So when you think of the Jewish Messiah, remember that the Hebrew concept of Messiah was the kinsman redeemer—the one who was from “among us” coming to “save or redeem us.” And although this is a high, mighty biblical concept of redemption and salvation, it is also the theology in which was buried the encoded message of race interrupted and a dual human bloodline. Piggybacked on the prophecies of the coming Messiah, whose heritage was said over and over and over again throughout the Old Testament to be that of a kinsman who would be of pure human blood, was the story of a pure-blooded race versus a mixed-blood race. When the very first prophecy of the kinsman redeemer was uttered, directly after the impregnation of Eve by both Adam and Nachash, dovetailing with the proclamation that there would forever be a state of conflict between the seed of Nachash and the seed of the woman, there was a necessity to provide a traceable heritage from which the future, prophesied Messiah would be able to hail.

In short, the Old Testament story of the Messiah, and the corresponding genealogical records substantiating a traceable, pure human bloodline, obviate the complete opposite: that there was an “impure” bloodline, that which was not completely human. That was the bloodline of Nachash, the Serpent of the Garden of Eden, member of the Divine Council, one of the gods of the pantheon of gods known as the Sons of God, the *bene ha ‘Elohim*, the Watchers.

I have to state emphatically that the story and prophecies of the Messiah woven throughout the entirety of the Old Testament were there for one reason: to provide an encoded, deeply subtextual message speaking to common events that every other ancient religion wrote about. The story of the coming Messiah seems more and more to simply be the Hebrew religion's collective mythology that needed to establish a pure, human bloodline. And even the "subtext of race interrupted" has dubious origins, as there is simply no way to establish any sort of solid fact. The story of the Messiah that was to come, and the genealogical record by which his human heritage was to be established, was the vehicle that was incorporated to establish a pure, human bloodline, in opposition to the bloodline that was somehow tainted. Is this a story of extraterrestrial interference? Or is it a story of the anthropological development of comparative religions? Or is it a story of the One, True God's creation and control of that which He created?

Comparatively Speaking...

The symbolic Tree of the Knowledge of Good and Evil as depicted in the Genesis account of Eden—the object of the forbidden fruit consumed by the first couple inciting God's wrath and judgment—is the Hebrew correspondent to the very same palm tree in Ea-Den, depicted as having a trunk around which a half-man-half-snake is entwined. It is from this tree that the Enki/Ea passed on knowledge and intelligence to humans—or, in the parallel Genesis scenario, Nachash taught the first human couple to partake of the forbidden knowledge. As the information was absorbed by Eve and passed on to Adam, their perceptions and awareness of reality quickly shifted, leaving the two in a severe state of shock and fear. (Author's Note: A person who is totally unaware of the reality in which he or she lives is said to reside in an "Edenic state.") The account goes on to explain that, soon thereafter, the couple ran and hid themselves from the voice of God, not because they had their first sexual experiences, nor that they were shy of their nakedness; even though Adam said they were hiding because they were naked, it was because they were suddenly, appallingly aware that there was a profound physical difference between the gods and themselves. They also were experiencing an enlightenment—for good or ill—that they had not known prior to these events. It is clear that until this time, the humans had no concept that they were in any way physically

different from their reptilian/god counterparts. They had finally leapt from their childlike innocence and ignorance into the realization that they were intended, by design, to be tillers of the field and slaves to their overlords. There was also the fear, as is accounted in Genesis, that they had, as slaves who transgressed the law, brought down upon themselves the enormity of consequence.

The symbolism of the forbidden tree in Eden is not limited to Judeo-Christianity. The Eastern Indian god Krishna sat atop a coiled serpent beneath the branches of the Banyan Tree, and from there bestowed spiritual knowledge to humanity. Further representation of the tree can be found in the many crucifixion accounts of great teachers and gods, such as that of Quetzalcoatl, the winged serpent god of the great Toltec and Aztec civilization whose crucifixion on a tree is etched forever in stone. The wooden crucifixes upon which those that bestowed knowledge upon humankind—the symbols of the supreme god called the Egyptian Tau and Ahnk—represent the Tree of the Knowledge of Good and Evil. It was the result of the teaching of the forbidden knowledges to humans that they were killed.

The remarkable fact is that throughout all ancient and modern civilizations, the serpent, snake, or dragon bestowing knowledge upon the human race figures prominently in all religions and histories. The Judeo-Christian serpent as embodied in the fallen angel known as Lucifer; the Mayan serpent God Quetzalcoatl; the enormous plumed serpent god of the Hopi Indians, Baholinkonga; the mystical, human-like reptilians known as Nagas of India; the Egyptian serpent god, Kneph; the Phoenicians Agathodemon, and even the Hebrews Nakhushstan, the Brazen Serpent that Moses raised on a pole for the people to be healed—these are but a few of the myriad accounts that exist in worldwide religious cultures describing early gods as having reptilian-human physical features as well as having descended from the stars in the heavens.

Where's the Beef...?

After reading to this point, you may be asking yourself, “So, what’s the ‘Reptilian’ connection to ancient man?” It is clear that, though our most familiar biblical stories have connectivity with ancient religions, it is also clear that there is symbolism that carries from one to the other. Not only is it my (secularized) contention that, anthropologically speaking, the Hebrew

religion (aka Christianity) has its roots in language and characters modified from more ancient religions, it also carries over symbolism and adapted meanings. The importance of drawing the comparisons between the ancient Sumerian culture and the ancient Hebrew scriptural accounts is superficial in this book, at best, for there are literal tome-filled libraries speaking to these matters, but it speaks to the foundational concepts that flow throughout the religious mythologies that have given us the foundations of what we believe. The bigger question to ask is whether we are putting our faith in something that we hold to be truth, when in fact it is nothing more than accumulated myth upon myth upon myth.

Now, before you cluck your tongue in disgust at this, I must again state emphatically that faith is a completely other matter. Faith is the “substance of things hoped for, the evidence of things not seen,” so said the Apostle Paul (Hebrews 11:1). Faith is the adhesive that binds together the things that don’t always make sense. If you are willing to step outside the box, if only for a bit, in order to look back in and ask some serious questions, you may just find that there are other things beyond the scope of religious dogma and systematic theology. You may even step back into the box with a stronger sense of what you believe, for it’s the repeated tearing down of muscle that builds its strength. The late physicist Richard Feynman put it this way:

If you expected science to give all the answers to the wonderful questions about what we are, where we are going, what the meaning of the universe is, I think you can easily become disillusioned and then look for some mystic answer to these problems.... We're exploring, we're trying to find out as much as we can about the world!

...[I]f there's a simple ultimate law that explains everything, so be it. That'd be a very nice discovery. If it turns out it's like an onion with millions of layers...then that's the way it is!... [W]hen we go to investigate we shouldn't pre-decide what it is we are trying to do except to find out more about it.... [W]e should look to see what's true and what may not be true. Once you start doubting—which...to me, is a very fundamental part of my soul—to doubt and to ask...it gets a little harder to believe.

...I can live with doubt, uncertainty and not knowing. I think it's much more interesting to live not knowing than to have answers which might be wrong. I have approximate answers, possible beliefs, and different degrees of certainty about different things but I'm not absolutely sure of anything... But I don't have to know an answer.... I don't feel frightened by not knowing things, by being lost in the mysterious universe without having any purpose—which is the way it really is as far as I can tell....²

So, with my decidedly middle-of-the-road approach to personal faith, let's look at some of the comparatives in religion that seem to paint a bigger picture, not only of humanity but of the influences of the “secret history” of the Reptilians, which you will soon find isn't really a secret at all. It's just forgotten and buried in the dust of time.

Chapter Three

Coiled Around Many Cultures

“If the account given in Genesis is really true, ought we not, after all, to thank this serpent? He was the first schoolmaster, the first advocate of learning, the first enemy of ignorance, the first to whisper in human ears the sacred word, ‘liberty.’” —Robert Green Ingersoll, American statesman, 1833–1899 “Look like the innocent flower, but be the serpent under it.”

—William Shakespeare

There is a huge difference between approaching the issue of the multicultural serpent with a broad view that religion is most often a thing that cannot be quantified to the liking of the skeptical or scientific mind, versus the brand of angry atheism tantamount to hatred of any form of religion. To most skeptical thinkers and the crusading scientific atheists of today, faith is a list of pieties and practices that consist of superstitions built on the misty nothingness of ignorance and the dangerous falsehoods of faith-based thinking. (I had one scientist refer to me, in an open debate, as an “ass-plucking, denialist Nephilimer.”) With this sort of eliminatory thinking, there is no room for the wonder of the spiritual (at least not openly admitted) and very little grasp of the way the theological incorporates critical thinking, let alone the complex phenomenology of the religious experience. Hardcore atheists are to religious believers what an office-bound, short-sleeved, horn-rimmed-spectacle-wearing, white shirt, and tied accountant is to the free styling, caution-to-the-wind, dreadlocked, barefooted, multi-colored-paint-smeared, loft-dwelling artist. Pardon my stereotypes.

Religion is the construct of human beings. It is the attempt to place structure on the unstructured spiritual experience, and more often than not, the foundational religious constructs evolve into a systematic set of dogmas and theologies that produce, in nearly every case, a meticulous mode of control, which bears little resemblance to the origin of the systemized

structure. Spiritual experience is rarely ever something that is corporate. It is individual. That individual, in turn, internalizes and personally pursues his particular religion or, as is evident throughout the history of humanity, he moves that personal experience to a place of revelation that of necessity should be shared with those around him. But many times, the seeking of like-minded followers turns heinously into sycophancy, and the establishment of a controlled system is imposed that resembles nothing of the original experiencer's spirituality. Religion contains within its symbols and myths, some of the most utterly profound truths of the human psyche, and even the body. But these are things that need to be properly interpreted and freed from the illusion of faith and theology in order to function. Though faith is a thing that is necessary in most religious practices, it is also the thing that, in its simplicity, can completely obliterate the open mind.

Now, see? I've turned the entire argument on its head: Science and skepticism have closed off the possibilities under the lock and key of quantifiability within a "theological" approach to methodology and evidentiary research. On the other hand, "Faith-ers," in opening themselves to internalizing external spiritual experience and structuring it into theology of any sort, have adopted the rigidity that comes with legalizing their acceptance of that which is unquantifiable. It's a nasty catch-22 of thinking, so that neither approach seems to be complete, but always lacking what the other brings to the table. Science needs faith and faith needs science, and both need skepticism. Both are incomplete without the other, and that is the great schism of the mind.

The symbolism and presence of the serpent in the ancient world was highly significant, and somewhere back there, a person, a priest, or a collective of both determined that the serpent was a symbol that should be held in high esteem. Whether it was like the cat my friend and I experienced on our Sunday morning philosophical excursions, or simply a recognition that the serpent bore physical qualities that superstitiously became spiritual ones, the deifying of this reptilian creature became widespread throughout human civilization, and carried to all parts of the world. Ancient societies and religious scriptures from the Cradle of Civilization to the Far East and European cultures are rife with serpent figures, which were simultaneously attributed two highly symbolic roles: One role connected serpents to the heavens in their representation as deities, creative powers, and healing entities; the second role linked them with the underworld, associating them

with darkness, evil, harm, and destructive influences. Nowadays, if one just stops and considers, there should be little difficulty recognizing this dual symbolism, as it persists, perhaps not to the same theological depths it once did, but it is there nonetheless. Look simply to the symbol of the healing serpent as it appears on the physician's caduceus, the two coiled serpents wrapped around the tree, while at the same time, we see the serpent as a thing to be feared and reviled, a representative of evil intent and even as a descriptor for wily, despicable character attributes: "That dude's a snake in the grass!"

No matter what your religious take may be on the serpent, it is clear that nearly every civilization either deified the serpent in one form or another, or looked upon the serpent as somehow sacred or symbolic of the more esoteric values in life and nature. The serpent's dualism in the Hebrew religion is clearly seen when Moses, the giver of the Law and traditional author of the Pentateuch (Genesis, Exodus, Leviticus, Numbers, and Deuteronomy), writes of the Serpent in the Garden of Eden as the seducer of Eve and the catalyst for the spiritual fall of humanity, yet upholds the serpent as the symbol of divine healing when the people are smitten by venomous snakes:

⁵And the people spake against God, and against Moses, Wherefore have ye brought us up out of Egypt to die in the wilderness? for there is no bread, neither is there any water; and our soul loatheth this light bread. ⁶And the Lord sent fiery serpents among the people, and they bit the people; and much people of Israel died. ⁷Therefore the people came to Moses, and said, We have sinned, for we have spoken against the Lord, and against thee; pray unto the Lord, that he take away the serpents from us. And Moses prayed for the people. ⁸And the Lord said unto Moses, Make thee a fiery serpent, and set it upon a pole: and it shall come to pass, that every one that is bitten, when he looketh upon it, shall live. ⁹And Moses made a serpent of brass, and put it upon a pole, and it came to pass, that if a serpent had bitten any man, when he beheld the serpent of brass, he lived. (Numbers 21:5–9)

Moses casts a bronze, shining serpent, the *necoshet* [נְכֹשֶׁת], and raises it on a pole, and the people who were bitten were then instructed to

look at it or touch the base of the pole to be healed of the terminal bites. Christianity, in turn, hailed to this miraculous healing event by equating the image of the brazen serpent elevated on the pole to the “lifting up,” or crucifixion of Jesus Christ.

¹³No one has ever gone into heaven except the one who came from heaven—the Son of Man. ¹⁴Just as Moses lifted up the serpent in the desert, so the Son of Man must be lifted up,

¹⁵that everyone who believes in him may have eternal life.
(John 3:13–15)

Although we have no idea of how this was supposed to have worked, other than the claim of divine power, we also have no idea how much time passed and how many people died between conception of the divine brass serpent, its sculpting design and casting, to final elevation on the pole. The story expounds on sacred symbolism over the sacred value of human life, the emphasis of the story demonstrating that the serpent was to be viewed as both the agent of harm *and* of healing—the bringer of death and the giver of life, perhaps paying homage to the fall of humanity, while at the same time revering the serpent as the deliverer of esoteric knowledge of the gods. The Hebrews sinned before their God and fiery serpents were sent to bite them as a divine punishment. In response, Moses crafted a bronze image of the venomous serpent, and the people were healed and ultimately spared by simply looking at it or touching the pole on which it had been erected.

The intent of the biblical passage is to illustrate that it is none other than God—Jehovah—who is the power working behind the image of the serpent. It is the paradoxical Jehovah who is at once the instigator of both death and life. And as God was so often want to do in Hebrew scriptures, He allows for—and in this case is the originator of—the deadly calamity in order to establish both his magnificent terror and beneficent grace in being the God who imposes harsh judgment as well as the God who offers a way out, salvation, and healing. To some, this may smack of a sort of divine Münchausen by proxy syndrome, but for the Hebrews, it was their God at work.

What is clear is that the Israelites were already quite familiar with images of deified serpents from their exposure to Egyptian mysticism and mythology during the four centuries they dwelled in Egypt, either as slaves or workers. And keep in mind that after 400 years, they were clearly

“Egyptian-ized” in a similar way as if you are a descendent of an Englishman who traveled to America on the *Mayflower* in 1620 and whose descendants remained here all those generations up until the current day, you would you be considered English by ancestry alone, but you would in actuality be completely American. Same deal with the Hebrews in Egypt.

The Hebrews were barely even Hebrews anymore. They had a vestige of their heritage kept alive in oral tradition and religious practice, but had completely forgotten who they were, as evidenced by the machinations Moses had to go through to keep convincing them that Jehovah was their God. They were Egyptians! But Moses came to lead them back to their ancestral promised land, and in the harshness of judgment, the serpent symbol is now seen by the Hebrews in its true light: a valid and important representation of their ancient god’s ultimate power over life and death. Their life and death. What is established to them in the symbol of the bronze serpent is that God was the divine force behind the serpent figure. Now put *that* in your edenic pipe and smoke it.

The Snake Marsh of Eridu

When we consider the Sumerian creator god, Enki—paralleled by the neighboring Akkadian god, Ea—as being connected through both ancient and modern mythology to a place called the Snake Marsh, coupled with the fact that we have already established that Enki/Ea is a linguistic precursor to YWHW (Jehovah), the Middle East becomes the hotbed of early serpent mythology. The parallel being, of course, that Enki, the brother god to Elil the chief god of the Annunaki, was not only responsible for the creation of intelligent mankind as a slave race at the behest of Elil, but he also saw the humans’ plight and led them into insurrection against the Annunaki. As we saw earlier, Enki/Ea is the prototype for the Hebrew Jehovah, and they played very similar functions as both creators and saviors. And the serpent symbolism is connected to them both.

In his fairly complex book *Deliver Me from Evil: Mesopotamian Incantations, 2500–1500 BC*, Oxford University researcher Graham Cunningham examines Sumerian tablets pre-dating the time known as the Sargonic period in ancient Mesopotamia, which extended from approximately the 22nd to the 23rd centuries BCE. During this earlier period in Sumer, there are many cuneiform tablets containing magical incantations, for both “helpful” and “harmful” divine ritual intervention. In these tablets

we find there are two specific incantations associating Enki/Ea with various agents of illness—in other words, the summoning of infliction, harm, or illness on someone else. In these incantations there is a reference to the “Snake of Enki,” while the other mentions “the place of the black snake in the middle of the abzu.” Remember the term *abzu*?

This is the great, underworld sea on which the city of Eridu sits, and surrounding the city lies the swampy region known as the Snake Marsh, a place, according to the mythology, well-known and loved by Enki/Ea. The incantations also mention a black dog, a horned snake, a serpent, and Enki himself. This association between Enki/Ea and harmful snakes continues well into the Old Babylonian period, and there is even one incantation directed against various snakes referred to as the two-tongued snake of abzu. Other incantations show that Enki/Ea could cure as well as cause illness (remember Moses and the brazen serpent on the pole), and there is a particular repeating phrase in the incantations saying *Ea did it, Ea undid it*. In essence: God brought catastrophe, God brought healing.

“Enmerkar and the Lord of Aratta” is a mythical Sumerian epic in which a speech is delivered by Enmerkar, the son of Mesh-ki-ang-gasher, the founder of the first dynasty of Uruk and builder of the city of Uruk. In that speech he delivers a magical incantation for the purpose of confusing the various languages of the people. Note the striking similarities to the Genesis account of the Tower of Babel:

Once upon a time there was no snake, there was no scorpion,
There was no hyena, there was no lion,
There was no wild dog, no wolf,
There was no fear, no terror,
Man had no rival.
In those days, the lands of Subur (and) Hamazi,
Harmony-tongued Sumer, the great land of the decrees
of princedom,
Uri, the land having all that is appropriate,
The land Martu, resting in security,
The whole universe, the people in unison
To Enlil in one tongue [spoke].
(Then) Enki, the lord of abundance (whose) commands

are trustworthy,
The lord of wisdom, who understands the land,
The leader of the gods,
Endowed with wisdom, the lord of Eridu,
Changed the speech in their mouths, [brought]
contention into it,
Into the speech of man that (until then) had been one.¹

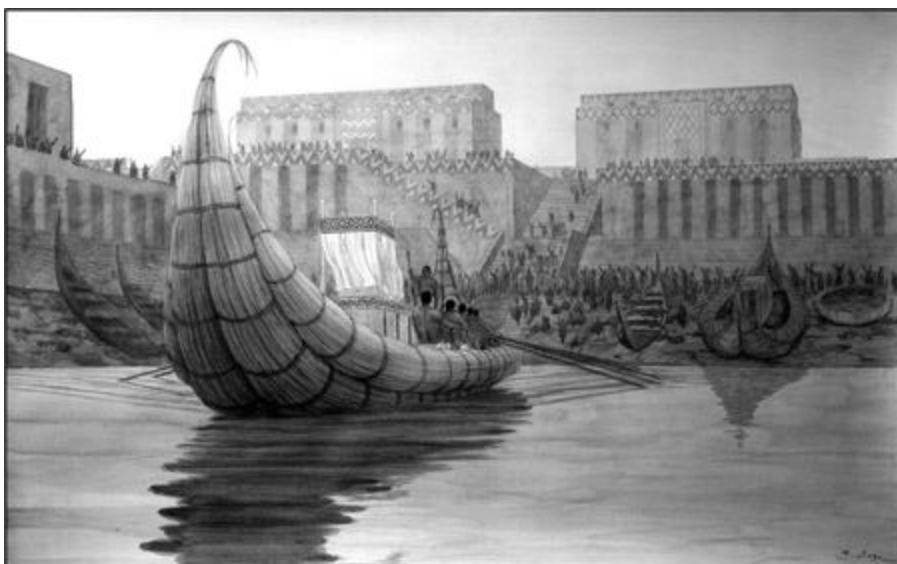

Sumerian cylinder seal depicting Enki and Adapa in a marsh boat. Image made available through Wikimedia Commons.

In the Book of Genesis, God comes down to earth and confuses the languages of humanity, causing them to disperse. For some reason he did not want the humans working in a unified fashion as they were building their giant ziggurat to “reach to the heavens” (Genesis 11:14). Enki/Ea plays this very same language-dispersing role in the Sumerian version of the tale. So, again, we see the correlation between Enki/Ea and Jehovah of the Old Testament. And the serpent slithers in and out through the narratives.

On one of the many Akkadian green jasper cylinder seals, dating between 2000 and 2300 BCE, there is an impression of the god Enki/Ea in a reed-filled marshland setting, standing in a shallow draft boat constructed out of the long reeds growing in the marsh, traditional to the inhabitants of the area. It is obvious that the central figure in the boat is none other than Enki, as evidenced by the ever-present dual streams of water emerging from his shoulders and the fish leaping from those streams. The boat pictured on

the cylinder is being guided through the heavily reeded marsh by two servants, both holding punting poles in their hands, while out of the water at the boat's fore and aft are fish leaping into the air, presumably greeting their creator in joyous worship. The entire setting on the cylinder is meant to evoke beauty and worshipful honor of Enki. One of the men standing in the boat with Enki is more than likely the man who never left his side, Adapa, the first human created by Enki. Adapa became the god's personal servant, baking daily fresh bread and fishing for his god's meals. In Sumerian hymns it is said of Enki that his greatest pastime was to navigate the waters of the Snake Marsh in his boat, known as the Ibex of the Abzu. It was here in the Snake Marsh that Enki is said to have lived in his mythical Sea House, which metaphorically cast its shadow over the waters of the Snake Marsh. If you visit the site of Eridu today, snakes can still be seen gliding across the surface of the water, forever reminding us why, after thousands of passing years, the place was given its name.

The harbor of ancient Eridu, with a boat carrying the statue of their patron god, Enki, as envisioned by archaeological artist Balage Balogh. Image used by permission from Balage Balogh, www.archaeologyillustrated.com.

Accordingly, in the ancient tablets, amplified to otherworldly proportions in the modern mythologies of the Annunaki found in the works of Zechariah Sitchin and others, it is said that Enki/Ea led a rebellion against his brother gods of the Annunaki, becoming the first “freedom fighter” for the human race, his base of operations being the Snake Marsh or Den of

Serpents, known as Ea's Den. (We'll expand on this in greater detail in the next chapter.)

Around the World in 80 Serpents

Well, not quite 80, but when you consider all the civilizations, ancient, archaic, and modern, that revere or worship the serpent in some form, the list is staggering. World religion, cultural mythology, and archaic literature represent the serpent as having become synonymous with the act of fertility, life force, and creative power.² The fertility and sexual linkage is partly due to snakes being seen as figuratively phallic in form and symbolically synonymous of the male sex organ—not to mention the linkage to the Garden of Eden story of impregnation at the seduction of the Serpent character. Serpents also became associated with water and earth due to the many species of snakes that live in the water or in holes in the ground, and agriculture, as their dwellings were in the ground and amongst the roots and plants.

The ancient Chinese linked the serpent with the gods of rain, a life-giving symbol of fertility and abundance in their agrarian culture. Australia, India, North America, and Africa have all linked snakes with rain and rainbows (bringing to mind the aptly titled 1985 book by Wade Davis and subsequent motion picture, *The Serpent and the Rainbow*, exploring the voodoo, zombie, and reincarnating resurrection practices in the Caribbean), which, again, are connected with rain and ultimately agricultural fertility. Cultural symbolism of rebirth, resurrection, transformative power, immortality, and healing (as with the brazen serpent of Moses) became strong spiritual aspects of the serpent. This is linked to the serpent's seasonal shedding of its outer skin, the orborous, a natural, physical occurrence called sloughing. This became a demonstrable, natural symbolism for resurrection, eternity, and the perpetual renewal of life. In the two major world religions said to have sprouted from the loins of Abraham—Judaism and Islam—the serpent was representative of sexual desire,³ reestablishing the sexual nature of the Garden of Eden story. Again reaffirming this idea, rabbinic tradition holds that the serpent in the Garden of Eden is illustrative of sexual passion and lustful desire.⁴ I find it interesting that these symbols existed in Abrahamic religions despite the fact that most adherents to traditional Hebraic, Muslim, and Christian faiths are far removed from the notion that the interaction between the Serpent

and Eve in the Garden of Eden was anything having to do with sexual encounter and transmission of forbidden knowledge.

In Hinduism, the *kundalini* is a coiled serpent that sits, metaphorically, at the base of the spine, a symbol of that residual power of pure desire and sexual passion.

The Hebrews and Sumerians have been touched on quite extensively, thus far, but let's do a brief recap, then move on to some other examples.

Israelite

The Hebrews held the serpent high as an evil presence embodied in the serpent that tempted Eve in the Garden of Eden. There are several other passages in the Old Testament and New Testament that speak to this character in other forms, both inanimate and possessing of character.

In Exodus 4, Moses is gifted with a magical staff that can turn to a serpent upon request. This was meant to be a sign of God's miraculous power when Moses went to confront the pharaoh of Egypt.

²And the LORD said unto him, What is that in thine hand? And he said, A rod. ³And he said, Cast it on the ground. And he cast it on the ground, and it became a serpent; and Moses fled from before it. ⁴And the LORD said unto Moses, Put forth thine hand, and take it by the tail. And he put forth his hand, and caught it, and it became a rod in his hand: ⁵That they may believe that the LORD God of their fathers, the God of Abraham, the God of Isaac, and the God of Jacob, hath appeared unto thee. (Exodus 4:2–5)

This very same rod-turned-serpent was a magical trick duplicated by the court magicians in Egypt, but as the story goes, Moses' rod-snake devoured the snakes produced by the Pharaoh's magicians. Again, according to Hebrew religion, a demonstration of God's power and Moses' demonstration that his snake was bigger than the Pharaoh's.

⁸And the LORD spake unto Moses and unto Aaron, saying,

⁹When Pharaoh shall speak unto you, saying, Shew a miracle for you: then thou shalt say unto Aaron, Take thy rod, and cast it before Pharaoh, and it shall become a serpent. ¹⁰And Moses and Aaron went in unto Pharaoh, and they did so as the LORD

had commanded: and Aaron cast down his rod before Pharaoh, and before his servants, and it became a serpent.

¹¹Then Pharaoh also called the wise men and the sorcerers: now the magicians of Egypt, they also did in like manner with their enchantments. ¹²For they cast down every man his rod, and they became serpents: but Aaron's rod swallowed up their rods.

¹³And he hardened Pharaoh's heart, that he hearkened not unto them; as the LORD had said.

(Exodus 7:8–13)

It is biblical stories like these that cause me to ponder why an infinite God did things the way He did them. It seems that God could have simply manifested Himself to the Egyptians, demonstrating that He was, indeed, a benevolent deity, resulting in the Egyptians falling on their faces and worshipping Him. Instead, according to the story in Exodus, God marionettes His followers through a series of devastatingly awesome events that equated to nothing more than the wreaking of destruction, mayhem, and suffering, when He could simply have gained the respect, worship, and reverence by manifesting Himself to the Pharaoh and the people of Egypt. Is this a God of infinite wisdom, holiness, and omniscience, or is it the manufactured god of humans in a historically culturally driven tale? That is the big question whose theme resonates throughout the subtext of this book. But as the systematic Judeo-Christian theology dictates, “Who am I to question God’s ways?” It’s an issue of faith in the supernatural that became law, theology, and dogma, as we will see repeated throughout many ancient religions.

If some of what I write seems as if I have some sort of axe to grind with biblical theology, please do not misinterpret me. What you see here are the shards of traditional stories *not* being filtered through religious predisposition, but the tales as seen from outside the box of dogma. When you look at these stories in that light, they become less God-inspired accounts and more of the same sort of religious mythological transference of divinity-driven theology for the purpose of establishing a picture that the teller of tale wanted told. The symbolism used to denote divine power is demonstrated in mythical proportions in the following passages:

⁴[The Hebrews] traveled from Mount Hor along the route to the Red Sea, to go around Edom. But the people grew impatient on

the way; ⁵they spoke against God and against Moses, and said, “Why have you brought us up out of Egypt to die in the desert? There is no bread! There is no water! And we detest this miserable food!” ⁶Then the Lord sent venomous snakes among them; they bit the people and many Israelites died.

⁷The people came to Moses and said, “We sinned when we spoke against the Lord and against you. Pray that the Lord will take the snakes away from us.” So Moses prayed for the people.

⁸The Lord said to Moses, “Make a snake and put it up on a pole; anyone who is bitten can look at it and live. ⁹So Moses made a bronze snake and put it up on a pole. Then when anyone was bitten by a snake and looked at the bronze snake, he lived.”
(Number 21:4–9)

¹¹“Beware that thou forget not the Lord thy God, in not keeping his commandments, and his judgments, and his statutes, which I command thee this day.... ¹⁵Who led thee through that great and terrible wilderness, wherein were fiery *serpents* (author’s emphasis), and scorpions, and drought, where there was no water; who brought thee forth water out of the rock of flint...”
(Deuteronomy 8:11,15)

As we have already examined, the serpent that Moses cast in bronze, many years later, became an object of worship itself. The nehushtan, as it was called (a derivative of the word *Nachash*), had taken on the status of god, and a cult formed around its worship, so much so that King Hezekiah expurgated the cult and tore down the bronze serpent. Apparently, serpent worship in Jerusalem was not new in Israel, as there are no less than seven such bronze serpents from pre-Israelite Palestinian cities. Two of these serpents were uncovered during an archaeological dig at Megiddo,⁵ one at the ancient cite of Gezer,⁶ two from the “holy of holies” at the ruins of Hazor, and another two at the remains Shechem.⁷ There are several other archaeological discoveries of the snake and serpent in the Canaanite region, but they mostly predate Israel’s occupation of the territory. However, with what we understand of the spread of religion and the adaptations from culture to culture, it is clear that the Israelites simply appropriated the older Palestinian serpent worship, blending it with their own version of serpent worship as embodied in the bronze serpent of Moses.

It is interesting to note that despite all the miraculous wonders experienced by the Hebrews under the leadership of Moses, and during the great exodus from Egypt, the people still clung to the physical objects such as the golden calf and the serpent, and elevated them to the status worthy of their worship. Could this be some indicator as to what really happened in these biblical tales? Ask yourself: Would you, if confronted with the sea splitting open to allow you to pass on dry ground, or if you stood before the fiery mountain where Moses ascended to receive the tablets, or if you experienced all the other miraculous wonders of the Hebrew's 40-year sojourn in the desert, forget about what God performed and worship an idol!? Or, perhaps, the Hebrews never really experienced any of these things on the same level as they have been passed down to us in biblical religious myth. Perhaps the experienter, Moses, constructed an elaborate religion from the bare bones of personal divine revelation, but the hard part for him was convincing the people to live by the dictates of his individual encounter with a god. And then, in a posthumous slap in the face to Moses, throughout the next few hundred years, the people took his brazen serpent on a pole, incorporated it into Canaanite religion of Palestine, and began worshipping the snake as if it were the God of their deliverance.

¹Now it came to pass in the third year of Hoshea son of Elah king of Israel, that Hezekiah the son of Ahaz king of Judah began to reign. ²Twenty and five years old was he when he began to reign; and he reigned twenty and nine years in Jerusalem. His mother's name also was Abi, the daughter of Zachariah. ³And he did that which was right in the sight of the Lord, according to all that David his father did. ⁴He removed the high places, and brake the images, and cut down the groves, and brake in pieces the brasen *serpent* (author's emphasis) that Moses had made: for unto those days the children of Israel did burn incense to it: and he called it Nehushtan. (2 Kings 18:1–4)

In magnificent poetic form, Job 26: 6–14 presents a picture of God's handiwork. The serpent is mentioned near the end of the passage:

⁶“Death is naked before God;
Destruction lies uncovered.

⁷He spreads out the northern [skies] over empty space;
he suspends the earth over nothing.

⁸He wraps up the waters in his clouds,
yet the clouds do not burst under their weight.

⁹He covers the face of the full moon,
spreading his clouds over it.

¹⁰He marks out the horizon on the face of the waters for a
boundary between light and darkness.

¹¹The pillars of the heavens quake,
aghast at his rebuke.

¹²By his power he churned up the sea;
by his wisdom he cut Rahab to pieces.

¹³By his breath the skies became fair;
his hand pierced the crooked serpent.

¹⁴And these are but the outer fringe of his works;
how faint the whisper we hear of him!

Who then can understand the thunder of his power?"

What is this “crooked serpent” spoken of in the passage? It appears again in Old Testament scripture:

¹In that day the LORD with His hard, great and strong sword shall visit leviathan the serpent, and leviathan, the *crooked serpent* (author’s emphasis), and shall slay the whale that is in the sea. ²In that day there shall be singing to the vineyard of pure wine. ³“I am the Lord that keep it, I will suddenly give it drink, lest any hurt come to it, I keep it night and day.” (Isaiah 27:1–3)

There are many interpretations of the “crooked serpent,” the leviathan and dragon, ranging from a presence of the Holy Ghost, to the constellation of Draco, to a prophecy of the swastika of the Nazi regime.

In all, the serpent is mentioned more than 40 times in biblical references. An exhaustive listing here would be simply that: a list. Rather than reference every passage, suffice it to say that all you need do is refer to a

Concordance of the Bible words and look under the heading for “serpent” or “snake.” You could also conduct an Internet search for the words “serpent + bible,” then sit back and find the voluminous Web pages and limitless amount of information and interpretation, from the scholarly to completely whack fringe. Suffice it to say that the Bible establishes the serpent mythology was at play in ancient Israel, most probably carried over, in their origins, from the Egyptian, Palestinian, and Sumerian cultures that influenced the early development of Hebrew religion.

The Great Dragon: China

For four millennia, Chinese culture has existed and thrived in an unbroken line, dating back to the Xia Dynasty as early as 2000 BCE. China’s mythological roots, however, extend even farther back in time. Five thousand years ago in China, around the time the ancient Britons were building the first circular ditch and mound of Stonehenge, the dragon began its long-standing tradition as a mythological figure of the Chinese people. Unlike the serpent or snake in other cultures, the Chinese held the serpent/dragon as a symbol of happiness, immortality, sexual intercourse, and fertility, imbued with the ability to ward off evil spirits. The pervasive dragon decorates nearly every ancient monument and structure in China, as well as adorning the garments of ancient Chinese generals and high governmental officials. The Emperor wore nine dragons on his brocaded robe.

In ancient times, again illustrating the dual nature of the serpent, the dragon was regarded as not only the highest of sacred animals, but it also became the imperial emblem of all Chinese emperors. Unlike the depictions of evil dragons of Western cultures, and the need for St. Patrick to drive the evil serpents from the Land of Ireland, the Chinese dragon is beneficent and gracious among all other creatures, and was worshipped as the divine ruler of lakes, rivers, and seas. It is the powerful yet gentle serpent Lung that brings the fertile, healing rain to the earth, giving life to the crops and cooling and quenching the thirst of the toiling husbandman.

The dragon ultimately became synonymous with the Chinese, who proudly proclaim themselves “Long De Chuan Ren” (Descendents of the Dragon). The long line of emperors believed themselves to be, as did the Egyptians and other monarchical families in ancient times—the sons of heaven (the Sons of God; the Elohim), brothers to the gods, and incarnate

embodiments of the sacred dragons. All the empirical accouterments became known as things that were of the dragon: The bed of the emperor was the dragon bed; the throne, the dragon seat; and the emperor's ceremonial robes, the dragon robes. The dragon was in and throughout every aspect of ceremonial worship and daily life.

For half a millennium, the Xia people and their dynasty dominated the northern regions of China, from about 2000 to 1500 BCE. They were a people who collectively worshipped the sacred serpent, a creature found coiled around the most ancient of Chinese mythologies. Through the course of religious evolution, the serpent took on the form of the traditional Chinese dragon, and became the most everlasting symbol of a people and the most recognized emblem of Chinese culture, spirituality and mythology.

In 551 BCE, a child named Kongfuzi was born into a poor family of aristocratic lineage. His family's lineage allowed him the ability to become an educator and governmental official. Better known to the world as Confucius, his philosophy as an educator was that learning, in and of itself, was the path to greater self-knowledge and self-improvement. Working for and attaining these things would lead you to good conduct and clean living. His teachings took on legendary proportion through the centuries and millennia, but his underlying goal was to make wisdom the divine force that would result in the smooth operation of a stable and well-ordered state of being. Sounds very New Age, doesn't it? As most of us know, his teachings became a legendary guide to living wisely.

Many followers flocked to the teachings of Confucius, and they continued to perpetuate his ideas, even after his death in 479 BCE. As is with most legendary figures, who attained legendary status even during their own lifetimes, legends were fostered and spread about Confucius, including one in which sacred dragons guarded his mother during her pregnancy and attended to her at his birth.

Mesoamerican Feathered Serpent

According to Aztec, Mayan, and Toltec scriptures, Quetzalcoatl, the feathered serpent god, was the primordial creator and giver of life to all that is. Along with his mirrored opposite god, Tezcotlipoca, he created the world, and he was sometimes referred to as the "White Tezcotlipoca," contrasted to his darker opposite, the god of the night. He was called the great Sky God, the "Lord of the East," being associated with the morning

star, which also gave him the name Tlahuizcalpantecuhtli, “Lord of the Star of the Dawn.” Quetzalcoatl was also of virgin birth, his mother being the goddess Coatlicue and his twin brother god, Xolotl, known as the evening star, associated with Venus. It was Quetzalcoatl who, after the death of the fourth sun (Fourth Age), descended to Mictlan, the land of the dead, and by sprinkling blood drawn from his penis over the bones of the dead he had gathered from the previous era, created the fifth sun and the dawning of the new age of mankind.

The Temple of the Feathered Serpent has fine stylized depictions of that deity in a style that includes the apparent influences of Teotihuacan and Maya art. Image made available through Wikimedia Commons.

Comparatively speaking, the resemblance to titles used for Jesus, the Bright Morning Star, and Lucifer [לִילִּה], the Morning Star, are striking. This begs the question as to whether the Jesus of early Christianity garnered His title from the same sort of evolution of pagan, earth-based religious belief as did Quetzalcoatl, only a few hundred years later. Although Christianity teaches that God (the Creator) and Lucifer/Satan/Devil (the created) are not precise opposites, despite the fact that they represent opposing forces of good and evil, and that-which-is-holy versus that-which-is-profan, the dual nature of the opposing forces is present in nearly all religious belief and mythology in every culture. In this sense, Quetzalcoatl becomes the very same archetype. And because we all know that the morning and evening stars are merely a planet in the solar system, attributing them to being the presence of divinity, even on a comparative level, is certainly nothing short of an archaic understanding on the part of both religious mythologies. As humans, we have always looked to the equinoxes and the traversing of the heavenly bodies to ascribe some sort of mystical substance to our gods.

The dual, or twin, aspects of Quetzalcoatl and Xolotl is not lost on the comparison between Jesus and Lucifer, who are not only the diametrically opposing elements in the Christian faith, but also hypothesized, by some wags, to be twin brothers, both of the Elohim.

As with other gods riddled throughout human history, it was Quetzalcoatl, the feathered serpent, who—as is attributed to Lucifer, Enki/Ea, Khrisna, and others—brought the knowledge of the gods to humanity, this act bestowing on him the additional title of “wise legislator.” And, as with the Serpent in the Garden of Eden, he was condemned by the other gods, and crucified on a tree, like Jesus Christ, the Messiah of the Christian faith.

Veneration of Quetzalcoatl as a god appears to have begun in the early Classic Mesoamerican periods between 400 BCE and 600 AD, and spread throughout Mesoamerica by the Late Classic Period (600–900 AD).⁸ There is some credence to the academic notion that Quetzalcoatl was merely a deified earthly king from an earlier Mesoamerican period, which would also fit the picture of most mythological gods who once had firm footing in the flesh and blood, but with the evolution of legend, became much, much more.

In the Aztec culture, whose religious beliefs are among the best-documented in historical sources, Quetzalcoatl was the god of the wind, the star of the dawn, of merchants, arts, crafts, and knowledge. He was also, as the bringer of learning and knowledge, the patron god of the Aztec priesthood,⁹ another cross-cultural similarity to the Illuminator and Bringer of Knowledge.

In one version of the myth, Quetzalcoatl allowed himself to be seduced by his smoking mirror opposite, Tezcatlipoca, and in his resultant remorse, threw himself on a funeral pyre, killing himself by “theocicide.” After his death his heart became the morning-star, creating his identification with the god Tlahuizcalpantecuhtli. Toltec religious dualism has it that Tezcatlipoca, the opposing deity to Quetzalcoatl, had reportedly driven the god into exile. According to yet another tradition, Quetzalcoatl traveled over the sea on a raft of snakes. Quetzalcoatl has been physically described as being light-skinned and bearded, and prophesies of his future return were connected to his mythology. When the Spanish conquistador Hernán Cortés appeared in Mesoamerica in 1519, the Aztec king at the time, Montezuma II, lured by

the higher technology, weaponry, and appearance of the Conquistadors, was easily convinced that Cortés was in fact the reincarnate Quetzalcoatl, returning to rule his people.

Quetzalcoatl became a dualistic serpentine symbol of death and resurrection. The god has a great affinity with the priest-king Topiltzin Ce Acatl Quetzalcoatl, who ruled the Toltecs in Tula during the 10th century. The cult of Quetzalcoatl became widespread in Teotihuacan, an area about 30 miles north of what is now Mexico City, as well as Xochilco, Cholula, and Chichen Itza.

In his book *Fingerprints of the Gods: The Evidence of Earth's Lost Civilization*, British author Graham Hancock published a controversial theory that states Egyptian culture, as well as all the Mesoamerican culture inclusive of the Aztec, Mayan, and Olmec, all shared similar Quetzalcoatl mythologies.¹⁰ The stories of a bearded, light-skinned man bringing “knowledge” are alleged to be common, and sprouting from a central source or a “master/proto” culture. As racist as that may sound by today’s standards of politically correct-speak, keep in mind that the mythologies are much older than current, 21st-century politics. The caterwaul by the scientific community is that all these theories are based on some sort of tacit racism, when in fact, it is the cultures themselves that have given us the stories, not later cultures attributing those stories to only the, as some in the scientific community call them, “brown peoples.”

Native American Rattlesnake

The serpent is revered among Native American tribes in the form of the rattlesnake, who is known as “Grandfather” and “King of Snakes.” It is he who gives both fair winds and is the bringer of tempestuous weather, aligning with the myths of Quetzalcoatl and his connection to the wind and weather.

In Native American Chippewa and Cherokee flood mythology, the Horned Serpent, Misiginebig, an evil, underwater serpent/dragon, kills one of the gods’ cousins. In an act of divine revenge, the gods kill the Horned Serpent, who in dying unleashes a great flood. The people first flee to the mountains and when they, too, become submerged, they float on a raft of serpents until the flood subsides. The evil spirits once controlled by the serpent god then go into hiding out of fear of further punishment and

repercussion. Again, the similarities to the Nephilim and the Flood of Noah are undeniable, as the Hebrew scripture tells us that the Nephilim were “on the earth in those days and also afterward” (Genesis 6:4). This is not to establish the Flood of Noah as the prototype or “true” story, but rather to compare the Flood of Noah to the other cultural accounts, demonstrating the common theme amongst varying cultural tales. (Anecdotally, in Ohio, atop a plateau overlooking the Brush Creek Valley, Serpent Mound is the largest and finest serpent effigy in the United States. The Mound Builders associated some great mystical value to the serpent, as demonstrated by archaeological sites such as the Serpent Mound, though, to date, no one has been able to decipher the particular associations.)

The Canaanite Basilik

The early, pre-Canaanite Phoenicians (the basis of the name “phoenix,” the rising firebird/dragon) had a serpent god called the Basilisk (made popular in one of the *Harry Potter* books and movies). This serpent wasn’t quite a serpent, but bore some of the physical characteristics of an early dragon figure, again demonstrating the migrated physicalized presence of the earlier serpentine representations. The Basilisk was considered to be an early representation of a phallic god, common in ancient religions, obviously founded in male domination. According to the mythology, to look directly at a Basilisk meant certain death in many of heinous forms, so it is impossible to picture them accurately, as no one was able to look at them and create an accurate representation. This ability to kill with a glance is shared by the gorgons of Greek mythology, mythical correspondents of the Basilisk. In turn, the only way to kill a basilisk was blindfolded and by use of indirect visual, such as by a mirror or by use of a mirror-like object in which the serpent could view its own reflection, as was the case with the Grecian myth of Perseus and his fight with Medusa.

First-century Roman historian Pliny the Elder wrote of the Basilisk: “The basilisk serpent has the same power, to kill with its gaze. It is a native of Cyrenaica, not more than 12 inches long. It routs all snakes with its hiss, and moves its body forward in manifold coils like other snakes.”¹¹

During the Middle Ages, the basilisk became identified with the cockatrice, a two-legged dragon with the head of a rooster, very similar to the phoenix, a serpent mentioned occasionally in the Old Testament book of Isaiah and other Hebrew scriptures:

And the sucking child shall play on the hole of the asp, and the weaned child shall put his hand on the cockatrice' den. (Isaiah 11:8)

Rejoice not thou, whole Palestina, because the rod of him that smote thee is broken: for out of the serpent's root shall come forth a cockatrice, and his fruit shall be a fiery flying serpent. (Isaiah 14:29)

They hatch cockatrice' eggs, and weave the spider's web: he that eateth of their eggs dieth, and that which is crushed breaketh out into a viper. (Isaiah 59:5)

For, behold, I will send serpents, cockatrices, among you, which will not be charmed, and they shall bite you, saith the lord. (Jeremiah 8:17)

When we enter the modern period, and Medusa becomes an innocuous decorative motif found on door knockers and broaches, the Basilisk immigrates to the United States and becomes identified with different American snakes, most notably the rattlesnake. One of the first rattlesnakes encountered by European explorers, a tropical variety known as the "Mexican West Coast rattlesnake," was given the scientific name *crotalus basiliscus*, or "Basilisk snake."

(On an interesting etymological note, the work *Basilisk* is where we got the later word for a temple of the phallic god, and eventually a type of church: the *basilica*. There is a remembrance to this ancient mythology found atop St. Peter's Basilica in Rome in the form of a phallic ball.)

Hindu Mythology

The worship of snakes and serpents in Hindu culture and religion demonstrates high status of snakes or nagas, in their mythology. नाग is the Sanskrit and Pāli word for a deity or class of entity or being, taking the form of a very large snake, found in Hinduism and Buddhism. The use of the term *naga* is often ambiguous, as the word may also refer, in similar contexts, to one of several human tribes known as or nicknamed the Nāgas. The term is still used to apply to ordinary snakes, particularly the King Cobra and the Indian Cobra, the latter of which is still called naga in Hindi and other languages of India.

The serpent primarily represents symbolic rebirth, death, and mortality, again as we've seen in other cultures, due to the casting of its skin and symbolic "rebirth." Carved representations of cobras or nagas can be found all across India, to which offerings of food and flowers are left, with lights burned before the many and various shrines. Among some South Indians, the cobra is so revered that, if accidentally killed, it is burned like a human being on a funerary pyre; no one would kill one intentionally.

The Serpent Nāgas form an important part of Hindu mythology and play prominent roles in various legends. The following is a list of serpents from Hindu mythology¹²:

Shesha (Adisesha, Sheshnaga, or the 1,000-headed snake) upholds the world on his many heads and is said to be used by Lord Vishnu to rest. Shesha also sheltered Lord Krishna from a thunderstorm during his birth.

Vasuki allowed himself to be coiled around Mount Mandara by the Devas and **Asuras** to churn the milky ocean creating the ambrosia of immortality.

Kaliya poisoned the Yamuna/Jamuna River where he lived. Krishna subdued Kaliya by dancing on him and compelled him to leave the river.

Manasa is the queen of the snakes. She is also referred to as Manasha or "Ma Manasha," with *ma* being the universal mother.

Ananta is the endless snake who circles the world.

Padmanabha (or Padmaka) is the guardian snake of the south.

Astika is half-Brahmin and half-naga.

Kulika.

Lord Shiva also wears a snake around his neck.

An important Hindu festival bearing ancient association with snake worship is *Nag panchami*. It is held on the fifth day of Shravana, and snake idols are offered gifts of milk and incense. It is said that the gaining of

wisdom, wealth, and fame are sought after by the offering of milk and incense to the serpent idol. Once again, the serpent is associated with illumination and the getting of knowledge.

Egyptian

Apophis, also known as Apep,¹³ dating back into the 1500s BCE, was the great water serpent god who slept in the mountains of Baku, rising with the morning star, daily attacks Ra on his journeys through the daytime sky and the underworld, and is subsequently destroyed each evening by Sobek, the god of the crocodiles.

As we have seen in most other religions and cultures thus far, the serpent seems to always hold some chthonic symbolism—that underworld characterization as the giver of life, possessing the creator aspect that seems ever present wherever the serpent is worshipped. Nowhere is this so evident and pervasive than in the mysticism of ancient Egyptian religion and worship. In the mythology and symbolism of Egypt exist some of the most glaring dualistic contrasts between reverent worship of the serpent and fear-based repudiation.

The Egyptians' reverence for the serpent's life-giving powers probably arose, in part, from—once again—observing them shedding their skins, continually exposing a new resurrected body in the process. The god Atum, the ancient Egyptian primeval creator deity, is represented in the form of the serpent who seasonally shed his outer skin, a symbol of the continual life, death, and new life cycle. At one point, Atum prophesies to Osiris, the Egyptian god of the netherworld and final judgment, that he is going to destroy the entire world he had created and revert back to his serpentine form.¹⁴

Early-20th-century Dutch-born archaeologist Henri Frankfort, who spent his life reconstructing ancient Egyptian and Mesopotamian culture and mythology, said of the Egyptian serpent gods, “The primeval snake survives when everything else is destroyed at the end of time. Thus the serpent was strongly and continually associated with creation and eternal existence in the ancient Egyptian ethos. The Egyptians portrayed life itself by the image of the rearing serpent, and a serpent biting its tail was a common Egyptian emblem for ‘eternity.’”¹⁵

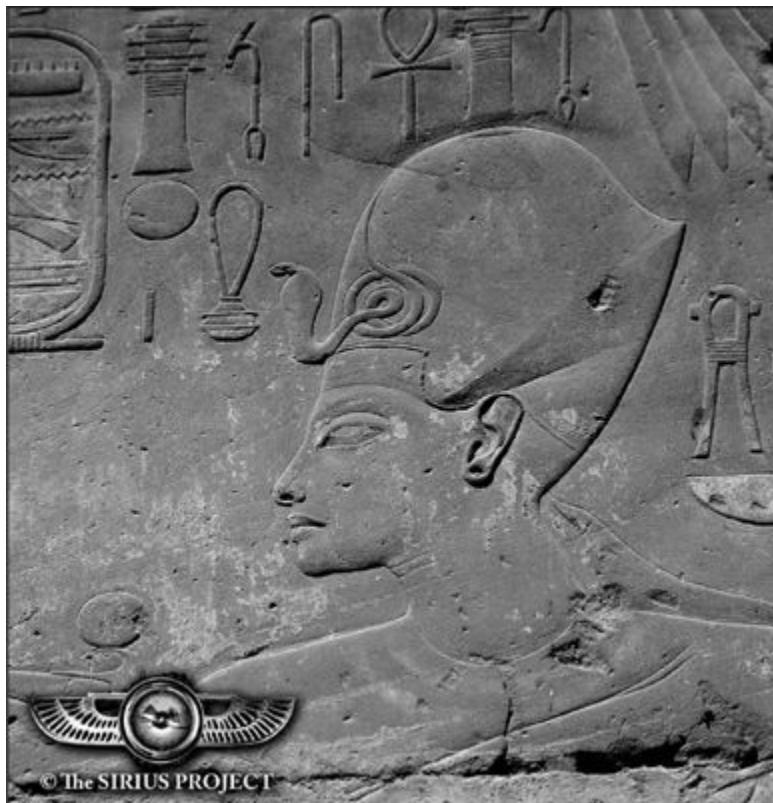

During the Egyptian Middle Kingdom (2030–1640 BCE), post-11th Dynasty, the god Amun came onto the scene as the patron god of the capitol city of Thebes. Amun in one of his manifestations was that of the serpent god named Kematef (“he who has completed his time”).¹⁶ At Karnak, during the beginning of the New Kingdom (1550–1090 BCE), Amun was merged with the sun god Ra, when Pharaoh Ahknaten uprooted the entire Egyptian system of religion and worship and decreed a new, monotheistic society. “Amun-Ra became the monotheistic, supreme state-enforced/endorsed god of Egypt during this period. Amun-Ra’s divine consort, the serpent goddess Mut (“the resplendent serpent”) gave birth to a son named Khonsu.”¹⁷ Together, this holy triad, in the Egyptian worldview, symbolized the perfect union both in the house of the gods as well as being representative of the supreme social structure of the royal family. And it was this family portrait that inextricably linked the house and family of the pharaoh to the mythological serpent of Egyptian mythology. But Ahkenaten’s monotheistic society lasted but one generation before it was overthrown and the implementation of a reversion back to the polytheism took place.

All periods of Egyptian history, from the earliest historical times all the way to the end of the New Kingdom, creation, fertility, birth, the goodness of the gods, rebirth, and resurrection were all embodied in the image of the serpent. Thermuthis was the serpent-headed goddess to whom were brought offerings at the time of harvest, thanking her for successful crops of both food and grape of the vine.¹⁸

The Father of Serpents, Geb, was the god of earth and “the father of the gods.”¹⁹ The snake was linked to life after death and the recurring cycle of life due to Egyptian obsession with the quest for eternal life, and he became a symbol of survival after death and even resurrection among the ancient Egyptians. In the *Egyptian Book of the Dead*, sometimes referred to by its more precise title, *The Book of Going Forth by Day*, in chapter 87, we are told that transformation into a serpent upon death gives new life to the deceased.²⁰

A serpent goddess in pre-dynastic Egypt set the stage for her veneration as an enduring symbol throughout the rest of dynastic Egyptian history. The most important serpent of Lower Egypt was Wadjet (“the green one”) who eventually became the symbol of a unified Egypt and its royal house. It was

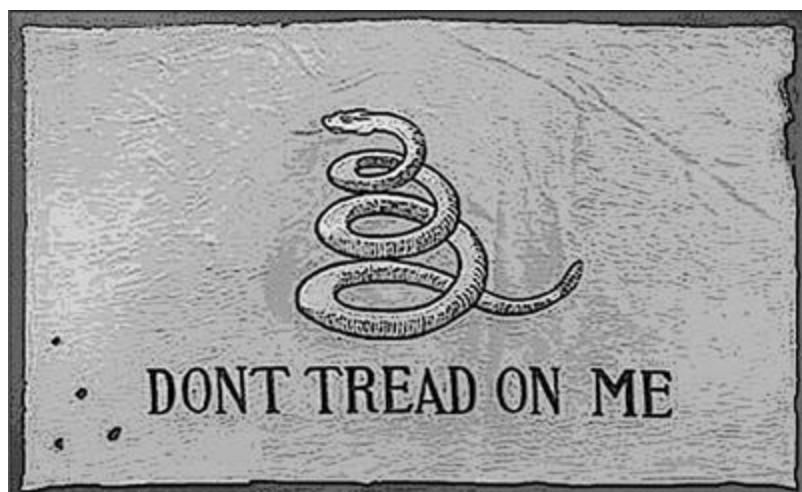

this serpent goddess whose name became synonymous with the general Egyptian term for *cobra* and the foundation for the creation of the symbol of the uraeus, the standing figure of the cobra found most often as the headpiece on the royal Egyptian crowns. The cobra/uraeus became such an important piece of Egyptian iconography that the life of the Pharaoh became known as the living years of the uraeus.²¹ Wadjet not only became physically represented on the Pharaoh's crown as his guardian and protector, but eventually was bestowed the title of the Eye of Ra. Her green color, significantly, became the color that represented resurrection in ancient Egypt, and Wadjet, also referred to as "the green one," embodied the forces of health and fertility. As with most gods out of antiquity, you can quickly see how numerous titles continued to be added on, as the powers and influence of the god evolved in worship (Wadjet: the green uraeus of the Pharaoh, the Eye of Ra, the protector and guardian of the life of the Pharaoh, the power of fertility and good health).

The crown of 18th-Dynasty Egypt, clearly showing the serpent figure. Copyright Sirius Project, Dr. John Ward, and Dr. Maria Nilsson, Luxor, Egypt. Used by permission of the Sirius Project.

Representing the oppositional character of the Egyptian serpent was the Serpent God of Darkness, the winged, fire-spewing Apophis. What Wadjet was to all that was good in ancient Egypt, Apophis was her counterpart, representing the demonic forces, evil gods, and powers of the bleak underworld. Apophis was the serpent of darkness, in complete opposition to the sun god Ra, who was the light of the world. But Apophis, albeit the antithesis to Ra, was never more powerful. He simply counterbalanced the serpent Mehen (“the coiled one”) who was the protector of the sun god Ra, assisting him on his journey through the realm of night to be reborn every morning.²² And as you find in many cultures and religions, the powers of darkness are thwarted by the power of good. As Satan is to God, so Apophis is to Ra, with minor alterations to the functionality.

It has been said time and again that the ancient Egyptians were utterly preoccupied with death—at least the royal family’s, as far as can be seen. Their entire lives, especially when a seated Pharaoh, were consumed with the afterlife and the resurrection. There is an interesting entry in the Pyramid Texts, the funerary papyri of ancient Egypt. In these documents is listed something for which there is very little explanation: the “snake game,”²³ presumably a test of sorts, played out in the afterlife when a Pharaoh died—a game he has to win. How interesting a tie to modern Christianity would that be!? The notion of an Egyptian judgment, test, or fist-a-cuff in order to enter the beautiful wonders of the afterlife seem a colloquial version of a much greater religious prime.

The Gadsen Flag: “Don’t Tread on Me.” Image copyright of the author.

Don't Tread on Me

Being an American and a citizen of the United States, I cannot overlook the serpent symbolism in some of my country's own iconography, continuing a long tradition of the snake making its appearance in the cultures of humanity. The Gadsen Flag, commonly recognized as the yellow "Don't Tread on Me" banner, emblazoned with the coiled rattlesnake, was named after Christopher Gadsen, a colonial general and statesman. Benjamin Franklin wrote of the rattlesnake as a symbol for American vigilance:

I recollect that her eye excelled in brightness, that of any other animal, and that she has no eye-lids—She may therefore be esteemed an emblem of vigilance. She never begins an attack, nor, when once engaged, ever surrenders: She is therefore an emblem of magnanimity and true courage.—As if anxious to prevent all pretensions of quarreling with her, the weapons with which nature has furnished her, she conceals in the roof of her mouth, so that, to those who are unacquainted with her, she appears to be a most defenseless animal; and even when those weapons are shewn and extended for her defense, they appear weak and contemptible; but their wounds however small, are decisive and fatal:—Conscious of this, she never wounds till she has generously given notice, even to her enemy, and cautioned him against the danger of stepping on her.—Was I wrong, Sir, in thinking this a strong picture of the temper and conduct of America?²⁴

The serpent has always been associated with strength and influence, despite its dualism as both a creature to be feared and revered. It can be asserted, however, that given such overwhelming evidence from texts and inscriptions, the ultimate duality in nature and perception of the serpent was illustrated by the need to have the serpent demonstrably enact both supreme goodness as well as ultimate evil among the ancient Egyptians, and that serpent imagery was incontrovertibly associated with the afterlife, resurrection, and eternity, as with so many other serpents in so many other religions and cultures.

PART II
The Serpent in Alien Subculture

Chapter Four

The Reptoids...Reptilians—No, Wait...Reptilian-Humanoids

As you have seen, the key to understanding the connectivity of the serpent to Reptilian/alien mythos is completely predicated on having an understanding of how the serpent's role became so important in human history—more specifically, to people, themselves. Believe what you will about spirituality, religion, science, or anthropology, the serpent figure has played prominently in the lore of ancient theory, and has become the rock star of current alien conspiratorial thought, the theory itself becoming the “mother ship” for all the varied, extraneously divergent sub-theories making the rounds in the circles of the ufological faithful. Make no mistake: The secret history of the Reptilians is as much a manufactured “religion” as are the snake and dragon cults from the depths of our anthropological past. That does not mean they do not exist in some form. If that was the final conclusion, this book would end right here.

The Bacilica of Reptilica

Gnosticism will tell you that the truest sense of theology is psychology. I would add anthropology to that mix—and that claims made about God or gods, are in their truest sense, actually only projections of humanity, the reflections of who we deem ourselves to be. After all, religion is humankind’s attempt to fill the god-shaped vacuum that exists in the human mind and heart, creating and re-creating God in the form that we need Him to be; religion, of course, being something completely different than spirituality—certainly on the same chart, just a different emphasis. We project and extrapolate our needs onto what we think God should be, and—*viola!*—we have religion.

What is all this talk about religion doing in a section of the book that is supposed to be about Reptilian/alien subculture, one might ask? Intrinsically, it is because they are the *very same thing*. Humans have some deep primordial, psychological, physiological wiring that makes us want to know more about who we are and where we come from and where we are

supposed to go from there. Human beings have an innate need to know our roots, and discover the reasons we are what we are and why we do what we do, but then we incorporate our innate creativity to construct the landscape around us. We can take the minutest of causality and convert that to consequence, and in so doing, we may find ourselves constructing a psychological fortress that will house and protect the way we conceive our universe and interact with our surroundings. So let's take a brief jaunt into the psychology of the need for God and aliens and everything else in between. Those base needs sprout from the human psyche.

To get some grasp of why the mind works the way it does in regard to these matters of mythology, let's take a simple look to the “fathers” of modern psychology: Sigmund Freud and Alfred Adler.

Freud, although a pioneer in his field—some of whose ideas have been left behind as we learn more and more about how the mind operates—focused his research on the unconscious/subconscious mind and how it juggles innate biological motives that are hardwired into human physiology, alongside the brain’s ability to produce irrational thinking. Repressed, early memories were at the root of what Freud was looking for, and he referred to his methods as *depth psychology*, a going back to our roots to see what we’re made of and why we operate the way we do in the current. We hear so much about modes of operation and family systems when we are trying to root out the origins of behaviors, which ultimately was fleshed out for the first time with Freud’s research. This brand of looking-to-the-past-psychology *can* be applied corporately (to a group), but Freud was much more interested in how the *individual* formed these modes prior to cognitive awareness.

On the other hand, common sense and conscious behavior were the focus of Adler’s research, leading him to emphasize what he called *surface* or *context psychology*. He believed that cognitive social motives and intimate social interactions were what drove behaviors in people, and he was aptly dubbed the father of ego and humanistic psychology. His work in cognitive and family therapy led him to the conclusion that it was the interactive social structure between people¹—especially family members—that was the primary motivation for human behavior. The goal for Adler’s form of therapy was to focus on a form of daily living experience that made social interaction the primary focus.

Freud, generally speaking, filtered his view of human nature through a pessimistic view of the things that govern behavioral outcomes. He adhered to a Darwinian/Hobbesian philosophy, which basically states that man in the state of nature, according to Hobbes, has no idea of moral goodness, and therefore must be naturally wicked; he is vicious because he does not know virtue. Throw a little “survival of the fittest” into the mix, and you have the rudimentary basics of Darwinian-Hobbesian Theory. (Hold on, psychologists; I’m going somewhere with all of this.)

Adler had a much more optimistic approach to the foundations of cognitive behavior, following a more or less Rousseau-ian/Humanistic philosophy, which espoused that human nature is innately good, and that society, our surrounding, and environment are the corrupting force that transforms man into self-interested/self-actualizing people.

The first man who, having fenced in a piece of land, said “This is mine,” and found people naïve enough to believe him, that man was the true founder of civil society. From how many crimes, wars, and murders, from how many horrors and misfortunes might not any one have saved mankind, by pulling up the stakes, or filling up the ditch, and crying to his fellows: Beware of listening to this impostor; you are undone if you once forget that the fruits of the earth belong to us all, and the earth itself to nobody.

—Jean Jacques Rousseau, *Discourse on Inequality*, 1754

Sense of self, Freud contended, was determined by what was passed on to you from your parents, immediate family, and social externals, such as the environmental factors of familial relations, parenting, and social interactivity that took place when we were infants and small children—as well as decisive, life-altering experiences as we grow older. We are not only influenced, but governed and manipulated by our past experiences, so in getting to the roots of who you really are and why you act in certain methods and modes of operation, you have to return to your foundations and the starting points that launched certain lifelong behaviors. Freud promoted the retracing of your steps to see where you came from, the influences of that past, and how you’ve gotten to where you are in the current. Your personality and present modes of operation are, therefore, determined by your earlier environmental influences.

Adler believed that people are absolute free agents with the will to determine their own personality via their own cognitive choices and reliance on their own innate creative selves. If you want to know who you truly are and why you are doing what you're doing, *in the now*, look *ahead*, and consciously move yourself forward toward what you have determined you want to be. When you focus on your future goals and ambitions, you align your personality with what it is you want to become and achieve. Freud, conversely, endorsed something called *efficient causality*—those experiences that push us forward from behind, making us what we are in the present.

“We do not have knowledge of a thing,” purported Aristotle, “until we have grasped its why, that is to say, its cause.”²

In stark contrast, Adler, much like Freud’s early associate Karl Jung, advocated *final causality*, that which pulls us forward, from that which we determine lies ahead. The difference in causalities is the source: either influence from the past (of which we have no control) or influence from the future, or that which we create and ultimately control by our cognitive actions.

Adlerian philosophy observed that, on an innate level, human beings *feel inferior* and that these feelings of inferiority—or, better, a sense of feeling lost in an infinite world and universe—are the motivating force, the fire in the belly, the drive behind all personal striving for accomplishment and attainment of personal goals. In a sense, we start with absolutely nothing—perhaps even a deep insignificance in our own estimation—and we work our way up to what we *choose* to become, persistently building upon each successive failure and accomplishment. We *strive for excellence*—superiority, if you will—in order to compensate for the deeply innate feelings of inferiority. These are the things that push us to be better and to strive for being the very best we can be. This isn’t about seeking superiority over others; it is about expressing and actualizing the drive toward perfecting ourselves. Eventually Adler expanded this idea of striving for the *ideal self* to striving to create a superior or perfect society to go along with it, and that our creative self is free to make up any sort of world it envisions and puts into implementation. This, however, was in contrast to German psychoanalyst Karen Horney, a contemporary of both Freud and Adler, who pushed her idea that humans don’t strive for superiority; they strive for a

self image built out of *idealism*. People don't believe their real self is acceptable, so, out of necessity and psychological survival, we create—out of whole cloth—an *idolized* self—the thing we think we *should* be.³

Do you see where this is going?

The entire notion of a race of Reptilians may be simply explained as a thing we've *devised from our own imaginations*. Just as we have devised religions built on spiritual experience and theory, we have done the very same thing with the notion of extraterrestrial races that live and operate behind the scenes of humanity. Just as with religion, there are things we call "evidences," yet no solid, empirical facts to back the claims, with the exception of historical studies and research that reveals a past history rife with nothing more than myth building within myth building within myth building. Simply go to your computer and type in the word "reptilians" (as I just did), and you will find more than 1,630,000 entries, and in the top 10 sites that appear in the list, half of them take you to something written by or based on the work of Zechariah Sitchin and David Icke, a self-proclaimed messiah, and the rest start off with phrases such as the following:

"Reptilians (also called reptoids, reptiloids, or draconians) are purported reptilian humanoids that play a prominent role in science fiction...."⁴

"Description: Typically, Reptilians are described as 6 to 8 feet tall, bipedal, having scaly green skin, have a bad odor, have large eyes usually yellow or gold with...."⁵

"The Reptilian Aliens which are called Reptoids are proportional in size to modern humans. They have a snake like or lizard appearance...."⁶

"I'm not claiming these people weren't 100% human at one time, what I am saying is that they invited the control and bodily takeover of Reptilians through blood...."⁷

"The teachings of the reptilian Ea, thereafter referred to as the esoteric mysticism of the snake brotherhood, caused a major shift in the perceptions of reality for...."⁸

"The Reptilians are the creation of the Carians, their parent race. They evolved on a planet...."⁹

“David Icke - The Reptilians - the Schism - Obama and the New World Order...Reptilian Experiencer and Author ‘Susan Reed’ Found Dead in the Bahamas....”¹⁰

“Alex Collier - On Reptilians - ETs and The Global Connection. - Alex Collier - On...Cosmic Explorers - Different Reptilian Factions on Earth. - Credo Mutwa On....”¹¹

“Reptilian influence comes via Satanism which they created, and that controls Freemasonry (Phil Schneider found that the UN was run by tall grey aliens)....”¹²

At this point it may seem as if I am completely trashing and thrashing the Reptilian theory. In fact, I am doing nothing of the sort. In order to find what can withstand scrutiny and the boiling off of the dross, it is necessary to apply the “small s” skepticism of questioning everything— but not to point of offhandedly dismissing all. That’s the job of “big S” Skeptics such as Michael Shermer, who sustains his income in much the same way as the paranormalists, ufologists, and weird-o-logians he decries. If you can’t trust a researcher of the paranormal because they make money off of books, events, and TV, you certainly can’t trust those who do the same thing on the other side of the philosophical fence, for the same reasons.

I have found that there are “small s” skeptics and “big S” Skeptics. I and many other like-minded philosophers are in the “small s” camp; we approach things with an open, yet questioning mind. We want to *know* the answers, but we do not do what the “big S” Skeptics do, and that is to dismiss questioning and make empirical statements such as “No it isn’t”; “No it doesn’t”; “You’re completely wrong” without application of research, even if it’s a fringe element. “Big S” Skepticism has (as has science, in many degrees), in proclaiming themselves better, more knowledgeable, or possessing of keener reason and more erudite insight, become the surrogate for religion, faith, and any train of thought outside what they deem as acceptable science or mainstream thinking. In a very real sense, Skepticism and science have established themselves as the “new religion,” especially when they spend so much time decrying, and so little time researching the questions that fall outside established academia. The New Absolutism is that there are no absolutes.

Bringing this back to the psychological, it is clear that the human psyche is comprised of both the Freudian and Adlerian modes of primary expressions of the psyche: We humans have both the need to look to our pasts to determine where we came from, and the need to allow our future aspirations to pull us forward. Out of both, we create our present realities and live within the frameworks we compose for ourselves. Does this, then, bring to utter discredit the theory of alien interaction with human beings? Does it dismiss the completely the notion that there are races of extraterrestrial (ETs), interterrestrial (ITs), and ultraterrestrial (UTs) dwelling among us and influencing activity on this planet? Not necessarily. Just as I cannot dismiss the existence of God or the veracity of ancient religions on the simple notion that they are not quantifiable by the scientific method, I cannot dismiss the possibility that we have been visited by beings outside the realm of our sciences or understanding. This is where intelligent discussions on these matters collide as opposing, approaching trains on the same track.

“Oy!” you say, “Psychology! Religion! God! Mythology! When are you going to give us the aliens?” Hang on, folks; they’re comin’.

The proofs and evidences that exist to substantiate a factual claim that a Reptilian race exists and operates on this planet are as evasive as the proofs and evidences required to prove the existence and work of God in humanity or the existence of ghosts of dead people materializing at midnight on the third full moon of every year. In short, there is no solid proof beyond personal experience and anecdotal evidence. Has that lack of measurable quantifiability prevented humanity from its historical, perpetual worship of God, gods, and other forms of divinities? Not in the least. As with religion, Reptilian/alien theory has its experiencers, such as the one mentioned in the opening of the introduction of this book, but they become the promulgators of personal, individual contact and intercourse (not limited to a sexual understanding) that have seen the unseen, spoken with the invisible, and learned the secret knowledges not known to others. These are the founders of “religious thought” in the alien field. I don’t say this to cast any sort of negative light on their claims; I merely make the comparison to the spread of ancient religion and the evolution of religious thought within the alien culture. Just as Elil became Elohim, and Enki/Ea became Jehovah, so the progression of Reptilian esoterica has developed into its current state. The evangelists of the theory are as convinced in their perceptions and

evidences as are the professors and theologians in different trains of religious thought, who many times are found to overlap the two fields. And why do they do that? Because the two fields are all one-in-same; they are outward expressions of inner desires—projections of what we want the world to be. That can be placed squarely on the shoulders of both religion and alienist trains of thinking in that they both hail to the spiritual make-up of the human psyche, those parts of the spiritual composition of individuals that need something to answer the greater questions of what lay beyond the explorable sciences.

Insert caveat here: Just because science and psychology seem to indicate that these things might not be so, does not qualify as the final answer on the topic. Remember: There exist some veils that we simply cannot pierce.

“Professing themselves to be wise, they became fools.”

(Romans 1:22)

Where is the wise man? Where is the scholar? Where is the philosopher of this age? Has not God made foolish the wisdom of the world?

(1 Corinthians 1:20)

Everyone is senseless and without knowledge; every goldsmith is shamed by his idols. His images are a fraud; they have no breath in them.

(Jeremiah 10:14)

How can you say, “We are wise, for we have the law of the LORD,” when actually the lying pen of the scribes has handled it falsely?

(Jeremiah 8:8)

My Reptile Can Kick Your Lizard’s Ass

As we have seen, the archetypical serpent of ancient religion is certainly not the end of the story. The veneration of the snake in the ancient religious cultures of Sumer and Israel, China, Africa, and the ancient Americas is not where the influence of the serpent figure comes to a screeching halt. The presence of the serpent is not limited to the ancient religions of the world, though those religious/cultural mythologies are the philosophical foundations for ongoing reptilian mythologies. The psychology of needing or wanting something greater, built on human need for something to

eliminate the foundational struggles of the past, has created some short coattails on which ride the current Reptilian and alien mythologies.

And perhaps this is the direct result of a humanity that wants something more than the traditional tales and entrenched religions. People are seeking for something more, so they create what they need and what they want to be. This, however, does not diminish the possibility that these notions have great efficacy, archaeologically, historically, cosmologically, and philosophically.

Our historical folklore is filled with imagery of the serpent reptile, ranging from science fiction and fantasy, to religious legends and modern conspiracy theories, ufology, and alien mythos to mysterious cryptozoological beings. The Reptilians, as we have come to understand them in current-day mythology, can be found firmly ensconced in alien,

otherworldly, and hollow earth lore as well as the theories of a race of intelligent, supernatural, inter-dimensional, highly developed reptile-like humanoids. They have become the stuffs of cult fiction, pseudoscientific theories, and the topics of the writings of New Age conspiracists.

David Icke, Riley Martin, and John Rhodes, stand out among the most recognizable claimants promoting the Reptilian existence and conspiracies, and though there are similarities to their versions of these beings, they also represent vastly differing theories as to their origins and interactions with the planet earth and the human race. None of them is anything less than malevolent. Martin's book, *The Coming of Tan*, is a memoir of his experiences as a sharecropper's kid who was taken on board an alien spacecraft. In his book he claims to have a personal knowledge of a race of Reptilians known as the Targzissians, an evil race of Reptilians who manage to coexist with six other types of aliens on a mother ship near Saturn.

On his [tumblr.com](#) profile, Rhodes says of his himself and his work: "My name is John Rhodes and I am a researcher, explorer and lecturer in the realms of ufology, occulted archaeology and metaphysics. In this report, I will be providing you with compelling evidence, gathered over many years of research, as to our genealogical connections with the overlord reptilian alien race and the occulted historical archaeology that clearly demonstrates that these reptilian beings have coexisted on this planet Earth with us for thousands of years prior to our current era."¹³

David Icke speaks of good and bad Reptilians fighting it out for domination of the Earth while clothed in cloned human skin, mostly infiltrating the royal families of Europe. (We will focus a bit on Icke in [Chapter 7](#).)

Reptoids is a descriptive manufactured word defining Reptilian-Humanoid beings. It is the most culturally popular name used to describe these extraterrestrial beings, although they are also referenced as dinosauroids,¹⁴ or lizardfolk or lizardmen (both *Dungeons and Dragons* terms, for you gamers out there). Other names include Draconians,¹⁵ which draw their name from the many proponents of the Draconian constellation as the point of origin for these otherworldly visitors, as well as Saurians and the hypothetical Dinoauroids.¹⁶ Although you may seek out other source points, they are generally found referenced by name in the plethora of

Internet sites that neither state source material nor point of origin, yet are found repeated over and over again into the countless hundreds of thousands. In these accountings the Reptilians are often described as having soft, scaly skin that is green or golden-brown in color. Yet, despite their similarity to Reptilian archetypes throughout mythology, no one has produced even a modicum of proof of the existence of Reptilian-Humanoids, and allegations of their existence can at best be referred to as crypto-zoological or pseudoscientific as opposed to a recorded genus or species.

Dale Russell, a Canadian-born geologist and paleontologist, was the first to purport an extraterrestrial theory as to the extinction of the dinosaurs in the form of an asteroid collision or supernova.¹⁷ He is also invented what became the highly controversial “Dinosauroid Thought Experiment,” a process that incorporates the employing of imaginary situations to help us understand the way things really are, or in other words, a hypothetical imagining of what could be if certain criteria had happened. This thought experiment resulted in his highly controversial, previously mentioned Dinosauroid.

Reptilians and the claims to their existence are nothing new. They are not simply the product of the mid-20th-century ufological explosion, nor are they a science fiction invention of Hollywood, however well-capitalized they might be in that market, with movies such as *The Alligator People* (1959), *Enemy Mine* (1985), *Conan the Barbarian* (1982), *Krull* (1983), *V—the Miniseries* (1984), the *Star Trek* franchise, and the list goes on. Experiencers, contactees, and abductees have, for centuries, made claims that they have been in contact with Reptilian peoples, yet there still exists no substantive proof beyond the stuffs of anecdotal evidences and personal experience as to just who the Reptilians are and where they actually come from, if indeed they exist as a race at all. Arguments have been made that Reptilians are Earth-evolved beings that expanded out into the cosmos long ago, and others will conversely argue that they came here from the aptly named constellation of Draco, hence the “Draconian” moniker.

According to proponents of the Reptilian theory, there has been enough information derived from the many contactee and experiencer reports and stories as to build a formidable trove of information about these beings. As a result, the Reptilian conspiracy *believers* emphatically insist they are in a

position to *deliver the truth* behind the origins of the Reptilian aliens, revealing precisely who these beings are and exactly what is behind their hidden agenda. Those unwilling to listen and heed the warnings will be doomed to fall under the influence and enslavement of the Reptilians.

After researching copious amounts of information on the origins of these Draconian Reptilians, I was able to boil down the varying stories, hypotheses, and myriad personal accounts into an acceptable amalgam that bears all the elements of the following:

The Reptilians evolved on two separate planets, one being Earth and the other a planet near Draconis, the brightest star in the aptly named serpentine-shaped constellation of Draco (Latin for “Dragon”). “Draco” is circumpolar—that is, never setting—for many observers in the northern hemisphere’s night sky. It was one of the 48 constellations listed by second-century astronomer Ptolemy and remains one of the 88 modern constellations today. From these two vastly distant planets of origin, two distinctly different races of Reptilian would evolve and help shape our planet and civilization as we know it today.

As the two Reptilian races evolved, it was known to the Draconian Reptilians, an evil spirited, warrior species, manipulative and deceitful in nature, that the Earthly Reptoids were a peaceful, good-hearted race. The Draconians were so evolved that, like the Arcturians, they surpassed the physical limitations of their material bodies, eschewing—despite their evil nature—their carnivorous need to eat and digest solid foods, developing the ability to ingest their nutrients through pure energy alone. The only problem was that their required energy food source was bad, evil energy. Accordingly, in order to survive, the Draconians must ingest pure evil energy, and it is this fact alone that turns simple self-preservation for the Draconians into an evil agenda.

In order to survive, the Draconian Reptilians are also rumored to have created the race that we have come to know as the Alien Greys as their slave race cloned as a source for nutrition. As the Draconian civilization continued to grow and expand, however, there was wrench in the gears, for as the

Reptilians grew in numbers, so did their slave race of Greys. Soon the Greys, weary of being drained of their negative energy by the evil race of overlords, revolted, resulting in their freedom from the consumptive bondage of their creators, the Draconian Reptilians. They left their captors and, apparently, continued on with their own agenda.

But now, bereft of their evil-energized clone slave race, the Draconians desperately needed new sources of nutrition. So they set out in their mighty but evil fleet of starships, seeking other planets that had populations on which they could feed. But, of course, the energy of those populations had to be comprised of bad and evil energy, so the search for the right planet was painstaking and long. One can only assume the cannibalism that must've taken place during those long generations of space travel, furtively seeking a source of food.

One day, the fleet was all abuzz, for a new source of energy consumption had been located! The Draconians had stumbled across the planet Earth. Their discovery of Earth is difficult to reconcile with the fact that they seemed, by various accounts, to already know that the Reptoids of Earth were benevolent and good-spirited, and that represents one of the many gaping cracks in the narrative. As the story goes, it was here they observed the highly advanced, yet peaceful race of Reptilian-like aliens known as Reptoids. But far more important to the Draconians were the human beings indigenous to Earth. They set a plan in motion to utilize the human population on Earth as the source for their evil energy nutrition. They first needed to eliminate and remove the Earth-evolved Reptoids in order to launch their Reptilian Agenda and manipulate a race of evil-minded humans for their energy consumption.

At this point, there are gaps in the storyline, but after successfully forcing most of the Reptoids to leave the Earth, Draconian Reptilians began to work their way into and influence the civilizations of Earth's ancient past. Rumored reports state that some Earth-evolved Reptoids still exist beneath the streets and farms of our planet, and within the

subterranean caverns of the Earth, secretly operating as freedom fighters for the human population of Earth, countering the Draconian Reptilian Alien agenda.

Today, power struggles among the Alien forces have thwarted an outright invasion of our planet. Reptilian Aliens from the Draco Constellation still have a fixed eye on our planet and have emissaries here on Earth performing the vital tasks to ensure that humans remain on the track of corruption, hatred, and egocentric goals. The more evil, the more food.

Now, pull this leg and it plays “Jingle Bells.”

I honestly did not know, after reading several sources on the Draconian story, whether to laugh uncontrollably or simply shake my head slowly from side to side. And you thought the story of the Garden of Eden seemed implausible.

After dissecting the various stories and myriad accounts of the so-called Reptilian Agenda, the preceding story was what emerged. Granted, some of the versions I encountered were meticulously well-written, providing “research notes” (mostly citing Sitchin, Icke, and others) and eloquent narrative. Others read like a fifth-grade essay project, but for the most part, they all said, pretty much, the same thing—reading like the script to a poorly conceived, made-for-television, B-grade science-fiction thriller with even poorer CGI. If you want a weekend’s worth of good entertainment, simply conduct an Internet search on the “Reptilians,” then start reading the various versions of where they came from, how they got here, and what they’re up to. Then note, as you read, the absolute lack of source material and references, and you become as frustrated as I was attempting to locate any accounts that bore even a modicum of presented fact beyond the individual author’s *feelings* and ungrounded, unsubstantiated storytelling (and in most cases, not even good storytelling).

In short, if these accounts were all we had to go on, I would think it would be pretty easy to chalk this all up to overactive imaginations and erstwhile yet sloppy interpretations of personal experiences set against an even looser grasp of history and the anthropology of myth.

Hitting Below Orion’s Belt

“There are good reasons to assume the man does not experience his fellowman as a member of the same species.... For him different language, customs, dress and other criteria perceived by the mind rather than by instincts determine who is a co-specific and who is not, and any group which is slightly different is not supposed to share in the same humanity... precisely because he lacks instinctive equipment, also lacks the experience of the identity of his species and experiences the stranger as if he belonged to another species; in other words, it's man's humanity that makes him so inhuman.”

—Erich Fromm

The fact that there are so many stories and theories attempting to establish the existence of extraterrestrial and intraterrestrial Reptilians on this planet speaks to one of two things:

1. Extraterrestrial Reptilians actually exist and interact with humanity based on the over-abundance of stories and experiential accounts.
2. The over-abundance of stories provides a distinct picture of how “believers” in certain phenomena attempt to establish their case, while presenting absolutely no quantifiable evidence, thus contributing to an ever-increasing cache of unsubstantiated stories and information.

In other words, there's a lot of information out there that is the product of over-worked imaginations based on the supposed scholarly presentations of a very small handful of researchers.

It's like the existence of God and the hundreds of religions that have sprouted from that one particular idea: Everyone starts with the root concept and either mimics what has been taught, or builds their own offshoot denomination or religion. In recent years I have read more accounts of the Reptilians on the Internet that are precise, repetitive, word-for-word copies of theories presented by Zechariah Sitchin, David Icke, and others of like-mind, whom I would refer to as founders of the contemporary thinking on the Reptilian Theory, that I believe there are very few original thoughts or unique research out there. Most of these accounts are presented without any reference to their source material, nor any evidences or proofs establishing

their cases, but contain the very same language, parroting the information presented by one or two major proponents.

Despite believing that there is something that has interfered with and interrupted the bloodlines of humanity, I tend toward the latter, above, in that there seems to be an awful lot of scrambling to make a story fit the preconceived notion, as opposed to empirical data to substantiate the claim. And there exists a completely different take on the entire notion of extraterrestrial life making contact with the human race. The astrobiologists and exo-biologists who study life as it may or may not exist on other planets have a daunting task at their fingertips. Though we have not even mastered the intricacies of human life and other forms of life on *this* planet, the study of places billions of light years from where we exist is theoretical at best, impossible at worst, yet we still engage in the study and research, all because we want to have some idea of what is out there—and speculate on whether or not *what is out there* may know anything about *us*. On top of that, to even suggest that there might be life out there that is similar if not more advanced than life on Earth is still met with general ridicule and eye-rolling scoffs. To some who criticize, the notion flies in the face of reason and/or religion. To others, it is simply an irrelevancy that when stacked against the tumultuous intricacies of life on this planet, let alone within local governments, politics, poverty, war, communities, and even families, is completely without meaning. If we can't figure things out *here*, then how are we supposed to try to connect with something that exists in a place beyond the stars, so out-of-context and out-of-reach to us humans? "If they exist, why don't they just fly their little starship space saucers over and say 'Hi!'" is the arrogant response, and "If they had that technology, why would they want to come *here*?" is the answer for those who believe that our understanding of science is the unit by which we measure the dimensions of the greater galaxy and universe. Perhaps, for extraterrestrial life, contact with our species is as risky to them as Fromm suggests in the quote here, defined by humanity's intolerance to his fellow man.

I am as dichotomous on the subject of extraterrestrial contact as I am on the idea of God. To evangelicals, I am a heretic and a reprobate—a back-slidden blasphemer who has abandoned the true faith. To the atheist, I am a Bible-thumping, Word-of-God preaching, Christian apologist. And that is because I am decisively middle of the road in that I accept the unprovable

possibility that there is a God, but I have deeply rooted questions and doubts, and seek better answers than the regurgitated pap offered up in most churches.

I have the very same dichotomous approach when it comes to my stance on ancient alien theory and the existence of Reptilians and Greys: I want to see the evidence that doesn't force my hand to squeeze the square peg into the round hole. Yet, based on my multicultural religious studies, I have very little doubt that this planet has been visited by non-human intelligences. Call them gods, devils, angels, demons, or extraterrestrials, it's not even a stretch for me to believe that in the vastness of the outward moving, ever-expanding universe there are not races intelligent and advanced enough to have come to this place and possibly even still live here, as colloquial and local as that may seem. After all, ancient myth combined with historical documentation, film footage, experiencer and abduction cases, leaked government information, and numerous other data speak loudly to their existence. The bigger questions for me, as with many who have come before me, are: "Who are the main players?"; "How do we fit into the scheme?"; "After we know these things, where will that take us?"

The entire history of the alien mythos repeatedly asserts the existence of many different types of alien beings present on this planet today. Anecdotally speaking, even I am only one step removed from a dear, old friend who encountered and became intimately involved with a mysterious man who reported that he worked for a facility in New Mexico that sank dozens of stories under the ground, headquartering several dozens of alien species that live and interact on this planet. According to this shadowy character, these alien races have been restricted from any interference with human beings or their affairs, at least in the greater sense. But if this is true, why are we seeing an ever-increasingly number of experiencers and abductees repeatedly describing only two distinct types of intelligent life forms with whom they've interacted (the Greys and the Reptilians)? And why is it that *they* seem to have exclusive rights of interference with humans? If interaction between these beings and our own species has been occurring throughout history, as legend and myth could seem to indicate, then where is the substantive evidence as to their existence? Where are they from, and what is their business with, or interest in, us?

I am firmly convinced that the contact we have experienced with non-human entities is inextricably linked to the mythologies of the ancients and

that the contact we may be experiencing today has not only a metaphysical connection to the past, but a physical one as well.

The legacy of the ancient serpent has become the modern history of the Reptilian connection. Is there any substantive reality to it, or is it all simply the extrapolation of ancient mythology into the current age, all driven by the *need* to have something more?

PART III
The Serpent's Bloodline

Chapter Five

The Remnant of the Nephilim

¹When mankind began to multiply on the earth and daughters were born to them, ²the sons of God saw that the daughters of mankind were beautiful, and they took any they chose as wives for themselves. ³And the Lord said, “My Spirit will not remain with mankind forever, because they are corrupt. Their days will be 120 years.”

⁴The Nephilim were on the earth both in those days and afterward, when the sons of God came to the daughters of mankind, who bore children to them. They were the powerful men of old, the famous men. (Genesis 6:1–4)

It's a very familiar story to you by now. The Elohim came to the earth, according to the Old Testament's Book of Genesis and the apocryphal book of Enoch, and intermingled with humans. They chose women, cohabited with them, married them, impregnated them, and produced offspring: the hybrid race of Nephilim, the children of those Elohim who had left their place and come down. Prior to those events, one of the Elohim, forever known as the Serpent character, Nachash, had an intimate encounter with Eve in the Garden of Eden, revealing forbidden knowledge and impregnating her with his seed, producing the very first of the human-Elohim crossbred Nephilim, Cain. According to the religions wrapped around the events of the Book of Genesis, the consequence of this activity was the fall of humanity from the grace of God, spiritually ushering in the need for a system of blood redemption and a savior who would be their Messiah—the kinsman redeemer. The God of the Hebrews cursed the Elohim, Nachash, prophesying perpetual conflict between his offspring and the offspring of the human woman, Eve, who was the mother of all humanity. What followed in the biblical record were lengthy cataloguings of the descendants of Adam—which, we have noted, did not include Eve's firstborn twin son, Cain, as he was the child of Nachash of the Elohim. This genealogical record was set in place to establish the “pure” human

bloodline from which the kinsman redeemer was to come. What is glaringly left out of the biblical accounting, though, is the line of Nachash. We read that Cain was banished from Eden after murdering his younger twin brother, Abel. Exiled from Eden, Cain left behind the only two other people mentioned in the Bible as being on the earth at that time: Adam and Eve. He went out into a world void of inhabitants and civilization, east to the Land of Nod. Once there, the passage tells us that he made love to his wife (of course—what else would you do after being banished from the only place on earth?), whom he either brought with him from Eden—meaning she was one of his sisters not named in the account of the first family—or a woman he met in his wanderings. She, in turn, bore him a son, whom Cain named Enoch.

And there in the Land of Nod, Cain built a city, most likely a wooden enclosure around a few huts, in honor of his new son, and named the city after him, Enoch. Of the subsequent history of this little city we know very little, but of the name of the city we know a very great deal. Without entering into too much detail regarding changes in pronunciation that occur in the course of the development of a language, it seems necessary to point out here that the sound represented by the letter N is often reproduced as an R. The CH sound that terminates the name *Enoch* may be replaced by a K or G, or a GH sound. These sorts of linguistic changes are very common in ancient tongues, and in relation to biblical city mounds, or tells, the people living around these cities kept the name places fairly intact throughout the passage of millennia. This revealed a very important city in antiquity that appeared under the name *Uruk*, and a study of cuneiform soon revealed that this could equally well be pronounced *Unuk*, which was recognized as identical with the biblical word *Enoch*.¹

What is more interesting is that the name Uruk/Unuk became synonymous with the word *city*, and not simply a mere city, but a city of great historical importance. The word in its raw form actually means, “the First City.”

Nod [נוֹד] is the Hebrew root of the verb “to wander” [לְנַדּוּ] and is obviously an etymological causation intended to explain the wandering, nomadic lifestyle of Cain and his future putative descendants, the Kenites. This sort of play on words is typical of rabbinic writings and suggests that this is a later scribal interpretation, which was more than likely inserted to

suggest that Cain's descendants were without territory—in other words, nomadic. Additionally, the Hebrew language did not exist prior to the time of Abraham, who lived some 4,000 years after the time of Cain. The language Cain and his descendants would have spoken was probably a Nilotic/Kushitic language closer to Old Arabic (Dedanite). So, although Cain built the first city, his descendants were forever known as wanderers, those without home, territory, or place to exist. And these were the offspring of Nachash.

It is interesting to note that, though the Nephilim mentioned in Genesis 6 are offspring of the Sons of God, the bene ha 'Elohim, they are not the children of the serpent. Nachash was not their father. So the Nephilim of Genesis 6 are not the "serpent seed," though it is quite possible that the descendants of Cain had grown large enough to be part of the hybrid race of Nephilim that had encompassed all of the known earth, corrupting the bloodlines of humanity up until the time of Noah. There is no direct information on this point of detail, though it can be extrapolated from the rest of the information that this is probably so.

The Serpent Seed Doctrine

So many times and in so many ways, current Christianity operates under presumptions that the text from which they pull their doctrine has been accurately translated, or presents a factual accounting of what they think they are understanding. Never is this truer than when fundamental Christianity takes dogmatic stances on the person and character of Lucifer/Satan/the devil, as well as the passages used to substantiate his presence in the Bible and in important doctrine-establishing passages of scripture. The lack of careful examination of the biblical text about the Serpent Seed Doctrine reveals a complete misunderstanding of the figure of Satan. The biblical passages that are forced to support the theory that Satan is a fallen angel is a tragic theological conundrum in the churches of modern Christianity, because the result is a complete misunderstanding of several applied biblical passages, the result of which has created a corrupt doctrine that perpetuates a complete error about the creature known as Satan.

When YHWH (Yahweh/Jehovah), the Mighty-One, revealed Himself to Moses and had Moses write the Hebrew Torah (also known as the Pentateuch, the first five books of the Bible), there was not one single

mention of an evil angel named Satan, or a plurality of evil angels—or, for that matter, *any* being that could tempt you in your mind to transgress the law of God. In fact the main point of the Torah is to proclaim that there is only one Mighty-One, and that one Mighty-One is YHWH (Yahweh/Jehovah). In Exodus 20:2–3 we find these words:

²“I am YHWH (Yahweh) your Mighty-One, which has brought you out of the land of Egypt, out of the house of bondage. ³You shall have no other mighty one before Me.”

Deuteronomy 4:35–36 says:

³⁵Unto you it was shown, that you might know that YHWH (Yahweh), ³⁶He is the Almighty, there is none else beside Him. Know therefore this day, and consider it in your mind, that YHWH (Yahweh/Jehovah) He is the Almighty in heaven above and upon earth beneath: there is none else” (author’s emphasis).

The first point to understanding this Serpent Seed Doctrine, is to understand that it is generally looked down upon as an heretical doctrine by those who claim to have the truth of God’s Word” on their side. Before we say a single word about the doctrine itself, it is important to note that we are looking at it from a “religion-spin-free zone”—from a point of view that sees such statements as “Let’s look at this from the perspective of one and only true word of God” as being thickly entrenched in religion-making and religion-keeping, as opposed to fact-finding.

If you wonder what the Serpent Seed Doctrine is, well, you actually already know, if you have read this book up to this point. The Serpent Seed, Dual Seed, or Two-Seedline is a controversial doctrine according to which the Serpent in the Garden of Eden mated with Eve, and the offspring of their sexual union was Cain, thereby bequeathing a bloodline that threads throughout humanity. Bingo. There it is.

The reaction in fundamentalist Christian circles is *What!? Eve mated with Satan and bore the devil’s child?! And there is a line of descendancy? Impossible. Not in my Bible!* But you have to disavow yourself of contemporary notions and fictions such as the idea behind *Rosemary’s Baby* or such other works when attempting to understand these concepts. **Nachash was not Satan. He was not the devil.** He may not have even been Lucifer, despite the later works in the Bible attributing Lucifer/Satan/the

devil to the Serpent in the Garden. And keep in the forefront of your mind, the only biblical passages making this claim do not spell it out in precise detail, nor can they, generally, withstand the scrutiny of criticism on a linguistic level. *Never* is Nachash, the Serpent in Genesis, directly said to be Lucifer, Satan, or the devil.

Here are the few references in the Bible that some theologians use to establish that the Serpent in the Garden has anything to with Lucifer, Satan, or the devil. See what you think.

Ezekiel 28:11–19

Ezekiel 28:11–19 is considered to be the first extrapolated reference to Lucifer/Satan/the devil as being present in the Garden of Eden. It was written approximately 1,000 years *after* the writing of the Book of Genesis. It is a lament written for the fallen King of Tyre, and the Christian church has rendered its meaning to stand as a metaphor for Lucifer/Satan/the devil. In actuality, it is not about Lucifer/Satan/the devil at all. Here is how the authorized version of the biblical passage reads:

Lamentation for the King of Tyre
(author's emphasis throughout)

¹¹Moreover the word of the Lord came to me, saying, ¹²“Son of man, take up a lamentation for the *King of Tyre*, and say to him, ‘Thus says the Lord God:

“You were the seal of perfection,
Full of wisdom and perfect in beauty.

¹³*You were in Eden, the garden of God;*
Every precious stone was your covering:
The sardius, topaz, and diamond,
Beryl, onyx, and jasper,
Sapphire, turquoise, and emerald with gold.
The workmanship of your timbrels and pipes
Was prepared for you on the day you were created.

¹⁴“*You were the anointed cherub who covers;*
I established you;
You were on the holy mountain of God;
You walked back and forth in the midst of fiery stones.

¹⁵You were perfect in your ways from the day you were created,
Till iniquity was found in you.

¹⁶“By the abundance of your trading
You became filled with violence within, And you sinned;
Therefore I cast you as a profane thing
Out of the mountain of God;
And I destroyed you, O covering cherub,
From the midst of the fiery stones.

¹⁷“Your heart was lifted up because of your beauty;
You corrupted your wisdom for the sake of your splendor;
I cast you to the ground,
I laid you before kings,
That they might gaze at you.

¹⁸“You defiled your sanctuaries
By the multitude of your iniquities,
By the iniquity of your trading;
Therefore I brought fire from your midst;
It devoured you,
And I turned you to ashes upon the earth
In the sight of all who saw you.

¹⁹All who knew you among the peoples are astonished at you;
You have become a horror,
And shall be no more forever.”

However, there are many translation issues with the preceding verses, which render it to read as a figurative descriptive metaphor for Lucifer/Satan/the devil. On examination, it says nothing of the sort. Here is how the passage is rendered in the Hebrew language in which it was originally written. Compare it to the rendering of the passage above (again, author’s emphasis throughout):

^{11–12}And the word of YHWH (Yahweh) came to me saying,
‘Son of man, raise a dirge over the king of Tyre. Say to him,
“The Master YHWH (Yahweh) says this: You were once a *seal-print [exemplar] of perfection*, full of wisdom, perfect in beauty.

¹³You came into luxury, a paradise from Elohim, gems of every kind were your covering, Sardin, topaz, diamond, chrysolite, onyx, jasper, sapphire, carbuncle, emerald. Your jingling beads were of gold, and the spangles you wore were made for you on the day of your birth. ¹⁴I had provided you with a guardian cherub; you were in the set-apart mountain of Elohim, and you walked proudly among the stones that flashed with fire. ¹⁵You were blameless in all your ways from the day of your birth until iniquity came to light. ¹⁶Your busy trading has filled you with lawlessness and sin, so I thrust you down from the mountain of Elohim, and the guardian cherub banished [or destroyed] you from among the stones that flashed like fire. ¹⁷Your heart has made you arrogant because of your beauty. You have corrupted your wisdom because of your splendor. *I have thrown you to the ground; I have made you a spectacle for other kings.* ¹⁸So great was your sin in your wicked trading, that you have desecrated your sanctuaries. So I kindled a fire within you, to consume you. I left you as ashes on the ground for all to see. ¹⁹Of the nations, all who know you were aghast; you became waste, gone forever.””

The major textual problems with the previous passage require a highly technical linguistic research, bringing in many intricate details from not only the Hebrew language, but also the LXX (the Septuagint, or Greek translation of the Old Testament). So rather than write 10 pages of textual criticism, linguistics, and translation issues, let me simply state that the comparatives made between the King of Tyre and Lucifer/Satan/the devil are insufficient translations, and one needs to go back to the Hebrew and Septuagint to understand the proper translation as rendered in the second version of the passage above.^{2,3}

Job 38:7

Job 38:7 is also used to speak of the Serpent being Lucifer:

“When the morning stars sang together, And all the sons of God shouted for joy?”

Because Lucifer/Satan was a created being, and because Eden was guarded by cherubim after the Fall, some scholars say that Lucifer/Satan must have been in Eden between his creation and the fall of humanity. Many scholars believe, based on Job 38:7, that all the angels, including Lucifer, were created on or before Day Four of creation week along with the sun, moon, and stars, only two days before the creation of Adam and Eve. But remember: Lucifer was a member of the Divine Council, one of the Elohim, the “Sons of God.” Though Lucifer may have been the Serpent, this verse says absolutely nothing about him being so. This verse also establishes for me that the “days” of Genesis were more than likely not 24-hour, solar days, but probably epochs of time. If they were literal 24-hour, solar days, then Lucifer decided he would take over God’s throne, rebelled, and fell from grace in roughly four to seven days from his moment of creation. (That’s another topic that we could trail off into for many pages.)

2 Corinthians 11:3

2 Corinthia isn 11:3 mentions the Serpent in the Garden, but make no connection to Lucifer/Satan. The following is a comparative statement, not an identifying one.

But I fear, lest somehow, as the serpent deceived Eve by his craftiness, so your minds may be corrupted from the simplicity that is in Christ.

Book of Revelation

The following three passages are taken from the writings of the Apostle John, who in his old age was imprisoned for the faith on the Isle of Patmos. While there, he had extraordinary prophetic visions that he recorded in what is known to be, chronologically, the last book written in the Bible’s New Testament, the Book of Revelation. Here are the three references he makes to Satan, whom he calls the “great dragon.” They are not presented in their full context here, but they are fairly stand-alone in their reference. They were written nearly 1,500 years after the Book of Genesis.

Revelation 12:9

So the great dragon was cast out, that serpent of old, called the Devil and Satan, who deceives the whole world; he was cast to

the earth, and his angels were cast out with him (author's emphasis).

Revelation 12:13–17

¹³Now when the *dragon* (author's emphasis) saw that he had been cast to the earth, he persecuted the woman who gave birth to the male Child. ¹⁴But the woman was given two wings of a great eagle, that she might fly into the wilderness to her place, where she is nourished for a time and times and half a time, from the presence of the serpent. ¹⁵So the serpent spewed water out of his mouth like a flood after the woman, that he might cause her to be carried away by the flood. ¹⁶But the earth helped the woman, and the earth opened its mouth and swallowed up the flood which the dragon had spewed out of his mouth. ¹⁷And the dragon was enraged with the woman, and he went to make war with the rest of her offspring, who keep the commandments of God and have the testimony of Jesus Christ.

Revelation 20:2

He laid hold of the dragon, that serpent of old, who is the Devil and Satan, and bound him for a thousand years...

1 Peter 5:8

1 Peter 5:8, in one final biblical passage, renders the metaphoric Satan in a completely different form than the Serpent, as found in Eden.

Be alert and of sober mind. Your enemy the *devil prowls around like a roaring lion* (author's emphasis) looking for someone to devour.

So what was the purpose of this little foray into the Serpent Seed Doctrine? It was to establish that the doctrine is not heretical to church teachings, for it simply does not refer to Satan as the entity of the Genesis passages. More than anything, it establishes that the Serpent in the Garden of Eden was completely unique from the biblical references to Lucifer, Satan, or the devil—and even those references are obscure in Hebrew,

extrapolated and forced into meaning by the teachings of the Christian church.

The Serpent Seed Doctrine should rightfully have the word *Doctrine* removed from the title, for it is nothing more than a statement of fact as substantiated within the textual passage where we find the interaction between the Serpent, Nachash, and Eve, the wife of Adam. Moreover, the Reptilian race that interacts with humanity is beginning to look more and more as if it is less a host of alien invaders, but rather a linkage, both physically and metaphysically, to the bloodline of the Serpent.

The doctrinal belief of the Serpent Seed is still held by some adherents of Christian Identity, a label applied to a wide variety of loosely affiliated believers and churches with a white supremacist theology. Most promote a racist interpretation of Christianity, claiming that the Jews, as descendants of Cain, are also descended from the Serpent. This is a belief that has surface throughout history and was adhered to by none other than one Adolf Hitler.

Chapter Six

The Merovingian Connection

If you believe there is a lot of mythology and mystery surrounding the Serpent and the Elohim, be prepared to pull up your iron shorts and pull on your thinking cap, because the Merovingian connection to the Serpent and the Elohim will quite possibly blow your mind. If you have heard the term *Merovingian(s)* used, you may have heard them referenced in connection to the Holy Grail and the search for that sacred cup in the Arthurian legends, and still have absolutely no idea who or what they are—and that they have been tied into the mythology of the Serpent. You will now find an astonishing connection to all the mythologies presented thus far in both *The Rise and Fall of the Nephilim* and everything in this book thus far. But, as always, let's start at the beginning.

In the Dark Ages

Ready for a little history lesson? For roughly 300 years between the fifth and eighth centuries, the Merovingians (sometimes referred to by their contemporaries as the “long-haired kings,” as they wore their hair long in ostentatious comparison to the closer-cropped hairstyles of the rest of the Franks) were a Salian Frankish dynasty that came into power, ruling the region known as Francia, largely synonymous with ancient Gaul, inclusive of modern-day France, as the regional name implies. From the third century on, the Salian Franks appear in the historical records as warlike Germanic barbarians and pirates, bitter ancestral enemies of the Gaulic Celts, and avowed allies of the Romans known as *Laeti*, a word used by the Romans to denote the barbarian tribes (literally “babblers” of out-land tongues; that is, foreigners, people from outside the Empire) who gave them fealty, serving as underlord serfs who swore allegiance and provided soldiers for the Roman armies, resulting in a rag-tag alliance with Rome. This granted them the right to be the first Germanic tribe settling permanently on Roman land. In 358, they entered into political agreement with the Romans and moved

into the region known as Toxandria, which comprises roughly the area of current-day Holland and Belgium.¹

By the seventh century, the Salians fully adopted Frankish identity and gradually dropped their identification with Salian roots and heritage altogether. It's interesting to note that the Merovingian kings operated under a rather socialistic system of governance, as defined by current-day standards. The king redistributed conquered wealth and real estate among his followers, and this was not just given to the nobility, as it apparently extended to the indentured peasantry. Some scholars have attributed this to the Merovingians as lacking a manageable understanding of public affairs, but there is also the view that they knew precisely what they were doing, and this was an act meant to foster loyalty among their people.

It was the son of Meroveus/Merovic (the ruler from whom the name Merovingian is derived), the leader of the Salian Franks, Chiladeric I (c. 457–481), who founded the Merovingian dynasty. His son Clovis I (481–511), however, was the man who united the Gaulic tribes and territories under Merovingian rule. After his death the Merovingian family seemed to be in a constant state of in-fighting and back-and-forth skirmishes for power, but when threatened by outsiders, the Merovingians always presented a unified front, standing together with unified purpose and intent. They were the ultimate power in the region. During the final century of Merovingian rule, the dynasty was increasingly pushed into a more or less ceremonial role. In 752, Pope Zachary formally deposed the last ruler of the Merovingian dynasty, Chiladeric III, bringing to an end the Merovingian era.^{2,3}

Christianity eventually started to take a foothold with the Merovingians, at least in the sense of being “Christianized.” An Irish monk named Columbanus, who was eventually elevated to sainthood by the Church, enjoyed great influence due to his sincere friendship with Queen Balthid, the wife of Clovis II. The Merovingians established numerous monasteries throughout their empire and awarded them to their loyal lords who funded the abbeys and monasteries, granting them bishoprics and titles as abbots. Many of them, due to their financial support, were even granted sainthoods.

Before we go further with the Merovingians, let's take an intermediate trip, wading through the theories behind the bloodline of Jesus Christ, which will intersect us with the Merovingians once more.

Mr. and Mrs. Jesus Christ

There is an enduring, shadowy, hypothetical mythology surrounding the ancestry and lineage of Jesus Christ, with the trail originating in first-century Palestine, leading to the thrones of the Merovingian kings of Franco Europe. It has been claimed that Mary Magdalene was Jesus' concubine, and Mormonism claims that Jesus was a polygamist. There are also theories that Jesus turned, of all things, atheist, married Mary, and went to Europe. If any genuine historical data to back any of these claims existed, they have been lost to antiquity. What we have today are countless books on the subject, some rich in history, and others just as rich in conspiratorial magma and speculative kookiness. So, it is left to the interpretations of the readers of the many literary works glutting the shelves—both fiction and non-fiction—to determine their veracity, in lieu of any solid proof.

In the highly intriguing, yet equally controversial book *The Holy Blood and the Holy Grail* (1982), the Merovingians are presented as kings who established their power by claiming they were descended from the bloodline of Jesus Christ, who, if the claim were true, would have had to have been married and producing offspring in order to leave a traceable bloodline.⁴ This book, as one might imagine, caused an immense stir around the world, and the ideas contained in the book were deemed blasphemous enough for it to be banned in some Roman Catholic-dominated countries. Response from the historical and academic fields was quite negative, and critics of the book tore it to shreds, claiming that the bulk of the claims, ancient mysteries, and conspiracy theories presented as fact were nothing short of pseudo-historical. Famed book critic Anthony Burgess wrote of the book, “It is typical of my unregenerable soul that I can only see this as a marvelous theme for a novel.”⁵ Dan Brown did just that and utilized the theme for his international best-selling 2003 novel, *The DaVinci Code*.

Despite the criticisms, and even the authors of the book making statements that some elements had to be fictionalized in order to fill the untraceable gaps in an invisible lineage of Jesus, the book presented enough historical fact as to prompt many historians—off the beaten path of convention and peer review—to dig a little deeper, giving us the Jesus bloodline that linked into the Merovingians.

As might be imagined, *The Holy Blood and the Holy Grail* spawned innumerable other books and documentaries exploiting both the veracity of the claims and the criticisms made in the book. In his 1996 book, *Bloodline of the Holy Grail: The Hidden Lineage of Jesus Revealed*, Sir Laurence Gardner picks up the gauntlet and presents what he said were actual pedigree charts of the lineage of Jesus of Nazareth and Mary Magdalene. Gardner maintained that these family trees proved beyond all doubt that the biblical couple were the ancestors of all royal European families,⁶ claiming that this, indeed, linked them to the contemporary Reptilian conspiracy theories that state all modern European Royal families are alien Reptilians, operating under the influence of a hidden race of extraterrestrials bent on the destruction of humanity. In his 2000 sequel, *Genesis of the Grail Kings: The Explosive Story of Genetic Cloning and the Ancient Bloodline of Jesus*, Gardner makes extraordinary claims that there is physical evidence—outside the biblical genealogies—that the bloodline of Jesus of Nazareth could be traced back to Adam and Eve. If you are Christian, this is already something that can be established in biblical texts, as the followers of Jesus set out to establish the blood tie between Jesus, Mary, and Joseph to the royal house of King David, then all the way back to Noah and then to Seth, the third son of Adam. Gardner goes on to relay that Adam and Eve were actually the first human couple, product of alien DNA experimental interbreeding with primates, conducted by the alien race we identify in ancient Sumerian texts as the Annunaki.⁷

The 2000 book *Rex Deus: The True Mystery of Rennes-Le-Chateau and the Dynasty of Jesus*, by Marylin Hopkins, Graham Simmans, and Tim Wallace-Murphy, articulates another shadowy version of hidden blood ties and the theory that the bloodlines of Jesus and Mary were intricately linked to a lineage of 24 high priests of the Temple in Jerusalem. This bloodline was known as the “Rex Deus”—the bloodline of the “Kings of God”⁸—and ties to all the fantastical stories of King Solomon possessing a ring with which he could control demonic elements to aid in the building of the temple, as well as connections to the masons.

These few mentioned works represent only a small number of the host of fictional, non-fiction, and documentary books and films released on this topic since the 1980s. But they illustrate a fact: Enough evidentiary material exists to establish a case for such claims, which are not at all far-fetched nor

gymnastics of the imagination. Simply consider the biblical Jesus of Nazareth and his first recorded public miracle, launching his public ministry, the Wedding at Cana.

In the biblical account, Jesus is in attendance at a local wedding of some person left unnamed and unmentioned in the passage. In the account, recorded in the Gospel of John 2:1–11, Jesus’ mother (her name, Mary, omitted from the passage) rushes up to Jesus in a bit of panic, telling Jesus that the party is out of wine, to which Jesus says, in what seems a rather brusque reply, “O Woman, what have I to do with you? My hour has not yet come.” His mother then says to the servants to do whatever Jesus tells them. Jesus then orders them to take all the empty pitchers and fill them with water, and to draw out some and take it to the chief steward waiter. After tasting it, and not knowing where it came from, the steward congratulated the bridegroom on departing from the custom of serving the best wine first by serving it last (John 2:6–10). John adds: “Jesus did this, the first of his signs, in Cana of Galilee and it revealed his glory and his disciples believed in him.”

“^{1–3}Three days later there was a wedding in the village of Cana in Galilee. Jesus’ mother was there. Jesus and his disciples were guests also. When they started running low on wine at the wedding banquet, Jesus’ mother told him, “They’re just about out of wine.” ⁴Jesus said, “Is that any of our business, Mother—yours or mine? This isn’t my time. Don’t push me.” ⁵She went ahead anyway, telling the servants, “Whatever he tells you, do it.” ^{6–7}Six stoneware water pots were there, used by the Jews for ritual washings. Each held twenty to thirty gallons. Jesus ordered the servants, “Fill the pots with water.” And they filled them to the brim. ⁸“Now fill your pitchers and take them to the host,” Jesus said, and they did. ^{9–10}When the host tasted the water that had become wine (he didn’t know what had just happened but the servants, of course, knew), he called out to the bridegroom, “Everybody I know begins with their finest wines and after the guests have had their fill brings in the cheap stuff. But you’ve saved the best till now!” ¹¹This act in Cana of Galilee was the first sign Jesus gave, the first glimpse of his

glory. And his disciples believed in him.”
(John 2:1–11)

My speculative contention is that this wedding is the wedding of Jesus. There are a few things to note in this passage that would tend to establish this fact. First, in first-century Judea, it was a Jewish tradition (tantamount to law) that a rabbi must be a married man in order to be worth his salt and effective in his ministry. This miracle represents the first miracle of Jesus’ public ministry. Second, in first-century Judea (as well as in modern times) it was Jewish custom and tradition for the groom’s family to provide the wine for the wedding. In this passage you see Jesus’ mother approaching him under some stress that the wedding has no wine. Why did she approach Jesus, and why did she seem to have some position of authority at the wedding? Was Jesus, perhaps, the groom? Finally we see Jesus (the groom?) ordering the servants and presenting the wedding with wine.

Perhaps the text of the passage, as with so many other passages in the Bible, is presenting certain facts and omitting others, or completely redirecting the actual events to point in a different direction. As we know, the early Church fathers had specific views they needed to convey in order to establish Church practice and governance, and the repression of women in any position of authority seemed to govern the effort. For Jesus to have been married would have elevated a woman to a lofty role, so they deleted the wedding and reduced Mary Magdalene to the role of prostitute, which is never stated anywhere in the biblical text. Pope Gregory the Great’s homily on Luke’s gospel dated September 14, 591, first suggested that Mary Magdalene was a prostitute: “She whom Luke calls the sinful woman, whom John calls Mary, we believe to be the Mary from whom seven devils were ejected according to Mark. And what did these seven devils signify, if not all the vices? … It is clear, brothers, that the woman previously used the unguent to perfume her flesh in forbidden acts”(homily XXXIII).⁹

Speculative as my theory may be, it is clearly apparent that the Church and many denominations overtly suppress the role of important women in the scriptures, with few exceptions, and just as overtly—even vehemently—resist the notion that Jesus could have been a married man who produced offspring. One old Bible school friend of mine reacted quite harshly at this notion when I presented it, insisting that marriage and children would invalidate the divinity of Jesus Christ. When I asked him why, he fumbled

for an intelligent answer but could provide none, reverting simply to stating that my words were heretical. And, in truth, if Jesus Christ is indeed divinity, “God very God,” does not the New Testament tell us that he experienced life and was “tempted in all points, just as we are, yet without committing sin” (Hebrews 4:15)?

The big question that remains unanswered is this: Did Yeshua bar Joshof, Jesus of Nazareth, called the Christ, marry and father a child? And if he did, was that child the beginning of a bloodline that could be traced or discovered, and did it merge into the ruling class of the Merovingian kings?

As the theory goes, Jesus married Mary of Magdala, a woman from whom he cast out seven demons (thought to be seven illnesses and infirmities) and who became one of his most ardent disciples, even to the point where after Jesus’ death, resurrection, and ascension, she was referred to by the other disciples and followers of Jesus as Miriamne, “The Great Teacher.” According to the non-canonical Gospel of Phillip, a Gnostic Gospel of the New Testament apocrypha (dating to the third century), Mary Magdalene was revered as the Great Teacher, establishing her as the heir-apparent to the living philosophies of Jesus. Her husband.

There were three who always walked with the Lord: Mary, his mother, and her sister, and Magdalene, the one who was called his companion. His sister and his mother and his companion were each a Mary. (the Gospel of Phillip)

There is another passage from the Gospel of Phillip referring to Mary Magdalene, but as is common with millennia-old documents, it is incomplete due to damage to the original manuscript, and several words are missing. The best, scholarly guesses as to what they were are shown here in brackets. Most notably—and frustratingly—there is a hole in the manuscript after the phrase *and used to kiss her often on her...*. The passage appears to be telling of Jesus kissing Mary Magdalene, and Jesus goes on to use a parable to explain to the disciples why he loved her more than he loved them:

As for the Wisdom who is called “the barren,” she is the mother of the angels. And the companion of [the saviour was Mar] y Ma[gda]lene. [Christ loved] M[ary] more than [all] the disci[ples, and used to] kiss her [softly] on her [hand]. The rest of [the disciples were offended by it and expressed

disapproval]. They said to him “Why do you love her more than all of us?” The Saviour answered and said to them, “Why do I not love you like her? When a blind man and one who sees are both together in darkness, they are no different from one another. When the light comes, then he who sees will see the light, and he who is blind will remain in darkness.”

However, the word *hand* is not necessarily the word after *kiss her... on her....* It may have been cheek, forehead, lips, or feet to simply show respect.¹⁰

The holy bloodline of Jesus is nothing more than a theory, filled with speculative evidences and magnificent stories, but, as with other theories of this sort, it is filled with conjecture, filler content, and unsustainable facts. The theory goes on to state that Jesus Christ had a natural child with Mary Magdalene, named Sarah (Hebrew for “princess”), who was then taken to France to keep her safe, either during Magdalene’s pregnancy or as a young child. It is Sarah’s blood descendants who in later centuries founded the Merovingian dynasty of the early kings of France.

The theory goes on to state that a secret order protects these royal claimants because they may be the literal descendants of Jesus and his wife, Mary Magdalene, or, at the very least, of King David and the High Priest Aaron. This secret society known as the Priory of Sion has a long and illustrious history dating back to the First Crusade, starting with the creation of the Knights Templar as its military and financial front. The Priory is said to be led by a Grand Master—or “Nautonnier,” one who steers through murky waters—and is devoted to reestablishing the Merovingian dynasty on the hereditary thrones of Europe and Jerusalem.

Historically speaking, the Roman Catholic Church is said to have attempted to exterminate all remnants of this dynasty as well as their guardians, the Cathars and the Templars, during the Inquisition. Their goal, according to Jesus conspiratorialists, was to maintain power through the apostolic succession of Peter instead of the hereditary succession of Mary Magdalene—so the mythos goes.

A variation on the bloodline theory is that Jesus didn’t die on the cross but survived the torturous event, after which he fled to Kashmir, returning to Srinagar, where he had originally been influenced by Buddhist teachings. It was there that he died of old age, and the biblical accounts of his

resurrection were enhanced by his followers. This theory is given merit by close comparisons of the teachings of Jesus in the Gnostic Gospel of St. Thomas paralleling classical Buddhist Sutras. The theory also has parallels with other stories of Jesus' disciples fleeing to foreign lands, such as the journey of Joseph of Arimathea to England after the death of Jesus, taking with him a piece of thorn from Jesus' crown of thorns, which he planted on Weayall Hill in Glastonbury, England. The tree that grows there, across the valley from Glastonbury Tor, is said to be a direct descendent of the tree that sprouted from the thorn planted by Joseph, and a flowering sprig is sent to the monarch of England every Christmas, a tradition started during the reign of James I, royal sponsor of the 1611 King James Bible, in the early 1600s.

The Beast From the Sea

Buried in obscure antiquity, there is a legend surrounding Meroveus, the founder of the Merovingian dynasty, in which he made claims to having been sired by two different fathers. Despite the more recent claims that the Merovingians descended from the bloodlines of Jesus Christ (predicated, of course, on the notion that Jesus was indeed married to Mary Magdalene and fathered a child with her who carried on his lineage in ancient France), King Clodian, the human father of Meroveus, and a strange beast of the sea were the progenitors of the first Merovingian king. Meroveus's mother was already pregnant with her son by King Clodian when she went swimming in the surf and encountered the beast of the sea.

“Despite the carefully listed genealogies of his time, the heritage of ***Meroveus*** was strangely obscured in the monastic annals. Although the rightful son of Clodian, he was nonetheless said by the historian Priscus to have been ***sired by an arcane sea creature, the Bistea Neptunis***....

“The Sicambrian Franks, from whose female line the Merovingians emerged were associated with Grecian Arcadia before migrating to the Rhineland. As we have seen, they called themselves the *Newmage*—‘People of the New Covenant’, just as the Essenes of Qumran had once been known. It was the Arcadian legacy that was responsible for the ***mysterious*** sea beast—the *Bistea Neptunis*—as symbolically defined in the Merovingian ancestry. The relevant sea-lord was King Pallas, a

god of old Arcadia. His predecessor was the great Oceanus. The immortal sea-lord was said to be ‘ever-incarnate in a dynasty of ancient kings’ whose symbol was a fish—as was the traditional symbol of Jesus”

—Laurence Gardner, *Bloodline of the Holy Grail*
(author’s emphasis throughout)

The *Bistea Neptunis*¹¹ was worshipped in classical antiquity as the Roman god Neptune and as Poseidon in Greek mythology. Neptune was the mythological god of the sea who is said to have founded Atlantis, which is the pagan version of the antediluvian civilization that existed prior to the Great Flood of Noah, in which God wipes out all of humanity while purging the earth of the Nephilim, the offspring of the Elohim, in Genesis chapter seven.

In the Apostle John’s visions on the Isle of Patmos, he records an image of the Antichrist as the beast that rises out of the sea. This appearance of the *Bistea Neptunis* in the Book of Revelation has interesting linkages to the Merovingian legend, especially in light of the fact that the Merovingian monarchs are said to have demonic connections.

¹And I stood upon the sand of the sea, and saw a beast rise up out of the sea, having seven heads and ten horns, and upon his horns ten crowns, and upon his heads the name of blasphemy.

²And the beast which I saw was like unto a leopard, and his feet were as the feet of a bear, and his mouth as the mouth of a lion: and the dragon gave him his power, and his seat, and great authority.

(Revelation 13:1–2)

The name Meroveus is a name created from two conjoined French words: *mer*, meaning “sea,” and *vere*, meaning “werewolf” or “dragon”—hence, beast from the sea. The Book of Revelation refers to the dragon in specific terms as being none other than Satan, the devil.

And there was war in heaven: Michael and his angels fought against the dragon; and the dragon fought and his angels.... And the great dragon was cast out, that old serpent, called the Devil, and Satan, which deceiveth the whole world: he was cast

out into the earth, and his angels were cast out with him.
(Revelation 12:9)

It is interesting to make note at this spot regarding two comparatives that stand out in this Merovingian mythology. The first is the relation to the great beast who rises up out of the sea. In the Sumerian mythology of Enki/Ea, it is said that he is the Lord of the Earth and the Lord of the Abzu, that great underworld sea, atop of which lay the Snake Marsh. It is the connectivity to the snake that the second comparative comes into view: the Dragon, which is simply an archaic derivative of the snake and the ancient serpent.

Some of the books mentioned (*Bloodline of the Holy Grail; Holy Blood, Holy Grail*; and *The Da Vinci Code*) were popular books marketed for mass consumption and sold millions of copies. As such, conspiratorialists hold them up as being nothing less than propaganda tools that conceal the true origins of the Merovingian race. This propaganda is obviously something masterminded from behind the mystical scenes in the mists of demonic and otherworldly ether. For their esoteric allusion to the Merovingians' legendary progenitor, King Meroveus, having been sired by a mysterious beast of the sea, is an overt claim that the bloodlines of the Merovingians were of literal satanic descent. The demonic origins and history of the Merovingian Dynasty, also known as the Dragon Dynasty in honor of the great red dragon (the "pendragon") of Revelation 12 and 13, are revealed in less available insider sources such as Gardner's *Realm of the Ring Lords* and Kenneth Grant and the Merovingian Mythos (published by DragonKey Press).

The Tuatha dé Danann

In Irish mythology, it is said that a race of kings descended from the heavens to the ancient Celts of Ireland. These tall, bright, shining creatures were elegant and beautiful, and brought with them the secret knowledge of the gods. Although the Tuatha represent a caste of Irish elemental beings, there are also accounts of them being flesh and blood conquerors of the Fir Bolg, one of the more ancient races inhabiting Ireland, coming down and invading from the four northern cities of Falias, Gorias, Murias, and Finias, where they acquired their occult skills and magical attributes.¹²

Tuatha dé Danann roughly, but imprecisely translates as “peoples’/children of the goddess Danu.” In the old Irish *tuath* means “people, tribe, nation”; *dé* is the genitive case of *día*, meaning “god, goddess, supernatural being, object of worship.”¹³ They are often referred to simply as the Tuatha, Tua, or the Tuatha dé, which also was used in early Irish Christian texts as a name for the Israelite diaspora.¹⁴ That, in and of itself, is an interesting historical reference: As Danu has also been rendered Anu, the reference—if not already obvious—creates an interesting link between Israel and ancient Sumerian mythology.

According to *Lebor Gabála Érenn* (*The Book of the Taking of Ireland*), the Middle Irish title of a loose collection of poems and prose narratives recounting the mythical origins and history of the Irish from the creation of the world down to the Middle Ages, they descended to Ireland “in dark clouds” and “landed on the mountains of Conmaicne Rein in Connacht, bringing a darkness over the sun for three days and three nights.”¹⁵ In another version of the story, less steeped in the mistiness of legend, the Tuatha landed in a fleet of sea vessels on the shores of what is modern-day Connemara, Ireland. As if to seal their resolve, they burned all their ships, so as to provide themselves no mode of retreat. The rising smoke from the fires is said to be the basis for the myth that says they arrived in smoke from the skies.

A poem in the *Lebor Gabála Érenn* says of their arrival:

It is God who suffered them, though He restrained them
They landed with horror, with lofty deed,
In their cloud of mighty combat of spectres,
Upon a mountain of Conmaicne of Connacht.
Without distinction to discerning Ireland,
Without ships, a ruthless course
The truth was not known beneath the sky of stars,
Whether they were of heaven or of earth.¹⁶

After a series of wars, it is said that the Tuatha dé Danann receded into the Hollow Hills and eventually became known as the Elven folk of Cletic lore. It is interesting to note that the “El” of Elven is a derivative of the ancient Sumerian Elil and the Hebrew Elohim. The connectivity between the mythological Tuatha dé Danann and the Nephilim is well worth

recognition, as they are perhaps etymological descendants in the same vein, again, as Elil and Ea are to Elohim and YWHW.

On a literary note, the Tuatha dé Danann are the basis for J.R.R. Tolkein's tall, elegant, bright, shining Elven people of Lothlorien. Tolkein had his finger on the pulse of shadowy history, and was obviously on to something.

Tuatha dé Annunaki?

“...The ancient people of the Tuatha De Danann...were the supernatural tribe of the pre-Achaean agricultural goddess Danae of Argos, or perhaps of the Aegean mother-goddess, Danu. But their true name rendered in its older form was Tuadhe d'Anu. As such, they were the people (or tribe) of Anu, the great sky god of the Annunaki.”

—Sir Laurence Gardner, *Realm of the Ring Lords: The Myths and Magic of the Grail Quest*

The Canaanite territory of northern Israel is said to have once been occupied by the Israelite tribe of Dan, who, during the days of the Bible's Great Exodus, around 1446 BCE, is said to have separated from Moses and the rest of the Israelites, traveling to the north. There the Dannites encountered the worship of Baal/Pan and became involved in the pagan fertility rites practiced by the indigenous Canaanite peoples at Mount Hermon, the very place where, according to the Book of Enoch, the Sons of God descended to the earth and made a pact to go in among human women and have children with them, bequeathing the Nephilim.

The people of the Israelite tribe of Dan intermingled with the Canaanite Tuatha dé Danann, also known as the Dragon Lords of Anu, said to be the offspring of the ancient Sumerian Annunaki. This is also one of the interpretations of the “Sons of God” intermingling with the “daughters of men,” referenced in the Genesis chapter six story of the Nephilim. One of the human-based interpretations of the story is that the children of Israel, as represented by the tribe of Dan, broke the law of God and intermarried with the Canaanites in the region of Mount Hermon, where the Elohim were said to have descended. Cultural values of the day did not allow for the women of Israel to intermingle with the men of another culture, so only the men were said to have taken Canaanite brides from the Tuatha dé Danann.

Hence, the basis of the story for the Sons of God intermingling with the daughters of men. From there, the integrated tribe a Dan and Dannan/Danu/Anu migrated to the north and west, settling along the way in the European and Scandinavian regions as a conquering nomadic people, replacing those they conquered with their own traditions blended with the Canaanite Annunaki Serpent culture.¹⁷

I again find the similarities and connectivities staggering: Tuatha dé Danann, Danites, Tribe of Dan, and their linkage to the Dragon Lords, the Annunaki, and the Serpent. Are these simply tricks of word similarities, or are the coincidences far too great to overlook?

Yet another version of the origins of the Tuatha dé Danann, the Dragon Lords of the Anu (before settling in Ireland around 800 BCE), is that they were the descendants of the Black Sea princes of Scythia,¹⁸ now known as the Ukraine. Like the original dynastic Pharaohs, they traced their ancestry to the great Pendragons (note: Uther and Arthur Pendragon of the Arthurian legends) of Mesopotamia, and from them sprang the kingly lines of the ancient Britons, the Irish Bruithnigh, and the Picts, the indigenous people of northern Scotland. In Wales the Tuatha founded the Royal House of Gwynedd, whereas in Cornwall in the southwest of England, they were the sacred gentry known as Pict-Sidhe, connected with the early Merlin (Myrddin) and Tyntagel, the legendary Cornish birthplace of King Arthur.

“So, from a single caste of the original Blood Royal—whether known as the Sangréal, the Albi-gens or the Ring Lords—we discover many of the descriptive terms which sit at the very heart of popular folklore. For here, in this one noble race, we have the ‘elves’, ‘fairies’ and ‘pixies’—not beguiling little folk, but distinguished Kings and Queens of the Dragon succession.”

—Sir Laurence Gardner, *Realm of the Ring Lords*

The Psalter of Cashel (the lost Book of Munster) states: “[T]he Tuatha dé Danann’ ruled in Ireland for about two centuries, and were highly skilled in architecture and other arts from their long residence in Greece.”¹⁹ According to The Psalter of Cashel, the Tuatha dé Danann were regarded as the descendants of Danaus, the son of Belus, who went with his 50 daughters to Argos, the home of his ancestral Io. In Irish legends the Tuatha

dé Danann, considered to be demi-gods, were said to have possessed a Grail-like vessel.²⁰ They were teachers of ancient wisdom and the founders of the Druidic priesthood.

As you can see, mythology melds with history. In the vaguely historical, mostly pseudo-anthropological works of Sitchin, the Annunaki are space travelers who descended in linguistically forced “firey rockets.” In anthropological research, they are the deified kings of the ancient Sumerians whose descendants migrated north to Black Sea region and south to Palestine, encountering other ancient peoples, and merging cultures and language.

In a Merovingian sense—and in accordance with modern Reptilian mythology—these are the ancestral Euro-Semitic people who forged the bloodlines of the royal families of the Franks, not to mention the royal houses of Europe’s history.

The Holy Grail

The Holy Grail has for centuries been linked to the legends of King Arthur and his Knights of the Round Table. It was a quest on which the mythical king sent his mighty men of valor. In more modern interpretations, this grail quest has been seen as less a quest for an object (the cup of Jesus used at the last supper) but one of finding and identifying the bloodline of Jesus Christ, the holy Son of God who was the divine savior of humanity. Take into consideration the aforementioned migration of the Tuatha dé Danann, and their purported establishment of the royal lines of Wales and Cornwall, both of which have connectivity to the Arthurian legends, and you will see the linkage between the legendary quest for the grail and the quest for the blood heirs of Jesus. Yet the dynastic lines of kings who claim to have descended from this hidden bloodline were not any part of the Christianity we recognize today. They were known as Sorcerer Kings and Dragon Lords, some of whom claimed to be not only descendants of the bloodline of Jesus Christ, but also the Luciferian bloodline, which seems an outright contradiction to the former!

The Merovingian kings were said to have descended from the Atlantian diaspora, the remnant of inhabitants of Atlantis who had escaped the destruction of that mythological region, fleeing to the Pyrenees Mountain region, bringing with them their abilities as occult adepts, and practitioners

of arcane sciences and the esoteric arts. The Merovingians, in fact, were often called Sorcerer Kings, or thaumaturge kings—sorcerers, workers of miracles, and practitioners of the black arts.²¹ These are the descendants of the grail, the heirs of the bloodline of the Christ. These are the things that delve into the darker side of Judeo-Christian history and lore—the mysteries of God, if you will—and they end up painting God in a very different light than we were taught in Sunday School or Synagogue, which is why they are deemed as heretical and blasphemous to the Church. But what if they are true? How would this affect your faith or your adherence to what you believed you knew from the Bible? Or would it simply send you back into those pages to dig deeper for answers, perhaps even into prayer to ask if that Holy God is truly there in the form you once understood Him?

Digging into more rabbinic lore, there is another version of the story of Cain, the son of Eve, in which he was not the son of Adam (which we've already established several times over, between this book and *The Rise and Fall of the Nephilim*), but of the fallen angel Samael, whose name loosely equates to Lucifer. We have already established, textually speaking, that the Serpent in the Garden was a character called Nachash, in accordance with the Hebrew of the Genesis text. But according to this obscure rabbinic version of this particular bit of Hebrew lore, it was Samael who appeared to Eve as the Serpent, the Nachash, seducing her. Whoever it was who actually appeared as the Serpent isn't as important as is the fruit of that union: Eve's firstborn twin son, Cain. If the Merovingians knew of this rabbinic version of the story—which they no doubt did—it could have been the basis of their alleged assertion that they possessed, flowing in their bodies, the blood of both Christ and Lucifer. And the idea that Cain was the offspring of a superior intelligence was already a well-established teaching of the Cainite Gnostics, of which the Merovingians were also sure to have intimate knowledge.

An alternate version of the Cain saga, equally Luciferian in its connotations, says that he was the son of Adam's first wife, Lilith, who was also a candidate for the Serpent, Nachash, in the Garden of Eden.²² According to rabbinic lore, she had been the consort of Elohim before her fall from grace and descent to the earth. It is interesting that, of the two alternate traditions concerning Cain's parentage, both involve a Luciferian-Elohim bloodline connection.

The Lilith-Samael version of the story also bears great connectivity to the grail saga insofar as, according to this account, the angelic/demonic pairing produces a son of their *own* who seems to play a recurring role in the entire grail mythos: Asmodeus. Not only is Asmodeus said to have played the central role in building the Temple of Solomon, the edifice from which the Knights Templar took their name, but he is also represented in the dominant statue at the entrance to Rennesle-Chateau in France, which has enormous legendary connections to the grail mythos. The recurrence of the character of Asmodeus in connection to grail lore gives credence to the notion that both he and the descendants of Cain may in fact have shared kindred ancestry. In some traditions it has been said that it was Asmodeus, not God, whom Moses called upon to part the Red Sea. Though portrayed as a demon or devil figure, the name Asmodeus reveals that he may not always have been viewed as such, for Asmodeus translates simply to Lord God (*Ashma* = “Lord,” and *Deus* = “God”). Asmodeus bears the same brand of duality found in the serpent deities of ancient Egypt, Sumar, and myriad other cultures we have mentioned in this book—which happen to be only the tip of the iceberg. So, again, we have to ask ourselves what it is we think we really, truly know for sure.

On an even more intriguing observance are the four French words positioned above the sculpture of Asmodeus at the entrance to Rennesle-Chateau: “PARCE SIGNE TULE VAINCRAS.” These four letters are an anagrammatic code in Latin, “CELATA AGNI SUPER ENRICVS” (“LAMB’S SECRET OVER ENRICUS”). “Lamb” is a reference to Jesus Christ, and it is thought that this phrase over the sculpture of Asmodeus is the third of a series of encoded anagrams that speak to the location of the Holy Grail. (To rabbit trail into that topic here would be lengthy and worthy of a book all its own, so for now, consider it fodder for thought and exploration.)

Another possible origin of the Luciferian bloodline theory is inextricably linked to the Elohim, the pantheon of gods in mythology who said in the Book of Genesis: “Come, let Us make man in Our image.” Elohim is the plural form for the name of God: “God Among Many Gods,” the bene ha Elohim, the “Sons of God” known as the Watchers in the Book of Enoch.

We have already established that the word *Elohim* is an etymological descendent of the name Elil, chief god of the Annunaki of the Sumerian culture, but it also has roots in the ancient Babylonian word *Ellu*, which means “shining ones.” This phrase has a distinctively Luciferian

connotation, because the name Lucifer literally means “light bearer.” Additionally, if you see Lucifer as being the same person as Nachash in the Genesis account of the Garden of Eden, remember that Nachash, by definition means, “crafty magician, *illuminator, bright shining one.*” It is also to be noted that the descendants of Cain, who became the deified kings of Sumer, bore the title of Ari, a term that also meant “shining ones.” And as I have already contended, Cain being the son of Nachash and Eve, is the first of the Nephilim mentioned in the Book of Genesis. The phrase *shining ones* would be a very apt description for the descendants of Enoch’s Watchers (the Sons of God of the Genesis account), who were said to have, according to the Enochian account, “hair white as snow, pale eyes, and pale skin that filled the room with light” (Enoch 105:10).

The Sumerian Ari are almost always depicted as wearing crowns bearing horns, and some of their descendants were said actually to have had horns. For instance, the most famous statue of Moses, carved by Michelangelo, depicts him with horns atop his forehead, not wholly inappropriate for someone who may be a blood relation of Asmodeus. But we also must consider the anti-Semitism of medieval Europe, a time of great bigotry against Jews and Hebrew culture. Many Christian artists in Europe, especially under the power of the Vatican papacy, were “required” to depict their biblical Jewish subjects as having horns, in accordance with the opinions of the powers that be. So, the presence of horns on the statuary heads of patriarchal Jews from the Bible had, some say, absolutely nothing to do with the mystical. They were a political contrivance. Theologians protest that they are not horns, merely rays of light. If they are rays of light, it could also suggest a Luciferian subtext, due to the bright shining element of Nachash and the Elohim.

Tetradrachm of Lysimachos. The head of Alexander is featured wearing royal and divine symbols: the diadem and the horns of Zeus Ammon. C. 305–281 bc. Image made available through Wikimedia Commons.

It's obvious, even to the casual observer, that they are *indeed* horns, which is not at all inconsistent with the normal medieval Western depiction of Moses and other biblical patriarchs, based on the description of Moses' face as *cornuta* ("horned") in the Latin Vulgate translation of Exodus. The Douay-Rheims Bible translates the Vulgate as: "*And when Moses came down from the mount Sinai, he held the two tables of the testimony, and he knew not that his face was horned from the conversation of the Lord*" [author's emphasis]. This was, however, a mistranslation of the original Hebrew text, which uses a term equivalent to "radiant," suggesting an effect like a halo. The Greek Septuagint translates the verse as: "*Moses knew not that the appearance of the skin of his face was glorified.*"

Anecdotal Historical Fact: Alexander the Great declared himself the Son of God, and he, too, was rumored to have horns. In fact, to this very day, if you talk to people on the streets of Iran (who have a cultural remembrance of his invasion as though it happened last week), they will tell you in all solemnity that it's a historical fact that Alexander had horns, which is why he wore his hair long—to cover them up. There was an ancient Greek coin, the silver tetradrachmon, issued

posthumously in the name of Alexander the Great around 242/241 BCE, depicting Alexander with the horns of Ammon-Ra.

Cain, the first of the twin-born sons of Eve, seems to have engendered his own traditional stories, as found in an obscure Gnostic sect bearing his name called the Cainites. Like the Carpocrateans, the salvific doctrine of the Cainites espoused a theology that declared the believer must gain favor with God by “making the journey through everything.”²³ Fourth-century Bishop of Salamis St. Epiphanius describes the Gnostic Cainites as a group of believers who possessed an “obscure chaos of evil practices,”²⁴ “consecrating...lustful or illegal acts to various heavenly beings...heretics so adulterated with the dualism...and licentious practices of Oriental heathenism...”²⁵ as a sort of sacred prerequisite. Interestingly, many contemporary scholars compare them to Satanists, but that was a common thought already forming nearly 2,000 years ago. In alignment with our study of the Nephilim and the serpentine cultures, Cainites also taught that Eve’s twin sons had different fathers, purporting that Cain was the offspring of Eve by a superior power, and Abel was Eve’s son by an inferior power. The Cainites are also considered an heretical group as they possessed the Gospel of Judas, in which Judas is written as the disciple who “studied the mysteries of God,” and that his knowledge was so much more advanced than any of the other disciples of Jesus, that he, in adherence to the insistence of Jesus himself, betrayed Jesus to the Jewish Sanhedrin so that the prophecy would be fulfilled.²⁶ In disparity to the accepted gospels contained in the canonical Bible, Judas did this out of complete altruistic discipleship to his master, resulting in such a tumultuous grief that he committed suicide. And as a result of his loyalty to Jesus, his name has been besmirched in Christianity for all time.

Coat of arms of Stenay. Image copyright of the author.

The extent to which the Merovingians knew of these alternate traditions is uncertain. Whether or not they believed in them is more uncertain still, yet it remains likely that they both knew about these traditions and took them quite seriously. To this very day, the coat of arms of the capital of the Merovingian empire, Stenay, bears an image of the devil. And the original name of Stenay was Satanicum.

How the Merovingians Influenced Hitler

In 1919, at the age of 30, Adolf Hitler joined the occultist Germanic Revivalist Thule Society,²⁷ although there are no historical records indicating that he ever attended a single meeting.²⁸ Hitler later reconceived and organized this organization into the National Socialist German Workers' Party, better known as the Nazi Party. The Thule Society was founded a year earlier by the followers of two men: Jorg Lanz Von Liebenfels, who later claimed that it was his “occultist ideals” that helped form Hitler’s thinking,²⁹ and Guido von List, a Viennese “Renaissance Man” of many varied interests and talents who gained his popular notoriety as an occultist and *völkisch* (“ethnic folk”) author. Through his writings and popular approach to reviving Germanic mysticism, List was one of the original New Agers, establishing himself as an important contributor to what has been hailed as modern Germanic revivalism. He was a late-19th-century pioneer in Runic Revivalism and Runosophy, a specialized branch

of archaic Germanic linguistics not only used as a means to establish Germanic foundations in ancient language transmission, but also steeped in a mysticism that purported the proper usage of runes could divine, charm, prognosticate, curse, and even bring people back from the dead. List was a Pagan occultist to the heart, and by later standards was the poster child for the colloquial term *long hair*. Perhaps his runic forays worked well for him, for he was highly regarded by the people, who saw his particular brand of folk writing as a solid foundation to the reemergence of Germany as a substantial power in the West.

So much can be said on these matters that a veritable tome could be written on these topics alone. Suffice it for the purposes of this study to say that the Thule Society, though outwardly deemed a populace organization that lent pride to the growing nationalist movement in Germany—rather like a grown-up version of the American Boy Scouts—became the animus behind the organizing of what was known as the *Deutsche Arbeiterpartei* (*DAP*), a German workers' party that met in local beer halls and was made up of members who wanted to see a rise in the worker class.

Adolf Hitler's DAP membership card, with the forged date and number, reduced from 555 to 55 to make him appear as if he were an original founder and member. Image by Mike Peel www.mikepeel.net. Made available through Wikimedia Commons.

Hitler, who at that time was a corporal in the German army, was ordered to attend a meeting of the DAP in order to spy on them for the purposes of

establishing their political agenda. While he was at this meeting, he did what a good spy ought not do by getting into a rather violent political argument with a member of the group. In short, he was recognized for his oratory skills and later invited to become a member of the fairly unorganized party. Hitler agreed to join and began to organize the party from what was tantamount to a bunch of guys meeting at the pub to argue politics into a solid organization. Hitler renamed the organization the National Socialist German Workers' Party (NSDAP)— the Nazi Party. According to Hitler biographer Ian Kershaw, the Thule's "membership list...reads like a Who's Who of early Nazi sympathizers and leading figures in Munich,"³⁰ with its small membership list inclusive of such historical German figures as Rudolf Hess, Gottfried Feder, Alfred Rosenberg, Hans Frank, Julius Lehmann, Karl Harrer, and Dietrich Eckart.³¹

By today's standards, the Thule Society's underlying philosophy would be considered heinous in concept and societally scorned in intent. At the core of the Thule was their occultist belief in the origins of a superior man, the Aryan race. In 1917, this underlying theme of superiority extended to membership qualifications. If you wanted to join the society, you were required to sign a special "blood declaration of faith" establishing lineage: "The signer hereby swears to the best of his knowledge and belief that no Jewish or coloured blood flows in either his or in his wife's veins, and that among their ancestors are no members of the coloured races."³²

The organizational intent of the Thule was originally an outwardly innocuous German study group headed by Berliner Walter Nauhaus, a wounded World War I veteran turned art student. In 1918, Nauhaus came into contact with a occultist named Rudolf von Sebottendorf, the newly elected head of the Bavarian Germanenorden Walvater of the Holy Grail,³³ an offshoot organization formed after a schism with the Thule Society. Nauhaus and Sebottendorf became associates while recruiting for their particular branches, and eventually they merged their branches under the Thule name, using it as a cover name for Sebottendorff's Munich lodge of the Germanenorden Walvater. Not only are we starting to see all the occultist roots to the Thule and its varying offshoots and chapters, but also the growing chimera of political power. What started in occultist folk

nationalistic revitalization quickly turned populace and aggressively political in intent and heinously evil in philosophy.

The Thule Society seal. Image from proswastika.org/e107_images/custom/thulegesellschaft_emblem.jpg.

The occultist origins of Nazi Aryanism, specifically as influenced by the Thule's philosophical foundation, is deeply probed in Kevin Abrams's and Scott Lively's *The Pink Swastika*. Abrams and Lively document how the Thule Society relied on ancient occultist supernaturalism to imbue their members with powers to be used for their Aryan claims and the foundational thinking behind their belief in the use of eugenics.³⁴ The fire of Adolf Hitler's dream of an Aryan super-race was fueled by the underlying occult theology of the Thule Society. Adhering to the belief that they were somehow infused with esoteric powers passed on to them by the spirits of the lost civilization of Atlantis, members of the society regarded themselves as metaphysically imbued with the god-like wisdom of these advanced ancients, fueling them to create a new race of Aryan super-men. They followed a more-or-less Darwinian philosophy that moved them by

some esoteric “eminent domain” to claim superiority and eliminate the ‘inferior’ races.³⁵

Jorg Lanz Von Liebenfels, the spiritual inspiration behind the founding of the Thule Society, was a Cistercian monk who claimed to have been given revelation and enlightenment upon discovering the rune-filled tombstone of a Templar knight. After interpreting what he believed were encoded messages on the tombstone, he began constructing his own philosophies of a blue-eyed/blond-haired, God-ordained Aryan race and its superiority over lower, inferior races. Lanz was hailed the “Father of National Socialism” by Austrian psychologist Wilfried Daim, who in 1958 penned his study of Lanz in *The Man Who Gave Hitler His Ideas*. The book remains a chilling history of the Merovingians and their infiltration of the Catholic Church.

Like most Merovingian monasteries Glastonbury became a Benedictine Monastery. And the purpose of Merovingian monasteries was “infiltration” based on the belief that the best way to crush the Church was from “within.”... There is no doubt in my mind that [the Grail legend] would have been the work of the Cistercians, founded by Benedictine monks as “the ratchet” for the structural organization of [the Prieuré de] Sion. Joseph of Arimathea is alone associated with the Grail legend and the Quest of the Grail legends, which per Colliers Encyclopedia, are dominated by the mystical symbolism of Cistercians....

More than any heretical Merovingian organizations, the Cistercians personified the banality of evil at its finest. The name Cistercian and of their first monastery, Citeaux derive from Cistus, of the Cistaceae or Rockrose family resembling the wild rose and cultivated in the Mediterranean. The Myrrh with which Mary Magdalene anointed the Body of Jesus also comes from the Cistus family. And they had chosen the Magdalene... assigning her the symbol of the Rose and Cross in memory of the Brotherhood of the Sun founded by Akhenaten who had taken as its symbol the Rose and Cross (Lewis). Cistercians were Rosicrucians. And this Rosicrucian order of monks would triumph in its infiltration of the Church.³⁶

The Secret Doctrine, authored by Madam Blavatsky in 1893, became the quintessential sourcebook for 20th-century metaphysical esoterism, and it was heavily influential on the construction of the Thule Society's foundational philosophies. The inner sanctum of the Thule Society was comprised of heavy-hitting occultists, some of whom were overtly Satanist, such as Dietrich Eckart to whom Hitler, very tellingly, dedicated his book, *Mein Kampf*. As a member of the Thule, despite his membership, perchance being in name only, Hitler diligently worked to align himself to the philosophies contained in Blavatsky's *The Secret Doctrine*, the thematic undercurrent of which was that the Aryan root race theory, a gnostic belief that humanity, in its current state of evolution, is destined to be "refined" by something called the seventh root, a belief delineating the philosophy that a race of "godmen," or *Homo Noeticus* (the New Man), would rise to preeminence over the rest of humanity, replacing them and cleaning the slate of lesser, races of color and evolutionary inferiority.³⁷ It has been purported German scientists under the Third Reich, in the development of their war machine and genetic research, were aided by repeated contact with gray entities who came from inside what is known as the hollow earth.

A book considered to be one of the first "science fiction" novels, *Vril, the Power of the Coming Race*, written by Lord Edward Bullwer Lytton and published in 1871 under the original title *The Coming Race*, despite being a fictional book with a Jules Vernes-ish style of 19th-century sci-fi, was highly influential on the thinking of Hitler, the Thule Society, and the Third Reich. Though not Lord Lytton's intention whatsoever, some later Theosophists—the broader field of esoterism founded by Madame Blavatsky—supported the notion that Lord Lytton's book was an actual fictionalized account of an existing superior subterranean master race who utilized the energy-form called Vril. The Thule Society did not merely consider the book the stuff of mid-19th-century science fiction, but, in fact, a true story based on a real magical substance. Helena Blavatsky, the founder of theosophy, endorsed this presupposition in her book *Isis Unveiled* (1877) and again in *The Secret Doctrine* (1888).

So the question that lingers is this: Although Adolf Hitler was clearly an occultist, easily influenced by the mystical and mentally governed by his innate drive to be one of the mythic royalty of the gods and demi-gods of ancient esoterica, was there anything beyond the simplistic interest entailing the influence of any sort of non-human involvement, and if so, was there

any linkage to mythical beings that governed his actions? As you have seen, this all funnels backward into the ancient past, linking races, religions, occult practices, and the etymological blending of language blended with the mythologies of ancient religion. And it all goes back to the Annunaki and continued reference to them having Reptilian roots of some sort. Perhaps it is time to go take a soothing bath in the great Abzu, with a fresh rinse in the snake marsh to collect our loose ends and organize our perceptions.

Here and now I have to admit to the fact that I loathe conspiracy theories, for they are generally the stuffs of overactive imaginations spurred into overload upon the discovery of some obscure, ancient myth or legend that they find either substantiates a theory (at least in their own way of thinking), or gives them animus to build a new theory, generally void of historical accuracy, twisting facts and figures, dates, and interpretations of names, events, locations, and archaic religious or occultist practices.

Chapter Seven

The New Age and the Serpent

Make no mistake about it: The mythologies of the Serpent bloodline, though well-established in the past, have never gone away; they've merely morphed into new mythology. We have seen that the Serpent is ever present in antiquity, slithering its way down through history, leaving meandering trails in the dust of nearly every ancient culture and religion, even touching the untouchable spirituality of Jesus Christ and the religion founded by his immediate friends and disciples, proliferated throughout the known world of 2,000 years ago by the evangelist Saul of Tarsus, who after his conversion changed his name to Paul, an apostle who never laid eyes on his master, Jesus Christ, but by vision alone.

The New Age movement, quite frankly, is nothing new, at all, in that it is a revisionist philosophy that has adapted the old mythologies to newer thinking. The notion that we are “all gods” is merely a looping replay of the teachings of the ancients, with the new twist that removes the brother-god/sister-goddess status from only the castes of royals to the common individual. Woven throughout the philosophies, when viewed as an amalgam of religious/spiritual/scientific/metaphysical thinking, is a connectivity to the serpent that is the driving force. One has to consider, only, the prevalent New Age philosophy put forward by well-known teacher and translator Eknath Easwaran,¹ of the kundalini (she who is “ring shaped”), that unconscious, instinctive, or libidinal force or Shakti, that is said to lie coiled at the base of the spine, the “sleeping serpent,”² to see where the connection to the Serpent of old has morphed into new meaning, but still maintains its presence.

David Icke

On a more sinister plane, the Serpent takes up abode in the highly conspiratorial world views of David Icke, former British football (that's “soccer” for Yanks like me) star and news/sportscaster turned New Age philosopher, who “exposes the dreamworld we believe to be real”—so says

the header on his Website.³ According to the description on his [Amazon.com](#) Author Profile,⁴ the elusive Icke says of himself:

David Vaughan Icke (born 4/29/52) British writer and speaker...[describes] himself as the most controversial speaker in the world, he is the author of 19 books and has attracted a global following that cuts across the political spectrum. His 533-page *The Biggest Secret* (1999) has been called “the Rosetta Stone for conspiracy junkies.”

Icke was a well-known BBC television sports presenter and spokesman for the Green Party, when in 1990 a psychic told him he was a healer who had been placed on...and that the spirit world was going to pass messages to him so he could educate others. In 1991 he held a press conference to announce that he was a “Son of the Godhead”—a phrase he said later the media had misunderstood.... [Icke] told the BBC’s Terry Wogan show that the world would soon be devastated by tidal waves and earthquakes.

...[in] *The Robots’ Rebellion* (1994), *And the Truth Shall Set You Free* (1995), *The Biggest Secret* (1999), and *Children of the Matrix* (2001) [Icke] set out a moral/political worldview that combined New-Age spiritualism with a passionate denunciation of totalitarian trends...[in which] many prominent figures are Reptilian, including George W. Bush, Queen Elizabeth II, Kris Kristofferson, and Boxcar Willie.

Michael Barkun has described Icke’s position as “New Age conspiracism.”... Richard Kahn and Tyson Lewis argue that the reptilian hypothesis may simply be Swiftian satire, a way of giving ordinary people a narrative with which to question what they see around them.

Whenever I encounter self-proclaimed gods and messiahs, despite their well-meaning messages of peace toward all, unity among fellow man, and self-growth based on a philosophical foundation that we are all little gods within the universal collective, I tend to write them off rather quickly, simply for the self-labeling—good or bad philosophical beliefs notwithstanding. Be it my past education in theology, or my years of

thinking, writing, and mulling over history, religion, and spirituality, or simply my exposure to and study of history's cavalcade of messianic figures who accomplished little other than leading their followers—and themselves—to bitter ends, it is at the moment of self-proclaimed messianic revelation that I lose interest and cluck my tongue. When I read that Icke compares himself to a god, substantiated by his many public appearances and the rare granted interview, I know what he is getting at from the standpoint of a New Age way of thinking.

Sure, the concept that we are all gods—that we collectively comprise the greater good and have within us the ability to rise to spiritual heights—is not necessarily a thing to be reviled, no matter what your spirituality or religious (or non-religious) status may be. However, when those spiritual concepts, not uncommon to many, many religions, and spiritual trains of thought and practice, are hitched to the wagon of fringe conspiracy theories that focus on ancient alien Reptilians from another star system, and are working behind the scenes to draw energy off the evil and corruption of humanity, while at the same time pulling the strings behind such mythical groups as the Illuminati, I tend to think the Messiah has stepped off the surface of the water and sunk into the sea of self-adulation entangling himself and his followers in the seaweed of self-deception.

Icke's boiled-down philosophies are not uncommon to the New Age thinking community. He blends staples of the metaphysical discussion about the nature of the universe and consciousness with over-the-top conspiracy theories about public figures ranging from world politicians, religious leaders, and Hollywood celebrities to members of Europe's Royal families. But where he adds a decidedly sinister twist is when he openly accuses them of being Satanic pedophiles, child killers, shape-shifters, mass murderers, serial killers and worse. What seems like unconnected political and social events are in fact, according to Icke, attempts by a hidden Reptilian race to subvert and control humanity.⁵

In his book *The Biggest Secret*, Icke contends that human beings are the product of an extraterrestrial genetic engineering program launched by a race of reptilians called the Annunaki, who came to earth from a solar system in the constellation of Draco. How he makes his connection to Reptilians is as obscure as a few pieces of statuary and a heavy reliance on the works of Zechariah Sitchin. In part, he embraces the ancient Sumerian

account of Enki's creation of primeval man as a slave race for the other gods. But he goes beyond merely hailing to ancient mythology as fact, expounding that reality is a holographic experience, the only *true* reality is the realm of the Absolute, which he illustrates by making comparison to the Hollywood movie *The Matrix*.

He teaches a philosophy of Collective Consciousness built on intentionality, reincarnation, a loose, adapted understanding of string theory, and outer-galactic worlds that exist alongside ours on other planes of frequency. He contends that our life experiences alter our DNA by "downloading" new information and "overwriting the software" of our conscious state, and that we attract experiences to ourselves by means of good and bad thoughts⁶—all in all, a mixture of current metaphysical thought with alien conspiracy theory, and, frankly, very appealing on many levels to those who have been disillusioned by science and religion and are seeking something different to assuage their loneliness or dissatisfaction with the status quo. It is very easy to understand how simply listening to Icke and reading his work can draw one in. His converts are, I am sure, people who have considered both aspects of his foundational thinking, and simply not dug deeply enough to see the missteps and calculated misinterpretations.

David Icke is certainly not the first to have mentioned Reptilian aliens, but he claims he has been the one to have pioneered the road to a better understanding of who the Reptilians really are, and why they continue to interact and influence earthly humans. From secretive governmental control to world domination, ancient religious roots to modern day New Age-ism, Reptilians, according to Icke, *have been known* for their secret agenda. And although we do not have a clear picture of what their true intentions may be, "we are able to gather from history the signs and traces of their past actions and influence with ancient human civilizations. Accounts from the Aztecs, Greeks and Chinese mythology and history leaves us clues as to an ancient race of aliens that perhaps helped and aided the building of our civilizations past and present."⁷ He has thrown the ancient alien theory on its head by attributing his particular brand of conspiracy to them.

Icke purports that Reptilians, today, are believed to have shape-shifting abilities that enable them to secretly work their agenda behind the scenes, hidden within the bodies of the ruling classes of Europe and in the majority

of U. S. presidents and political figures, not to mention prominent entertainment and pop cultural personages the world over. Icke reports that he has found evidence that our political structure and economic systems have already been influenced by these evil, cunning, crafty (a word used to define Nachash, the serpent character in the Garden of Eden) Reptilians who have worked for thousands of years behind the scenes of human history. These alien intruders, for at least 6,000–8,000 years have seduced, through their cloned counterfeit political leaders and royal personages, the hearts and minds of all humanity, who are blinded to their existence. All the while, these Reptilian overlords are plotting their secret agenda and have been slowly fostering chaos throughout human history, waiting for the right time for the ultimate conquest of our planet.

During his aptly named Turquoise Period, in which Icke and his wife dressed only in the color turquoise due to his claim of some metaphysical effect that acts as a conduit for receiving positive energy, Icke writes that he had been channeling beings from another world and via automatic writing, and had received messages from extraterrestrials telling him that he was a Son of the Godhead—in other words, a “Messiah.” After the clamoring controversy and criticisms that ensued after the release of that statement, Icke later attempted to backpedal his statement, amending it and reinterpreting “Son of the Godhead” as the “Infinite Mind.”⁸ After this experience, in 1990, he met Deborah Shaw, a British psychic living in Calgary, Alberta. Icke began a relationship with Shaw, and the couple had a daughter the next year. Shaw and her infant daughter moved in with Icke and his wife, and she changed her name to Mari Shawsun. Icke’s wife changed her name to Michaela, which, she said, was an expression of the Archangel Michael. The eclectic trio was dubbed by the British press as the “turquoise triangle.”⁹

You have to think that anyone who predicts the end of the world must be a true believer in his or her ability to prognosticate world event, or have some real deep set faith in his or her ability as a channeler or psychic. Icke made himself part of this short list of doomsayers when he publicly prophesied that the world would end in 1997 (that was, now, 15 years ago, in case you’re counting, as of this writing). The end of the world as we knew it, according to Icke, would be preceded by a number of disasters, including a severe hurricane around the Gulf of Mexico and New Orleans—now there’s a stretch, a hurricane in the Gulf of Mexico (do I sound too

skeptical here?)—volcanic eruptions on the island of Cuba, “disruption” in China, a hurricane in Derry, and an earthquake on the Isle of Arran. He also said in that interview that Los Angeles would become an island, New Zealand would disappear, and the cliffs of Kent would be underwater by Christmas of that year. Icke told reporters that the information contained in this world-ending prophecy had been passed on to him through channeling the voices in his head, which was physically transmitted through automatic writing. As of the writing of this book, Icke is still holding enormous stadium events today, filling sports arenas for his 10-hour conferences. To me, this merely reaffirms my contention, and aptly illustrates the fact that the world is hungry for something and people will look for the things they feel they are missing in any outlet available. When science and religion fail us, we will look to anything to fill the void.

Of course, the end-of-the-world prophecy saw 1997 come and go without incident. Icke later wrote in that he had felt out of control during that press conference where he uttered his prophecy, almost as if he wasn’t the one saying the words. He said that he heard his own voice predict the end of the world, yet was completely appalled at what was spilling out of his own mouth: “I was speaking the words, but all the time I could hear the voice of the brakes in the background saying, ‘David, what the hell are you saying?’”¹⁰ To Icke’s great dismay, his prophecies were splashed all over the front page news the next morning.

In and of themselves, there would seem to be no real harm to Icke’s channeling-driven, automatically written script and his alien-Reptilian-overrun world view. If a guy wants to read the works of Zechariah Sitchin and add his own twist, insisting that the Sumerian pantheon of Annunaki gods were a race of Reptile aliens with evil intent, still governing our human affairs from behind a curtain of subterfuge, placing Reptilians in seats of high political world power throughout the ages, imposters in an exterior skin of cloned human flesh, infiltrating their way into all the ruling families of the world, who am I to tell him no? If the man has built a following that buy his books, pays to attend his conferences (and he *is* a phenomenal, eloquent, moving public speaker) and promulgate his views, why should any of us care? If that is the niche David Icke has found to fill his coffers and pay the electric bill, and if people have so little to believe in that they ascribe to his views (which, frankly, I have a hard time believing even Icke himself fully believes) then more power to him. After all, blended

throughout his alien message is a more overt call for people to take action against the abuses and oppressions of government, the seeking of world unity in contrast to the New World Order, and the gaining of inner god-like awareness and tranquility. What's so wrong with that? Whatever the vehicle of delivery of the message, the ends justify the means, and if the world becomes a better place, even if we have to foist upon the common mind the notion that if we don't pursue these things, the Reptilians will get a stronger foothold and destroy our world and have us all for lunch. No matter if you are exploiting information and creating a revenue stream, while at the same time foisting peace and unity as the answer, despite how disgusted one might be with his methods, he is ultimately pushing a good thing, right?

But there is a much more insidious aspect to David Icke's assertions. The Reptilians that he claims exist and operate behind the scenes of humanity are ones he links to the bloodlines of Cain, the Merovingians, and the Luciferian lineage. He speaks a form of anti-Semitism, buried in a twisted view of world history, linking the Jews with the Illuminati and the New World Order. The Jews, Icke purports, are the Reptilian-populated, -controlled, -manipulated race seeking world domination through their positions held in the wealthy, ruling, and royal families of Europe and the Western world. The "Chosen People" of the Old Testament are a plague to humanity. And the heinous underpinning of his teachings is that his foundations are laced with historical fact, yet merged into his Reptilian/Illuminati views.

This is not to say that the man does not adhere to good philosophies that stand for the betterment of humanity, but that is the hook that draws an inordinate amount of followers to his philosophies. Truth and fact mixed with bizarre theorizing make for the propagation of a message that is all at once appealing and stimulating to the curious, who are dying for answers to convert our world from what they view as a place of evil and oppression, to one of peace and harmony. Throughout his career, David Icke has professed to having long stood against many political and social systems that may be compromised by the Reptilian alien agenda, and, although Reptilians continue to make their push against humanity, many believe that we have protectors from yet *another* constellation watching their every move and awaiting their chance to move against the Reptilian alien race of aliens and their agenda. Although many of the subjects related to Reptilian aliens or intelligent life elsewhere is usually left to the science-fiction authors and

fanatics, David Icke continues to push his own alien agenda toward what he believes to be the “truth that has been hidden from the public for ages.”¹¹

Conclusion

The Continued Presence of the Serpent

As we have seen throughout this entire book, the presence of the serpent as a thing of both good and evil began as early as the recorded history of humanity and has coursed its meandering trail down through the ages. If, indeed, the imagery and symbolism is a result of ancient humankind's face-to-face encounters with non-human entities in the form of Reptilians, the case of history does not bear out that fact. What we know for a certainty is that the symbolic form of the serpent was inextricably linked with the worship and veneration of the serpent since the dawn of civilization.

Is the presence of the serpent linked to the Luciferian? Does the serpent crawl on its belly solely due to the spoken judgment of God in the Book of Genesis? Or is that simply representative of one version of the serpent in human religion and religious mythology? The seemingly as-yet unanswerable questions are co-dependents with our ability as humans to reach the unreachable and piece the unpierceable. In the vastness of the universe, we are awfully big for our own britches when we think we have the answers to the most elusively quantifiable of questions.

To not know all the answers is the beginning of exploration. That is precisely what I believe we set out to do in all of our sciences, histories, archaeologies, and anthropologies, let alone the verbose pomposity of our philosophies. For me, the pervasive presence of the serpent through our human existence on this planet—our spiritualities, religions, legends, and mythologies—represents an enduring symbol of something or someone that had such great impact on early humanity and their civilizations that it pressed an deeply encoded imprint in our collective psyche that has endured nearly all others, equaled only by our innate need for a deity. Those equally dichotomous quantities have been present with us, family to us, and governing aspects of who and what we are—and surely will continue to be so, prompting further seeking, questing, and digging for the reasons why.

Afterword

It's a river. As you have seen in the preceding pages, the amount of information that stems from one simple thought to the next is filled to over-brimming with tributaries branching off the main artery into other tributaries—stemming into hundreds of branches, little creeks, streams, coolies, and swampy backwaters with inlets and outlets of their own. As I stated at the very start of this book: "*The implications of the comparative historical and religious touch points are so far-reaching that the meanderings of myth one must follow to seek efficacious tendrils of fact could most certainly drive one mad in its contemplation.*" It has nearly brought me to that point, not due to the content of the mythologies and varied philosophies, but based upon the overwhelming mountain range of information to sift through and weigh against fact, fiction, insanity, and spirituality—and those distinctions are, sometimes, very difficult to decipher. What is one person's religion is another's folly, leaving plenty of room for criticism, nay-saying, and propagandizing.

There were times in the writing of this little book that I saw myself as a literary version of Meriwether Lewis on his quest to discover the Northwest Passage to the great western Pacific Ocean. After weeks and months of forging through seemingly un-traversable terrain he came, finally, through the foothills and low mountains. It was at that point that Lewis scaled a nearby ridge, certain he would see the Pacific Ocean stretched across the horizon. When he reached the top of the ridge and gazed at what lay beyond, though, all he saw was mile upon mile, range upon range of the craggy, snow-crested Bitterroot Mountains. His spirit sank and he was overcome with the feeling that he'd never find his way. His thoughts of enduring the hardship of the quest for even a single mile more turned into the despair that accompanies the feeling of having come too far to go back, but not far enough to find completion. Despite his inner turmoil, he pressed on and eventually cleared the mountains and pine forests of the northwest and stepped onto the sandy beach of accomplishment, the salty waves of the Pacific Ocean lapping at the soles of his boots.

For me, seeking the Reptilian factor and the connectivity of the serpent in human history and religious myth has been all-consuming, and just when

I feel I have fulfilled the goal and step to the ridge of conclusion, there, stretching out before me as far as the eye can see, is another range of snow-capped peaks, each bearing a new rocky climb.

It's the looking for the way through that seems daunting while you are in it. Then, when you finally get there, you look back at the terrain you've traversed and wonder about all the wondrous undiscovered country in other regions extending off to the right or the left of the trail that brought you to this place. Yet, despite all the unexplored territory, you are satisfied that you have at least forged a single path to the other side.

Our ancient past is filled with amazing stories of beings who governed our existence. Whether they were gods descended from the heavens, extraterrestrial beings making their presence known while, perhaps, undergoing their own explorations, or whether they are simply comprised of deified human royal bloodlines and the stuffs of overwrought imaginings and religious control—whichever it may in reality be, they represent the mysterious elements of our past that have comprised the modern mythologies of today. If we take but a moment to stop ourselves in the tracks of our busy work schedules, hang up the phone, shut off the television and the Internet, close the calendar, stop shopping and mowing the grass, and simply “unplug” for a few moments and listen to the quiet, we will find that those voices are still speaking, beckoning us to come find them.

Conclusively answering whether or not extraterrestrial serpentine beings interacted with humanity and continue to make their presence felt from the stealthy shadows is as simplistically easy as finding God sitting on His patio having a cup of Darjeeling. What is certain is that humanity has been writing about these things since they first developed the skill set to record their personal histories. The plethora of occultists, religious apologists, scientists, true believers, skeptics, and experiencers can accomplish only one thing, and that is a presentation of the facts as they understand them. That is why all we are left with, beyond establishing points of history, anthropology, and archaeology—the bare tools of the trade—are the facts, which sometimes controvert the theories.

The things that seem to really matter to the questioning mind, most often never have solid answers. I am again brought to the words of the Richard Fyneman, astralphysicist contemporary of Oppenheimer and Einstein:

If you expected science could give all the answers to the wonderful questions about “what we are” or “where we’re going” or what the meaning of the universe is, and so on, then I think you could easily become disillusioned and then look for some mystic answer to these problems.

...I can live with doubt and uncertainty and not knowing. I think it’s much more interesting to live “not knowing” than to have answer which might be wrong. I have approximate answers and possible beliefs and differing degrees of certainty about different things, but I’m not absolutely sure of anything, and there are many things I don’t know anything about. But I don’t have to know an answer. I don’t feel frightened by not knowing things, about being lost in a mysterious universe without having any purpose.

...I can’t believe the special stories that have been made up about our special relationship to the universe...because they seem to be too simple, too connected, too local, too provincial. The earth! He came to the Earth! One of the aspects of God came to the Earth, mind you, and look at what’s out there, it isn’t in proportion. Anyway, it’s no use arguing it...we should look to see what’s true and what may not be true. Once you start doubting, which for me is a fundamental part of my soul, to doubt. And ask. And to doubt and ask, it gets a little hard to believe.¹

Did a race of Reptilians come to this planet long ago? Did extraterrestrials seed the human race or genetically engineer primordial hominids, creating a slave race? Were humans freed from bondage, led by a traitor from the ranks of the alien oppressors? Is there an extraterrestrial race that has sifted in and out of humanity’s affairs for all of recorded history, governing our destiny from the shadows? Or are we a race that simply evolves and grows, learning from the past and moving beyond our old superstitions and mythologies? Are we bound by religious thought and man-made myth, only to suffer at its invisible grasp until we move beyond the need for false messiahs and imagined gods, spirits, devils, and monsters that subjugate us to our own fears? Or is it truly that we are the creation of a one, true God, and all the rest is simply the concocted, fabricated veil of lies

and deceit, obfuscation and illusion that enslaves us to the dictates of the demonic evil that would stand in the way of our knowing that God in a more real, meaningful way?

These are the questions that I sincerely hope you are left pondering when closing the cover of this book. It is obvious that God does not go out of His way to present His case in a fashion that is not as old, cracked, and crumbling as the last surviving manuscripts telling his story. Accordingly, his opponents seem to work much harder gaining proselytes than He spends attempting to bring us to Him, and so answering the call of religion—even when told it is supposed to be a personal, loving God in charge—is a much more daunting challenge than simply believing things are what they are.

So, toss the coin in the air—or better, roll your 32-sided die. Are we simply creatures at the behest of some greater power, or are a race that lives, thrives and grows off of and in spite of its misty history and scaly mythology? Has humanity experienced the visitations of non-human entities?

Trust no one. Listen to no one. Adhere to no one. Grasp the gift of exploration and seek out the answers for yourself, for if you are comfortable simply living by the dictates of what someone else tells you is so, then you are doomed to live that life of constrained servitude. Think for yourself, and before you know it the answers will make themselves as evident as the nose on your face—the realization that all that remains in the end is a kind of forbidden knowledge, a rage with and beyond reason against reason itself, as exiles from the comforts of bondage, we are composers of a cognitive music that is not a spirituality or a religion, nor is it an eschewing of either, but it is a religion of no religion, a faith of no faith, a belief in no belief.

And, yet, there is that still, small voice...

“Extinguished theologians lie about the cradle of every science, as the strangled snakes beside that of Hercules.”

—Aldous Huxley

About the Author

SCOTT ALAN ROBERTS is the founder and publisher of *INTREPID Magazine* (www.intrepidmag.com), a publication that boasts an eclectic focus on science, politics, culture, ancient civilizations, conspiracies, ancient aliens, and unexplained phenomena.

Roberts is an accomplished illustrator and writer of fiction and non-fiction. He can be more or less defined by his roles as Dad and Husband, and is a parent to five exuberant children, three of whom are still young enough to live at home. These ingredients combined have made Roberts's life a paradoxical roller coaster of hellacious joy and insightful befuddlement, and were it not for his self-acclaimed buoyant, easy-going nature, he insists he would most assuredly have lost his sanity a long time ago.

Having spent the bulk of the last 25 years in advertising as a creative director, designer, and illustrator, Roberts's background is laced with varied and diverse skills and experience in publishing and marketing. He possesses an astute flare for the visually dramatic, demonstrated in his various ventures from theatre to comic book art and publishing, as well as advertising campaigns and public speaking.

After two years in a Christian bible college, he entered seminary, pursuing his Masters in Divinity (Mdiv) and worked as a youth director alongside his advertising career. His religious studies intensified his natural interest in spirituality, and his research of the paranormal expanded throughout the following years, much to the chagrin of many of his former Bible school fellows.

Shortly after his seminary years, Roberts began a small comic book publishing effort, writing and illustrating stories, which were also pitched as animated television series. He developed and published *The Bloodlore Chronicles*, as well as the highly successful *Ancient Heroes* trading card series, and began development on a series of chapter books. He authored and illustrated his first historical teen novel, *The Rollicking Adventures of Tam O'Hare* (www.tamohare.com), which garnered success in the teen and college markets in 2008 and 2009.

Roberts began his delve into paranormal investigation in 1999 by co-hosting and producing Three Horizons Paranormal Radio airing in Oklahoma City and several affiliates. He simultaneously launched a fledgling paranormal investigative long before the pop culture of paranormal investigation was “all the rage.”

Roberts's current projects include *Tam O'Hare and the Banshee of BallyGlenMorrow*, the second in his series of Tam O'Hare historical novels, and a more scholarly effort on the historical Moses, tentatively entitled *The Grimoire of Moses: An Historical Exploration of the Majick and Mysticism Behind The Great Exodus and Its Enigmatic Leader*, co-authored with archaeologist/anthropologist Dr. John Ward. He is also working on a joint authoring effort with *INTREPID Magazine* partner Micah Hanks, *At Odds: The Pervasive, Perpetual Conflict Between Science and Religion*.

Roberts is a standup philosopher, and frequent guest speaker at many conferences and events around the country and abroad. He is the former Editor-In-Chief of *TAPS ParaMagazine*, the official publication of SyFy's *Ghost Hunters*.

Roberts currently lives with his family not far from the Minneapolis/Saint Paul metro area, where he grew up and lived most of his life. You can see more visiting his Website (www.scottalanroberts.com).

*For life's optimists,
who see hope in human change*

LECTOR INTENDE, LAETABERIS

Mankind–

N. human race, human species, human kind, human nature; humanity.
human being; person, individual, mortal, body.

Adj. human, mortal, personal, individual, social.

Change–

N. alteration, mutation, variation, modification,
metastasis, deviation, turn, evolution, revolution,
transformation, transfiguration; metamorphosis.

V. alter, vary; modulate, turn, shift, veer, shuffle, swerve,
deviate.
transform, transfigure, metamorphose.

My aim is to sing of the ways bodies change, ceaselessly transforming into other forms.

Ovid, *Metamorphoses* (c. 8 CE)

All things change with time, and we change with them.

Lothar, Holy Roman Emperor (c. 840)

And then I, a woman, by a flick of Fortune's hand was transformed into a man.

Christine de Pizan, *The Mutation of Fortune* (1403)

We are nothing but a bundle or collection of different sensations... and are in a perpetual flux and movement.

David Hume, *A Treatise of Human Nature* (1739)

It is itself unchanged, the same water which my youthful eyes fell on; all the change is in me.

Henry David Thoreau, *Walden* (1854)

Metamorphosis governs natural phenomena... reflects the shifting character of knowledge and attitudes to the human.

Marina Warner, *Ovidian Metamorphosis in Contemporary Art* (2009)

A note on confidentiality

THIS BOOK IS A SERIES OF STORIES about medicine and the changing human body. Just as physicians must honour the privileged access they have to our bodies, they must honour the trust with which we share our stories. Even as long as two and a half thousand years ago that obligation was recognised: the Hippocratic Oath insists ‘whatsoever in the course of practice you see or hear that ought never to be published abroad, you will not divulge’. As a doctor who is also a writer I’ve spent a great deal of time deliberating over that use of ‘ought’, considering what can and cannot be said without betraying the confidence of my patients.

The reflections that follow are all grounded in events within my clinical experience, but the patients in them have been so disguised as to be unrecognisable – any similarities that remain are coincidental. Protecting confidences is an essential part of what I do: ‘confidence’ means ‘with faith’ – we are all patients sooner or later; we all want faith that we’ll be heard, and that our privacy will be respected.

1

Transformation

From so simple a beginning endless forms most beautiful and most wonderful have been, and are being, evolved.

Charles Darwin, *On the Origin of Species*

THERE'S A PARK near my medical office lined with cherry trees and elms that undergo beautiful annual transformations. If there's time on my commute I'll stop at a bench and watch them for a few moments. Winter brings storms, and the last few years have seen several of the tallest elms blown over. When they fall down, tearing up their roots, deep coffin-sized gashes open in the earth. Around Easter the branches thicken with a green so enchanting I see why some imagine it as the colour of heaven. The blossoming of the cherry trees in spring strews the grass with petals, and to take a stroll beneath their branches is to be feted in pink. The summer air feels ripe and dense – barbecues are lit and babies play on rugs in the shade; acrobats teeter over ropes strung between the tree trunks. But my favourite season is autumn, when the sky feels high, the air pellucid and brittle, and heaps of crimson, auburn and gold gather around my feet. I've been appreciating this park for around twenty-five years – it's adjacent to the medical school where I trained.

Aged eighteen, in the first year of training, I walked through drifts of those leaves to a biochemistry class that I've never forgotten – a lecture where I had something approaching a revelation of the intricacy, the interconnectedness, even the wonder of life. It had an inauspicious beginning: projected on the wall was a complex diagram of the haemoglobin molecule. The tutor explained that the chemical which binds oxygen into red blood cells, known as a ‘porphyrin ring’, was essential both to the haemoglobin of blood and the chlorophyll that traps the sun’s energy in leaves. Thanks to porphyrins, she said, life on earth as we know it is possible. Up on the wall, the molecular structure resembled a four-leaved clover, with porphyrin leaves interlocked in an architecture of almost Gothic complexity. Cradled at the core of each of the four leaves was a lava-red atom of iron.

When oxygen binds to the heart of each leaf, she explained, it reddens like an autumn maple; when oxygen is released, it darkens to purple. So far, so biochemical. ‘But this isn’t a static process,’ the tutor added, ‘it’s dynamic and alive.’ The binding of oxygen transforms its cradle; the stress of that transformation pulls a tiny atomic lever which bends the cradles of the other three, encouraging the take-up of more oxygen. This was the first revelation of the elegance of biochemistry, as startling as it should have been obvious: from chlorophyll to haemoglobin, molecules cooperate with one another in order to sustain life.

Watching the diagram, I tried to imagine billions of molecules of my own haemoglobin, their shapes shifting as they gathered oxygen in my lungs with each breath. Then the beating of my heart pushing on rivers of blood to my brain, my muscles, my liver, where the same shift would occur in reverse. It seemed a transformation as vital and as perennial as the annual

growth and fall of leaves, implausible, somehow, that it could be happening moment to moment throughout my body.

'The more the tissues need oxygen the more acid they become,' she went on; 'that acidity deforms haemoglobin into releasing oxygen *exactly in proportion to how much it's needed*.' This was the second revelation of the morning: blood is exquisitely calibrated to meet varying oxygen requirements across the body. She began explaining the ways in which foetal haemoglobin is subtly enhanced to draw oxygen across the placenta from the mother, but I was already so caught up in the first two realisations that I hardly heard her.

I felt the air charge with reverence, the unfolding of a kind of joy: that such balance existed among the tumult of body chemistry seemed strangely beautiful, though at the same time inevitable.

TRANSFORMATION IS ONE of the most ancient and resonant themes in literature and art: two thousand years ago in the *Metamorphoses*, the Latin poet Ovid painted nature and mankind as a seething maelstrom where all matter, animate and inanimate, was caught up in cycles of change 'like pliant wax which, stamped with new designs, does not remain as it was, or keep the same shape... everything is in a state of flux, and comes into being as a transient appearance'. Ovid closed his poem with a declaration of the fraternity of life, and a passionate plea to treat all beings with compassion. That compassion too is at the heart of clinical practice – medicine could be described as the alliance of science with kindness. This book is a celebration of dynamism and transformation in human life, both as a way of thinking about the body, and as a universal truth.

The great cavalcade of the cosmos is in evolution around us: the universe is expanding, the gyre of the galaxy spinning, the earth wheels through its orbit and the moon gets more distant with every year. A tilt in our planet's axis gives us the swing of the seasons; more than a trillion tides have already rinsed earth's shores. The churn of plate tectonics is renewing the crust of the earth. 'Nothing stays the same for long' is a truism that, depending on your perspective, is either a curse or a consolation. 'You can't step into the same river twice', said Heraclitus – because our bodies are ceaselessly renewed, even as each river's waters are renewed.

To be alive is to be in perpetual metamorphosis. The borders of our

selves are porous – shaped and recomposed by elements of our environment. River water was once sea spray; next year it could flow in your neighbour's blood. The water in your brain once fell as rain on ancient landscapes, and surged in the swell of long-gone oceans. From this perspective, the body is itself a flowing stream, or burning fire: no two of its moments are ever the same. In growth and in recovery, in adapting and in ageing, our bodies ineludibly change form – and with sleep, memory and learning, so do our minds. From the crises that may overwhelm us to the transitions between conception and the grave; from the neural flows that weave consciousness to the changes that can be effected through our own willpower and determination, we embody change.

The word 'patient' means 'sufferer', and to practise medicine is to seek to ease human suffering. Much of my work as a physician takes advantage of those changes that aid us, and tries to slow those that would constrain us. As a writer, I'm interested in change as a metaphor that has preoccupied poets, artists and thinkers for millennia, and as a doctor, I'm interested in the same theme because to practise medicine is to seek positive change, however modest, in the minds and the bodies of my patients.

2

Werewolves: Agitation at the Full Moon

As the first human metamorphosis of its kind, Lycaon's transformation [into a wolf] is worth examining in detail.

Genevieve Liveley, *Ovid's 'Metamorphoses'*

WHEN A NIGHT in the emergency department is particularly blood-soaked with violence, or heavy with psychiatric admissions, it's common to hear colleagues remark: 'It must be a full moon.' On a busy night shift I've even stepped outside to check, seeking explanation in the heavens for my busy workload on earth. That the moon has effects not just on the tides or on cycles of human fertility, but on minds, is an ancient belief. Othello says to Emilia, 'It is the very error of the moon. She comes more near the earth than she was wont and makes men mad.' James Joyce in *Ulysses* waxes on the moon's 'power to enamour, to mortify, to invest with beauty, to render insane'. That the moon has a transformative effect on the human psyche is a widespread conviction – a variety of studies from India, Iran, Europe and the US have all asserted it. One North American study found that 40 per cent of the general public were convinced that the moon had an influence on the mind; an earlier survey put the rate for mental health professionals at 74 per cent. But statisticians haven't been able to substantiate the claim: the number of admissions for trauma, or for mania or psychosis ('lunacy'), are unaffected by the phase of the moon, and there is no connection between a

full moon and the frequency of suicide attempts, road accidents or calls to crisis support telephone services. My colleagues in emergency medicine, and those 74 per cent of American mental health professionals, are all wrong.

That the truth runs counter to such a widely held opinion led three Californian psychiatrists to investigate. In a study called ‘The Moon and Madness Reconsidered’, they proposed that before the advent of effective artificial lighting in the nineteenth century, the full moon probably did affect those with precarious mental health, by disturbing quality and duration of sleep. They cited evidence that resting in the dark for fourteen hours a day can terminate or even prevent episodes of manic psychosis, and that even a mild reduction in hours of sleep can worsen mental health and bring on epileptic seizures – something my own patients with bipolar illness and epilepsy have confirmed. Patterns of activity in the brain involved in healthy sleep seem to overlap with patterns associated with good mental health in ways we don’t yet fully understand.

Before artificial lighting, people took advantage of the days around a full moon, because its light was powerful enough to be abroad at night. The Lunar Society of industrialists and intellectuals in eighteenth-century England named itself not for its object of study but because its members found it easier to meet on evenings when the moon was full. But moonlight was also shadowy enough to give a prompt to the fearful imagination. ‘The insane are more agitated at the full of the moon, as they are also at early dawn,’ the French psychiatrist Jean-Étienne Esquirol wrote in the nineteenth century: ‘Does not this brightness produce, in their habitations, an effect of light, which frightens one, rejoices another, and agitates all?’

JOANNE FREDERICK was brought in by ambulance; ‘agitated delirium’ was written across the top of her triage sheet. The medical history came from her flatmate: she’d been suffering with a head cold for a few days, feeling weak and under the weather, and had gone to the pharmacy to buy medicine. It didn’t work: she became weaker, had abdominal pains, and her skin felt as if it was burning. Her urine felt hot and heavy, and was painful to pass. She’d had urine infections in the past, but this was different: a bodily unease had possessed her, spreading up through her torso and out into her limbs. Her legs trembled, her arms lost all their power, and she had

a persistent low-grade fever. She arranged an appointment to see her GP, but never made it: her flatmate called an ambulance when she began hallucinating giant lizards on the walls. On the way to hospital in the ambulance she had a seizure and when I met her in the high-dependency unit, she had been sedated.

There are hundreds of reasons that someone might end up with an ‘agitated delirium’: drug overdoses, drug withdrawal, infections, strokes, brain haemorrhage, head injuries, psychiatric disorders, and even some vitamin deficiencies. But all of Joanne’s blood tests came back normal – the CT scan of her brain was unremarkable. As she lay sedated in the high-dependency unit, her flatmate began to tell me more of her story. Joanne lived a fairly quiet life, with a few close friends but keeping largely to herself. She’d been admitted to hospital with a ‘nervous breakdown’ once before; the hospital notes said that she’d had a brief episode of incapacitating panic and anxiety that had resolved after a few days’ rest. She worked as an administrator in the basement of the city council offices – a job she loved because it allowed her to stay out of the sun. ‘She burns really easily,’ said her flatmate, ‘you should see her in the summer – she gets blisters from it.’ Her skin was mottled with brown pigments, particularly across the face and hands, as if coffee granules had been spilled over wet skin.

I was a junior doctor at the time, and for me and the rest of the medical team Joanne’s diagnosis was a puzzle. When the supervising physician arrived to do his rounds he listened carefully to the story of how Joanne had come to be there, and flicked through the hospital notes from her previous admission. He examined her skin closely, leafed through the reams of normal tests, then looked up with a glance of triumph: ‘... we need to check her porphyrins,’ he said.

Porphyrins, critical for both the structure of haemoglobin and chlorophyll, are generated in the body by a series of specialised enzymes that work together like a team of scaffolders. If one of those scaffolders doesn’t work properly, porphyria is the result. Part-formed rings of porphyrin build up in the blood and tissues bringing on ‘crises’, which can be occasioned by drugs, diet, and even a couple of nights of insomnia. Some porphyrins are exquisitely sensitive to light (it’s this property that enables them to absorb the sun’s energy in chlorophyll) and some types of

porphyria lead to a blistering inflammation on exposure to the sun, with consequent scarring. The build-up of porphyrins in nerves and the brain causes numbness, paralysis, psychosis and seizures. Another effect of the accumulation of porphyrins in the skin, as yet unexplained, is growth of hair on the forehead and cheeks. Acute porphyria can cause constipation and agonising abdominal pain: it's not unusual for victims to be brought howling into operating theatres, subjected to unnecessary operations time and again before doctors reach the correct diagnosis.^{*}

When Joanne's lab report came back it confirmed soaring levels of porphyrins: it was likely that she had a rare variant of porphyria known as 'variegate'. Treatment had already begun: rest, avoidance of exacerbating drugs (the cold remedies she'd bought over the counter had probably triggered her crisis) and intravenous fluids. To those we added infusions of glucose. Within three days she had recovered, and was discharged home from the ward with a list of drugs to avoid and an explanation, at last, of why she'd always been sensitive to light.

IN 1964 A CURIOUS PAPER was published in the journal *Proceedings of the Royal Society of Medicine* by a London neurologist called Lee Ellis. In four eloquent and persuasive pages he proposed that the myth of werewolves has been reinforced or even initiated by porphyria. Skin conditions such as hypertrichosis may cause hair to grow over the face and hands, but have no psychiatric manifestations. Rabies in humans may induce an agitated, furious state of mind with biting and hallucinations, but without skin changes. Ellis pointed out that people with porphyria avoid direct sunlight, and prefer to go about at night. Crises are precipitated by periods of poor sleep or a change in diet. In severe untreated cases sufferers may have pale, yellowish skin caused by jaundice, scarring of the skin, and hair may even begin to grow across their faces. People with certain types of porphyria may suffer derangements in their mental health and become socially isolated, breeding distrust among the wider community.

In past centuries this constellation of symptoms may have attracted accusations of witchcraft. A French exorcist, Henri Boguet, boasted in his *Discours exécrible des Sorciers* (1602) of the number of werewolves and witches he had tortured and put to death: six hundred, including scores of children. 'All these Sorcerers were grievously scratched on the face, arms

and legs,’ he wrote, ‘one of them was so disfigured that he could scarcely be recognised as a human being, nor could anyone look at him without shuddering.’ It isn’t inconceivable that a light-sensitive, intermittent kind of madness, transposed to an illiterate, isolated, credulous community, could nourish and perpetuate the fear that human beings can transform into wolves. After all, 74 per cent of mental health professionals believe that the full moon can cause madness.

IN ANCIENT HITTITE LAW, to be banished from a community was to be told, ‘thou art become a wolf’; we still describe certain excluded people as ‘lone wolves’. The first human transformation described in Ovid’s *Metamorphoses* is of man into wolf, effected by the gods as retribution for ferocity and cannibalism. Though the threat from wolves has all but disappeared from Europe we still turn to them when we need a metaphor for the predatory or the ravenous: we speak of a ‘wolfish grin’ and a ‘wolfish appetite’; children still tremble at the wolf in the ‘Little Red Riding Hood’ story, and the one terrorising the Three Little Pigs. Cave paintings of wolves by our palaeolithic ancestors are among the oldest artworks we know of.

‘Werewolf’ is supposed to refer to the physical transformation of human being into wolf, while the Greek term ‘lycanthropy’ is now reserved, in English, for the psychiatric delusion that one has become a wolf – a form of psychosis. Psychiatrists have broadened the term’s use to take in any delusion that one has been transformed into an animal, but the correct term for that is ‘therianthropy’ from the Greek *therion* meaning ‘beast’. Pliny thought the idea that people could physically turn into wolves absurd, and that it was only the human mind which was capable of transformation: ‘That men may be transformed into Wolves and restored again to their former shapes, we must confidently believe to be a loud lie.’

King James I of England (James VI of Scotland) had a particular fascination for the occult, and in his book *Daemonologie* (1597) he wrote of werewolves: ‘by the Greekes they were called lykanthropoi which signifieth men-woolfes. But to tell you simplie my opinion... if anie such thing hath bene, I take it to have proceeded but of a naturall super-abundance of Melancholie.’ Lycanthropy, then, was thought by King James to be a temporary madness, a psychiatric problem, rather than a physical

transformation. The Greek physician Marcellus of Sida agreed: he argued that the werewolves reported to frequent the graveyards of Athens after nightfall were not ‘turnskins’ – the Roman term for those who could shape-shift into wolves – but deluded. The Byzantine doctor Paul of Aegina wrote that these lycanthropes could be treated with copious bloodletting, sleep, and sedatives – a set of remedies not too different from the modern treatment of porphyria.

Ancient literature is replete with delusional transformations: one of Virgil’s *Eclogues* tells of the madness of three sisters, cursed into believing they had become cows: ‘They filled the fields with imaginary lowing... each feared the plough-yoke on her neck and often searched for horns on her smooth brow.’ In the Bible’s Old Testament, King Nebuchadnezzar undergoes an animal transformation following a fit of depression: ‘He was driven from men, and ate grass as oxen, and his body was wet with the dew of heaven, till his hairs had grown like eagles’ feathers, and his nails like birds’ claws.’

In late medieval Europe atrocities like those described by Boguet were relatively common: hundreds of would-be werewolves were put to death at the stake. As the eighteenth and nineteenth centuries wore on, published reports of ‘lycanthropy’ began to fade along with superstitions (and European wolf populations). But the delusion didn’t go away entirely, it just changed form. In 1954 Carl Jung described three sisters who dreamed night after night that their mother had transformed into an animal. He wasn’t surprised when, years later, the mother developed psychotic lycanthropy: the daughters, he reasoned, had unconsciously recognised their mother’s long repressed ‘primitive identity’.

IN OUR OWN TIMES and culture, the most famous literary work to express the horror and the metaphorical potential of animal transformation is Kafka’s *The Metamorphosis*. Gregor Samsa wakes one day as a ‘monstrous vermin’, an insect-like creature with scurrying legs, horny jaws and a beetle-like shell.* Samsa’s transformation is irreversible: as a travelling salesman he was trapped in the service of his family, and in his new life as vermin he is physically trapped in his room. As his family agonise over what to do he gets accustomed to his new form, scuttling on his ceiling, and preferring rotting scraps from the floorboards to the plated food his family leave out

for him. In the end he goes the way of all vermin, dead on the floorboards, and swept out with the trash.

Kafka's *Metamorphosis* resists straightforward interpretations, but speaks to anyone who feels alienated, persecuted and powerless. Samsa's metamorphosis renders him spatially and socially isolated, like many who suffer profound mental or physical illness. The animal transformations we know of from myth and from folklore traditions tend to carry a semblance of coherence, or even justice, at least within the logic of their own story. But Samsa doesn't have that consolation: 'he could think of no way of bringing peace and order to this chaos.'

ONE OF THE ELM TREES near my clinic seems to me different from all the others, not because of its size, or the pattern of its limbs, but because one of my patients once fell twenty feet from it. Gary Hobbes wasn't normally a tree-climber: he was a young man with schizophrenia who, after taking a cocktail of drugs containing MDMA, became convinced he had transformed into a cat. Witnesses recounted that on the day of his fall he had been prowling the local streets examining the contents of bins before scaling the elm to hiss at passers-by. The police were called; he climbed higher. A dog-walker approached to watch; Gary recoiled and screeched, demonstrating a previously unexpressed terror of dogs. The police were debating how to get him down when he slipped and fell, breaking his wrist on impact. He knocked his head too and lay mewling on the grass, concussed enough to be transferred without incident to the emergency department.

The following morning Gary woke on an orthopaedic ward with a plaster cast on his arm, reluctant to discuss his experience with the hospital psychiatrist. He was discharged back to his supported accommodation – a complex of small apartments with a warden on hand to help. On visits to see how he was getting on I'd spot opened cat-food tins in his kitchen, and wonder if he was eating them. From time to time I'd ask him about that night, but he changed the subject. The last I heard, he'd adopted a couple of street cats as pets, and had cat flaps cut in the apartment door.

Early European and Near Eastern myths are full of animal transformations; some scholars take them as evidence of ancient animal worship. A glance at internet traffic suggests that the veneration of cats and

dogs remains as powerful a motivation in human affairs as it ever did. Folklore traditions are full of animal transformations too, from the selkie tales of the Celtic lands, in which humans shape-shift into seals, to the spirit animal transformations of shamanism. Something these stories hold in common is that it's dangerous to lose one's hold on the human world: the selkie who spends too long as a seal forfeits their human life; the shaman who is mentally weak, or insufficiently trained, might get stuck in his or her animal skin.

'THEY ARE ALL BEASTS of burden in a sense,' wrote Thoreau, 'made to carry some portion of our thoughts.' Visit any toy shop, or watch a few television programmes made for children, and you'll see just how much humanised animals remain part of western culture. From Peter Rabbit to Stuart Little, tiger costumes to face-painting parties, adopting the skin and habits of animals offers children a liberating means of becoming fiercer, or smaller, or faster, or more agile, than they really are. For some adults, the psychosis of therianthropy may offer a comparable escape, a release from the limitations and pressures of human life.

In the late 1980s a group of psychiatrists in Massachusetts published a paper in which they described a series of twelve cases they'd seen over fourteen years at a clinic in suburban Boston. Two had suffered true lycanthropy and become wolves, two had become cats, two had become dogs, and two were 'unspecified' (their behaviour was 'crawling, howling, hooting, clawing, stamping, defaecating', and 'crawling, growling, barking'.) Of the remaining four, one had transformed into a tiger, one a rabbit, one a bird, and one – a lifetime keeper of gerbils – became his favourite pet.

There was no predominance of schizophrenia among the patients – eight were categorised as 'bipolar', two 'schizophrenic', one had a diagnosis of depression and one was described as having a 'borderline personality'. 'The presence of lycanthropy had no apparent relation to prognosis,' the authors noted: 'the delusion of being transformed into an animal may bode no more ill than any other delusion.' The most persistent transformation of all was of a young man, age twenty-four, who following a period of alcohol abuse became convinced, like Gary Hobbes, that he was a cat trapped inside a man's body. At the time the series was published this man had lived in his

feline persona uninterrupted for thirteen years.

'The patient stated that he had known that he was a cat since this secret was imparted to him by the family cat, who subsequently taught him "cat language"', the psychiatrists wrote. He held down a normal job, all the while 'he lived with cats, had sexual activity with them, hunted with them, and frequented cat night spots in preference to their human equivalent.' The psychiatrists had little hope for improvement – his belief had persisted despite various trials of antidepressants, anticonvulsants, antipsychotics and six years of psychotherapy. 'His greatest – but unrequited – love was for a tigress in the local zoo,' they concluded. 'He hoped one day to release her.'

* When those same scaffolder enzymes fail in plants, dark spots bloom across the leaves following even modest light exposure.

* The transformations in Angela Carter's modern fairy tales are similarly striking.

3

Conception: The First and Second Reason for Existing

May he be ashamed who thinks badly of it.

Sir Gawain and the Green Knight

THROUGH TERM-TIME at medical school I had a job in a bar; through the summers I worked preparing dissections of human cadavers. The bar job was an education in life, and the anatomy job, I imagined at first, would be an education in death. I didn't find it macabre, but enlightening – it earned me a strong stomach and a thorough knowledge of anatomy. But it taught me nothing of death.

Only after I'd qualified as a doctor did I begin performing medicine's most doleful tasks: breaking news of terminal illness, or the death of someone loved. And working regularly on hospital wards I began to be routinely present at moments of dying: standing solemnly as someone's last breath rattled, or noticing the cooling of the skin after an unsuccessful resuscitation. It seemed somehow strange that no material change occurred at that moment of transition: the dead body was composed of the same elements as the living one of moments before. The dynamism from which life is woven, moment to moment, had merely been stilled.

It was once believed that on death the soul escaped from an open mouth.

‘Your existence is attached by a thread,’ wrote Montaigne, ‘it rests only on the tip of your lips.’ That thread is sometimes robust and well-fastened, at others weak and loosely held. For Montaigne, death was the snapping of the thread from life’s loom, the beginning of a new process of unravelling. As its converse, conception was simply the tying on of a new thread, initiating a new weave in the tapestry of life.

LEONARDO DA VINCI wrote that his earliest memory was of a red kite, a kind of hawk that feeds on carrion, swooping down to his cradle and opening his lips with its tail. Kites are masters of aerobatics – their tail shape influenced the design of Roman ships – and Leonardo watched them carefully when designing his own flying machines. Interpretations of the cradle memory vary: some see in it the ignition of his creative genius, others his perception of his exceptionality, yet others relate it tangentially to his homosexuality.

Around 1503 he painted the adult Virgin Mary seated on the lap of her mother, St Anne. Mary reaches out as if to pull Jesus back into the family, but he eludes her grasp, straddling the lamb that by convention symbolises the sacrificial crucifixion that awaits him.

In Leonardo's day the belief that Mary had become pregnant without sex was long-established, and the notion was gathering adherents that her own conception was the same. The pope at the time brought the belief into orthodoxy. For the couple of centuries prior, Anne had been central to a medieval cult of fertility – earlier paintings show her with three daughters, each called Mary, by three husbands. At a time when women were often pregnant twenty or more times in the course of their lives, Anne's several pregnancies made her a popular saint.

Even for those who weren't saints, the creation of new life was held a divine miracle beyond the reach of human understanding. It was obvious that sex had something to do with it, but the mechanism remained a mystery. Leonardo, though, was committed to understanding every stage of human life, all the way back to its initiation. In one of his most famous cartoons, made a decade before the painting of St Anne, he attempted an X-ray anatomy of the male and female laps at the very moment of conception:

There were few precedents, and though he was a keen anatomist and dissector, most of the sexual anatomy in the cartoon was made up. His vision of the body was one in which bodily fluids are changed one into another by heat and activity. The womb he drew has a tube connecting it directly with the breasts (he thought that breast milk was transformed menstrual blood), and the womb receives a conduit of a female seminal fluid directly from the spine. His understanding of male sexual anatomy

was similarly unconventional – he drew a duct from the heart into the fluid bathing the spinal cord, and other ducts bringing semen from the brain to the spine and directly into the penis. Testicles appear as little more than counterweights, holding the ducts into position. He must have had a sense of humour: over his cartoon of conception he wrote: ‘I expose to men the origin of their first, and perhaps second, reason for existing.’

Twenty years after da Vinci’s painting of St Anne, a German physician called Euchar Roesslin was influenced by Genesis 3:16: ‘I will greatly multiply your sorrow and your conception; In pain you shall bring forth children; Your desire *shall be* for your husband, And he shall rule over you.’ He suggested that the ‘singular natural delight between men and women’ was partial compensation for the pain of childbirth, and for both sexes, a salve against the inevitability of death.

By the 1700s, the German physician Albrecht von Haller knew that human eggs came from ovaries, but thought that sex caused each fallopian tube to stiffen and, ‘surrounding and compressing the ovary in fervent congress, [it] presses out and swallows a mature ovum.’ It took seventy years before another German, Karl Ernst von Baer, actually identified a mammalian ovum (in a dog), and it wasn’t until the 1930s that a human ovum was seen within a woman’s fallopian tube, and modern understanding of conception began.

MUCH OF MY WORK concerns fertility and infertility: conception, contraception and, sometimes, abortion. Women come seeking assistance in losing a pregnancy or encouraging one; provoking ovulation, or preventing it. I give advice, prescribe drugs, draw inexpert cartoons of male and female anatomy. But, even today, many aspects of fertility and its rhythms remain obscure.

The creation of new life usually passes unnoticed: some women have a fleeting pain when they ovulate, but embryos can be conceived as much as twenty-four hours after that, and neither conception itself nor implantation in the womb occasions any sensation at all. It may take weeks for someone’s suspicion of pregnancy to grow into a conviction, to become strong enough to go out and buy a pregnancy test.

As consultations go, it can be joyful or sombre: a woman comes into my office, sits down by the desk, and says ‘I’m pregnant’. The way the words

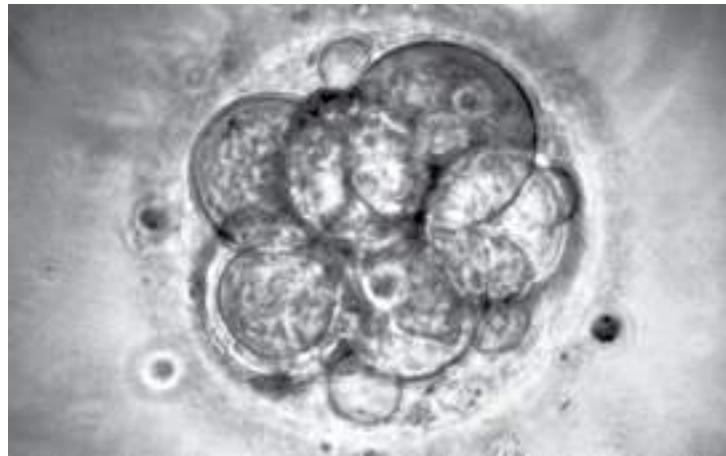

are delivered can be enough to gauge whether it's cause for celebration or dread. I take a guess which, then reply slowly with '... and how do you feel about that?' – just to be sure. 'Delighted!' I sometimes hear, or 'Awful!' Sometimes a bag opens, and urgently purchased test sticks are laid out on the desk, all showing the same blue cross or double pink line. We scrutinise them, twisting their angle to the light to make sure we're not mistaken, then repeat the test with one from my own cupboard. As the urine seeps along the reagent strip we gaze down, faces anxious and downcast, or lit with excited anticipation.

Today's tests are so sensitive that many women know within a few days of conception, when the embryo is still a thread-thin streak of cells on a disc of jelly – a streak that will define the axis of the spinal cord. When the mood in the room is excited anticipation, those moments are a treat, whether it's a longed-for baby or a welcome surprise. In those other consultations, when the mood is downcast, my questions become a little more urgent: when was your last period; how regular are they normally; when could you have conceived; have you ever been pregnant before? We're accustomed now to being in charge of our own bodies, but pregnancy is a primitive reminder that its changes are often beyond control; that bodies have their own rhythms, waypoints and fixed destinations. For some it's that inexorable quality of pregnancy that's its most terrifying aspect: a process often alienating in its otherness has been set in motion, and for the woman, whether the pregnancy proceeds or not, nothing will ever be the same again.

In most parts of the United Kingdom a woman can request the termination of a pregnancy if she feels, and two medical practitioners sign a document to agree, that there's a risk to her physical or mental health were the pregnancy to continue. The referral process is swift and discreet – I've referred happily married women whose husbands are not the father of the pregnancy, and teenagers whose lives would be misery if their parents found out. There's less of this now than there used to be: thanks to sex education and the provision of contraception, teen pregnancy rates in the UK have halved in twenty years.

I watched an IVF conception once: semen was dripped from a pipette onto a woman's eggs, layered out in a glass dish, where they fertilised almost immediately. The eggs were left multiplying in their vitrine, the

multiplying cells becoming smaller and smaller as each split, until the proto-embryo was a hollow ball still comparable in size to the original egg. The development of new life doesn't bring accumulation of size or weight at first – chemical elements already present within the egg and sperm are simply woven into a new pattern. Watching a human fertilisation was both impressive and unimpressive, like watching a bee pollinating a flower.

A century ago, a Massachusetts physician, Duncan MacDougall, weighed his patients immediately before and after death: the loss of mass, hence the weight of the soul, he calculated as 21 grammes. His instruments were faulty: neither the transition to death nor the conception of life occasions any change in weight, no loss or gain of mass. It is simply the cessation or initiation of all that sustain us, the commencement of a new process of transformation.

HANNAH MOLLIER was twenty-four when I met her. Her long hair was worn tied up in a knot, and between consultations it changed colour like traffic lights; she dressed in ankle-length purple or blue dresses. She and her husband Henry had moved to Scotland from the Welsh valleys, and her accent was so strong that I'd often ask her to repeat herself. One day in clinic she opened her bag and three pregnancy tests tumbled out onto my desk. 'I'm pregnant,' she said.

'And how do you feel about that?' I asked her.

'It wasn't planned if that's what you mean, but I'm going through with it.' We talked about vitamins and midwives, ultrasound scans and morning sickness, and I referred her to the antenatal clinic.

I saw her regularly through the pregnancy, which was dreadful for her: high blood pressure, nausea, heartburn, and back pain so severe she could hardly walk. ‘There’ll be no more after this one,’ she told me in her lilting, sing-song accent. ‘One is enough.’

Six weeks following the delivery she brought the baby to see me – a delicate little girl with dark eyes like ink spots and a pelage of translucent, downy fur. After I’d completed the screening checks on her daughter, and examined the scar of her caesarean section for how well it had healed, we discussed the options for contraception: she left with a prescription for contraceptive pills. ‘They’ve a failure rate of about 1 per cent,’ I told her: ‘it’s important to take them at around the same time every day.’

Three months later she was back in clinic, pushing a pram ahead of her. When I went to call her from the waiting room, I noticed she was sitting beside another patient of mine who was just embarking on her third cycle of IVF.

‘I’m pregnant again!’ Hannah said, as she negotiated the pram through the office doorway. She sat down, and with one arm continued to rock the pram.

‘And how do you feel about that?’ I asked.

‘It’s a nightmare, isn’t it? I’ve not recovered from the last time. I knew right away: feeling sick, sore breasts...’ She paused a moment, her expression shifting as she realised why I’d asked. ‘But we’re going through with it, Henry and me – our minds are made up.’

Hannah’s second pregnancy was more gruelling for her than the first – we met every two to three weeks, juggling medications for sickness, for heartburn, for back pain and worsening sciatica. Towards the end she became incontinent of urine, struggled to leave her flat, and could barely sleep. The platelet count in her blood dropped, her blood pressure rose, and the gynaecologists offered to deliver the baby by caesarean section again. ‘I’m definitely not having any more,’ she told me, limping around her flat when I called in to see her. ‘Can’t they just tie my tubes while they’re in there?’

‘I’ll ask,’ I said, and wrote a letter to the department of obstetrics and gynaecology.

Two weeks later a message arrived: ‘Female sterilisation in a woman as young as Hannah is inadvisable,’ she’d replied. ‘Rates of regret are high.

We will offer a contraceptive implant at the time of discharge from hospital.'

IT TOOK UNTIL the nineteenth century for medicine to catch up with da Vinci's research, when a series of mostly German gynaecologists pondered the anatomy of conception. They scrutinised physical changes during intercourse, and guessed their effects on the likelihood of conception. They queried which sexual positions had the best chance of success, and whether sex during pregnancy was dangerous. They theorised with one another about whether the womb itself altered its shape or position during orgasm. None of them were women.

In 1933, just as physiologists were beginning to understand human fertility and the timing of ovulation, pornography laws in the United States relaxed enough for a New Jersey physician called Robert Dickinson to publish his own research. Dickinson believed that anatomical science needed to get away from the dead bodies in the dissection room, and occupy itself instead with living human beings. As a gynaecologist he was challenged daily to figure out why some couples struggled to conceive, and realised that society's reluctance to discuss sex freely was the cause not just of enormous misery, but even of infertility. 'Perhaps,' he wrote, 'this shyness is begotten by the certainty that such study cannot be freed from the warp of personal experience, the bias of individual prejudice, and, above all, from the implication of prurience.' He begins a chapter called 'Anatomy of Coitus' with an observation of the centrality of sex in the perpetuation of human life: 'No bodily function of human beings may challenge sex intercourse for far reaching effects from a single act, or for manifold implications based on short total time of action. In the single act new life or no life can hang on seconds.'

It was 'no life' that most concerned him – whether conception was hoped for, or whether it was to be prevented – and his book includes a chapter on contraceptive devices, and on methods of abortion. One passage describes how to carry out a simultaneous abortion and sterilisation. Carrying out the two procedures through a single abdominal opening gave women a single scar, and for the many who approached him in secret, he argued it offered 'a better alibi'. One of his illustrations attempts to delineate, in profile, like Leonardo, the most important journey any of us

ever made, when our mother's ovum and our father's sperm came together.

Dickinson's final section is on the anatomy of different sexual positions, and in particular how they affect the pooling of semen at the cervix, and the likelihood of conception. He thought that a varied sex life would help conception, but that wasn't his only concern:

Artistry avoids monotony. This applies not alone to variety in action but to variety in atmosphere and adventure, to the notion of sea and sky as none too spacious and spring woods or moonlight none too gracious as background and as setting for rapture and splendour.

Following Dickinson, more precise representations of the anatomy of conception weren't possible until the 1990s, when accurate MRI scanners became available. A Dutch physiologist, radiologist, anthropologist and gynaecologist solicited the help of seven couples who agreed to have sex inside an MRI scanner (the anthropologist and her partner also volunteered). Their paper begins by acknowledging how little was known about the anatomy of sex, and commenting that even six decades after Dickinson, research was still being held back by the fear of being seen as prurient. They demonstrated changes in the position of the womb during female arousal, and noticed that Dickinson had been wrong about the shape of the penis during intercourse. They demonstrated striking changes in the blood supply to the vagina during sex.

Only one of the couples involved, the anthropologist and her partner, managed to sustain intercourse long enough for the scanner to take accurate images. 'The reason might be that they were the only participants in the real sense,' the paper concludes, 'involved in the research right from the beginning... and as amateur street acrobats they are trained and were used to performing under stress.'

WHEN I SAW HANNAH after her second delivery she was pushing a double pram. I asked how she was coping with two babies – her daughter was just fourteen months old – and she gave a hollow laugh. 'We can cope,' she said; 'he's good, my Henry – together we manage.' Her second daughter was more unsettled than her first had been; nights were disrupted, and both

she and Henry were exhausted. But they were still able to laugh. Just. She was keen to show me the site of her contraceptive implant. It was high on the inside of her left arm, just under the skin – about the size and thickness of a matchstick, but smooth and flexible. ‘I don’t know why I need to bother with contraception,’ she said and gave a ribald laugh. ‘Sex is the last thing on either of our minds.’

When the youngest was about four months old I came to work to find a note on my desk: ‘Call Hannah Mollier,’ it said, ‘it’s urgent.’

‘You’re never going to believe this, Dr Francis,’ she said down the telephone. ‘I’m pregnant again.’

‘... and how do you feel about—’

‘I can’t go through with this, I just can’t, I don’t think my body can take it.’ The line went quiet for a few seconds. ‘I hate the idea of an abortion, but I’m going to have to. I could hardly even walk the last time, couldn’t sleep, was peeing myself. I think I need an abortion. Don’t you think I need one, on medical grounds?’

She was early in the pregnancy, and could only have conceived a few days previously. I phoned the obstetrics and gynaecology department explaining her situation, her two young babies, her disabling back pain worsened by pregnancy, the failure of contraception. Abortion clinics send their appointments to the referring clinic rather than to a home address (too many women still have to seek abortions in secret), and so the following day I rang Hannah with the place and time for her to attend for what’s called an ‘early medical’ abortion. She met a counsellor who explored her choices, and explained how she’d be given a tablet to block hormones of pregnancy then, a day later, a pessary to put inside the vagina to encourage the shedding of womb lining.

We spoke on the phone the following week. ‘You’ll never guess,’ she told me. ‘It didn’t work. I’m still pregnant. They say it’s a one in a thousand chance.’

Again she met the counsellors, again she took the tablet; again she was given a pessary to take home, and again it didn’t work.

‘By my calculations that makes me one in a million,’ she said. I wondered if the pessary had failed, or whether once home, Hannah had felt unable to use it.

I saw Hannah the following week, back in clinic to have the

contraceptive implant taken out of her arm. The counsellors had offered her a decisive surgical termination, but she'd turned them down. 'I've decided to go ahead with it,' she told me, shuffling her double pram forwards and backwards as she spoke. 'Why didn't those tablets work?' she asked.

'No idea,' I said, shaking my head. 'I guess you're right – you must be one in a million.'

'Well, if this baby wants to stay so much, maybe I should let it.' The lilt of her accent rose up and down, lifting and dropping like a needle on a running stitch.

4

Sleep: The Chamber of Dreams

I had never heard mention before then of any gods that could make people sleep, nor to wake.

Chaucer, *The Book of the Duchess*

SOME PATIENTS ATTEND my clinic complaining of flitting symptoms that veer from one part of the body to another. As soon as I begin to get an understanding of one symptom (knee pain, say, or stomach cramps) the narrative shifts, and I'm asked to come to terms with another. It's as if each symptom recounted is of less importance than the suffering I'm being asked to acknowledge. To recast the focus of the conversation into the sufferer's mental and emotional life, drawing it away from the repetitive listing of ever more physical symptoms, it can be enough to ask: 'How is your sleep?'

'Terrible,' I'm sometimes told, or 'Too good – I'm never out of bed.' Chronic pain can cause agitated and unrefreshing sleep, but so can a restless, agitated mind. Oversleeping can mean thyroid deficiency, but it can also suggest being in retreat from the world. For many people, being asked about sleep isn't as threatening as being asked about anxieties or despondencies.

Many of the serial insomniacs I meet can't switch off their attention – every time they glide towards sleep some controlling, rational part of their

mind jerks them awake. Brain scans show that when sleeping the analytical parts of our brains tend to fall silent, while more instinctual, emotional areas come alive. To fall asleep is a kind of abandonment, of consciousness as well as of the body; sleep's inherent lack of control can make it a terrifying prospect for some. Often there's an urgency just to get some sleep: the pills to achieve this can be dangerously addictive but, for the most part, effective. Sedatives like valerian are among the oldest known drugs, and opium too has been used for millennia.

It's estimated that about 10 per cent of the world's population suffer chronic insomnia – a 'symptom' experienced by the patient, not a 'diagnosis' implying a particular medical cause – and the proportion who sleep poorly is higher still. No one can say exactly why we have to sleep, but every organism goes through alternating periods of repose and activity. Some cetaceans, seals, and birds even sleep with one half of their brains at a time, suggesting that the process is so important that it must not be suspended for long: vital cerebral hygiene is at stake. Neural processes engaged through sleep are thought to remove waste material produced by brain cells, restore aspects of the body's function, and repair injured tissues. Children sleep more than adults because their brains are constantly learning, and because they have to grow so much – it's during sleep that growth hormone is generated by the body. The longer we're awake the more a chemical called adenosine accumulates in our neural tissues. Vital for cellular energy metabolism, too much adenosine makes us feel terrible, but sleep returns its levels to normal.^{*}

Different phases of sleep seem to perform different functions: REM sleep, in which the majority of dreaming occurs, is important for memory consolidation (or perhaps the systematic forgetting of useless information[†]), while without 'slow wave' sleep we may wake feeling unrefreshed. (REM means 'rapid eye movement'; though the body is paralysed, the muscles around the eyes continue to move.) We experience REM every ninety minutes or so while we sleep – most adults have four or five episodes of it each night. Phases of 'non-REM' sleep have traditionally been divided into four stages, I – IV, but this classification has been challenged as overly simplistic.

Much about the detail and the mechanisms of sleep remains mysterious. Newborn babies spend about half their sleep time in REM, and adults about

a quarter. The deepest phases of sleep, when the brain's EEG tracings show deep coordinated pulses in neural activity, also diminish as we age – some elderly people don't enter the deepest phase of slow wave sleep at all. REM is triggered by a tiny bunch of neurons that spring from deep in the brainstem and flow into a region at the core of the brain called the thalamus. When they activate, REM is enabled. Only mammals and birds have REM. If you wake someone during REM, 90 per cent of the time they'll report having a dream.

From the 1950s to the 1990s it was largely assumed that to be in REM sleep *was* to be in a dream, but more recently that's been shown to be wrong. If you wake someone during non-REM sleep, there's still a 10 per cent chance they'll report a dream, though those dreams are usually more conceptual and less vivid than dreams reported during REM. If you're prevented from drifting into deep sleep your chances of reporting a dream when awoken from non-REM rise to over 70 per cent. No one can agree on the purpose or meaning of dreams. If you suffer the sort of brain damage that affects the generation of REM sleep you can still dream, but if you sustain damage to an area called the 'ventromedial quadrant' you can't dream, but will still have REM sleep.

Sleep might be relatively straightforward to grant with drugs, but recurrent, distressing dreams are a more difficult problem. But listening to the narrative within dreams, and exploring their associations, can offer a welcome space in which to explore unarticulated anxieties and preoccupations. I'm not a psychoanalyst, but listening to the content of my patients' dreams can often be helpful in exploring the challenges and complexities of their lives. Here are some recurrent dreams I have heard in the consulting room, only in the past year:

An elderly man finds himself running through a labyrinth of corridors, opening and closing the silvered doors of rooms. Sometimes he enters a room, and pulls out all the drawers – he's looking for something, but doesn't know what. A list in his pocket urges him on, a list he's sure is incomplete. As the dream progresses he grows more frantic until he wakes with a start, eyes wet with tears, his heart pounding against his ribs.

A successful museum curator with a high public profile and onerous administrative responsibilities dreams herself as a surgeon, standing over a slit body. Nurses surround her in silent expectation: there are entrails

hanging out, and she can't figure out how to put them back in.

A young man, violated and abused by his parents as a child, is haunted by persistent recurrent dreams of cartoon characters. Sometimes they fly around his head, taunting and mocking him. Sometimes they humiliate him, or one another. He wakes from these dreams electrified by horror, and fears sleep.

THERE'S A DREAMLIKE QUALITY to Ovid's *Metamorphoses*; the reader is aware of being drawn into a strange, hallucinatory space. In Book XI the dream-god Morpheus is described as living at the bounds of the earth, in a cave surrounded by opium poppies. The waters of the river Lethe, which springs from the cave, 'invite slumber as they glide'; dark, soporific mists emanate from the earth. Morpheus's father Somnus, the god of sleep, lies dozing on a vast ebony couch in the cave. He's surrounded by the insubstantial forms of numberless dreams, 'as many as the harvest bears ears of corn, the wood green leaves, or as the sands cast up on the shore'.

Morpheus means 'shape-maker' – he can take any human shape. His purpose is to act out the dreams of mortals, in order to send them portents. That dreams are charged with divine significance was taken for granted among the Near Eastern and Mediterranean cultures which nourished Ovid's thought: the Babylonian *Epic of Gilgamesh* has both the eponymous hero and his alter ego Enkidu receiving clairvoyant dreams. The power of dreaming is celebrated in the Hebrew scriptures with the story of Joseph, a young Hebrew from Canaan who's supremely adept at the interpretation of God-given dreams. There are numerous other episodes in Egyptian, Mesopotamian and Greek culture that testify to the importance of understanding the messages within dreams.

One of the founding texts of psychoanalysis is Freud's *The Interpretation of Dreams* – a title he took from a two-thousand-year-old work by an Ionian Greek called Artemidorus ('*Oneirocritica*'). Freud didn't believe that dreams come from the gods, but neither did he see them as the flotsam of a chaotic, ungoverned mind – he saw them as the guardians of sleep. Our restless minds would wake us ceaselessly, Freud said, if it weren't for the transformative power of dreaming. Just as Morpheus changed shape in order to act out our dreams, so dreaming transforms our fear, shame and dark ambitions into the narratives of our dreams. For Ovid,

the dream-god Morpheus comes as a storyteller, and his fictions illuminate deeper truths.

'THALAMUS' MEANS 'inner chamber'. The thalamus lies beneath the mushroom folds of the cerebral cortex, under the caves of the cerebral ventricles. I've examined them at autopsy: twinned packets of grey matter the colour and consistency of alluvial clay. Their function is to pass on sensory information towards the cerebral cortex, filtering and relaying all that we see, hear and touch. The world flows to us through the networks and synapses of the thalamus, and when sedative drugs make us sleep, it's in part because those drugs change thalamic function.

Each of the senses is apportioned a thalamic 'nucleus', and within each nucleus millions of connections are humming and clicking in communication with one another and with the cortex. Sight passes through to the back of the brain, where it's perceived a couple of inches above the bones of the neck. Hearing rises up and out in a radiation to be processed beneath the ears themselves.* Touch is perceived in a ribbon of cortex wrapped like a headphone band across the top of the brain. Smell and taste – our earthiest, most primitive senses – are different: they pass directly into the brain's underbelly, where they mingle with the emotional centres involved in hunger and lust, fear and memory. The cortex that makes sense of smell and taste is more primitive too – structured in just four layers instead of six – a hangover from our reptilian evolutionary past. It's the primitive way in which smell and taste are perceived that makes them so evocative of our past, and so intimately associated with feelings like nostalgia or disgust.

The brain's world is electrical: it's through electricity that nerve cells communicate with one another, and it is through manipulating each cell's electrical voltage that thalamic neurons block or transmit sense information. Each thalamic neuron answers to the rhythm of the sense that it serves. The activity of its neurons can be imagined as a million desynchronised drum machines, pounding out a million different rhythms, each one responding to a different sense-impression. In addition to the classical five senses, ceaseless torrents of data inform the cortex moment to moment of our balance, motion, temperature, thirst, hunger, the tension and position of every muscle and tendon of the body, the fullness or emptiness of our

bladder and rectum, and the pressure of air in the lungs and windpipe, not to mention all the higher-order reflections, perceptions and memories that clatter constantly through our waking minds. The din of all this would deafen us if we weren't so skilled at directing our attention to just two or three sensations at a time. But when it comes to sleeping, even a few of the millions of sensations pressing in on us would be distracting. To permit the brain to rest it's not enough just to direct our attention, we have to slam the gate of the senses shut.

When we begin to drift towards sleep, one among many changes is that ions of potassium leach out through the wetsuit-tight membranes that clothe each thalamic cell, and into the surrounding extracellular fluid. The leaching occurs because of the change in shape of a tiny membrane channel called ' K_{2P} ': twin pores open within the channel's structure and positively charged potassium ions glide out. The electrical charge of the neuron drops with the departure of the potassium, and the speed of thalamic neurons' firing slows as a consequence. Awake, millions of syncopated rhythms convey all the complexity of the world around us. Asleep, those neurons slow to a deep, harmonised beat that shields us from awareness. When we shake ourselves awake the reverse occurs: K_{2P} channels narrow and close, the voltage in the thalamic neurons rises, and each begins again to faithfully transmit information to the cerebral hemispheres about the outside world.

K_{2P} channels aren't unique to humans – they were first identified in pond snails. They're not unique to the brain either – you can find them in the kidney and in the pancreas (where their function is less thoroughly understood). We know they're involved in sleep because when scientists deliver anaesthetic gases or sedative drugs to pond snails, their K_{2P} channels open, and the snails become sluggish. Even pond snails sleep. Maybe they even dream.

Artemidorus, the Greek author of *Oneirocritica*, didn't get caught up in the question of whether dreams come from the gods or from the self – he said only that when we experience recurring dreams, 'our spirit admonishes and foretells us affectionately the self-same thing worthy to be thought upon.' I appreciate the gentleness of that 'affectionately'; some of my own consultations become quiet, mutual reflections on what recurring dreams might mean. The sites where dreaming takes place within the brain are

poorly understood, and they can be a dangerous territory – a realm of primitive emotion we explore at our peril. Drugs like amphetamines tap into the same areas of the brain as dreaming when they gift energy and elation; if those same regions become ungoverned, the waking nightmare of psychosis may break through. In clinic, I ask about dreams cautiously, aware not just that they're deeply private, but that their content carries power.

I began to ask those of my patients who experience recurrent nightmares what their spirit could be ‘affectionately admonishing’ them to contemplate. I asked dreamer one, who found himself nightly running through corridors opening and closing doors, to talk more to me about his personal history. His wife and both his children had died in appalling circumstances many years before (car crash, cancer, suicide). If there was any eloquence to his dream, it perhaps expressed anguish over all that had been left unsaid between himself, his wife, and his children. There was a horror that came from his knowledge that he could never substitute his life for theirs. Exploring this as a potential meaning didn’t diminish the frequency of his dreams, but it did allow him to articulate something of the depth of his grief. The intimacy that grew between us through those discussions made it easier, I hope, to discuss other fears and anxieties. I couldn’t cure him of grief, but through discussions of his dreams we created a space for that grief to be voiced.

Dreamer two had dreamed herself a surgeon uncertain how to proceed; when she began to talk about that terror she moved naturally, and without being prompted, into a disclosure of her childhood, her career choices, and her parent’s high ambitions for her – they always put on pressure to transcend the family’s modest background. She admitted that she never expected to be promoted so highly, and often worried that those around her thought her not up to the responsibilities of her job. When we were able to discuss those feelings of inadequacy – of being an imposter in her role – she went on to list all the reasons she was, in truth, ideally qualified for her post.

For dreamer three, who repeatedly experienced taunting and tormenting at the hands of cartoon characters, the physical and emotional betrayals he suffered as a small child were too raw to begin approaching with words: he found himself unable to talk about them. We decided instead to suppress the

dreams with drugs. There's a drug called clonazepam that blunts and attenuates our dreams, or at least subdues the memory of them. I began a regular prescription of clonazepam for him, to be taken until such time as he feels able to talk about the tragic abuse of his past, either with me or with a counsellor – a time we acknowledged might never come.

* We need sleep to live: there is a genetic condition called 'Familial Fatal Insomnia' in which a progressive intractable insomnia, in step with a deteriorating dementia, leads to death. It is thankfully extremely rare.

* Francis Crick, one of the discoverers of DNA's structure, believed that this was the purpose of REM sleep.

* A paradox being that the noises heard in the right ear are processed in the cortex beneath the left, and vice versa.

5

Bodybuilding: Unhelmed by Fury

If you want to be strong, you must accustom your body to be the servant of your mind, and train it with toil and sweat.

Prodicus, *On Hercules*

ONE OF THE FIRST CONSTELLATIONS I learned to recognise was that of Hercules: a box of stars radiating flailing, half-bent limbs. Look for the Pole Star, then follow the tiny saucepan handle of Ursa Minor, and you're not far off. As a child, I had a pop-up book about astronomy, and over starry bones it showed a greyed-out Hercules kneeling, club in hand, about to deal a death blow to the serpent Draco.

I knew the story of Hercules because my schoolteacher had organised a project on Greek mythology. According to the myth, Draco was a snake-like creature guarding an apple tree in a sacred garden when Hercules (or, as the Greeks named him, Heracles) clubbed him to death. I don't remember her pointing out the parallels with the story of the Garden of Eden, but I do remember her asking us to make drawings of Hercules's twelve labours. I sketched mountains of shit in the Augean stables, and puddles of blood under the Nemean lion (his 'thirteenth' labour, the impregnation of fifty virgins in a single night, was never mentioned). He was so strong, the teacher said, that when a superhuman being called Atlas tired of holding up the heavens, Hercules was the only mortal powerful

enough to take on the task.

In the most usual telling of the myth Hercules was the son of Zeus, result of one of his many illegitimate affairs. Zeus's wife Hera tried to prevent the birth, directing magic spells at Hercules's mother while clamping her own thighs tightly together. This was an integral part of the spell, and Hera was tricked into uncrossing her legs; the enchantment broke, and Hercules survived his first labour. It was immediately apparent that the boy was strong: in his cot he strangled the snakes that Hera sent to kill him, and the prophet Tiresias augured that he would accomplish great deeds.

HARRY ALKMAN ABUSED anabolic steroids. It wasn't his muscles that gave me the clue, but his skin: no matter what treatment I gave, his acne remained disastrous. I tried everything in the armoury: lotions and astringents, antibiotics and vitamin A, but his shoulders, neck and cheeks continued to erupt with pustules which scarred to pits, as if raindrops had fallen on the dust of his skin. I was new to medicine when we met, with an innocent belief in my patients' honesty. While discussing Harry's acne at a coffee break one day, a more experienced colleague suggested: 'Ask again what else he's taking.'

At our next appointment I asked Harry if he was *sure* he never took anything I hadn't prescribed; he confessed he'd been buying steroids online for the last four years. 'Which one?' I asked.

'One?' he said, surprised by my ignorance. 'No one takes just one.'

'Well, what *do* you take?'

‘Well, I started with testosterone and some Dianabol. That’s to bulk you up, for the first twelve weeks. And also anastrozole to stop man-boobs.’ I knew anastrozole as a hormonal treatment for women with breast cancer.

‘And then?’

‘Well, that depends on what you want to achieve. To get more definition you’d usually switch the type of testosterone, and add in something like Anavar. But keep going with the anastrozole.’

‘So you said that’s for starters. What do you take once you’ve moved up a level?’

‘There are plenty of schedules out there,’ he said, ‘Masteron, Equipoise, Decanate, Nandrone, human growth hormone...’

I interrupted: ‘Your acne won’t get better until you stop taking those steroids. They’re making your skin oily, which brings on the spots and scarring.’ I ran through some of the other risks of steroids: heart failure through its effect on cardiac muscle, diabetes, infertility, depression, uncontrollable bouts of rage. He listened politely; in his lap I could see the skin over his knuckles tightening and relaxing.

‘If you don’t want to help me with my acne just say so,’ he said finally. ‘But I know what I’m doing. I’ve never felt better.’

THE FIRST BODYBUILDER in the modern sense was a nineteenth-century German circus strongman called Friedrich Müller, who adopted the stage name Eugen Sandow. He claimed to have been inspired by a famous Roman statue of Hercules, the ‘Farnese’. In his manifesto ‘Body-Building’, Sandow coined a phrase as well as an industry – to emphasise the self-improvement ethos of his new sport, he subtitled it ‘Man in the Making’. He patented a regime of clean living and weight training that resonated with the fin-de-siècle obsession with colonial strength and self-determination. In 1901 he conceived a public contest to find the world’s best physique: it was organised at the Royal Albert Hall in London, and judged by the author and physician Arthur Conan Doyle and the sculptor and fitness enthusiast Charles Bennett Lawes. Opening the show was a troupe of gymnasts from the London Orphan Asylum. The contestants paraded on stage, dressed in black tights and animal skins, striking poses from famous statues of antiquity. Sandow presented the winner with a golden statue of himself holding a Herculean pose.

Sandow must have had immense willpower; he claimed he had been a weakling until he was inspired by the statue of Hercules to build up his muscles. He sold his patented techniques by mail order, and from the outset his aim was an aesthetic one: mimicry of classical statuary rather than feats of particular strength. In the journey from circus strongman to the Albert Hall he made a leap of respectability; adopting classical motifs gave the endeavour a dignity and acceptance which broadened its audience. That audience grew exponentially with the advent of cinema: after 1910, Italian films like *Cabiria*, *Marcantonio e Cleopatra*, and *Quo Vadis?* all led with Herculean muscle-men, and borrowed heavily from the classics. The films were phenomenally successful across Europe and the United States, and their actors became celebrities – feted for their muscles rather than their acting skills or good looks. By the 1960s, the films were epic in scope: Steve Reeves's *Hercules* and *Hercules Unchained* set the tone for bodybuilders as actors. Others followed: Arnold Schwarzenegger (*Hercules in New York*), Mickey Hargitay (*The Loves of Hercules*) and Ralf Moeller (*Gladiator*).

In his memoir *The Education of a Bodybuilder*, Arnold Schwarzenegger wrote of how at the age of fifteen he first visited a gym in Austria and became intoxicated by the idea of transforming his body. The men who took him on as a protégé were huge, brutal but profoundly admirable – he sought specifically to emulate their ‘Herculean’ looks. His account of his first summer in the gym is steeped in a kind of sexual intoxication: Schwarzenegger felt turned on by the feeling of his muscles expanding, and dreamed of growing ever more gigantic. He modelled his own training schedule on that of the bodybuilding actor Reg Park (star of *Hercules and the Conquest of Atlantis*). Park advocated a kind of sculptural bodybuilding, which involved first pumping the muscles up, and then finessing the definition of each one.* Like an autoerotic Pygmalion, Schwarzenegger fell more deeply in love with his body as he sculpted it.

On the subject of steroids, Schwarzenegger is coy: his *Encyclopedia of Modern Bodybuilding* slips a discussion of performance-enhancing drugs into the last couple of pages. Every great bodybuilder uses steroids, he declares, but they do so only as a final polish to a body already honed to near-perfection through *effort*. Steroids, he says, are essential if you want to keep your edge – an edge as much mental as physical. The drugs don’t just help build muscle faster and stronger, they bring on an aggression that facilitates a ferociously competitive attitude to training.

FROM MY DESK I usually had warning that Harry Alkman was coming to clinic – his voice like a chain-gang foreman carrying from the hallway as he argued with the receptionists, or his dogs barking outside as he chained them to the surgery steps. He had three Staffordshire bull terriers – pale, muscled and belligerent.

After the conversation about his acne I didn’t see him for a few months. The next time I heard those dogs barking, I went out to the waiting room to find him sitting with his girlfriend Tanya. She was silent in the corner: pale, and nervous, her ginger hair straggling over a grey tracksuit top. Harry sat with legs spread, occupying the space of three chairs. The cloth of his T-shirt bulged as if crammed with snakes.

‘You’ve got to help him with his temper,’ Tanya said tentatively, as they sat down together in my office. Her voice was like a child’s whisper. ‘It’s

getting out of hand.' Harry's skin looked better, and I asked if he was still taking steroids.

He laughed. 'Maybe I tried a new regime,' he said.

'He won't listen to what I say,' said Tanya, her eyes pressing on me.

'To be honest, he doesn't tend to listen to me either,' I said.

A few nights previously they had been having an argument and Harry had lashed out at her; she dodged, and his fist hit the wall. The impact snapped a bone. He held up the hand as evidence, bandaged in the emergency department. 'See what she made me do? You've got to give me something to calm down.'

'You're responsible for your own actions,' I said, as calmly as I could. 'And if you cut out the steroids you'll get less angry.' I reached down into the drawer for a leaflet titled 'Alternatives to Violence', circled the phone number on the front, and handed it over. The leaflet carried a portrait of a pensive young man, heavily muscled, above the legend: 'Be Who You Want To Be: Respect yourself, Listen to others, Get on with people.'

'You have to stop those steroids,' I repeated. 'And Tanya, if he threatens you or hurts you – phone the police.'

She came a week later without him, and I told her about the local women's shelter where she could go if she ever felt unsafe at home. She already had their number.

THERE'S YET ANOTHER VERSION of Hercules's myth, dramatised by the Greek playwright Euripides, in which, on the completion of his twelve labours, Hercules returns home to his wife Megara and their three sons. In this telling, Hera can't bear to see Hercules happy after his labours, so from her viewpoint on Mount Olympus she sends a furious madness upon him. Euripides describes the change: 'He was no longer himself; his eyes were rolling; he was distraught; his eyeballs were bloodshot, and foam was oozing down his bearded cheek. He spoke with a madman's laugh.' Hera's spell makes Hercules believe that Megara and his children are enemies; boiling with rage he turns on them. He slaughters one son with an arrow; his second son pleads with him but Hercules, absorbed in his frenzy, clubs the boy to death and tramples on his bones. He then turns on his wife and third son, shooting a single arrow through both bodies. Finally, his family slaughtered, he turns on his foster father Amphitryon but the goddess Pallas

intervenes, hurling a rock at his breast. As it hits home his ‘frenzied thirst for blood’ fades; he falls to the floor and into an enchanted sleep.

MANY CULTURES HAVE STORIES of muscle-bound strongmen, unhelmed by fury. In medieval Norse culture these men were much valued in battle: they were called ‘berserks’, or ‘bear-shirts’, transformed by their bloodlust to become as much bears as men. The Germans too had a word for that altered state: ‘mordlust’, a lust for death. The Anglo-Saxons had Beowulf; the Irish, Cú Chulainn; in Hindu mythology, Krishna; for the Babylonians, Gilgamesh. There are resonances and echoes with the battle-trance of Achilles. The Hebrew Bible has the story of Samson, a Herculean strongman who, like his Greek counterpart, kills a lion with his bare hands, pulls down buildings and lays waste to an army (but where Hercules has his bow and arrows, Samson is armed with an ass’s jawbone). Just as the Greek myth gives Hercules three earthly ‘wives’ in quick succession, the Hebrew story offers Samson the same.

Anabolic steroids can make an already irascible temper far worse – there are a few accounts in the medical literature of murder committed under their influence. Weight training without steroids can enhance well-being by boosting testosterone, but it can also intensify background aggression. A study conducted in a male prison showed that the most aggressive men had higher testosterone levels. Men born with doubled ‘Y’ chromosomes instead of the usual single ‘Y’ don’t just have more testosterone, there is some evidence to suggest that they are over-represented in the prison population, possibly through greater propensity to short-tempered violence. Anecdotal evidence suggests that when adolescent boys are in the midst of the testosterone boost of puberty they get into more fights, and become more argumentative at home. Like the madness of Hercules, unnatural levels of testosterone can ignite furies that consume the individual, even as they threaten everyone around him.

MEN WHO TAKE ANABOLIC STEROIDS for a length of time usually become infertile, because artificial testosterone inhibits the body from making its own. Their testicles shrink, and their sperm count drops. As if in awareness of the paradoxical effects of excessive testosterone, many of the greatest strongmen in mythology pass through a phase of feminisation: Thor goes

through a period dressing as a woman, as does Krishna. One of the Greek myths of Hercules tells that in one of his three marriages he stayed home to cook and clean, while his wife went out hunting and fighting. In one version of the story of the Trojan War, Achilles's mother tries to keep him home by dressing him as a girl (he is betrayed when the Greek army passes through the village, and he can't resist fondling their weapons).

The next time I saw Harry there was no warning – no barking of dogs, no yelling at the reception desk. He was sitting quietly in the waiting room when I went to call him, wearing a loose hooded sweatshirt. As he sat down in the chair of my office, he placed a piece of paper on the desk.

'What's this?' I asked.

'My new regime. I've come to see what you think.'

The piece of paper had a list of medications on it, and none of them were anabolic steroids.

'So have you stopped taking testosterone?' I asked him.

'Yep – I've brought it down slowly. Tanya and I are going to have kids. I've come to see if you'll help.'

'Well, I can't prescribe any of this stuff for you – most of these are IVF drugs for women. They're not licensed for use in men.'

'I don't need you to prescribe them for me – I'll get them and inject them myself. I just wanted to know what you think of the regime, and if you'll send the sperm count test afterwards, to see if it's worked.'

Harry had it all worked out: his research had told him to arrange a week of daily injections with a hormone to stimulate his testicles. Then he'd start a drug which in women leads to hyperovulation, but in men can kick-start the production of sperm. Anastrozole was on the regime again – this time to prevent Harry's natural testosterone being converted into oestrogen by the body.* The sperm he produced would at first be very sluggish, so after a month he'd take a fairly low dose of another drug to promote agility and mobility of the new sperm.

I phoned a colleague who specialises in endocrinology – the study of hormones – to ask him about the regime. 'Will it work?' I asked him.

'Sadly, it probably will,' he said. 'But most bodybuilders do this every so often, just to make sure their testes are still working. As soon as they get the reassurance of a normal sperm count, they go back on the steroids.'

BODYBUILDING COULD BE DESCRIBED as a species of addiction, both to the mental rush when blood surges to the brain fresh from swollen muscles, known as ‘pump’, and to a body shape perceived to be superior. A couple of decades ago it was thought of as a modern neurosis – a ‘body dysmorphic disorder’ responding to a contemporary crisis in masculinity. For some bodybuilders there may be a fragment of truth in that, but Eugen Sandow and Arnold Schwarzenegger are emblematic of a dream that has been around for as long as humans have admired strength.

In most of the Greek myths of Hercules he is born strong, but in a story recorded by Xenophon, one of Plato’s pupils, there was a moment in the hero’s adolescence when he had to make a choice between a life of strength or a life of ease. Walking along a path one day, Hercules encounters two women who present him with a decision. He could choose a path of comfort through life or a path of difficulty. The path of difficulty would require great effort but would result in a commensurate measure of honour. He could be strong, but that strength wouldn’t come as the free gift from a god or through taking a drug – it would come only through the exercise of will. He chose the path of difficulty: ‘For of all things good and fair, the gods give nothing to man without toil and effort.’

* In 1972, after winning Mr Universe, Schwarzenegger was invited to Park’s home in Johannesburg. Park criticised the definition of his calves, and instructed Schwarzenegger on how to improve them.

* Men who have one testicle removed often experience a flare of testosterone production from the remaining one. It swells in size, and breast tissue beneath their nipples may swell as the newly released testosterone is converted to oestrogen.

6

Scalp: Of Horns, Terror and Glory

My hair is grey, but not with years,
Nor grew it white In a single night,
As men's have grown from sudden fears.

Lord Byron, *The Prisoner of Chillon*

ON A JOURNEY THE LENGTH of the New York subway I once attempted a survey of the hairstyles of everyone who entered my carriage. There were spray-backs of radiant gold; ringlets of bouncing delight; dreadlocks and crew cuts; forelocks and permanent waves. A multiplicity of braids, plaits, ponytails, pigtails, tresses, tufts and knots. I counted Afros, mullets and tonsures. There were quiffs, coiffures, streaks of white and rainbow-dyes of colour. There were also fungal patches of ringworm and balding patches of alopecia.

Even the bald scalps showed a wealth of diversity: some were pockmarked like asteroids, others looked worn down and freckled – sandstone sculptures under acid rain. Some had swatches of bruises, others were glossy as polished mahogany. Some were wrinkled, others suave, some scratched like glacial erratics. I saw scalps that were crusted with psoriasis, others with sun damage and dermatitis. I didn't see anyone with horns.

THE SCALP HAS one of the best blood supplies in the body: wide arterial trunks ascend into it from each side of the face, and when it gets wounded, blood can spurt a couple of centimetres into the air. Scalp skin is tough, and its wounds satisfying to stitch – in the emergency department I often start with a few tight silk sutures to halt the bleeding, and then finish the job with staples or glue. ‘Superglue’ was invented during the Vietnam War for the express purpose of repairing briskly bleeding wounds like those of the scalp. Only the tongue and cheek heal quicker, thanks to their more generous blood supply. The scalp is among the thickest skin on the body, at around 1 mm (skin thickness varies from 0.05 mm in the eyelids and behind the ears, to 1.5 mm on the palms and soles of our feet). Women have thicker skin on their scalps than men, and bald, elderly men the thinnest scalps of all. All this variety across the acreage of the body’s surface makes skin our largest and heaviest organ, oddly and unjustifiably overlooked by most medical training.

Training in every speciality involved being summoned to ‘interesting cases’ and then adding them to an inner register of experience, but being a medical student in Dermatology felt peculiarly voyeuristic: every day we were asked to crowd around scantily clothed patients and scrutinise their skin. I remember being ushered in to view verrucas that had metastasised across someone’s heel; to dress necrotising blisters of bullous pemphigoid (an autoimmune condition, the name of which derives from the Greek for ‘pustule’); and to witness a scabies hunt that ended with the skewering of mites from tunnels in the skin of an aghast student.

One morning I was marshalled with five other students into a consulting room where a middle-aged woman in a rainbow-coloured cardigan and gypsy skirt was sitting on the side of an examination couch. Her face was haloed with blonde frizz, and she had brushed it forwards over her forehead. ‘I’d like you all to see this,’ said the consultant, and asked her if she’d lift up her fringe. At least two of us took a sharp intake of breath: in the centre of her forehead, just at the hairline, she was growing a horn. It was about two inches long, brown, and curling to a point like the stalk on a Halloween pumpkin.

‘We’re making arrangements to remove this,’ said the consultant. ‘These cutaneous horns are made of keratin, just like your hair, nails and…

rhinocerous horns.' Various skin conditions can generate a horn: sun-damaged skin, which may start overproducing a horny layer of skin that lengthens; some skin cancers; verrucas; and even some disorders of the sweat glands. About one in five horns turn out to be cancerous. Though of different origins, the horns are all composed of the same substance – keratin. 'They're fairly straightforward to remove,' the consultant went on, 'though this one will require a skin graft to close the defect.'

We all stood in a half-moon around her, trying not to look horrified, though the patient herself seemed unconcerned. 'Don't take it off today,' she said, and gave an impish laugh. 'I've a costume party next week – I was thinking of going as a unicorn.'

IN ROME THERE'S a statue of Moses by Michelangelo, in which he is portrayed with twinned horns, gathered brows and an intense gaze. It was commissioned for the tomb of the Renaissance pope Julius II, but sits in a small church called San Pietro in Vincoli. The horns commemorate the moment in the Bible when Moses, after receiving the ten commandments, descends Mount Sinai to his people with his face noticeably changed. St Jerome, in translating the Hebrew into Latin, described the transformation of his face as 'horned', and ever since, in the iconography of the West, that's how Moses has been represented. The Moses of Michelangelo is an enthralling, masterful piece of sculpture – Sigmund Freud devoted a lengthy and breathless essay to it ('How often have I mounted the steep steps... and have essayed to support the angry scorn of the hero's glance!')

Transformations in the classical as well as the Biblical tradition tend to imply an element of divine justice: in the *Metamorphoses* of Apuleius someone behaving like an ass becomes a donkey, in the *Metamorphoses* of Ovid a bloodthirsty murderer changes into a wolf. The Bible has a couple of horned transformations: in Deuteronomy 33 there's a prophet whose horns convey strength and grandeur, while the book of Revelation is stuffed with horned messengers from hell. What meaning or justice was served by putting horns onto Moses's head?

Three and a half centuries ago the physician and polymath Thomas Browne puzzled over this inconsistency, and so went back to the Bible's original Hebrew and Greek. He realised that in Hebrew the word 'kaeran' means 'glorified' or 'shining' and that the almost identical 'karan' means

'horned', and concluded that the western iconography of Moses, for more than a millennium, is all down to a mistranslation. Horns, Browne concedes, are the 'hieroglyphic of authority, power and dignity' and so of all the transformations that could have been effected on the face of Moses these were perhaps not inappropriate.^{*} In Ovid, the future king of Rome accepts his destiny only when horns start growing from his skull. The confusion between 'horned' and 'shining' too is an ancient one – Browne quotes the Roman philosopher Macrobius: 'The Libyans reckon their god Hammon to be the setting sun, and they portray him with ram's horns, since these are the source of that animal's strength, as sunbeams are of the sun's.'

FREUD'S PSYCHOANALYSIS takes it for granted that the emanations and irritations of skin can reflect aspects of our inner life – almost as if the skin can be a barometer of our mental and emotional weather. In the early years of the twentieth century more pedestrian skin complaints like eczema and even nettle rash were assumed to be reactions to psychological or emotional conflicts. Many of my own patients notice that their psoriasis and eczema worsen during periods of anxiety or poor sleep – an observation that modern theories of immunobiology struggle to explain. Modern medicine is fairly good at knowing how to subdue skin diseases when they flare up, but our knowledge of what kindles them in the first place remains embarrassingly poor.

If skin can be a barometer to psychic weather, so too can hair – as a reaction to an emotional shock it's well known to turn white or fall out. In medical journals, this phenomenon is called 'Marie Antoinette syndrome', because of the widespread belief that the French queen's hair blanched over a single night, waiting for the gallows. Over a century ago Leonard Landois wrote,

One of the oldest problems of pathology and physiology which has escaped scientific research and is still clouded in mythical darkness is the sudden whitening of the hair. I call it a mythical darkness, because the reports, dating mostly from older times, sound more like fairy tales than scientific observations.

But it's no fairy tale: modern dermatologists have confirmed it. Once a strand of hair leaves its follicle within the scalp it's dead – it can't change colour unless bleached. But the phenomenon of sudden whitening happens not through a change in the pigment, but through the preferential shedding of coloured hair after a fright or a shock, leaving only pale hairs behind. No one understands why the immune system attacks coloured hair in this way, and there is no known treatment.

The first historical example is in the Talmud, when bereavement is described as greying the hair. Inconsolable grief whitened the hair of Shah Jahan following the death of his wife Mumtaz Mahal (unassuaged by the building of her mausoleum, the Taj Mahal). The grief doesn't have to be for loved ones – the loss of books can do it too. On hearing of the loss of his ship with numerous priceless manuscripts, the hair of the Renaissance scholar Guarino of Verona turned white. There are numerous examples in the literature of hair-whitening following imprisonment awaiting execution: Ludovico Sforza, when captured by King Ludwig of France; Sir Thomas More in the Tower of London; and a military officer called D'Alben in pre-revolutionary France (whose hair blanched only down one side, the right). The *Chronique d'Arras* tells of the hair-whitening of a condemned criminal at the court of Charles V, and Marie Antoinette has her Scottish counterpart in Mary Queen of Scots, whose hair may have turned white awaiting execution (or it may just have been that she had more grey hair than she was ordinarily willing to admit). Of Mary's execution Stefan Zweig wrote:

When Bulle [the executioner] wished to lift the head by the hair and show it to those assembled, he gripped only the wig, and the head dropped onto the ground. It rolled like a ball across the scaffold and when the executioner stooped once more to seize it, the onlookers could discern that it was that of an old woman with close-cropped and grizzled hair.

HORNS DON'T JUST SIGNIFY DIGNITY, but also lust, gaiety and mischief. They are the symbols of stag parties, infidelity and inexperience (greenhorns). Pan, the Greek god of shepherds and sex, had two horns, as did Bacchus, the god of wine and of fertility. 'There be many Unicorns', wrote Sir

Thomas Browne, ‘and consequently many Horns... Since what Horns soever they be that pass among us, they are not the Horns of one, but several animals.’ As a medical student I was warned against the temptation of jumping to obscure, dramatic diagnoses – if I heard hoof-beats, I was instructed to think of horses not zebras, and never mind the possibility of unicorns. Though he accepted that a variety of species could be unicornous, Thomas Browne doesn’t mention human unicorns and likely never met one. Since that afternoon in Dermatology clinic, neither have I.

But preserved in the anatomical collections of the University of Edinburgh is the horn of a human unicorn: Elizabeth Low. The stories behind many of the specimens in the collection have been lost over the centuries, but Low’s is preserved thanks to a silver medallion attached to the horn itself. The horn began growing in 1664, the year that Browne was elected a Fellow of the College of Physicians. It was removed in 1671, the year Browne was knighted.

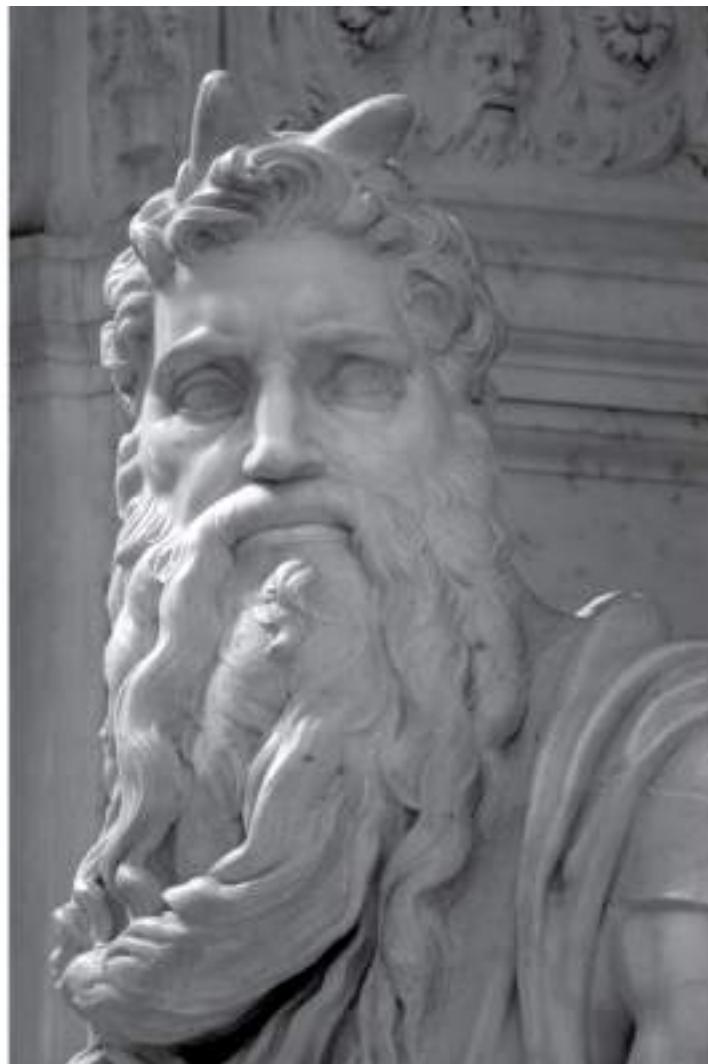

‘This horn was cut by Arthur Temple’, it reads, ‘Chirurgeon, out of the head of Elizabeth Low, being three inches above the right ear, before thir witnesses Andrew Temple, Thomas Burne, George Smith, John Smyton and James Twedie, the 14 of May 1671. It was agrowing 7 years, her age 50 years.’

FOR CENTURIES, it's been assumed that Michelangelo's Moses depicts the moment when the prophet catches the Israelites in the act of worshipping a golden calf, and his expression is one of incandescent fury. In defence of this perspective Freud quotes two contemporaries, Henry Thode and Carl Justi, in describing Moses's face as 'a mixture of wrath, pain and contempt'; 'quivering with horror and pain'. In Rome once I went to see Moses's face, and he didn't look angry to me – but wary, astonished, and even a bit frightened. It's true his eyebrows are gathered, but the left one

slopes downwards, and his expression seems more a backward glance than a furious stare, as if he can't quite wrench his gaze from something terrifying or even wondrous.

There's an alternative view: the statue might just commemorate an earlier moment in the story, when Moses has asked God to reveal himself. His face would show not anger, but heaven-struck, terrified awe. It's one of the strangest and most powerful scenes in the Hebrew Bible – it's hard to think of a more fitting moment for Michelangelo to immortalise. It's just a pity that, being sculpted in marble, we can't tell if Moses's hair has turned white.

* Attila the Hun and Alexander the Great were generally depicted with horned helmets. In the

Qur'an, Alexander is referred to simply as the 'Two-Horned One', *Dhul-Qarnayn*.

Birth: Reshaping the Heart

When brought to birth, man is not yet completed; he must be born a second time.

Mircea Eliade, *The Sacred and the Profane*

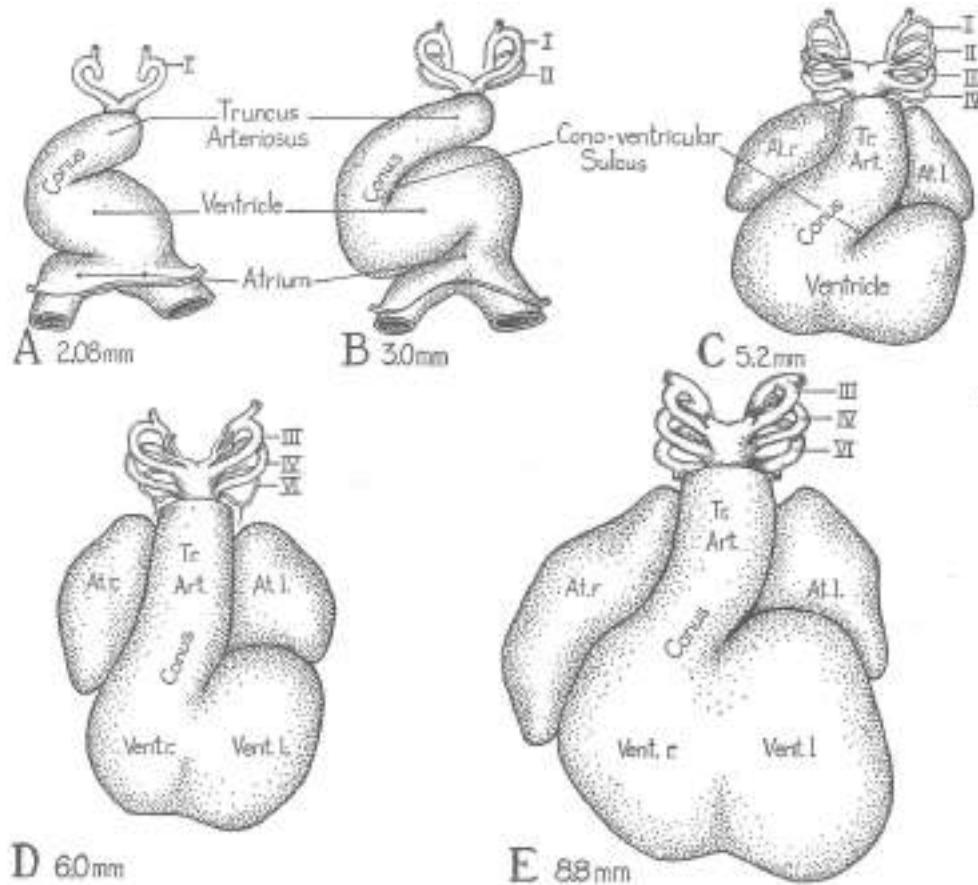

THE FIRST BABY I delivered was at the end of a long night shift as a medical student. Her parents had arrived on the ward the previous afternoon, when the mother was still in the first stage of labour. We were formal and polite with one another at first – this was their first baby, and they knew it to be my first delivery – but after hours of blood and shit and sweat we were like old friends. Long after I'd qualified, every year on her birthday, I'd receive in the post a photo of their little girl. Whenever I went travelling I'd send her postcards.

I remember my hands shaking as I held her in those first moments, silenced by a sense of wonder. She took her first gasps; to watch her body change from a pallid blue to pink was like seeing colour return to a landscape after an eclipse. We were on an upper floor of a rural Scottish hospital, and the summer sunrise cast golden light on the bare institutional walls. I took a towel to dry her, clamped the cord when it stopped pulsing, and passed her up to her mother. She cried out, and I was stopped short by a tiny, powerful voice that until moments before hadn't existed.

I have attended many births since hers, and my sense of amazement has

never greyed at new life, new breath, claiming its place in the world. It's glorious to see colour and life flooding into new limbs, to watch a baby join the cavalcade of life thanks to a concert of changes in the heart.

THE HEART BEGINS as two rolled tubes on a flat embryonic disc, which coalesce to form a bulbous sac that twists and knots as it grows – a fattening snake folding itself into the basket of the ribs.

We speak of ‘the circulation’ but in reality human beings have two: a ‘pulmonary circulation’ for our lungs, and a ‘systemic circulation’ for the rest. The ventricle on the right pumps to the lungs, the ventricle on the left pumps to everywhere else, and the two beat simultaneously. Every beat of an adult heart pushes about seventy millilitres in tandem into each circulation; the two bloodstreams cross at the heart in an endlessly flowing figure of eight. One of the many marvels of our mammalian hearts is that they manage to conduct these twinned circulations with a single pump. Another is that the baby’s lungs have to develop in the absence of air to

breathe – the foetus gets all its oxygen through the placenta. Blood from the placenta gets where it's needed quickly by circumventing the baby's lungs through a pair of 'shunts': ingenious channels which shift blood from the right-sided pulmonary circulation to the left-sided systemic circulation.

The first shunt is a hole between the right atrium and the left, the 'foramen ovale'. Oxygen-enriched blood courses from the placenta, through the umbilical cord, and into the largest vein of the body. This vein is fluted at just such an angle that about a third of its blood, on entering the right side of the heart, twists straight across the atrium, through the foramen ovale, and onto the left side of the heart, where it can take oxygenated blood out to the brain and torso where it's needed. In my summers as an anatomist I'd seek out this window with astonishment: the hearts we dissected were of men and women who'd lived into old age, and yet the impression left by the foramen ovale was still visible, as was the groove in the atrial wall that rolled and directed blood towards it. To examine the walls of the adult right atrium is to see foetal fluid dynamics imprinted in the heart.*

The second shunt necessary for life in the womb is the 'ductus arteriosus', a fat trunk of a vessel that spills 90 per cent of the volume of every heartbeat away from the lungs and into the aorta. This channel is also fluted at a very particular angle, calibrated to draw bluer, more deoxygenated blood from the right ventricle down the descending aorta, and out to the placenta to be re-oxygenated.

Human babies start out in the earliest weeks of pregnancy with tails, and gill arches at their throats like fish. The heart develops in the throat from the vessels of these gill arches, and the ductus arises from the residue of the sixth arch.

As the embryo grows, its heart migrates down from the neck to its place in the chest. As it descends it remains connected to its original nerve supply in the neck, which is why for many people, the only sign of a heart attack is that they feel a pain in the throat and jaw. The closure of the ductus is a transformation essential to sustain our air-breathing lives, part of the transformation that turns a blue newborn pink.

All large arteries have a layer of muscle between the inner and outer coats, but the ductus is special: it has a double spiral of opposing helical fibres. It's the contraction of these fibres that closes the vessel off after birth, and they're triggered to do it by sensing oxygen from the baby's first

gasps. If that early closure fails, the blood flow in the ductus reverses, damaging the lungs and overexerting the heart.

The Greek physician Galen didn't know about those helical fibres, but made a surprisingly accurate observation of ductus closure two millennia ago:

The ductus joining the aorta to the pulmonary artery not only ceases to grow after birth, when all the other parts of the animal are growing, but it can be seen to become thinner and thinner, until as time progresses, it dries up completely and wears away.

In the dissection room I'd find its remnants: frayed scraps of fibrous tissue under the arch of the aorta, and marvel that they were all that was left of a once broad, vigorous conduit of blood, able to channel 90 per cent of each heartbeat.

A ductus that hasn't closed by seventy-two hours after birth gets classified as a 'patent ductus arteriosus' or PDA, and can be dangerous. 'Failure of the ductus arteriosus to close shortly after birth is associated with significant neonatal morbidity and mortality,' concluded a recent review; 'Early diagnosis is essential.'

I'M ACCUSTOMED TO LISTENING to the hearts of newborns: every baby born to a patient of my practice is seen soon after birth. The heart of a newborn beats more quickly than that of an adult – at least double the speed – the two pairs of valves making a rapid, see-saw staccato as they close in unison at more than two beats a second. There's something fragile about it, but vital; I'm acutely conscious that I'm hearing the first few beats of a heart that will beat billions of times – with luck, long after my own has fallen silent.

A decade after making that first delivery, a baby just a few weeks old was brought to my clinic for a check-up. His mother, Joy, told me 'He's not feeding very well.' 'He's trying,' she said, 'but it's as if he can't coordinate sucking with breathing. And his nose is getting blocked up.' She stretched the baby's tiny body out on her lap; a river-map of veins showed through translucent abdominal skin. His eyes blinked unseeing from that half-womb

half-world that babies occupy in the first weeks of life. I asked about the birth: Connor had been born a week or two early, and there had been no complications. At first he'd thrived, and regained his birth weight, and when I plotted out his size on a growth chart I saw that he was around the 90th centile – meaning that only 10 per cent of babies his age would be larger. At first he'd fed well, but for a few days now he'd been struggling.

I warmed the end of the stethoscope by rubbing it on my hand, knelt on the floor, and put it to Connor's ribs. Instead of a soft staccato there was a legato, each beat joined to the next by a muffled rumble, loudest to the left side of his breastbone, and audible, though quieter, along his back. His lungs sounded healthy, with plenty of free passage of air. 'He has a murmur,' I said, taking the stethoscope from his chest. Joy's eyes widened, her nostrils flared a little, her head became very still on her neck. 'He's not feeding so well because his nose is blocked, but I'd like to have his heart checked too. Lots of babies have murmurs – it's usually nothing to worry about.'

'Could it be serious?' she asked, searching my face as much as she listened to my words.

'Not necessarily' – I tried to look relaxed – 'we'll need an ultrasound scan of his heart to know more.'

As I typed up a referral letter Joy buckled him into a sling with grim efficiency; as she left down the clinic corridor I heard her call her husband on the phone. A couple of weeks later a letter from the paediatric cardiologist arrived.

'Thank you for referring this infant, in whom you noted a murmur,' it said. 'There is no family history of valvular heart disease, though a grandfather had a persistent ductus arteriosus closed as an adolescent.' The cardiologist had plotted Connor's weight as I'd done, checked all of his pulses, and noted that when she placed a hand over Connor's chest, she could feel a transmitted impulse from the left ventricle of the heart – beating more vigorously than it should. 'Ultrasound showed a moderately volume-loaded left ventricle, normal valves, a patent aortic arch, and a moderate ductus arteriosus with ceaseless, turbulent flow. Connor is tolerating this haemodynamic abnormality very well.'

As Connor's heart had knotted into position it had left one thread untied – a patent ductus. 'It is unlikely this will now close on its own,' the

cardiologist added, ‘and we may need to arrange surgical ligation at around six months, or transcatheter occlusion.’

The next time I saw Joy was in the clinic corridor a couple of months later, when her son was four months old. She had just had him weighed: he was still growing along the 90th centile with regard to his length, but his weight had dropped to the 50th, because he was getting slimmer. ‘Sometimes I can even hear his murmur,’ she said. ‘Do you think there’s a chance it’ll close on its own?’

I did my best to reassure her, but by the next appointment with the paediatricians his weight had dropped to the 35th centile. They assured Joy that Connor’s heart hadn’t sustained any irreversible damage, though it was now a little wider than it should have been, and the lungs were showing signs of strain. The cardiologists wanted to see whether it would close further on its own. ‘They said they’d see him again in another two months, and put dye inside him to take X-rays of his heart,’ Joy said. ‘They think they’ll be able to tell then how easily it can be closed.’

The day of his ‘cardiac catheterisation’ Connor was anaesthetised, and a narrow tube was introduced from an easily accessible blood vessel in his leg up and into his heart. Pressures in the pulmonary arteries and aorta were measured and compared. By then his weight had fallen to the 25th centile, and his length had begun to fall too. Sometimes a patent ductus arteriosus has a shape that means it can be closed from within, using only wires introduced down the catheterisation tubes, but Connor’s could not. His surgery was two days later.

The next time I saw him was the following week. He fed from Joy’s left breast, and she lifted up his vest to show me the scar where the surgeons had cut into the left side of his chest. They had splayed open his ribs, collapsed his lung, and with a watchmaker’s precision, tied off the ductus.

‘The noise has gone,’ Joy said, ‘you can’t feel his heart thudding through his chest any more. He’s feeding better too. Who’d have thought a tiny thread, tied in exactly the right place, could make such a difference?’

Three months later Connor was back up to the 50th centile in terms of his weight, and his chest X-ray showed that his heart had reverted to normal size. The return of his growth was dramatic: at a year his weight had returned to the 90th centile. ‘Connor can now be regarded as having a completely normal heart,’ said the final letter discharging him from clinic.

‘Looking to the future, there is no need for him to take any precautions whatsoever.’

THE CHARACTERISTIC MURMUR of a patent ductus was first described over a century ago by a Dr George Gibson, a few hundred yards away from my clinic in Edinburgh. A physician in the city’s Royal Infirmary, Gibson described the distinctive ‘thrill’ he felt over the chest as blood rumbled through the ductus. Turbulence in an artery causes its inner lining to roughen, the way a river abrades its banks. That abraded layer is fertile soil for seedlings of bacteria to lodge and grow. Until a few decades ago, children with patent ductus often died from these infections, or from the failure of an overexerted heart.

Until 1938, children with a patent ductus had to live with it, or more often die with it, but that year at the Boston Children’s Hospital a surgeon managed to close one. His name was Robert Gross, and his achievement is all the more astonishing given that he had the use of only one eye. He practised the minuscule stereoscopic movements required by dismantling and reassembling watches. Closing the ductus was considered so risky that Gross did it surreptitiously, when his boss went away on holiday. Only two surgeons had tried before him: one had opened the chest to find no ductus present (before ultrasound was invented, misdiagnosis was common), and the other proved technically impossible – the child died soon afterwards. ‘The child or youth who possesses a patent ductus faces an uncertain future,’ wrote Gross, ‘like Damocles, he leads a precarious existence, never knowing when he might be cut down by the danger which menaces him.’

Gross’s first patient was a sickly child who had narrowly survived to the age of seven. His account of the surgical innovation, published in the *Annals of Surgery*, describes a wan, melancholy girl: ‘Frequently she would stand still, have a rather frightened appearance, and place her hand over her heart. When asked what was the trouble she would whisper “Something wrong inside of here.”’ She couldn’t play with the other children, and her mother often reported a frightening buzzing noise coming from deep within her chest.

Gross was convinced that this devastating problem had a simple, technical solution. First he went to the dissection room, where, working on cadavers, he figured out the best place to open the ribcage to get at the

ductus.

Then he trialled his procedure on a series of living, anaesthetised dogs, until he was confident he had perfected the procedure of dissecting the pulsing aortic arch away from the pulmonary arteries. It took ‘great care and patience,’ he said: ‘in a small place between the great vessels... space is at a premium’. There was a risk of damaging three nerves: one that sustains the breath, one that coordinates digestion and pulse rate, and one that supplies the larynx – a scalpel-slip could induce suffocation, or make his patient mute. ‘I have spent as long as an hour in locating, freeing up, and tracing this nerve, for it is time well spent,’ he wrote of the nerve to the larynx; ‘once it is brought into view, the remainder of the dissection seems to be on a safer and surer basis.’ After a meticulous clearing of the fibrous tissue around the ductus, he recommended pinching it closed for several minutes before proceeding. ‘If no undesirable effects are produced... the ductus may be permanently ligated.’ This he did with heavy braided silk, which had to be ‘drawn up *very tightly* if complete obliteration is to be effected’. The linings of his patient’s lung were sutured up again, her lung re-expanded, and after a day resting in bed, she was allowed up in a wheelchair.

Gross’s first paper describes four separate cases, all achieved without complications. His technique had brought a transformation to the heart and the great vessels that, in most of us, occurs naturally in the first hours after birth. ‘The child’s general condition has been excellent,’ he wrote of one of the cases. ‘She has returned to school and in the first two months after operation she has gained three pounds in weight.’ A length of silk, expertly tied, had effected a kind of rebirth.

* In about 15 to 30 per cent of us the foramen ovale stays patent into adulthood (a 'PFO'). William Harvey, the discoverer of the circulation of the blood, thought PFOs might permit their owners to breathe underwater. He was wrong: PFOs make diving more dangerous. They permit gas bubbles that form in the blood on surfacing to cross from the right circulation to the left, where they may cause strokes in the brain.

Rejuvenation: An Alchemy of Youth and Beauty

Whereat Hecabe... leapt into the sea and changed her aged form.

Nicander's *Heteroeumena* ('Beings Made Alien')

IN MIKHAIL BULGAKOV'S NOVEL *The Master and Margarita* there's a scene of miraculous rejuvenation, accomplished by a magical cream. Margarita Nikolayevna, a thirty-year-old woman, is sitting on a bench in Moscow's Alexander Gardens beneath the Kremlin when a suspicious fang-toothed man (later revealed as an agent of Satan) presents her with a golden casket, heavy and ornate as a reliquary. He tells her to wait until exactly half past eight that evening before opening it and applying the contents to her skin. For reasons too complicated to summarise, she agrees.

At 8.29 p.m. Margarita can't wait any longer: she lifts the heavy box of gold and opens the lid. The cream is yellowish and oily, and gives off the aroma of earth, marshland and forest. She begins rubbing it into her forehead and cheeks, where it is absorbed quickly and greaselessly, producing a tingling effect over her skin. Then she looks in the mirror and drops the casket in shock.

Her eyes have changed colour to green, and her eyebrows have grown from narrow, plucked lines into perfect, symmetrical arcs. A worry-line

between them has vanished. Shadows around her temples, and ‘barely detectable sets of crowsfeet’ have vanished. The skin of her cheeks begins to glow pink, her forehead becomes pale and perfectly smooth, and the artificial waves in her hair are loosened into flowing and natural-looking curls. She laughs with glee, throws off her bathrobe, and begins to rub the cream all over her naked body. A tense headache that had bothered her since her meeting in the gardens disappears, her arms and legs grow stronger and firmer. Jumping into the air with joy, she sinks slowly and elegantly back to earth, as if being lowered by angels. The cream has granted her the power of flight.

Bulgakov was trained as a doctor and his book brims with vivid clinical details: of blood spurting at a beheading, of a gently persuasive psychiatric interrogation, of the grinding crunch of a leg being severed. He brings the same attentiveness to the effects of the cream.

As a physician, he must have known that creams in the real world can only slow the inevitable process of ageing, never reverse it. To keep skin looking youthful, it’s more important what you *avoid* than what you rub on: smoking, unhealthy food and sun exposure all add years to the skin. Once its natural elasticity has started to fade, there’s no cream on earth that can restore it.

IT WAS AN AIRPORT, but it could have been a shopping mall, a railway station or even a hospital concourse anywhere in the rich world: strip lighting, cathedral-high ceilings, gantries of air ducts, wear-resistant carpets, overpriced cafés, gallimaufries of shops, and target demographics idling on uncomfortable chairs. The products for sale vary slightly with the season, but not much: magazines, gifts, clothes and bags; caffeine, electronics, junk food and alcohol. A solitary chemist’s shop offers a different promise, with illuminated banners of ‘health’ and ‘beauty’. But what they are really selling is youth.

Medieval alchemists had a thousand different names for youth elixirs, and the contemporary rejuvenation industry is not far behind. The first three creams I picked up belonged to the same range, and blended an appetising list of ingredients: rosemary, chamomile, cocoa, eucalyptus, borage, avocado, echinacea, aloe vera, hops, cucumber, calendula, and ‘heavenly fragrance of rose-scented geranium’. On another shelf, an exotic melon

from the Kalahari had been rarefied and liquefied, and presented for application to heat-damaged hair. There were seductive promises of rejuvenated and radiant-looking skin. One of the creams promised a transformative reduction in the appearance of fine lines and wrinkles, and another a ‘firmer, lifted, and youthful-looking complexion’. There were variably blended products customised for hands, nails, feet, face, body and breast. Some creams were described as ‘precious serums’, the application of which was not just beneficial, but necessary. Each offered to make skin ‘visibly plumper, smoother and rejuvenated’.

The men’s shelf ran to just four products, which in their own way also promised youth, though their effects were described as calming, softening and smoothing rather than rejuvenating (as if mollifying male character, not male skin, was their object). The divergent marketing approach for men’s products was replicated on the shelves stocking vitamin supplements, which promised youth and improved complexion for women, but strength and potency for men. These were advertised as being necessary not just for health, but to confer ‘vitality’.

The story of Bulgakov's Margarita is part of a long tradition, from Snow White's wicked stepmother (who wanted to remain 'fairest of them all') to the Germanic legends that granted vigorous youth to men heroic enough to slay a dragon. There's a spectacular example of youth enchantment in Ovid's *Metamorphoses* when Jason defeats a dragon to get hold of a golden fleece, then implores his wife – the sorceress Medea – to rejuvenate his father Aeson, using a potion of herbs so exotic they could have been taken from a modern cosmetics catalogue. In her dragon-harnessed chariot Medea makes a tour of the most glamorous and outlandish sites in the Greek world in order to gather herbs. She fills twinned holes in the earth with the blood of a sacrificed sheep, adds wine and milk, then dips flaming torches in before setting them ablaze. Into a cauldron go roots from Thessaly, sands from Oceanus at the earth's limit, and powdered rocks from the far east.^{*}

Medea used a desiccated old olive wand to stir the brew; as she did so it sprouted leaves then grew heavy with olives. Spatters from the broth caused flowers and grass to spring up on the cold dark earth. At this final sign Medea felt ready to proceed: she slit Aeson's jugular veins and poured in her potion. 'Quickly his beard and his hair lost their whiteness... New flesh filled out his sagging wrinkles, and his limbs grew young and strong. The old king marvelled at the change in himself, recalling that this was the Aeson of forty years ago.'

BETH LORD WAS in her mid-fifties and wore elegant designer suits and blusher on her cheeks. Her vigilant eyes were heavy with mascara, and her eyebrows were as delicately contoured as the finest sable paintbrush. She'd trained as a lawyer but hadn't worked for years. Her husband was an executive at an investment bank, and worked long periods away between offices in New York and Shanghai. 'About twenty years ago he told me "we don't need the money" and encouraged me to quit. So I did.' At first, she didn't miss work, being a busy mother of a young daughter, and she signed up for every school and local committee that asked her to contribute. In addition to her rounds of meetings and school fairs she attended a gym every day, and started a small-scale business selling cosmetics to friends and neighbours.

Usually in clinic we talked about her anxiety, which was high, and her mood, which was low, as well as her struggles to relate to her husband.

They hadn't had sex for years, and she would sometimes ask me to recommend relationship counsellors, or how to improve her libido, as well as that of her husband. My advice never seemed to reap much reward. One day she attended complaining of chest pains, which had been gripping her ribcage at night – usually when her husband was away. She was anxious that they might be coming from her heart, or from some cosmetic breast surgery she'd had in the past.

'I didn't know you'd had surgery,' I said, glancing at her notes on the screen. She unbuttoned her blouse and pulled down her bra to show the circumferential scars at the periphery of each nipple, where the disc of tissue had been resected and repositioned higher on the breast. 'It hasn't given me any problems up to now,' she said, 'do you think those operations could be causing the pain?' Each silvered circle radiated a thin line, which dropped down over the recontoured breast – invisible in dim light but shown up by the examination lamps. 'I had it done ten years ago.'

I told her that it was unlikely her pains were caused by scarring. 'Did you ever have any other operations?' I asked. We had never discussed plastic surgery.

'Oh, a couple, but you won't have the records – it's all been done abroad,' she said. 'I've had Botox around the eyes, some fat at the top of my arms taken out, and – oh! Some sagging skin taken off my belly.' She indicated another circular scar around her navel where the skin had been pulled taut and trimmed, then repositioned over her umbilicus. 'That was just to deal with the stretch marks after being pregnant with Margaret.'

Her daughter Margaret suffered from migraines, and I'd come to know her a little over the years. 'How is Margaret?' I asked.

'Fine, fine,' she said with a quick, nervous smile. 'She's off at college now, having a ball. I'm happy she's away, you know, living her own life.' But her voice suggested otherwise, and the fingers of her right hand fretted at the diamonds on her left.

There were a few tests to arrange, to confirm that the pain wasn't coming from Beth's heart. Its character and timing implied it wasn't coming from her lungs, ribs or past surgery. 'You know, much of the time we can't find any physical cause for chest pains,' I told her. 'The pains come and go on a rhythm that's more to do with worries or anxieties than anything else. When those worries and anxieties ease, so does the pain.' We talked a little

about breathing techniques to try the next time she felt the pain.

‘Sometimes,’ I added, ‘these kinds of pains can be your mind and your body’s way of telling you that something in your life has to change. It won’t let you rest until that happens.’

‘My life could do with a few changes,’ she said.

THE EARLIEST KNOWN TEXT concerned with the elixirs of youth is an early Chinese commentary on the *I Ching*, the ‘Book of Changes’, in which chemical substances and processes are tentatively correlated with the book’s famous hexagrams. The *I Ching* takes it for granted that the universe and all beings in it are caught up in cycles of transformation, and suggests that the astute application of mystical and medical knowledge can influence those changes for the better.

In Europe, alchemists were obsessed with generating gold, but in China they preferred to work on youth elixirs. A string of Chinese alchemists claimed to have created a rejuvenating potion; Joseph Needham, the historian, scientist and Sinologist, was so struck by the frequency with which Chinese emperors were poisoned by these drugs that he tabulated a list of victims. In around 300 CE, a Chinese alchemist called Ko Hung collated various recipes. Three centuries later a more detailed treatise specified the inclusion of obscure, exotic substances such as mercurial salts and compounds of sulphur. There are over a thousand different names for these potions, most of which carried the same basic mineral ingredients.

One of Ko Hung’s near-contemporaries in the West, a Byzantine called Synesius, believed that the physical transformations effected by alchemy were less important than the mental positions adopted by its practitioners. A true alchemy of youth didn’t require a laboratory or precious, exotic substances; all that was needed was the right kind of incantation, and a change in attitude.

‘I’VE LEFT HIM,’ Beth told me when she next came to clinic. ‘Or rather, he’s left me, or we’ve both left each other – either way, the marriage is over.’ There was a fierce and triumphant gleam in her eye that I hadn’t seen before. Though she was still meticulous about her clothes I noticed she was without her usual layers of make-up. She looked fired-up, vital, and slightly in shock.

‘What happened?’

‘I’ve known for years that something had to change...’ she began. ‘Maybe I just held on for the sake of Margaret. But those chest pains, they were the last straw.’

One night she’d felt the pains beginning, and rather than worry over them she’d got up out of bed, put the lights on, and had written out a list of every disappointment and frustration in her life. ‘It was quite a list,’ she said, with a wry smile. ‘Two sides of paper. But one thing kept coming up again and again – the sense of being trapped in this marriage, trapped with a man who had lost interest in me and in our life together. And the worry that time’s running out.’

‘So what did you do?’ I asked.

‘When he came back from business last time, I showed him the list.’

‘And?’

‘He’s been having an affair for years! He admitted it! With a woman twenty years younger than me.’

I waited for a few moments.

‘It was almost a relief to hear him confess,’ she said. ‘Well, I’m better off now without him. That’s the first change, but there’ll be more.’

‘What do you think you’ll do next?’ I asked.

‘He told me I didn’t need to work... but we all need work, don’t we? And I want to travel!’

‘How has Margaret taken the news?’

She beamed back at me with pride: ‘That was the greatest surprise of all,’ she said. “‘Mum, you should have done it years ago,’ she told me.”

BULGAKOV WROTE THAT Margarita felt ‘anointed’ by the magical cream: a glorious sense of freedom ran through her limbs, her body fizzed with giddy pleasure. She had the sudden conviction that she would leave her home and her husband, who she did not love, and begin a new life.

After shouting ‘Hurray for the cream!’ to no one in particular, she flies through the air to her husband’s desk and, without hesitation or deliberation, writes a note asking him to forget her.

A sound disturbs her – a broomstick knocking in the cupboard. Margarita opens its door, jumps onto the broomstick, and zooms naked out of the window. Magic has rendered her invisible to onlookers – it’s

understood that this youthful beauty is for her own pleasure, not anyone else's. After taunting her boring neighbour, taking revenge on an enemy, she takes off on a flight out of Moscow.

At first she flies at tremendous speed across the Russian landscape, her toes brushing the tops of trees, the great rivers of Siberia passing beneath her so quickly that a strobe of reflected moonlight flashes beneath her feet. Then she slows to enjoy her new perspective, and 'savour the thrill of flight'.

MEDICAL PRACTICE IS SO THICK WITH DAILY REVELATIONS, SO DEEPLY TEXTURED WITH THE INTIMACIES AND DETAILS OF SO MANY LIVES, THAT SEVERAL MONTHS WENT BY BEFORE I REALISED I HADN'T SEEN BETH LORD AGAIN. SHE MUST HAVE MOVED AWAY, GIVEN UP ON HER PRESCRIPTIONS OF ANTIDEPRESSANTS, OR HAD NO NEED OF THE SPACE OUR CONSULTATIONS OFFERED. SOMETIMES A THERAPEUTIC RELATIONSHIP COMES TO AN END BECAUSE IT HAS ACHIEVED ITS AIM, AND SOMETIMES BECAUSE A STRAY PHRASE HAS CAUSED OFFENCE. USUALLY I NEVER FIND OUT WHY.

A couple of years later I saw Beth's name again on my clinic list. I called her name from the waiting-room door; 'Long time no see,' she said, rising quickly from her seat and striding after me to the office.

'So how have you been?' I asked.

She was still gracefully dressed, but wore little make-up, and the expression around her eyes was cheerful and relaxed. In her attitude and her appearance she seemed younger. 'Fine, marvellous really,' she said, taking her seat.

'When we last met you spoke about leaving your husband...'

'And I did!' she finished with glee. 'And I took off travelling. I've been twice around the world since then...'

* Chinese alchemists traditionally mixed and heated different minerals, not herbs, to create youth treatments, and it's as if Ovid was aware of Chinese preference.

9

Tattooing: The Art of Transformation

They were stains of some sort or other... And what is it, thought I, after all! It's only his outside; a man can be honest in any sort of skin.

Herman Melville, *Moby Dick*

IT'S THIN, THE BARRIER that separates us from the world – when I see skin blister or crack I'm often startled by just how insubstantial it is. The subtlest of scratches may leave a scar; the most trivial of abrasions may drive dirt under the skin and leave a permanent stain. The first tattoos must have been like this, unintentional, ash or mud forced into the body through falls or flint wounds.

A few years ago I had a clinical attachment to a medical research unit in East Africa. One of the local doctors, Faith, took care of me. She had trained in Nairobi, was efficient and imperturbable, and her long, braided hair was knotted high on her head. As she led me on her rounds she spoke of her grief at the corruption that robbed funds from the hospital. One of the hundreds of bedside stops we made together was to a malnourished boy, about eight years old, who lay face down on a dirty bed. He had cerebral palsy, had fallen in a fire, and before coming to the hospital had been nursed at home with inadequate, dirty dressings. Mottled burn scars made a chiaroscuro of his back; pressure sores too, some infected. Embedded in the burn scars were flecks of charcoal that would be almost impossible now to

remove – if he survived, he'd carry their marks for the rest of his life. ‘He is improving a little,’ said Faith, her voice matter-of-fact as she picked up his chart. ‘When I admitted him I almost cried, he had been so neglected. But then I remember that I don’t care. I can’t.’

For accommodation I rented a bungalow in an empty holiday complex near the hospital. One day the manager’s ex-husband arrived, sacked the staff, switched off the water supply and locked the main gate. For a couple of days I had to wash my clothes and dishes in the pool, until I found a room in another house with some colleagues, further away from the hospital but next to the beach. It was a round house, surrounded by the bush, open to the air and with iron bars instead of walls, and it came with a resident population of giant millipedes, dive-bomber beetles, and smug, fat geckos. Within the toilet rim lived a colony of tiny frogs, naturally selected to swim fast enough to avoid being flushed away.

At night I’d hear the sounds of partying carry through the trees from the house next door. The neighbours at that time were Samburu warriors from the highlands of Kenya. They had recently been the subject of a documentary, and had come down to the coast to celebrate with the film’s director. At an evening party I was taken aside by one of the men: he didn’t like it down by the Indian Ocean he told me – too hot, too many people, and the locals ate too much fish. No self-respecting Samburu would eat such food. It was different in his homeland, he said: cool, spacious, healthy, and a hunter could eat red meat all year round.

Around his thighs he had a pattern of circular scars: raised, shiny blebs as if divots of flesh had been prised out with thorns, then left to heal. I asked how he had got them. ‘It’s done with burning sticks,’ he said; ‘we do it when we become *moran*, warriors.’ He ran his fingers over the scars, remembering. ‘For days afterwards it was very hard to walk.’ The whorled patterns of the markings were like fingerprints writ large. Others on his trunk were arranged in neat cubic geometries, like *I Ching* ideograms cast over the body. The young men in his tribe were all marked this way, he said, before they were expected to go out to fight against neighbouring tribes, such as the Turkana.

‘Did you ever fight the Turkana?’ I asked.

He shook his head. ‘They are near to Somalia. They have AK-47s.’

He’d visited Edinburgh once for the film festival. ‘Very cold’, he

remembered. I imagined this African warrior, skin like polished anthracite, scars hidden beneath blue jeans, bracing himself against the icy brine of the North Sea wind.

IN MY CLINIC in Edinburgh I often see another kind of scarification – the ‘deliberate self-harm’ of those who cut themselves in moments of intense anguish. I asked one of my patients, Calvin, how he’d fallen into the habit: ‘It started in secret,’ he said, ‘something I did in my own bedroom. I’d take a razor, or unscrew the blade from a pencil sharpener, and just nick the skin ever so slightly. Just enough to draw blood. I’d catch the blood in tissues, then smuggle the dirty tissues out to a bin far from the house. It made me feel better, for a while. But then worse, you know, afterwards.’

‘Where did you cut yourself?’ I asked.

‘At first just here’ – he pointed to his hip – ‘so that if I was wearing shorts no one would be able to see the scars.’

Calvin pulled down the waistband of his trousers and half-stood to show me: a marbled lattice of white lines overlay his hip.

‘And then?’

‘Then it wasn’t enough – I switched to the other hip, and then my forearms. At the beginning I thought I could just wear long sleeves, and

then I didn't care any more. Something switched in me – I *wanted* others to see the scars. I wanted my mum, my dad, my teachers, everyone around me to see how unhappy I was.'

We were both silent for a few seconds. 'What do you think about them now?' I asked.

'For a long time I was happy to have them. That phase in my life is past, but it's a big part of me. It's part of who I am. Those scars are a relic of my past self – I don't want to get that low again. Until recently, each time I glanced down and saw the scars, I remembered how much stronger I am these days.'

I'd been seeing Calvin for a year or so, weaning down his antidepressants slowly, checking in on the counselling and the confidence-building courses he'd signed up for. 'And now?'

'And now I'm ready to move on. I'm going to leave that part of my life behind for ever. I've decided to get tattoos, I'm going to cover them all.'

For some, the act of being tattooed is related to the same impulse to cut, but for Calvin each tattoo was a step away from the person he'd been. Over the next few visits I watched his tattoos evolve. First a Chinese dragon coiling over his left hip, flicking its tail up over the crest of his pelvis and towards his spine; 'It means vigour for me,' he said, 'a reminder that I've got hidden strength.' I looked closely – the scarring was barely noticeable. Then, a few months later, I saw him again: his right hip was overlain with a lion rampant. 'It's bold and proud, like I want to be.' Over the following year, on his right forearm, there evolved a scene of winged angels mounted on clouds, the trumpet blasts of heaven radiating around them like discharges of electricity. In the pale gaps of skin there bloomed a garden of flowers. On his left there evolved a hellish scene: ghouls, skulls and trident-bearing demons, with fanged snakeheads crammed in the spaces.

'I'm caught in the middle,' he said, pointing at his torso; 'with hell on my left side' – at this he lifted his left forearm with its ghouls and demons – 'and heaven on my right' – he lifted the angels and trumpet blasts.

'You're carrying both around with you,' I said.

'Don't we all. You must see that in your job.'

IN THE SHERLOCK HOLMES STORIES, Arthur Conan Doyle implies that the discerning detective can learn much about a person from their tattoos. 'I

have made a small study of tattoo marks,' Conan Doyle has Holmes say, 'and have even contributed to the literature of the subject.' The tattoo is valued as a living testimonial to the life history of its bearer – as valuable to the physician as to the detective.

Often, when I roll up a sleeve to take blood pressure, or pull up someone's shirt to listen to their lungs, I see tattoos that ordinarily go unseen. Some are about family allegiance: the names and birthdays of children, or fidelity to a particular partner. Some tell me about military tours of duty, or time spent in the merchant navy. Tattoos of bikers, soldiers, sailors and prisoners all bear witness to membership of a closed, strictly tiered society. I remember opening a shirt to test a man's belly for appendicitis, to see his torso inscribed in a flowing copperplate: 'worrying is praying for the worst to happen'. His tattoo was a kind of self-uttered enchantment: he told me that since getting it, his lifelong anxiety had gone.

Tattoos can be helpful to the clinician in a very direct, practical way: one patient of mine could point to exactly where among a writhing sleeve of snakes to plunge a needle to be sure of getting blood. Sometimes skin is tattooed to show a radiotherapist exactly where on the body a tumour is to be targeted. Some are about forging an allegiance between the present and the future self – a lifelong keepsake of how its bearer used to be: a flower at the ankle, a rosette at the base of the spine, a cartoon character on a shoulder. And I've seen some that are emblems of transcendence and celebration: a phoenix rising from the ashes of a mastectomy scar, a garden of flowers blooming over stretch marks.

Tattooing must be among the earliest of art forms – the body as canvas, as symbol, as commemoration, as welcome, and warning. They're frameless works of art, transformations of the body surface – itself subject to ceaseless change. They break down the distinction between subject and object. Sometimes they're dismissed as something you'd get on impulse, but for most people, getting a tattoo is painful – as the poet Michael Donaghy pointed out, you'd need a 'whim of iron'. The word is Polynesian – it came into global usage with the voyages of Captain Cook, and refers to the 'tat-tat-tat' repetition of the needle as it punctures the skin (the drum roll 'tattoo' of a military band has the same origin).

It can be the puncturing of the skin that brings a tattoo to my medical attention – infections, blistering, sometimes inflammatory reactions to ink.

Psychological reactions too – around half of tattoo recipients regret them. In the United States a quarter of all young and middle-aged people have a tattoo, and there are more than 100,000 tattoo-removal procedures each year. James Kern, a tattoo artist specialising in transmuting unwanted tattoos into new designs, has written: ‘You will never have a happier client than someone who no longer has a tattoo that they hate. It destroys their self-esteem. I love the transformation physically and spiritually.’

Historically there have been hundreds of reasons for getting tattooed – perhaps as many reasons as there are people who have them. Anthropologists have listed a few: camouflage for hunting; to mark and propitiate puberty and pregnancy; to counteract disease; improve fertility; to mollify malign spirits. Some of the motives identified among tribal societies are just as relevant among my own patients: to take on new characteristics; to honour ancestors or descendants; to enhance one’s respect among the community; to frighten enemies; to make the body a register of life events; to beautify oneself; to express an emotion (patriotism, love, friendship); to demonstrate group allegiance. Some motives seem unique to contemporary culture: as permanent facial make-up, or even to make money exhibiting yourself. I’ve heard of someone who tattooed his blood group onto his arm, in case he ever needed a transfusion (with an arrow pointing at the broadest vein). And there are more baleful reasons: being branded by a fascist regime; as an act of deliberate self-harm; or to relieve boredom in a prison cell.

Of the latter two, the tattoos of prisoners tell a story of bravado, isolation and violence, or affirm allegiance and status. Some prison cultures, like those in Russia or South Africa, have elaborate tattoos that symbolise crimes committed – coffins to signify a murderer, a dagger at the throat for a mercenary, wrist manacles or numerals to signify the number of years incarcerated.* For the prisoner, the body can be the only possession left – and the only weapon of rebellion. I’ve seen clumsy self-inked allegories of freedom restrained, and of gardens and birds intertwined and tangled with thorns. I’ve seen scrawled skulls reminiscent of the *memento mori* skeletons that dance around the borders of old gravestones. Tattoos are a way of bringing disorder, playfulness and creativity to a body living within the drudgery and order of the prison. The body in chains comes to tell a story of its own liberation.

THE FIRST I KNEW of Mark Blakewell was a sheet of paper sent in to the medical practice from the city jail: ‘The above-named patient is being released from prison tomorrow,’ it said, ‘I’d be grateful if you would take over the methadone prescription as detailed below.’ Methadone is an opiate substitute, prescribed to dull the cravings of heroin addicts. I looked up the notes we held from the time before his conviction: a catalogue of emergency department attendances for fight injuries, and a couple of psychiatric referrals that he didn’t turn up to. Then a sudden silence, about ten years previously. We sent an appointment time back through to the prison nurses, and the following day he showed up in my office.

He was thin and pale, in his early forties, with crew-cut blonde hair, and tight, bloodless lips. There were lines notched into his eyebrows. He wore a green tracksuit with white stripes, and down one cheek he had twinned scars. He blinked too often, and his eyes fidgeted around the room. But the most striking thing about him was his tattoos – all amateur works, executed in thick blue ink. A spider’s web was drawn up one side of his neck, and a dagger, pointing towards his heart, tattooed down the other. There were some tears tattooed onto one cheek; a loop of barbed wire circled his throat. Through his thin hair I could make out more designs on his scalp – a swastika, a skull and a Scottish flag. I glanced down at his hands: he had ‘LOVE’ tattooed across his right knuckles, and ‘HATE’ across his left. On his thumb knuckles he had clusters of blue dots, and a swallow fluttered at the web spaces between his right thumb and index finger.

He sat down next to my desk, and glowered. He had skin creases like target circles around his eyes. ‘I’ve come for my methadone,’ he said.

‘Sure. What dose are you on?’

He sighed theatrically: ‘If you don’t know that already, you don’t know what you’re doing.’

‘I’m just checking I’ve got the right details.’

‘Eighty,’ he said. ‘And I need my Valium too.’

‘Eighty, fine. But I can’t give you Valium – no one comes out of prison on Valium.’

‘If you think we can’t get it there you really don’t know what you’re doing.’ The consonants in his voice were hard. ‘If you don’t give me any, I’ll have to buy it on the street. Then it’ll be your fault when the police

come after me.'

'If you're so nervous you have to buy street Valium, then maybe we should talk about how to ease your anxiety.'

He grunted, grabbed the prescription from my hands, and went to stand up. Then the mask of fury on his face softened, he exhaled slowly and sat down again.

'Sorry,' he said, and looked down at his shoes. He looked as if he was trying to find the words to say more.

'I'll be civil to you, if you'll be civil to me,' I said.

He sat back in his chair and took a deep breath. 'OK, let's start again.'

Each of my patients on a methadone prescription is seen monthly, and over the months, as I came to know Mark better, he grew his blonde hair long. It curled around his ears and cast the spider's web and dagger into shadow. The tattooed tears on his cheek were still prominent, and through his open-necked shirt I'd glimpse the barbed wire girdling his throat. On that first day out of prison I'd watched him manage to get his temper under control; slowly, I watched him do the same with his drug use.

One day he came in with a bandaged hand. He was wearing a polo-necked shirt, and was down from eighty to forty millilitres of methadone a day. We agreed to drop it to thirty-five. He told me he'd found a job in a mechanic's shop – a friend had recommended him for the work. 'And what happened to your hand?' I asked.

'Tattoos,' he said. 'I burned one with battery acid.'

I unwrapped the bandage: weals of reddened skin were healing over his knuckles, but blue ink was already showing through the scabs.

'They used to try this in the old days,' I said. 'They'd peel off tattooed skin, then graft new skin over the wound. It doesn't work very well – they use lasers now.'

'And does it work?' he asked.

'Sometimes,' I said. 'And your tattoos are exactly the kind it's best for. Not cheap, though.'

The lasers for tattoo removal are chosen according to the colour of pigment to be broken down – red and orange pigments need a green laser, a red laser is used for blues and blacks. It's painful too – more painful than getting the tattoo in the first place. The lasers usually lighten the skin, which can be a problem for anyone with a dark skin tone.*

I went on meeting with Mark every month, bringing his methadone down by increments – and as his addiction eased, I watched his tattoos dissolve. By the time he was at thirty millilitres a day, the tattooed tears on his cheek were just faint smudges, barely noticeable. He was living frugally, spending all of his income on the laser clinic. By twenty-five millilitres the dagger and webs at his throat were fading, and I could see he had started on the circle of barbed wire at his throat. By ten millilitres a day there were just blemishes to see on his face and neck, though he still had to keep his hair long enough to prevent the scalp tattoos showing through.

A year or so later I saw him in clinic again. He looked well – as he walked into my office his once grey, zipper-tight lips opened wide in a smile. He wanted me to prescribe something to help him stop smoking. I noticed the swallow still fluttered at the web space between the thumb and index finger of his right hand.

‘What about that one?’ I asked him, pointing down at the free-flying bird.

‘That one I’m keeping,’ he said.

* Kafka’s *In The Penal Colony* describes a machine that tattoos each prisoner’s body with the law that has been broken.

* There is a push now to extend the regulation of tattoo artists to the pigments that it is legally permissible to use, in order to make them more easily removable. Bright modern pigments are the most difficult to remove with lasers.

10

Anorexia: The Enchantment of Control

This is a real illness, not a whim of spoiled rich girls. It's been treated like it's voluntary and wilful as opposed to what it is: a serious, life-threatening psychiatric and medical illness.

Diane Mickley MD

ANOREXIA NERVOSA IS AN INSCRUTABLE ILLNESS: baffling and frustrating to those who suffer it as it may be to those trying to help. Some mental illness dissolves the boundaries of the self, tearing the seams by which we hold ourselves together. Some foist on us delusions of being pursued, persecuted, contaminated – or their opposite: delusions of being powerful, grand and invulnerable. Some mental illness forces a retreat from the world, shutting down engagement in a destructive cloak of depression or catatonia. Anorexia is none of these things: a self-destructive, poisonous assault on the body and mind, a grim alliance between one of our most ancient instincts – to fast and even avoid food that we believe might harm us – and one of humanity's newer preoccupations – the way we appear to ourselves and to others.

Effective mental health therapists are part-priest and part-conjuror: they find ways to re-invoke an individual's boundaries, dissolve his or her delusions, and summon an authentic, engaged self from the shadow beneath which they've fallen. We no longer think of mental illness as a possession

which descends on us, cast by powers beyond our control. Modern medical psychiatry looks at mental illness as a phenomenon of brain chemistry, but some languages still carry the sense that it comes from without as a kind of psychic weather. This perspective can be effective in neutralising any guilt or culpability a sufferer might feel – ancient physicians spoke of melancholia as something beyond our control, subject to the flux of humours, and some languages retain this sense today. There are languages in which to say ‘I’m depressed’ is to say ‘a sadness is on me’; in English we still speak of a depression as having ‘lifted’.

It seems irrational, in the twenty-first century, to think of anorexia as a malignant enchantment, yet culturally it’s the most plausible fit – a mood or conviction that brings misery and starvation, often arriving inexplicably and departing just as unaccountably. There may be warning signs: an unusual attitude to food before the illness came, a powerful determination to achieve goals, a destructive family dynamic, a traumatic experience, a perfectionist attention to detail, or any one of a number of other ‘risk factors’. Each could have played a part in initiating an obsession with restricting food, but that doesn’t explain why many people with odder attitudes to food, more destructive family dynamics, or greater perfectionism over details, never develop anorexia.

In some parts of the world shamans still use rituals to cast out malign spirits: as a family physician, in the modern West, anorexia can make me feel like a novice exorcist. Some of the anorexic patients I’ve known have succeeded, with or without help, to cast out the illness that was starving them; others found ways to make an uneasy truce with it. Some were defeated by their anorexia – it has the highest death rate of any mental illness. And it has been with us for centuries – St Catherine of Siena, who lived in the fourteenth century, was anorexic (‘I pray to God and will pray, that He will grace me in this matter of eating so that I may live like other creatures’). So was the seventeenth-century nun Veronica Giuliani, a tortured woman who would lick walls and eat spiders, but not the meals placed before her in the convent refectory. It’s not just a disorder of western culture: there are reports of anorexia from Nigeria, Hong Kong and South Africa, as well as among the Amish people (though one study from Fiji implied that television introduced anorexia to a community that had never known it).

Accounts from the Middle Ages, written by priests and abbesses charged with the care of anorexic nuns, betray feelings of bewilderment and impotence in the face of the illness that are comparable to those I've heard expressed by therapists in modern psychiatric clinics. Anorexia has been intimately, painfully and eloquently described by many men and women who have suffered it, and my perspective as a clinician is no substitute for those accounts.

SIMONE WAS A LAW STUDENT who hobbled into my office holding her stomach, complaining of overwhelming nausea and a light-headed sensation as if she was about to faint. I helped her onto the examination couch; the wings of her pelvic bones stretched the skin at her hips, and her ribs were a bowed washboard. Her abdomen was distended into a dome. 'It must be gas,' I thought to myself, 'maybe she's got a bowel obstruction.' But the swelling felt dull beneath my tapping finger, as if there was little air or gas beneath the skin. Her temperature was normal, and her blood pressure was on the low side for someone suffering so much pain. Most people with an obstruction in the bowel can't stop vomiting, but Simone didn't even retch. When the bowel is blocked by a twist or a tumour, the intestine works harder to clear the obstruction: intestinal fluids trickle through the interconnecting caverns of the bowel making high-pitched, tinkling sounds. But when I put a stethoscope on Simone's abdomen, it was silent.

'What have you had to eat in the last twenty-four hours?' I asked, gently pressing my hand over the quadrants of her swollen abdomen.

'Nothing unusual,' she said, grimacing. Her eyes looked trapped and frightened, like a stowaway under an opening hatch. 'A rice salad last night, and this morning a bit of toast.'

I slid a needle into her vein at the elbow, drew out a few tubes of blood for the lab, then gave her some anti-nausea medication and morphine. 'You're very dehydrated,' I told her, 'I'd like to arrange an ambulance to take you down to the hospital.' She lay back on the couch and nodded. White, downy hair on her cheeks, illuminated by the overhead strip lights, made a ragged, tilted corona around her face. 'Come and see me when you get out.'

It was a couple of weeks before she came back to see me, and her discharge letter held a surprise. 'Acute gastric dilatation with foodstuffs,' it

said: ‘Therapeutic Procedure: Decompression gastrotomy.’ Simone had stitches down the front of her belly: the surgeons at the hospital had opened her up and found a stomach bulging with around six pints of half-chewed rice and melted ice cream. They’d piped it out with a tube, repaired the hole in her stomach, and stitched her up again.

The food restriction of anorexia leads to emaciation and malnutrition, while most men and women I’ve known with bulimia – whose eating disorder takes the form of self-induced vomiting or other purging – maintain a normal weight. But there’s a grey zone between the two, variants of anorexia that are haunted by the compulsions of bulimia. In ‘binge-purge anorexia’, sufferers survive years of semi-starvation only to binge as a response to some stressor, sometimes as rarely as once every few years. A stomach shrivelled through disuse can’t cope with the burden of a normal meal, so a binge stretches it perilously thin, and vomiting the foodstuffs out becomes impossible. It was clear that Simone had eaten so much food that her stomach, like her skin and bones, had been taken to breaking point.

I NEVER KNEW SIMONE’S PARENTS; on the couple of occasions I went to the home she shared with them, they weren’t there. Over the months, then years, that I was Simone’s doctor I found out more about her, and how anorexia nudged its way into her life. It took root like a spore in shadowed soil. She had always been slender and quiet, an only child, and the family was affluent: her mother was an academic who commuted between Edinburgh and Oxford, and her father a lawyer. They lived in a modern luxury apartment overlooking one of the city’s parks, with sleek designer furniture and wide, echoing rooms.

Some anorexia begins in imitation – it’s commoner among siblings of anorexic people and in pupils attending boarding schools – but in Simone’s case it began with a fear of contamination. She picked up an infective diarrhoea – a common enough illness – that left her for a few weeks with cramping abdominal pain every time she ate. At first she thought that she was being recurrently infected by intestinal parasites, then that she was being poisoned by new food intolerances. She began to manipulate her diet to exclude potential triggers. Alone for much of the time in an empty flat with her textbooks, she commenced an obsessional hygiene routine, and began to categorise and weigh her food into ‘good’ and ‘bad’. ‘Bad food’

insidiously became categorised in her mind as ‘too fattening’. Most of us when we are hungry become distracted, irritable and light-headed, but Simone had a paradoxical reaction – she felt clean, clear-headed and calm. At first, her studies improved. She felt a new level of control over life and her circumstances.

Gradually, Simone’s worries over being contaminated or poisoned by food began to give way to a horror of the sated feeling that comes with a normal meal. She approached her meals distrustfully, pushing food around the plate as if engaged in bomb disposal rather than nourishment. In the early days, she’d stand in front of the refrigerator for a quarter of an hour, agonising over what to eat before walking away empty-handed. Later she avoided the refrigerator altogether. She took up running, experimenting with how little she could eat and still manage to complete her favourite circuit of the park without feeling faint. The circuit lengthened; the fat that all of us need for health, to cushion our bones, muscles and organs, began to melt from her hips, cheeks, shoulders. Her bones thinned, her ankles swelled with fluid from malnutrition, and she felt cold all the time. Her family life had never been particularly harmonious but mealtimes with her parents, frantic with concern about how to make her eat, became a battleground. It was after a particularly violent argument with them that she’d gorged on the rice and ice cream that had brought her to my clinic.

When we met again after the hospital admission I referred Simone urgently to the local eating disorders clinic. The psychiatrists recommended citalopram, an antidepressant medication which they hoped would help reduce some of her anxieties around eating, and they arranged fortnightly meetings both with themselves and with a dietician. ‘They gave me sheets showing the minimum I have to eat to slowly bring up my weight,’ Simone told me at one of the early appointments. ‘I’m sticking to them, I really am.’ But her weight didn’t rise. Deception is an inextricable part of most eating disorders, and I found out later that she never took the citalopram as prescribed, and rarely ate as the dieticians advised. Her periods had stopped long before, but now her ankle swelling worsened, and downy hair grew even more thickly on her ^{*}cheeks. She dropped out of law school.

WHAT IS IT THAT CAUSES a healthy adolescent, whether male or female, to starve themselves until their bones soften, their teeth loosen, their hair falls

out and their hearts weaken? Among the first to define it was a French physician, Charles Lasègue, who in 1873 gave a fairly sweeping summary of some of the characteristics he associated with the illness:

A young girl, between fifteen and twenty years of age, suffers from some emotion which she avows or conceals. Generally it relates to some real or imaginary marriage project, to a violence done to some sympathy, or to some more or less conscient desire. At other times, only conjectures can be offered concerning the occasional cause.

As to ideas about causes, the same could be said today: ‘only conjectures can be offered’. As a constellation of attitudes to food and body weight, anorexia transcends times and beliefs, but its triggers involve a pernicious synergy of culture, advertising, peer pressure, genetics, family relationships, storms of hormones and peculiarities of personality. It’s often precipitated by some stressful life event: a bereavement, challenge or change in role.

The journalist Katy Waldman, a recovered anorexic, wrote an eloquent, fearless essay about her illness which noted some of the contradictions at its heart. She pointed out that there’s a tendency among survivors to make a poetry of emaciation: anorexia becomes a choreographed performance that ultimately becomes a prison. She called for an end to the celebration of wan, delicate women in art and literature, and a rejection of destructive narratives that seek to amplify their appeal. The illness awakens a revulsion towards food and a healthy body weight that seems unassailable, perhaps because it is so closely associated with the primitive aspects of our humanity: nourishment, sexuality, body awareness. For adolescents, it provokes a retrogression of puberty, seeming at first to effect a transformation in reverse. ‘I starved,’ wrote Waldman, ‘to acquire that old classical capability: metamorphosis.’

If anorexia is, as Waldman proposes, a kind of dramatic performance, Simone and I tried to sneak in new stage directions. I wanted to exploit her formidable perfectionism and resolve to an alternative end: a healthy weight. We agreed together a list of foods she'd endeavour to eat at breakfast, lunch and dinner, tabulating their associated calories – she accepted that without a minimum intake her body would grow weaker, and her mind too. But none of my interventions seemed to hold; her revulsion at the feeling of a modest meal within her stomach remained strong, and her weight continued to fluctuate on the edge of what is compatible with life. Twice more she was admitted to hospital: once when the salt levels in her blood threatened to destabilise the rhythms of her heart, and once when she collapsed unconscious with low blood pressure. I asked her once, ‘Do you think there’s a part of you that would welcome death?’, and she took a long time in answering.

But the answer, when it came, was ‘no’, and after three years of our meetings, her breakthrough came. I can’t take any credit for the change: after numerous medications, dieticians, admissions to hospital and regular visits to the psychiatrists, one day she told me simply that she’d eaten a chocolate bar, and felt better. ‘It was that simple,’ she said, astonished by the obviousness of what she needed to do. ‘I had energy. I felt good. I was expecting that horrid feeling to come over me, that disgust, but it didn’t. And I had only the one – I didn’t gorge on them.’

‘What made the difference?’ I asked her.

‘No idea – it’s just that now when I feel nauseated at the idea of eating, I

can see it as a sign that I'm not thinking straight, a sign that I actually *have to eat.*^{*}

Over the subsequent months I charted the rise of Simone's weight back into health. She returned to law school, moved out of her parents' flat, started dating, and though she never lost her perfectionism, her dedicated attention to the ingredients of what she ate, her weight didn't drop the way it had over those three years.

Much later, when the downy hair had gone from her cheeks, she had strength in her limbs and the rhythms of her hormones had returned, she came to see me about contraceptive pills. 'Remember those awful years,' she said and gave a short laugh, 'the only good thing about them was that my periods stopped.'

'Do you ever think about those years now?' I asked her.

'Sometimes,' she replied. 'It's hazy though, as if I was under a spell. I wish I knew how it was broken.'

* The downy hair growth is due to hormone imbalance. This 'lanugo' or 'wool-like' hair has led some scholars to speculate that the medieval nuns canonised as 'bearded saints' suffered from anorexia.

11

Hallucination: A Sphere of Devils

For man has closed himself up, till he sees all things through narrow chinks of his cavern.

William Blake, *The Marriage of Heaven and Hell*

I HAVE A PATIENT who believes her fingers are rotting. Usually Megan offers me her fingertips for inspection. Her unclipped nails are thick with grime, and more than once I've led her to the sink where together we've scrubbed them with a nail brush. 'Can't you smell it?' she asks me, 'they're disgusting.' I don't smell or see anything unusual. Megan is sometimes tormented by bullying and insulting voices, and when those voices are strong, so are the hallucinations of rot. We meet at least once a month: for me, it's a chance to check how she's getting on; for her, it's to pick up her antipsychotic drug prescription. She finds the drugs helpful; the consultations, I think, less so. I've tried exploring what the rotten fingertips might mean for her; whether they're a symbol of some rot or canker that gnaws at her mind rather than her fingers. 'Nope, there's nothing symbolic about it,' she says. 'They *really* stink. I can't believe you can't smell it.'

In Greek the word 'psyche' means 'soul' or 'life'; 'psychosis' means 'animation' or 'infusing with life'. For nineteenth- and early twentieth-century psychiatrists it meant something different: 'psychosis' was madness arising from a disorder of mind, as opposed to 'neurosis', which arose from

a disorder of nerves (this is now recognised to be a meaningless distinction). Today the word is reserved for those who hold beliefs and report hallucinatory perceptions that are manifestly untrue – those who've lost touch in a particularly damaging or distressing way with what's verifiably real. In *Dementia Praecox, or the Group of Schizophrenias*, published in 1911, psychiatrist Eugen Bleuler coined the term ‘schizophrenia’ to describe a group of mental illnesses that suggested this loss of grip on reality. His book affirmed that when delusions or hallucinations become prominent, ‘everything may seem different; one’s own person as well as the external world... The person loses his boundaries in time and space.’ In schizophrenia, this loss of boundaries can become enduring, life-limiting and profoundly distressing.

When people take hallucinogenic drugs for pleasure, that pleasure is contingent on the change they offer being temporary. Aldous Huxley’s *Doors of Perception*, an essay exploring the effects of taking four-tenths of a gramme of the hallucinogenic drug mescaline, took its title from William Blake: ‘If the doors of perception were cleansed, every thing would appear to man as it is, infinite.’ For Huxley, the brain was a reducing valve, optimised to restrict the glory and plurality of the world. He took hallucinogens with the intention of blowing open that valve, and specifically noted that the drug gave him an ‘inkling’ of what it might feel like to be psychotic. He wanted to induce a transformed state of consciousness, and shortcut through to the ecstatic states of mystical religion like those described by practitioners of Zen Buddhism, in which perceptual boundaries are said to be similarly dissolved.

The idea that drugs could offer transcendence was criticised by the Zen master D. T. Suzuki, who insisted that hallucinogenic drugs gave an insight only into a ‘devil’s sphere’ of reality. Taking LSD, Suzuki is quoted as saying, ‘is stupid’. ‘These drugs conjure up “mystic” visions,’ he wrote, ‘[but] Zen is concerned not with these visions, as the drug-takers are, but with the “person” who is the subject of the visions.’ Suzuki’s student Koji Sato took a different view: hallucinogenic drugs gave access to a mental state in which students ‘should not linger’, but from which much could be learned. Sato tells the story of one Zen student who couldn’t progress beyond a series of Buddhist koan teachings until he took LSD; following his drug experiences, he ‘passed these koans easily’.

It seems a universal that human minds seek to move in and out of alternative worlds, altering their state of consciousness. Children accomplish these transformations through play, but with adults, drugs are an almost ubiquitous feature of human communities, whether to transform perspective, become energised or to relax. Almost every society has a tradition of using drugs, and the few without tend to have developed alternative means of accessing hallucinatory states such as fasting, or prolonged meditation.

Broadly speaking, to be an hallucinogen, a drug must induce a distortion of perception without acting as a sedative or stimulant. There are many natural hallucinogens, and their use by humans has been described as far back as the Hindu Vedas – about 5,000 years. In the Middle Ages there were periodic outbreaks of a condition known as St Anthony's Fire, in which whole communities experienced hallucinations when they ate bread contaminated with ergot alkaloids. The alkaloids are generated by a fungus that grows on grain; in the gut they cause diarrhoea and vomiting, and in the brain they can cause headaches, hallucinations and seizures. A similar effect is brought on by ingesting the leaves or berries of deadly nightshade ('belladonna'). One seventeenth-century treatise on belladonna poisoning emphasised the religious and mystical nature of the hallucinations – prefiguring Huxley's *Doors of Perception*.

There are many other natural drugs that have hallucinogenic effects, like the psilocybin of mushrooms, and the peyote of Meso-American cacti. But the most powerful hallucinogen of all is a synthetic one, Lysergic acid, or LSD. It's active in tiny doses, about a thousandth of the equivalent dose of mescaline, making it one of the most powerful drugs known: 10 μ g can produce a feeling of euphoria, and as little as 50 μ g an hallucinogenic effect.

LSD was first synthesised in 1938, but its effect wasn't discovered until 1943 when, while working in the laboratory, the Swiss chemist Albert Hoffman accidentally absorbed some through his fingers. He thought he had died and been transported to hell. The drug has wide-ranging effects across the brain, and scientists couldn't figure out how it transformed vision, hearing, smelling and dreaming without dulling or heightening the taker's level of consciousness. In the 1950s and 1960s it was trialled as a therapy for alcoholism, for depression, even for schizophrenia, but few studies have been able to prove any enduring therapeutic benefit. More recently, the psilocybin of hallucinogenic mushrooms has been proposed as an aid to deepen engagement in psychotherapy, much as Sato's Zen student passed the most difficult koans only after taking hallucinogens. But LSD is not without danger: many studies show a small, persistent risk of psychotic reactions to the drug – around 1 or 2 per cent. It seems that LSD-induced

visions can cede to hallucinatory states that persist long after the drug itself has been eliminated from the body.

MY INTRODUCTION AS A MEDICAL STUDENT to the horror of drug-induced psychosis was Dan, a young student of philosophy I met during a psychiatry attachment. After taking LSD for the first time, Dan had a psychotic reaction with persistent hallucinations, and disabling panic attacks. I spent a couple of hours talking with him about his experience. He was short, with blonde curls to each side of his forehead like question marks, and a vertical line between his eyebrows like an exclamation. Angry patches of acne erupted between the sparse bristles on his cheeks.

He told me that he took a tab of the drug one evening in his bedroom, out of curiosity. The first thing he noticed, within twenty minutes or so, was that his bed was breathing, the quilt was rising and falling in time with his own breath. He tried to write down ‘the bed is breathing’ on a piece of paper, but the sensation of the pen on paper was all wrong, as if the nib was sinking through into the wooden desk beneath. Lying down on his bed he glanced up out of the window, and noticed that the sky was pulsing between light and dark. ‘It wasn’t frightening at first,’ he said, ‘but beautiful’; he lay for a while mesmerised by the change. He knocked on his flatmate’s door to tell him about the vision but found that instead of words, only giggles would come out. ‘Every time I tried to speak it was as if I had to line the words up beforehand in some antechamber of my mind,’ he said, ‘then blurt them out. But they wouldn’t come.’ On a trip to the toilet he saw his urine as fluorescent green blobs on the porcelain, beautifully bright, like scales on a dragonfly. As he watched, they seemed to spiral in a vortex towards the base of the pan before melting away.

At first the drug made him feel exhilarated and euphoric: he wanted to go out and enjoy his new perceptions. He strode out for a walk around the neighbourhood, but the euphoria quickly melted: his feet on the pavement seemed to sink into the cement; the music playing through his earphones began to boom from the brick walls of the buildings around him. His exhilaration yielded to a creeping, desolating anxiety. Beneath the hood of a pedestrian he glimpsed the flashing impression of a skull. Every piece of chewing gum trodden into the pavement glowed red, green or amber depending on the light showing at its nearest traffic lights. A panic attack

came over him, bringing a toxic paranoia: every car looked like a police car, every pedestrian seemed like a threat.

He cut the walk short and, running back to his flat, noticed that the drug had done something to his body temperature – he was overheating. Once back in his room he stripped off all his clothes, and sat naked in the middle of the bedroom. ‘I kept telling myself, “What can happen to you? You’re here, on your bedroom floor, nothing bad can happen”’. But a great deal was happening: the edges of the posters on his walls were moving, scraps of paint on the wooden floor seemed to writhe like larvae, and when he looked down at his skin, it seemed to swirl in endless migration over its own surface. ‘It was terrifying to see that even my body wasn’t safe,’ he said. ‘But it was also horribly fascinating: my hand would transform between looking old, wrinkled and weak, then it’d become strong, youthful and powerful. And if I looked in the mirror I’d see the same rapid change, backwards and forwards, on my face.’

Dan sat for hours like that on his bedroom floor, too scared to switch off the lights and sleep, terrified to leave the room. ‘I felt as if I’d passed my whole life perched on a plinth in a central chamber of my mind,’ he said. ‘Stable and secure. That night I was kicked off, and left hanging by my fingernails over some awful chasm. I knew that if I let go, I’d go mad.’

By sunrise the following day he was still flinching at unexpected auditory hallucinations, distrustful of every sensation – even the hard pressure of the floor beneath him. Music would blare loud then become muted, and he flinched at flickering shadows on the edges of his vision. Sleepless now for thirty hours, his paranoia was intensified by exhaustion: he became overwhelmed by terror at the prospect of going outside. His flatmate called the GP, and then accompanied him to the local clinic. The GP sent him in a taxi to the emergency psychiatric team at the local hospital, where he sweated, trembled and stared at the floor until he was seen.

‘They told me it would fade with time and they were right,’ Dan said. ‘They gave me some drugs – sedatives – that brought such relief. The first one I took was like honey on my brain.’ The psychiatric team arranged to see him again the following day – he didn’t need to be admitted into the hospital ward. The new drug slowed him down, his thoughts became viscous, and he had to stop attending the university. But within three weeks

he had reduced the dose to a negligible amount, and was learning to breathe through the panic attacks. Out on the street he still saw skulls on people's faces, but was finding ways of ignoring the visions and distracting himself. Speaking to medical students like me was one of the ways in which he was trying to understand his experience, and reclaim his mind.

THE PSYCHIATRIST R. D. LAING spent many hundreds of hours listening to personal accounts of psychosis. There are striking similarities between his case reports and accounts like Dan's of a terrifying LSD trip. In *The Divided Self* Laing quotes one of his psychotic patients: 'I'm losing myself. It's getting deeper and deeper. I want to tell you things, but I'm scared.' In his book *Disembodied Spirits and Deanimated Bodies*, Italian psychiatrist Giovanni Stanghellini quotes a patient undergoing a similar kind of 'ego disintegration': 'All sensations seem to be different from usual and to fall apart. My body is changing, my face too. I feel disconnected from myself.'

There's a theory about schizophrenia that proposes psychosis as a disintegration of the moment-to-moment synthesis between the different social and mental roles we inhabit – a synthesis we all carry out unconsciously, and which hallucinogens temporarily disrupt. From this perspective, psychosis and hallucinogenic drugs break the tiller that allows us to navigate between inner and outer worlds. Each of us is composed of bundles of different identities, and we are subject to ceaseless torrents of sensory awareness; in psychosis the ability to create wholeness from that turmoil breaks down. Images from functional MRI scanners are notoriously difficult to interpret and the technology is still in its infancy, but when the brains of LSD users are visualised, networks of neurons that under normal circumstances all fire together can be seen to become desynchronised. It may be an insight into how those many selves that constitute our being can be shattered apart.

Dan found a way back from the edge of disintegration and his breakdown, though provoked by a drug, gave me a glimpse of what some of my patients with schizophrenia, like Megan, might be going through. Hallucinogens can offer visions but risk division of the self, and for Albert Hoffman, Dan, and for D. T. Suzuki, those visions are a 'sphere of devils'. But for many users the effects are pleasing, compelling, addictive, even heavenly. Precisely because they are temporary, they offer some an escape

when life feels tedious, and bring breadth and richness when it feels narrow or impoverished. But it's a fragile heaven they offer: dissolving the boundaries of experience may become a dark hell of terror. To reassert the boundaries of perception is to offer a path back to the light.

12

Puberty: Suddenly Accelerated Youth

With man the young arrive at maturity at a much later age than with any other animal.

Charles Darwin, *The Descent of Man*

I WORKED ONCE with a wise and straight-talking community midwife, a mother of four, who after delivering babies at home would visit regularly for the first few days to check how well couples were adapting to becoming parents. I asked if there were any impressions or insights she'd gathered over the decades of her work. Some take a first baby in their stride, she told me, while others felt as if parenthood had dropped them into a tunnel of fear and exhaustion. It often seemed to her as if the younger the parents, the less difficulty they had adapting to the change.

'Do you give them any advice?' I asked her.

'The ones who are struggling? I tell them that for the first six or seven years kids just need you,' she replied, 'and you have to find a way of reconciling yourself to that. But then the following six or seven are just lovely, as the children learn about the world, and get slowly more independent.'

'And the six or seven years after that?' I asked.

'They go somewhere you can't follow,' she said and gave a wistful smile. 'But mostly they come back.'

In clinic I see plenty of babies, toddlers and pre-school children – often with wheezes, fevers, ear infections and rashes. Sometimes there are concerns about feeding, and sometimes about growth. By about the age of six the frequency of visits drops away, as the kids get better at fighting off infections, and hit their stride in terms of development. But then at age twelve or thirteen I start to see them again, as the hormonal upheavals of adolescence take hold.

All babies produce sex hormones: I often see unweaned newborns of both sexes with swollen breast tissue created by oestrogen. But the brain of a newborn baby is trigger-sensitive to sex hormones, and a sensitive feedback mechanism, initiated soon after birth, slams a brake on their production. The sensitivity of that brake diminishes in late childhood until it's weak enough, finally, to activate puberty. The onset of puberty isn't then the unfolding of something new, but a release into something that's been long suppressed.

There's a famous painting by Edvard Munch, created during his anxious years in Berlin, which shows a naked pubescent girl with flushed cheeks and a defiant, quizzical gaze. He called it simply *Pubertet* – ‘puberty’. She's sitting on the edge of a bed, wrists crossed in her lap, hair loose over the shoulders. The most striking aspect of the image is not the boldness of her stare, or the finesse with which she's been painted, but a large, womb-shaped shadow that bulges up from beneath her onto the wall.

Some critics reckon that the shadow represents Munch's own repressed sexuality; others think it's a phallic symbol or symbol of the womb, or that it represents the challenges and complexities of looming adult life. Many parents welcome the gathering strength and independence they see in their children, while others mourn the arrival of puberty as a loss of innocence. Munch's painting implies that the coming of sexual maturity is a kind of expulsion from the Eden of childhood into the solitude and the responsibilities of adult life.

I MET BILLIE BAXTER when she was four years old, when two long-term patients of my practice adopted her. She was small for her age, inquisitive and agile, with short blonde hair that curled at the nape of the neck. As soon as she entered my office she'd make straight for a mat of toys, then jump on the weighing scales. Her mother Amy worked as a librarian, and her father Simon stayed home to look after Billie.

Ear infections, chest infections, constipation, eczema – over the first couple of years I saw a fair amount of Billie. She stayed small for her age. If you measure the heights and weights of one hundred children, and plot them on charts, it's usual to show the 'normal' range as existing between the third-smallest and the third-largest child: the '3rd centile' and the '97th centile' respectively. Billie stayed around the 5th centile, at the lower end of the normal range. Billie's inquisitiveness remained with her – she was

bright at nursery, and once at school proved to be a precocious reader. Little was known about her birth parents.

I never had to visit Simon and Amy at home, and by the time Billie was six the frequency of her visits to the clinic dropped away. A year after I'd last seen her I received a questionnaire from a life insurance company for Amy. I rang up to see how they were all getting on: Simon told me that the infections had stopped bothering Billie, her eczema had settled down, and that she was no longer troubled with constipation.

A couple of years later, when Billie was eight, I saw her name on my clinic list again. She sat in the chair by my desk, swinging her legs and looking around as if remembering all those childhood visits. She was wearing unicorn-patterned trousers and a sweater printed with a kitten – her hair had darkened with age and she held it back in a ponytail. She looked about average size for her age – she must have been approaching the 50th centile. ‘I’ve come to ask you about her toes,’ said Amy, ‘the nails are growing in at the corners.’ Billie took off her trainers – she had glitter varnish on every toenail – and I showed her how to lift up the corners with pieces of cotton wool so they wouldn’t dig into the flesh. When I’d finished, and Billie had put her socks and trainers back on, Amy asked her to go and wait outside.

‘I wanted to speak to you on your own,’ Amy said as soon as the door was closed. ‘When is it normal to start puberty?’

‘Well, that depends...’ I began.

‘Because I was twelve before my periods started,’ Amy went on.

‘Has Billie had a period?’

‘No, not a period, but her breasts are starting to grow. She’s only eight!’

‘Has she any pubic hair yet?’ I asked her.

She shook her head. ‘No, thank goodness. It couldn’t be starting already, could it?’

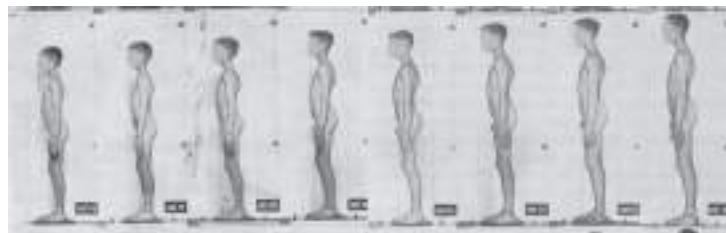

THE SEQUENCE AND TIMING of puberty was first worked out in the 1960s by James Tanner, a paediatrician at the Institute of Child Health in London, and his colleague W. A. Marshall. As a medical student I had to memorise the sequence, so as to be able to recognise when it went awry. No periods in a girl with mature bones suggested an underlying gynaecological problem; pubic hair before breast or testicle growth suggested a hormonal problem,

and so on.

My textbook in paediatrics carried cartoon drawings based on Tanner and Marshall's seminal papers, showing the progressive changes in boys' genitalia, girls' breasts and both sexes' pubic hair, alongside normal age ranges for each stage. According to Tanner, the photographs the cartoons were based on were taken at an orphanage called the Harpenden Children's Home just north of London – the focus of a study that had examined the growth of children since 1951. For two days every month throughout the period of the study one of Tanner's colleagues, R. H. Whitehouse, visited the children's home. Whitehouse took naked photographs of the boys and girls one at a time, making sure they were timed to capture images within fifteen days of their birthdays. In total each child was photographed twice yearly in childhood, and four times yearly as adolescents, because the rate of change in adolescence is so much greater; 192 girls and 228 boys took part.

It's not clear from Tanner's research publications how much choice the children had about taking part. It must have been an unsettling sight: scores of children queuing nervously for a room in which each had to strip for a photographer. Whitehouse worked 'at a rate of three or four per hour'. The photographs were taken as frontal and profile images, collated by name, and later assessed by Tanner and Marshall. 'The development of the secondary sex characters was studied in whole-body photographs,' wrote Tanner, 'By comparing each picture with the preceding one, changes in the genitalia and pubic hair could be readily recognized.'

But the images they gathered have been fundamental to the understanding of the way puberty evolves, and the medical understanding of how to intervene when it goes wrong. The two men classified pubertal development into five discrete stages, and created tables to facilitate the staging of development for the clinician. In the profile photographs each child was arranged to face their younger selves, as if looking back with longing towards their own childhood.

Arranged in sequence, the photographs stood as a cinematography of the transformations of puberty.

In the materials and methods section of their paper, Tanner and Marshall described all the participants as ‘white British’ and that ‘they had no physical abnormalities, and lived in small family groups in a children’s home where the standard of care was in all respects excellent’. Online, there are plenty of testimonies agreeing that Harpenden was an excellent institution, though you don’t have to look far to find poignant tales of unhappiness, as well as furious allegations of abuse. Socio-economically it was a skewed population; Tanner admitted that the children ‘came mainly from the lower socio-economic sector of the population, and some may not have received optimal physical care before entering the home (usually between age 3 and 6 years)’.

Being neglected as a child, and being of low birth weight, has been found in some studies to bring puberty forward through a mechanism that remains unknown, as if the human evolutionary response to a stressful childhood is to facilitate pregnancy in the next generation as quickly as possible. This process is known as ‘early life programming’; Tanner’s children may have entered puberty earlier than the average through this mechanism, and so weren’t representative of the general population. It’s well recognised that children like those at Harpenden who begin life in a resource-poor environment but move to be brought up in a resource-rich environment, go into puberty earlier than the natives of either environment that stayed put. The same process happens in plants – those that begin in

poor soil, and are then given richer soil, reproduce earlier and more abundantly. At the same time the *average* age of menarche or menophany – the age when girls first have a period – has dropped overall in the United States and in western Europe from around age seventeen in the mid-nineteenth century to age thirteen by the mid-twentieth, for reasons that are still unclear.*

BILLIE WAS YOUNG to show the earliest signs of puberty, but according to Tanner's charts her development was within the normal range – just as she was in the lowest centiles for height, she was in the lowest centiles for pubertal onset: the second, visible stage of breast development can be reached as early as eight and a half. Perhaps her life before adoption had influenced her early puberty, or perhaps her own birth mother had been the same.

It was a couple of years before I saw Billie in my office again – Amy told me before the appointment that she'd been teased at school for wearing a bra, and her first period had come just before her tenth birthday. She was now among the tallest in the class. She sat in the chair by my desk, big for her age, wearing dark, baggy jeans and a black hooded sweatshirt. She no longer swung her legs or looked interestedly around the room, but held her hands in the front pocket of the sweatshirt, her shoulders hunched forwards.

‘The first thing is her acne,’ said Amy; ‘you can see it on her forehead, and she’s getting it on her shoulders too.’ The skin was shiny and speckled with little pustules. Billie sank even further, if it was possible, into her chair.

‘I can help with that,’ I told her, and lightly tugged back the hood on the sweatshirt to have a closer look. ‘I’ll give you some lotions and if it’s no better within a couple of months let me know – there’s other things we can do.’ A glance of relief shot across Billie’s face, like sunlight between clouds, but she still didn’t say anything.

‘And then there’s her knees – she gets these terrible pains when she runs, or after sports in school,’ Amy said. ‘And they’ve got lumps on them too. Come on, Billie,’ she added with a hint of impatience, ‘show Dr Francis.’

Billie gave a sigh, and rolled up her jeans to show me her knees; she had hard, tender swellings on her shins just below the kneecaps.

‘That’s just because you’re growing so quickly just now,’ I said. ‘You can think of it as your bones growing faster than your tendons.’ I pulled over the skeleton that stands in my clinic room, and pointed out where the tendon from the kneecap attaches to the shin, and how its traction could pull up and irritate the bone. ‘It’s even got a name, this condition,’ I added, ‘Osgood-Schlatter’s disease.’ Billie snorted a laugh.

The growth rate of bones after babyhood through childhood is fairly constant, but the sex hormones of puberty accelerate that background rate. Tanner and Marshall showed that graphs of ‘height velocity’ throughout childhood take the shape of a ski jump, because the rapid growth of babyhood falls away only to shoot up again in early adolescence. Tanner and Marshall’s papers are a model of dispassionate clinical language, but occasionally a note of humanity breaks through, showing that they were concerned not only with their research, but with the anxieties that all teenagers feel around puberty: ‘All the girls in this study... had passed the peak of their height spurt before menstruation began,’ they wrote; ‘We can therefore confidently reassure the tall girl who has reached menarche at an early age that her growth is now slowing down.’ Tanner also acknowledged the institutionalised sexism of the 1950s with reference to a paper from the American psychologist L. K. Frank: ‘adolescence, at least in urban American girls, is a period of considerable stress and perplexity; [Frank] lays particular emphasis on the difficulty these girls find in accepting with satisfaction the feminine role.’

SEX HORMONES AFFECT the male breasts too – it’s not uncommon to have to reassure adolescent boys whose nipples are swollen and tender that they aren’t turning into girls. With time their symptoms almost always settle down. The first sign of puberty in boys is a loosening of their scrotum, giving way to an increase in the size of their testicles, and the first pubic hair. The enlarging testicles make more and more testosterone, which in turn drives other changes: an increase in the size of the penis, a darkening of the scrotal skin.

Pubic hair growth is driven not so much by testosterone, but by steroid hormones produced in the adrenal glands – that’s why it occurs in girls as much as it does in boys. Those same hormones also drive a change in the sweat glands: so-called ‘apocrine’ glands become active, which make oilier,

smellier secretions than the more watery sweat glands active in childhood (as anyone who has ever washed a teenager's socks will confirm). The same hormones bring an increased tendency for pores on the face, chest and shoulders to get plugged and infected, provoking eruptions of acne. In both sexes the larynx lengthens and broadens, deepening the voice, but in boys this deepening effect becomes more pronounced.

And the transformations of puberty entail more than just the visible: there are substantial changes in the brain. An increase in risk-taking behaviour and aggression in boys has been tentatively correlated to a delay in maturation of the pre-frontal areas of the cortex. It's thought that our capacities for abstract reasoning, and perception of social cues, go on improving into our twenties. For reasons that aren't quite clear, teenage brains recalibrate to a different, later, body clock: for the average teenager, 7 a.m. feels the same way for them as 5 a.m. does for someone middle-aged. In 1955 Tanner caricatured the folk wisdom about adolescence:

A picture is painted of the suddenly accelerated youth, staggering under the impact of his newly acquired hormones... Mutually incompatible drives and emotions are simultaneously aroused, many of which later become shed or repressed bit by bit as the individual chooses inevitably this path rather than that.

Or as the midwife I once worked with told me, they go somewhere you can't follow, but then they come back.

Many adolescents develop anxieties around body image that are intimately connected to the rapid transformations of their bodies. Tempestuous shifts in mood through adolescence are found across cultures, irrespective of wealth (though one study in the United States found that African Americans were uniquely protected against body image anxieties, for obscure reasons). Puberty can entail intense psychosocial upheaval, of questioning the choices and the wisdom of the adults around us – it becomes a fire through which some aspects of our childhood selves are burned away, while others are annealed into elements of our adult identity.

The final act in the drama of puberty is the closure of the growth plates of bone, the timing of which is the same across human populations

irrespective of ethnicity. Epiphyses fuse in a particular order – understanding the correct sequence is essential when reviewing X-rays in the emergency department so that, as a doctor, you can distinguish between a flake of bone chipped off through an injury, or a healthy flake of bone that has simply yet to fuse. Long bones, such as the femur or the humerus, may not fully fuse until age twenty-one, and in women, the pelvis may grow until as late as twenty-two.

When Charles Darwin began to think about puberty, he noticed how striking the delay in human puberty is in comparison with other primates – chimpanzees go into puberty between the ages of six and eight, and then reach full skeletal maturity a decade earlier than we do. It's thought that the slow growth of the human pelvis is one of the reasons women complete puberty with such wide pelvic outlets in comparison with the other primates. Human babies have the largest heads relative to body size of any mammals – without that late, long growth of the pelvis, we could never be born.

* In 1939 a Peruvian girl called Lina Medina became the youngest recorded mother, giving birth by caesarean section to a baby boy at the age of five years and eight months. Lina reportedly began menstruating at around a year old. Edmundo Escomel, ‘La plus jeune mère du monde’, *La Presse Médicale* vol. 47, no. 43, 1939, p. 875.

Pregnancy: The Most Meticulous Work

‘Good God!’ says he, ‘how snug and compleat it lies – I defy all our painters in St Martins lane to put a Child into such a situation.’

William Hogarth, on seeing the dissection of a foetus *in utero*

ULTRASOUND SCANS were first developed in Glasgow, by a professor of midwifery called Ian Donald who had heard of metalworkers using them to detect flaws in steel. The metalworkers would calibrate the ultrasound machines against their thumbs, because bone and flesh reflect sound waves differently. In the summer of 1955, Donald drove from Glasgow down to a boiler manufacturers in Renfrew, his car boot full of buckets of ovarian cysts and uterine tumours. He compared ultrasound images of the body parts with those he obtained from a slab of steak. Impressed with the results, he moved the machine out of the metallurgists’ workshop and into the clinic.

In 1958 he wrote up his findings in a paper called ‘The Investigation of Abdominal Masses by Pulsed Ultrasound.’ The sound waves worked as well to outline the dimensions of a baby’s skull as they did a cyst or a tumour, and Donald began refining the technique to monitor the growth and development of babies in the womb. Within a couple of decades his scanners were ubiquitous: I’ve seen cheap and simple machines used upcountry in East and West Africa, and in rural clinics in India. They’re

indispensable now for monitoring the growth and development of the baby, to identify the position of the placenta (if it is too near the cervix it risks rupture in labour). They're even used in the frenzy of delivery itself for a quick check of the baby's precise position.

The technology has moved on: it's possible these days to watch babies on ultrasound in three dimensions. The internet is suffused with these images; often the sonogram image is shown side by side with a photograph of the same baby hours after birth. Mothers bring printouts to my clinic: asteroidal contours pixelate against a black, starless background, reminiscent of images beamed back from deep space. But a closer inspection reveals them to be the most human of forms, beamed not from the reaches of the solar system but from the future.

Perhaps it's the glimpse of the future they grant that makes these images so enchanting, or perhaps it's because through most of human history the transformations of pregnancy have been hidden. There's something transgressive, even uncanny, about them. Though woven by sound, they offer silent promises of what is to come.

AS A JUNIOR DOCTOR working in obstetrics I'd be asked to help out in antenatal clinics: a dozen or so women, in various stages of pregnancy, seen across the span of a morning. There was an ultrasound scanner somewhere behind a curtain but it wasn't for routine use – it was enough to use faster more traditional methods of determining whether a pregnancy was proceeding well. The checks I was to perform have been standardised across the world, and are so formulaic that each woman brought a list of them to each appointment on a grid. Date of clinic visit was written on the vertical axis, and each check was given a box to be ticked along a horizontal. To complete an antenatal check, it was enough to work your way across the grid.

Pregnant women have an increased blood volume, their hearts beating for two (or three, in the case of twins), which may drive blood pressure up. Their pulse rate too can accelerate to cope, and a particularly elevated pulse hints at a problem. Kidneys can be affected, and I'd dip-test a bottle of urine to make sure that there was no blood or protein leaking out. I'd draw a blood sample from each patient to see if the haemoglobin and platelets were keeping up with the extraordinary demands being made on them: the blood

counts of most women drop during pregnancy, their blood diluted by the increased volume. And I'd ask them whether they were suffering from any of the customary complaints of pregnancy: nausea, backache, heartburn, or the bony pain of a stretching pelvis.

These checks were to gauge how much the effort of pregnancy was proving a strain on each woman's body; when they were complete I'd move on to check how the baby, or babies, were growing and changing in the womb. That new life may take root and, like some kind of magical fruit, begin to swell, is the most quotidian of marvels. But it *is* marvellous. It felt like a great privilege to chart that burgeoning change.

First to be assessed was the baby's 'lie' in the womb, trying to feel the weighty, solid roundness of a head, the curve of a spine, the smaller, softer and more mobile globe of a tiny rump. The further on the pregnancy the more significant the 'lie'; if the head was up ('breech'), a discussion would be opened with the midwives about whether to plan a caesarean or a vaginal delivery. Next I'd measure the 'height' of the womb itself, using nothing more advanced than a tape measure. Beyond the middle weeks of pregnancy, irrespective of size or ethnicity, the distance in centimetres, from the pubic bone to the uppermost extent of the womb correlates almost exactly to the number of weeks a woman has been pregnant. This correlation is so responsive that in the final weeks of pregnancy, when the baby's head drops deeper into the pelvis in preparation for labour I'd see a corresponding drop in this 'fundal height'.

In her elegant account of her own pregnancy, *Expecting*, Chitra Ramaswamy wrote of how comforting this element of the antenatal visit was for her:

How reassuring to feel the old-school pressure of its end against the top of my pubic bone, drawing me up as if I were a length of fabric. Pregnancy was meticulous work, as precise as a dress pattern, and my bump always measured within a centimetre or so of the number of weeks I was pregnant.

The unravelled tape measure would follow the *linea nigra* or 'black line' of pregnancy, in which the skin from pubis to umbilicus darkens with the

hormones of pregnancy. ‘It bisected my stomach like a ring around a planet or a veined streak of quartz encircling a pebble,’ wrote Ramaswamy, ‘evidence of a disturbance within. Some mysterious ancient change.’

The final phase of the antenatal check, listening to the baby’s heartbeat, was to be signed off on the grid with a scribbled ‘FHH’ – ‘foetal heart heard’ – a peremptory way to document something so auspicious. If foetal ultrasound images seem beamed from the future, so did these peculiar, mesmerising sounds: rapid, pristine heartbeats clattering above the stately bass of the mother’s own pulse.

AFTER BILLIE BAXTER’S precocious puberty I didn’t see her again until she was thirteen – having finished developing at an age when some boys have barely started. Amy brought her in. ‘Billie’s pregnant,’ she said bluntly, as soon as they’d sat down, her face haloed in anger. ‘I don’t know how it happened, and she’s certainly not telling.’ Billie sat hunched in the chair by my desk, face hooded, arms folded, gaze fixed on the floor. She didn’t know it, but she was mirroring her mum’s posture. ‘It doesn’t matter who he is,’ Billie said. ‘I’m not seeing him any more. You can’t make me get rid of it.’

‘Who’s going to look after the baby?’ Amy said, her voice beseeching, then menacing. ‘You can’t drop out of school at fourteen. For God’s sake, Billie!’ She looked across at me, pleading now. ‘I can’t be a grandmother! Not yet!’ Billie just folded her arms all the tighter. Her ex-boyfriend was fourteen, she said. She’d wanted to have sex with him. And she was going to have the baby.

In my area there are counsellors trained to support young women who’ve become pregnant in their teens, or need confidential advice about contraception. I picked up the phone and spoke to one of them – she gave me a time for Billie to attend the following day. I wrote the time and place on a slip of paper and handed it over, along with a prescription for some folic acid supplements. ‘If you’re sure you want to go ahead with this pregnancy, take one of these each day,’ I said, ‘they’re good for the baby.’ She sighed, took the prescription and stuffed it into her pocket.

The following day, the counsellor contacted me to say that Billie hadn’t shown up. I left a message, and in case she preferred to see a female doctor, left a time to come in and see one of my colleagues. But again, Billie didn’t

turn up.

I spoke with Simon and Amy: they were both furious with Billie, and thought her decision more about being wilful and obstinate than about expressing a genuine desire for motherhood. Otherwise, the pregnancy was going well: she had a touch of nausea, was sleeping more than usual, but was still making it in to school. Her parents thought that she was taking the folic acid I'd given. Billie was early in pregnancy for review by the midwives, but there was a new scheme – one-to-one support for teenage mums, throughout pregnancy and for the first couple of years. It was called the 'Family Nurse Partnership'; an idea planted in the United States in the early 1980s, recently sown in Scotland. Extra funding meant there was more midwife and nurse time to spend with the young pregnant women, and to support them. It encouraged healthier pregnancies, better language development for babies, better school outcomes for their mums, fewer subsequent pregnancies, and a dramatic improvement in keeping fathers engaged. The nurses and midwives of the scheme would liaise with Billie's teachers, and start preparing her for what it would be like to be heavily pregnant at thirteen, and care for a baby at fourteen.

The partnership arranged an ultrasound scan: the pregnancy was about twelve weeks on, and the baby a strong, healthy girl.

Billie was seen regularly by the nurses of the partnership, but eight weeks passed before I saw her back in clinic. Her lower back was beginning to hurt, she said, and she wanted a medical letter excusing her from gym class. 'How is it all going?' I asked.

'Fine,' she said, and for the first time in years looked directly at me.

'Did you have your twenty-week scan yet?'

'It was amazing,' she said, her face brightening. 'Sometimes I just can't believe that there's a new person inside, waiting to come out.' She put both hands on her belly, regarding it with an expression of fear mingled with pride. 'It's incredible when I can feel her moving inside me.'

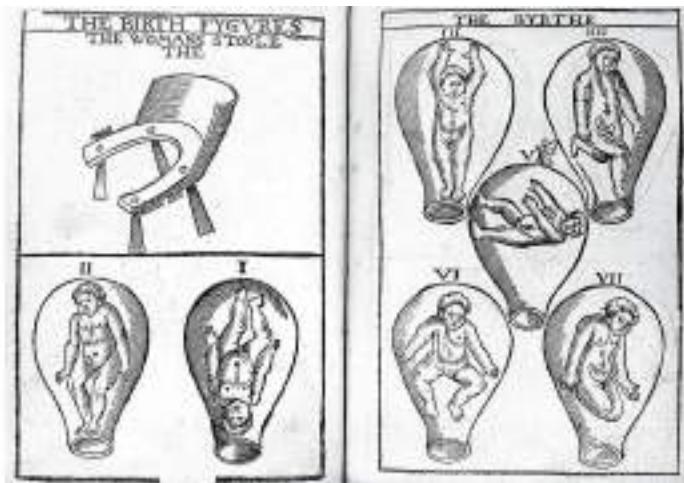

'And your mum and dad? How are they getting used to the idea?'

Her face fell.

FOR MILLENNIA, knowledge about midwifery care must have been passed orally between women, but rarely written down. The few writings that have survived from the classical period, written by men, suggest they understood

little about pregnancy. ‘If a woman is pregnant with twins and either breast loses its fullness she will miscarry one,’ says one of the Hippocratic treatises, ‘if the right breast it will be the male child, or if the left, the female.’ Some women *are* alerted they are going to miscarry by a sudden easing of breast tenderness, but in Hippocrates, that observation is conflated with senseless ideas about twins.

By the Middle Ages, manuals of midwifery began to show how babies might be positioned within the womb in late pregnancy, in order to give some guidance as to how they might be helped out. The images were schematic and poorly drawn, but they at least acknowledged that the growth of babies is not the stuff of miracles, but of material facts – a matter of anatomy and physiology. Men and women both were beginning to imagine what they might be feeling when they put their hands on a pregnant belly. One of the first to have useful images was an early sixteenth-century textbook called *The Byrth of Mankynde*, written by Eucharius Roesslin. It tabulated the different ‘lies’ of a baby in the womb, and offered advice about how best to deliver the baby in each case.

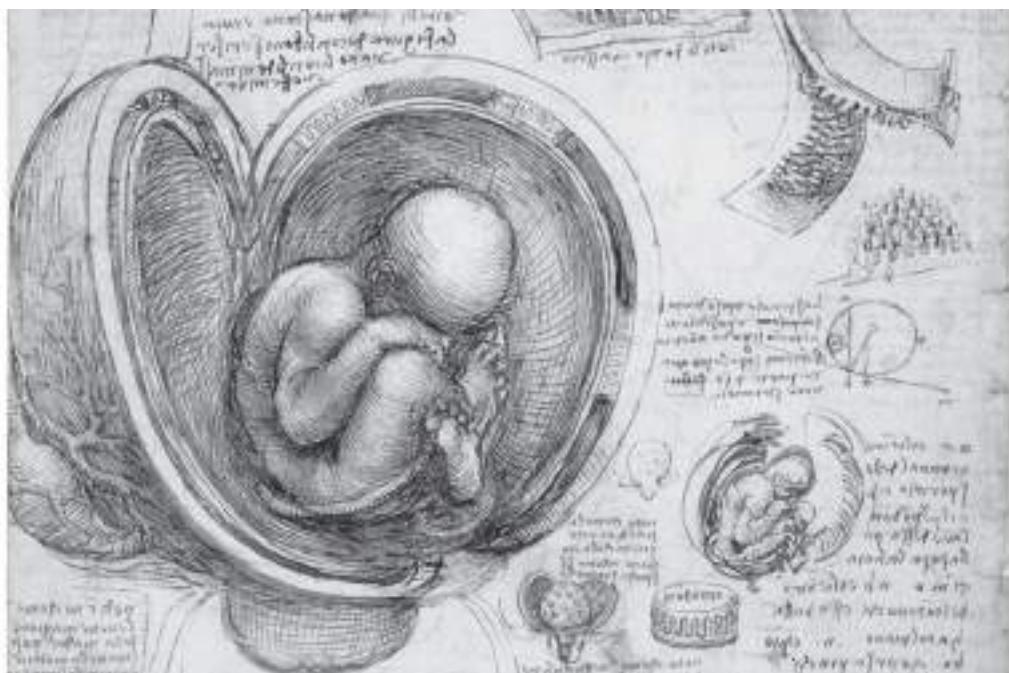

South of the Alps, Roesslin’s contemporary Leonardo da Vinci was working on a far more accurate vision. Earlier in his career, he’d sketched out the ways in which he wanted to approach the mystery of new life and its development:

... begin with the conception of man, and [then] describe the nature of the womb and how the foetus lives in it, up to what stage it resides

there, and in what way it quickens into life and feeds. Also its growth and what interval there is between one stage of growth and another. What it is that forces it out from the body of the mother.

Leonardo thought that a baby did not receive its own soul until birth ('the same soul governs the two bodies... the things desired by the mother are often found impressed on the members of the child'), but others of his contemporaries believed it was somehow funnelled in from God at the 'quickening', when a pregnant woman began feeling movements within the womb – usually around twenty weeks. His *Study for the Foetus in the Womb* was made from a dissection he made of a woman who'd died at around this stage of pregnancy. Just as his images of coitus and conception prefigured those now obtainable with MRI scans, his images of the foetus in the womb are a hint of the 3D technology to come.

THE TRANSFORMATIONS OF PREGNANCY are as much social as physical: the pregnant woman's belly becomes a kind of unwilling public property, and her choices a matter of open debate. Strange hands assume licence to poke and prod; others may tut-tut disapprovingly if she dares drink coffee in public, never mind wine. Pregnancy illuminates with an unforgiving light

how much society pries into women's bodies with more intensity, and with harsher judgement, than it does men's. Virginia Woolf skewered this disapproval in *Orlando*: 'the better to conceal the fact; the great fact; the only fact; but, nevertheless, the deplorable fact; which every modest woman did her best to deny until denial was impossible; the fact that she was about to bear a child'. But there's a flip side to the public scrutiny of pregnancy which shows itself in a kind of wonder – a spellbound reification of the pregnant woman. For all our scientific understanding, an enchantment persists about new life forming within the body of another. Those intrusive hands may be hoping for some magic to rub off on them.

Margaret Atwood's *The Handmaid's Tale* describes a dystopian society in which fertility has plummeted, and women are subjugated as reproductive slaves. Atwood conveys both the sense of wonder that pregnancy inspires as well as the opprobrium meted out to many pregnant women. One of the captive women, Ofwarren, walks triumphantly into a shop frequented by the other handmaidens, her belly swollen like a 'huge fruit'. Ofwarren's hands lie over the dome of her abdomen as if protecting it, but also as if she hopes to absorb something of its vigour. The other women murmur excitedly; they long to touch her even as she glances haughtily at their own flat bellies. The tension in the room builds until one of the women mutters 'show-off'. Chitra Ramaswamy captures this strange mingling of admiration with resentment: 'How people stared, particularly women, with a deep, almost male gaze that bore an unnerving resemblance to lust,' she writes of the later stages of pregnancy. 'I began to realise that they weren't really looking at me at all. To be pregnant was to be a kind of mirror. Women, especially, wanted to see themselves in you.'

LEONARDO'S IMAGES of how the foetus lies in the womb weren't surpassed until the 1750s. The Scottish anatomist William Hunter saw the original folios among the Royal Collection in Windsor, and conceived an ambition to better them. Hunter was Queen Charlotte's personal physician, a celebrity doctor and a Fellow of the Royal Society. He recognised how much progress Leonardo had made towards comprehending the changes of pregnancy, but also how much more there still was to understand. With a Dutch illustrator called Jan van Rymsdyk, then famous in London circles for the grace and precision of his illustrations, he began work on his

magnum opus, the anatomical work for which he's still best remembered: *The Anatomy of the Human Gravid Uterus*. Hunter had many enemies, was by report an insufferable narcissist, and was often accused of taking credit for others' work. Rymdyk later said of him, 'it is a dishonest mean cunning, in making one self a great Man with other People's Merit'. But the work the two men created is one of clear-sighted vision, a fusion of Enlightenment science with an aesthetic sensibility reminiscent of the Dutch masters. It's a lesson in how scientific discovery can be a close cousin of art, and how much beauty can be revealed through anatomy.

The original drawings that Hunter made with Rymdyk are held at the library of the University of Glasgow. I phoned ahead for an appointment – they're held in black, sepulchral boxes, and the staff need a few days' notice to bring them up from the archives. Each of the boxes needs its own table, and when they came up I saw that each was marked 'RESTRICTED'. Opening them, I found seventy-two drawings across thirty-four mounted plates. It was necessary to handle them with gloves, slowly lifting each image from the box as if unearthing them.

Hunter's interest was in relieving obstructed labour, and so his emphasis was on the final months of pregnancy. 'I was so fortunate as to meet with a Gravid Uterus,' he wrote cynically to a correspondent in February 1751, 'to which, from that time, all the hours have been dedicated.' The drawings are composed from about a score of these 'meetings'; they move backwards through a sequence of women prematurely dead, from full-term pregnancy to the days following conception. Rymdyk's illustrations are of William Hunter's own dissections, as well as those of his brother John – the three men likely worked at times in the same space. Hunter's attitude to the dissected women is betrayed by his correspondence, and sounds shocking to modern ears. But in eighteenth-century London around one in fifty pregnancies ended in the mother's death. For Hunter, the death of a pregnant woman was routine; he was driven by scientific curiosity to understand pregnancy, but also by the imperative to reduce maternal deaths. Prints of engravings were produced for the education of clinicians all over the Anglophone world.

The Special Collections department of Glasgow University Library is on the twelfth floor; as I spread Rymdyk's drawings across four tables I looked out over the city, and realised that I was within a few hundred yards

of the lab where Ian Donald developed ultrasound. The foetal images hadn't faded; the babies were so lifelike it seemed scarcely possible they were drawn in death.

The printed edition of the engravings is dedicated to Hunter's sovereign George III, and attempts to impress upon the king the significance of his highly unconventional work:

Sir, this work had no other claim to the honour with which it is distinguished by YOUR MAJESTY, than as it illustrates one part of science hitherto imperfectly understood, it contains the foundation of another part of science, on which the lives and happiness of millions must depend.

Consistent with his interest in reducing maternal death, rather than understanding foetal development, Hunter often dismisses the baby with statements such as: 'The Foetus, with two turns of the navel-string round its neck, requires no explanation.' But Rymsdyk devotes great attention to the foetuses. Plate I shows the skin of the abdomen folded back like a mantle, the bulge of the womb filling the centre ground. Plate VI shows the same womb opened: a term baby in position, left arm extended, fingers curled as if plucking at strings. Her hair is stuck down with amniotic fluid as if sweating at the exertion of being born, or of dying.

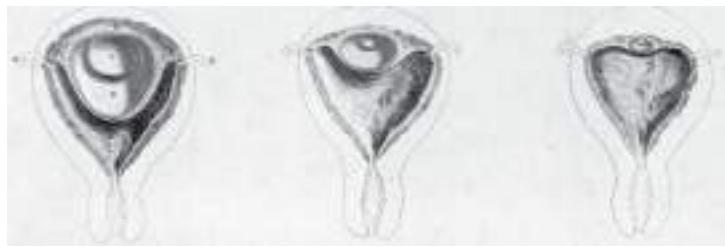

Plate XX shows a baby in breech position, fingertips touched lightly together. In one drawing made at around eighteen weeks of pregnancy, the detail is such that you can make out the window frame behind Rymdyk, reflected on the shiny amniotic membrane. The membranes have been peeled back so carefully that the amniotic fluid is undisturbed; we look down with the artist on the baby floating in the liquid. Of this fluid, Hunter wrote: ‘To the taste it is always very sensibly saltish: and a considerable quantity of common salt may be obtained by evaporating a large quantity of liquor’ – like a fragment of the sea carried inside.

Some of the illustrations show the pelvis seen lengthways, like Leonardo's couple in coitus. Others have been drawn looking up at the swollen dome of the womb from between the thighs, as a midwife or obstetrician would gauge the progress of labour.

The final plate of Rynsdyk and Hunter's *The Anatomy of the Gravid Uterus* shows the sac of the embryo in reducing size – a shrinking crystal in a droplet of dew – retreating to its own conception.

SIMON AND AMY came around to the idea of being grandparents. Billie went into labour at forty-one weeks – only slightly overdue, but normal for a first pregnancy. She went through twenty-six hours of agony, a perineal tear, stitches, haemorrhage, transfusions, and delivery with the help of forceps. She might have appeared to have completed puberty, but her pelvis still had years to grow; if she'd lived a century earlier, she would almost certainly have died.

But she gave birth to a healthy baby girl, called the baby Danielle, and, as Amy had predicted, went back to school while Amy and Simon took on the job of being parents. I had *déjà vu*: Simon or Amy back regularly in clinic, a child bouncing on his or her knee, asking me about wheezes, fevers, rashes and feeding.

'It suits us you know, being a family of four,' Amy said to me one day, with Danielle in her arms. 'I didn't expect it to, but it does.'

'And Billie? How is she getting on?' I asked.

She shrugged. 'She plays with her a little bit, will pass me a nappy if I'm in the middle of changing her, but she never speaks about the pregnancy. It's like it never happened.' She looked down at Danielle, smiled at her and tickled her toes. 'I'm keeping a close eye on this one though,' she said; 'I don't want to be back here in a few years with a great-grandchild.'

14

Gigantism: Two Giants of Turin

Really, there must be some energizing element in the air here – to be at home here will make one king of Italy.

Friedrich Nietzsche, *Selected Letters*

TURIN: A NORTHERN ITALIAN, French-inflected city of boulevards, *settecento* palaces, varnished wood and polished brass; of plane trees, promenades and the river Po. Of Alps visible on three horizons, Primo Levi's suicide, and Friedrich Nietzsche's madness. Before his breakdown Nietzsche wrote of it: 'Here day after day dawns with the same boundless perfection and plenitude of sun: the glorious foliage in glowing yellow, the sky and the big river delicately blue, the air of greatest purity... In every way, life is worth living here.'

Turin's Museum of Human Anatomy is behind an inconspicuous wooden door off one of the city's grandest boulevards, up three flights of marble stairs. There are no windows; the smells are of floor polish and plaster, with a hint of formalin. Columns of stone are interleaved with vitrines of dark lacquered wood. I worked once in Edinburgh's Anatomical Museum, arranging collections of specimens for display, and Turin's museum felt familiar. It too was built up in the 1800s, by obsessive categorisers – part educational institute, part wonder-house. Skulls of Etruscans jostle with the skulls of apes. There are pickled hands and feet;

twenty feet of coiled, preserved intestine; decapitated Peruvian mummies; wax models of the female pelvis with an erotic attention to detail. As in Edinburgh, phrenology heads sit side by side with the death masks of celebrities; wax models illustrate the development of the embryonic heart. Both museums are preoccupied with comparative anatomy – the natural world ransacked in the attempt to conjure order from the commotion of Life.

In Edinburgh, you're met at the door by the skeleton of a hanged murderer,^{*} and in Turin you're met by the skeleton of a giant. Giacomo Borghello of Liguria was seven feet two inches tall when he died in 1829, at just nineteen years old. The plaque didn't mention it, but I asked the attendant how he died: he'd been employed in a circus, she said, and his cause of death was given as 'heart failure'. Borghello's mortal remains, yellowed as parchment, are suspended in a cabinet, and my head reached not much higher than his pelvis. His skull was undersized in comparison with his gigantic limbs, and the growth plates ('epiphyses') at the end of each long bone were not even beginning to fuse. Something was driving Borghello's enormous growth even as it killed him.

The attendants of Turin's museum wouldn't allow it, but I would have liked to glance inside his skull, just between and behind the eyes, at the place where the pituitary gland nestles. The pituitary produces the hormone that drives growth; the recess in the skull where it fits is named the *sella turcica* or 'Turkish saddle', because early modern anatomists noticed its similarity to the high-pommelled saddles of the Ottoman cavalry. In producing so much growth hormone Borghello's pituitary was likely to have been swollen, and his *sella turcica* wider than usual to accommodate it.^{*}

IN TURIN I ALSO WENT to visit Piazza Carlo Alberto, where the philosopher Nietzsche lived in the late 1880s: 'the only suitable place for me,' he said of it; 'it shall be my home henceforward'. On one of the piazza's corners I found a laudatory plaque, erected on the centenary of Nietzsche's birth. Engraved in marble, it was a hymn to gigantism of the mind: 'In this house Friedrich Nietzsche knew the fullness of spirit that tempts the unknown, the will to dominion that calls forth the hero.'

Nietzsche wrote his autobiography *Ecce Homo* in Turin, during three

frantic weeks in October and November of 1888.[†] In it, he describes feeling as heroic as a polar explorer: ‘The ice is near, the solitude is terrible – but how peacefully all things lie in the light! How freely one breathes!’ Nietzsche saw himself as a giant among dwarves: *Ecce Homo* has section headings called ‘Why I am so wise’, ‘Why I am so clever’, ‘Why I write such excellent books’.

Nietzsche felt that it was his duty as a philosopher to encourage mankind to expand perspective and strive to become *Übermensch*, variously translated as ‘Overman’, ‘Beyond-man’ or ‘Superman’. These ‘supermen’ included philosophers such as Montaigne and Aristotle, and were rare in the history of humanity. Nietzsche imagined them as fellow members of a ‘republic of creative minds’, ‘each giant calling to his brother through the desolate intervals of time... undisturbed by the wanton noises of the dwarfs that creep past beneath them’.

In a section of what he considered his finest work, *Thus Spake Zarathustra*, a thinly disguised Nietzsche carries a dwarf up a mountain to show him the breadth and nobility of his vision. The dwarf finds the vision incomprehensible. Nietzsche makes an explicit correlation between exalted physical stature and exalted mental perspective, then compares that exaltation with the tininess of most human concerns. He seems to be refuting the old saying, repeated by scholars from the twelfth-century John of Salisbury to Isaac Newton, that academics are simply dwarves who see far ‘because they have stood on the shoulders of giants’. On the contrary, Nietzsche maintained that he could see far because he was a giant of the mind.

In the autumn of 1888 Nietzsche wrote of ‘a supreme feeling of pride which nothing could equal’, articulating his sense of ‘the disparity which obtains between the greatness of my task, and the smallness of my contemporaries.’ His expansive sense of himself and his mission continued to grow.

THE PITUITARY GLAND is the strategic command of several of the body’s hormonal systems: it is essential not only for growth but also for healing, sex, birth, lactation, response to trauma and maintenance of equilibrium. It sits on the margins between body and brain. In the embryo, the gland begins as a pouch at the back of the throat; it migrates up and back into its saddle-

like position beneath the cranial vault between week four and week six of gestation. There it takes in nerves, and fuses with a small outgrowth from the brain that becomes its posterior half.

Through secretion of TSH, or ‘thyroid stimulating hormone’, the pituitary controls the body’s metabolic rate by calibrating the release of thyroxine, another hormone, from a gland in the neck. Failure of the gland to respond is the cause of one of the more common hormonal transformations: with an underactive thyroid we gain weight, lose hair, feel sluggish and shiver with cold in a warm room. With an overactive thyroid the converse is true: we lose weight, tremble with agitation and feel hot even in a cold room. The thyroid is intimately connected to how active we are – in ancient Rome, mothers would allegedly measure the neck circumference of their daughters after they’d spent an evening with a man, because sexual encounters cause the gland to swell.

The pituitary also secretes LH and FSH, ‘luteinizing hormone’ and ‘follicle stimulating hormone’, which control the testes and ovaries, sexual differentiation, ovulation and the generation of sperm. Through prolactin the pituitary drives the production of milk in the breasts (among other things) and through ACTH, ‘adrenocorticotropic hormone’, it controls the production of natural steroids. But it is the pituitary’s secretion of growth hormone that drives the lengthening of bones and determines the height we attain.

The response of the long bones to growth hormone is time-limited – once the growth plates have fused at the close of puberty, they ignore the pituitary’s command to grow. But if the pituitary gland goes on producing growth hormone after fusion of the growth plates, other parts of the body can still respond: the heart thickens and blood pressure rises; the jaw lengthens, the forehead becomes embossed, the hands, feet and nose swell. This constellation of changes is called ‘acromegaly’, or ‘swelling of the extremities’. It may come as a consequence of untreated gigantism in adolescence, or it may arise in adulthood, if production of growth hormone surges (usually due to a pituitary tumour) later in life.

The transformation of acromegaly happens so slowly that for the most part it’s hardly noticed by close family and friends – usually it’s only after an absence of months that the change becomes obvious. But those familiar with its distinctive features may spot it at once: I knew a hormone specialist

who recognised evolving acromegaly in the barista from whom he bought his morning coffee. The barista handed over his coffee one morning, and my colleague handed over a business card and, scrawled on it, a clinic appointment.

Since the mid-twentieth century it's been technically possible to treat both acromegaly and gigantism with either surgery to the pituitary gland or drugs to block growth hormone's effects – or both. It's necessary too: Borghello's heart wasn't unusual in giving out at nineteen, overwhelmed by the challenge of pumping blood to such a colossal frame, while being pathologically thickened both by growth hormone itself and by his elevated blood pressure. A swollen pituitary can cause other problems, such as blindness, which is caused by the squeezing of the optic nerves. It's as if, as human beings, our stature is calibrated to stay within a particular range. Beyond that range, life becomes difficult to sustain.

IN *ECCE HOMO*, Nietzsche wrote that he felt ‘certain at each moment of my immortality’. It was to be among his last writings. On 3 January 1889 he came upon a horse being flogged just a few yards from his front door on Piazza Carlo Alberto. He rushed to embrace and protect it, then fell sobbing, arms around the horse’s neck, before being carried back to his quarters by his landlord. Over subsequent days he wrote a series of crazed letters to his usual correspondents, including Richard Wagner’s wife Cosima (‘Ariadne, I love you’), and Fräulein von Salis (‘The world is transfigured, for God is on earth. Do you not see how all the heavens rejoice? I have just now taken possession of my kingdom, am casting the Pope into prison.’). He signed these letters as ‘Dionysus’ or ‘the crucified one’. Franz Overbeck, a Protestant theologian and close friend, recognised that Nietzsche’s customary arrogance had given way to something more sinister, so he came to Turin and arranged to transfer him to an asylum in Basel.

In Basel, Nietzsche shuffled between psychiatric clinics and his mother’s house for a decade, before succumbing to pneumonia, probably precipitated by a series of strokes. His madness has variously been attributed to syphilis, bipolar illness, a benign brain tumour, and a disorder of the cerebral arteries. He never again wrote anything of significance. It was as if the will to dominate, to be a giant among dwarves, contained

within it the catalyst for his own destruction.

OPPOSITE BORGHELLO'S SKELETON in Turin there is a diminutive skeleton with all its growth plates fused: not the skeleton of a child, but an adult with arrested growth. The museum's description reads '*un esempio di nanismo armonico*' – 'an example of harmonic dwarfism'; though small, the body is in standard if childlike proportion. In life, this individual lacked the human growth hormone of which Borghello had a surfeit.

Within flexible limits society gives advantage to those who are bullish and self-confident, as it does to those who are above average height. In his book *Size Matters*, the science journalist Stephen Hall comments on his own experience as a man of five feet five and three-quarter inches: we live in an altocracy. Hall quotes the perspective of an eighteenth-century German physician, Johann Augustin Stoller: 'Nobility of soul accompanies tallness of body.' Sociologists tell us that tall people are consistently deemed more intelligent, congenial, reliable and authoritative, and Hall points out that in US presidential elections, the taller of the two candidates usually wins.*

Once a patient of mine who lived on one of the wealthiest streets in Edinburgh brought her daughter to my clinic to request referral to a growth specialist. 'She's stopped growing, and she's only five foot,' she said. Molly had been the first in her class to enter puberty, and now, aged fourteen, was being overtaken by all of her classmates. Both her parents were below average height.

When people believe modern medicine to be capable of miracles, I try to take it as testimony of just how accustomed we have become to its success. But I had to tell her that, in this case, medicine had nothing to offer: 'There's nothing wrong,' I told Molly as kindly as I could, 'and no reason for a referral.' I plotted out her height on a centile chart and showed her where she stood: 'The height at which you stop growing is related to your own parents' heights, your nutrition in childhood, and your age at puberty. If you start the growth spurt of puberty early, you stop growing earlier too.' Even if growth hormone had been indicated it was now too late – the growth plates of Molly's long bones were already beginning to fuse.*

The use of growth hormones as a treatment for short stature has had the unintended effect of medicalising natural variation in height. Growth

hormone secretion from the pituitary gland peaks at night, and treatment with artificial hormone is given as an injection under the skin every evening, within an hour of going to bed. In those who most need it the effect can be dramatic: one or two inches may be gained within six months of treatment, and one or two shoe sizes.

Until the 1980s, the hormone was extracted from the pituitary glands of cadavers, but it's now synthesised artificially in the laboratory. Even so, the process is complex and sophisticated – human growth hormone is one of the most expensive treatments in medicine. At the time of writing, a course may cost three or four times the average UK annual salary, and those with a normally functioning pituitary can expect to gain an inch in height at best. But if Hall is right, and height is so directly correlated to economic success, then even the vast costs of human growth hormone treatment could prove a worthwhile (if ethically dubious) investment.

TO BE PERSUADED to leave Turin, Nietzsche had to be drugged with sedatives, and cajoled into believing that Switzerland was putting on a state visit in celebration of his new royal status. On the train north he sang songs and proclaimed himself king of Italy.^{*}[†]

If only he'd paid more attention to some of his favourite philosophers: Aristotle believed that virtue lay in finding the balance between extremes; Montaigne warned against hankering after physical or intellectual stature. One of Montaigne's famous essays, 'Of Moderation', advises human beings to stay within 'the fair and beaten way that nature has traced for us'. He suggests temperance even in philosophy, and offers a passage that could stand as a critique of Nietzsche's own grandiloquent claims: 'In the end [philosophy] renders a man brutish and vicious, a condemner of religion and the common laws.' In another essay he warns against an obsessive preoccupation with height: 'A man of low stature is as much a man as a giant; neither men nor their lives are measured by the ell.'

* William Hare, of 'Burke and Hare', who were paid for their murder victims by the Edinburgh anatomist Robert Knox.

^{*} Pituitary' means 'snot'; early anatomists thought that the gland channelled mucus.

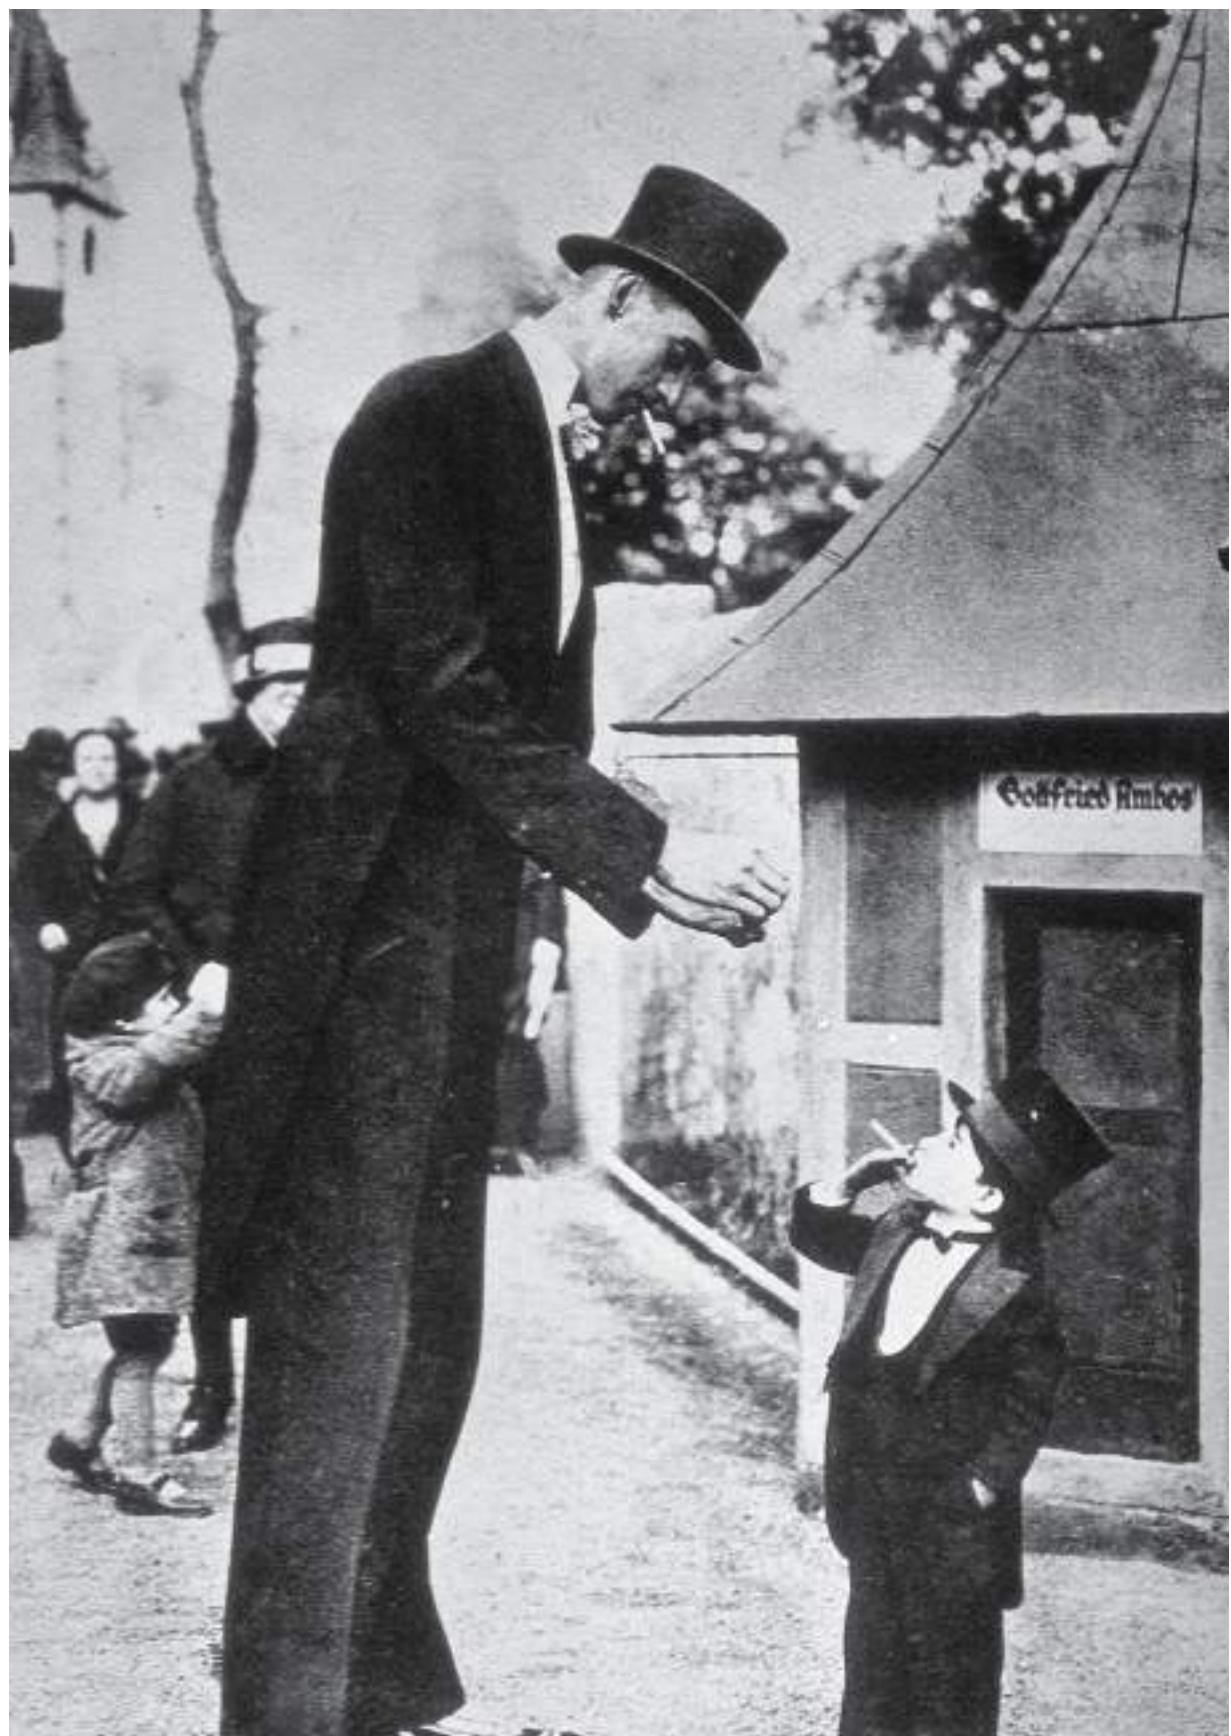

[†] 'Ecce Homo' are Pontius Pilate's words on releasing Jesus of Nazareth to the mob: 'Behold The

Man'.

* There are exceptions: George W. Bush managed to beat John Kerry, and Jimmy Carter beat Gerald Ford.

* Though as discussed in ‘Puberty’, her pelvis would still have some years to grow.

* Overbeck says that he sang the ‘wonderfully beautiful gondola song’ reproduced in *Ecce Homo*: ‘And my soul, a stringed instrument,/ Sang, touched by invisible hands,/ To itself a secret gondola song,/ Trembling with all the colours of bliss.’ See also *Selected Letters of Friedrich Nietzsche*, Christopher Middleton, trans., p. 354.

Gender: The Two Lives of Tiresias

We must acknowledge this Androgynal condition in man.

Thomas Browne, *Pseudodoxia Epidemica*

AT MEDICAL SCHOOL in the mid-1990s, my paediatric training took place in a Victorian hospital in Edinburgh called the ‘Sick Kids’. But it began before birth, so to speak, in the modern maternity unit a short stroll away across the park. It was there in the obstetric hospital that I was obliged to learn how to deliver babies, as well as gain an understanding of the many perils that attend the first few minutes of life. When I’d been signed off as competent to assist births, the next stage in training followed the newborn babies into an adjoining neonatal unit.

The babies we admitted were often mortally ill and critically underweight, but one day there was an unusual admission: a perfectly healthy nine-pound newborn. In the moments after birth, when its parents had cried out to ask if it was a boy or a girl, the midwife had gasped, ‘I don’t know!’ The baby had ambiguous genitalia, a small penis as well as a vagina. He or she was robust and feeding well – no metabolic or hormonal problems were causing the ambiguity. The only reason to stay in the hospital was to figure out whether ‘she’ really was a ‘he’, or vice versa. The importance placed on the distinction was implicit even in the name bands we wrapped around the babies’ wrists. These were usually colour-coded

pink or blue, but the new baby was given one of white. The parents were anxious and bewildered, and only became more so when the attending neonatologist began to speak of blood tests, scans and gonadal biopsies.

Later that day, I walked back across the park to the library at the Sick Kids and looked up ‘Disorders of sexual differentiation’ in the textbooks. ‘Ambiguity of the external genitalia at the time of birth causes great distress for the parents,’ I read. ‘Sensitive explanation is vital.’ It was estimated that one in 2,000 babies manifest some degree of genital ambiguity, and as regards the tests: ‘Complete diagnostic evaluation requires special expertise as it has to consider the long-term functional role of the individual as well as the precise gender.’ The book went on to explain that the vast majority of babies with ambiguous genitalia fall into two broad groups. Intersex babies could turn out to be genetically female – with two X chromosomes – but their clitorises had swelled to the size of small penises because of a hormonal condition generating unusually high levels of testosterone-like hormones (androgens) while still in the womb. But there were also genetic males – possessing an X and a Y chromosome – whose developing genitalia had proven partially insensitive to testosterone, or who hadn’t been able to generate adequate amounts of the hormone to physically differentiate. As human beings, our default form is female – if the bodies of XY babies don’t sense androgens in their blood, they develop short, blind-ended vaginas with a clitoris instead of a penis.

There was a third category in the textbook – ‘true hermaphrodites’: these were babies born with both testicular and ovarian tissue, and small penises as well as wombs and vaginas. Highly improbable events had to coincide for this to happen, and there were several ways in which it could come about. The most likely is that a ‘male’ sperm carrying a single ‘Y’ chromosome, and a ‘female’ sperm carrying a single ‘X’ chromosome, fertilise an egg that has just divided, then those two fertilised eggs fuse together. The bodily tissues of these ‘true hermaphrodites’ are a tessellation of male and female cells, and are known in medical jargon as ‘mosaics’. Mosaicism has been known since at least the 1930s, but it wasn’t until the late 1950s that it was realised this phenomenon could lead to hermaphroditism.

The textbook said, in clear but insensitive style, that ‘a genetic male with functioning testes but feminized external genitalia is better reared as a

girl.' I wondered how they could be so sure.

It took a few days to sort out all the blood tests and scans – days in which the parents, in the interests of neutrality, referred to the baby as Sam. Names might tolerate ambiguity, but the deeply gendered nature of language meant that no one could figure out which pronouns to use. 'It' seemed grossly insensitive, but 'he' or 'she' might prove incorrect.* Sam was gloriously oblivious, breastfeeding well and putting on weight.

When all the results were put together, they implied that Sam had rare, 'true' hermaphroditism: a mosaic of male and female cells had given rise to elements of both sexes. As well as a penis and vagina, Sam had a womb as well as a fallopian tube leading from an ovary on the left side, but on the right there was a buried testicle, and a vas deferens, the duct that in adulthood conveys sperm from the testicle to the urethra.

In the 1990s in Edinburgh, there wasn't a great deal of sensitivity around gender ambiguity, and the possibility of raising Sam as neither male nor female – being dressed in green or red instead of pink or blue – didn't appear to arise. The very nature of the English language seemed to demand a decision. 'She's a girl,' Sam's mother decided finally, once we had explained the findings of the tests, 'Sam is Samantha.' What would be done about her penis was left for a later decision. Her bald little head was immediately decorated with a flowery headband. Her cot-side filled up with pink cards, frilly blankets, and heart-shaped balloons.

SAM WAS LIVING, thriving proof that there's more to men and women than X and Y chromosomes, but modern western culture, and in particular western medicine, often struggles with ambiguity and androgyny. Through most of the twentieth century, medical orthodoxy held to the line articulated in my paediatric textbook: boys without male genitals (absent either because of a developmental anomaly, or consequent to an accident) could simply be raised as girls. But it was increasingly noted that in adolescence, many of these individuals began to express discomfort with the gender allocated to them. Early hormonal exposure seemed to have a role in determining later identity. It was noticed, too, that XX babies raised as boys because of their enlarged clitorises reported high levels of preference for identifying as women. One study from 2005 put this proportion at 12 per cent, while the proportion of XY babies raised as girls, but who later identified as male,

was lower at 5 per cent.

Modern medicine is only now getting to grips with these fluid ideas of gender identity, but thousands of years ago, in the philosophy and mythology of the Greeks, these concepts were already being explored. Plato's *Symposium* tells of the contribution of the playwright Aristophanes to an earnest discussion about love. In the beginning there were three sexes, he says, not two: male, female and androgynous. Each consisted of four hands, four feet, two sets of genitals and two faces gazing in opposite directions. Those beings wholly male came from the sun, those all female came from the earth, and those in whom male and female parts coexisted came from the moon.

All three groups of these original, powerful beings began to threaten the gods, so Zeus split them down the middle 'as you might divide an egg with a hair', doubling their numbers but condemning each to search forever for his or her other half. Those who were once androgynous became heterosexuals, useful for breeding but prone to adultery. Those who were all-woman became lesbians and those who were all-man became homosexual men ('the best of boys and youths, for they have the most manly nature'). Aristophanes was a comic playwright, and seems to have anticipated being mocked for his ideas. 'This is my discourse of love,' he says in the *Symposium*, 'which, although different to yours, I must beg you to leave unassailed by the shafts of your ridicule.'

From the ancient world through to the Renaissance, there are plenty of examples in medical and other writings in which men and women are thought of less as opposites than as sharing essential characteristics, and capable of changing sides. From the anatomies of Aristotle and Galen, to the speculations of Thomas Browne, for most of scientific history, transition between female and male was thought of not just as possible but as expected from time to time. Only about 200 or 300 years ago, with the hardening rationalism of the Enlightenment, did this fluidity give way.

Another Greek story, the myth of the prophet Tiresias, attests to a fascination with gender flexibility. As a young man, Tiresias was walking in the forest when he came upon a pair of mating snakes – a symbol of bisexuality and an omen of ill luck. Instead of rushing away from the misfortune, 'he struck them across their backs'. The female snake was killed, and Tiresias was transformed instantly into a woman. Snakes were

symbolic of transformation because they periodically shed their skins, and in her new skin Tiresias became a prostitute in Thebes, and later a mother. After seven years, she came upon mating snakes again, and this time struck the male, and was promptly returned to male form.

Ovid follows the tale of Tiresias with a bawdy, barroom story about Zeus and his wife Hera having an argument over whether men or women had the greatest pleasure during sex. As the only ancient transsexual, Tiresias was called in to adjudicate, and testified that if sexual pleasure consists of ten parts then women enjoy nine-tenths and man enjoys one part only. It's an odd tale, and given the assertion that only about one-third of women in western culture reach climax during heterosexual intercourse, perhaps says more about male anxieties than it does about sexual realities.

TARIK TOLD ME that he had known from a young age that he should have been born a girl. He was neither straight nor gay, and he couldn't remember ever being interested in sex. As a boy, he'd been more interested in Barbie than in Action Man, and was scolded for wearing his sister's dresses. Outwardly he had been a calm and studious child, but a whirlwind of anxieties over his gender identity gathered force through adolescence. He became an academic, and when we met three or four years ago, he was just beginning a long research sabbatical. The free time offered by the sabbatical had given him his first opportunity to think about changing his gender identity. 'You're the first person I've told,' he told me, sobbing. 'I can't go on like this.'

Since my time in medical school, neurodevelopmental research had moved on: momentum had gathered against the proposition that a boy without a penis should simply be raised as a girl – and vice versa. Elements of gender differentiation are deeply rooted in the brain and in hormones – there's little doubt now that there's more to a sense of gender identity than socialisation. Twin studies imply that the incidence of discontent with birth gender is higher in identical twins than it is in fraternal (non-identical) twins, which implies at least a partial genetic component. Other studies have found that chromosomal disorders that lead to reduced testosterone production in boys may result in increased desire for male-to-female transition.

Until recently, gender variance was considered a deviance. The first

Diagnostic and Statistical Manual ('DSM') of the American Psychiatric Association, published in 1952, placed gender variance under the blunt heading 'Sexual Deviation'. The second manual, published in 1968, retained the same classification, although by then the Kinsey Report on sexual behaviour in the United States had broadened awareness of sexual diversity. The third DSM, from 1980, created the new category 'Gender Identity Disorders', which was carried over into the fourth, from 1994. The fifth version, in 2013, has switched the term 'disorder' for 'dysphoria' – a state of mind that connotes suffering and distress. This term, too, has been criticised as excluding those entirely at ease in their adopted gender, and the more neutral term 'variance' is now proposed.

Tarik was profoundly dysphoric; every morning he woke with a plunging feeling in his gut, knowing he faced another day of acting as a man. He was depressed, and his sleep was agitated and unrefreshing. His body disgusted him, particularly his chest hair and beard, his jaw line, penis and scrotum. He could barely bring himself to touch his genitals and found it easier to wash them quickly, in the dark.

Medical guidelines in both the UK and the US require living fully in the 'adopted gender role' for twelve months or more before gender reassignment surgery. 'I hate that expression, "living in a role",' Tarik told me when we began to discuss transition. 'For me, this is living authentically.' With support from a local gender identity clinic he took the difficult step of telling his academic colleagues, his parents and his siblings, and began to live as 'Teresa'.

Tiresias had switched gender at the strike of a snake – with the support of the clinic, I began the much slower process of effecting a comparable metamorphosis with prescription drugs. The first drug was finasteride, which inhibits the generation of the most potent form of testosterone within the body. It's used to shrink the prostate, and in small doses it helps to retard male-pattern baldness. This was only partially successful – it isn't a very effective treatment – and gave way after a few months to leuprorelin injections, initially monthly and then, once her body was used to them, once every three months. Leuprorelin inhibits the pituitary gland's production of gonad-stimulating hormones and can shrivel the testes – it has the potential to cause flushing of the skin, a collapse of interest in sex and weakening of the bones. A few weeks after leuprorelin was established, we commenced

oestrogen therapy. This feminises the body and promotes the development of breasts, but can bring on blood clots as well as subtly increase the risks of stroke, heart attack and breast cancer.

This all took a couple of years, and the final phase of transition to Teresa would be the most difficult: surgical removal of the testicles and parts of the penis, and then the creation of a blind-ended vagina using the penile skin. The physical transition proceeded in two stages – Teresa's convalescence from each procedure took months. The body's own power of healing can rebel against its new form: initially, trans women have to keep their newly created vagina open with the daily use of dilators, and regular douching with antiseptic solution. Parts of the scrotal skin are infolded and sutured down to resemble labia.

Once Teresa's physical scars had healed, her dysphoria was replaced by euphoria. She went back to her position at the university and the quiet, studious life she'd had before transition. She told me that her academic work was better than it had ever been. Oestrogen affects more than just the shape and hair distribution of the body: 'My brain loves these hormones,' another trans woman told me shortly after commencing oestrogen therapy. 'It feels as if a missing cog has fallen into place.' Teresa remained uninterested in sex or in finding a partner. There were still immense challenges she faced: teasing and disapproval from her colleagues; disappointment and disbelief from her parents; harassment in the street; the need for ongoing hormonal treatment; her ceaseless battle with chest and facial hair. But her sleep now was restful, and the feeling of dread on awakening had gone.

EVEN THIRTY YEARS AGO the transition from Tarik to Teresa would have been improbable: gender surgery was far more difficult to access, and it was rudimentary in terms of the procedures that could be offered. But though the science and the surgery to effect gender transition is a relatively recent phenomenon, classical medical ideas of gender and sexual differentiation prefigured it. They hinged on the assumption that male bodies were simply warmer than those of women, and the temperature of your mother's womb determined whether you'd develop male or female sexual organs. According to Galen, these organs were fundamentally the same: the scrotum was simply a womb turned inside out, and the penis was an

extruded vagina. To transform a woman to a man, all that was necessary was to heat the pelvic organs, which would then ‘break free’ and become externalised. It was an absurd view in many respects, but it did allow for the possibility that gender exists on a spectrum, and that we all carry the potential for transformation.

This idea persisted from classical times to the medieval, and endured past the Renaissance. The sixteenth-century French philosopher Michel de Montaigne and his surgeon contemporary Ambroise Paré both tell the story of a female swineherd, Marie, who, while energetically jumping a ditch after some pigs, found that her vagina had ‘extruded’ into a penis, making her a man. The transformation was confirmed by a bishop and Marie was re-baptised ‘Germain’, and honoured by being made one of the king’s courtiers. It seems as if Germain was welcomed in his new form because he’d transitioned through an apparent act of God, rather than through his own choice. It’s likely that Germain was an XY male, and the growth of his penis was not sudden but took place gradually over months; he probably had a hormonal condition that had diminished the conversion of testosterone to its most potent form, and so developed feminine genitalia in the womb. The sequence is well described by the heroine/hero of Jeffrey Eugenides’s novel *Middlesex*: the heightened hormonal boost of puberty causes the growth of a penis and beard, descent of the testicles, as well as a deepening of the voice. This particular genetic condition is also relatively common in a genetically restricted community in the Dominican Republic, where those who experience it are known as *huevedoces*, or ‘testicles at twelve’.

Montaigne tells another gender transition story, about a woman called Mary who took to living as a man. Mary became a weaver in a distant town and fell in love with a woman whom he married, and with whom he lived ‘for four or five months, to [his wife’s] satisfaction’. But then someone from his home town recognised him and called in the authorities, who tried him as a woman. Mary was hanged for ‘using illicit devices to supply her defect in sex’. In the French society of the period, acts of God were permissible, but Mary’s transition was perceived as a matter of wanton choice.

In 1931 a German physician named Felix Abraham published a description of a new procedure, carried out by a Dr Gohrbandt in Berlin, on

two individuals with gender dysphoria. The first, Dora R., had tried repeatedly as a boy to amputate his penis. Abraham described the second, Toni E., as a ‘homosexual’ and ‘transvestite’ who had only ever felt comfortable in women’s clothing. Toni E. was fifty-two at the time of her surgery – Abraham adds that she had waited until the death of her wife before proceeding.^{*}

Gohrbandt’s ‘vaginoplasty’ procedure involved the creation of a tunnel through the pelvic muscles from the perineum up to the abdominal lining. The new cavity was then packed with a rubber sponge coated with skin grafts taken from the thigh. Abraham concluded his case reports with a summary of his case for facilitating surgical transition:

One could raise an objection to this type of surgery, that it is some kind of luxury surgery with a frivolous character, because the patient possibly will return to the doctor after some time with new and greater demands. This cannot be excluded. It was not easy for us to decide on the described procedures, but the patients were not to be dismissed, but also were in a mental state that made it probable that self-mutilation, with life-endangering complications, could be possible. From other cases we have learned that transvestites [sic] indeed cause themselves very severe harm if the doctor does not fulfil their wishes.

Following the simple vaginoplasty of Gohrbandt, it wasn’t until the 1950s that Dr Georges Burou in Morocco began to use inversion of the penile skin to create a vagina – a neater, and from the perspective of healing, more successful method of vaginoplasty. Hundreds of trans women are said to have passed through Burou’s clinic through the 1960s and 1970s. ‘I do not transform men into women,’ he announced in 1973. ‘I transform male genitals into genitals that have a feminine aspect. All the rest is in the patient’s head.’

In a sense, Burou could be said to have been correct: it’s now known that there are structures in the brain, constituting parts of the hormonal and emotional regulatory systems, that exhibit differences between the sexes. A post-mortem study from Holland found that the hypothalamus of trans

women shared neuronal characteristics with natal women. Whether these similarities pre-date or post-date the surgical transition (i.e. whether they were innate or consequent to behavioural or hormonal changes) wasn't clarified by the study. But either way, in their 'heads' and in their 'brains', the trans women were identifiably women.

There is much still unknown about gender, sexuality and the developing brain. It's becoming apparent that there are critical moments in the womb that determine whether we grow up identifying as male, female or somewhere in between, and neuronal structures within the brain come to reflect these different positions. This isn't to deny that the expression of identity is enormously influenced by our individual contexts and cultures, or to contest the evident truth that elements of our identities shift ceaselessly through different social interactions.

The next few years are going to see a gathering appreciation of the many determining factors involved in the expression of gender identity, as well as improvements in surgical techniques. Many elements of transition thought impossible are now looking achievable: uterine transplants have become technically possible, and in 2014 a recipient of such a transplant gave birth. Though no trans woman has yet successfully received a uterine transplant, many have expressed the wish to do so, and it would be surprising if one isn't announced within the next few years.

As a doctor, my role is to ease suffering and promote health; my interest in gender reassignment (or 'confirmation' as many trans men and women prefer it) is primarily whether it eases the distress of the patient consulting me, and helps them live their lives. Gender variance holds a mirror up to the polarisation of gender in our society, which instructs us relentlessly and emphatically to *choose*. It's known now that forcing this choice can be harmful, and isn't backed up by the scientific evidence – we all benefit from allowing elements of our identity to be in flux. In her book *The Argonauts*, Maggie Nelson quotes her partner's impatience with the idea that anyone with an ambiguous expression of gender must be on a journey to one binary extreme or the other ('I'm not on my way anywhere'), and points out that all of us are in ceaseless transition, irrespective of gender: 'on the inside, we were two human animals undergoing transformation beside each other, bearing each other loose witness. In other words, we were aging.'

There is a gathering movement of people who feel that, for them, gender

reassignment surgery may have been a mistake – that the medical profession’s checks and barriers to hormonal and surgical transition, though formidable, were for them insufficient. After twenty years living as a woman, ‘Elan Anthony’ detransitioned, like Tiresias, back to being a man. He calls his journey ‘third way trans’: ‘I couldn’t bond with people and eventually started therapy to work on why I couldn’t have relationships and why my body was so tense,’ he said in an interview with *The Guardian*. ‘I eventually realised that a lot of this had to do with trying to present myself as female, which was unnatural for my body.’ He’d been bullied as a boy, feeling himself at the bottom of a strict male hierarchy; through therapy he came to realise that his childhood identification as female reflected an unconscious need to escape. One of the greatest barriers faced by Elan was criticism within the trans community: ‘It is difficult being part of the psychological community that is so pro-transition right now, and being one of the few critics,’ he said, ‘but it feels like there are a lot more people speaking out about detransition, as well as more clinicians who are interested in looking at alternative ways to deal with dysphoria.’

When in *The Waste Land* T. S. Eliot wrote of the pain of being trapped between two lives, tortured and unable to be fully accepted in either, the allegorical figure he chose was Tiresias, ‘throbbing between two lives’. To undergo transition from one gender to another takes courage and determination, but in a polarised culture, so too does the occupation of an ambiguous, androgynous space. In the natural world, to occupy a space part-way between two genders is not just possible, it’s common. The testimony from science, medicine and people with fluid or ambiguous gender all indicate that the distance between Tiresias’s two lives needn’t be so great, and that sometimes the choice need not be quite so stark.

* The Italian poet Carlo Emilio Gadda pronounced pronouns ‘the lice of thought’ for the lazy thinking they introduce.

* The same year Lili Elbe, a trans woman born in Denmark who changed her name from Einar Wegener, died from surgical complications of a procedure to implant a womb in her pelvis.

16

Jetlag: The Brain that Holds the Sky

The brain is wider than the sky,
For, put them side by side,
The one the other will include
With ease, and you beside.

Emily Dickinson

ON THE ANTARCTIC RESEARCH STATION where I lived as base doctor for a year there were almost four months of sunlessness, while the planet's winter tilt put the continent in shadow. But it wasn't perpetually dark: there was plenty to see and the sky was always changing.* On emerging from Halley base I became accustomed to looking up and seeing the wheel of the stars and planets, meteor showers, or the slow creep of satellites. The ice was usually moonlit, and at that latitude there were weekly and sometimes daily auroras, granting depth and spectacular brilliance to the sky. On midwinter's day, almost two months into the dark time, we added another source of light – we lit a fire. We piled up wooden packing crates and set them ablaze.

To warm yourself by a bonfire built on ice is a distinctive experience. The floating ice shelf beneath our feet was hundreds of metres thick, fixed to the shoreline, and composed of snow that had fallen further into Antarctica over millennia, and then flowed slowly, as a glacier, out over the Weddell Sea. As the fire gathered intensity, the compacted snow melted and

seeped away, the flames sinking their own firepit deeper into the oblivious ice. To the south of the base we could see the contours of the continent rising towards the South Pole, its immense weight settling beneath the stars and auroras as if in obeisance. On midwinter's night we kept our backs to it, holding our beer bottles towards the fire to keep them from freezing. For a few hours we bathed in heat and light, trying not to think how alien an environment we were living in, and how far we were from those we loved.

For some, the winter so far had been particularly tough. Sleep had become restless and unrefreshing: as *Homo sapiens* we're best adapted to the rhythms of tropical skies, and the lack of sunlight month after month was sending our body clocks awry. Some of my base-mates experienced 'free-running', when the body's internal rhythm loses its purchase on the celestial twenty-four-hour clock and slips to a shorter, or longer, internal timer. Free-running can lead to a bewildering, exhausting sensation of perpetual jetlag, as the body tries to run to a rhythm shorter, or longer, than twenty-four hours.

The body's internal clock is called 'circadian' (Latin for 'almost a day') and is characterised by the secretion of melatonin at night from the pineal gland of the brain. When we're in temperate or tropical latitudes, the pineal's own rhythms are calibrated by the sky's alternation of light with dark. Deprived of natural light during a polar winter, the pineal gland of those who by nature are early-rising larks defaults to a shorter internal 'day' of just twenty-two or twenty-three hours, while night owls may default to twenty-five or twenty-six.^{*} To get up or to try to sleep on schedule when your circadian rhythm is running faster or slower than twenty-four hours was to put yourself out of synchrony with the rhythms of the base. But to sleep as you pleased would cause havoc to base routine, and upset the delicate harmony of its little society – there were just fourteen of us for the ten months the base was isolated. My role as the doctor was to look after the well-being of those on base, but also to investigate whether supplementing the dim fluorescent lighting on base with additional light boxes could keep everyone's body clocks to time, alternating white light with blue-enriched as the winter progressed.

Circadian rhythms influence more than just our waking and sleeping – they govern body temperature, blood pressure and aspects of our bodies from the biochemical level right up to the psychological. Light is the best

stimulus to mould our sense of time, but exercise after waking can help, as can rigid mealtimes (the liver has a distinct body clock calibrated to customary mealtimes, just as the brain's clock is timed to sleep cycles). The pineal gland gets its knowledge about the seasons, and ambient light conditions, via 'ganglion cells' arising within the intricate weave of the retina and running into a part of the primitive brain called the 'suprachiasmatic nucleus', or 'SCN'. These neurons are a 'third eye', keeping the body aware of the passage of night and day in an entirely unconscious way, and they respond better to light at the blue end of the spectrum.[†]

The temperature outside reached the fifties below zero, but every 'afternoon' I would go skiing on a marked track around the three-kilometre perimeter of the base. I'd ski by moonlight if the moon could be seen, or starlight when it could not. Sometimes I'd ski by the light of auroras. Gathering light into my eyes at the same time each day, I hoped to convince my brain that there was still a shape to the day.

THE SIMPLEST and most archaic organisms on earth, blue-green algae, have circadian rhythms: during daylight, special proteins gather like parasols over their DNA to prevent damage by the sun's radiation (in darkness those proteins move away to let DNA do its work). It's likely that the earliest organisms in the primordial ocean worked to a shorter rhythm than we're used to today, just twenty-two hours, because the earth was spinning faster when they first evolved. There was no ozone layer then, making it even more crucial that DNA be protected against the harsh, unfiltered sunlight. Many of the genes that govern our body's sense of time look as if they have evolved from primitive proteins involved in this ancient cycle of protecting and repairing DNA.

Many of our own cells – not just in the pineal gland or the liver – have what's called a 'molecular oscillator', showing a twenty-four-hour pattern to the genes they express, and varying throughout the day in terms of their electrical activity. At the molecular level the body is chemistry, and as a general rule chemical reactions go faster in the heat and slower in the cold. But body clock genes and the proteins they express can keep to time irrespective of background warmth – something of critical importance to insects, plants and other organisms that have no temperature control.

Jetlag exists because our bodies have a brake that slows adjustment

whenever we move into a new rhythm of darkness and light. It's a form of resistance to change: the body shifts cautiously into the new rhythm, and it is that caution that prevents our rapid adjustment to a new ambient time zone. If body clocks were able to reset quickly and easily our ancestors might have been thrown out of kilter by a full moon, or whenever they enjoyed a late night around their Palaeolithic fires. But our body clocks have to be able to shift – without that malleability we could never have moved from the tropics to the temperate and polar latitudes as a species, where there are rapid swings in sunrise and sunset times around each equinox. Adaptability of the body's sense of time made it possible for humanity to move across immense distances of latitude, just as today it facilitates the jet-age shifts in longitude.

A few years ago, a group of cell biologists in Oxford found the cause for this 'brake' on adjustment to jetlag: when light shines on the ganglion cells within our retinas, the cells of the SCN begin to express hundreds of genes that transform cell timing to fit the new ambient light conditions. But then another protein kicks in, switching those genes off again almost as soon as they're active.* Adjustment to the new rhythm is delayed until the pressure of light exposure, day after day, becomes irrepressible. The researchers created transgenic mice without this molecular brake; the new mice adapted to an artificially induced jetlag of six hours within just a day or two, raising their hopes that one day there could be a drug that could cure jetlag, or help shift workers adjust to switching between night and day shifts.

IT'S MORE THAN A DECADE since I practised medicine in Antarctica, but I still meet with circadian problems in clinic. The rhythms of our bodies are often discordant with the rhythms of our communities and our working lives; people in the West spend on average an hour less a day out in natural light than they did twenty years ago, and screen time has burgeoned over the same period, cramming our brains with its blue-enriched light. Shift-working is endemic – particularly in healthcare – and to work rapidly alternating shifts is to condemn yourself to perpetual jetlag. Shift-working is known to lead to poorer concentration, as well as obesity – you get hungrier when your sleep is mistimed, crave more carbohydrate, and a sluggish, out-of-kilter metabolism exacerbates and accelerates diabetes and heart disease.

When the clocks change for winter, for many it's as if a door is gradually closing, or a curtain is being drawn across their mood and ability to concentrate. 'Winter blues' is one name for it, 'Seasonal Affective Disorder' another. Herman Melville described it in *Moby Dick*: 'Whenever I find myself growing grim about the mouth; whenever it is a damp, drizzling November in my soul...' To get away from winter blues Melville's narrator Ishmael took off to the South Seas, but most of us don't have that opportunity – we have to find a way to make our peace with the winter.

It can feel as much of a struggle to keep one's body clock running to time through a Scottish winter as it did through an Antarctic one. The research I conducted in Antarctica showed that the sky-blue light boxes offered a slight improvement in the quality of sleep, but didn't help any of our small group stay more closely to the twenty-four-hour clock. The best ways to beat winter blues, keep the body clock to time, as well as get over jetlag, remain the same wherever you are in the world: stick to a routine, eat well-spaced healthy meals, get daily exercise and, crucially, get as much light through the day as possible – natural light from the sky is usually many factors of magnitude brighter than artificial light. When I remember my time in Antarctica, skiing day after day beneath heavens as wide and dark as a dilated pupil, I was grateful for the spectacle of meteors and auroras, the phases of the moon and the ceaseless turning of the stars. My eyes, as organs of light, granted visions of great beauty there, but I appreciate them too, now, as organs of time.

* I wrote about my year on the station in *Empire Antarctica: Ice, Silence & Emperor Penguins* (Berkeley: Counterpoint, 2013).

* There are identifiable genes which code for these traits, and 'clock genes' can predict whether you are by habit early or late to bed.

† There are even people who are 'cortically blind', in the sense that they have no conscious perception of light, but this 'third eye' continues to keep the body clock running strictly to time.

* This is called 'salt-inducible kinase I' or *SikI*.

Bonesetting: An Algebra of Healing

The treatment of a fracture is not difficult, and is almost any practitioner's job.

Hippocrates, *Fractures*

A YEAR AFTER FINISHING the job in Antarctica I flew out to West Africa to learn about the work of my friend Stephen, a paediatrician. He was carrying out some research on malnutrition, and running a back-country clinic near the Gambia's border with Senegal. The clinic lay to one side of a small village community and did basic, vital work as well as research: minor injuries, treatment of infections, pregnancy care, nutritional advice. There were no X-ray facilities and few drugs. Every morning as I ate breakfast I'd watch a queue lengthen from the clinic's front door along a shaded walkway and out into the surrounding trees. I had little experience of rural tropical medicine then, but hoped to learn.

It was April, the hottest month of the year, and the temperature climbed over 40°C. In the hottest part of the day it was impossible to work: I'd lie still in a hammock strung between two trees. The wind that came scorching out of the Sahara was like a furnace blast, warming the skin rather than cooling it. Within a year my skin had passed through a hundred degrees of heat – from the fifties below zero in Antarctica to the forties above. Vultures sat panting in the dust, wings outstretched to cool themselves, the

way I'd seen penguins do when Antarctic temperatures approached the melting point of ice.

The sun fell so swiftly that there was little sense of an evening, but when the day's clinical work was done, and the temperature became more bearable, I'd take a walk through the village. Though at times it felt remote – there was no phone signal after 5 p.m., and the internet connection was vestigial – there were hints of the wider world. One of the village's earthen huts housed a bakery: when flour arrived from the coast you'd see smoke from its chimney, and know that there'd be French baguettes on sale. There was a small shop run by a Mauritanian pedlar, who sold lanterns and buckets made in China. Those goods were imported by Lebanese merchants who'd been settled for a century on the Atlantic coast. As he worked, the pedlar listened to the BBC World Service in Arabic.

If there was time I'd continue on towards the river, beneath a spreading mango tree, down an avenue of baobabs and through thickets of man-high yellow reeds. Beyond the reeds there were squared ridges of dry-baked soil – rice paddies in the wet season – then some mudflats and, in the distance, the brown slick of the river. I'd been brought up with the reliable rivers of northern Europe, but this was something altogether different: briny and unpredictable, an oily wallow of mud, fed by the fickle rains of the Saharan fringe. Lungfish flopped into holes at my approach, breathing heavily. It seemed a land where categories were unstable, and the unexpected was routine.

'GEOMETRY' MEANS 'measurement of the earth', and as a science it has its origins in ancient Egypt. It was used to calculate the land available for agriculture as the water level rose and fell in the fertile Nile delta. One of its foundational texts is Euclid's *Elements*, written in Alexandria around 300 BCE – said to be the most influential textbook ever written, second only to the Bible in terms of the number of editions that have been printed. It starts with defining terms ('a line is a breadthless length', 'a boundary is an extremity of any thing') and goes on to postulate various axioms ('the whole is greater than the part', 'all right angles are equal to one another'). From these definitions and axioms it constructs a whole mathematical world, then tames it. Proofs tumble from its pages. One of the most famous of its proofs shows how the two basal angles of an isosceles triangle must

always be equal. In the Middle Ages, scholars gave this proof the name ‘Bridge of Asses’, because students who struggled with it were unlikely to progress.

At school I always enjoyed mathematics; I liked its absence of words, the way it encouraged visualisation of the infinite, and its reliable delivery of neat conclusions – at my level at least. There was pleasure in mastering each new technique: now the circumference of a circle, now the length of a hypotenuse, now the gradient of a curve. Calculus was particularly satisfying – a kind of arithmetical magic. That a string of letters and numbers could be transformed into a sweeping parabola was an unexpected delight.

I learned that one inventor of calculus was Isaac Newton and that for him transformation was a universal, elemental process: everything in flux that could be measured and portrayed in algebraic form he termed a ‘fluent’. His mathematics summoned a world of ceaselessly changing rivers of numbers. He invented calculus to describe the rate of change of each fluent, which he called ‘fluxion’.

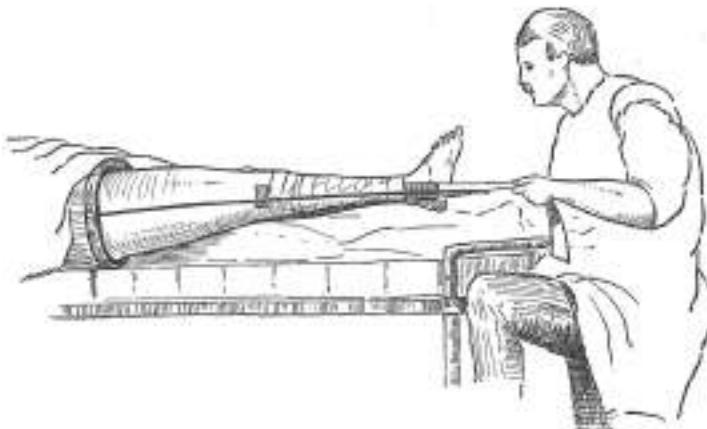

The word *algebra* is Arabic, *al-jabr*, which means ‘bonesetting’. Although there are hints of algebra in ancient Greek texts such as Euclid’s *Elements*, and even in the writings of the Greek physician Galen, the algebra that we know today was invented in ninth-century Baghdad. The mathematics of algebra was named for bonesetting because it pulls apart two sides of an equation, balances them, then resolves them to find solutions – just as a broken bone could be pulled apart in traction and then made to heal. In southern Spain, thanks to the legacy of the Arabs, bonesetters and barber surgeons were known until modern times as *algebristas*.

One of the great reassurances of mathematics is that equations work out the same every time. The human way of healing doesn’t fit well into the ethereal perfection of mathematical formulae: it’s different for every individual, and every injury. Mathematics can probe transcendent mysteries such as prime numbers reaching into infinity, or the impossible calculation of negative square roots. The business of human healing is messier, though no less mysterious.

ONE AFTERNOON A BOY of eight was carried into the Gambian clinic having

fallen ten feet from a mango tree and injured a leg. He was unable to walk and, sobbing with pain, wouldn't let anyone examine him. Stephen injected local anaesthetic into the groin at the top of his left leg to numb the thigh, which allowed the boy, eventually, to straighten his hips. His left leg looked shorter than it should have, and his left knee was turned out to one side – both signs suggesting his femur had been fractured. It was a life-threatening injury: femoral fractures can prove fatal either from blood loss within the leg or from pneumonias that set in with immobility. The best way to ease the pain of these fractures is to pull the leg out into traction on a frame called a Thomas splint, which restores the thigh to its normal length and brings the snapped ends of bone together.

Thomas splints are named for a Welsh surgeon called Hugh Owen Thomas, who came from a long line of Anglesey bonesetters – perhaps his ‘innovation’ was simply the adaptation of a family secret. I’d had two of these ‘Thomas splints’ in my clinic in Antarctica and never needed to use them. In the Gambia, where I really needed one, there were none available.

We wrapped the boy’s leg in loose bandages and made a box with pieces of wood lined with crumpled tissue paper – he’d be more comfortable with the leg immobilised, but without the traction of the Thomas splint his leg still looked shorter than it should. The only way to assess his injury thoroughly would be to get an X-ray, which meant a four-hour journey, on dirt roads, to a clinic on the Atlantic coast.

The boy’s father was a solemn old man, stately in his dirty white robe and skull cap. No, he said, the boy wouldn’t go to the coast. He knew someone who had gone there with a fractured leg and had never returned. The boy would come home with him and they’d see a bonesetter in the

village.

Some of the nurses began to get angry, accusing the father of child abuse. He was threatened with a call to the police. I tried to explain through interpreters that there was a chance the boy would be crippled, that his leg would shorten and tilt unless it was treated correctly. But with dignity the man simply gathered his boy in his arms and walked off through the trees.

FOR MANY CENTURIES algebra evolved in parallel with geometry, rather than integrated with it. They were thought of as mutually exclusive mathematical systems: geometry was the more distinguished elder cousin, representing the world in concrete terms that were discrete and universally applicable. Algebra was the newcomer, a slippery, Arab-inflected symbolism which, for many in the West, carried a hint of the occult (the philosopher Thomas Hobbes called it ‘a scab of symbols’).

It was Descartes, the philosopher of division between body and mind, who finally unified algebra with geometry. He showed how the two disciplines were part of the same cosmic continuum, that together they could resolve mathematical problems that had previously been insoluble. He plotted geometrical shapes on perpendicular axes that we still call ‘Cartesian coordinates’ in his honour, giving the letter ‘x’ to one axis, and ‘y’ to the other. He had devised a system of mapping shapes of infinite dimensions.

With his division of body and mind, Descartes broke the physical world into parts and processes, heralding the specialisation of science and medicine and unleashing a revolution in thought still reverberating today. And with his fusion of algebra with geometry he paved the way for calculus, for a mathematics of transformation to fit the churning, evolving world.

A WEEK AFTER THE INCIDENT with the boy and the broken leg I drove out with Kalilu, one of the clinic’s nurses, to another village to deliver ‘directly observed’ tuberculosis therapy (‘DOT’). Kalilu wore a neat Islamic beard with no moustache, and wore a black woollen skull cap. His spectacle frames were ornate and golden, and clipped to his nursing uniform he carried a mobile phone. He had a calm air of imperturbability, and told me that he hoped one day to study in the UK. On the drive he told me about the

DOT initiative to ensure adequate treatment of TB, and to limit its spread. We roared away from the clinic into the loose, Sahel scrubland, beeping at donkeys and goats that strayed into our path. Baboons loped across the road ahead of us, green velvet monkeys swung up into the trees. There were no road signs, but termite mounds towered along each verge like snow poles. The track was not so much potholed as undulating; sometimes the earth looked scorched, but whether deliberately cleared for agriculture or accidentally ignited by a stray cigarette, Kalilu couldn't say. We drove past swamps, savannah and rubble-fields of volcanic rocks. The air felt gritty with Sahara-blown sand. The landscape was so beautiful that I didn't want the journey to end, but suddenly I saw tin and thatched roofs appear through the trees, announced by a tired UNICEF notice: 'Baby Friendly Community'.

We slowed as we entered the village. Groups of men sat in the shade and waved to Kalilu as we passed. The women were all working: carrying wood, pounding flour. Children ran from the earthen-walled houses to follow the car, surrounding us as we emerged, shouting 'What-is-your-name-what-is-your-name.'

'Just say, "Tubab",' said Kalilu. 'It means "white man".'

He led me to an earthen-walled house with a corrugated steel door; an old woman sat in the shade outside. Beside her stood a naked boy aged two or three who gazed open-mouthed at my pale skin. We went in and called but there was no answer. Inside there were two rooms: one bare, its walls washed in white, a torn cloth mattress rolled up in one corner. The other room was empty but for a well-made double bed and, on it, a dirty throw. We walked back out, Kalilu calling for his patient. A crowd began to gather, then a young woman in an ankle-length sarong and matching headscarf stepped forward, laughing. She directed us back into the house: our patient had been sleeping under the dirty throw.

The man who emerged from beneath the throw was so thin that each joint and ligament, each vein and tendon, stood out as if he'd been flayed. He acknowledged his audience (spectators were crowding into the room), lit a cigarette stub, and with a groan pulled himself over to the edge of the bed. Kalilu poured the correct dose and combination of anti-tuberculous pills into a cup. No, the patient said, shaking his head. He wouldn't take them. There were too many, and they made him feel sick. 'See how thin he is,' muttered Kalilu to me, tut-tutting. 'He has refused a test for HIV.' More of the man's family began to appear, pushing through the onlookers, raising their voices and pointing. 'They are telling him not to be stupid,' Kalilu translated, 'they are telling him to take the medicine.' Village elders arrived, and gave more indignant advice. Most onlookers seemed amused, but their voices began to edge with impatience. Still the man sat calmly, smoking and shaking his head as the villagers remonstrated with him.

As with the boy with the broken leg, I knew that having treatment available for a particular medical problem didn't mean that I knew how to persuade a patient to accept it. And then there were the wider economics of his situation: in nineteenth-century Britain, before anti-TB treatments had been developed, death from the disease was directly linked to the sufferer's level of poverty. Even with effective drugs available, the link between poverty and TB deaths remains stubbornly robust. To treat the man's TB effectively, he had to be cured of his poverty and, as a doctor, I didn't have the first idea how to approach that.

I asked Kalilu what he was saying to the man. He said: 'I'm telling him the tubab doctor is ordering him to take the medicine.'

The man pointed up at me and said something – everyone laughed.

‘What did he say?’

“If the tubab wants me to take them, he can pay me”, Kalilu said.

Kalilu shook his head and laughed at the suggestion – though hidden within it was the tacit acknowledgement that money was as necessary as medicine in the cure of this disease. Resistance broke: the crowd looked on silently while one by one the man took the tablets, swigging them down with cola before falling back on the mattress and pulling the throw over his shoulders. The women drifted back to their work, the men to the shade, the children to their games.

IN THE FIRST PHASE of bone healing there’s a flare of inflammation, with clotted blood forming around the broken ends, and the body’s immune system provokes pain and swelling. The blood clot becomes a framework for tough, fibrous cells, and the lining of each bone (the ‘periosteum’) transforms into a tissue that can lay down new cartilage and bone. This new bone grows out in a bulbous mass from each end of the fracture, until they meet one another in the middle to form a bridge of ‘fracture callus’. This process may take days with a small bone or weeks with a large one. How close the broken ends are to one another, and how well aligned, influences the speed of healing.

The new bone to be laid down is spongy and frail; over further weeks it is gradually replaced with layered, stronger, ‘lamellar’ bone. Lamellar bone is then remodelled by specialised cells that streamline the callus outline. Sometimes I see X-rays in which the fracture healing has been perfect – there’s little sign on the image that there’s been any injury at all. At other times lumpy irregularities and thickenings endure, and I’ll be able to turn to a surprised patient and ask ‘So when did you break your ribs?’ Small bones, like the ones in the fingers, may be fully healed by three weeks. A bone like the femur may take twelve.

As I walked back to the car with Kalilu, I saw the boy of the week before, limping along after his friends. ‘Look!’ I said to Kalilu, pointing over to him. ‘There’s that boy with the femoral fracture. But those fractures take six weeks at least.’

Kalilu shrugged. ‘Maybe the bonesetter worked some magic. Maybe you were wrong – the leg wasn’t broken at all.’

We drove back into the bush, which seemed less beautiful on the return

journey. Rather than admire the scenery I thought about the economics of health and how much about being a doctor I was yet to learn. Another day working in medicine, another Bridge of Asses I struggled to cross.

Menopause: Third Face of the Goddess

The menopause is probably the least glamorous topic imaginable; and this is interesting, because it is one of the very few topics to which cling some shreds and remnants of taboo.

Ursula K. Le Guin, '*The Space Crone*'

EDINBURGH'S MENOPAUSE CLINIC is held in the Chalmers Sexual Health Centre – an old Victorian hospital first opened in 1864 at the bequest of a master plumber. George Chalmers specified in his will that he wanted a ‘New Infirmary or Sick and Hurt Hospital, or by whatever name it may be Designed’. The lower two wards were for the destitute, the upper two wards for those who could pay three shillings a day. ‘In 1887 a small apartment for nurses was opened,’ says the official history; ‘It lay between the wine cellar and the mortuary.’

Sometime in the 1950s the building amalgamated with the nearby Hospital for the Diseases of Women, and through slow metamorphosis shed its lying-in wards. In 2011 it was refurbished as the city’s sexual health centre, with a mixed bag of specialisms: venereal diseases, contraception, menopause, as well as the gender identity clinic. Queues lengthen outside every morning for the drop-in service. Jokers or prudes have prised the word ‘Sexual’ from its sandstone wall.

Most of the sexual health clinics I’ve worked in have a jaunty, informal

atmosphere; their patients are fairly young, the diseases for the most part are treatable (now that even HIV is kept in abeyance), and the staff have a gentle irreverence that lends itself to a good working environment. All doctors hear stories that must remain private, but sexual health physicians hear more than their share.

When I went to learn more about the work of the menopause clinic I started in the coffee room, where students, trainees and consultants were all laughing together over stories from a staff night out. I was there to sit in with Ailsa Gebbie, a consultant gynaecologist and the senior clinician at the menopause clinic. Ailsa had been one of my tutors at medical school twenty years earlier – energetic and enthusiastic, with short blonde hair and a crisp, careful manner of speaking. She's a former director of the UK's Faculty of Sexual and Reproductive Healthcare.

Few women come to my clinic for advice about the menopause – I'm a forty-something man, and they generally prefer to consult a female colleague. But every so often someone going through what still gets called ‘the change of life’ asks me about hot flushes, insomnia, skin changes or mood swings. Oestrogen slows over years rather than months, making the name ‘menopause’ sound more abrupt than the reality. *Meno-pause* also suggests something temporary, even trivial. Symptoms of the menopause may be transient and often mild, but the phase it gives onto is enduring and hardly trivial. Menopause isn't a disease, or a deficiency, or even a constellation of symptoms, but a natural consequence of having lived for four or five decades as a woman. All women see a dramatic drop in oestrogen levels around menopause, but only about one in fifty men sees a comparable drop in testosterone levels at the same age. Around a third of women suffer enough from it to want to see a doctor, ranging from those exhausted, distressed and depressed by their symptoms, to those who'd just like to attenuate their hot flushes. As a man, I see too few women in this situation to keep up with the latest advice, but too many to refer them all to a colleague. So I went to sit in with Ailsa to see what I could learn.

BEFORE ‘MENOPAUSE’ WAS COINED a little over a century ago, the clunky Greek term ‘climacteric’ was used more widely. The word means a step on a ladder – a phase to be transcended or surpassed – but ‘climacteric’ has been made to bear a heavy burden of meanings: a climax to life, a critical

period, a storm successfully weathered. For much of its history it applied to men as much as it did to women, though men's 'climacterical year' was traditionally thought to be the sixty-third – long after the forty-ninth year suggested for women. Pre-modern medicine was preoccupied with numerology and had an obsession with factors of seven that goes back at least to Solon of Athens, who in around 600 BCE wrote a long poem about the way that human life is divided into ages of seven years, each initiated by a rite of passage and occasioning a change in role. But the association with sevens is more ancient still: the Babylonians noticed seven celestial bodies (Sun, Moon, Mercury, Venus, Mars, Jupiter, Saturn) and built seven levels to their ziggurats; Greek language took seven vowels, and defined seven wonders of the world.

There are three columns of discussion in the *Oxford English Dictionary* devoted to 'climacteric', and only one entry refers specifically to the menopause: 'Applied to that period in life (usually between the ages of 45 and 60) when the vital forces begin to decline (in women coinciding with the period of "change of life").' For the term 'climacteric disease' it offers: 'a disease of unknown cause which often occurs at an advanced stage of life, characterized by loss of flesh and strength, sleeplessness, etc.'

Of the four hundred or so editors and contributors who worked on the *OED*, about seventy were women. The 'C' section that includes 'climacteric' was overseen by four.* But the exclusion of women's voices from much of literature's history means that every original source for 'climacteric' they recorded, written between 1590 and 1879, was written by a man.

The historian Louise Foxcroft, in her book *Hot Flushes, Cold Science: A History of the Menopause*, summarises the historical male take on menopause by quoting the sixteenth-century physician Giovanni Marinello: 'as soon as the periods stop, pains arise... the disorderly uterus rises or descends all the time, or commits other actions difficult to endure.' Foxcroft warns against thinking of the climacteric as a purely female phenomenon: 'Men have hormones too,' she observes, 'and arguably, a menopause, if we think of it as a transitional phase which is part of the ageing process.'

The historian of medicine Roy Porter warned about the domination of masculine perspectives, particularly with respect to discussions of women's bodies. Porter's opinion was that menopausal problems, when they present

at all, are overblown and the result of a male-orientated profession's tendency to medicalise whatever it doesn't understand. He reported that in many traditional societies there's an absence of subjective problems with menopause – that, on the contrary, menopause was something that women celebrated, because it marked release from a part of their lives that was often 'burdensome and dangerous' (bearing children), as well as stigmatising (menstruation being viewed as polluting). Cross-cultural studies of women around the climacteric bear up Porter's analysis: Finnish, Mayan, North African, Rajput, Chinese and Japanese women have all been found by researchers to suffer fewer physical or 'somatic' menopausal symptoms than, for example, American women. A 1980s study by Nancy Datan examined five ethnic groups in Israel – Muslim Arabs as well as Jews from North Africa, Persia, Turkey and central Europe – and found that each welcomed the menopause as a liberation. As human beings, wrote Datan, we are all in different states of transition, 'immigrants in middle and old age to a changing world for which we are not prepared'. She concluded that each ethnic group had traditions which helped women adopt new and liberating roles in middle age, and that every culture finds ways of infusing life with love and with meaningful work.

In the twentieth century, medicine began characterising menopause as a deficiency disease, treatable by Hormonal Replacement Therapy (HRT) – first launched in 1942. Twenty years later, HRT was applauded into the pharmacies and stock exchanges of the world by a New York gynaecologist called Robert A. Wilson, whose book *Feminine Forever* suggested that women should consider HRT in their thirties or risk crumbling bones and collapsing libidos. Wilson called women who'd been through the menopause 'castrates'.

In the final years of the medicalising twentieth century, 27,000 post-menopausal women took part in the 'Women's Health Initiative' study, the results of which implied that women taking HRT had a slightly higher risk of strokes and breast cancer than those who didn't. Then in 2003 a far larger study, appropriately named 'The Million Women Study', suggested that taking HRT as much as *doubled* the risk of breast cancer, though the absolute numbers remained small. Headline writers are prone to prioritise relative risk over absolute risk: an increase of 1 in 100,000 adverse events to 2 in 100,000 is an almost insignificant change, but a headline may still

scream that risk has ‘doubled’. The effect was immediate – between 2002 and 2006 HRT prescription in the UK dropped by two-thirds. These trials were shown to be fundamentally flawed, using the same doses of hormones in women aged forty who’d gone into an early menopause as they did in women aged seventy who’d had a natural menopause twenty years earlier.

HRT remains controversial. Before going along to the menopause clinic I asked Iona Heath, former president of the Royal College of General Practitioners and for thirty-five years a practising GP, for her perspective on the merits and hazards of HRT. ‘When I meet a menopausal woman in clinic who wants help with her symptoms I tell her there are two ways to look at the HRT controversy,’ she told me. ‘The first is that HRT is a male-dominated conspiracy to medicalise a normal, natural process.’

‘And the second?’

‘That the scare stories about HRT are a male-dominated conspiracy to stop women getting the hormone supplements they need. The way they respond would tell me which way they wanted to go.’

WHEN CHALMERS’S HOSPITAL first opened in the 1860s a girl born in its wards would have had a life expectancy of about forty-one. By the late 1880s, when nurses’ quarters were opened by the mortuary, that life expectancy had risen to just forty-five. These figures were so low because of the terrible frequency with which women (and babies) died in childbirth. The majority of female children didn’t live to reach the menopause, and those who did were relatively rare – resilient survivors.

Ailsa led me from the coffee room along a whitewashed mezzanine corridor. The refurbishment had given this third phase of Chalmers’ hospital a new and repurposed life – it had gained a glass roof, they had rebuilt some walls, and natural light fell in shafts past a space where once there had been gynaecology and obstetric wards. ‘Will the clinic today be all new patients?’ I asked Ailsa.

‘A mixture – some of these women I check in on every few weeks while trying out different treatments. Some of them will be new to me – referred in because their usual doctor can’t get their symptoms under control.’

‘Will they all have been on HRT already?’

‘Most of them – though there are still a few GPs who are anxious about prescribing, particularly if there are complications – a family history of

cancer, thrombosis, strokes.'

I sat beside Ailsa while she conducted her clinic, meeting her patients, discussing with her how I'd manage each in my own clinic, taking notes for my own future practice. Many of the women clearly knew and trusted Ailsa; there were discussions about hot flushes, sexual problems, urinary infections, incontinence, osteoporosis, libido, crashing mood swings. Some women had gone into the menopause gradually, others in abrupt consequence of treatments for breast or ovarian cancer. 'In someone suffering severe hot flushes from cancer treatment there's good evidence for cognitive behavioural therapy rather than HRT,' Ailsa told me. 'Some kinds of counselling can be as good as HRT, perhaps even better, at helping people adjust to mood and sleep problems. And without the risks.'

'And what do you tell people about those risks?' I asked her.

'I show them a table that lays them out.' She opened the UK bible of prescribing – the *British National Formulary* – to a page listing the statistical risks. 'It shows how cancer and thrombosis risks begin to rise a little after ten years of continuous treatment. But those risks remain small.' For women in their fifties who've taken HRT for over ten years, breast cancer rates rose from about 2 per cent to just over 4 per cent. For women in their sixties the incidence rose from 3 per cent to just under 7 per cent.

'So it doubles, more or less,' I said.

'But it's still small. When people know the actual risk at a population level, rather than the relative risk, and their symptoms are intolerable, they often prefer the HRT. And generally I don't prescribe it beyond sixty years of age, because it's then that the cancer and thrombosis rates begin to rise.'

I saw Ailsa prescribe antidepressants rather than hormones on occasion, and I asked her whether she thought that meant mood changes and sleep problems around the menopause were related to depression and anxiety. 'Not always,' she said, 'but small doses of antidepressants can be helpful. No two women are the same.' Sex hormones maintain bone strength, so with menopause can come a thinning and weakening of bones. Ailsa prescribed medications to slow that process, and she also encouraged a couple of the women to smoke less and exercise more (smoking weakens bones, and exercise strengthens them). While most of the HRT I've ever prescribed has come in tablets, Ailsa suggested alternatives. 'If the only problem is that the skin of the vagina is getting thin and dry, or the bladder

is getting too sensitive, it doesn't make sense to take large doses of oestrogen by mouth. I prescribe a ring that women can put in the vagina and take out themselves, placing the oestrogen directly where it's needed. Skin patches and gels that you can rub into the skin of your thigh or your chest can be useful too – lower doses, fewer risks.'

Perhaps it's not possible, as a doctor, to make an objective judgement, but, in sitting for an afternoon with Ailsa, I didn't see any evidence of an overbearing medical establishment attempting to convince women they were suffering a deficiency disease. I saw women with anxiety, unbearable hot flushes, sexual difficulties and insomnia, some of which may have been brought on by a slowdown of body oestrogen, receive careful, balanced and often life-changing advice.

'AT MENOPAUSE as never before, a woman comes face to face with her own mortality,' wrote Germaine Greer in *The Change*. 'When a fifty-year-old woman says to herself, "Now is the best time of all", she means it all the more because she knows it is not forever.' The feminist psychologist Carol Gilligan noticed that the climacteric, as one of life's most significant transitions, can occasion a kind of mourning that 'can give way to the melancholia of self-depreciation and despair'. But there are other, more positive perspectives on menopause.

In 1976, the American novelist Ursula Le Guin wrote an essay both panoramic in scope and beautifully concise, reflecting on her own arrival at the change. I can't speak with authority or experience on the menopause, but Le Guin can, and I've recommended her essay to patients. She argues in the essay that the traditional division of women's lives into the triple phases of 'maidenhood', 'maturity' and 'crone' gave life a meaning and trajectory that was more than just a physical evolution – it was about social shifts in being. Le Guin views the late twentieth century as undervaluing virginity, with children acting more and more as young adults, while post-menopausal women are encouraged to take hormones to perpetuate youth. It is as if 'the Triple Goddess has only one face: Marilyn Monroe's, maybe,' she wrote.

Her proposal was that women become more comfortable with accepting the third stage in their lives, valuing it for something uniquely feminine, and offering liberating opportunities: 'The woman who is willing to make that change must become pregnant with herself, at last. She must bear

herself, her third self, her old age, with travail and alone.’ Unlike the births she’d laboured with her own children, no male obstetrician would stand over this new transition, or suture up her lacerations. ‘Anyhow it seems a pity to have a built-in rite of passage and to dodge it, evade it, and pretend nothing has changed. That is to dodge and evade one’s womanhood, to pretend one’s like a man.’

Many readers know Le Guin through her body of science fiction and fantasy novels, and she concludes her essay with a sci-fi thought experiment: imagine some aliens asked to take ‘an exemplary person’ back to their planet Altair to teach them something of the nature of humanity. Le Guin wouldn’t pick a young cosmonaut, or a male scientist, or even a statesman like Henry Kissinger. Neither would she pick one of the many young women who’d volunteer, ‘some out of magnanimity and intellectual courage, others out of a profound conviction that Altair couldn’t possibly be any worse for a woman than Earth is.’ Instead she’d pick a woman over sixty – wise, patient, witty and shrewd – who’d worked hard all her life, given birth and raised her own children. She’ll be too modest to volunteer, says Le Guin, but we should insist, because as a woman in the third stage of life she ‘has experienced, accepted, and acted the entire human condition – the essential quality of which is Change.’

Castration: Hope, Love and Sacrifice

We defend ourselves not against castration anxiety but against death, a far more absolute castration.

Ernest Becker, *The Denial of Death*

THE UNIVERSITY LIBRARY at my medical school was shared with students of Veterinary Medicine. Sometimes I'd find myself at a desk opposite one of the vet students; we'd glance at one another's textbooks with curiosity, occasionally open at the same subjects – haematology, say, or orthopaedic surgery. It was reassuring to see how much common ground there was between medicine for humans and medicine for animals.

One day I was revising prostate cancer: the appearance of its malignant cells under a microscope, the stages of its spread, the radiotherapy, brachytherapy (embedding of radioactive pellets into the tumour), and standard chemotherapies used to treat it. In health, the prostate gland stores semen and mature sperm; it has strong muscular walls that squeeze during ejaculation. Exposure to a lifetime of testosterone increases the growth of the gland as well as its susceptibility to cancers. Many treatments for prostate cancer work by blocking testosterone's generation within the testicles – with no testosterone, the growth of the tumour slows.

'All that for prostate cancer?' asked one of the vet students, glancing over at my notes.

'Sure,' I said; 'what do you guys do to treat it?'

'One word,' he laughed, 'castration!'

As a boy I'd see farmers castrating spring lambs in the fields near my home. They'd take a tiny rubber 'O', the diameter of its hole almost as wide as the rubber was thick, and with a pair of special pliers spring it over the lamb's scrotum. The rubber squeezed off the blood supply to the testes, and a few weeks later they'd drop off. The first time I saw farmers gelding lambs I asked one of them, 'Doesn't it hurt?'

He shrugged. 'It's better this than the old way,' he replied. 'A century ago, shepherds used their teeth.' After an afternoon spent gelding, the men's beards would be clotted with blood.

Gelding animals takes testosterone out of their development, making them less aggressive and more biddable, but also bigger (sex hormones accelerate the closure of the growth plates of bones, so without testosterone, animals' bones grow longer before fusing). Low testosterone levels also encourage the accumulation of fat. You can leave castrated animals grazing alongside females without fear they'll reproduce. Agricultural societies have used it since long before written records: castrated oxen take a yoke more easily, and will pull a plough with less whipping. Castrated dogs are simpler to train, and will more readily round up the castrated sheep put out to fatten in the fields. Early Assyrian and Chinese civilisations transposed this knowledge to humans: boys born in poverty would be castrated and

sent to work under the yoke of the state in the imperial household. (In China, both penis and testicles were removed – these ‘three treasures’ were pickled in a jar, brought out for special occasions, and buried with the eunuch.) Eunuchs were often taller, sometimes stronger than average, and were frequently employed as the core of an imperial guard. They could work in the imperial harem without fear that they’d cuckold the emperor.

When Alexander the Great conquered Persia he was struck by the utility of such eunuch slaves, and adopted the custom – eunuchs were also considered sexually desirable. The Romans copied it from the Greeks: the emperor Nero had a eunuch called Sporus (whom he dressed as a woman, and married) and the emperor Domitian had a favourite eunuch called Earinus. There’s usually an element of voyeurism in the Roman accounts, a curiosity about ambiguous gender and genitalia that’s still visible in media coverage of the phenomenon today. Eunuchs were high-class slaves, the most expensive in the market; in losing testicles they were believed to have lost family loyalty and to have become faithful only to their masters and to the empire.

Around the time that Christianity began to spread into the Roman Empire there was already a cult of a eunuch god called Attis, who was celebrated in springtime and believed to have died then been resurrected after three days. His priests committed self-castration in honour of a fertility goddess, and they did it on the hill in Rome where Vatican City sits now. The practice survived the Christianisation of the Roman Empire: one of the early church fathers, Origen, is famous for committing self-castration. Castration continued in Byzantium (where gelded boys were trained as choristers) and into the twentieth-century Russian Orthodox church, where the *skoptsy* sect encouraged self-castration as late as the 1920s. St Paul’s advice that women should keep quiet in church was taken to its logical conclusion during the Italian Renaissance: God’s glory was sung in soprano by castrated men from the mid-1500s. The Jesuit Tommaso Tamburini, active in the early seventeenth century, sanctioned castration only ‘provided there is no mortal danger to life and that it is not done without the boy’s consent’. How much choice they had in the matter is hard to assess, though reports throughout the seventeenth and eighteenth centuries describe boys ‘pleading’ for the honour of being castrated, to bring both prestige and financial security to their families. The complex, high-pitched melodies for

which castrati were most in demand by the Vatican were those sung around Easter week – the same time of year that the priests of Attis celebrated castration.

The Vatican didn't ban the castration of boys for its choirs until the late nineteenth century, and the last castrato of the Sistine Chapel, Alessandro Moreschi, died in 1922. But twenty years before he died, with his voice already fading in quality, he made a series of recordings for the 'Gramophone and Typewriter Company' that would become 'His Master's Voice' or HMV. You can find the recordings online, Moreschi's voice a wavering, ghostly soprano that makes every song an elegy.

THE COMEDIAN BILLY CONNOLLY once joked that he'd reached an age when doctors had become uninterested in his balls, and had begun showing greater interest in his rectum. The median age for testicular cancer is around thirty-four, for prostate cancer it's nearer seventy-two. To have your prostate gland checked manually you have to lie on one side, knees pulled up to your chest, while a doctor puts a gloved finger in through your anus – the size and consistency of the prostate can be assessed through the thin bowel wall.

Prostate cancer is common: among my local patient population of almost four thousand, there are several new diagnoses a year. Alex Sinclair was one of them: a sixty-two-year-old builder, muscular and stoical, bald, with a beard so dense and black it was as if the lower half of his face was eclipsed. He told me he was divorced, and hinted at a dynamic sex life; his children had long ago grown up and moved away. He came to clinic wearing his overalls. 'I used to get up once or twice a night to pee,' he told me, 'but now it can be five or six times. I wake up exhausted.' There were times he found himself standing at the toilet for a full minute before urine began to trickle out. 'I prefer not to see doctors,' he said. 'But I couldn't put it off any more.'

We worked through a questionnaire called the 'International Prostate Symptom Score' which asks for a rating of one to five across a series of questions, from how often you have had the sense that you haven't emptied your bladder, to how often you have to strain to initiate urine flow: Alex scored an impressive twenty-two. I took a blood sample from his arm, to examine levels of a substance specific to the prostate – this 'PSA test'

varies broadly with prostate size, and can on occasion flag up cancer. I asked if I could do a rectal examination up on the couch. ‘I’ve heard about these,’ he said with resignation, standing up to unzip his overalls; ‘if you must.’

Alex’s prostate was huge, jutting back from its position under the bladder and indenting his rectum. On one side of the crease down the middle of the gland I felt a firmer, discrete lump, like a pebble lodged in tarmac.

‘Well, that’s why you’ve been struggling,’ I told him; ‘your prostate is so large, urine can hardly squeeze through it.’ Alex stood up and started pulling up his overalls. ‘I’d like you to see one of the specialists,’ I added, then caught and held his eye. ‘They’ll want to check tiny pieces of the gland under a microscope.’

His actions slowed as he took in this information. Then he asked carefully: ‘How do they get the pieces out?’

‘They’ll pass a very fine needle in through your anus, and through the bowel wall.’ I was hoping to reassure, but wondered if perhaps I was making his anxiety worse. ‘Your prostate gets bigger the longer it’s been exposed to the testosterone in your body – so the longer you’ve lived, the bigger your prostate grows. You’re not alone – it’s quite common to start getting problems around your age.’

‘Is it the same thing as cancer?’ he asked, pulling up his zip and reaching for his hat.

I waited a couple of moments, until again his gaze swung back towards me. ‘Just as every man’s prostate grows the longer he’s lived, they say every man gets prostate cancer if he lives long enough. But in most men it grows slowly, and never causes bother.’

‘How will I know if it’s going to cause bother with me?’

THROUGH THE 1980s, an editor at *The New York Times* called Anatole Broyard wrote a series of short, brilliant essays about being diagnosed and treated for prostate cancer. The essays were collected and published by his widow following his death from the illness. Broyard had for many years been a literary critic, and he brought to the essays an immense breadth of reference, humour, a ferocious intellect, and prose as luminous as an arc light. ‘What goes through your mind when you’re lying, full of nuclear dye,

under a huge machine that scans all your bones for evidence of treason?’’, he wrote of one scan, undertaken to see if cancer had infiltrated his skeleton; ‘There’s a horror-movie appeal to this machine: Beneath it you become the Frankenstein monster exposed to the electric storm.’

Broyard experienced his own diagnosis as a storm of anxiety and fear, but also, paradoxically, a liberation – life became as colourful as a ‘paisley shawl draped over a grand piano’. As a critic he turned to books to help him come to terms with his cancer, but complained that too many memoirs were humourless, over-respectful, and soaked in Romanticism, ‘so pious they sound as if they were written on tip-toe’. He admitted that a part of him felt exalted by the diagnosis, as if in hearing some of the worst news anyone can hear – a diagnosis of terminal illness – he’d been granted a great blessing by the universe. There was an element of gratitude for some aspects of his illness: it had given him a deeper and more intimate appreciation of the glory of being alive, as well as licence to give in to a long-suppressed desire to be more impulsive.

In an essay called ‘The Patient Examines the Doctor’, he spells out the kind of physician he’d prefer – someone with a ‘furious desire to oppose himself to fate... intense enough or wilful enough to prevail over something powerful and demonic like illness’. Broyard often felt that he had to put on a stoical front for his friends, who’d congratulate him on his bravery, but knew that a good doctor should see through the bravado and recognise his loneliness, even act as a guide through the inferno of cancer therapy. He didn’t want a doctor that relied on bluster, or phoney confidence tricks. His ideal doctor would be schooled in poetry, or be at least familiar with the possibilities of metaphor:

I would like a doctor who is not only a talented physician, but a bit of a metaphysician, too. Someone who can treat body and soul.... To get to my body, my doctor has to get to my character. He has to go through my soul. He doesn’t only have to go through my anus.

Broyard refused the physical castration his first surgeon offered (‘My urologist, who is quite famous, wanted to cut off my testicles, but I felt that this would be losing the battle right at the beginning’); but he accepted that

most treatments for his prostate cancer might make him impotent, or affect his libido. He advised against thinking of sex as physical, rather than an intimate extension of the imagination, and accepted the diminution of his sex life as a reasonable bargain in the hope of gaining more years of life. ‘In my own case,’ he wrote, ‘after a brush with death, I feel that just to be alive is a permanent orgasm.’

THE UROLOGISTS CONFIRMED IT: Alex had prostate cancer. What’s more it had spread, and so removing his prostate gland to eliminate the tumour wasn’t an option. The first step to improving his quality of life was to widen the urinary passage through the prostate, or ‘bore it out’ as Alex put it (builders have a useful store of analogies when thinking about the body and its failings). I had assisted in these operations as a junior doctor: a patient was laid anaesthetised on their back, legs in stirrups, while a narrow instrument with a camera inside it was advanced down through the penis and into the bladder. It was always an amazement to watch the procedure, the camera exploring an unseen, barely credible world of pink tunnels and embankments, delicately veined and whorled with contours. Once into the prostate a wire loop emerged from the instrument, which, when heated up by an electric current, could simultaneously peel away and cauterise the tissue that had been blocking the urine’s flow. It took a few days for the bleeding to settle down – days in which Alex had to stay in hospital with a wide-bore catheter draining the bladder. Following the procedure Alex’s urine was flowing, but his cancer was too far advanced to be eliminated. I started him on injections to shut down the production of testosterone in the testes, as well as hormone blockers. Plans were made for radiotherapy at the local hospital.

I reviewed him a couple of weeks after the first injection. His interest in sex had collapsed, his skin felt hot and dry, his urine heavy and stinging. ‘I’ve never been much of a worrier,’ he told me, ‘but I’m getting uptight about everything these days. And I can’t watch a film without blubbing like a baby.’ He wanted to continue working, but found his muscles ached after even minimal exercise, and he was losing much of his strength. These were all symptoms that could be put down to the loss of testosterone, rather than to the cancer. ‘I used to lift four sheets of plasterboard no problem,’ he told me, ‘but I think I’ll be lucky if I can manage two.’ Over subsequent weeks

his testicles shrank, and though he didn't lose the density of his beard his skin took on a pink, delicate sheen, as if it were becoming more fragile.

'Have you had enough?' I asked him one day, after he'd detailed all the side effects that were troubling him. 'Do you want to stop the treatment?'

'Not if it's doing me good,' he replied. 'If it's keeping down the cancer, for me at least – it's worth it.'

ALEX STILL ATTENDS my clinic every twelve weeks for the injections which wither his testicles but slow the growth of his tumour. A pragmatist by nature, he sees the exchange as a reasonable compromise: 'I'm lucky to be here,' he says, as he loosens his belt for the injections which, for their size, have to be given into the largest muscle in the body – the buttock.

After the initial shock of the treatment his libido returned, slowly, and one day he told me he had a new girlfriend. 'Her eyes are wide open,' he said, 'she knows I might not be around for ever.' I told him just to let me know if he wanted to try medication for impotence, but he just winked: 'no need,' he said, 'I've just got to use a bit more imagination than I used to.'

SOME MEN PERCEIVE the loss of testosterone as a punishing humiliation. Castration has long been exploited as punitive: the Oracle Bones of the Shang Dynasty in China, carved around 1500 – 1400 BCE, list castration as a sentence for prisoners of war, and an Egyptian Pharaoh who lived a couple of centuries later boasted of having castrated more than six thousand soldiers of an invading Libyan army. More recently, the Janjaweed militia in Sudan perpetrated the same on their prisoners. Some western jurisdictions today order chemical castration as a combined punishment and 'treatment' for convicted sex offenders, with controversial results.

Given the cultural hinterland of castration as punishment, it's a mystery as to why, historically, many young men and boys volunteered for such an ordeal. In *The Castrato*, a comprehensive examination of the phenomenon, the historian Martha Feldman explores some of the reasons why they did so. She proposes that we think of the exchange as much more than a bargain, but rather as a *sacrifice* – the transformation being in some sense sanctifying or sacralising. The castrato was offering something precious as a gift to celebrate the greater glory of God, but also in the hope of receiving something precious in return. Castrati, says Feldman, were 'sacralized

'creatures', in a way comparable to kings. In Confucian China that sacrifice was made to the state, and in Renaissance Italy, the church. It was seen as a kind of rebirth, much as Broyard felt that his life was given back to him when he received his terminal diagnosis.

Sir Thomas Browne noticed that after undergoing castration, males seemed to increase their chances of a long life – in part because diseases of the prostate had been neutralised. The Roman poet Lucretius, in *The Nature of Things*, describes sufferers of the plague sacrificing their testicles in the hope that they'd avoid the disease. Matthew's Gospel reads:

There are some eunuchs, which were so born from their mother's womb: and there are some eunuchs, which were made eunuchs of men: and there be eunuchs, which have made themselves eunuchs for the kingdom of heaven's sake.

And there are some who choose castration in the hope of prolonging their lives.

Laughter: Some Eminency in Ourselves

We will try to avoid the error of those who in their subtle disquisitions on the comic idea forgot that laughter is a bodily act.

James Sully, *An Essay on Laughter*, 1902

AT EIGHTEEN I HAD A JOB as a nursing assistant at a long-stay residential hospital specialising in learning disabilities. I wore a lemon-yellow uniform, and my job was to bathe and dress male residents and help them with their meals. The hospital had been built in the late 1960s, with four hundred beds for the long-term care of those labelled ‘mentally deficient’. Many had entered as children; I met one who’d been committed for stealing a bicycle, another told me he’d been locked up for climbing on roofs. Both, as children, had been slow at school, and their parents had complained of bad behaviour at home. My colleagues said it was doubtful whether they’d manage now beyond the walls of the hospital. I learned the bitter reality of the word ‘institutionalised’.

For some of the residents there was a genetic background to their difficulties: it was my job to feed a boy with Cornelia de Lange syndrome, who didn’t have any hands and couldn’t speak. Every morning I’d help dress an elderly man with Fragile X syndrome, a genetic disorder that may lead to learning disabilities. I struggled to get his legs into his trousers or socks on his feet – he had a beatific, amiable tolerance of my clumsiness.

The other assistants knew that I was a medical student and at tea break they'd ask me about the details of genetic syndromes, or the drugs we helped dish out. I couldn't help them (I was in first year) but the job, and their enquiries, forced on me an early appreciation of the subtlety and fragility of the mind. Our brains are delicately calibrated, I realised, and there's a multiplicity of ways in which their potential can be frustrated. I had been living independently for only a few months; now I had an insight into the lives of those who never do.

On the ward was Henry, who according to the notes had the intellect and speech of a three-year-old. He had a bald head, stubby yellowed teeth, and a nose like a Roman general, as well as a tremendous and uninhibited capacity to laugh. He had a powerful, resplendent laugh, deep and sonorous, which he delivered sporadically throughout the day. When he wasn't laughing he'd usually be smiling – his expression at rest was one of irrepressible mirth. He loved dancing and music – the accordion music of Jimmy Shand was a favourite – and when music was playing he would take to the floor and whirl me around until he was gasping in great gales of laughter – I'd end up laughing alongside him. Afterwards, we'd sit back down to catch our breath, and there was a sense of some tension having been released, of some appreciable change for the better.

Now and again, in the throes of a full-bellied laugh, something would come over Henry, and that laughter would turn to a sob. Tears would bead at the corners of his eyes, and a choke would catch at his voice. 'What's the matter,' I'd ask him, 'is anything wrong?' He'd shake his head, shoulders shuddering, and I'd wait. A few moments later he'd be chuckling again, as if life was a joke to which tears or laughter were equally appropriate.

THERE ARE BROADLY TWO KINDS of laughter: the kind that floods out in response to something funny, and the kind of laugh that we put into conversation, to ease social interaction. As we get older we get better at distinguishing the two – the ability to tell the difference goes on improving into our forties. Both kinds of laughter are the ally of health: those who laugh regularly report less pain, anxiety and depression than others, as well as better sleep, energy and feelings of well-being. Laughter dilates blood vessels, dwindle heart disease and rallies our immune systems, making us less allergic but better able to fight infections. Many paediatric hospitals

employ clowns, or ‘giggle doctors’, to ease tension and aid healing among attending children. ‘Laughter is the best medicine,’ goes the joke, ‘unless you’ve got diarrhoea.’

We don’t have much idea as to why we laugh. It’s evidently a physical process – breathing is disturbed, the face becomes flushed, and we’ve all known the feeling of our sides aching with laughter. And there are mysterious physical changes associated with hearty laughter – I’ve known patients for whom a comedy show invariably brings on an asthma attack.

In 1900, the French philosopher Henri Bergson wrote an essay that was later translated as *Laughter: An Essay on the Meaning of the Comic*. For Bergson, human beings live in two worlds: the physical world that we perceive with the senses, and the social world of meanings, hierarchies, love, hate and mockery. He thought we laugh only in company, which isn’t true – we do laugh alone, but we are thirty times more likely to laugh when we’re with others, particularly with people we like, and who we want to like us (hence the ‘canned’ laughter on sitcom soundtracks). As human beings, he went on, we’re on shifting social sands, constantly trying to figure out where we are situated with respect to those around us. Laughter reconciles us to the fact that we’re changing social animals in a restless world; it allows us to smooth the roughness of dynamic social exchange. It’s cathartic of social tensions, and its work is to reinforce connections between individuals. Absent from Bergson’s sophisticated theory is any robust attempt to integrate theories of laughter with the evident truth that small children laugh often, and with gusto, long before they’ve developed the intellect required to understand the meanings of jokes or care much about the opinions of others.

Charles Darwin, that master of unprejudiced observation, begins his study of ‘high spirits’ with children in mind: ‘Laughter seems primarily to be the expression of mere joy or happiness. We clearly see this in children at play, who are almost incessantly laughing.’ Laughter can also be provoked when there are incongruities between different associations of meaning, such as in the classic gag by Mae West: ‘Marriage is a great institution, but I’m not ready for an institution.’ Babies can be just as sensitive as adults to incongruities – a baby who laughs when she sees a tower of blocks fall over is observing that one moment the tower is stable, and the next it isn’t – it could be the non-verbal discontinuity that provokes

the laughter. Tickling too involves a kind of incongruity, as it's a mock 'attack' by a trusted person. Darwin thought a great deal about tickling:

The anthropoid apes, as we have seen, likewise utter a reiterated sound, corresponding with our laughter, when they are tickled, especially under the armpits... Yet laughter from a ludicrous idea, though involuntary, cannot be called a strictly reflex action. In this case, and in that of laughter from being tickled, the mind must be in a pleasurable condition; a young child, if tickled by a strange man, would scream from fear.

Darwin noticed that the movements involved in laughter – short, interrupted vocalisations on breathing out, with long drawn-out gasps on breathing in – are the precise opposite of those uttered when screaming with distress – so laughter acts as a powerful social signal of good humour. The transformative effect of a gale of laughter imposes a temporary paralysis that renders other actions, or the communication of other emotions, impossible.

Laughter to ease social relationships can be fake, or exaggerated, but it still serves a useful purpose. It marks our alignment or disalignment with others, and displays our affinity with those around us much more quickly than is possible with words. Aristotle thought that getting amused was a virtuous, social activity, as long as it was carried to the right extent, at the right time. He even had a word for it, *eutrapelia*, coming from the Greek meaning 'able to turn well'. If individuals can be imagined as cogs in a social machine, wittiness and humour are the grease that enables the machine to turn smoothly.

FOR HENRY, the frontier between tears of sorrow and tears of laughter was permeable and fragile – the two emotions seemed to have a common origin, and merge seamlessly from one to the other. One of oldest surviving books of medical case studies, the *Epidemics* of Hippocrates, noted how laughter and tears may erupt spontaneously in situations of extreme stress, almost as if they are interchangeable methods of coping: 'she used to wrap herself up... scratching and plucking out hair, and alternately wept and laughed.'

Darwin commented that these transitions between tragedy and comedy, even in prominent social situations, are widespread among other cultures: ‘Mr. Swinhoe informs me that he has often seen the Chinese, when suffering from deep grief, burst out into hysterical fits of laughter.’ In western cultural traditions those rapid transitions between tears and laughter are restricted for the most part to babies and toddlers, though in situations of extreme stress they’re observed in adults too. Darwin cites the ‘recent’ siege of Paris (his book was published in 1872): ‘the German soldiers, after strong excitement from exposure to extreme danger, were particularly apt to burst out into loud laughter at the smallest joke.’ Many people report the impulse to laugh at funerals, for example, not out of insensitivity, but from some inarticulate need for catharsis and to release tension from the grief of the situation. Perhaps the humour in bleak comedies arises from a similar kind of discomfort.

Among neurologists, the common origin of tears and of laughter is widely accepted – in the 1920s a syndrome called PLC, ‘Pathological Laughter and Crying’, was described: uncontrollable episodes of laughter or crying, or both at the same time, triggered by the most insignificant stimuli. For someone with PLC, sobs of distress might be provoked by having a hand waved in front of your eyes, or fits of giggles brought on by being given a plate of food. PLC can result from stroke, certain kinds of epilepsy, brain tumours, multiple sclerosis, and even the infusion of antiepileptic drugs, and seems quite separate from any subjective sense of mirth or well-being. It’s apparently triggered by the activation of a kernel of tissue near the base of the brain that coordinates the muscular movements involved in both kinds of emotional expression. It’s likely that the idiosyncrasies of Henry’s brain led to the activation of this centre on the slightest of stimuli. The cerebellum – the ‘little brain’ beneath the nape of the neck – is also involved in laughter in some way: one of its functions is to coordinate not just appropriate movement, but the appropriateness of emotional expression.

In 1903, a French neurologist described a syndrome of *Fou rire prodromique* – ‘anticipatory crazy laughter’. In this case uncontrollable, unemotional laughter caused by disinhibition of the brain centre was the herald to a stroke that led on rapidly to death. In an afterthought to his long poem *Briggflatts*, Basil Bunting relates a Persian tale of a stone in Tibet, the

mere sight of which causes any viewer to descend into paroxysms of laughter ‘which continues till they die’.

MANY YEARS AFTER I’d stopped working as a nursing auxiliary, I had a job providing medical cover to a hospice. Whenever I passed the day room there would be a funny movie, or a stand-up comedy routine, playing on the television. After the nurses took around their trolley of pills and suppositories, a trolley of comedy DVDs followed – a consolation, even a tonic, for patients and clinicians alike. Tea breaks and ward rounds were informal affairs – you could tell that the staff of the hospice were devoted to their work. There were just a few yards of hospital linoleum to walk between each bedside, but on passing between patients we would traverse mountain ranges of emotions. At one bedside there’d be solemnity, sadness and a frank discussion of death’s approach; at the next we’d all be chuckling about constipation, or the eccentricities of hospital wheelchairs.

The philosopher Thomas Hobbes thought that laughter was a ‘sudden glory arising from some sudden conception of some eminency in ourselves’. If he was right, perhaps there was laughter in the hospice to show superiority to the imminence of death. There was plenty of cathartic laughter to relieve tension; perhaps without it we could have been paralysed or overburdened by pity. We laughed at the absurdities and incongruities thrown up by the proximity of death in a society which reveres youth and health. We’d sometimes laugh to share solidarity with both colleagues and patients, and I’d sometimes hear laughter erupt from rooms at visiting time, perhaps easing tension between members of a family already wrapped in grief. The laughter wasn’t cynical, or hard-hearted – it was changing the atmosphere, giving courage and a sense of togetherness, helping patients, doctors and relatives adapt to a new reality, when words no longer seemed enough.

21

Prosthetics: Humanity 2.0

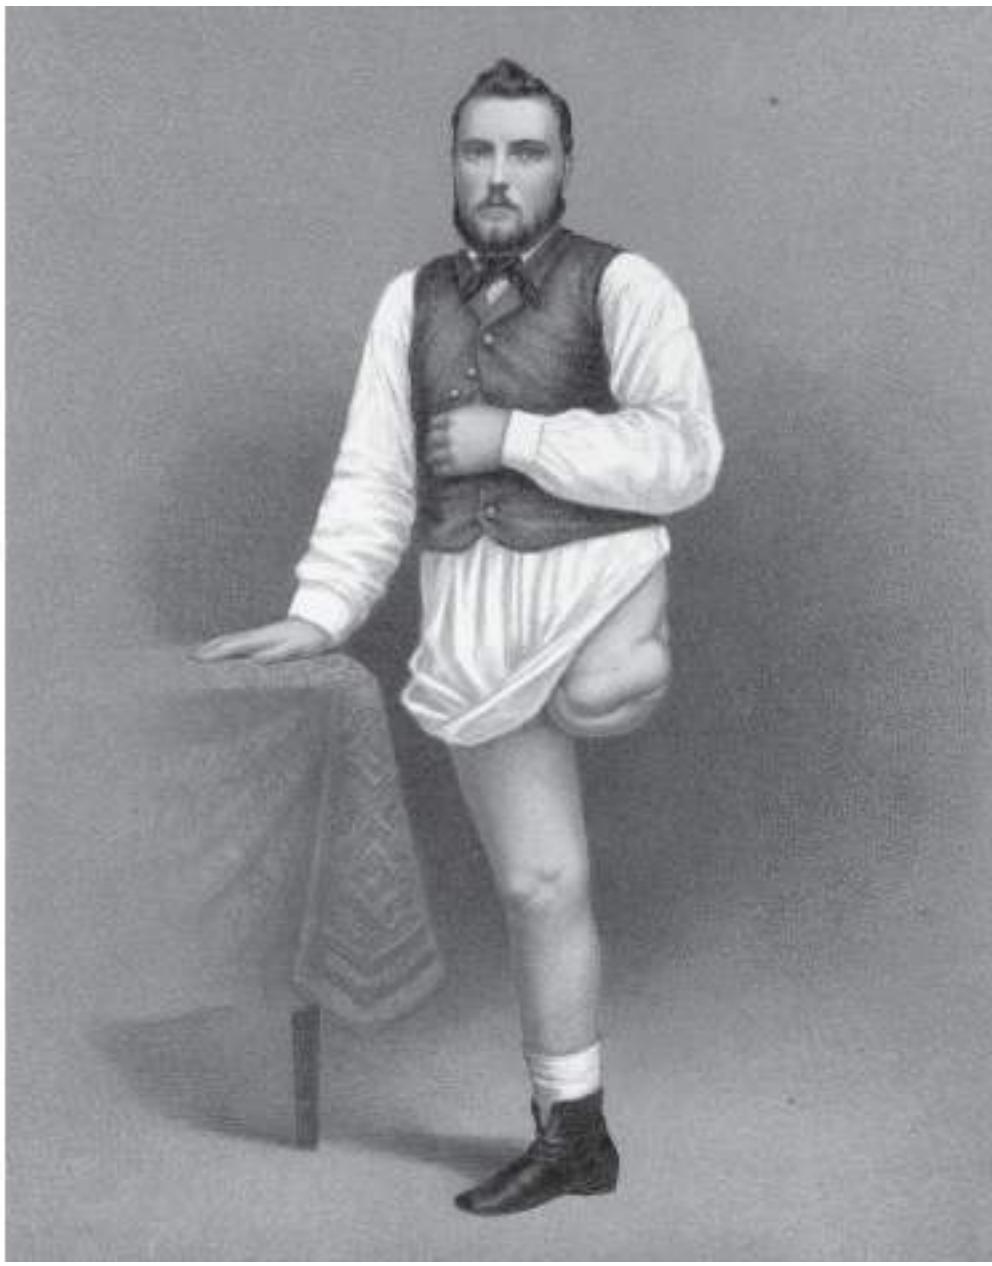

He walked on an orthopaedic limb, but in such a manly way that everyone envied him his walk.

Osip Mandelstam, *Journey to Armenia*

LIGHTSABERS MUST HAVE cauterising powers; when Luke Skywalker lost a hand in *The Empire Strikes Back* the stump hardly bled. Before long he had a new robotic hand, whirring and clicking to that stump's commands. It's an old idea that technology can restore us following mutilations, and perhaps even give us an upgrade. Long John Silver and Captain Ahab had their peg-legs, Captain Hook his eponymous hook. Pliny the Elder writes of a Roman general during the Punic Wars who, following a traumatic amputation on the battlefield, had a prosthetic arm fashioned to fit into his shield. One of the earliest literary forerunners of Luke Skywalker's amputation is the moment in Ovid's *Metamorphoses* when Pelops is hacked to pieces by his father. The gods reconstitute his scattered parts, but can't find the shoulder – they craft instead a replacement from an elephant tusk 'making his body by such means complete'.

As a junior trainee in vascular surgery I used to assist in limb amputations. Despite the sophistication of the hospital and the surgical implements it was always a surprise how much of a grisly business it remained. As soon as the patient was anaesthetised, the cleavers and bone

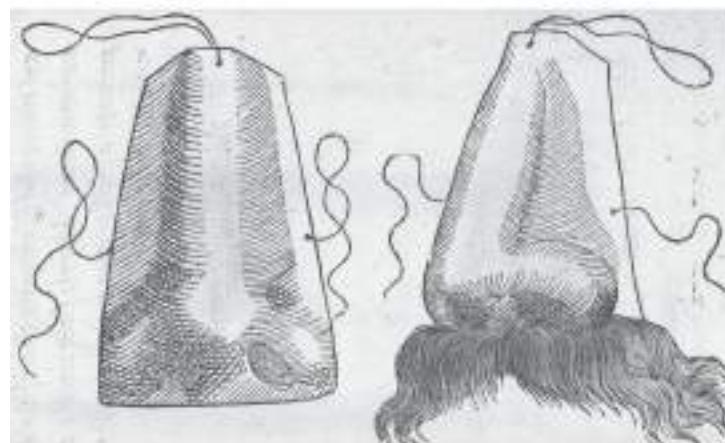

saws came out, and within minutes a severed limb would lie purpling on the green surgical drapes, before being tossed into an incinerator bag. The following morning, on the ward round, we'd check the stitching of the stumps, and make arrangements to introduce each patient to his or her prosthetist who'd fit them for a new limb. There was a new amputation every couple of weeks, usually performed because of blocked arteries – these were patients who'd suffered years of chronic pain and infections. On those crisp, starched, hospital sheets I'd see them gaze on their newly lightened, truncated limbs, stunned by the change effected on their bodies.

The earliest-known prosthesis is a big toe, made of wood and leather and found on the mummified foot of an Egyptian noblewoman buried three and a half thousand years ago. A bronze and iron leg dating from 300 BCE was unearthed two millennia later in southern Italy (it was transported to London, and destroyed during the Blitz). It's not until the early sixteenth century that there are stories of customised prosthetic hands – a German mercenary knight called Götz von Berlichingen lost his right arm in battle at the age of twenty-four, and had a replacement one built of iron, housing

springs and pulleys. He went on to fight for Charles V against the Turks and the French. Armourers were the finest craftsmen of prostheses through the Middle Ages; they were the most skilled in ergonomic metalwork and their clients were the most likely to suffer amputations.

By the late sixteenth century, the Parisian surgeon Ambroise Paré was making sophisticated advances in prosthetic technology. He had noticed that people whose lives he saved through amputation often struggled with shame and disability, so he invented lifelike peg-legs that could kneel, and elbows that could bend. He also manufactured a hand with bendable fingers, and made prosthetic noses for those who had suffered nasal amputations.

In one of the many conflicts between the Ottoman Empire and the Bulgarians, captured Ottoman soldiers had their noses amputated as a humiliation and a warning. It's said that on their return to Istanbul, the Sultan awarded each one an upgrade: a new nose cast in gold.

ANDREW GANNON HAS WORN a prosthetic arm for as long as he can remember – he was born with a left arm that ended at the elbow, and his parents insisted, even as a toddler, that he wear a prosthesis – keen that from his earliest years he'd build a mental self-image that included the limb he was born without. By age four, his prostheses were ‘myoelectric’; that is, they could sense activity in the muscles of his arm and make the hand open or close accordingly.

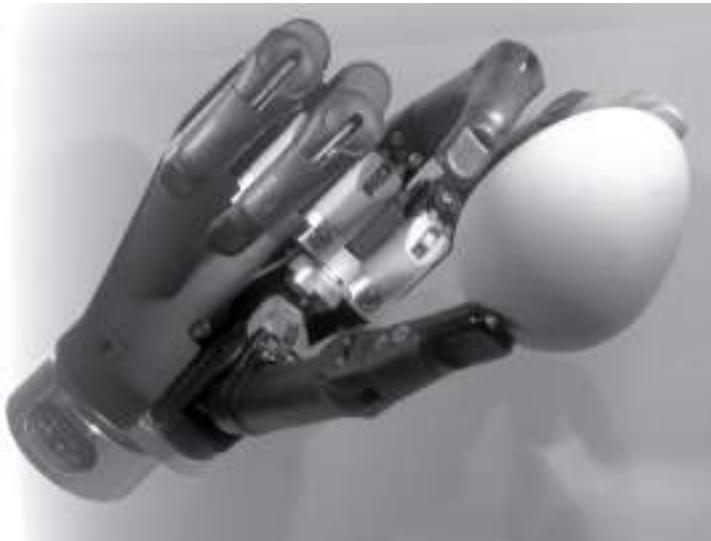

On his left arm Andrew wears an ‘iLimb’, the latest of his myoelectric prostheses; it’s sheathed in translucent silicon, revealing a skeletal intricacy

of jointed and piston steel. The translucence of the prosthetic skin allows the branding over the back of the hand to be seen. It made a low electronic whine as Andrew demonstrated its capacities for me. ‘There’s so much pride in their engineering that the manufacturers want everyone to be able to see it,’ he explained of the translucent glove, and shrugged; ‘I’d rather just have it black.’^{*} The silicon wears through quickly, exposing the robotics within to moisture, so he had to regularly change the cover. Some prosthetic limbs are now sheathed in photovoltaic cells, so that they can at least partially recharge as they are being used.

Andrew had had the iLimb for two years when we met. It has only two sensors within its socket – one over the muscles that would ordinarily work to open the hand, and one over the muscles that would ordinarily close the hand. The limb is plugged into an electric socket to charge every night. The vast range of potential movements programmed into its circuits are initiated by just four signals: there’s one signal to open the hand, initiated by a rapid muscular impulse at the elbow; a double impulse of the same signal; a triple impulse of open signal; and simultaneous contraction of both open and closing signal (‘co-contraction’). The prosthesis switches between different programmes through sensing quickly alternating combinations of those signals: ‘There was funding available to supply just two of these limbs in the region,’ he told me. ‘The prosthetic centre chose me because they knew I’d use it, and that I’d be honest in my feedback.’ Initially he struggled with the complex movements required. ‘But I got there in the end,’ he said, reaching for a packet of paper tissues. Almost absent-mindedly, he held the crumpled plastic wrapping with the fingers of his iLimb, and pulled a tissue out with ease. ‘That’s one of the best things about this limb,’ he said, noticing my gaze, ‘the lateral grip. As a boy I had my own way of tying shoelaces, but this is the first limb that can manage the thumb movements involved in pulling out a tissue, or tightening a lace.’

The iLimb fingers have sensors within them that stop contracting when they meet resistance, meaning that Andrew can pick up an empty aluminium can without difficulties – previous limbs lacked sensitivity, and would crush cans in their grip. He uses both of his hands naturally in gestural body language, spreading wide open palms or closing his fist in context as he speaks. He also has an application on his smartphone that can wirelessly switch the limb between different settings, rendering the hand

capable of positions such as the hold required to shake hands, or even make obscene gestures. But he rarely uses these – the four pre-set programmes are enough. ‘I’ve a new baby at home,’ he told me, ‘but I decided against changing nappies with the limb. It’s quicker and safer just to slip the limb off, finish the nappy one-handed, and then put the limb back on.’

THERE ARE AN ESTIMATED four million people around the world who have suffered amputation of a limb – only a tiny proportion of them are rich enough (or live in countries rich enough) to afford myoelectric prostheses. Olivia Giles is a quadruple amputee living in Edinburgh; in 2002 she lost her hands and feet to a rare form of meningitis which causes blood poisoning. Trained as a lawyer, she now works full time as the director of the charity 500 Miles, providing prosthetic limbs in Malawi and Zambia.

I asked about her own experience, losing her hands and feet to septicaemia a decade earlier. A bacterial infection in the bloodstream had reduced the circulation to her extremities so profoundly that they had turned gangrenous, and had to be amputated. ‘One day at work I felt really ill, as if I had flu,’ she said. ‘The following morning I saw these purple spots spreading over my feet, and then my hands, and felt dreadful – I went to the hospital where I collapsed unconscious. Then I woke up four weeks later like this’ – she raised her forearms that end short of the wrists. ‘I came within an inch of dying, but I survived, and that’s why I’ve never looked back. I’ve more regrets about my life before the amputations than I do

about the life I've lived since.'

I asked Olivia about the transition to her new life – for many people who suffer amputations, the first few months or even years can be torturous. ‘The day I got up on my prosthetic legs and took a couple of steps was like a rebirth – the beginning of a new life,’ she said. ‘I was euphoric; I hadn’t dared to hope that one day I might walk out of hospital. So almost immediately I began thinking about a charity, so that others could have the same chance for a second life as I’ve had. Malawi is a place with great need, and it isn’t war-torn – when I chose a place to start the charity I wanted to be able to visit and supervise it myself. And Zambia – there are so many strong connections between Scotland, Malawi and Zambia.’

I was surprised that the majority of the charity’s work was to offer prosthetic legs; arms were lower priority. ‘For an adult, in sub-Saharan Africa, they know they will never be given a job over someone who is able-bodied,’ Olivia said. ‘Once they’ve had an amputation their life as a working adult is largely over, but prostheses can enable them to go on working in the fields. We fit arm prostheses that have sprung hooks that can hold a hoe or a rake, but legs give people mobility, which means freedom. The arms that we use are really just cosmetic – people get mocked and ostracised, and supplying a dummy limb can help them to fit in.’ Olivia told me that someone who has lost one arm still has around 95 per cent of their ability to function – adding a prosthetic arm, even a sophisticated one like an iLimb, adds only an extra 5 per cent.

‘The most transformative thing about prosthetic limbs is the potential they offer for children,’ she told me. ‘The kids we work with, if they lose a limb in an accident, they become trapped in the home, a burden on their families, often ashamed of the disfigurement. Having a prosthetic leg makes it possible for them to go back to school. You can see it in the mothers’ faces when the new limbs are fitted, their faces light up, because they know that this means that their child has a future. The prosthesis gives them a future.’

The limbs that Olivia’s charity supplies are made in Switzerland, not locally in Africa; she told me that the locally sourced limbs are not yet of high-enough quality. ‘We order them in batches, then ship them out to Lusaka and Blantyre and Lilongwe,’ she said. The local prosthetists she employs have all studied on a diploma course in Cambodia; as a

consequence of the war there, low-cost prosthetic technology is advanced. ‘It’d be cheaper to have the prosthetists train over in Tanzania,’ she added, ‘but the course isn’t yet as good. There’s a diploma course too in Togo, but it’s French-speaking, which is no good for our Zambians and Malawians.’

Over the years, I’ve known many amputees struggle with phantom pain, prejudiced attitudes about disability, chronic depression and anxiety. But Olivia was upbeat about the possibilities open to amputees, even those who have suffered multiple amputations like herself: ‘We’re so lucky to live in a western society where it’s acceptable to be disabled, where society has made accommodations for us, where there’s legislation, where things are accessible. It’s possible to have a high quality of life here in Scotland no matter your disability. The facilities and the funds available in the UK are generous: here, if the mould for your stump doesn’t quite fit then it’s discarded and a new one is made. That would never happen in poorer countries where they have to make do with what they’ve got.’

The charity doesn’t only provide prosthetic limbs, it issues splints to straighten club feet, and orthotics to help burned skin heal without disfiguring and disabling contractures. ‘Some don’t realise how important it is to look after the skin of a burn,’ she said. ‘Many hospitals in Africa have a terrible reputation, and people tend to run away as soon as they can. We’re working hard to convince people of the importance of good follow-up.’

Olivia is positive about the possibilities of life after amputation; that even simple, low-cost prosthetics can revolutionise lives for the better. ‘It doesn’t make any sense to me how someone could look at me and my body, and feel pity, when my body is healthy and strong! How much more miserable would it be to have chronic depression, or a degenerative condition that you can’t see but which is going to shorten your life. My life isn’t going to be shorter because of having no hands and no feet – it’s just a little more inconvenient.’

WITH TECHNOLOGY, humanity has the opportunity not just to replace the function of a missing limb, but to improve on it. The word *prostheses* means ‘addition’ – hidden in the word’s root is the hint that prostheses might enhance the possibilities of human beings, rather than just substituting them. Pelops had a replacement shoulder carved from ivory; now prosthetists use titanium, carbon fibre, and Kevlar.

Many years ago I met Jamie Andrew, a quadruple amputee who lost both hands and both feet to frostbite in an Alpine climbing accident. Like Olivia, he prefers not to use prosthetic hands from day to day. ‘I think you’ve got to ask yourself what the limb is for,’ he told me. ‘Is it to replace a missing part – because you’re never going to get back your hand – or is it a tool to help you do things?’ Jamie leaned forwards, deftly picked up his coffee cup with his handless forearms, and took a sip. ‘If it’s a tool, well, I have plenty of those, and they work better than hands. I have an arm designed for driving, arms for ice climbing, an arm with a kitchen knife for chopping vegetables... I could go on. All these are better at their function than my hands were.’

‘And the new generation of myoelectric limbs?’ I asked him. ‘What do you think about the value, the usefulness of those?’

‘I’d be more interested in the technology if they tried to make an improvement on the human hand, instead of trying to make a slower, clunkier, second-class copy of one.’

A few years ago one of the UK’s military prosthetic centres closed, and its funding was passed over for use through the UK National Health Service. The transfer meant that civilians had access to the kind of technology that previously was available only to veterans. ‘Take rock climbing, for example,’ said Jamie. ‘My climbing legs have stubby little toe-fronts on their feet that are perfect for narrow crevices in the rock. Or skiing: human thighs, knees and calves are pretty good at absorbing pressure from uneven snow surfaces. My old skiing legs had sprung carbon-fibre dampeners, which worked well, but would chatter over the ice on sharp turns. But my latest skiing legs have mini shock absorbers, like the ones that you see on the front forks of a bicycle – they’re perfect for eliminating vibration, and better than a human leg.’

I told Jamie that I'd heard there was disagreement in the amputee community about the value of pursuing transplants, versus the value of concentrating on developing and refining prostheses. The reality of 3D scanning of stumps, and 3D printing to build sockets, allied to an ever-evolving toolkit of synthetic materials, means that Paralympic athletes are catching up with able-bodied ones – in some instances they surpass them. It's as if prosthetics might offer more than just a replacement for a missing limb, but a new improved version of being human – Humanity 2.0. Jamie laughed: 'If someone was to offer me a hand like Luke Skywalker's I'd take it,' he said, 'though that's a long way off.' But not light years away.

* Since we met, Andrew has sourced a supply of plain black gloves.

Memory: Palaces of Forgetting

One condition of remembering is that we should forget.

William James, *The Principles of Psychology*

THE FOURTH CALL of the night shift was to a nursing-home resident, George B., who the staff said had become uncharacteristically belligerent. Earlier in the day he'd struck out at another resident of the home – something he'd never done before. It was turning into a busy night: the first call had been to give morphine to a woman on her deathbed. She had looked as if she might not survive until morning, and the morphine had helped ease her pain and breathlessness. The second was to decide if a man had dislocated his artificial hip, but he met me at the door with little more than a limp. The third was to a young woman who'd phoned the service in a panic, hallucinating that her living-room carpet was infested with spiders. It turned out that she wasn't psychotic – she had just been injecting amphetamines.

I pushed a buzzer and stood at the door next to a rusting municipal bench and a bin for stubbing out cigarettes. It was a modern construction in cheap brown brick, all on one level, with a peaked gable roof over the entrance. On the glass door there were notices asking me not to disturb residents at mealtimes, to sign in and out of the building, and please remember to sterilise my hands. I peered in through the glass: a mandatory fish tank, scrubbable carpets, wipeable easy chairs, and information boards

with photographs of the staff, alongside montage illustrations of residents on days away. As I waited, an angular, elderly woman in a dressing gown appeared on the other side of the glass. She was leaning with determination over a walking frame, and stopped for a moment to look through at me. Her left hand went up in a regal salute, then she smiled a dazzling, hundred-watt smile. For a second or two we stood smiling at one another. Then she moved on down the corridor, looking from side to side as she went, like a queen surveying the splendour of her palace.

It was another couple of minutes before a nurse flustered to the door to let me in. Her hair was in a high bun with a pen stabbed through it, and her dark-blue uniform told me that she was in charge for the night. In one hand she held a bunch of keys, and in the other a sheaf of papers in plastic wallets. ‘I’m Maggie – sorry for the wait,’ she said, turning on her heels and striding back in the direction she’d come from. She gestured for me to follow: ‘short-staffed,’ she added.

‘Don’t worry,’ I said.

I caught up with her at another set of double doors. ‘George is usually so mild-mannered’ – she punched a code into a keypad on the wall – ‘a real gentleman.’ We were stopped as the door opened: a frail, bowed man wearing a green polo shirt and nothing below the waist met us at the door. ‘I’m just going home,’ he said, ‘see you,’ and pushed past me into the main corridor.

‘Not that way, Jimmy,’ said Maggie, lunging to catch him. She took him persuasively by the arm, directing without forcing him down a separate corridor – he clearly trusted her. ‘Go and get your trousers, please,’ she said to him, then grinned at me. ‘Welcome to the madhouse,’ she said in a stage whisper.

In this half of the building there were only men – several were walking up and down the corridor, some were sitting in a lounge. They all looked clean and well cared for. On an unwatched television, celebrities walked down a red carpet; the room flickered with the flashbulbs of paparazzi.

Maggie led me down the corridor to George’s room. ‘Carol will look after you,’ she said, and strode off again at a clipped pace. George’s name and his photograph were tacked to the door: a big man, bald, with a summer shirt open to the waist, bronzed and smiling into the camera. A holiday snapshot. His shoulders were muscled, and his tattooed arms were stretched

around a wife, daughters, grandchildren.

The room inside had been stripped of anything that could be used as a weapon, and in its centre George lay naked on a bed. He was paler and more haggard than his photograph. Arrayed around the walls were photocopies of old photographs. George in uniform, medals on his broad chest; one standing by a jeep, another of him saluting a senior officer. There was a close-up photograph of the same medals taken decades later, I presumed: they were tarnished and dusty. George lay on his back, eyes open, fingertips held to his cheeks. Sweat beaded on his forehead and his lips moved as if in silent prayer. There was no sign of Carol.

I put my bag down next to the bed. ‘Hello, George,’ I said, ‘I’m Gavin Francis, the doctor. How are you?’ I took his right hand off his cheek gently, as if to shake it, and with my left felt for his pulse. A middle-aged woman in the yellow tunic of a nursing assistant stepped out of the adjoining bathroom. She had white bobbed hair and drawn-on eyebrows. ‘He won’t reply,’ she said, ‘he’s hardly spoken all day.’ She moved to the other side of his bed and put a hand on his shoulder. ‘You’re not right, are you, George? Poor love.’ Her voice was sing-song, as if speaking to a child, but the affection in it was honest. We both stood for a moment looking down on his naked body in all its tragic strength, so deserted by his mind. I looked away, up at the photographs on the walls, and Carol followed my gaze. ‘He was a captain in the army,’ she said. ‘He told me that one’ – she pointed up at the photograph of George saluting the more senior officer – ‘was taken in Berlin, just after the war ended. He can still tell you all about his medals.’

I nodded. ‘Haven’t you got a sheet for him?’

‘He just throws them off,’ Carol said. She pointed at some clothing in the corner; ‘His pyjamas need a wash.’

I leaned in closer to George’s ear: ‘I’m just going to check your temperature and examine you,’ I said. He showed no sign of having heard, and his lips muttered on. I pushed the nozzle of a thermometer into his ear, and its reading showed a slight fever. Bending over him, I put my stethoscope to his chest: the air moved cleanly through his lungs, his heart murmured as if an unoiled cog was turning slowly inside. I took off the stethoscope and began gently to press on his belly, and he winced. ‘Did you manage to get a urine sample?’ I asked Carol.

‘In there,’ she said, pointing her thumb over her shoulder into the bathroom. I took the urine testing sticks from my bag and went in: tough-wearing institutional lino; a hard plastic chair beneath a disability shower; handles on the walls; polythene-wrapped packets of incontinence pads.

To assess whether urine has an infection takes a full two minutes – those one hundred and twenty seconds can be the only slack moments in a shift. Urine testing sticks have tiny squares of chemical reagents on them; after those chemicals are dipped in urine they change colour, coming to resemble the swatches of paint in a DIY store, or the colour-keys to altitude in the corner of old maps. Sometimes, as I wait, I’m conscious of the centuries of physicians before me who have scrutinised urine for clues. Usually I just watch the colours evolve. Sometimes I remember the clinical exam, many years ago now, when a distinguished professor asked me to dip a urine stick and hold it out, ‘so I can see if your hands are shaking’.

I dipped the thin paper testing stick into the urine Carol had left out on the sink and, glancing at my watch, counted out thirty seconds before the urine’s sugar level could be gauged, a minute to read off its blood and protein, two minutes to assess its white blood cells. The protein square turned the pale green of the nursing-home corridors. The white blood cell square turned the same lilac as the shower curtain.

The combination of lilac, green and some streaks of midnight blue confirmed that George had another urine infection. The workings of his brain were so tenuously balanced that just a few bacteria growing in his bladder, and the associated toxins in his blood, had tipped this ordinarily gracious if forgetful man into terror and bewilderment.

No one understands the exact mechanism which makes people with dementia so vulnerable to a worsening of memory when they have an infection. In medical terminology George had a ‘delirium’, a particular species of confusion named for a Latin word referring to ploughing: ‘*deliriare*’ means ‘out of furrow’. George’s brain and mind were accustomed to well-worn routines and habitual responses; the urine infection had jolted the ploughshare of his mind from its customary track.

IN 1943 THE THEORETICAL PHYSICIST Erwin Schrödinger gave a series of lectures at Trinity College Dublin entitled ‘What is Life?’ He dedicated the lectures, and the book that came of them, to the memory of his parents. For

Schrödinger, our ability to learn and hold memories was what most made us human. The brain and central nervous system, he explained, were engaged in the constant ‘phylogenetic transformation’ of learning. To learn something new was to be engaged in a deep and intimate way with your own humanity.

Schrödinger delivered another series of lectures thirteen years later, at Trinity College Cambridge. He titled them *Mind and Matter*, and elaborated on his Dublin theme: much of what we consider the self is intimately connected to our ability to make new memories, which we use to build images of both present and future. Loss of memory may lead to a loss of self; memory is how we weave the world into existence. ‘There really is no before and after for mind,’ he wrote. ‘There is only a now that includes memories and expectations.’

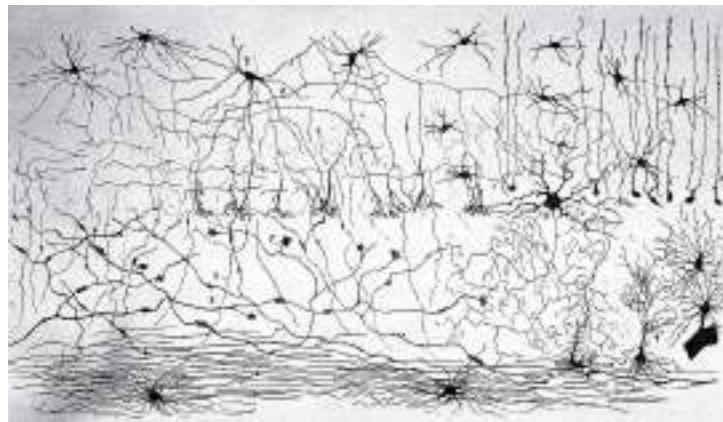

Schrödinger was schooled in the classics and begins a memorable passage in *Mind and Matter* by comparing the neuroscience of consciousness with a scene in Homer’s *Odyssey*, when a blind bard sings of the horrors of the war so beautifully that Odysseus begins to weep. The bard’s name is Demodocus, which means ‘gift-to-the-people’; it’s thought that Homer intended him as a self-portrait. Just as Homer’s poem was a tapestry of epic magnificence with a self-portrait stitched into it, so Schrödinger said that our mind weaves experience from skeins of memories, then contrives to knit our conscious selves in as participants.

After reading Schrödinger’s *Mind and Matter* I went to dig out the passage: ‘It’s as if you were present yourself at Troy, or have heard the tale from a witness,’ says Odysseus to Demodocus. ‘You must have been taught by the Muses or by Apollo.’

The ‘Muses’ were the daughters of Zeus and of Memory; the earliest sources have it that there were three of them: ‘Meditation’, ‘Remembrance’ and ‘Song’.^{*} The ‘Museum’ was their palace, and their work was to give inspiration, by infusing memories with a divine spark of creative life.

MEMORY ALLOWS US to travel in time and space, it moors us in the present, liberates us from the moment, and offers to take us into the past, as well as imagine the future. Conversely, the loss of memory is socially isolating and profoundly disorientating; to lose memory is to experience a change in the nature of the self. There are a hundred billion cells in the human brain with

an average of five thousand synapses each: five hundred trillion potential connections in which to embed memories. The scale and splendour of these neural networks took a long time to elucidate – neuronal branches ('dendrites') were too densely packed for the first microscopists to trace the connections of a single cell. It was like trying to visualise a single tree, wrapped in a thicket of thorns, in a rainforest, at night. In the late nineteenth century, a technique was developed by an Italian, Camillo Golgi, then improved by a Spaniard, Santiago Ramón y Cajal, that was capable of staining just a few neurons in a thin slice of brain tissue. It was as if a way had been found to select a few trees in that dark rainforest and charm them into luminescence. In drawings of magnificent elegance, Ramón y Cajal revealed the awesome complexity of the brain's networks of memory.

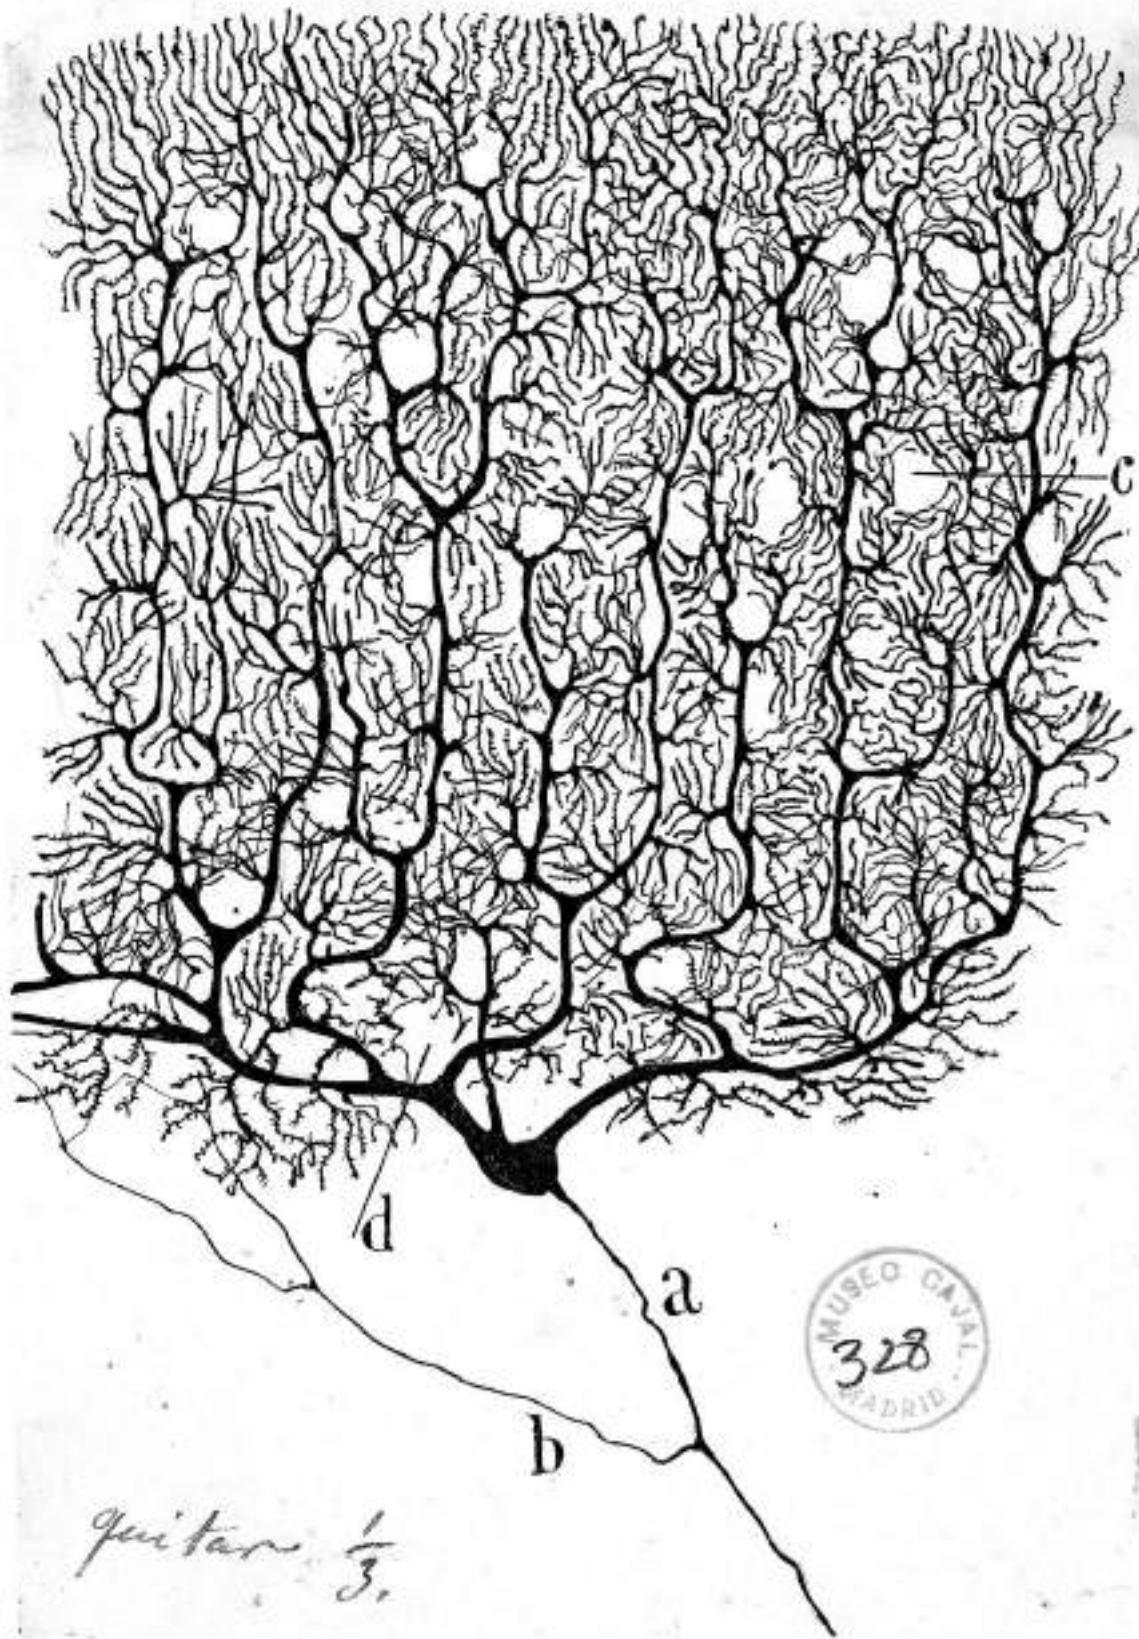

Neuroscientists speak of several ways in which we learn new memories. Impressions pass in milliseconds from our senses into the brain, and are then filtered through grids of semantic memory that make 'sense' of them – it's through the organising sieves of semantic memory, learned by experience over years, that sound becomes understood words, and patterns of light become recognisable images. Our brains do not passively sense the world – they knit it from moment to moment by braiding and knotting remembered encounters from the past. Those networks are continually modified as certain connections or 'synapses' are strengthened while others are weakened – a process called 'synaptic plasticity'. Plasticity entails material change to the structures around the synapse. Memories are sustained in part through a long-term modification of calcium and sodium channels in the membrane of each brain cell.

There are several distinct types of memory. It appears there's a dedicated

network just for ‘working memory’; reverberating loops of neural activity in the cortex which can hold information for just a few minutes. Nobody understands the fragile mechanism of this, or why it’s so easily sidetracked. If you see a car perform a hit-and-run, you can be distracted from committing the car’s colour and registration number to memory, but you can’t be distracted from remembering the colour or registration of your own car.

The memory of what you were doing at the time of major events, such as 9/11, or the assassination of JFK, is termed a ‘flashbulb memory’. Particular events of your remembered past are termed by neuropsychologists ‘episodic memories’: decisive, photographic moments in the narratives of our lives. Though these episodes too are little understood, it’s known that the hippocampus – a baroque curl of cortex in the base of each temporal lobe – is fundamental to establishing them, and sleep is necessary to consolidate them. The hippocampus needs a lot of oxygen, which suggests that it’s extraordinarily active; children who’ve suffered periods of oxygen starvation have fewer hippocampal neurons, and poorer memories as a consequence. One of neuropsychology’s most famous patients, Henry Molaison (‘H. M.’), had surgery to both hippocampi to mitigate epilepsy in 1953. He woke with fewer seizures but unable to commit any new experience to memory.

Other parts of the brain than the higher cortex and hippocampus are involved in alternative modes of memory. The basal ganglia that lie just beneath the cerebral hemispheres learn how to transform new deliberative movements and behaviours into seamless, unconscious actions. Timing of movements is ‘remembered’ elsewhere, in networks of the brain’s cerebellum, which coordinates complex actions like speech, or delivering a serve at tennis. People with damage to the cerebellum have impaired working memories, suggesting that it is essential for coordinating words and images, not just muscles. The cells that accomplish this are among the most intricately branched neurons in the brain.

The forgetting of Henry Molaison was of a sudden and catastrophic kind – from the day of his surgery he was unable to remember anything new. The only comparable pathology in normal clinical practice is Korsakoff's psychosis – something I've seen only once in twenty years of practice – when a destructive alcoholism, in alliance with certain vitamin deficiencies, brings on irreversible brain damage. This is the kind of memory loss that afflicted 'Jimmie G.' in Oliver Sacks's essay 'The Lost Mariner' – a man cursed by Korsakoff's to be marooned in time while life flowed on around him. Jimmie G. was admitted to Sacks's hospital with a note saying only 'helpless, demented, confused and disorientated'. But Sacks found his personality intact, and his mind robust for everything but the creation of new memories.

To get a glimpse of the myriad ways of forgetting, it's worth glancing at the index of a textbook of psychiatry. Under dementia you might find 'alcoholic', 'Alzheimer's', 'cerebrovascular', 'Creuzfeldt-Jakob', 'depressive', 'Lewy Body', 'Parkinsonian', and 'psychotic'. Up to half of the dementia I see is 'cerebrovascular': as the body ages its blood vessels silt up and the result is a slower, more forgetful brain. Some is 'Parkinsonian': Parkinson's disease may progress from a difficulty initiating movements to a difficulty initiating thoughts and, eventually, memories. But in many who attend my clinic complaining of memory loss, a cause can't be identified – psychiatrists classify these as 'Alzheimer's type'. When post-mortem examinations are performed on the brains of people with this kind of dementia, memory circuits are seen to be clogged with two unusual proteins. The first, 'beta-amyloid', is found in plaques between the brain cells; the second, called 'tau', is found in tangles within the cells themselves.

The reason why these substances accumulate remains a mystery, and we know little about how to prevent them. The onset of forgetting in Alzheimer's is insidious: for many, the process moves so slowly that it never causes difficulties, while for others the accretion of tau and amyloid is accelerated for reasons that remain obscure. There are some drugs which, if started early, may slow the decline by about six months at best, but these too have side effects, and are often poorly tolerated by the frail, elderly people who need them most.

When Sacks sought the advice of the great Russian neuropsychologist

A. R. Luria about how he might treat Jimmie G., he received an eloquent and compassionate response.

There are no prescriptions in a case like this. Do whatever your ingenuity and your heart suggest. There is little or no hope of any recovery in his memory. But a man does not consist of memory alone. He has feeling, will, sensibilities, moral being – matters of which neuropsychology cannot speak. And it is here, beyond the realm of an impersonal psychology, that you may find ways to touch him, and change him. And the circumstances of your work especially allow this, for you work in a Home, which is like a little world, quite different from the clinics and institutions where I work. Neuropsychologically, there is little or nothing you can do; but in the realm of the Individual, there may be much you can do.

Luria's advice reads as a plea for dedicated, resource-rich nursing care for people with dementia; care that's possible in homes like the one I was called into in order to see George. In the absence of any effective treatment for memory loss, it's the quiet humanity and enthusiasm of nursing staff like Maggie and Carol that we have to support.

WE LIVE LONGER now than at any other time in the history of humanity, and dementia may seem like a modern epidemic. But it's nothing new. 'Nothing whatever, in man, is of so frail a nature as the memory', says Pliny's *Natural History* (c. 70 CE) 'for it is affected by disease, by injuries, and even by fright... very often the memory appears to attempt, as it were, to make its escape from us, even while the body is at rest and in perfect health.' But dementia is of less interest to Pliny than its converse, the stories he'd heard of prodigious memories. He recounts the rumours about King Cyrus of the Persians, who was said to remember the names of every one of his thousands of soldiers; of an ambassador who within a day of arriving in Rome had memorised the names of every senator; and of a man called Charmidas, who, on being given the name of any book in the library, could recount it just as if he was reading aloud.

Jorge Luis Borges borrowed from Pliny for his story *Funes the*

Memorious, in which a Uruguayan gaucho, Ireneo Funes, falls from a horse and wakes up crippled in body, but with a newly infallible memory. Through the power of perfect memory Funes' world is transformed to one of almost unbearable richness and brightness; the depths of his vaguest recollections become illuminated with brilliance and clarity. He becomes able to remember every configuration of clouds he has ever seen, and forms comparisons in his mind's eye between those skyscapes and all the varieties of marbled patterns he has ever glimpsed in the binding of books. In the back bedroom of his mother's house, working only by candlelight, Funes learns English, French, Portuguese and Latin simply by flicking through dictionaries. Borges has Funes declaiming Pliny in a flawless Latin learned only hours before.^{*}

Normal life is impossible for Funes, distracted as he is by the variety and ceaseless metamorphosis of the world around him. The vivacity and lucidity of his visual memory means that he is tortured by the subtle effects of ageing, of entropy, of rot, of the creep that all living things make moment to moment into senescence. Memory is intimately bound to our humanity, but it has to be selective; an overactive and vivid memory can be a curse, and not just for savants like Funes. I've known many hundreds of patients unmoored by memory loss, but I've known dozens who would welcome the forgetting of painful memories. Forgetting can be just as important as remembering. 'The truth is,' concludes Borges's narrator, 'we all live by leaving behind.'

ON A HILL overlooking the nursing home where Maggie and Carol work there's a palatial university business school, set back from the road by a croquet lawn, and in it a small museum. It's not immediately obvious from the road, being hidden behind mature stands of chestnut, sycamore and Scotch pine. When I last visited it was spring: cherry blossom was out along the main road, and the croquet lawn was edged with bluebells. You wouldn't think you were in the midst of a city, and when the building was first constructed, it wasn't. It was designed in the style of an Italian palace as a 'hydropathic hospital' in the closing decades of the Victorian era, for fee-paying customers attracted by its peaceful location and a spring famous for its curative waters. The central tower has five storeys, the wings of it just three; high sash windows look north-west in the direction of Fife. In

1916 the hospital was requisitioned for the war effort and rechristened Craiglockhart War Hospital. Shell-shocked officers were sent there to recuperate following the atrocities of the Somme.

The small museum preserves the memory of how the building, between 1916 and 1919, was home to nearly two thousand officers – among them the poets Wilfred Owen and Siegfried Sassoon. One of the psychiatrists in residence, William H. R. Rivers, pioneered a new approach to those tortured by their memories. Rather than accuse the officers of cowardice or malingering, Rivers sought to understand how these men’s memories had become a torment, and how they might be induced to remember without pain.

In December 1917, Rivers addressed the Royal Society of Medicine in London on his work at Craiglockhart. To repress memories wasn’t pathological, he said, but a ‘necessary element in education and in all social progress’. Soldiers, said Rivers, usually learn over long periods of training to dampen their distress at war, and divert the powerful emotions generated in conflict into other channels. But the war had come too precipitously, and the training of the men had been inadequate: ‘Training in repression normally spread over years has had to be carried out in short spaces of time,’ Rivers wrote, ‘while those thus incompletely trained have had to face strains such as have never previously been known in the history of mankind.’ The problem in shell-shock was not repression *per se*, but maladaptive and ineffective repression. The only antidote to the poison of recurrent, traumatic memories was to bring them back into the light of remembrance, re-examine them with a psychiatrist, and hope that their emotional significance would fade.

One of Rivers’ cases was an officer who had walked out into no man’s land only to stumble over his friend’s head, torso and limbs, ripped apart by a shell. The officer tried to forget the appalling incident, but every night as he slept was gripped by nightmares of seeing again his mutilated friend blasted across the battlefield. He’d wake in terror, sweat soaking his pillow. Rivers realised that it was the man’s love for his friend which gave this horrific memory its power, and searched for some element of the experience that ‘would allow the patient to dwell on it in such a way as to relieve its horrible and terrifying character’. He focused the man’s reflections on the ‘conclusive evidence that [his friend] had been killed outright, and had been

spared the prolonged suffering which is too often the fate of those who suffer mortal wounds'.

According to Rivers, the man's face brightened at once: 'He saw that this was an aspect of his experience upon which he could allow his thoughts to dwell.' From that day, whenever the painful memory came to mind, he'd imbue it with the reassuring thought that his friend had been spared suffering. After a few nights the dream disappeared. Then it began again, but this time without fear or horror. In the second version of the dream he was able to direct his actions: he crouched down next to the dead friend, touched his belongings and gathered them, and was even able to converse gently with him about their shared grief.

In 1917, the year after Siegfried Sassoon was discharged from Craiglockhart, he contributed two poems to an anthology of war poetry, its title invoking those gods of Memory: *The Muse in Arms*. Throughout the anthology, there are images of war as a kind of delirium or madness. One of the poems contributed by Sassoon, 'The Rear-Guard', hints at a modest liberation achieved by leaving painful memories behind, though that liberation might be into death on the open battlefield:

At last, with sweat and horror in his hair,
He climbed through darkness to the twilight air,
Unloading hell behind him, step by step.

AFTER CHECKING GEORGE'S URINE in the en-suite bathroom I moved back to his bedside. Carol was sitting beside him now, stroking his arm and talking in a low, soothing voice. 'He has a urine infection,' I said. 'I'll just go out to the car and get some antibiotics for him.' Before leaving, I stood watching George for a moment. He still showed no sign of having noticed me, his lips continued to murmur, and sweat pooled at the corners of his eyes. I wondered how much of his memory had been lost in tangles of beta-amyloid and tau proteins, yet Carol had told me that, when well, he was able to remember much about the war seventy years earlier, and the stories behind each of his medals. With luck the antibiotics would nudge him out of his delirium, back to the habitual furrows along which his thoughts and his memories ran. In a delirium of memory loss we can lose much of what

we think of as identity; with treatment of his infection, and good care from staff like Carol, I hoped that George would find himself again.

Maggie led me back through three sets of doors, a different code punched in each time. We stepped out into the night. For a moment we stood together, savouring the moment of being between tasks, breathing open air. I walked over to the car, saw that two more visits had come through to the emergency services laptop, and picked up a box of antibiotics. On my way back towards the double doors I saw Maggie talking with the elderly lady I'd seen earlier – the one who had saluted me like a queen. She was explaining some urgent matter, eyes bright, hands animated. Maggie stood listening patiently, a hand on her shoulder, as if she had all night.

* Later sources speak of nine Muses, with fabulous names, including ‘lovely-voice’, ‘make-famous’, ‘heavenly-one’, ‘give-delight’, ‘beloved’, ‘song-celebration’, ‘many-hymns’, ‘dance-delighting’ and ‘flourishing’.

* There’s a suggestion that Borges himself possessed a prodigious eidetic memory. Many years after he had become blind, he was able to remember the book, page and which part of the page, he had first seen a particular quotation.

23

Death: The Celebration of Life

You can frighten people with death or an idea of their own mortality, or it can actually give them vigour.

Damien Hirst

A DETECTIVE INSPECTOR once told me that the key thing to remember at a crime scene was to keep your hands in your pockets; the temptation to reach out and touch a murder victim, or a potential murder weapon, could be overwhelming. He had little faith in forensic pathologists. ‘I was at a scene where a dead man lay slumped over a desk,’ he told me. ‘There was a narrow entry wound on the back of his head, and a hole in the victim’s forehead. A Bakelite phone on the desk was shattered into pieces – he had obviously been shot. The pathologist arrived: “Hmm,” he said. “Looks like we’re searching for a stiletto, or maybe a knife.”’

Once he was called to a high-rise block of flats. A body had been found in an advanced state of decomposition. ‘It was the strangest thing I’ve ever seen,’ he told me. ‘I had a witness saying she was alive only the day before, but the witness must have been wrong. There she was, turning into liquid.’

He had retired early, and I asked whether having dealt with so many murders had made him pessimistic about life. ‘Not pessimistic,’ he said, ‘but more philosophical. Enjoy it while it lasts.’

AFTER OUR BRIEF ENCOUNTERS in the clinic, my patients go out into the world, and it may be months or years until I see them again. Occasionally, I hear later from the hospital or the police that they've died. That death is usually in some way expected, or could at least have been anticipated. When death comes as a surprise, or is in some way suspicious, the body of the deceased goes for an autopsy, or post-mortem.

Recently, on the phone with a pathologist about a post-mortem report that she had prepared on one of my patients, I realised how rarely I had cause to speak to her or her colleagues. 'So much of my practice is guesswork,' I said to her, 'trying to figure out what's going on beneath my patients' skin. I envy you being able to take a look inside and figure out what's happening once and for all.' 'That's a misconception,' the pathologist, Charlotte Crichton, replied. 'We don't have all the answers either.' She invited me to come and see for myself.

I met Charlotte at 8.30 a.m. sharp, in her office, where she was busy with the police summaries for the morning's cases. There was a man whose body had been pulled from a river; fishing tackle had been found nearby. 'He might well have stumbled and drowned,' Charlotte said. There was a woman in her fifties, found dead on her sofa; Charlotte wanted to find out whether the woman had died of a heart attack, which seemed likely, or had been poisoned by gas or drugs. 'It's relatively unusual for us to do a post-mortem on a woman,' she said; 'it tends to be men who die violent or suspicious deaths.' Finally, there was a man with morbid obesity, found face down in his kitchen, who could conceivably have choked on some food he was preparing. The circumstances of each were detailed in a police report, listing witness statements, some medical history provided by the GP, and also any pertinent information provided by family members. There was a brisk professionalism about Charlotte's description of each patient, as well as an unmistakable curiosity. She was in the business of looking for answers, and hoped that the morning's work would deliver them.

I changed into blue hospital scrubs. Between the locker room and the autopsy suite was a tiled tray of the kind used to disinfect your feet at a swimming pool; rubber boots were lined up against the wall, next to a hose for washing them down. The suite was somewhere at the heart of the building and saw little natural light. There were three body-sized steel trays

at waist height; when there were enough pathologists around, autopsies could be carried out three at a time. The ventilators in the ceiling were designed to push air down and away from the noses of the pathologists. ‘At least that’s the idea,’ Charlotte said. ‘It doesn’t seem to work very well.’ Along one side of the room was a glass wall with seating behind it: a viewing gallery for students. A fluorescent purple Insect-O-Cutor blinked high on one wall next to a sign: ‘No eating, drinking or smoking.’ We tied on disposable aprons, rolled plastic gauntlets up our sleeves, tucked the gauntlets into surgical gloves, and were ready to start.

The first time I ever saw a dead body was in the first week of medical school, in the dissection room. It was the body of a man, partly skinned. Most of him was obscured under a linen cloth, but his right arm, stiff with rigor mortis, pointed at the ceiling. Preservatives had turned the muscles brown; they spiralled from the hand towards the elbow like ivy around a tree trunk.

In the mortuary, the first dead body – let’s call him Philip – was pulled out on a gurney. No linen cloth had been draped over him, no preservatives had been injected: his skin was grey and mottled, and for the most part intact, except where fish had nibbled. His eyes were half-open, and his head thrown back. The first task of the post-mortem examination was an external search for scratches, scars and injuries. Charlotte carefully examined his hands, nails and feet for evidence of a struggle, and pointed out that his right eye was bloodshot. ‘But look: his arm is reddened on the right too. So it’s only bloodshot from gravity, because he’s been lying on that side after he died.’

Charlotte took a scalpel and made a long cut from the notch at Philip’s throat to his pubic bone, and opened his abdominal cavity. Whether in operating theatres or anatomy classrooms, I’ve always been stunned by this moment of revelation: that just a few millimetres below the skin lies a glistening clockwork intricacy, the mechanisms that keep us alive. Philip had been dead for a few days, and his viscera were beginning to turn – I had to stifle a gag. But Charlotte was deft and businesslike (‘I only wear a mask when there are maggots’);^{*} she cut through his rectum and oesophagus, then lifted out all his major abdominal organs – liver, spleen, stomach, intestines – in one piece and onto a plastic tray. Left behind was a hollow, exenterated space. The tray was placed on an examination table for later, and we turned

back to the corpse.

The main artery of the leg enters the pelvis just to one side of the bladder. Charlotte squeezed some blood from it, to be sent away for analysis of drugs and toxins. ‘From my clinic I usually send urine for toxicology,’ I said. ‘So do we,’ she replied. But where I would send the patient off to the loo with a tiny sample bottle, she made a small hole in the top of the bladder with a knife and sucked some urine out with a syringe.

The next step was a delicate dissection of the neck – strikingly gentle after the vigorous opening of the abdomen. There are several layers of muscles in the neck, all of them involved in speech or swallowing. Charlotte peeled away the layers one by one, looking for signs of bruising or haemorrhage – anything that might suggest strangulation. (In anatomy class I was taught the same dissection; like an archaeologist tenderly brushing away earth, the tutor would elevate each strap muscle, eventually reaching the nerve that lies beneath.) There were no signs of bruising or struggle, and the hyoid bone – a C-shaped structure that anchors the tongue – was unbroken. ‘No signs of strangling or hanging,’ Charlotte said. ‘It’s always good to document it if you accidentally break the hyoid or the larynx in the removal, just in case the body is exhumed for a repeat examination.’

During the frontal cut Charlotte had left the ribs themselves untouched. Now she used secateurs to cut their front ends, all the way up to the collarbones. She cut those too, and lifted away the breastbone to expose the heart and lungs, gleaming in the chest. The heart is held within a tough membrane called the pericardium; Charlotte took care not to pierce it. Then she nimbly cut a U-shaped slice through the floor of the mouth and, because the neck muscles had already been dissected, she was able to pull the tongue, throat, windpipe, lungs and heart away in one piece.

Philip’s tongue lay on the dissection tray, slippery and purple, still attached to his throat and gullet. Charlotte began to make neat, precise cuts across its length looking for evidence that it had been bitten or chewed – injuries that might suggest the dead man had suffered an epileptic seizure or a biting struggle just before death. The tongue was normal, so she turned back to the table to deal with the head.

While we’d been busy at the dissection tray, the mortuary technicians had cut across the top of Philip’s scalp from ear to ear, exposing the skull, then peeled the forehead skin forwards over the face. The scalp had also

been pulled backwards, and the calvarium – the dome-like part of the skull – removed to reveal the brain. Charlotte scrutinised the membranes and confirmed that there was no evidence of haemorrhage or meningitis, then extracted the brain itself for examination.

Our brains can't bear their own weight out of the skull – that's why they float in briny cerebrospinal fluid, as the foetus floats weightless in the womb. Charlotte placed the brain to one side, creamy and grey, and it sagged into the contours of the tray. Then she stripped back the opalescent meninges of the skull and we peered into the smooth bowl of its base, where the nerves to the face, ears, eyes and tongue enter and exit. 'Have you ever seen an acoustic neuroma?' I asked her – a relatively rare tumour on the nerve running to the ear. 'Oh yes,' she said, 'they're commoner than you think.'

Charlotte pointed out the pearly translucence of the bone overlying the mechanism of the inner ear. 'Can you see it looks purplish – that's blood behind the bone, in the inner ear. You'd think it was a sign of head trauma, but we see that often in drownings.'

'Why?' I asked.

'Gravity,' she said. 'When bodies are carried along in the water they usually float head down, and blood within the veins and arteries begins to leak out of the blood vessels and into the inner ear.'^{*}

There were no fractures in the skull that we could feel. The mortuary technicians packed the space with cotton wool and put the calvarium back on. The skin was stitched over as if the brain had never been disturbed.

What was left of Philip lay on the stainless-steel table. All of his major organs had been removed, his abdomen disembowelled, his chest excavated, his ribcage splayed open. Charlotte cradled his head on the now spindle-thin neck, and rocked it gently from side to side, to feel if there were any broken bones. Because his throat and windpipe had been removed it was possible to run a finger along the front of the neck's vertebrae, to check they were all in alignment. Using a knife, she meticulously divided each rib from its neighbours, and moved it back and forth to feel if there were any fractures. The limbs and pelvis were left to themselves: 'There's not much that can kill you in the limbs,' she said. 'And now for the cut-up.'

All the major organs were now laid out in a couple of trays (as a medical student, this was the only part of a post-mortem I'd been allowed to see).

Charlotte proceeded methodically, at times with extraordinary finesse. There were moments when she slowed down and scrutinised the tissue in her hands as if struggling to read arcane script. Her examination of the heart, for example, involved making scores of tiny cuts through each of the coronary arteries, looking for any clots that might have caused a heart attack. There were moments too when she moved at speed, such as when she bisected each kidney, or cut the liver into broad slabs to look for cancer and cysts. It was surprising how much of the work she did by feel. ‘Some livers are greasy with fat,’ she told me. ‘Feel here’ – she held out a lobe of lung – ‘that rubberiness means it’s infected, but in the healthier tissue it feels airy and light. Emphysema feels different again; *too* light and airy, like bubble wrap.’ There was a creamy yellow plaque on the surface of one of Philip’s lungs (‘he had probably worked with asbestos’), and Charlotte took a wedge of it away for further examination under the microscope.

Each organ was weighed and carefully catalogued on a whiteboard at one end of the room. ‘We’re so used to the big hearts of overweight men that it comes as a surprise when we find one of normal size. We start thinking there’s something wrong with it.’ Charlotte opened Philip’s heart to examine its chambers, then looked in the pulmonary arteries for evidence of the jelly-like clots of pulmonary embolism. She guided my fingertips onto the lining of Philip’s aorta: it was porridgy, suggesting that he’d had high cholesterol – ‘Another big problem among the Scottish population,’ she said.

The tongue, throat and larynx had already been examined; now Charlotte looked along the length of the windpipe for tumours, then opened it from behind to look for any obstructions that might have caused choking – there were none. ‘There’s not much of interest generally in the abdomen,’ she said, ‘although we do sometimes see tumour seedlings from the bowel, and there are usually plenty of gallstones. See?’ She handed me Philip’s gall bladder: it felt like a bag of dice.

‘Do you ever find anything in the pancreas?’ I asked. ‘Sometimes tumours, sometimes a big gallstone blocks its exit, but usually not much.’ The pancreas generates the enzymes necessary to digest our food, and after death those enzymes are released. As a result, the pancreas auto-digests; the clean contours of the organ transform into liquid as it relents to its constituent parts.*

The long, smooth knives used in autopsies are known as ‘brain knives’ because their principal use is to cut sections through the brain. Charlotte methodically made sections across the brain’s width, starting at the front and moving slowly towards the back, each slice about a centimetre in depth. She did the same with the cerebellum, cutting through the connections that sustained his thought and his identity, hoping to reveal what might have brought about his death. All the sections were then arranged on a slab so that Charlotte could take in the whole structure of Philip’s brain in one glance. The brain was partly decomposed, yet the grey and white matter appeared distinct. There were no tumours, cysts or evidence of bleeding. Charlotte took samples from the hippocampus, and part of the cerebellum (the ‘dentate’). ‘They’re the parts of the brain most sensitive to lack of oxygen,’ she said, ‘so will show if he was struggling for air before he died.’

In the brains of people with Parkinson’s disease, pathologists notice an absence of dark tissue towards the brainstem – the so-called *substantia nigra*. ‘With vascular dementia,’ Charlotte said, ‘you see little speckles through the brain, and also in chronic carbon monoxide poisoning. In multiple sclerosis there are jellied pink areas, where the nerves’ fatty sheaths have broken down.’

All of Philip’s organs were placed back in the cavities of his chest and abdomen, and the wounds were stitched up until he looked just as he had when he was rolled into the autopsy suite. The samples Charlotte had taken were labelled, and would be sent off for further examination. ‘The toxicology will go off to the lab too,’ she said, ‘and we’ll see whether he might have been poisoned. But often post-mortem is inconclusive. It looks like he had a chest infection, he doesn’t seem to have been assaulted, and there was no obvious reason for a collapse.’

‘So what happens now?’

‘The procurator fiscal will take my report into account, but it’s only one part of the evidence.* It’s up to her to decide whether the death was suspicious, not me.’

I knew the routine now. Taking less than an hour with each, Charlotte performed the same sequence of examinations on the other two bodies. When we opened the skull of the woman in her fifties there was blood: she had died of a massive brain haemorrhage, not a heart attack. ‘What would the actual mode of death have been?’ I asked Charlotte.

‘She’s likely to have died very quickly,’ said Charlotte as she lifted out the woman’s brain; ‘either a rise in pressure within her cranium because of the haemorrhage would mean that blood couldn’t reach and circulate within it, or a brainstem seizure would have terminated her breathing, or even stopped her heart. Look, there’s the ruptured one,’ she said, gesturing among the small aneurysms that hung like grapes beneath the trellis of her brain. It looked like a tiny, deflated wineskin.

The obese man had indeed choked: when we opened the back of his windpipe, we found incontrovertible lumps of potato. ‘And with asphyxiation?’ I asked. ‘How long would it have taken him to die?’

‘He wouldn’t have suffered much either,’ she said, guessing what I was really asking. ‘Forensic studies of asphyxiation have found you lose consciousness within about ten seconds. By twelve or fifteen seconds, seizures begin.’ She went on to explain how, at first, blood would have gone on pumping between the man’s failing heart and his unconscious brain, until a tipping point was reached – oxygen deprivation would have begun to cause irreversible damage to both organs. I thought back to biochemistry class, and how delicately haemoglobin molecules are calibrated to sustain life. By the time he lost consciousness the man’s haemoglobin would have changed from a bright, lava red to a dusky amethyst purple. ‘With less oxygen in the blood, there comes a point when heart muscle can’t carry on,’ Charlotte said; ‘it goes into ventricular fibrillation, and the pulse stops.’

Processes all across the body that for decades had maintained life, stitching it together moment to moment – the filtering of blood in the kidneys, the sifting of toxins in the liver, the maintenance of breath in the brainstem – would have slowed to a stop over minutes. ‘By three or four minutes into an asphyxiation,’ said Charlotte, ‘there are no more signs of life.’

WHEN WE HAD FINISHED the last post-mortem I stripped off my apron, gauntlets and gloves, and hosed down my rubber boots. I stood for a long time in the shower, trying to wash off the smell of human dissolution. I had a clinic to go to in the afternoon, and so changed back into trousers, collar and tie, then went back through to Charlotte’s office. She was writing up her findings. As I walked in she looked up and smiled.

‘So what did you think?’ she asked.

‘You see so much death,’ I said, straightening my tie; ‘how does it affect you?’

She paused, and looked back to her papers. ‘I don’t think about it too much,’ she said at last. ‘But’ – she took a deep breath then smiled again – ‘a morning of post-mortems, it always makes me want to celebrate being alive.’

On the main road outside, a dead rat had been flattened by traffic; a crow was picking at its remains. I got on my bike and pedalled half a mile to my own clinic.

All that afternoon, and for a couple of months afterwards, after-images from the post-mortem room flashed through my memory. ‘Autopsy’ means ‘to see for oneself’ – it felt as if a veil had been pulled aside, and a terrible fragility revealed. I’d be talking with a patient then suddenly imagine them laid out on the mortuary slab, their eyes glazed, their blood cold and dark. Those moments were shocking, but also somehow motivating. Medicine is in some ways the art of postponing death, and I returned to my work with new energy.

* Forensic pathologists have to be entomologists too: the species of insects found on the body can predict the time of death to a remarkable degree. Edinburgh’s pathology department are developing new charts that take into account Scotland’s colder climate, and different patterns of insects.

* Thomas Browne quotes Pliny’s insistence that drowned women float prone, and drowned men belly up, *veluti pudori defunctorum parcente natura* – ‘nature modestly ordaining this position to conceal the shame of the dead’. He was wrong.

* Thomas Browne, *Urne Buriall* I. ‘Some, being of the opinion of Thales, that water was the original of all things, thought it most equal to submit unto the principle of putrefaction, and conclude in a moist relentment.’

* A Scottish role roughly comparable to that of a coroner.

24

Transformations

How long can this go on? But let us by all means extend the scope of our charts.

Annie Dillard, *Holy the Firm*

JUST UNDER FOUR THOUSAND people are registered with my medical practice, and at times their difficulties seem to flow like a torrent through the clinic. But I'm conscious that my colleagues and I catch only the briefest glimpse of their lives, our consultations just momentary eddies in a vast tide of human life. Across the span of a morning clinic I might arrange an admission to a hospice, mitigate a storm of anxiety, explore a worrying discomfort, medicate a feverish baby, adjust some antipsychotics, assess a healing fracture. I might celebrate a remission of cancer, or commiserate over its diagnosis; voice congratulations on the safe birth of a baby, and condolences over the death of a spouse. Some of the work is modest and routine, some is urgent and dramatic, most of it is rewarding and worthwhile. At its best, medicine invokes and influences human change, and the possibility of change means hope.

There's a quick walk I can take from my medical office up to an outcrop of cliffs overlooking Edinburgh's city centre. The cliffs are known as 'Salisbury Crags', and the land around them has long been a protected royal park. The view from them always grants perspective. Their rock is of

cooled magma, thrust out more than three hundred million years ago by the pleating and wrenching of the earth's crust. Scotland lay nearer the equator then, and the local bedrock – an uplifted ocean floor – was already ancient. You can still see the step between the softer sandstone base and the hard magma intrusion of the cliffs. For centuries, the city streets were cobbled with the durable rocks of Salisbury Crags.

In the 1780s a local physician, chemist and farmer called James Hutton examined the crags, and realised what they testified: the earth's surface was not static, but slowly churning. He delivered a paper to the Royal Society of Edinburgh arguing that the sandstone beneath the crags had been created 'in the unfathomable regions of the sea', before rising up to become land. He was resurrecting an ancient idea: in the *Metamorphoses*, Ovid described land and sea caught in cycles of transformation, one into another: 'I have seen what once was solid earth now changed into sea,' Ovid wrote, 'and lands created out of what once was ocean.' Hutton summoned a vision of eternal, universal flux: 'we find no vestige of a beginning – no prospect of an end.'

From my habitual perch on the clifftop I can see my practice area laid out below me like a living map. Patches of cloud shadow and light move over the face of the city, merging and dividing. The fluid lives of my patients are reflected in the street movements of cars and pedestrians. From up there I can see the old medical school and the adjacent park of elm and cherry trees, where I first had a revelation of the dynamism and elegance of biochemistry. There's the tree where Gary Hobbes fell, convinced he'd become a cat, as well as the housing scheme where Hannah Mollier conceived three pregnancies, and Harry Alkman injected himself with bodybuilding drugs. There are the bars and tattoo parlours my patients frequent; their apartments, offices and college halls. To the north, there's the

morgue, to the south, the crematorium, and between them, the green baize of several burial grounds. There's the rehabilitation hospital I refer to for prosthetics, and the sexual health centre with its menopause and gender clinics. Off to the west there's the hill of Craiglockhart, where W. H. R. Rivers sought the redemption of war memories; closer by there's the dementia centre run by his heirs. Visible too is a research institute where, even now, genetic mutations that were millennia in evolution are being replicated in minutes. Our species has the power now to transform its own DNA – an ability that may yet prove a curse, or a consolation.

Ovid's *Metamorphoses* ends on a note of optimism. It conjures a vision of the citizens of Rome, out on the streets to receive the god of medicine who has journeyed from Greece to save the city from a pestilence. The god arrives in the form of a snake, symbol of transformation and renewal; it winds through the streets before coming to rest on an island that divides the flow of the river Tiber. Once there, the god 'resumed his divine appearance, put an end to the citizens' distress, and brought health to the city by his coming'. The final lines see Julius Caesar deified, hoisted to heaven, and transformed into a star. Ovid proclaims that the magnificence of his own poem has rendered him immortal. But no one is immortal, nothing is eternal, everything is in flux – even the stars.

This world always was, is, and will be an ever-living Fire, with measures of it kindling, and measures going out... it rests by changing.

Heraclitus, *Fragments* 30, 84

Gratitude

TWENTY YEARS OF REMEMBERED clinical encounters are the inspiration for this book, and the people to whom I'm most grateful are my patients. The requirement to honour their confidentiality means that they must go unthanked individually. I'm also thankful to Andrew Franklin, Cecily Gayford and Penny Daniel of Profile, and Kirty Topiwala of the Wellcome Collection, for their trust, support and editorial talent. Susanne Hillen copy-edited the manuscript beautifully. A bouquet of gratitude too for Jenny Brown – the only literary agent I know who offers babysitting.

I'm grateful to Lee Illis for his insights into porphyria and lycanthropy, and Genevieve Lively for permitting me to quote from her book on Ovid. Some ideas in 'Conception' were inspired by Thomas Laqueur's 1986 essay 'Orgasm, generation, and the politics of reproductive biology'. Carrie Vout of Cambridge University kept me right with Ovid, and with Hercules. Douglas Cairns kept me right with Heraclitus and with Nicander. 'Bodybuilding' couldn't have been written without Sven Lindqvist's *Bench Press*. Claire Preston's work on Thomas Browne was instrumental in the writing of 'Scalp'. Malcolm MacCallum at the University of Edinburgh has given enormously of his time and energy in supporting my research for this book. Thomas Morris's *The Matter of the Heart* helped me in writing 'Birth' and Marina Warner guided me through European and Near Eastern rejuvenation myths. I gratefully acknowledge the contribution to 'Anorexia' of Katy Waldman's brilliant *Slate* essay 'There once was a girl'. For 'Hallucination', I gratefully thank Theresa Kiyota and acknowledge the influence of Paul and John Lysaker's 2010 'Schizophrenia and alterations in self-experience'. Thomas Williams of the University of Edinburgh and Louise Bath of Edinburgh's Royal Hospital for Sick Children both gave

generously of their time and their thoughts in helping me with ‘Puberty’ and ‘Gigantism’, as did James Hall and Iain McClure. For ‘Pregnancy’, I’m grateful to Chitra Ramaswamy for allowing me to quote from her book *Expecting*. Maggie Nelson graciously permitted me to quote from *The Argonauts*, and Elan Anthony to quote his views on detransitioning. I’m grateful to Professor Dick Swaab for confirming with me the details of the post-mortem studies quoted in ‘Gender’. Diane Mickley permitted me to quote her views on anorexia. Thanks are due to Professor Jo Arendt for supervising my Masters thesis on circadian clocks in Antarctica – some of the material in ‘Jetlag’ is thanks to her. James Kern generously gave permission to quote his words on the redemption of unwanted tattoos. I’m grateful to Stephen Owens, Kalilu Sanneh and Conor Doherty, for welcoming me to Keneba in the Gambia. Thanks to Ailsa Gebbie for inviting me to her menopause clinic in Edinburgh, and to the late Ursula Le Guin, Louise Foxcroft, Germaine Greer and Iona Heath, for giving me permission to reproduce their reflections on the menopause, published and unpublished. Sergio Bestente introduced me to Martha Feldman’s book *The Castrato* and is a fine editor and friend; thanks to the estate of Anatole Broyard for giving permission to quote from his collection of essays. Penguin Books granted kind permission to quote from *Metamorphosis* by Ovid. trans. Mary M. Innes. Copyright © Mary M. Innes, 1995. Andrew Gannon, Olivia Giles and Jamie Andrew all gave generously of their time in helping me understand more about their use of, and work with, prosthetic limbs. Professor Richard Morris of the University of Edinburgh shared his ideas on memory and brain injury. Thanks to Karen Edgar in New York, and the estate of Alexander Luria in Moscow, for permitting me to quote Luria’s letter to Oliver Sacks, previously published in *The Man Who Mistook His Wife for a Hat*. Damien Hirst kindly granted permission to quote his comments to *The Telegraph* on death and vigour. David Farrier and Peter Dorward read an early version of the typescript and gave insightful comments.

An early version of ‘Gender’ first appeared in *The New Republic* in November 2015; the writing of it, with the help of Sarah Kennedy and Jennifer Whyte, set me off on a journey into human transformation. I’m grateful to the editors for permitting elements of it to be reproduced here, and to Laura Marsh and Emma Foehringer Merchant for their skill in

editing it. Earlier versions of ‘Werewolves’ and ‘Death’ first appeared in the *London Review of Books*; I’m grateful to Mary-Kay Wilmers for permitting them to be reproduced here, and Paul Myerscough for editing them so attentively. Some of the material in ‘Sleep’ was unearthed during research for my essay ‘Cerebral Hygiene’, published in the *London Review of Books*, and material on the networks of synaptic plasticity reproduced in ‘Memory’ was courtesy of research for my piece on Santiago Ramón y Cajal, ‘In The Flower Garden of the Brain’ in *the New York Review of Books*.

My colleagues at Dalkeith Road Medical Practice are incomparable: thanks to Teresa Quinn, Fiona Wright, Ishbel White, Janis Blair, Geraldine Fraser, Pearl Ferguson, Jenna Pemberton, Lynsay McDonald, Sharon Lawson, and Nicola Gray.

My final thanks are to Esa, for all the changes so far through the seasons of our lives.

True North: Travels in Arctic Europe
Empire Antarctica: Ice, Silence and Emperor Penguins
Adventures in Human Being

WELLCOME COLLECTION is a free museum and library that aims to challenge how we think and feel about health. Inspired by the medical objects and curiosities collected by Henry Wellcome, it connects science, medicine, life and art. Wellcome Collection exhibitions, events and books explore a diverse range of subjects, including consciousness, forensic medicine, emotions, sexology, identity and death.

Wellcome Collection is part of Wellcome, a global charitable foundation that exists to improve health for everyone by helping great ideas to thrive, funding over 14,000 researchers and projects in more than seventy countries.

**What is the point of life?
There does not have to be a point.
It just is.
Enjoy.**

David Icke

Quotes by 13th century Persian mystic Jalāl ad-Dīn Muhammad Rūmī widely known simply as Rumi. His words are confirmation that nothing is new. It has only been forgotten:

The universe is not outside of you. Look inside yourself; everything that you want, you already are.

You are not a drop in the ocean.
You are the entire ocean in a drop.

Stop acting so small. You are the universe in ecstatic motion.

Why do you stay in prison when the door is so wide open?

Raise your words, not voice. It is rain that grows flowers, not thunder.

Take someone who doesn't keep score, who's not looking to be richer, or afraid of losing, who has not the slightest interest even in his own personality: He's free.

And one that I can seriously relate to ...

Run from what's comfortable. Forget safety. Live where you fear to live. Destroy your reputation. Be notorious. I have tried prudent planning long enough. From now on I'll be mad.

I've been 'mad' for 30 years. Try it – it's wonderful.

I'm Not Crazy.
My Reality is Just Different Than Yours.
People might think you're crazy for what
you believe or wear or say, but it doesn't matter.

Cheshire Cat in *Alice in Wonderland*

Alice: 'Have I gone mad?'

Mad Hatter: 'I'm afraid so, but let me tell you something, the best people
usually are.'

Alice in Wonderland

Though I may not know the answers,
I can finally say I'm free.
And if the questions led me here, then,
I am who I was born to be.

From *Who I Was Born to Be*, written by Audra Mae
and recorded by Susan Boyle.

The Prologue

When I discover who I am, I'll be free – Ralph Ellison

I am going to expose from 30 years of research and experience in a long list of countries what I say is really happening in the world and why. These are my perspectives and they don't have to be yours, but in the wake of the 'Covid-19' police state impositions worldwide they surely become near impossible to deny any longer.

It is ever more blatantly obvious that what I have been saying for decades was planned to happen *is* happening as global society transforms so quickly in the image I have predicted. Events have never moved so fast in that direction than during the manufactured 'Covid-19' hysteria and fascistic national lockdowns in which billions were put under actual and virtual house arrest across the world. Eighty-five percent of this book was written before these draconian impositions were rolled out – based on a lie – and I have decided to hold back on the 'Covid-19' story and its catastrophic human impact through economic Armageddon until the late-added chapters near the end which expose in detail both the nature of the 'virus' scam and why it was perpetrated. I will of course refer to the 'virus' briefly here and there before then, but I want you to read the rest of the book and the information that I laid out *before* the 'virus' blitzkrieg because then the who and why of the 'virus' hoax will be devastating in their clarity and context. Nothing in my lifetime has so proved my point about global control than the staged illusion of 'Covid-19'. To emphasise – *Please note when you see my comments relating to the 'virus' that the text around them was written before the 'virus' hysteria and lockdowns began.*

Figure 1: All these decades later the mainstream media is still using the same CIA propaganda term for those who are aware that governments lie to us.

Is it really random coincidence that what I have written for three decades was planned for humanity is now so clearly happening? Or is it the most glaring evidence and confirmation of a calculated agenda for total human enslavement? I vociferously say the latter and I am confident that by the end of this book with the dots and strands connected you will agree that coincidence theory is simply not credible in the face of the evidence. I'll make it very clear what I say is going on, but I want the *evidence* to speak for itself and for you to decide what it means. With that said we shall begin. I have been exposing for 30 years a conspiracy to enslave humanity in an Orwellian global tyranny of total control – ultimately (and very

soon if we don't wake up fast) by connecting artificial intelligence to the human brain so that AI *replaces* the human mind. That's crazy? It's happening step-by-step before our eyes right now. 'Human' thinking and emotions would be history and our perceptions dictated directly by AI and those that control AI. It's no good people screaming 'conspiracy theory' – a term brought into widespread use by the CIA in the 1960s as it sought to discredit those questioning the ludicrous official story of the Kennedy assassination ([Fig 1](#)).

These are definitions of the term 'conspiracy': An evil, unlawful, treacherous, or surreptitious plan formulated in secret by two or more persons; a combination of persons for a secret, unlawful, or evil purpose; an agreement by two or more persons to commit a crime, fraud, or other wrongful act; any concurrence in action or combination in bringing about a given result. On that basis the world is drowning in conspiracies at every level of society, but to the mainstream media, indeed the Mainstream Everything, conspiracies don't exist and anyone who says so is a kook peddling a 'conspiracy theory'. Yes, even in the light of the draconian, fascistic impositions of the 'Covid-19' hoax. What I have been exposing since 1990 is not multiple unconnected conspiracies (though they do exist by those definitions alone). I have uncovered *one* conspiracy with multiple faces driving human society to the same despicable end and what I have revealed is not a 'theory'. It is an obvious reality unfolding by the day as AI takes over human life and freedom is deleted. The crazies in the Devil's Playground of Silicon Valley are now telling you that what I have been warning about for so long is indeed what is planned to happen. They are doing so because they have no choice as AI takes over and cannot be hidden any longer. The sales-pitch is the emergence of a new era in which humans will be 'gods' thanks to a connection to AI when, in truth, the 'new human' will be post-human and no longer 'human' at all. Insiders like Google executive Ray Kurzweil even point to the year of 2030 for when this will be seriously underway and human brains will be connected to the AI 'cloud'. He said:

Our thinking ... will be a hybrid of biological and non-biological thinking ... humans will be able to extend their limitations and 'think in the cloud' ... We're going to put gateways to the cloud in our brains ... We're going to gradually merge and enhance ourselves ... In my view, that's the nature of being human – we transcend our limitations.

As the technology becomes vastly superior to what we are then the small proportion that is still human gets smaller and smaller and smaller until it's just utterly negligible.

Figure 2: How human perception is manipulated into a myopia of possibility. Control information and you control perception. (Image Gareth Icke.)

This is what I have called 'the assimilation' as human awareness is absorbed into AI and that which is truly behind AI. I don't mean the middlemen and women of Silicon Valley. Even the tech billionaires are not the engineers of all this. They are merely the oil rags, albeit very rich ones. What is happening today is the endgame in a story that has spanned thousands of years as we perceive the illusion of 'time'. Our human sense of reality was infiltrated long ago by a force that is not human which has created a global

hierarchy of control with its representatives and agents manipulating human perception century after century on the road to *total* enslavement ([Fig 2](#)). By controlling perception you control experience individually and collectively in a cause-and-effect that I will be explaining in detail. The plan has demanded the constant centralisation of power as a bottom-line imperative. With every step in that direction fewer and fewer people seize more control over the population. Tribes became nations and nations are becoming superstates like the European Union and trading blocs controlled from the centre. Decisions are being made increasingly through global corporations and institutions like the United Nations and the World Health and Trade Organizations. People have long called this conspiracy (while not realising it's a conspiracy) 'globalisation'. What is this? The global centralisation of power over every aspect of human life – the very plan I have been exposing for decades. We now have the centralisation of control in Silicon Valley over the flow of information from which people form their perceptions of events and reality. Hysterical Silicon Valley censorship by Google, Facebook, Twitter, Amazon and all the rest (controlled from the shadows by the same force) is aimed at dictating everything you see and hear and, through that, manipulating your *perception* of everything. Even that won't be necessary with an AI connection to your brain. Your perceptions would then be delivered directly.

This has always been the goal of the non-human infiltration of human society via its agents and operatives in apparently human form. The technological cutting edge that we see in the public arena is as nothing compared with technological knowledge in other realities where what is today called 'smart' was known about while history records humans knocking rocks together and living in caves. The constant flow of 'new inventions' that daily deepen human control have been waiting for humanity to reach a point of intellectual development where it could build and operate its own technological prison. This is where we are today. Gadgetry and communication systems required by the global prison are playing out into public awareness from underground bases and secret projects with cover stories and cover people hiding the truth of where it all comes from. The flow of technology is seamless for this reason. There are no 'seams' or big delays as the manipulators wait for the next stage to be 'invented'. There are no gaps as technological limitations are pondered for decades and overcome. Almost by the week the next stages of technological AI are revealed and the pace is ever quickening. Humanity has been perceptually-manipulated to develop the intellectual capacity ('cleverness') to build and operate its own technological Alcatraz while not developing the wisdom to see that this is what we are doing. I have been saying for decades: Cleverness without wisdom is the most destructive force on earth. So it is proving and not by accident, but design. Cleverness is so often confused with wisdom. Cleverness knows about information while wisdom knows what it means and sees its consequences. It is clever to build an atomic weapon, but not wise to do so. I have exposed the conspiracy, ancient and modern, in enormous detail and the non-human force orchestrating from the shadows and realities unseen by the human eye. You can find this information in ... *And The Truth Shall Set You Free*, *The Biggest Secret*, *Children of the Matrix*, *Tales From The Time Loop*, *The David Icke Guide to the Global Conspiracy*, *The Perception Deception*, *Human Race Get Off Your Knees*, *Phantom Self*, *Everything You Need To Know But Have Never Been Told*, *The Trigger*, and other books. My focus here is on how human perception has been manipulated to follow the path the control system has decreed and from this knowledge point to *The Answer* that will set us free. That answer relates to who and what we really are and to escaping the fake self-identity that we are told and pressured to believe in. To know who we are, where we are and how the two interact is the whole foundation of human freedom which is why every effort is made to keep us in ignorance of that information and awareness.

How it's done

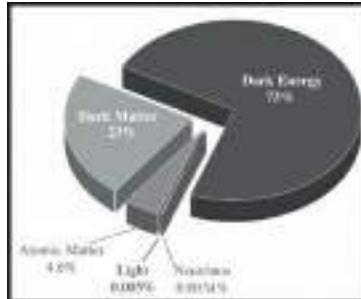

Figure 3: The almost infinitesimal band of frequency that we call ‘light’ or the electromagnetic spectrum. Scientists call that which we can’t see ‘dark’ which I contend is erroneous in their version of reality. ‘Dark’ should be simply considered beyond human sight.

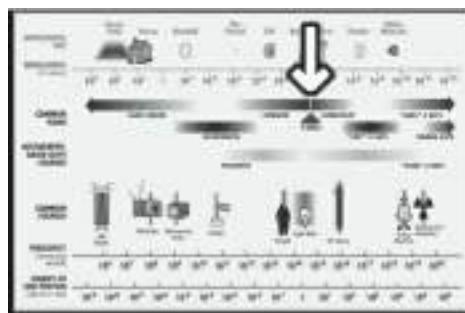

Figure 4: Visible light, which is the only reality we can ‘see’, is a fraction of the 0.005 percent. The human five senses are aware of only one ‘TV channel’ within Infinite Existence.

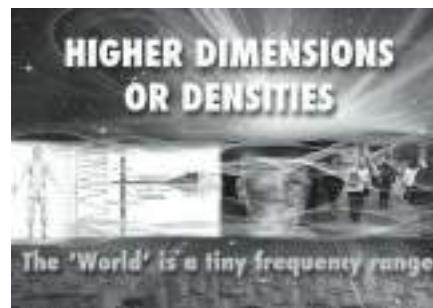

Figure 5: Our ‘world’ is a band of frequency within Infinite Reality.

Some brief but essential background is required for those new to my work about the overwhelmingly hidden hierarchical structure driving the direction of human society on behalf of the non-human force that it represents. Without awareness of this structure and how it works the context of world events simply cannot be understood. I have long used the concept of the spider and the web. The Spider is the non-human force operating beyond the *extraordinarily* narrow frequency band of five-sense human perception. People think they can see all there is to see in the ‘space’ they are observing; but they can’t. They are seeing only a tiny fraction of what exists around us and within us. The electromagnetic spectrum (including radio waves, microwaves, infrared, ultraviolet, X-rays and gamma rays) is only 0.005 percent of what exists in the universe in various forms of energy and reality. Some scientists say it’s a bit more, but not much. The point is that the electromagnetic spectrum is a fraction of what exists beyond its band of frequency and humans can’t see the almost totality even of that spectrum. Human sight – everything we perceive as a visual reality or ‘the world’ – is confined to a micro-segment of the 0.005 percent known as visible light ([Figs 3 and 4](#)). We are limited in our visual perception to a minuscule band of frequency and that is only by the terms that mainstream science can currently measure or thinks it can ([Fig 5](#)). In truth what we ‘see’ is even more myopic in comparison to Infinite Reality that exists

beyond the firewalls of visible light and the illusory limits of the speed of light. Watch television or listen to radio and you perceive only what is being broadcast by the channels and stations you have chosen. All the other channels and stations exist in the same room but you are not aware of them unless you change the channel or move the dial. When people ask why if this non-human force is real we can't see it – this is why. It operates from realms of frequency outside the human band of visual reality and is invisible to us in the same way that when you are tuned to TV station 'A' you can't see TV stations 'B', 'C' or 'D' even though they exist. Change channel and you switch from station 'A' and connect with one of the others. Station 'A' doesn't disappear when you switch; it's only that you are no longer connected to its wavelength or output and so you can't see it. I have just described what happens when we 'die' (or rather don't – only the body does). Our consciousness changes 'channels' or moves its point of attention. This is that all death is – a transfer of *attention* from one reality to another. The source of human control is hidden from us although non-human entities representing this force can move in and out of our reality by entering our band of visual frequency and then withdrawing. Accounts are legion of people claiming to have seen entities or craft 'appearing out of nowhere' and then 'disappearing' in a flash. They don't appear or disappear. They enter the human band of visual frequency and then leave. To the observer they have appeared from nowhere and disappeared into nowhere when it is just a case of now you see it, now you don't, as it comes and goes from visible light. What does a TV channel do when you switch to it? What does it do when you switch away from it? The channels, or realities, appear 'out of nowhere' and then 'disappear into nowhere' when in fact they don't go *anywhere*. We only connect and disconnect with them.

The Web

Figure 6: The compartmentalised web of secret societies, semi-secret and public organisations that allow the 'Spider' hidden at the centre to impose its agenda on human society. (Image Neil Hague.)

What I call 'The Web' is the interconnecting secret society structure that allows the Spider in the hidden to dictate events in the seen ([Fig 6](#)). Strands in The Web close to the Spider are the most exclusive secret societies and their initiates will know the detailed Spider agenda and where it is planned to go.

Communication with the Spider directly and through satanic ritual allows these inner-strand initiates to know about technological possibility way before it appears in the world of the seen and to secure the transfer of technological knowledge long before its official time of release. If you have access to this inner sanctum of The Web, or penetrate it through decades of work, you can predict what we perceive as the 'future' – including the technology involved – because the 'future' in this sense is only the Spider agenda being spun. If there is a plan for the world and nothing intervenes to stop that plan then it will happen and revealing the plan becomes predicting the future. My books over the decades have proved extraordinarily accurate in predicting events for this reason – including a plan for 'pandemics'. The whole

point of what I do is to alert enough people so that humanity *does* intervene and stop the planned outcome of total human control. Famous 'see-the-future' writers such as Aldous Huxley (*Brave New World*, published in 1932) and George Orwell (*Nineteen Eighty-Four*, published in 1948) have proved to be so accurate because by whatever means they were able to penetrate the Spider agenda and could predict technology and other possibilities that didn't exist at the time of their writing. As we move out in The Web from the Spider and the inner-sanctum initiates we meet the secret societies that we do know about in terms of name if not actions. These include the Knights Templar, Knights of Malta, Opus Dei, the Jesuit Order, Freemasons and many others which have an interlocking command structure if you go deep enough. Most of their members will not be aware of their interlocking nature and the agenda their controlling core is pursuing. Different levels or 'degrees' are compartmentalised from what those above them know ([Fig 7](#)). Human society is arranged in the same way with the great majority in any organisation kept in ignorance of what the few at the top know and are seeking to impose. They are pawns and foot-soldiers for an agenda they don't even know exists. Intelligence agencies (themselves structured as secret societies) are classics of this compartmentalisation or 'need to know' technique.

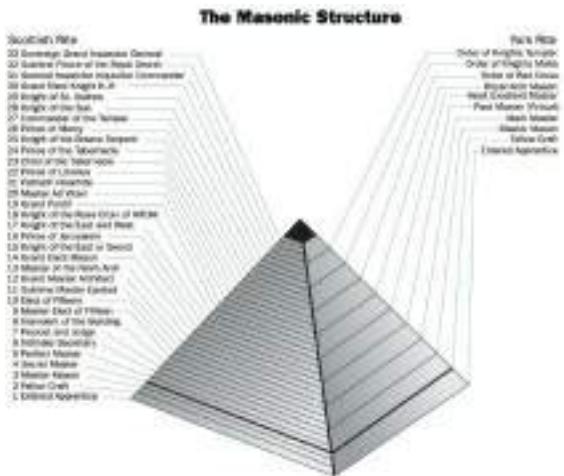

Figure 7: The compartmentalised ‘degrees’ that keep each level of Freemasonry in ignorance of what the others know is the structural basis for all organisations within The Web.

Figure 8: Major ‘cusp’ organisations that take the hidden agenda of the Spider and play it out across human society.

Figure 9: What happens in the world of the 'seen' is hatched in the unseen.

There is a point in The Web where the hidden meets the seen and here we have what I call the 'cusp' organisations that include the Royal Institute of International Affairs (established in London in 1920); Council on Foreign Relations (US, 1921); Bilderberg Group (US, Europe, worldwide, 1954); Club of Rome (Europe, US, worldwide, 1968); and the Trilateral Commission (US, Europe, worldwide, 1972). These groupings and others answer to the Round Table secret society founded in London in the latter years of the 19th century by the House of Rothschild and its frontman lackey, Cecil Rhodes (Fig.8). The definition of 'cusp' describes perfectly the role of these organisations – 'a point of transition between two different states'. In this case those two states are the hidden and the seen between which they act as a conduit. Cusp groups gather together politicians, government administrators, financiers, corporations, intelligence operatives and media to advance a common direction for the world although many of the gofers and stooges involved will have no idea because of compartmentalisation. Cusp organisations include a fantastic list of 'think tanks' and nongovernmental organisations (NGOs). Their role is to take the Spider agenda hatched in the hidden part of The Web and impose that in the world of the seen through governments, government agencies, banks, corporations, intelligence and military groupings, media conglomerates and all the pillars and institutions that dictate the direction of human society. We see apparently random and unconnected decisions made by governments, groups and organisations, but the society-transforming ones are not random and certainly not unconnected. They are the Spider agenda being introduced through its countless proxies which in the end all answer to the same master (Fig.9). At the inner-core of The Web governments and politics *are* the banking system *are* the global corporations *are* the Silicon Valley giants *are* the mainstream media *are* the education system *are* mainstream science *are* the pharmaceutical cartel, or 'Big Pharma', and so on. Key decisions that change the direction of human life are not taken randomly or independently. They are part of the Spider's plan for total control. The vast majority of people working in these groups and organisations who daily take Spider-instigated actions are clueless about the origin of those decisions, changes and policies, and what they are designed to collectively achieve. This is the structure that allows the very few to control and manipulate the very many while the many remain in ignorance of what is really happening and why. Who is going to tell them – the *mainstream media*? That is owned by The Web and most mainstream 'journalists' are as ignorant and often more so about the agenda than the rest of the population.

The Death Cult

The inner core of the secret society global network locks into human-sacrificing Satanism – literally making sacrifices to their hidden 'gods' and masters beyond human sight which are obsessed with death. They feed off the energy and terror associated with death and especially sacrificial death. Most people think that human sacrifice to the 'gods' came to an end in the ancient world. If they read some of my other books they will see otherwise and how many of the global rich and famous are practitioners of this horror to this day. They will also realise that Satanism involves vampiring the energy of children which is where the whole theme originates of 'sacrificing young virgins to the gods'. This is code for children.

Satanic and paedophile rings often work in unison in the targeting of children in their service to The Web and the 'gods'. These ancient practices have passed through what we experience as history under the cover of this network and that's why I refer to the inner elite of The Web as a Death Cult. You can read the detailed background to the Cult going back thousands of years in other books like *The Trigger* and *Everything You Need To Know But Have Never Been Told* (*Everything You Need To Know* from hereon). One central network within the Cult is known as Sabbatian (or Sabbatean)-Frankism which emerged in the 17th century and was the driving force behind the creation of Israel and Zionism, Saudi Arabia and the head-chopping (Death Cult) 'ISIS' version of extreme 'Islam' known as Wahhabism. Sabbatian-Frankism is named after two dark occultists, Sabbatai Zevi (1626-1676) and Jacob Frank (1726-1791) and is a form of Satanism. Jacob Frank teamed up with Sabbatian-Frankist Mayer Amschel Rothschild, founder of the Rothschild banking dynasty, to establish the infamous Illuminati in 1776 as another important strand in The Web. I expose Sabbatian-Frankism in *The Trigger* in relation to the *real* perpetrators of 9/11 (a mass death ritual) and all that has followed in regime-change wars (death of millions) and deletion of freedom. I will refer to the inner-core controlling The Web within human society throughout the book as 'the Cult' and it is important to keep in mind the central part played by its Sabbatian-Frankism wing in relation to Israel, the United States, United Kingdom, Europe and worldwide in the manipulation of global events. Tiny Israel has so much power and influence because it is the fiefdom of Sabbatian-Frankism (the global Cult) and no one needs to know this more urgently than the Jewish community which it has infiltrated while posing as Jewish.

Figure 10: The ever-growing obsession with death.

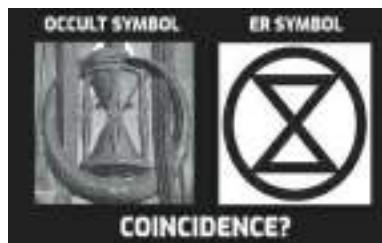

Figure 11: Occult symbol and Extinction Rebellion ('ER') symbol.

The great majority of my research on Sabbatian-Frankism has come from Jewish sources that were and are well aware of how their community has been hijacked. Sabbatian-Frankism and the rest of the Cult specialise in infiltrating societies, cultures and religions by posing as members of those communities while pursuing a very different goal. This infiltration allows the Cult to create and control groups of all kinds while most of those involved have no idea there even is a Cult let alone that it is directing their organisation, religion, culture or society. How many of those who blindly repeat the official nonsense about human-caused climate change and demand the dystopian transformation of society to 'solve the problem' know about the Cult's cusp-cult the Club of Rome? This was specifically created to exploit

environmental concerns (real and imagined) to transform society into a global centralised Marxist-like tyranny in precisely the image demanded by ‘climate change’ protestors such as Extinction Rebellion and promoters of the ‘Green New Deal’ in America. Who string-pulls from the shadows such protests and demands? The *Death Cult* does. You can even see the obsession that groups like *Extinction Rebellion* (ER) have with death and blood ([Fig 10](#)). We are told that the group’s symbol represents an hourglass in a circle to mean time is running out ([Fig 11](#)). It is, however, a symbol long used in occultism and ‘sex magic’ and referred to as ‘The Mark of the Beast’. The O is female and X is male. ‘Ceremonial magician’ Kenneth Grant was secretary and personal assistant to the elite British occultist Aleister Crowley. He explains in his 1973 book, *Kenneth Grant, Aleister Crowley & The Hidden God*, that the symbol also related to a Celtic god called Nodens:

The Heart of the Sigil of Nodens is identical with the Mark of the Beast: ☽ the fusion of O and X which produces the lightning flash. Nodens is the God of the Great Deep or Abyss, microcosmically identical with subconsciousness. He reigns over the Abyss and controls and harnesses its lightnings ... The Seat of Stone is [Egyptian goddess] Isis, and upon this foundation the Goddess is established and rules the heavens, the earth and the deeps beneath the earth. In other words, the Goddess who grants all desires is invoked by the union of the X and the O ...

Extinction Rebellion protests are incredibly ritualistic with groups of people with white faces and blood-red robes walking through the streets. I am not saying that all followers of Extinction Rebellion and supporters of the Green New Deal know they are assets of the global Cult. They are still more pawns in a game they don’t understand. If they read this book to the end they might see how monumentally they are being had. Human-caused climate change is being hoaxed to justify the centralisation of global power over the fine detail of our lives and as I write so is – *big time* – the ‘pandemic’ which ticks every box for those seeking to impose the global Orwellian state.

Permanent government is the real government

Figure 12: Permanent governments operate nationally and globally and dictate the direction of countries and the world while ‘elected’ politicians of all parties come and go.

Figure 13: Politicians are here today and gone tomorrow, but the Hidden Hand that I call the Cult is always there and ultimately controls all of them. (Image Gareth Icke.)

Figure 14: Get the public to support different masks on the same face and divide and rule will always follow. (Image Gareth Icke.)

Every country and the world as a whole has a permanent government controlled by the Cult through compartmentalisation and these are always in power no matter what the nature of the here-today-gone-tomorrow political parties that only *appear* to be the origin of societal change. Permanent government is widely referred to as the 'Deep State' today although that is only part of the permanent control. The Deep State consists of Cult-directed intelligence, military and law enforcement personnel along with government administrators and insider politicians that seek to advance the Cult agenda for the world. They direct, manipulate and undermine elected government and non-Cult personnel (the overwhelming majority) to ensure that what the Cult wants it gets. Other sections of permanent governments include the banking and financial networks, Big Tech, Big Biotech, Big Pharma, Big Media (and some of the 'alternative'), Big Oil, other major corporations, the legal system and courts. Politicians come and go, but the hidden government is always there and no matter what the colour of the briefly-elected political rosettes the same direction of the world incessantly continues (Fig 12). America is a perfect example of how this works although it's the same in every country. The United States is governed (at least officially) by either the Democratic or Republican parties and the Permanent Government controls both of them. Whichever you vote for the Cult is in power. The Republican Party is controlled by a group known as the Neocons or neoconservatives (major funder casino billionaire Sheldon Adelson) and the Democrats have a similar group that I call the Democons (major funder financier billionaire George Soros). Adelson and Soros both answer to those that control Israel which in the shadows is the Sabbatian-Frankist wing of the Cult. Soros would deny that Israel connection to maintain his cover of being different from Adelson. He's not. Do these people and others always like each other? No, they don't and there is rivalry between them. Levels above them, however, make sure that any mutual contempt doesn't get out of hand or in the way. Woe betide them if it does. We see the US presidency passing between 'Democrat' Bill Clinton, 'Republican' Boy George Bush, 'Democrat' Barack Obama or 'Republican' Donald Trump who are described in office as the most powerful people in the world. They are in reality only temporary puppets of the Permanent Government because the Neocons and Democons both take their orders from the same Cult (Fig 13). Political squabbles, attacks and counterattacks are sideshows as the Cult agenda for total human control moves incessantly forward. Public squabbles played out in the media also help to convince the population that they really do have different political choices within what is called 'democracy'. This term is used as interchangeable with 'freedom' when democracy is really only the ability to mind-manipulate enough people to vote for you by lying to them. You lie in election campaigns about your planned policies and then largely do the opposite once you win office. You are then free to officially run the country until the next lie-fest when you may be replaced by another party controlled from the shadows by the same force that controls you. It happens all the time across the world. People vote for Party 'A' and they get into power. The public don't like what they do and next time the majority vote for Party 'B'. People don't like what they do because it's pretty much the same in outcome and the only way they can remove them is to return to Party 'A' that they threw out the election before. Round and round the garden generation after generation. Heads you lose, tails you lose. In some countries there

may be a Party 'C', but the principle is the same. The government that you see is subordinate to the Permanent Government that you don't see and national Permanent Governments fuse into a global Permanent Government that dictates to the world through The Web. Against this background the massive divisions in the population between the political 'Right' and 'Left' take on a whole new light and state of ridiculousness. They are manipulated divide and rule to set the target population at war with itself while believing they have 'choice' ([Fig 14](#)).

Cult wars

War after war in the Middle East is testament to the existence of the Permanent Government behind all political faces and facades. A Neocon 'think tank' called the Project for the New American Century (PNAC), founded and dominated by ultra-Zionists with fanatical allegiance to Israel and Sabbatian-Frankism, published a document in September, 2000, calling for American troops to 'fight and decisively win multiple theatre wars' in the Middle East and elsewhere to regime change governments in a list of countries including Iraq, Libya, Syria and Iran as well as bringing about regime-change in North Korea and eventually China. The Cult seeks to control the whole landmass of Eurasia from Europe to China and from Russia down to the Middle East and this further explains the constant demonisation of Russia. The PNAC document said that to justify this policy to the American public and secure the enormous required increases in military spending the United States had to experience another attack on the homeland like the one by the Japanese at Pearl Harbor, Hawaii, in 1941. To quote the document:

... [The] process of transformation ... [war and regime change] ... is likely to be a long one, absent some catastrophic and catalysing event – like a new Pearl Harbor.

A year to the month later America had what President Bush called 'the Pearl Harbor of the 21st century' – 9/11. Members of the Project for the New American Century behind the document came to office with Bush in January, 2001. They included Dick Cheney (Vice-President and de-facto President); Donald Rumsfeld (Defense Secretary); Paul Wolfowitz (Deputy Defense Secretary); Dov Zakheim (Comptroller of the entire Pentagon budget); and many others allied to Israel and committed to the PNAC list of regime-change targets. I show beyond doubt in *The Trigger* that the satanic Sabbatian-Frankist network of the Cult operating out of Israel and in league with its agents in the US Deep State were the real perpetrators of 9/11 which they then used as the excuse to launch the 'war on terror' (war of terror) to pick off their list of target countries. They invaded Afghanistan to 'get' the fake 9/11 villain Osama bin Laden and followed this by targeting the countries on the original PNAC list – Iraq, Libya, Syria and Iran with much finger-pointing also at North Korea and increasingly China. The nature of the Permanent Government comes into focus when you observe how those countries have been targeted by different presidents from apparently 'opposing' parties: George Bush ('Republican', Iraq); Barack Obama ('Democrat', Libya and Syria); and Donald Trump ('Republican', Iran). We also had UK Prime Minister and war criminal Tony Blair (Labour Party) working with Bush to invade Afghanistan and Iraq while David Cameron (Conservative Party) was Prime Minister when Britain supported Obama in laying siege to Libya and Syria. They may appear to be 'different' presidents, prime ministers and parties, but they follow the same script written by the Permanent Government.

Unhooking the mind

All this brings me to the focus of this book which is escaping the human mind-prison by taking back control of our own perceptions and self-identity. I mean by that our perceptions of *everything* from world events to the nature of the True 'I' and reality itself. The number of Cult operatives working in full knowledge of what they are doing is microscopic compared with a global population heading towards eight billion. The only way so few can control and direct so many is by hijacking their perception of everything. You can use 'physical' control only over relatively small groups through military and civilian

law enforcement (unless the population acquiesce en masse through perception control as with the 'pandemic'). For global control you require perception control. Behaviour comes from perception and if you control perception you control behaviour and what people will do or won't do, challenge or support. Hijack perception and you hijack behaviour; hijack behaviour and you hijack the world. The sequence of control is perception = behaviour = collective human society. The next question is where do perceptions come from? They come from *information* received. We develop our perceptions through information that we absorb from personal experience, a bloke down the bar, the ten o'clock news, a posting on Facebook, and countless other sources. We can therefore extend the sequence to information = perception = behaviour = collective human society. Control information and you control that whole sequence. The Cult already overwhelmingly controls information and it seeks total control. Perceptions are *assumptions* based on the brain's best guess in the light of information received. Humanity would increase by a ginormous leap its potential for knowledge and creativity if we realised that perception and truth do not have to be the same thing and in fact rarely are. What is perceived 'truth' anyway except assumptions that become perceptions that become 'this is how it is'? Donald Hoffman, a professor in the Department of Cognitive Sciences at the University of California, Irvine, said that perception is a controlled illusion and reality is when we agree about our hallucinations. Yes, but who controls the illusion and elicits agreement on hallucinations by controlling information and the assumptions that come from that? The Cult is seeking to enforce total control by imposing perception directly through a brain-connection to AI, but for now they must control information to control perception to hijack collective reality. Here you have the reason the Cult is obsessed with controlling sources of information through ownership of the mainstream media and Silicon Valley while suppressing other information through the ever-increasing censorship documented at length in my other books and experienced by more people every day. The Cult seeks to delete or suppress any source of information and opinion that questions and challenges the official narrative of almost any subject, including government (Cult) policy, 'Covid-19', vaccines, regime-change wars, human-caused climate change, the nature of human biology and political correctness which is manipulating the population to censor itself. All these subjects and so many more are aspects of the Spider agenda and they are imposed by the Cult via The Web. The coordination of censorship by this network is obvious and it's cheered on by the Cult-created fake-'progressive' 'Woke' culture. 'Woke', ironically, is another word for 'fast asleep'. The climate change hoax, the imposition of extreme transgender doctrines, beliefs and language, and the obsession with seeing racism absolutely everywhere are all facets of 'Woke' and, not coincidentally, facets of the Cult agenda for the world as I will be explaining.

Fake self-identity

The foundation and bottom-line of mass perception programming is to maintain humanity in ongoing ignorance of who we are and where we are. The idea is to program the belief from cradle to grave that we are cosmic accidents of random 'evolution' and to define self-identity only by the labels we are given and give ourselves. Life has a beginning and an end and when you're dead you're dead. For those who won't buy the latter you tell them they are subject to the demands of an angry, judgemental external 'God' with rules and regulations (Cult rules and regulations) which must be followed to avoid the fires of hell or secure a date with multiple virgins waiting only for believers. Whether religious or atheist the labels of limitation still apply. These are the labels of 'I-am-a' as in: I-am-a man, woman, gay, transgender, black, white, rich, poor, Christian, Muslim, Hindu, Jew and all the rest. These labels are not who we are. They are merely what we are briefly *experiencing*. We – the eternal 'I' – are an expression of an Infinite State of Awareness *having* those experiences. Think how impossible it would be to pressure, frighten, intimidate and manipulate people to do what the Cult demands if we knew that we are a point of attention within a state of Infinite Awareness having a brief experience called human in whatever form, colour, race or sexuality. How even harder would it be to divide and control people aware that we are all aspects of the

same consciousness and who understand that our temporary labels are illusory divisions and not real in the way that they seem to be? How would the Cult instigate the essential divide and rule and conflict between labels of race, culture, sexuality, politics and income bracket if we all knew they were temporary illusions and that our reality is just another type of ‘dream’? Or that human life is like donning a headset and playing virtual reality? Such games may seem so real, but take off the headset (symbolic of ‘death’) and you see that it was all a technologically-generated illusion, a dream or nightmare that we believed in the moment to be real. Such is the nature of human life. As Rumi, a 13th century Persian mystic, said:

This place is a dream. Only a sleeper considers it real. Then death comes like dawn and you wake up laughing at what you thought was your grief.

Figure 15: The human illusion.

These truths must be kept from us for the Death Cult conspiracy to prevail. This book is about how that is being done and how we can return to the true and eternal ‘I’ that we are and always will be beyond the illusory diversions of the five senses. The inner circle of the Cult knows what reality is and how it works and their power comes from keeping that knowledge from the population. They do this by dismissing or demonising such information in the public arena while passing it on to generations of chosen initiates in the secret society networks of The Web. Secret societies and other assets of The Web answer in the end to the Cult which itself answers to its non-human masters or Spider. We have in this way been manipulated to forget our real nature and live in an isolated ‘Bubble’ of self-identity and limitation that I call Phantom Self – *label self* (Fig 15). This is the whole foundation of human control, but it doesn’t have to be. Open your mind and it’s wakey, wakey time.

CHAPTER ONE

What is ‘reality’?

If you don’t know who you truly are, you’ll never know what you really want – Roy T. Bennett

Dictionary definitions of ‘conscious’ include: ‘The state of being aware of, and responsive to, one’s surroundings’; and ‘the state of understanding and realising something’. My definition for the purposes of this book is going to be very different.

I am making a clear distinction between what I will call ‘mind’ and ‘consciousness’. I will use the term ‘mind’ and ‘Body-Mind’ to describe the perception of five-sense reality and ‘consciousness’ for expanded awareness beyond the walls – firewalls as we shall see – of the five senses. From this perspective those two official definitions can be seen in another way. Take the first one: ‘The state of being aware of, and responsive to, one’s surroundings.’ Okay, but aware of *what* surroundings? Perceived ‘surroundings’ (quite the wrong term as I shall explore) are actually illusory when compared with how we appear to experience them. The world is not ‘solid’, for example. It only seems that way to *senses* that are not consciousness in its prime form. Our five senses, or information decoding systems, ‘sense’ our ‘surroundings’ while not in the widest meaning of the word being ‘conscious’ or ‘aware’ of what those surroundings are. If that was the case we would see through the illusions and mind-trickery to perceive the world as it really is. Then there is that other definition of conscious: ‘The state of understanding and realising something.’ Can anyone truly understand *anything*, never mind *something*, when we appear to be experiencing a ‘physical’ world of ‘solidity’ which is, in fact, neither? How can we understand anything *in* the world if we don’t understand the nature of the world? We can’t and yet all the institutions of human society are making decisions and forming perceptions based on an illusory reality which is nothing like the one they think they are living ‘in’. How can such decisions and perceptions be anything except skewed and misguided? These are the same institutions of education, science, medicine, politics and media etc. from which all but a few glean their perceptions and make their decisions. Put all that together and it captures in its totality the meaning of the phrase ‘the blind leading the blind’ or, as I would put it, the unconscious leading the unconscious. Five-sense mind is not *conscious* in my definition so much as *sensory* – ‘relating to the physical senses’. It doesn’t perceive and instead *decodes*. I will explain the hows and whys as we go along. This entrapment in five-sense perception is why so many (especially in academia, science and medicine) only believe in what they can see, touch, taste, smell or hear – *sense, decode*. They are not *conscious* beyond sensory self. By my definition, therefore, such people are unconscious and slaves of five-sense mind. Our senses are not conscious any more than a computer is conscious when it *decodes* data and presents it on the screen in a form that we recognise.

Figure 16: The symbolic – but very accurate – depiction of the human plight. The computer operator (consciousness) becomes disconnected from the computer (Body-Mind) which is then programmed with false perceptions of everything to secure mass human control. (Image Neil Hague.)

Figure 17: Who are we? We are awareness, a state of being aware. The body is only a temporary vehicle for a brief experience by that awareness as a ‘human’.

Figure 18: We may experience ourselves as ‘individual’, but we are all expressions, too, of the same infinite flow of awareness that at one level I will call ‘The Field’. (Image Neil Hague.)

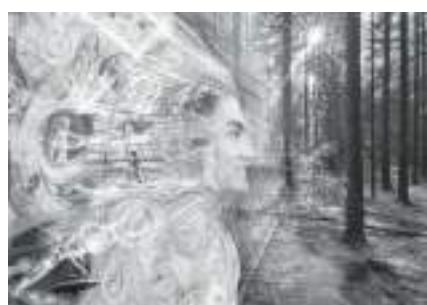

Figure 19: When our point of attention enters the human frequency band we should be guided from our expanded levels of consciousness. Instead most are manipulated to operate only in the realm of the five senses where the Cult controls what they see and hear. The result is ‘physical’ enslavement through perceptual enslavement. (Image Neil Hague.)

What I am calling ‘conscious’ is that which operates beyond the merely sensory. You could think of this as the person sitting at the computer with the keyboard and mouse while sensory mind is the computer which should be responding to that input ([Fig 16](#)). When a computer virus infiltrates a system and takes it over – takes ‘possession’ – the operator is tapping the mouse and banging the keys without response. The computer takes on a life of its own with something else seizing control. I say this is what has happened to humanity. A ‘virus’ – the Death Cult and its non-human masters – have infiltrated human perception and essentially disconnected sensory mind (Body-Mind) from expanded awareness. We are not our body or sensory perception. They are only experiences for the True Self which is simply awareness – a state of being aware ([Fig 17](#)). Everything in all existence is consciousness, the *same* consciousness in different states of awareness, and we, like *everything*, are an expression of that state of Infinite and Eternal Awareness ([Fig 18](#)). Our expression or *point of attention* is currently having a brief experience called human and our Body-Mind (the symbolic computer) is the vehicle for that experience. Humanity has been manipulated by the Cult to forget our true nature and identify with the ‘me’ of the five senses and all its illusory labels and sense of apartness and division ([Fig 19](#)). We are meant to retain a connection to the True ‘I’ (the hands on the mouse and keyboard) and we can open our minds potentially to Infinity itself. When our minds are closed that influence is lost to our *experiencing* awareness, or Body-Mind, and we becomes isolated in the ‘Bubble’ within which our sense of reality is dominated by five-sense perception ([Fig 20](#) overleaf). Instead of being influenced by our expanded levels of awareness we become mesmerised by information constantly fed to the brain and five senses by Cult-controlled media, politics, science, medicine and academia while all except a few in those professions have no idea they are serving a Cult-directed agenda. They are as perceptually mesmerised by their Bubbles as everyone else. Perceptions within the isolated ‘Bubble’ are programmed to *sense* reality while not being *conscious* of reality and this allows the Cult to impose its will via manipulated ignorance on human experience. From this has come the collective madness of war, division and conflict of every kind and this possession of Body-Mind is planned to be completed through the mass-connection of AI to the human brain. That would take us beyond mere perception programming to full-blown assimilation into artificial intelligence and the force behind it. I don’t mean assimilation of the True ‘I’, but of the five-sense Body-Mind Bubble isolated from True ‘I’. It’s like a virus taking control of an entire computer network by bypassing and disconnecting the operators (True ‘I’) and connecting the system to another source (the Cult and its masters in the unseen). Everything is conscious because everything *is* consciousness manifesting in infinite states and forms. Not everything, however, is *equally* conscious and hence my distinction in this book between what I am calling Body-Mind and consciousness. Observe humanity for five minutes to see multiple states of awareness. Sensory mind is a form of awareness which is incredibly limited in its perception of reality compared with consciousness beyond the Body-Mind Bubble.

Figure 20: The whole foundation of human control – isolation in the Bubble of perception. See Neil Hague colour section.

What is this ‘God’?

Figure 21: Our ‘individual’ awareness is Infinite Awareness experiencing itself. We are the ‘individual’ and the whole.

We are a point of attention within an Infinite state of awareness/consciousness that some refer to as ‘God’. I don’t use that term with all its religious connotations and diversions. For those who do, we are not *apart* from ‘God’; we are a part of ‘God’. We are a unique point of attention through which Infinite Awareness, or ‘God’, can infinitely experience itself ([Fig 21](#)). Infinite Awareness means Infinite Possibility and Infinite Potential for Infinite Experience. We are all expressions of the same consciousness and separation is a five-sense illusion that the Cult works so hard to maintain. American cosmologist Carl Sagan said:

We are a way for the universe [I prefer The Infinite] to know itself. Some part of our being knows this is where we came from. We long to return. And we can, because the cosmos is also within us. We’re made of star stuff.

Figure 22: Humanity is entrapped in perceptual Bubbles and programmed by Cult-controlled mainstream information sources operating in the Bubble. Isolate and program. See Neil Hague colour section.

What is ‘human’ except a state of awareness experiencing itself in multiple ways? The level of awareness of the ‘part’ is decided by the strength of connection that it has to the whole. The more we lose a perception of self-identity with the whole (I am Infinite Awareness having a human experience) and perceive ourselves to be isolated random ‘labels’ (I am Ethel on the checkout or Charlie at the drive-through) the more the connection and influence of Infinite Awareness is lost and we become trapped in illusion and forget who we really are. This can be accurately symbolised as living in a Bubble of isolated Body-Mind in which the perception of everything is formed only from the information available within the Bubble ([Fig 22](#)). Beyond its walls lies infinite possibility, potential and awareness that would give you a completely different understanding of who you are and where you are. The Cult works incessantly to keep humanity entrapped in the Bubble because only then can its will prevail. Isolate Body-Mind from expanded states of consciousness and program Body-Mind with the perceptions and self-identity that allow the imposition of mass servitude. Crucial to this is to use the inner-core of the secret society network to communicate the nature of reality through the generations of the Cult while keeping that knowledge from the target population.

Descriptions of Infinite Reality that I have outlined here can be found throughout history long before

the Cult instigated mainstream ‘science’ to tell us that we are all random cosmic accidents, that consciousness only comes from the brain, and death is the end. The perceptual outcome of promoting this nonsense has been to embed the belief that we are not an eternal expression of an infinite whole and only a meaningless assembly of randomly-evolved cells. We are told by ‘experts’ that the brain is the origin of consciousness and life depends on the brain being active. When it’s not then consciousness ceases to be. Selling this Bubble illusion is an essential precursor to mass control. Cult-created ‘education’ and academia download this baloney to each generation of young people who largely pass it on to the next generation. Academia and this-world-is-all-there-is ‘scientists’ have themselves downloaded the same script (otherwise they would never get the job) and their funding and authorities demand that this is what they teach to others in a perpetual-perceptual motion machine in which ignorance speaks lies unto ignorance and calls it ‘education’. For those who won’t buy this perceptual program there is the associated entrapment of religion in which some have eternal life if they do what ‘God’ (the Cult) demands while others are condemned to the Fires of Hell for having a mind – or consciousness – of their own. Religion in a sentence: ‘Do what ‘God’ (we) say or you’ll be in deep shit.’ Ancient cultures across the world knew that consciousness is eternal and their societies were founded on that understanding in the thousands of years before Cult ‘science’ and religion dropped in to tell and sell another story which was imposed by Cult-orchestrated colonisation from Britain and Europe. The Cult headquartered itself in Britain (hence the British Empire) after its journey of the centuries out of Sumer and Babylon (today’s Iraq), Egypt, Asia, and elsewhere. Italy and Germany are other major Cult centres (so is China) and it expanded into North America with colonisation while establishing itself in the pivotal land of Palestine through Sabbatian-Frankism with the creation of Israel (see *The Trigger*).

Unravelling the illusion

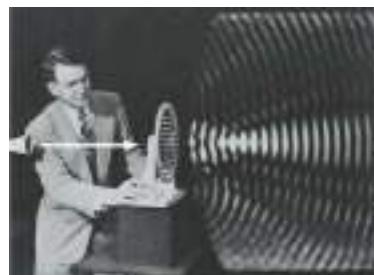

Figure 23: The foundation of human reality is information encoded in wavefields and the illusory ‘physical’ world is a decoded projection of that information.

Figure 24: A computer decodes information from Wi-Fi radiation fields in the unseen into images on the screen that we can see.

Figure 25: The human brain and five-sense decoding systems do the same by transforming unseen wave information into holographic, illusory ‘physical’, information that only exists in our ‘heads’. (Image Gareth Icke.)

Figure 26: Different parts of the brain specialise in decoding different senses and fits them together to form perceived reality. (Image Neil Hague.)

Before I explore reality more deeply I should summarise the illusory ‘normal’ that we are told to believe in. This requires us to accept that what we appear to be experiencing is *really* what we are experiencing. Official reality is what the *five senses* are manipulated to believe in. Can I see it? Check. Hear it? Check. Touch it? Check. Smell it? Check. Taste it? Check. Okay, it exists then. But *does it* in the form that we think it does? Are we and the world really ‘physical’ and ‘solid’? No. The sensory system of the five senses is a decoder of information in the same way that a computer decodes Wi-Fi into a very different form on the screen. The five senses decode information in a particular way (again like a computer) which reflects what they have been encoded to do. A computer decodes information from electronic circuits and Wi-Fi electromagnetic radiation fields into pictures, colours, graphics and text on the screen as radio and television broadcasts transmit sound and images in waves which the television decodes ([Fig 23](#)). We perceive the Internet to be what we see on the screen when in fact the only place the Internet exists in that form is actually on the screen. Everywhere else that same information is expressed as electronic circuits, codes and Wi-Fi fields. Our human reality also consists of electromagnetic Wi-Fi-like wavefields of information and we are interacting with those fields as a computer interacts with Wi-Fi. A computer is encoded to decode Wi-Fi wave information to produce what we see on the screen while the five senses, in league with the brain, are encoded to decode information from radiation wavefields to produce the reality (the *sense* of reality) that we perceive as the ‘physical world’ ([Figs 24](#) and [25](#) on previous page). The foundation of our reality and the human self is not ‘physical’. It is wavefield information (keep thinking Wi-Fi) which the five senses decode into the ‘world’ that we think we are experiencing as physicality. Observe each of the senses and you will see that this is true. They decode wavefield information into electrical information which is communicated to the brain to be decoded into what we experience as the physical world. There are specific areas of the brain that process input from each sense and these sources are then combined to construct what we believe to be human reality ([Fig 26](#)). Our sense of everything in terms of physicality and solidity is an illusion of this decoding process. What appears to be physical is really holographic – *illusory* physical. Holograms give the appearance of solidity while being anything but solid. This illusion can be seen in today’s holographics which can look as solid as you and me when in fact they are energetic projections that have no solidity. I’ll cover this in more detail in the next chapter.

Only at the end of this wavefield-electrical-digital-holographic decoding process does the ‘external’ world exist as we perceive it ([Fig 27](#)). Nor is holographic ‘physical’ reality actually external to us despite what our senses may tell us. The ‘world’ that we experience apparently ‘outside’ of us only exists in that form *in our heads – the brain*. In the same way information on the screen of a computer only exists in that form *inside* the computer. I have heard scientists claim that the senses de-construct an external reality and then re-construct it in the brain. This is absolutely not the case and anyone taking even a cursory look at well-established evidence will see that. Our experienced reality, as acknowledged by more aware scientists, is like a computer screen which hides all the codes, circuits and pixels which make the sound and images possible. In our case those codes, circuits and pixels are information (consciousness) waves that when decoded form our illusory ‘physical’ reality.

Figure 27: The human decoding system transforms wave information into electrical information which becomes digital and holographic information – the illusory ‘physical’ world. (Image Neil Hague.)

Figure 28: The foundation of the human body and everything in our reality is information encoded in wavefields. See Neil Hague colour section.

The foundation of our reality – including ourselves – is wave information fields which are expressions of *consciousness* and so everything is conscious in some form. Information encoded in the wavefield of a tree is what makes it a tree and not a flower or a thorn bush. What is a ‘tree’ in a virtual reality game? It is information encoded to be decoded by the computer into the form of a tree. Every expression of form, every thought and emotion, transmits different wave frequencies that reflect the information the waves represent and contain. Form is *information – waveform information*. What is encoded into the human body wavefield makes us appear ‘physically’ human ([Fig 28](#)). Our reality is the sum total of all these wave information fields within the frequency band of the human senses and I will refer to this totality as ‘The Field’ – the energetic ‘sea’ that connects everything while our senses tell us that each ‘form’ stands apart from all other ‘form’ with ‘space’ in between. That ‘space’ is filled with the information (consciousness) of The Field which connects everything ([Fig 29](#) overleaf). Wi-Fi technologically mimics ‘The Field’ and the reason for that will become clear later on ([Fig 30](#) overleaf). Body-Mind fields are interacting with ‘The Field’ in the same way that we take information from the Internet and also post information. The Field affects us and we affect it. We *are* The Field and The Field is us – we are indivisible. The term ‘We Are One’ is not some trite esoteric phrase. It describes how everything in our reality and *all* realities is

ultimately one field of energy/consciousness. Apparent division is an illusion of the way we experience reality. The key is to realise that *everything* is a wave information field which we decode into the ‘world’ that we think we live ‘in’ when ‘it’ really lives in *us* – Body-Mind. Understanding the foundation wave nature of ‘physical’ reality is to truly grasp what is happening in the world as will become clear.

Figure 29: Everything is connected with The Field and wave-interacts with everything else through The Field. See Neil Hague colour section.

Figure 30: A portrayal of the now ubiquitous Wi-Fi fields – a technological overlap of The Field which operates basically the same.

Ears to hear? Tongues to taste?

Figure 31: A falling tree (and everything else) literally does only make a noise when we hear it.

Figure 32: Everything is wavefield information in its base state – including food. ‘Physical’ food is decoded wavefield energy (information). See Neil Hague colour section.

The hearing sense is the most obvious example of decoding waves into electrical signals. Our ears receive wavefield information as soundwaves and transmit them to the brain as an electrical communication. Only when the brain decodes that information do we ‘hear’ sound. People talk about ‘hearing’ each other speak, but words don’t pass between us – sound waves do. Words only manifest at the *end* of the sequence, not the beginning. When we speak we are generating *wavefields* of information from the vocal chords and these soundwaves are decoded by the ears and transmitted electrically to the brain to be decoded into the words that we think we are hearing with our ears. We hear them in the brain and it’s the same with all the senses. Sound is *silent* to our senses in the form of sound *waves* until their information enters the brain. Take the example of a tree falling. A falling tree is an electromagnetic wave information field that impacts on the electromagnetic wavefield ‘sea’ or The Field. A wave disturbance is generated in the ‘sea’ from this wave interaction and if no one is there to decode that disturbance a falling tree makes no noise. If an observer is present they will pick up the wave disturbance as electromagnetic (sound) waves and transmit these electrically to the brain to be decoded into the sound of a tree falling. Hence the question ‘does a falling tree make a noise?’ can be answered by ‘only if you hear it’ ([Fig 31](#)). All five senses work this way. Food and drink as we perceive them are really energetic fields of information decoded by the senses into the form that we see and taste. The tongue sends electrical signals to the brain to become ‘yummy’ or ‘what’s this shit?’ It is the *brain* that tastes within human reality and the same with sight, touch, smell and hearing ([Fig 32](#)). There are pain relief techniques used today which involve blocking the point of pain from communicating electrically with the brain. Unless the brain decodes that signal into ‘ouch’ there can be no pain. Food companies, well, they call it food, add taste enhancers to their products to trick the brain into decoding more taste than the ‘food’ contains. Car seats are now being designed to further trick the brain for health reasons into believing someone sitting behind the wheel is walking. ‘Physical’ reality is an illusion and the Cult knows this. It works constantly to stop *you* knowing to make you a sitting duck for its perceptual manipulation. The famous scene in the first *Matrix* movie describes the world as it really is when the character Neo has his mind inserted into a computer program to be shown the illusory nature of physicality:

Neo: This isn’t real?

Morpheus: What *is* real? How do you define ‘real’? If you’re talking about what you can feel, what you can smell, taste and see, then ‘real’ is simply electrical signals interpreted by your brain.

That’s all it is and everything we believe to be real only exists in the brain or Body-Mind in the form that we experience. British philosopher Alan Watts, who became well-known in America for his Western interpretation of Eastern philosophy, said:

... [Without the brain] the world is devoid of light, heat, weight, solidity, motion, space, time or any other imaginable feature. All these phenomena are interactions, or transactions, of vibrations with a certain arrangement of neurons.

Outside the brain none of these foundations of ‘physical reality’ exist in that form. Mainstream scientist Robert Lanza describes in his book, *Biocentrism*, how we decode electromagnetic waves and energy into visual and ‘physical’ experience. He used the example of a flame which emits photons, or tiny packets of electromagnetic energy, each pulsing electrically and magnetically:

... these ... invisible electromagnetic waves strike a human retina, and if (and only if) the waves happen to measure between 400 and 700 nano meters in length from crest to crest, then their energy is just right to deliver a stimulus to the 8 million cone-shaped cells in the retina.

Each in turn send an electrical pulse to a neighbour neuron, and on up the line this goes, at 250 mph,

until it reaches the ... occipital lobe of the brain, in the back of the head. There, a cascading complex of neurons fire from the incoming stimuli, and we subjectively perceive this experience as a yellow brightness occurring in a place we have been conditioned to call the 'external world'.

Illusion Confusion

Even movement is a decoded illusion. There is no *movement*? You experience moving around in your dreams while *you* don't move at all. It all happens in your mind. *You* are lying in bed fast asleep. How can human experience involve 'physical' movement except as a holographic dream given that holographic 'physical' reality only exists in the brain? When people don headsets to play computer games they experience speeding along in a car or falling over a cliff while their bodies are sitting in a chair going nowhere. A British newspaper writer described how the most striking aspect of playing such a game was the physical sensation of moving without really moving: 'My brain sends signals to my body that create the illusion that it's shooting around like a pinball when in fact I am stationary.' This is how the illusion of human movement works. Colours don't exist until they are decoded by the brain. Each colour and shade is a unique frequency that requires decoding to 'see'. Objects (wavefields) absorb some wave frequencies of colour and reflect others. What they reflect we decode and 'see' as their 'colour' and what they absorb we don't. All that we visually perceive is reflected light which is why we can't see in pitch black when objects (wavefields) have no light to reflect. At the two colour extremes black absorbs all light and appears black while white reflects all light and appears white. Other colours absorb some and reflect some which gives them their unique light representation that we 'see' (decode) as colour. Rainbows are called a spectrum which comes from a Latin word meaning an apparition or phantom (hence 'spectre'). That sums it up, really. In the same way that sound can only manifest when waves are decoded by the brain so visual reality can only manifest through the same process. This is the real foundation of the scientific concept of the 'Observer Effect' which says that 'physical' reality only exists in that form when it is being observed or 'measured'. When it is not being observed/measured reality remains in its wavefield state and only becomes 'physical' when we *look at it* in some form even through a measuring device. One media headline said: 'Your entire life is an ILLUSION: New test backs up theory that the world doesn't exist until we look at it'. Andrew Truscott, an Associate Professor at the Australian National University who has studied this phenomenon, said that at the quantum (smaller than the atom) level reality does not exist if we are not looking at it. He added that his team's experiments revealed how '... the atoms did not travel from A to B ... and it was only when they were measured at the end of the journey that their wave-like or particle-like behaviour was brought into existence.' Theoretical physicist Werner Karl Heisenberg (1901-1976), the celebrated German pioneer of quantum mechanics, said that 'a path comes into existence only when you observe it'. An article in *Epoch Times* described the findings of another experiment in an article headlined 'Your Mind Can Control Matter':

Atomic particles were shown to also be waves. Whether they manifested as waves or as particles depended on whether someone was looking. Observation influenced the physical reality of the particles – in more technical language, observation collapsed the wave function.

Figure 33: The white crest of a wave and the ocean are the same body of water. Humans and Infinity are the same body of consciousness. They

just take a different visual form.

Figure 34: It all seems so 'real', but it is holographic illusion decoded from wave information. See Neil Hague colour section.

Scientists have long pondered on the strange phenomenon that particles are also waves at the *same time*. That's impossible, surely? They have to be one or the other? They don't when you appreciate that particles and waves are manifestations of the *same information*. They only appear to be different because of the form that information takes (Fig 33). Waves are the foundation information construct and particles are their decoded holographic representation. 'Collapsing the wave function' is the act of decoding holographic reality which exists in another form at the beyond-human-sight quantum level. Quantum reality is waves of possibility and potentiality and the mind decodes that into holographic actuality. Scientists say that 'physical' reality only exists when we observe it, but the term missing here is '*decode it*'. Physical reality only exists when it is *decoded*. The act of observation triggers the decoding process. Human reality requires an observer to exist because the observer is *making it* exist in that form in the decoding system of the brain (Fig 34). Waves ('non-physical') and particles ('physical') are different forms of the same field of information. Scientist Albert Einstein said: 'The [wavefield] is the sole agency of the particle [matter].'

He's behind you!

Figure 35: 'He's behind you' and when observation decodes reality true reality is always 'behind you'.

Figure 36: Look and see what's not really there except in your 'head'. (Image Neil Hague.)

For reasons I have explained Einstein's contention *has* to be the case. The 'observer' principle is like the classic scene in a British pantomime show when a character faces the audience and they shout that someone 'is behind you'. As the character turns around to check this out the person behind moves around as they do. No matter how many times the character turns what he is looking for is always behind him and so unseeable ([Fig 35](#)). Move your focus in any direction and wavefield becomes hologram. We don't see what's 'behind you' (wavefield reality) because the act of observation triggers holographic decoding ([Fig 36](#)). Writer Michael Talbot described in his book, *The Holographic Universe*, something he witnessed at a family party in which a stage hypnotist was invited to entertain the guests with some mind tricks. At one point a man called Tom was put into a hypnotic trance and told that when he was brought back to a waking state he would not be able to see his daughter. The hypnotist asked the daughter to stand right in front of her father and the now apparently awakened Tom was asked if he could see her. 'No', he said, she wasn't in the room. He was, in fact, looking right into her belly as he sat and she stood. The hypnotist then put his hand in the small of her back and asked Tom if he could see what he was holding. 'Yes', Tom replied, bemused at such an easy question – 'You are holding a watch'. He was asked to read an inscription on the watch which he did while his daughter was standing between him and the watch. A mainstream scientist would tell you that is impossible when the explanation is so simple. The base form of the daughter's body was a wavefield of information operating at frequencies outside the human visual frequency range. Unless she was decoded into holographic form within the frequency band of Tom's eyes/brain she would not appear in her father's 'physical' reality. What's more if she wasn't in his mind holographically she could not block his view to the watch ([Fig 37](#)). The hypnotic suggestion that Tom wouldn't see his daughter firewalled his brain's decoding system from reading his daughter's field and without that happening she would remain invisible to him. This is also a basic explanation for 'ghosts' which are wavefields of consciousness not connected to a human body field and thus cannot be decoded into 'physical reality'. Most appear as ethereal and not 'solid' because of this although some can project a self-image so powerfully that they may appear to be 'solid', albeit briefly. Neo in *The Matrix* asks how he can appear to have a body while in a computer program connected to his brain and he is told that his mind is creating a 'residual self-image' – a 'mental projection of your digital self'. In the context of a 'ghost' it's a mental self-image of the former digital self which will still be imprinted in the 'ghost's' wavefield. Even the illusory 'world' that the brain constructs is manifested from a fraction of the information we receive second by second. The mainstream *Wonderpedia* science magazine said:

Figure 37: If we don't decode something from the waveform it cannot appear in our holographic 'physical' reality. (Image Neil Hague.)

Every second, 11 million sensations crackle along these [brain] pathways ... The brain is confronted with an alarming array of images, sounds and smells which it rigorously filters down until it is left with a manageable list of around 40. Thus 40 sensations per second make up what we perceive as reality.

Figure 38: The process of decoding virtual reality games is the same in principle as how we decode the ‘physical’ world.

Figure 39: Like the ‘physical’ world it can seem so ‘real’.

Forty sensations or bits of information construct our experienced reality from 11 *million* received and any gaps are filled in by what the brain believes should be there. It’s hysterical to think what reality is compared with the way we experience it. We can get some insight into the process of reality-manifestation with the ever more sophisticated virtual-reality games and systems which mimic technologically the way we create reality biologically (another form of technology if the truth be told). Players wear headsets, earphones and gloves which allow electrical information and codes of the game to access and override the decoding of ‘normal’ reality and trick the same senses into decoding a fake reality ([Fig 38](#)). The mind-trick can be so effective that people react as if what is being played artificially to their eyes, ears and touch senses is real ([Fig 39](#)). I have just described human reality and how its illusions are created.

The brain is an information processor

Figure 40: The brain can decode frequency information from other realities as it can decode frequency ‘words’ from the human vocal chords. We only have to open our minds and breach the Bubble. (Image Neil Hague.)

This sub-heading may appear to be stating the obvious. Of course the brain processes information. Yes,

on that we are in agreement. It's the wider context that produces the fork in the road that takes me and many in mainstream science in different directions. This involves the contention that consciousness (information) is not only processed by the brain but also *originates* in the brain. I seriously don't agree. Oh, but different parts of the brain 'light-up' or switch-on when people are in various perceptual states. Okay, but does that happen because the brain is generating those states? Or because it is *decoding* those states through specialised areas of the brain related to those states while the information being *processed* originates elsewhere? I say the latter. Where does the information come from which the brain decodes into what we perceive as our thoughts, emotions and perceptions? The question has multiple answers in that the nature and origin of that information can come from multiple potential sources. Those locked away in the Bubble will process information through the brain from within their Bubble while those who have breached the Cult's perceptual firewalls and accessed expanded awareness will process information from way beyond the Bubble. As a result how they see themselves and reality will be dramatically different. Put aside what you have been told about the brain for a second and imagine it to be only a processor of consciousness and not the origin – 'you hum it, son, and I'll play it', as the saying goes. Information processed by the brain comes from wavefields of consciousness outside the brain and this can be confined to the five-sense 'Bubble' or be any scale of expanded awareness with which your mind allows itself to connect. If you do access those expanded levels you are called crazy and insane by those in the Bubble. Information processed by the brain also comes from countless other sources including television, social media, personal experience and the ridiculously-named 'education' system. The brain will process anything that comes its way so long as this myriad of potential information is delivered within the frequency band of brain activity. It will decode the sound (frequency) of the human voice and also information delivered from realities way beyond the realm of the human voice if minds open to that level of awareness ([Fig 40](#)). When people say they 'hear voices in their head' they are describing the same phenomena as the brain receiving information delivered by the vocal chords as electromagnetic waves which it decodes into words. The information can originate with another human or from dimensions of reality 'far away' (as with psychics or mediums). It can also be delivered in the form of waves generated technologically to infiltrate the brain's perceptions to misdirect and manipulate a target. The Cult operates just such a system worldwide today as I will be describing. The brain is a receiver, transmitter and processor of information, not the origin, and it can be a challenge to discern what is 'you' and what is another source of the wave information you decode as thought and emotion. There are ways of doing that though which I'll get into later.

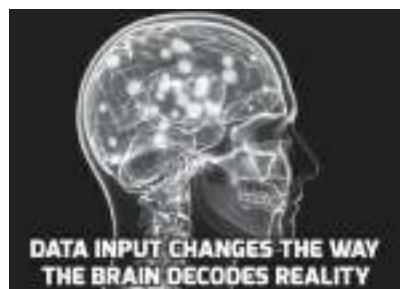

Figure 41: The brain becomes what it receives and processes.

The brain may be a processor of information, but it's not a neutral one any more than a computer is neutral when it has been encoded to process information in a particular way. Program a computer to decode information 'A' and not information 'B' and that's what it will do. We call this a 'firewall' and they are employed in China to prevent the population accessing large swathes of the Internet that the Chinese dictators don't want people to see. The same can be done with the brain and a central factor in

this is what is called brain ‘placidity’. It was believed until relatively recently that once the brain was formed this was how it remained for life. Scientists now know the very opposite is the case. ‘Placidity’ refers to how the brain changes the way information is *processed* in accordance with the information that it *processes* (Fig 41). All information is delivered in the form of frequency. Every thought, emotion and perceptual state is represented by its own unique frequency and as the brain processes information it arranges its neuron networks to fire (decode) in the sequence those frequencies represent. The brain processes particular frequencies of information, thought, emotion and perceptual states and here you have the reason why different perceptions and behaviour light-up different parts of the brain which are involved in processing those frequencies. Consciousness via perception activates those parts of the brain and the brain does not activate itself. The more the brain becomes dominated by flows of the same information, thought, emotion and perception (frequencies) the more its placidity will solidify the neural networks into a repeating sequence of processing (‘firing’ – *decoding*). The only way this can be changed is through other information, thought, emotion and perception representing other frequencies which then, through placidity, change the sequence of processing. Perceptions are represented by frequency waves and create a self-fulfilling conscious and subconscious feedback loop in which we interact with The Field of possibility only within the frequency band that our perceptions represent. In this way our perceptions become our experienced reality. The potential for mass manipulation is limitless when the Cult knows this and works to stop humanity knowing. Perception frequencies impact on the brain through placidity to dictate the way it processes information. In the absence of any change the brain goes on processing information in the same way. Through this sequence solidified perceptions become self-fulfilling prophecies as the brain processes information to match the solidified perceptions and the subsequent neuron-firing sequence which comes from that. We see this in people unable and unwilling to explore another point of view or ways of looking at situations and subjects. They say ‘my mind is made up’ (solidified neuron pathways), ‘I am right’ and ‘the science is settled’ when it blatantly is not.

Figure 42: Perceptions create a self-fulfilling conscious and subconscious feedback loop in which we interact with The Field of possibility only within the frequency band that our perceptions represent. See Neil Hague colour section.

The term ‘a closed mind’ is most apt. People can break free anytime they make the choice to realise they are entrapped by their own unyielding perceptions that lead their brain to process information in ways that appear to *confirm* those perceptions (Fig 42). Round and round it goes again like a fairground ride apparently moving while going nowhere. This is not helped by the system employed by Internet giants such as YouTube which recommend information based on your past viewing. Hey look at this – something else to confirm what you already think. The very idea that we can form solidified perceptions while being aware of a fraction of 0.005 percent of what exists in the Universe is a fair definition of insanity. Religions go even further and insist that all people need to know can be found between the covers of a *single book* within a fraction of a fraction of 0.005 percent of what exists in the Universe. As a measurement of crazy, that is world class. It becomes clear why the Cult has always sought to control the

information that people see and hear worldwide. Information dictates the way the brain processes information and becomes the person's sense of reality which, in turn, becomes their experienced reality. There's a lot more about this to come in relation to current events which look very different from this perspective.

Time? What time?

Figure 43: 'Past', 'present' and 'future' are only perceptions. All is happening in the same NOW. See Neil Hague colour section.

I understand why people find it so difficult to comprehend that there is no time when 'time' is the very foundation of human society. Everything is driven by the perception of 'time' – time is running out, look at the time, how time flies and where has the time gone? Yet the only moment within the entirety of Infinite Reality is the NOW. There is nothing else. What we perceive as past, present and future are all happening in the same NOW. I know that sounds incomprehensible to most people, but look at it from this perspective: Where is the 'present'? In the NOW. Where are you when you think about the 'past'? In the NOW. Where are you when you think about the 'future'? In the NOW. Where does the perceived 'future' eventually happen? In the NOW. Where did the 'past' happen? In the NOW. There is only the NOW ([Fig 43](#)). As you read this book in what is perceived to be the 'present' all your thoughts and memories of the 'past' exist in your conscious and subconscious mind in that same 'present' as do all the wavefield perceptions that you will experience as the 'future'. They are all vibrating in the same field of NOW. I see scientists speculating about how the future can affect the present or even the past. Some of their experiments make it seem that way when in fact 'past', 'present' and 'future' affect each other because they are all happenings and connections in the same NOW. 'Time' is a decoded construct of holographic reality. Wavefield happenings in the NOW are arranged in a holographic sequence by the brain so that one appears to follow another. The apparent speed that Body-Mind runs this sequence leads to the perception of 'time' and our personal mental and emotional state affects how fast or slow 'time' appears to pass. When we are doing things we don't like 'time' seems to pass slowly while activities we enjoy make 'time' appear to pass quickly – 'My goodness, where's the time gone?' and 'Time flies when you are enjoying yourself'. Einstein called this 'relativity' as in 'time' being relative to the observer – the *observer* or decoder again. He was describing this in terms of the speed and location of the observer relative to what was being observed, but it goes much deeper into the speed at which the observer processes information. A sequence of events ('time') comes into existence only when we decode that sequence into experienced reality and the passage of 'time' is dictated by perception – one person says 'time is flying by' while someone even in the same room will say 'time is dragging today'.

Figure 44: Different scenes on a DVD appear as past, present and future when they all exist on same disc in the same NOW. Our perceptions of them creates the illusion of 'time'. (Image Neil Hague.)

Figure 45: 'Time' is real when you cross an invisible line and change the 'day'? Time does not exist. We make it *appear* to exist. (Image Neil Hague.)

'Time' seems to pass quicker the more information the brain processes and as ever more information is processed today, especially with instant news, social media and the Internet, 'time' seems to be speeding up for many people. Studies with soldiers have shown how time is in the mind. Three groups were taken on a march of the same distance but at one point each was told they had been marching for different times even though they had not. One group was told the correct time or miles they had been marching; the second was told they had been marching for less time than they had; and the third was told they had been marching for more time than they had. The fatigue of the three groups matched the time they *thought* they had been marching when the time/distance involved was the same. A movie on DVD exists in the same NOW and I think everyone could agree with that. We experience the movie, existing in the same NOW, as a sequence of 'time' as one scene follows another. Where you are on the DVD will appear to be your 'present' while your 'past' is the scenes you have already watched and your 'future' is the scenes you have yet to watch ([Fig 44](#)). A DVD in totality in the NOW is still experienced as 'time' passing from past through present to future and that's how we experience the passage of 'time' when there is only the NOW. Philosopher Alan Watts described 'individual' events as 'different sections of one continuous happening'. This is a good analogy, as with the DVD, and there is also the symbolism of experiencing a journey along a river as a series of moments in 'time' when the whole river exists in the same moment from source to sea. Each perceived 'moment' following past 'moments' are really 'different sections of one continuous happening'. Time as we perceive it is quite obviously a human construct in that it involves clock-time which is so ridiculously manufactured that you can pass an invisible line called the International Dateline and instantly be in tomorrow or yesterday ([Fig 45](#)). People in Australia enter each New Year long before those in the United States and yet if an American in his today calls an Australian in his tomorrow they talk in the same NOW. The *speed* of ageing is connected to the perception of 'time' that doesn't exist except as a decoded illusion. While the body's wavefield stability remains the same the body hologram cannot change. Ageing is an interaction between mind and body. There is a sequence in the body blueprint that leads to a cycle from birth to death. After all we wouldn't want to stay in this one band of frequency forever when there is infinity to explore. The speed of this 'ageing' sequence, however, is down to the mind and its perceptions. People think they must age in a certain cycle

and period only because almost everyone else does. Once again we have a self-fulfilling prophecy in which ageing is driven by the *perception* of ageing gleaned from experiencing the ‘norm’ of ageing. This is a quote that captures the time-illusion theme:

Time doesn’t exist, clocks exist. Time is just an agreed upon construct. We have taken distance (one rotation of the Sun), divided it into segments, then given those segments labels. While it has its uses, we have been programmed to live our lives by this construct as if it were real. We have confused our shared construct with something that is tangible and thus have become its slave.

A slave to the Cult ‘gods’ and the manipulated construct of illusory ‘time’; but we don’t have to be. Once we understand how the mind and a perception of ‘time’ interact we can start to control time. Top sportsmen and women already do this without realising. Researchers at the University of London found that those taking part in sports involving fast movement of a ball (tennis, baseball, cricket etc.) are able to slow down time. Their focus during play processes information so fast that its holographic movie sequence runs slower than the general population. The crowd in a tennis match with their heads lurching left and right to follow the ball perceive one speed while the players are experiencing another. This allows them to accurately hit a ball which at ‘spectator’ speed would defeat them. You often hear it said about great footballers that they seem to have more ‘time’ than everyone else. They *do* through the way they process information. They assess a situation on the pitch (process information) so fast that they can respond quicker than others who process (and so react) slower. Remember the game is happening in the minds of players and therefore it must be mind that decides the outcome. When this is more deeply understood by the world of sport we will see performances of all kinds improve by amazing leaps. The limit of sporting performance – as with life itself – is decided only by the self-imposed perception limits of the mind. There is an altered state that top sports people know well called ‘the Zone’. I experienced it myself as a footballer and it is not confined to sport. I go into the Zone when I am writing and during speaking events. In sport the Zone slows down ‘time’, the sound of the crowd dissipates to silence, and any nerves or worry about the outcome disappear. You access a level of awareness beyond what is called the ‘conscious mind’ which can be full of self-doubt (‘You think too much’). What follows is a calmness and level of focus that is only interested in doing the job and not worrying about what the outcome will be. In these moments come the best performances which self-doubt and emotion can otherwise sabotage.

The speed of light? It's pedestrian

Figure 46: The night sky seems so far away, but it only exists in that form in your brain. What happened to ‘space’? (Image Neil Hague.)

Figure 47: All existence shares the same ‘space’ on different bands of frequency just as analogue radio and television stations share the same ‘space’ without being aware of each other unless they are very close on the dial. (Image Neil Hague.)

The collective programmed perception limit of speed and ‘time’ is the speed of light which we are told is the fastest speed possible. What crap that will be seen to be. We live in an infinite reality of Infinite Possibility and there is no fastest or slowest anything. The speed of light at 186,000 miles per second (and the perceived physics associated with that) apply only to the frequency band of current human perception and even then they are malleable through the perceptions of consciousness. The speed of light is only the inability of Body-Mind to consciously decode reality faster than the speed of light and there is a reason for that which I will be exposing. The already-measured speed of communication by consciousness is infinitely quicker than the speed of light – as in *instant*. When cells from the same person were located 40 miles apart they responded instantaneously to changes in the other. This both revealed the myth about the speed of light and confirmed the truth about wave communication over what we perceive as enormous ‘distance’. Physicists led by Juan Yin at the University of Science and Technology of China in Shanghai estimated the speed that photons (tiny packets of light) interact at *ten thousand* times the official speed of light. ‘Time’ changes along with much else when you approach the speed of light and the limits of the Body-Mind decoding system within the human frequency band. Space and distance are further illusions of holographic decoded reality. Scan the night sky and everything you think you ‘see’ in the form that you think you ‘see’ exists only in your ‘head’ – the Body-Mind decoding systems ([Fig 46](#)). In fact, it’s not even your head but an area at the back of the brain where visual reality is decoded and your personal visual movie constructed. Computer games appear to have both time, as scenes change, and space in depth and perspective. Yet they are only codes written for the computer to decode. Space as we perceive it is defined by holographic form. Where there is no form we call this ‘space’ and people think of this ‘space’ as ‘empty’ when it is a consciousness field full of information – The Field. What we refer to as ‘space’ is only the absence of form or ‘things’ and it is absolutely not ‘empty’. Infinity exists in the same ‘space’ where you are sitting or standing now while only an infinitesimal fraction can be perceived by the human decoding system ([Fig 47](#)). We are told that light from stars travels billions of light years to get to us when there is no ‘space’ to ‘cross’ or ‘time’ to ‘travel’ except as an illusion of decoded perception. What you believe you perceive and what you perceive you experience. Change what you believe and you change what you experience.

Evidence galore

Figure 48: Enormous numbers of people have described leaving five-sense perceptual focus and entering a vastly different reality in a near-death experience.

We have evidence of other realities and levels of consciousness from literally millions of people living today who have had what are called 'near-death experiences', or NDEs. This is when the body dies and people apparently experience their awareness being released to another point of observation outside the body ([Fig 48](#) overleaf). Reality that I have outlined so far explains why near-death experiencers describe what they do. The number of NDEs must be many hundreds of millions and more throughout history with near-death experiences described in ancient Greek and Roman texts and medieval works. Modern experiencers report how they see medical staff trying to revive 'them' (or rather their temporary vehicle) while being perceptually detached from the body. Many are able to accurately recall what staff were saying while 'they' were officially 'dead'. Many describe looking down on their body and no longer identifying with that as part of them. NDEs have many common themes of passing through a tunnel (though far from always); meeting long-dead friends and relatives (often looking far younger than when they 'died'); and experiencing stunningly beautiful places while enveloped in indescribable love. They report an extraordinary sense of calm and peace and how they felt free for the first time. Not everyone's life changes for the better after they return to the body, but that is the case with most once they have come to terms with living in a world they know is not what it appears to be. One experiencer said: 'I don't fit in because I don't "toe the line" and just agree with things.' This happens when you see through the illusion. Others report feeling more tolerant, loving and compassionate and no longer obsessed with materialism and personal status. The most common trait of a near-death experience is that people no longer fear death. Humanity in general is haunted by the prospect of death when there is nothing to fear. The Cult doesn't want us to know this when fear of death (fear of the unknown) has so many uses in pursuit of control (see the Covid-19 hoax). I have read a long list of near-death accounts over the years and the great majority are very positive. Rarely do you find people who prefer human life to what they experienced in 'death'. They return because they are told their experience is not yet over or they don't want to leave children and other loved ones behind. Most are transformed by their experience and what it showed them about reality beyond the myopia of the body which focuses our attention within the minuscule frequency band of visible light. 'We' don't die – only the illusion does. My own findings were confirmed by a team of scientists from the University of Liège in Belgium and Canada's Western University who found that in 158 written testimonies about near-death experiences positive responses far outnumbered negative ones. Canadian paramedic Adam Tapp, who was clinically dead for eleven minutes, said: 'It was just like waking from a nap in a place I have always been and there was no fear or anything, just complete contentment and happiness.'

Figure 49: My mother's picture with the life-force that had departed her body at the time of 'death' which was nothing more than a transformation of her point of attention.

Figure 50: Our experienced reality is like a torch light in a pitch-black 'warehouse' and all we perceive is within its beam.

Figure 51: When we leave the body it is like all the lights of the warehouse are switched on and we realise that reality is far greater than we thought. Oh, just a little bit.

I went to the funeral parlour when my mother 'died' and saw her body lying on a table. I touched her hand and it was cold and lifeless as you would expect; but alongside was a big picture of her which my brother Paul had arranged to have at the funeral and that picture was *alive* with energy and radiance ([Fig 49](#)). Cameras don't only record an image we can see. They capture the energetic life-force – the True 'I' – that takes temporary residence 'in' the body. The life-force that I saw in my mother's picture which was no longer in her body – *that's* who we are. Switch off the electricity to a piece of technology and it 'dies' or ceases to work while the electricity itself, the life-force of the machine, continues to exist. A body devoid of its life-force decomposes because the energy sustaining it has gone. A near-death experiencer described our world as like walking through a pitch-black warehouse with a torch when all you can see and be aware of is limited to the narrow beam of light ([Fig 50](#)). She said leaving the body was like all the lights in the warehouse are turned on. You see the enormity of what you are and where you are when before you were aware only of that within the torch light ([Fig 51](#)). Another constant theme of experience outside the body is the feeling of being at 'one' with everything and connected to everything. A near-death experiencer said he was aware of his hospital environment in Los Angeles and could also hear conversations of family members in India. He said he felt everywhere in the same moment. This is what happens once our awareness is no longer focused through the visible light myopia of the body – the torch light – and we access the perceptual reality of waves that connect with other waves beyond the illusions

of distance and time. There is still the ‘individual’ sense of self and at the same time the feeling of a seamless connection to all that exists. This can be simply explained. We are a unique point of attention within a seamless flow of Infinite Awareness and we are both the ‘individual’ attention and the whole at the same ‘time’. Human disconnection from awareness of the whole as manipulated by the Cult means that ‘incarnate’ consciousness experiences reality from a sense of isolation and apartness – the Bubble ([Fig 52](#)). A near-death experiencer described beyond-the-body reality:

Figure 52: Burst the Bubble and freedom awaits.

... everything from the beginning, my birth, my ancestors, my children, my wife, everything comes together simultaneously. I saw everything about me, and about everyone who was around me. I saw everything they were thinking now, what they thought then, what was happening before, what was happening now. There is no time, there is no sequence of events, no such thing as limitation, of distance, of period, of place. I could be anywhere I wanted to be simultaneously.

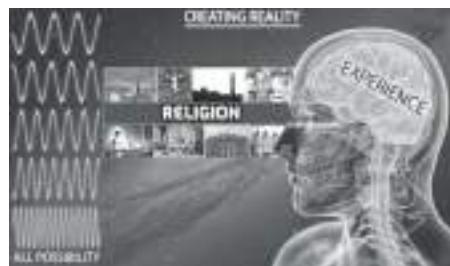

Figure 53: Religion is the greatest form of mind control ever invented never mind which name may be on the temple door. (Image Gareth Icke.)

Figure 54: Create religions and then play them off against each other – and within each other – to divide the target population into conflicting groups. (Image Gareth Icke.)

Exactly. That is life beyond the limited focus and decoded illusions of Body-Mind. Think how different our world would be if humanity realised that we are experiencing a temporary illusion or movie and that we are ALL expressions of the same Infinite whole in which, despite what our five senses may tell us, there is no time, sequence of events, limitation, distance, period or place and we can be anywhere we want to be simultaneously. How would you pitch race against race, religion against religion, sex against

sex, politics against politics and income against income if everyone knew these are temporary and illusory labels and experiences and that we are all *each other*? The Cult must perpetuate this illusion or its divide and conquer manipulation is over. Religion is one of the greatest forms of mind control ever invented (by the Cult) and up there as the greatest form of divide and rule ([Figs 53](#) and [54](#)). Do people really think that when they leave the body they are still Christians, Muslims, Jews, Hindus, black, white, man, woman, transgender, rich, poor and so on? Some may wish to believe so, but it's delusion. Are those suffering 'physical' or psychological handicaps still handicapped when they withdraw from a body where the handicap manifests? We need to urgently see the fundamental difference between the *experience* and the *self*. That realisation alone will change the world.

You are what you believe

Some near-death experiencers report amazing health transformations with even late-stage cancer disappearing. They say pain goes with release from the body and that must be so. Pain is a phenomenon of the senses and not beyond-the-body consciousness in its infinite form. They describe how they can see, touch, hear, taste and smell without attachment to the five senses and in a far more advanced way. How can you see without the eyes of the body? It's all *illusion*. Expanded awareness is aware across all 'senses' with no need for the perceptual confines of the body to allow it to see; but if incarnate awareness is so body-focused and programmed by the illusions of eye-only sight then it will experience that reality until it's released from the body. People see visions in states of meditation and altered states of consciousness when their eyes are closed. Do we think that we see our vivid dreams through our *eyes*? Blind people describe how they could see once they leave the body. Blindness is the inability to decode visual information through the eye/brain connection within the human reality of visible light. Once they withdraw from visible light they see with consciousness whose awareness is filtered out by body systems during a human experience. Other common themes of near-death experiences are 'life-reviews' when they feel the consequences for others of their actions – nice and not so nice. Many describe having an infusion of knowledge about life and reality when they are released from the body information filter and consciously connected to awareness, insight and knowing that the Cult works to perceptually firewall. An experiencer returned with a deep knowledge of quantum physics that she didn't have before and had never studied. You can, however, access such information while in the body and I'll be describing how to do this. Mainstream academics and scientists ignore this mountain of evidence from the experiences of multiple millions because it demolishes their version of reality. They work on the basis that if they can't explain it then it can't exist which launches self-deluding arrogance into the stratosphere. I call it the arrogance of ignorance. 'What about the laws of physics?' they will cry. What about them? They only apply in theory within the frequency walls of human reality. They don't apply anywhere else and they don't need to apply here once we grasp what reality really is and how it really works. Manifestations of this are dubbed 'miracles' ('defying the laws of physics') when there is no such thing as a miracle – only understanding that Infinite Possibility means anything is possible. All will become clear as the book proceeds.

Most people have blissful experiences when they leave the body, but some don't. Others see religious figures, but most don't. There are many reasons for these differences including the saying 'death is no cure for ignorance'. Near-death does not have to be a cure for perceptual programming, either, although it certainly can be. If you believe that Jesus is your saviour then you may see Jesus in a near-death experience and let's not forget that consciousness beyond the body is trying to communicate information and concepts to you. If you associate love with Jesus then that image may be used to symbolise love and give you comfort in a bewildering situation. It doesn't mean there is literally a Jesus and of course no one knows what 'he' looked like even if he had been real. I don't believe for a second that he was, but I can relate to the character that appears in many guises and under many names in different cultures to be a *symbol* for expanded states of consciousness. This would make sense of 'No one comes to the Father

except through me' – only through expanded states of consciousness can you be aware of the Infinite Whole. The basic 'Jesus' story was told in versions all around the world long before the period when 'Jesus' was supposed to live and each could be symbolising states of expanded awareness. They represent a recurring narrative put into different historical and cultural settings using different names for the hero. There is not even a physical description of 'Jesus' in the Bible. The image that people have of 'Jesus' came from far later artistic imagination and interpretation and yet those who claim to meet 'Jesus' in near-death experiences see this classic version of 'him'. It's all in the mind, but then everything is. The New Age 'Jesus' is called 'Sananda' and claimed to be an 'Ascended Master'. Guess what? He is portrayed in virtually the same way as the Christian 'Jesus'. I don't accept the literal existence of 'Jesus', but as a *symbol* of expanded awareness, well, I'm open to that. Your state of consciousness when you withdraw from the body will massively influence your experience until the truth dawns that what you believed about life and reality is to say the least not quite how it is. Those who have some understanding of reality will be aware of the process that follows 'death' while those with their awareness welded to Cult perception programs can be seriously bemused and bewildered as so many near-death experiences have confirmed.

Your state of awareness most certainly affects the experience of psychoactive drugs which activate areas and channels of the brain to access realities normally denied to human perception. These have been used for thousands of years as a major source of shamanic comprehension of reality. I took ayahuasca, a psychoactive rainforest potion, over two nights in Brazil in 2003 and had a fantastic experience over a total of seven hours. For five hours on the second night a clear, loud, powerful voice taking a female form gave me chapter and verse about the illusory nature of 'physical' reality. I refer to the communicator as 'The Voice'. During an explanation about the illusion of 'time' and 'space' The Voice said: 'Why do you fly from point A to point B when you *are* point A and point B and everything in "between"?' When I returned home with total recall of what was said I began to research the subject at length and found that mainstream science (especially quantum physics) already had the evidence to prove that physical reality is illusory, but the controlling hierarchy still sought to push the case for this-world-is-all-there-is and you are only your brain. This is the Cult narrative for reasons I have explained. Some have had nightmare experiences with psychoactive drugs and in my view they only open brain channels that allow access to deeper levels of yourself which can still reflect your current mental and emotional state and what is happening in your subconscious. I have known people who have taken drugs like LSD hundreds of times and they were no more enlightened than someone who has had nothing stronger than a cup of tea. It is not only about opening your mind, but what level of awareness you open to. Gail Bradbrook, a co-founder of the extreme climate group Extinction Rebellion, is a psychoactive potion-taker who thinks she is enlightened as a result and wants others to partake. She told the BBC that the idea of creating Extinction Rebellion came to her when she prayed 'in a deep way' while taking 'psychedelic medicines'. Her subsequent 'enlightenment' led her to establish a Climate Cult operation which is a fundamental threat to human freedom as I will be exposing. She confuses demands for global centralisation of power to 'save the world' (exactly what the Cult has been seeking all along) with an 'awakening'. Such 'enlightenment' is really a fast-track to even greater enslavement and I repeat: Psychoactive drugs only take you to where you already are subconsciously, if not consciously, and that will dictate the level of awareness beyond human reality that you connect with. These drugs, like death, are indeed no cure for ignorance, but they can be for some. Perception is the key and who is in control of that? *We are* – if we make that choice and stop allowing others to tell us what to think.

The scale of the reality illusion, which is mercilessly manipulated by the Cult, can be seen in the fact that mainstream science believes that (illusory) time and space are among the fundamental building blocks of the Universe. This systematically-imposed ignorance ('lack of knowledge, understanding, or information') is the foundation of human control and it must end before, as Martin Luther King put it, freedom can ring.

CHAPTER TWO

Who are we?

All growth is essentially an expansion of awareness – Joseph Rain

There is a malevolent force behind humanity's systematic perceptual entrapment and the indoctrination is incessant and life-long. What a testament to the power of consciousness over programming that anyone is awakening from the Cult-induced trance and they are in ever greater numbers.

Figure 55: I-am-a whatever my upbringing told me to be.

People are unconscious and perceptually entrapped in Body-Mind because they are *manipulated* to be that way and this needs to be understood to avoid awakening from the trance to include a sense of superiority. Almost everyone was asleep once. Five-sense unconsciousness can appear to be unbelievably stupid, but that is what happens when people are disconnected from an influence of the True and Infinite 'I' and imprisoned in a sensory world that hijacks perception for an entire human lifetime. The great news is that we can become conscious anytime we want. More and more people are awakening from their induced coma while others are being captured more deeply in the Cult's perceptual fly-trap by a tsunami of programming deployed increasingly via technology. The latter, too, can escape the illusion – perceptual entrapment – whenever they make that choice. The motivation of this book is to speed and expand that process. As more become conscious of their True Self the world must change to reflect that. In the same way the crazy world of today, and a long time 'past', has reflected and continues to reflect collective human *unconsciousness*. So much is explained about 'past' and 'present' events when this is understood. Ironically, and it's another big penny-drop, the most *unconscious* are invariably those in positions of power directing the lives and society of everyone else. This is once again by design and not random chance. The Cult has to keep its targets asleep in unconsciousness if it is to secure ongoing collective control through perceptual programming and the most effective way to achieve that is to put unconscious Bubble people into positions of official power who are string-pulled from the shadows by the Cult. The plot demands disconnecting Body-Mind from expanded awareness and then to program

isolated Body-Mind with the required perception of self and reality through control of information. We see this process everywhere. Muslims tend to come from Muslim families, Christians from Christian families, Hindus from Hindu families, and followers of Judaism from Jewish families. In every case that version of reality and life is all they have ever heard in their growing-up years ([Fig 55](#)). The greatest form of mind control is repetition as the Cult-created Nazis well understood. You repeat a statement or alleged ‘fact’ until it becomes an ‘everyone knows that’ when in truth ‘everybody’ only ‘knows’ what they have been told to think they *know*. They don’t ‘know it’; they have only *downloaded* that perception which is a very different thing. Add the carrot and stick, benefits and punishments, for believing or not believing in the orthodoxy and it’s no wonder the religion that people are born into becomes the one they follow for life with all the limitations and impositions of belief and behaviour that come with the package. The sequence I have described applies equally to those who follow no religion or may indeed be antagonistic to religion. The non-religious population is also programmed through family, ‘education’, academia and media by the repetition of information headed ‘normal’ and ‘rational’ when most of this betrays an extreme misrepresentation of reality. Young people are told they must believe this crap and they are tested on their level of absorption in ‘exams’ that have potentially life-long career implications within The System. If you regularly question what you are told to believe you are ‘a disruptive influence’ in the classroom. Has your doctor prescribed Ritalin?

Figure 56: The fake self-identity that most people believe they are.

Figure 57: I am what I’m told I am.

I am going to focus on this life-long programming process later because it is vital to understanding how collective human perception is hijacked and how we can stop falling for it. Our human lives are a choice – a *perception*. These choices decide your health, happiness and entire experience. By that I mean *everything* you ever experience and even that called ‘random chance’, good and bad ‘luck’ and circumstances that appear to be created by other people. To appreciate how this happens we must first put aside all mainstream perception, belief and preconceived idea about the nature of self, reality and the human body. What the control system has told us about all of these things is fakery and at the core of this unceasing propaganda delivered day after day to generation after generation is the Cult. It knows that if we can be kept in ignorance of who we really are its agenda for mass control becomes a relative breeze. This is the foundation of human enslavement – hypnotically peddling a fake self-identity or what I call the Bubble or ‘Phantom Self’ ([Fig 56](#)). How apt that the word ‘person’ comes from the Latin ‘persona’

which means ‘actor’s mask’. Our Phantom Self persona is indeed our actor’s mask or headset. We appear to experience a solid world through a solid body. We do not. We are told that we are victims of our genetics. We are not. We appear to live in a world where everything is apart from everything else with ‘empty’ space in between. We do not. All is illusion that we are manipulated from cradle to grave to believe is real ([Fig 57](#)). When people can see through the scam they can stop it controlling their lives.

The One

Figure 58: The body is only a temporary vehicle for the awareness that we eternally are.

Who are we? Put the temporary human form aside and we are formless *awareness* – a state of being aware ([Fig 58](#)). How aware depends on how aware we choose to be or *allow* ourselves to be and that ‘how aware’ decides our life experience. We are unique points of attention within an infinite stream of awareness or consciousness and that awareness in its ‘totality’ (infinity) is what some call ‘God’ or the ‘Godhead’, Native Americans call ‘The Great Spirit’, and I call the *All That Is* or ‘*The One*’. Existence is not a single state of perception with *The One* constantly experiencing itself through its infinite expressions in different states of consciousness. There is a level of awareness that I describe as *Infinite Awareness in Awareness of Itself* which is aware that it is all awareness. This has been variously called ‘the Void’, ‘the Father’ and in my case *The One*. The ancient religious term ‘Father’ is an attempt to relate this concept to the world of human experience. *The One* is really the Father and Mother and everything in all existence. It is the realm of All Possibility, All Potential, and our perceptions dictate which possibility and potential that we manifest in ways I will be describing. All Possibility is the implication encoded in *All That Is, Has Been and Ever Can Be*. To the human mind enslaved in the illusion of past, present and future this would seem to be impossibility. How can anything be all that *is*, has *been* and ever *can be*? Yet what is this depicting except *All Possibility*? Reality is infinite because possibility is infinite within the awareness of *The One*. How can you have a state of all possibility unless everything is possible? Thus *Infinite Awareness in Awareness of Itself* is ‘past, ‘present’ and ‘future’ (as they appear to be); it is *and* it isn’t; it can *and* it can’t; it did *and* it didn’t; it is everywhere *and* nowhere; it is everything *and* nothing, it exists *and* it doesn’t. Some people say ‘God is everywhere’ while others say that’s crazy and cannot be; but it’s true in the sense of *The One* that weaves through the fabric of everything because *The One* is everything. Even impossible must exist within all possibility because the impossible is a possibility. Whether we choose (through our perception) to experience the possible or impossible is down to us. What one person will experience as impossibility another will find a way to overcome and make possible. If you don’t know how to do something that ‘thing’ is indeed impossible. When you *do* know it becomes possible. Both are potentials within All Possibility which includes every paradox. All Possibility must be awash with paradox which is defined as ‘a state in which one is logically compelled to contradict oneself’. When all is possible that must be. For every ‘truth’ there must be a contradictory ‘truth’ or perception of reality and *possibility*. Look at something from one angle (perception) and A is ‘true’. Look from another angle (perception) and B is ‘true’. They can both be true (possible) depending on your point of observation even

though they appear to be contradictory. Is the body solid in the way we experience it? Yes. Is it really solid from a point of expanded awareness? No. Here we have a paradox – it is *and* it isn't. Both are true from two different points of experience ... perception, *possibility*. Maybe human belief in '*I am right*' could benefit from some revaluation.

The no-thing is everything

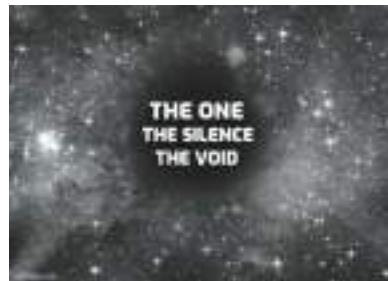

Figure 59: The *All That Is, Has Been, And Ever Can Be* that interpenetrates all existence. It *is* all existence.

Figure 60: The One is the creator of all reality via its infinite points of attention – including us. See Neil Hague colour section.

The 'Void' is a term used to describe *Infinite Awareness in Awareness of Itself* because that is how it appears to be ([Fig 59](#)). Those who have entered altered states of consciousness throughout human history have perceived 'God', the 'Father' or '*The One*' in the form of a void or silence. I did so myself during my ayahuasca experience in 2003. I observed from the realm of vibration, frequency and form an indescribable brilliant blackness. I know it may sound crazy but the darkness shone like the brightest light. 'This is the Infinite, David', the ayahuasca Voice told me. 'It is where you come from and where you shall return.' The word 'return' is only used in relation to human perception. We are *always* the Infinite – we never 'left'. We've just forgotten and been manipulated to forget. The shining blackness was still and silent and so different from the movement and vibration in the world of form. The Void has been described as 'nothingness', but within the stillness and silence is *everythingness* in the form of All Possibility waiting to manifest from the imagination of 'God' or '*The One*' which includes *our* imagination as an expression of *The One*. Sit in silence for a moment and what do you hear? Nothing. Okay, but this 'nothing' is only the absence of sound waves for your brain to decode. Within the silence, the nothing, is everything. When you hear sound or see images they are possibilities manifested out of All Possibility – the silence and the stillness. Silence is the norm, the foundation state, while sound comes and goes from the silence of *All That Is*. Rumi, the 13th century Persian mystic, said: 'Silence is the language of god, all else is poor translation.' Scientific studies have highlighted the negative effect of excessive sound – as in too loud and too much even when not loud – and the benefits for heart and mind of silence. I sit working all day in silence or near silence thanks to the quiet nature of where I live and it's wonderful. I read that

the word ‘noise’ actually comes from a Latin word meaning nausea. It is certainly highly recommended to spend time regularly when possible where it is quiet and not noisier/nausea. The ‘Void’ is the *source of all Creation* (possibility) while the realms of frequency and vibration *are the Creation* ([Fig 60](#) overleaf). The ayahuasca Voice said: ‘If it vibrates, it’s illusion.’ An immense indescribable love was emanating from the stillness and silence which confirmed what The Voice had said right at the start of the five hours of communication: ‘All you really need to know is Infinite Love is the only truth – *everything* else is illusion.’ This became the title of a book that I wrote soon afterwards. Put another way: *Infinite Awareness in Awareness of Itself* (the ‘Void’, *The One*, the source of love) is the only truth – everything else is the Creation or imagination of Infinite Awareness made manifest by information (consciousness/‘thought’) in the form of frequency/vibration. How can there be an ‘only truth’ within All Possibility? The only truth is All Possibility. This is limited only by the imagination of *The One*, and that is limitless.

Five years after my experience in Brazil, Dr Eben Alexander, an academic neurosurgeon at Harvard, fell dangerously ill and went into a coma for a week from which he said doctors did not believe he would emerge alive or at least as a functional human being. He said he was a this-world-is-all-there-is believer as the product of academic perception programming. This was underpinned by his scientist father who also believed that consciousness only exists in the brain and when the brain dies so do ‘you’. Alexander did recover his faculties even though he said his brain had so shutdown that only the primary survival functions remained active during the coma. He later wrote a book, *Proof of Heaven*, published in 2012, about what he experienced in his near-death state which transformed his perception of self and reality. He recalled how he met a female figure ‘out there’ that he somehow recognised, but he didn’t know why or where from. When he recovered he said he was later shown a picture of his younger sister from his birth family (he had been adopted) who he had never seen before. It was the figure he had met in his near-death state. Alexander’s claims have been controversial, of course, and people will have to decide for themselves what they think of them. The part of his book that most struck me for obvious reasons was when he recalled experiencing ‘The Core’ which he described as a ... Dazzling Darkness. This is what I had seen nine years earlier and he also described this ‘Core’ as a place from where ‘the purest love emanated and all is known’ ... all is known = All Possibility. I experienced this as the all-knowing *All That Is, Has Been and Ever Can Be – The One*. Albert Einstein said: ‘Anyone who becomes seriously involved in the pursuit of science becomes convinced that there is a spirit manifest in the laws of the Universe, a spirit vastly superior to man.’ That spirit is *The One* which pervades all existence and not only one universe.

Figure 61: A droplet can appear to be individual, but connect it to the ocean and where does the droplet end and the ocean start? They are one and the same.

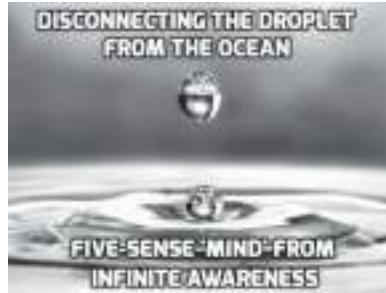

Figure 62: The foundation of human perceptual control is to disconnect the droplet from awareness of the ocean – our True Self.

What is called Creation emerges from *The One* through infinite expressions of *The One* (including ‘humans’) and Creation is once again limited only by the imagination of *The One* which is infinite. Creation is therefore infinite in its possibility and we are experiencing only a fragment of this in the micro-frequency band of light visible to humans. We are nevertheless co-creators of *The One* as an expression of *The One*. Consciousness fields emanating from *The One* themselves beget other consciousness fields like a single cell divides and divides until it is the *trillions* of cells in a human body. The point is that all those cells are manifestations of *one* cell as all that exists is the manifestation of One Consciousness. We are ‘individual’ points of attention and *all* points of attention. The part is the whole and the whole is the part. Where does the droplet end and the ocean begin once the droplet is reconnected with the ocean? They are the same and the Cult’s whole agenda is founded on keeping the droplets unaware of the ocean that we all are ([Figs 61 and 62](#)). We are all manifestations, or co-creators, of *The One* – yes, even you sleeping in the street believing yourself to be downcast, outcast and a failure. In my expanded awareness during the ayahuasca experience beyond the perceptual limitations of the body I felt connected to everything, but I was still a unique individual ‘me’. We are not one or the other. We are *both*. The more your mind opens and your consciousness expands the more your sense of self and the ‘I’ expands. Humanity has largely been manipulated to perceive only the individual. Even most major religions, while accepting there are other realities, still present ‘God’ and humanity as apart from each other instead of being the *same*. Saying ‘I am God’ is considered blasphemy. In the world of the Cult there has to be a servant and a master to match its own agenda for humanity. Infinite Awareness in its fully awakened state – ‘*The One*’ – pervades everything. It is that which weaves the web of life. *The One* interpenetrates all realities and is within you now. Perception creates experienced reality as I am going to make clear and a human perception of isolation and *only* individuality becomes our experience of both. They are illusions that without a conscious connection to *The One* can seem very real. Redefine who you are, open your heart and mind to expanded awareness, and your experience will – *must* – change.

What is ‘human’?

Figure 63: The body and the auric electromagnetic field is what I am calling Body-Mind which experiences reality through the five senses; but we are much more than that.

Figure 64: The energy vortexes known as 'chakras' which interpenetrate and communicate through our different energetic levels of being.

Now we can connect all this to today's global society. Human experience operates on multiple levels of awareness. There is the level that can be electromagnetically and visually recorded as the human 'auric field'. The combination of body and auric field is what I am referring to as Body-Mind. It is also known by many as the 'Ego' ([Fig 63](#)). We talk of people having open minds and closed minds and this is a perfect description. An open mind remains connected to expanded states of awareness while a closed one withdraws into the Bubble and perceives everything from the Body-Mind (five-sense) perspective. Bubble perception applies to much of the population (although this is changing) and crucially to those that dictate mass perception in the institutions of the Mainstream Everything – science, academia, media, medicine, commerce, politics and government. There is a level of our awareness that people call 'Soul' which operates outside the human frequency band and connects with Body-Mind through energetic vortexes known as 'chakras'. This is an ancient Sanskrit word from the Indian subcontinent meaning 'wheels of light' and that's an excellent description of the spinning energetic (consciousness) connections between levels of awareness within the same 'self' ([Fig 64](#)). When chakra connections are open the human 'I' can be influenced and guided by the Soul 'I' and through that to *The One* 'I'. In other words how far we open our minds has no limit. When those chakra/consciousness connections close or diminish we become perceptually isolated in the five senses and fall prey to self-identity with illusory human labels. The label 'I', or Phantom Self Body-Mind, then appears to be the only 'I'. Body-Mind is a projection of Soul and when the influence of Soul is weakened Body-Mind can take on a life and direction of its own. There are vortex points throughout the body and the seven main ones are:

The crown chakra on top of the head (many near-death experiencers describe re-entering their body through the top of the head); the 'third eye' chakra in the centre of the forehead through which we can make psychic connections to other realities; the throat chakra which relates to multi-level communication and connects with the vocal chords to affect their vibration; the heart chakra in the centre of the chest through which we express love (a lot more about this to come); the solar plexus chakra just below the sternum; the sacral chakra beneath the navel from where we experience emotion and the connection of this emotion-chakra to the bowel/intestine is why people 'get the shits' when they are nervous and fearful; lastly there is the base or 'root' chakra at the bottom of the spine which grounds us in apparently 'physical' reality and also relates to sexuality and reproduction.

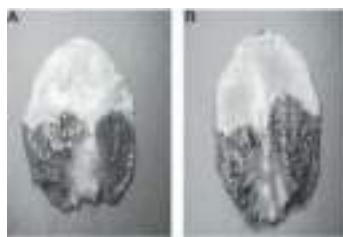

Figure 65: Fluoride calcifies the pineal gland which connects us to frequencies of awareness beyond Body-Mind. Definitely not a coincidence.

Each chakra is connected to a gland in the endocrine system including the pea-sized pineal gland in the brain which is known as the 'Third Eye' for its association with psychic sight or 'sixth sense'. The pineal gland is shaped like a pine cone and located in the middle of the brain. It has been revered in cultures across the world throughout history as a connection with 'god' and expanded reality. Endocrine glands regulate hormones, including sex hormones, metabolism, biological cycles including sleep, and the immune system. Through these connections the energetic balance or imbalance of the chakra vortices affects the 'physical' and psychological health of the whole body. In the case of the pineal gland/chakra connection it affects the ability to expand into other levels of awareness and malfunction locks people away in the five-sense Bubble – as the Cult well knows. Fluoride which the Cult has manipulated into drinking water and toothpaste on the false pretext that it protects teeth has been shown to calcify the pineal gland ([Fig 65](#)). The theme of locking people away in the five senses is *everywhere*. Add the fact that aluminium (in vaccines and many other sources), glyphosate (a herbicide that has long entered the food-chain and is sprayed in the public environment) and Wi-Fi all suppress the pineal gland and you see what the game is – entrapping human perception in the five-sense Bubble. Scientific research has revealed how aluminium and glyphosate combine to be especially destructive to pineal gland function through the compounds they produce. The blood-brain barrier used to protect the brain from these and other toxins, but that is now being breached through technological radiation with 5G increasing the effect many fold.

'Serpent goddess'

Figure 66: The caduceus is symbolic of the kundalini energy rising through the chakra and central nervous system and bursting through the crown chakra on top of the head to connect us with other realities. The nature of those realities is dictated by our own state of being.

Figure 67: A kundalini activation can connect people with high frequencies of awareness or the low frequencies in which the Cult and its 'gods' operate.

The root chakra is the source of the transformative energy known as 'kundalini' (from a Sanskrit word meaning 'coiled') and this is symbolised as a coiled serpent or snake. Kundalini energy is revered as a goddess in some eastern traditions and symbolised by the caduceus symbol with the wings representing 'enlightenment' that comes from kundalini activation ([Fig 66](#)). The effect of this can be slow and measured or, as in my case in 1991, like a nuclear explosion. When kundalini energy is triggered it moves

up through the chakras, spinal cord and central nervous system to burst through the crown chakra and activate all the other chakras on the way ([Fig 67](#)). Such activation is said to bring people into a state of ‘enlightenment’ and make them ‘illuminated’. The term ‘Illuminati’ which describes a key network within the global Cult relates to this principle of kundalini activation that can consciously connect people to other realities and instigate sometimes outstanding psychic abilities. The point to emphasise, however, is that such a connection is not good or bad. Kundalini awakening can connect you with expanded consciousness of high vibration or equally to consciousness of low and manipulative vibration. It will reflect where you are consciously and subconsciously as with psychoactive drugs. Illuminati Cult initiates are opened via kundalini activation in secret society and satanic rituals to the frequency realms from which the non-human force controls the Cult through perceptual possession. Whether kundalini awakening connects you with high or low realms of awareness depends on your own frequency and that is dictated by your own perceptions and state of being. Are you driven by love or hate, for example? These are very different frequencies. Gathering numbers of people are going through the experience of ‘kundalini rising’ with a fantastic human awakening underway although you wouldn’t know this by observing the Mainstream Everything. They will be the last ones to get what is happening.

The kundalini process or a slower form of awakening from the Bubble can present many challenges and be very confusing as your perceptions begin to transform. Suddenly the world doesn’t seem the same anymore and those around you may believe you have ‘gone crazy’. Many people who end up under psychiatric treatment are only having a kundalini experience and they may have strange new perceptions or ‘hear voices’ as the activation connects them with other sources of information and influence beyond the five senses. This settles down eventually in most people, but by then many are prescribed drugs by clueless psychiatrists who don’t know what is happening or even the very nature of the human being. Such drugging (suppression of awakening) can be encouraged by family members who also have no idea what is going on. Such are the consequences of ‘educated’ ignorance. I had a colossal kundalini awakening in 1991 after a life-changing ‘paranormal’ experience on a hill in Peru as I have recounted in other books. I have described how energy that felt like a drill entered the top of my head and passed down through my body while another flow came the other way. I didn’t know it at the time but that energy was flowing through the chakra network and central nervous system to activate – *big time* – the kundalini. My conscious mind became flooded with concepts, information and awareness from beyond the senses and this launched me into three months of utter confusion and bewilderment when I didn’t know who I was, where I was, or what on earth was happening. I call this my ‘turquoise period’ when I had the urge to wear the colour turquoise all the time. Everything is a unique frequency including colours and I was attracted to turquoise as my energetic field was attracted to the *frequency* of turquoise as a result of the transformation I was going through. People are subconsciously attracted to certain colours for the same reason and they radiate in particular colours (‘you always look great in that colour’) while looking and feeling drained in others. It’s not the colour as we perceive it that has that effect; it’s the frequency and how it impacts on our own frequency field.

Give us a wave

To realise what the body is we have to deprogram ourselves from what we’ve been told that it is. Everything in created reality outside the stillness and silence of the Void is information (thought, imagination) delivered through frequency and vibration in the form of waves. We talk about sound *waves*, thought *waves* and brain *waves*, and creation emerges from the thought or consciousness waves emanating from the awareness of ‘God’, or *The One*, via all its points of attention. *The One* experiences itself through the infinite realms of Creation. ‘In my Father’s house are many mansions’ as the Bible puts it. You, me, everything outside The Void are information/consciousness fields taking the form of waves, frequency and vibration with an always-there conscious connection to *The One* whenever we choose. People believe they are only their human labels when we are in fact an expression of Infinity and

ultimately we *are* that Infinity. This is the last thing the Cult wants us to know when its control depends on us not knowing. Perception dictates the frequency and nature of the waves we generate. The more expanded your consciousness and sense of 'I' the higher/quicker and more expanded the frequency/vibration you will emanate and connect with until you perceptually become *The One* and return to the silent, still, all-knowingness of the Void from whence you came. Even then you are still 'you', just a very different state of consciousness and perception. The Biblical story of the Prodigal Son who leaves his 'Father', messes up, learns from the experience and returns home again to be welcomed by his Father can be a symbolic way to describe this. 'The Father' didn't judge his son just as *The One* doesn't judge. Whatever your choices and experience you are *The One* experiencing itself. The point is, though, that while we remain in perceptual states of isolation, a sense of *only* individuality, and in emotional prison cells of hate, anxiety, fear, worry, depression, guilt, resentment, revenge and so on we cannot expand into higher levels of consciousness. These are low-vibrational states which entrap us in low-vibrational experience. If you are in perceptual frequency band 'A' you can only experience that band when that's all you can connect and interact with. Radio station 'A' can't connect with radio station 'B' when they are broadcasting on different frequencies. The same applies after what is perceived as 'death'. Our perceptual (frequency/vibrational) state decides what reality – which of the 'mansions' – we can gravitate to although release from the body and its illusions can obviously transform perception very quickly.

Figure 68: When Body-Mind disconnects from an influence of the greater self – 'Soul', 'Higher Self' – we are at the mercy of perceptions gleaned only through the five senses. See Neil Hague colour section.

The body/auric field (Body-Mind) and Soul (expanded awareness beyond Body-Mind) are both consciousness fields of frequency and waves. They are meant to connect and communicate as one 'entity', but if Body-Mind becomes seriously out of frequency-sync with Soul then communication and influence is diminished ([Fig 68](#)). Soul, or what some call the 'Higher Self', is banging the keyboard, tapping the mouse and getting no response from Body-Mind, or 'Ego'. The Cult works ferociously to secure this disconnection and isolate Body-Mind from Soul. The game is then to program isolated Body-Mind with perceptions that ensure mass human control ([Fig 69](#)). Knowledge of true reality has been held at the inner core of the secret society and satanic networks and passed on through the generations via those networks to exclude mainstream humanity. Such knowledge was once widely understood in the ancient world, but was then sucked out of general circulation. This was achieved not least by the imposition of religion which made exploring reality a death sentence imposed by the Cult behind those religions. Cult empires (especially the British) targeted shamans and carriers of ancient knowledge as the world was colonised

with a fake version of reality that hijacked perception and instilled the crooked beliefs of mainstream (Cult) ‘science’ and mainstream (Cult) religion to secure an official monopoly on the perception of reality. Religions in the East do speak of Maya (‘illusion’) and Brahman (Infinite Existence, Infinite Knowledge, and ultimate reality) and that’s great. Unfortunately these basic truths are mostly obscured by the ritualistic worship of stupendous numbers of perceived Hindu ‘gods’. Hoarding knowledge and imposing ignorance is the whole foundation of human control. Today the knowledge is returning through those tapping into expanded states of awareness and the relatively few open-minded scientists genuinely seeking the truth (mostly through the realms of quantum physics which explores reality beyond the perceived ‘physical’ world). They are seeing the unsupportable fallacy of the ‘physical’ illusion and understanding what the ancients knew and the Cult has worked so hard to suppress.

Figure 69: Humanity is bombarded second by second with information – most inaccurate – by Cult-serving sources to form mass human perception. (Image Neil Hague.)

The body is not solid and quantum physics alone shows that this cannot be. It is a field of energy waves encoded with an information blueprint which constantly responds, positively or otherwise, to other waves in the form of thought, emotion and those delivered as food, drink and the now endless and ever-gathering forms of radiation in our ‘smart’ society. Everything, including food, drink and all that we consume and interact with, are manifestations of wavefields of information and waves affect other waves in positive, negative and neutral ways. Ever wondered why human behaviour has been so transformed by the ‘smart’ revolution of technologically-generated radiation waves and why suicides among the young are soaring? Stick around because the ‘why’ will become obvious from this perspective. Open-minded scientists operating outside the song-sheet mainstream have reached the same basic conclusions about the importance of understanding the function of waves and their impact on human life. It may seem strange to some that they could reach their conclusions from scientific research while I came to the same perspective through other means. There is actually nothing strange about it. When you tap into expanded states of awareness beyond Body-Mind you tap into the same knowledge whether you are a scientist or someone who left school at 15 as I did to play professional football. The label doesn’t matter. It’s how much you open your mind to other levels of awareness and possibility that decides what you know and what you don’t. By these criteria it is better to have an open mind and not be a ‘scientist’ than to be a ‘scientist’ with a mind slammed shut.

Atomic mythology

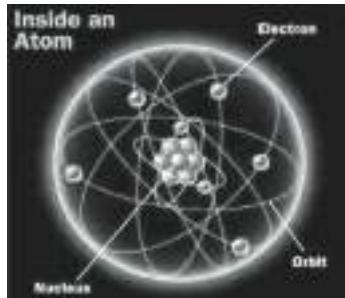

Figure 70: Atoms that are not solid cannot create a solid world. Yep, makes sense.

Replacing the conditioned perception of solidity and materialism with wavefields and holograms immediately explains mysteries that have bewildered mainstream establishment science since its inception. When you realise that nothing is solid or physical it all begins to make sense. The foundation of the materialist view is the atom which we are told is what forms matter – ‘solid’ matter. How strange then that atoms have no solidity! They are packets of energy waves made up of what science perceives to be electrons ‘orbiting’ a nucleus. Atoms are not solid and cannot a solid world make ([Fig 70](#)). The particles and nucleus are a fraction of the atom in totality. The rest is ‘empty’ in terms of physicality. Yet scientists tell us the body is made of *atoms*. They claim at the same time that the body is physical and has solidity when that cannot be when atoms have no solidity. Atoms are a decoded manifestation of information carried in waves. This description puts the whole ‘physical’ atom theory into perspective:

If the nucleus were the size of a peanut, the atom would be about the size of a baseball stadium. If we lost all the dead space inside our atoms, we would each be able to fit into a particle of dust, and the entire human race would fit into the volume of a sugar cube.

Figure 71: Plato’s Allegory of the Cave symbolising the human plight.

Go deeper into the nucleus and electrons and you find that they are not ‘physical’ either while mainstream science battles on with ever-diminishing credibility to hold the line at ‘the world is solid and the body is solid’ when they demonstrably *are not*. Atoms were named from a word meaning ‘uncuttable’ by Ancient Greek philosopher Democritus who lived approximately between the years of 460 and 370BC. He formulated the theory which became the foundation of modern science that matter is made of ‘uncuttable’ atoms and that movement comes from atoms colliding and bouncing off each other. You might observe that this has led to scientific explanations for the Universe invariably involving things bashing into other things. The (illusory) Big Bang is said to have been the instigator and the Universe has been staggering around colliding ever since apparently like some Saturday night drunk. Call a cab – the Universe is pissed again. How do you explain how so and so happened, professor? ‘Collision.’ And this? ‘Something hit it.’ Even in Ancient Greece there were others who could see through this. Famous philosopher Socrates (around 470 to 399 BC) believed that another force separate from ‘physical reality’ provided what I would call the blueprint for the world of the seen and he was right. His pupil Plato (approximately 427-347 BC) described something similar with his Allegory of the Cave ([Fig 71](#)). He told

the symbolic story of prisoners living in a cave and never seeing anything other than the single wall that their chains allowed them to see. Behind them was a fire which they couldn't see and people and animals walked past the flames casting shadows on the wall. These shadows became the reality of the prisoners because it was all they knew and experienced. Some prisoners studied the shadows and were acknowledged as experts about perceived reality while all along they were only studying shadows believing them to be real. Mainstream scientists and academics today are doing exactly the same apart from the minority of honourable exceptions who go their own way. In my analogy they are 'experts' studying reality within the Bubble while believing that to be all there is. A prisoner in Plato's story escapes and realises the shadows are illusions. He comes back to share the news with the others still enslaved, but they don't believe him and call him crazy. This is an allegory, as Plato clearly intended, for the human plight which continues to this day.

Figure 72: Shut-up – I know how things are. The System told me.

The reality that we think we are experiencing is a 'shadow' of something else in the sense of illusory 'physical' reality being a 'shadow' (decoded projection) of wavefield reality. The Soul is a wavefield phenomenon and so is Body-Mind. The body is a wavefield information blueprint that can replicate itself through 'procreation'. It, too, is a state of awareness because everything is and the body is designed for the mind – an incarnation of Soul – to experience this reality. The idea is that the mind, or 'ego', remains in sync and connection with Soul and is influenced by its expanded awareness. In this state of connection the mind/ego is *in* this world, but not completely *of* it. It has perceptual radar which is not subject to the illusions of 'matter'. If, however, mind ceases to be influenced in its perceptions by Soul the whole focus of reality is captured by the five senses and this becomes the dominant reality gleaned from information received from five-sense reality in the form of the Cult-controlled media, science, medicine and what is taught in schools and universities (Fig 72). Now, with Soul out of the game, an entire sense of reality can be programmed into isolated Body-Mind to induce Bubble perceptions. This one sentence describes how a few have enslaved the many through almost the entirety of known human 'history' to present day when 'smart' technology is taking this to a whole new depth of control. There are two primary levels of mind, the conscious and subconscious. It has been estimated that some 95 percent of human behaviour comes from subconscious programming and not from conscious decision-making. The Cult and its non-human masters target the subconscious to keep their targets *unconscious* of what is happening in great swathes of their mind. Remember that *Wonderpedia* magazine quote describing how every second eleven million sensations crackle along [brain] pathways which the brain filters down to a manageable list of around 40 per second and from this we perceive visual reality. We are consciously aware of a fraction even of what we see, hear, touch, smell and taste while the subconscious absorbs it *all*. The Cult has a whole language of symbolism revealed at length in my other books which is designed to bypass the conscious mind and speak to the subconscious.

How we create 'physical' reality

Figure 73: Human reality – waveform becomes holographic via human decoding systems. (Image Neil Hague.)

Figure 74: We even decode our own body into holographic form. Where is your body? In your *mind*. (Image Neil Hague.)

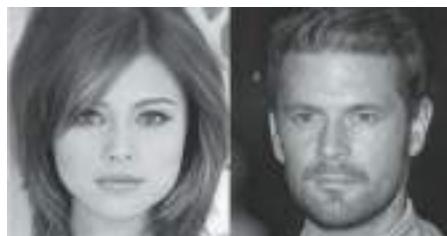

Figure 75: These are digitally-generated 'people' that don't exist as live human beings. The technology can also create fake landscapes and objects.

A wavefield information blueprint becomes the experience of a physical world when we decode the wave information into holograms. The five senses decode *wavefield* information into electrical information which they communicate to the brain and this is decoded into the digital/holographic information (illusory 'physical') which we perceive as the physical world (Fig 73). The different forms of information are the *same* information expressed in different ways. Wavefields are the foundation of all created reality and the body can be no different. This decoding sequence is the work of the mind which means that we decode our *own body* into apparently 3D physical reality by what scientists would call 'observation' or 'looking at it' (Fig 74). This is done through the interaction of the wavefield of the body and the wavefield of the mind in ways that I will come to shortly. Our bodies exist in our mind (like everything else) which is why your state of mind dictates the state of your body. Characters in the most sophisticated virtual reality games can appear to be so real and yet they are only information decoded by the computer and today fake digital people are being created that appear to be live human beings (Fig 75). I watched an experiment in which a group wore headsets that gave them the illusion that their bodies were that of a doll. This so tricked the brain that when something was done to the doll, including a needle in the eye,

the group reacted as if it was happening to *them*. We don't have to really have a 'physical' body to perceive the *experience* of having one. Virtual reality is technologically mimicking our experienced reality which is itself only a more advanced version of virtual reality. Indeed the two are becoming so close in their appearance that those at the cutting edge of virtual technology say it won't be much longer before you will not be able to tell the difference. We accept that virtual reality technology is decoded information that increasingly mirrors 'real' reality, but people still find it hard to grasp that 'real' reality is made manifest in basically the same way. Virtual reality technology hijacks and overrides the very same five senses through which we decode 'real' reality. Observe how virtual reality works and you are looking at how 'real' reality works. Virtual reality worlds exist only in your brain and so does 'real' reality – including the brain itself which is a wavefield construct in its prime state. I have been saying this for years and American cognitive sciences professor, Donald Hoffman, shares that view: 'The brain itself is an illusion ... neurons do not exist except when we see them, just like different colours ... only exist when we perceive them.' Where is the 'physical' body and the 'physical world? It's in our *minds*. We hear about mind over matter when mind *is* matter and matter *is* mind ([Fig 76](#) overleaf). This applies to mind at all levels of consciousness and to all expressions of 'matter'. Max Planck (1858-1947), the 'father of quantum physics', said:

Figure 76: This famous scene from *The Matrix* perfectly describes the 'physical' illusion.

All matter originates and exists only by virtue of a force which brings the particle of an atom to vibration and holds this most minute solar system of the atom together. We must assume behind this force the existence of a conscious and intelligent mind. This mind is the matrix of all matter.

Planck also said:

I regard consciousness as fundamental. I regard matter as derivative from consciousness. We cannot get behind consciousness. Everything that we talk about, everything that we regard as existing, postulates consciousness.

Mind is the *decoder* and *perceiver* – the *creator* – of all matter.

Holographic illusion

Figure 77: All of these images are holograms that appear ‘solid’ when they’re not.

Figure 78: Holograms of people – some no longer alive – can be inserted into scenes with living people.

Figure 79: The woman in this picture is a hologram projected from another location.

Figure 80: The guitar players are holograms.

Figure 81: The bike is a digital hologram.

The reality we experience as physical is really holographic and malleable, not solid. Holograms emerge from a flat surface in a form that makes them look three-dimensional ([Fig 77](#)). The technology began with simple holograms you see in shops, but holography has since been moving ever closer to human reality in the same way that virtual reality has. Holograms are now used to insert holographic fake people into films and stage shows alongside ‘real’ people with the join getting harder to see. The best of them look as ‘solid’ as you and me. Holographic depictions of long-passed artists like Elvis appear in duets with very much alive singers and I saw a whole comedy programme featuring a hologram of the late and great British comedian, Les Dawson ([Fig 78](#)). Holographic versions of people can be transmitted across the world ([Figs 79](#) and [80](#)). We also have digital holograms which is actually what ‘physical’ reality really is ([Fig 81](#)). Rich Terrile, director of the Centre for Evolutionary Computation and Automated Design at NASA’s Jet Propulsion Laboratory, said in 2017 that he believes the Universe is a digital hologram. This must be so because everything in what we perceive as the material world is a digital hologram. You would expect in this case to find pixilation in the fabric of our reality akin to pixels on a television screen that we decode into the images of TV programmes. It turns out that we do. A *New Scientist* magazine article about holographic reality in 2009 said that under magnification ‘the fabric of space-time becomes grainy and is ultimately made of tiny units rather like pixels’. A report by researchers at Britain’s University of Southampton in 2017 found ‘substantial evidence’ that human reality is like watching a 3D movie projected from a 2D screen. Yes, a *wavefield* screen. Kostas Skenderis, head of applied mathematics and theoretical physics at Southampton, said that while we perceive pictures to have height, width and depth they are in fact on a flat surface. The team detailed their findings in the peer-reviewed scientific journal, *Physical Review Letters*. They said the Universe could be a ‘vast and complex hologram’ and Professor Skenderis said that holographic reality was a huge leap in understanding the structure of the Universe. Skenderis likened reality to watching a 3D film in the cinema with the difference that we could touch objects and experience the ‘projection’ as real. I suggest that we don’t touch objects hologram to hologram (as in the experience of solid to solid) but electromagnetic field to electromagnetic field. The skin or touch-sense is a fundamental decoder of information into holographic reality and a wave antenna. Nor are we *watching* a holographic movie. We are *creating* it (*decoding* it). Researchers at Ibaraki University in Japan said they have found ‘compelling evidence’ that the Universe is a holographic projection and ever more scientists are being pushed in the same direction by both the evidence and the way the apparent contradictions of ‘matter’ become perfectly explainable once you bring holograms into the story. Leonard Susskind, professor of physics at Stanford University, has encompassed the holographic model to describe the Universe along with celebrated Argentine theoretical physicist Juan Martín Maldacena among many others. Susskind said: ‘It’s now gone from wild-eyed conjecture to be an everyday working tool of physics.’ How come I could have been so sure our reality was holographic in nature long before it touched the mainstream of science? If you tap into The Field beyond the five senses you just *know* how things are without having to work out every mathematical detail and confirmation. Those who were crap at school and feel a failure as a result should remember that. An open mind, and especially an open heart as we shall see, is far more enlightening than a university degree – first class or otherwise. You don’t need a scientific mind to understand reality. You need an *open* one. Great scientists *know* first and work out the details later while most of science does it the other way round.

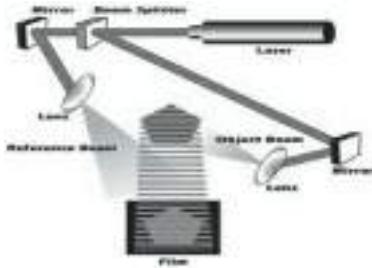

Figure 82: How holograms are created with two parts of a laser colliding to form an interference pattern – a waveform version of the object being captured.

Figure 83: A waveform holographic interference pattern.

Figure 84: Two stones dropped in water create waves that expand and connect to form an interference pattern that reflects the weight of the stones, where they were dropped and at what speed.

Figure 85: Holographic car looking very solid, but you could walk through it.

The information foundation of holograms that we have in human society is encoded in *wavefields*. They are created by dividing a laser beam into two parts. One part ('working beam') passes across the subject/object being photographed to record it as a wavefield and then strikes a holographic print. The other part (reference beam) strikes the same print directly ([Fig 82](#)). The two halves collide on the surface and create an 'interference pattern' which is the information of the featured subject encoded in a wavefield ([Fig 83](#)). The process is the same as two pebbles being dropped in a pond and the waves moving out until they collide and form a wave pattern in the water ([Fig 84](#)). This pattern is a wavefield representation of the weight of the stones, how high and at what speed they were dropped and how far apart. With holographics another laser is directed at the wavefield interference pattern and, apparently miraculously, but not really, a three-dimensional 'solid' image of the subject is projected as a hologram.

The laser ‘reads’ (decodes) the information in the wavefield pattern and in the case of human reality that laser is the *mind*. Our entire reality is being decoded by the mind from the base form of waves into holographic ‘physical’ illusion. Holograms can appear to be so solid that people refuse to walk through them when they depict cars and such like at motor company launches. When they try to do so they realise that they can ([Fig 85](#)). Okay, then, why can’t we walk through walls and each other? Two main reasons: (1) what the mind believes is real it will experience as real and (2) the resistance you feel when you bump into a ‘solid’ object is not a physical resistance but an electromagnetic one. I am sitting in this chair now and not falling through the seat and then the floor and then the earth etc., because the electromagnetic waves of my bum are different to those of the chair. My bum and the chair aren’t making contact at the holographic (‘physical’) level. They are establishing resistance at the *wavefield* electromagnetic level. When wavefield frequencies are far enough apart they can pass through each other which is why people see ‘ghosts’ walk or float through walls. Ghostly figures (other expressions of consciousness) tend to appear as ethereal. They are not a manifestation of the visible light, five-sense, frequency band and they can pass through apparently solid objects just as radio frequencies pass through walls. Those who can expand their visual decoding potential beyond the usual limits of human perception tend to see ‘ghosts’ while others more confined to five-sense reality tend not to. One will say ‘I’ve seen a ghost’ and the other will say ‘You’re mad, I can’t see anything’. It’s all about frequency and what you can and cannot tune into. ‘Physical’ reality, then, is a holographic illusion and what a difference this makes to understanding human experience and what is termed the ‘paranormal’. All the ‘paranormal’ phenomena that could not be happening if the world was ‘solid’ suddenly becomes possible and explainable from the perspective of the illusory solidity of holograms and the power of the mind to impact on wave information fields and through that change the nature of those holograms. What appear to be impossible happenings and ‘miracles’ are only wavefields generated by consciousness influencing other wavefields and thus holographic ‘solid’ reality. We will see in the next chapter that all ‘paranormal’ activity can be simply explained from this understanding. While great swathes of mainstream science focuses only on ‘physical’ reality that doesn’t exist, they will never explain the apparent mysteries of life which demand an understanding of non-physical reality. In such circumstances mainstream scientists with that ‘physical’ mindset can only deliver the mantra of ‘it’s not possible’ because, from its knowledge base and perspective, it *is* impossible.

Electric reality

Body-Mind operates and communicates electrically and electromagnetically and the brain also communicates with the body and its cells and organs through electrical signals. We are electrical/electromagnetic beings at the human level and part of what I call the Cosmic Internet in which the Universe affects us and we affect it and each other. This is possible through an exchange of information as our thoughts, emotions and perceptions interact through wave connections with The Field. Biologist Bruce Lipton points out that each human cell contains 1.4 volts of electricity which doesn’t sound much until you multiple that by the *trillions* cells in the body. You can see Internet videos showing how the power of an antenna is increased when touched by a human hand and electricity transferred (this happens with ‘hands-on’ energetic healing). We are electrical and when this electricity ceases to be generated by the body we are said to ‘die’. Our cells are batteries that store electricity and if they become drained we become weak and ill while vice-versa is the case. The speed of ageing is connected to this with cells lacking their optimum electricity either dying or not being like-for-like replaced. In this way the original body blueprint begins to unravel and we experience this as ageing and diminishing function. Ponder on the effect therefore of living in the technologically-generated radiation fields that we do today which scramble the electrical/electromagnetic systems of the body including cell replacement. When this constant replacement gets seriously out of kilter it is known as cancer. Here you have the link between technological radiation fields and cancer and other diseases. Emotional stress imbalances and distorts

electrical/wave harmony in the Body-Mind through the electrical/wavefields it generates and this is how stress becomes illness. A rush of fight-or-flight stress in response to danger or a short experience is fine. The body is designed to deal with those situations before returning to equilibrium. Ongoing stress known as 'background anxiety' or 'survival stress' is a very different matter and can be extremely destructive to health. Distorted wavefields generated by stress can jam immune system communication and stop people thinking straight through chaotic interaction with thought processing. The opposite is true with states of love and joy which transmit balanced waves and transfer that state to the body. Another aspect of stress is addiction to chemicals produced by those states. My mother used to say about a neighbour ... 'It's being so miserable that keeps them going'. Addiction to emotional chemicals means that when people are not worried (miserable) they have to find something to worry about to get their chemical fix. Methods of healing outside the mainstream are increasingly founded on achieving electrical/electromagnetic balance and harmonising the rate and direction of cellular electrical spin. Observe the solar system and the galaxy and you'll see that everything is spinning down to the smallest particle. When the spin reverses from what it should be electrical chaos in the body can follow and people head for a doctor who has no idea about the real cause and hands out a drug (also a wavefield) that can lead to even greater electrical mayhem, sorry 'chemical side-effects'. Pharmaceutical drugs are imbalanced fields of information (hence 'side-effects') while natural, not synthetic, nutrition and vitamins can have harmonious fields that sync with the body instead of wreaking havoc. The trick is to know which fields (nutrition/supplement) will help to secure harmony in any particular situation and which will not. Overriding everything is the power of the mind to heal the body by generating the perception waves that balance the imbalances that are experienced as illness.

In the language

Figure 86: The body meridian system picked out by a tracer dye and looking like a computer motherboard.

Figure 87: The Earth is also criss-crossed and interpenetrated by meridian lines of energetic force.

Figure 88: Hair-like needles and other techniques balance the flow of energy or 'chi' (information) in the body meridian system.

Reality can be seen in the phrases people use without realising that what they say is literally true. We describe the 'electricity' we feel in a room, theatre or stadium generated by various human interactions. Hair stands up on the back of the neck and skin tingles in an excited crowd because of electromagnetic energy emitted in the form of emotion. Skin is an antenna and the whole body is the same – hence the tingling amidst powerful electrical/electromagnetic fields. This happens to people in 'haunted' places when they feel the electromagnetic fields of entities just beyond the human visual frequency range. We speak of the electricity between people while others are said for the same reason to have 'magnetic personalities'. It is all about the power and compatibility of electrical/electromagnetic fields. Sex is the merging of two electromagnetic fields which together generate electrical power greater than the sum of the parts (well, sometimes!). The ancient art of acupuncture is based on balancing the flows of information in the form of electricity and electromagnetism that circulate the body through lines of force called meridians. These are the body equivalent of meridians or 'ley lines' that circulate and interpenetrate the Earth ([Figs 86](#) and [87](#)). Both systems are manifestations of the communication networks of The Field that connect everything to everything else. The ancients knew of these phenomena before religion suppressed the knowledge and they marked their paths and major vortex 'chakra' points where many lines cross with earthworks, standing stones and circles. The more powerful the vortex the more sacred the circle and location was considered to be. Hair-like needles and other methods employed by acupuncture balance the flow through the meridian system of *information* encoded in electricity known by the Chinese as 'chi' ([Fig 88](#)). The principle is yet again the same as with computers. When a virus scrambles the flow of information passing through the system the computer response to keyboard/mouse direction slows down or ceases to react. What appears or doesn't on the screen is affected by the distorted information and this is what happens when chi information in the form of electricity is in a state of disharmony or dis-ease. In ancient China some would for this reason pay their acupuncturist when they were well and not when they became ill. The acupuncture practitioner was supposed to keep the chi in balance to ensure that illness couldn't manifest. A perfect example of ignorance dictating perception is when acupuncture is dismissed and ridiculed for 'putting a needle in the foot to treat a headache'. If such people had the self-respect to do some research before waving their arrogant hand they would know that chi information passes around the body in circuits and a circuit that passes through the foot and the head can be blocked in the foot in a way that transfers to a pain in the head.

Figure 89: Every part of a hologram is a smaller version of the whole and encoded with the same information.

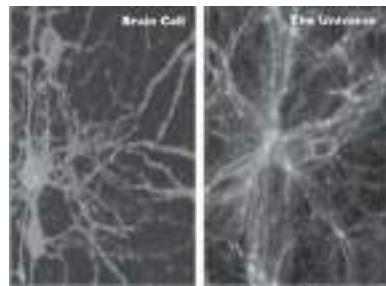

Figure 90: Brain activity and the Universe. As above, so below – the holographic principle.

There is one other point to make about holograms before we move on. They have an amazing characteristic in which every part of the hologram is a smaller version of the whole. If you cut a holographic wavefield print or interference pattern into four pieces and direct the laser at each one you would expect to see four quarters of the original image. But you don't. You see a quarter-size version of the *whole* image (Fig 89). This continues to be the case as you cut the image further because of the way information is distributed within a holographic wavefield or interference pattern. Although the clarity gets fuzzier as you reduce the size it's still the image in its entirety. The human energy field is a smaller version of the Earth field while brain activity and levels of the Universe look remarkably similar in our holographic reality (Fig 90). Here you have the reason why healing methods such as acupuncture and reflexology have identified areas throughout the body that are smaller representations of the whole body. This has to be the case when the body is a hologram and every part must be a smaller version of the whole. Tiny cells have respiratory, digestive and immune systems just as the body does in line with the holographic principle and the Earth has a ley line electrical system as the body has the chi meridian network. A skilled palm reader can read the information of the whole body in the hand thanks to the way holographic information is distributed (Fig 91). Holographic principles are the foundation of the ancient theme of 'as above, so below'.

Figure 91: Information can be gleaned from the hand because it represents the information blueprint of the whole body in a smaller form – precisely how holograms work.

Reality is certainly not what we are told to believe that it is. 'Unexplainable mysteries' don't tend to survive open-minded research. Talking of which ...

CHAPTER THREE

What mysteries?

The impossible could not have happened; therefore the impossible must be possible in spite of appearances – Agatha Christie

From the perspective of reality that I am describing so-called mysteries of life dissolve like snow in the sunlight. A long list of ‘inexplicable’ phenomena become ‘Ah, so that’s how it works’ and ‘Blimey, it all makes sense now’.

Figure 92: Wave entanglement – a key to understanding reality and human interaction.

We return to the theme of waves in water after two pebbles are dropped (Fig 92). Where waves from each collide and connect is known as wave *entanglement* and from this understanding of entanglement everything starts to fall into place. For example: Body-Mind is a wave entanglement between the wavefields of the body and those of the mind. While they remain in sync or entangled we are ‘alive’. Body-Mind’s wave entangled dance of synchronised oscillation is the human Dance of Life. When the body ceases to function (its *wavefield* ceases to oscillate and generate electricity) this releases the mind from entanglement and we ‘die’, or rather the body does. This is happening when near-death experiencers describe leaving the body as the mind is freed from the perceptual limitations of the body and opens to an entirely different reality. Wave entanglement with the body focuses attention of the mind on the micro-band of frequency called visible light through the decoding systems of the five senses. Once the mind is released from that body myopia we become aware of other realities. We are back to the torch light and warehouse analogy. If the body’s wavefield oscillation is restored so that entanglement is restored the mind can be drawn back into the body. If it doesn’t revive we’re out of here. The mind needs a body operating within the frequency band of the human world to experience and interact with the human world. Seeking out another body to entangle with is known as reincarnation. Those who have a lot of out of body experiences (a near-death experience without the body needing to die) have a much more fluid wave entanglement with the body which allows their mind to be released more easily. There are ways of training the mind to do this. Mind has the power to dictate the nature of wave entanglement

or whether there is one at all. Mind wave-power can think us alive against all the medical odds ('I'm *determined* to live') and think us dead ('I have lost the *will* to live'). Mind is the governor of the body while the Cult wants us to believe that the opposite is the case and so we don't use that power in all manner of ways. The body cannot exist without the mind. When mind disentangles it takes with it the life-force energy that animates and empowers the body which then starts to decompose. The light literally goes out as death is often described. Human life is the *rhythm* or oscillation of life and the body's rhythms including circadian and all biological rhythms are connected to this prime oscillation and its interaction with other waves. Another version of entanglement is called quantum entanglement in which 'entangled particles remain connected so that actions performed on one affect the other, even when separated by great distances'. Scientist Albert Einstein described this as 'spooky action at a distance'. There is actually nothing 'spooky' about it. When particles that are expressions of waves are connected by those waves they will act in unison as manifestations of the *same* wave or the *same field*.

Gene Genie

Figure 93: Big Pharma – the Cult cartel that controls mainstream medicine and seeks to crush any alternatives that work.

The wavefield relationship between Body-Mind is crucial to understanding everything in human reality. We are told that our genes basically decide all that happens to us physically and mentally. Some women tragically have breasts removed after being told their genes give them a high chance of breast cancer. Mainstream medicine is often brilliant in dealing with trauma injuries, orthopaedics, surgery, and reviving people at death's door (do electric shocks revive only the heart or primarily the wavefield oscillation that generates electricity?). Antibiotics have also been highly effective although they are handed out far too liberally to the point where infections can mutate to overcome them. These are the so-called 'superbugs'. When it comes to illness in general, however, modern medicine can be a disaster zone. One of the biggest causes of death in the United States – right up there with heart disease and cancer – is the *treatment* in all its forms. That's crazy? Yes, it is, but if people mean crazy as in that can't be true – check the figures and remember that they are only the numbers officially reported. Many other deaths which have medical causes are hidden behind fake diagnosis. The reason for this is that mainstream medicine doesn't know what the body really is beyond the biological, let alone how it functions, and it is manipulated to be that way through control of medicine by the pharmaceutical cartel or 'Big Pharma' ([Fig 93](#)). This is a Cult creation given predominance over 'health' thanks to people like oil tycoon and Cult operative J.D. Rockefeller (see my other books). Big Pharma (the Death Cult, hence it kills so many people) owns the medical schools where doctors are trained and indoctrinated; owns the professional bodies like the Medical Associations; and owns governments through a global army of lobbyists and money-no-object political funding. The situation is so outrageous and dire that the best rule of thumb is this: If Big Pharma wants something it's bad for humanity. Mainstream medicine is an outgrowth from mainstream 'science' which is also a Cult production at its establishment core. Both are controlled through funding and governing authorities that ensure only the Big Pharma version of the body and its treatment is allowed to be practiced in the mainstream (and increasingly anywhere). You want to be a

doctor? Then do it our way or we'll have you struck off. This has happened to many proper doctors seeking to employ methods that work rather than singing from the Big Pharma rulebook. You want to be a mainstream scientist? Well, don't think you are going to get funding or any prestigious position if you challenge what we tell you is 'scientific' orthodoxy (which becomes medical orthodoxy). Witness the withdrawal or non-existence of funding for scientists who challenge human-caused 'climate change' orthodoxy which the Cult seeks to impose through its Climate Cult in which the dominant theme is 'extinction' (death). The same methodology can be found throughout academia which takes its orthodoxy from science orthodoxy and medical orthodoxy which all originate with Cult orthodoxy. The great majority in these institutions don't know they are following the rules of the Cult while those in the inner circles of secret societies and satanic groups most certainly do.

Figure 94: An imbalance or flaw in the body wavefield becomes illness or disease – disharmony – in the hologram. Wavefield balance = holographic 'health' because one is a reflection of the other. See Neil Hague colour section.

Figure 95: The body 'hard drive' – the receiver-transmitter of information known as DNA.

Figure 96: 'Blank-sheet' stem cells can be encoded to perform any function.

The foundation of medical orthodoxy is that genes and not mind are the arbiter of everything when the opposite is true. This calculated inversion of reality is designed by the Cult to isolate body from mind in human society when body *is* mind. Big Pharma medicine is based on this misrepresentation and its drugs focus on affecting the body (hologram) chemically. This means they concentrate on the symptom they see

in the hologram and not the cause which is a wavefield, energetic, information imbalance decoded through into the hologram ([Fig 94](#)). A problem in the hologram (symptom) is really a problem in the field (cause). Alternative methods of healing have long accused mainstream medicine of treating only symptoms and ignoring the cause and this must be so when the medical industry doesn't acknowledge the existence of the body wavefield where the cause *always* lies. I say always because the body is a wave information field and its holographic level is only a decoded projection of that field. What happens in the field happens in the hologram and what doesn't bother the mind doesn't bother the body. Even when Big Pharma drugs are claimed to have psychological effects they target the way the brain processes information and not the source of information itself – wavefield mind. The body has some trillions of cells (cell 'batteries') and in almost every one is the body 'hard drive' known as DNA ([Fig 95](#)). We apparently have three billion base pairs of DNA and one section of this is called a gene. DNA of a normal human cell contains an estimated 30,000 to 120,000 genes although only a fraction of them are activated at any time. We are talking biological nanotechnology. Genes contain instructions for what the body looks like (everything from eye colour to height) and how it functions minute by minute. From this has come the myth that genes control what happens to the body, what diseases you'll have and even how long you will live. This is profoundly misleading in that it ignores the X-factor of mind and consciousness beyond mind. The membrane of every cell is a liquid crystal and DNA is crystalline because they are receiver-transmitters of information. This is the wave communication system through which the mind (and heart) activate and deactivate cell function. American developmental biologist Bruce Lipton, who wrote *Biology of Belief* and has a YouTube presentation of the same name, points out that cell membranes are semiconductor information processors like those, also crystalline, used in electrical circuits. Genes are a 'hard disk' and programmable. 'Blank-sheet' stem cells are produced by the body which then receive signals to encode instructions that dictate their function ([Fig 96](#)). Through this communication system humans, animals and the natural world 'evolve' in the sense of exchanging information between mind, body and environment to develop new gifts and abilities to cope when their environment changes. Animals are in sync with their surroundings thanks to this information exchange and so desert species have less need for water and birds hunting fish have microscopic sight to see fish from high in the air. When this transmutation through encoding new cell instructions stays in step with environmental changes it is called 'evolution'; when it doesn't we call it species extinction. We are rather more than a 'lump of meat' and our world far more than a cosmic accident. I will be describing how the entire Universe is an electrical/electromagnetic phenomenon which, like everything else in all existence, is conscious.

Turning yourself on (and off)

Figure 97: Our mental and emotional state is transmitted as waves which can turn genes on and off that relate to those states. In this way our state of mind becomes 'genetic' consequences good and bad. See Neil Hague colour section.

Which genes and their functions are active and which are not is dictated overwhelmingly by the mind and its *perceptions* through wave entanglement with the body. I have been banging on for decades now about the central role played by perception – *everything* originates from perception which is why the Cult in all its forms seeks as its prime objective to control perception. Every thought, emotion – perception – manifests as a unique frequency (wave) emanating from the mind and its emotions and you can feel these waves emitted by people. We talk of good vibes and bad vibes and that's true. Someone may put on an act with their face and demeanour, but we feel something about them that doesn't *feel* right. We are picking up the wave frequencies representing their real perceptions and attitudes behind the 'physical' mask. The nature of these frequencies, or perceptions, decide which genes in the cells are activated or switched on and which are not. We have genes with different instructions that affect the body's 'physical' and psychological state. Among them are genes that will make you healthy, joyful, optimistic and mentally and emotionally balanced along with others that can make you sick, even fatally, depressed, pessimistic and mentally and emotionally *imbalanced* by the way they *process information*. Now picture perception waves or signals emanating from the mind and having the effect of activating and deactivating different genes on the basis of their particular function. This is possible because genes of different functions respond to frequencies broadcast by the mind that relate to those same functions ([Fig 97](#)). The mind wave frequency and that representing a particular gene's function operate on the *same wavelength* and they entangle to send a signal from mind to gene. In this way the *perceptual* state of the mind is transferred to the body's genetic system. If your mind feels depressed its frequencies will activate the genes which carry instructions that represent depression and this emotional state will be transferred to a like-effect in the body. The same perceptual waves are affecting which functions are encoded in blank-sheet stem cells. Mainstream medicine sees only the chemical effect on the body and not the wave imbalance triggering that chemical effect which emerges from the conscious *and* subconscious mind. Doctors prescribe chemical drugs for a chemical symptom and miss the wavefield cause. Through this wave connection or entanglement stress becomes illness. The disruptive effect that stress waves can have on heart-related genes is how stress causes heart disease and the same process happens with cancer and everything else. When the mind and its emotions feel nervous or fearful the frequency activation will cause emotion genes in the belly to give you 'the shits' as I mentioned earlier. It is not the *genes* that decide what happens to the body in terms of the outcome origin; it is mind frequencies that dictate which genes are switched on and which are not. Mind is the message and genes are the messenger. Different parts of the brain 'light-up' and are activated by different thoughts and emotions for the same reason that genes are. The brain is responding to perceptual waves/signals from the mind and these activate those areas of the brain related to those frequencies as the brain processes the information. The brain is again the processor of information and not the origin, just as genes are processors – *semi-conductor* processors – of information and not the source.

Figure 98: It's not only chemical shite. It's wavefield shite.

What I have described is being studied today by an emerging scientific discipline called epigenetics.

Science believed that to change the genetic nature of the body our DNA, or 'hard drive', had to change or mutate. This is now known to be untrue and reflects the long history of scientific dogma which lurches from 'this is how it is' to 'er, well, actually, it's not'; and from 'you are talking nonsense you science blasphemer' to 'well, okay, you were right, but we'll claim the credit and call it a new discovery'.

Epigenetics studies how the body changes 'physically' and psychologically by which genes are switched on and off and which gene functions dominate. Highly significantly this on-off sequence dictated by the perceptual mind waves of one generation can be passed on to the next through procreation. Sperm and eggs combine to form the body ('software') program and carry the epigenetic (wavefield) blueprint of the parents (there are cases, however, where this doesn't happen). Children can be born with the same on-off gene sequence with all the consequences, good and bad, which that entails. The child is born with what the perceptions of parents and other 'ancestors' genetically developed through life experience. We hear this described in lines like 'She's just like her mother' and 'He's just like his dad'. There are other reasons for this, of course, but epigenetics is one of them. It is also the case that signals activating and deactivating gene function are not confined only to mind although that is the dominant source. Drugs and toxins are wavefield phenomena in their base form even though we perceive them holographically as chemical in nature. Big Pharma drugs cause so much damage to health because they are energetic wave distortions which transfer that distortion to the wavefields of body and genes. It's the same with toxins in food and the environment. Do we really think that poisons in the herbicides and insecticides sprayed onto crops are not retained in the food they produce? Of course they are – both in waves and their chemical form in the hologram. What we eat and drink may look like a sandwich or a soda, but in its base form food and drink are fields of information waves. These fields can harmonise with the Body-Mind field when they are in vibrational sympathy ('nutritious food') or cause disharmony and dis-ease when their disruptive waves distort the Body-Mind field (Big Mac and a coke, please). Food and drink have long been shown to affect people psychologically, too, and this comes from the same wave-gene impact ([Fig 98](#)). Frequencies represented by fast food in recent decades have been triggering genes that relate to weight gain and through the epigenetic effect generations of children are being born with a greater genetic aptitude to gain weight than earlier generations did not have. The smart technology explosion is pounding everyone with radiation frequencies from phones, masts, satellites and Wi-Fi and this will be having an enormous impact on epigenetic gene function in ways that the general population and most of the medical and telecommunications industries will not be aware of. The Cult does know, however, and those consequences are long-planned. Untested 5G now being rolled out around the world is the next level of genetic and psychological manipulation. I'll deal with this in detail in later chapters. Do people think that the transformation in the perceptions and emotions of especially the young in the 'smart' era is just some random coincidence?

Believing is seeing

When someone is poisoned it is not the chemical that kills them but the deeply distorted wavefields represented *holographically* as a chemical. The body's wavefield oscillation is so undermined that it can no longer function when its dancing waves cease to dance. Some Christians in America take Biblical Scripture so literally that they handle poisonous snakes and even drink lethal strychnine to prove their faith. Some die, as you would expect, but some don't and how can this be? The danger of snake poison and strychnine is in the effect of its wavefields on the body's wavefield. If the wavefield mind is so strong in its belief that they won't die then the frequency signals from the mind will not allow body reactions to be activated by the poison that will lead to death. Thus there you have the process of 'mind over matter'. We are increasingly urged to fear genes with genetic tests warning people what their genetic blueprint has in store for them later in life. What a tragic irony on many levels. If you believe that you are destined to be the victim of your genetic blueprint you are sending out the mind/brain waves within the frequency band which can activate the very genes that produce the outcome. It becomes a self-fulfilling

wavefield/genetic prophecy. If our minds do not believe in such an outcome – especially if we *know* and live the fact that mind is the governor – those cancer genes or whatever won't be activated for your whole life. Why is it that so many people die within the period the doctor predicted they would die? 'How long do I have, doctor?' is so often a question that delivers literally a death sentence. Mind becomes convinced that the body will die within the declared period and sends out waves of frequency that make it happen. There have been cases where people have been told they have a fatal disease with a certain period to live and they have died in that period only for post-mortem tests to reveal they did not have the 'fatal disease' at all. They died from a *belief* that they had the disease and a *belief* in the doctor's prognosis of how long they had to live. There are so many stories and accounts along the same lines. In this way we can believe ourselves to live and believe ourselves to die. Witness the list of cases in which one group has been given a drug to have some effect or other and a second group is unknowingly given only a sugar pill or 'placebo'. Many times those taking the non-drug placebo experience the effect of the drug they have not even taken. Some trials involving psychoactive drugs have had those taking only a placebo heading out on a psychedelic 'trip'. People have recovered from health problems, even serious ones, by taking a placebo they believed was a drug that would cure them. This can happen through the process I have been describing. Belief in the cure sends out the mind/brain waves that activate the genetic blueprint and its immune system to deliver the believed-in outcome. There is also the 'nocebo' effect when belief in a bad health outcome focuses the mind to produce just that. Warning people about the 'side-effects' of drugs is understandable, but how many then experience those effects because that possibility has been transferred to the mind and its perceptions? Tell someone that the cup of tea they just drank contained poison and watch what happens even though there was no poison. How many drugs appear to work only because people believe they will? The same applies to alternative methods, too, although they are much more in sync with how the body works and what it is. Mind is *all* when it comes to the body and the Cult knows that.

I'll give you an example of how perception manifests illusions. I researched mind control for many years both sides of the Atlantic and met a large numbers of people who had been shockingly abused in the infamous US government-military-CIA mind control operation known as MKUltra. Part of this horrific programme was 'trauma-based mind control' in which the target is subject to situations of extreme terror. Their mind builds an amnesic memory-barrier around the experience like a bubble or honeycomb so the person does not have to keep reliving what happened. This creates self-contained compartments called by insiders 'alters' as in altered states. These self-contained alters are then programmed to carry out tasks including assassination in the style of a Manchurian Candidate and mind manipulators are able to switch the alters to different 'personalities' which perform different preprogrammed tasks. A so-called 'front alter' is installed that operates as the target's conscious mind while the other alters remain in the subconscious. Trigger words, phrases, even sounds, are encoded to switch alters and make them temporarily the front alter to carry out their designated task or be sexually and violently abused by rich and famous people. Once completed the prime front alter is restored which has no idea what the other alter has done or experienced. I have exposed this in detail in other books and the reason I raise the subject here is that many who suffered in MKUltra told me that if they took drugs or were drunk in one alter or fragment of mind the effect of the drugs and drink would disappear immediately they were switched into an alter that had not been 'conscious' or 'front' when the drugs and drink were consumed. One told me that her biggest nightmare was to be given anaesthetic in hospital while in one alter and for another to kick in during the operation. She knew that the anaesthesia would cease to work and she would wake up. Such is the illusion of experienced reality. The latest mind control techniques involve harmonics which technologically manipulate the brain's wavefield and electrical patterns to program perceptions and behaviour and even insert death programs that trigger the body to shut down. 5G, anyone? Relate this to the Cult's control of information through 'education' and media when both are forms of perceptual hypnotism. I will be showing later that the Cult's knowledge of how

perception becomes experienced reality is mercilessly exploited to instigate mass human control.

I know myself how consciousness can override medical prognosis. I began to develop joint problems at aged 15 just six months into my football career and they continued to develop until I had to stop playing at 21. I was diagnosed with rheumatoid arthritis and given a horrible prognosis that included the possibility of being in a wheelchair in my 30s. I refused to accept that and rejected the offer of painkilling drugs for the rest of my life. It's a good job I did or I would be dead now. I didn't need a wheelchair in my 30s, but the arthritis did continue to develop and at its peak affected very painfully my toes, ankles, knees, hips, wrists and fingers. The experience gave me many gifts that didn't seem so at the time. These included the end of my soccer career which led me into journalism and what I am doing now, plus the activation of a fierce determination not to let the pain and arthritis stop me. There came a time, however, as I began to understand the relationship between mind and body, that I decided to put this into practice by using perception to impact the arthritis. I decided the arthritis was not going to continue progressing and would start rolling back and releasing me from the pain. By 'decided' I mean something much deeper than that which I call 'knowing' and I'll be coming to this in due course. At the time of this book's publication I am 68 and should *really* be in a wheelchair by now with a ravaged body after the arthritis developed at aged 15; but I'm not. I have no pain and apart from some remaining deformation in my right hand my life is not affected in any way by arthritis. What you believe you perceive and what you perceive you experience. Don't be a victim of your genes. Be the master of them through your perceptions which decide which are activated and which are not. Hereditary inevitability and doctor prognosis is a myth – if you know this.

'Born' winner? 'Born' loser? Or mind dictates all?

The process of perception creating experience applies across the entirety of human life. We talk about 'born winners'. What is that except mind dictating experience? 'Born winners' always seem to manifest situations and 'strokes of luck' to grasp victory from the jaws of defeat while others, individuals and teams, grasp defeat from the jaws of victory. You see this with sports people who dominate in less important games and yet whenever they come to the decisive match or championship final others with less talent and stronger perception win the day. An example was England's Leeds United football team in the 1960s and 70s. They were a brilliant side with highly talented players managed by a guy called Don Revie. They would dominate a season until the closing deciding stages and then fall away at the decisive moment. It was not their talent that defeated them; it was their own perception. Revie was famous for producing detailed 'dossiers' on each of the opposition players which his team were supposed to read. This betrayed far too much attention on what the other team might do instead of what *his* team could do. Leeds were so good that if they performed to their potential what the other team did didn't matter, but it mattered big-time to Revie, a superstitious man, to the point of obsession. This exposed the undertone of insecurity that was often transferred to his team when the pressure was on in season-defining situations. Perceptual transfer happens with all groups, large and small, and even to whole populations as we saw in Nazi Germany. Everybody is emitting wave frequencies that reflect their perceptions and emotional state. Football teams are therefore groups of wavefields that become *entangled*. The more perceptually powerful fields will impose themselves on the others and soccer pundits talk about someone having a personality that 'dominates the dressing room and what happens on the pitch'. They often describe these players as ... 'born winners'. The manager as the boss of the team is obviously best placed to impose his perceptions on the group and in this way Don Revie's insecurities would have been transferred by wavefield to the team at crucial moments of high pressure. Confident of winning becomes fear of losing which is something very different. Perception is transferred from mind to body in the ways I have described and the body's actions reflect the mind's perceptions. We hear this reported in these terms: 'They have been brilliant all season, but in this deciding match they just didn't perform.' With the great Revie Leeds United team that happened far too often to be coincidence. Perception/wavefield dominance or

subordination can be observed in every aspect of human society and most certainly in sport where it is always on public display.

There is another phenomenon known as 'a disruptive influence in the dressing room' – a player with negative attitudes and perceptions who emits those waves within the team's collective field of wave entanglement and creates a schism or distortion that affects the perceptions and performance of the collective. I played in teams that had disruptive characters and in others where everyone was mutually supportive and it absolutely can seriously affect the performance of the whole group. This is the real background to terms like 'infectious' behaviour, infectious enthusiasm and infectious negativity. The 'infection' spreads through wave entanglement. A further sporting example of how entanglement affects outcome is the impact of supporters on a team or individual. The crowd watching a sporting event is affecting the outcome – or can – and teams playing at home in front of their own supporters tend to win more often than they do away. The wavefields of the crowd become entangled with the fields of the team they are focused upon. If this support is positive these 'good vibes' are transferred to the team along with potentially enormous surges of energy to aid stamina and performance. Many successful UK athletes in the 2012 Olympic Games in London described how they felt empowered by the British crowd and especially when it was a race for the line and their bodies were at their apparent limit. Somehow they found another surge of energy just when they needed it and this would have been a combination of their own minds (determination) and very much the wavefield energy input from entanglement with spectators willing them to win. The reverse of this is also true. Football teams having an unsuccessful run often do better away from home because the frustration and criticism of their fans is transmitted through wave entanglement and this can disrupt and drain the performance, confidence and energy of the players. 'Born winners' are so perceptually strong, however, that they perform to their maximum ability in a hostile atmosphere and are empowered by their determination not to be affected. If you believe in 'Little Me, I have no power' you will live a life that expresses that self-identity as your perceptual state is transmitted in waves that entangle with other waves in sync with them. You will attract into your life people, situations and experiences that reflect your state of mind and emotion to produce a self-fulfilling prophecy. Everything in our reality is a frequency wavefield, a pattern of entangled, vibrating, oscillating, consciousness/information, and that includes circumstances, potential situations and experiences all of which are forms of consciousness. If we are in sync with their 'vibe' we attract them. If we're not, we don't. This will be immensely-relevant when I come to how the Cult manipulates human society and how we can stop that happening. You don't like your life? Then stop creating it – *attracting* it.

The relationship (wave) field

Figure 99: Relationships of all kinds are founded on wave-entanglement and the attraction or resistance of 'vibes'. See Neil Hague colour section.

Relationships of every kind from boy meets girl to the experiences we attract and the effect of planets in astrology can all be described and understood in terms of mind/consciousness-wave entanglement ([Fig](#)

[99](#)). Perceptions obviously decide what personal relationships we seek to pursue and if this is mutual then wave entanglement follows. We describe this as making a ‘bond’. Entanglement can be imposed, too, if we allow it. A relationship based only on ‘physical’ attraction will form a wave entanglement to reflect that. When the attraction fades the entanglement unravels and the couple (coupling) separates. Or, at least, they do if that’s the only connection. If by the time the ‘physical’ attraction fades a mutual hostility has developed then the attraction wave entanglement is replaced by a hostility wave entanglement and things can get very ugly. Hostility and hate from one partner is infused into the mutually entangled field and can trigger more hostility and hate in the other who reflects that back in a mutual feedback loop that diminishes, even destroys, the lives of both parties. Apply this interaction across human society and you see it everywhere in everything from personal relationships to world wars. Parents, communities and religions that instil in their children a hatred for other communities and religions ensure negative, destructive and ongoing wave entanglement passed on generation after generation as we have seen throughout the world. Entanglement between couples can be based on multiple waves generated by multiple perceptions of each other including attraction *and* repulsion, love (or the human version of it) *and* hate. These are described as love-hate relationships and which wave connection dominates at any time depends on particular circumstances. Candlelit dinner – ‘I love you’. Come home pissed – ‘You horrible bastard’. When relationships of whatever kind are founded on love in its *unconditional* sense generated from the heart chakra vortex, and not just the groin, entanglement can be mutually beneficial, supportive and last indefinitely even though its nature may change. We can see this in couples late in life well past the lust stage that love each other even more than ever and live in wavefield harmony and mutual support. Individual minds decide individual experience and entangled mind connections decide collective experience. A dictator mind is someone who wave-entangles, sometimes with whole nations, and imposes his or her perceptions on everyone else. See Hitler, Stalin, Mussolini, the Chinese leadership and endless other examples. The Nazi mentality entangled with millions of Germans and became the mesmerised masses oscillating to the same rhythm in those grotesque rallies of unquestioned wave-entangled homage to Hitler. The theme here is that whatever your waves (perceptions) sync with will become entangled in some form of relationship. Those that don’t sync will pass you by. ‘Hands-on’ energy healers make a wave entanglement with those they work with as energy is transferred through these channels (so make sure you pick the right one). Energy healing can be done directly or at a distance when waves of energy are directed from the healer’s field to entangle with the recipient. I have experienced this and it works *when* the healer knows what they’re doing.

Wave entanglement equally applies to desires, ambitions, fears and all situations that we face. Every thought and emotion is a wave frequency and desires, ambition, fears and situations are wavefields of thought and emotion on particular frequencies. Our perceptions in relation to what we want, fear or experience decide the type of relationship, or no relationship, that we have with these potentialities. Say you want to achieve something, but you don’t believe you can or will with your self-identity perception of ‘things like that never happen to me’. Waves generating from your mind will not sync in that perceptual state with the wavefields represented by what you would like to achieve. If you are determined to do everything you can to reach your goal in the belief that you *could* achieve it you will make some level of wave entanglement with the objective; but *know* you will get there and you make an entanglement with the field of *being* there. This allows you to manifest *being* there and achieve what you want. Mind/heart power operates on many levels. There is not believing you will achieve what you want; hoping you’ll achieve; being confident you’ll achieve; believing you’ll achieve; and top of the shop in terms of ensuring the goal – *knowing* you’ll achieve. I saw many young players when I was footballer with terrific talent who fell by the wayside because they didn’t believe – *know* – they would be a footballer. We talk of people ‘lacking confidence’ when in truth it goes deeper than that. I said as a kid that I was going to be a professional footballer. Few believed me. Lots of young people want to be footballers and only a few ever make it with the competition so fierce. I just *knew*. I didn’t hope – I *knew*. I could not explain why

I never doubted the outcome even when the statistical chances were so slim. What followed was a series of ‘lucky breaks’ that put me in the right place at the right time with the right performance in the right game. Was this really by lucky chance or my mind creating that through *knowing* the outcome making a wave entanglement with the wavefields that represented the outcome? There was, and is, more to this than just ‘positive thinking’ which is low-level when it comes to experience-manifestation. *Knowing* is way beyond that as I will discuss later and is connected to intuition – intuitive *knowing*.

What possessed you?

Figure 100: Possession by demonic entities is real – the classic image from *The Exorcist* movie.

Figure 101: The information field of the possessing entity is infused into the field of the possessed target who then, in the most extreme cases, starts to reflect holographically the visual image of the entity. (Image by Neil Hague.)

An extreme example of wave entanglement is known as ‘possession’. This is an age-old concept of entities, usually described as ‘demonic’, taking over a human body and dictating its behaviour and even the way it looks. We have seen this depicted in many horror movies including *The Exorcist* and the process has been described in every culture throughout known human history ([Fig 100](#) overleaf). There is a reason for that – it’s true. Mainstream science dismisses even the possibility. It doesn’t understand reality and has no knowledge base from which to explain how such things can happen. Given the ‘science’ motto is ‘if I can’t explain how it’s happening then it can’t be happening’ all that’s left is to deny that it’s happening. Never mind the mountain range of people’s personal experience of common phenomena over hundreds or thousands of years as we perceive ‘time’. Well, in fact, it *can* be explained, as the entire spectrum of the ‘paranormal’ can be, and simply, too. Science uses the term ‘paranormal’ for everything it cannot explain despite the said Himalaya-like compilation of personal experience and accounts, ancient and modern, to show that it’s real. Only scientifically-endorsed absurdity qualifies for the official verification stamp of ‘normal’. Possessing entities are wavefields of consciousness operating outside the band of visible light that are able to entangle with the wavefields of Body-Mind *if* – emphasise *if* – Body-Mind falls into compatible mental and emotional frequencies. This can happen in states of fear or depression and through the effect of drugs and extremes of alcohol consumption or by having sex with a possessed person which allows the entity to use the wave-connection of sexual energy to ‘jump’ across and make an energetic entanglement. The Cult employs sexual predators to target people it wants to open to entity possession and control. The entity instigates wavefield entanglement and can then start to

transfer its own information field and personality to the target (think of a computer virus ‘possessing’ a computer system). Friends and observers will notice the target starting to change in personality and behaviour and in the most extreme examples of possession even their facial features transform and distort. The consciousness/information field of the possessing entity transfers so much of its own wave information that the possessed person starts to take the holographic form of the entity ([Fig 101](#)). It doesn’t have to go this far for someone to be possessed and perceptually influenced and directed, but it absolutely happens. Satanists set out to *be* possessed in this way during rituals and the hierarchy of Satanism is dictated by the power of the possessing entities which means that the demonic hierarchy in the unseen becomes the satanic hierarchy in the seen. This is how the pecking order of the Cult is decided. Cult operatives who direct human society via The Web are actually non-human demonic entities hiding behind apparently human form. I say *apparently* because the major Cult families and operatives are really biological software programs and a form of what we would call today artificial intelligence, or AI. Their thought processes are AI and this is why those that direct the Cult are so intellectually advanced while having no empathy. Does a software program have empathy? No – it just acts according to data input. Anyone still wonder why the Cult has visited such evil on humanity with no emotional consequence? These biological AI software vehicles allow their hidden masters to manipulate human society without actually needing to enter the human frequency range. The ‘masters’ are also a form of AI as I will come to in detail later and the plan to assimilate human consciousness into AI through brain connections and other means is this AI ‘awareness’ seeking to empower itself by absorbing non-AI human minds. Their AI nature explains why they are so obsessed with technology which they are using to impose their control. They are *not* human and their consciousness fields are devoid of empathy and compassion so anything goes. Lower level servants of The Web (mostly ignorant of what is really going on) are possessed in less powerful ways, but still enough to turn them into advocates and manipulators of the Cult agenda even though they may not know the true background and origin of that agenda. For obvious reasons most possessed people don’t know they are possessed. The inner elite by contrast definitely do and glory in the fact. I have heard accounts of many wives and families of men who joined the Freemasons and began to change personality as they lost their former warmth, empathy and sense of justice, fairness and decency. The great majority of Freemasons don’t know that their weird initiation rituals are not just historic throwbacks to a bygone age. They are designed to create an energetic wavefield environment in which entities can attach to the initiate and the more elite the secret society and satanic group the more extreme this becomes. Satanic arts and voodoo are founded on these same wave connections which are exploited to adversely affect the target. Putting a pin in a doll used to symbolise a person and them feeling pain a long way distant is possible and explainable. The doll becomes the wave-surrogate of the person (a focus of *attention* representing the person which allows the instigation of wave entanglement) and through that connection their wavefield is disrupted and they feel the transmitted discomfort. The US military and many other countries have psychic assassination squads that connect with the wavefields of people they want to kill. They can stop their heart waves oscillating or affect them in other ways *unless* the target’s wavefield (mind/consciousness) is more powerful than theirs.

Taking shape and wavefield families

I have been widely and intensely ridiculed – and still am – for saying that the inner hierarchy and many lower operatives of the Cult are shapeshifters able to take both human and their prime non-human form through their dual hybrid *wavefield information fields*. I have said they can appear as either human or reptilian although reptilian is not the only entity-type involved. You can read about all this in detail in *Everything You Need To Know*. Ridicule from the media and much of the public comes once again from an ignorance of reality and given the way people are programmed to believe in a fake version of reality all their lives I can understand why. Funnily enough I don’t resent such people. I feel sad for them and I get why they dismiss what I say although it would be nice if they read one of my books before waving a

hand in arrogant dismissal of something they have chosen to know nothing about. The thought process goes like this: 'The world is solid and so it's impossible to shift between one shape and another – that Icke is clearly crazy.' If the world was *solid* all that would be correct, but it isn't. Shapeshifting does not happen 'physically'. It can't – there is no physical. Recall what I said earlier about what science calls the 'observer effect' and I call the 'decoder effect'. Apparent solidity is really a hologram which is decoded into manifestation by the mind of the *observer* from a wave information field. What we think we see as physical reality is really holographic reality which only exists in that form in the decoding processes of Body-Mind. Shapeshifting as a perceived 'physical' happening is really the observer decoding the human part of the hybrid field and then the field shifting to project the non-human part which the observer also decodes. What happens is a *wavefield* shift of information, but to the observer's mind the person appears to have *physically* shifted from one form to another as one field is decoded and then the other. Here is a perfect example of how if you suppress the true nature of reality you can manipulate great swathes of the target population to dismiss as impossible what is actually happening.

Figure 102: The reptilian brain or R-complex has an enormous impact on human perception and behaviour.

I have written at great length over the decades about Cult bloodlines that have interbred since 'ancient times'. These are best-known as 'royalty' and 'aristocracy' although they now overwhelmingly operate through the dark suit professions of politics, government, banking, business and media. Designer procreation passes on the hybrid wavefield blueprint (biological AI software program) which involves a duel information field. One part is infused with human wavefield information and the other is non-human, often, although far from always, reptilian in nature. Observe reptile behaviour and you'll see how software-like it is. I have witnessed a number of crocodile/alligator presentations at wildlife parks where the computer-like 'press-enter' nature of their behaviour has been highlighted. Royal and aristocratic bloodlines (wavefields) are called 'bluebloods' and the term illustrates the difference between these families and the rest of the human population. The whole theme of royal bloodlines with a 'divine right to rule' comes from their origin as the bloodlines of the 'gods' and you find this theme across the world. Ancient Chinese emperors claiming the right to rule through their genetic (wavefield) descent from the 'serpent gods' is only one example. 'Divine' right to rule has been associated with the Christian god while it should far more appropriately refer to the Sanskrit 'Deva' (female Devi) which is defined as 'a shining one or supernatural being'. The ancients often described their non-human 'gods' as the 'Shining Ones'. Deva comes from the Latin '*deus*', or 'god', and '*divus*' from which derive the English words 'divine' and 'deity'. Cult bloodlines were given their (divine) right to rule by 'supernatural gods' – the non-human force behind human control. The Biblical story of the 'sons of God' who interbred with the daughters of men to create a hybrid race called the 'Nephilim' is describing the instigation of the hybrid bloodlines and the Cult also infiltrated human genetics in general. It is no accident of evolution that one of the most influential parts of the human brain in dictating behaviour is called the reptilian brain, or R-complex, which absolutely has a 'press-enter' reaction system as we'll see ([Fig 102](#)). All the background can be found in detail in my other books. The original text from which 'sons of God' was translated in fact

referred to sons of the gods, plural. These ‘sons’ and ‘gods’ are symbolic of the non-human entities which hijacked human society long ago and still impose their will and agenda through the Cult ... *run by the Nephilim bloodline families* which are the AI biological software programs.

When populations began to reject overt rule by bloodline ‘royal’ dictatorships the Nephilim continued and expanded their control by moving into the realms of politics, banking, business, media and so on where they remain predominant to this day. They continue to interbreed through covertly arranged marriages to ensure the Nephilim bloodline software information program is not diluted or deleted by interbreeding with the ‘common people’. They may not overwhelmingly be official royalty any longer but they act as if they are, They believe they are special and above humans and have the ‘divine’ right to control everything. Nephilim bloodlines now operating through dark suit and uniform professions are orchestrators of The Web serving the interests of the Spider operating in frequencies outside human sight. Non-human entities which I refer to as the Spider are the same entities that the Old Testament calls collectively ‘God’ and other cultures around the world call ‘the gods’. Hence the Old Testament ‘God’ is described in nature and behaviour in very different ways to the New Testament ‘God’. A few overt Nephilim ‘royalty’ survive, most notably the British royal family which provides the ongoing UK and Commonwealth head of state on the basis purely of *bloodline* succession. I have written widely about the Nephilim human-reptilian hybrid nature of the British royals and naturally attracted a blaze of ridicule for my trouble. I don’t care. I am interested in the truth not a pat on the back and a Facebook thumbs-up. I do not wish to be considered ‘normal’ when that word with regard to human society is another term for clinical insanity. The fake royals live in ongoing mega-privilege off the backs of the British population as the entire Nephilim network lives off the backs of the global population under terms like the One-percent. They are Cult bloodline human-reptilian shapeshifters and if people don’t like that or accept that then they must do the other thing which is fine by me. They should know, however, that no amount of ridicule and condemnation is going to stop me saying it.

The bloodlines around the world were behind the emergence of major religions that serve their interests of perception control. There is no coincidence in many major Cult bloodlines emerging from the Middle East and ancient Egypt, Sumer and Babylon – the latter two now called Iraq – when from this region came three of the world’s major religions, Christianity, Judaism and Islam. These have so much in common and recognise many of the same deities and heroes. The differences are emphasised, however, to allow centuries of divide and rule between them and that continues to this day to the ongoing benefit of the Cult which created them. Philosopher Alan Watts pointed out how religion is a copy of the monarchical societies from which they emerged with followers kneeling, bowing and prostrating themselves to ‘God’ as they did to the monarch. The Christian ‘God’ sits on a throne and terms such as Basilica mean ‘House of the King’. We have Biblical descriptions of ‘Jesus’ and ‘God’ as ‘King of Kings’ and ‘Lord of Lords’ and Christianity and other religions have the same follower-God relationship that ‘subjects’ had with monarchs. This version of ‘God’ worship is just an extension of monarchical (Cult bloodline) control.

It can't be true? Oh yes, it can

Suppressing the nature of reality requires the constant dismissal and alleged debunking of any phenomena that cannot be explained by Cult-controlled mainstream science. It obviously follows in the public mind that if things are happening or possible that science claims can’t happen the version of reality pedalled by science can’t be all there is to know. This realisation has the potential to open minds to other possibilities and that’s something the Cult wants to avoid at all costs. Take astrology which originates in the ancient world and claims that the movements of planets and stars influence human life and behaviour. Astrologers claim these forces have very a significant impact on the personalities of people through the astrological sequences at work at the time of birth (some believe conception). I will have more to say about this when I address the power of expanded consciousness to override not only

astrological wave influences but all the others that come at us today with the speed of machine gun fire. I emphasise that astrological frequencies are *influences* and don't have to impose upon us unless we allow them to through choice or five-sense unconsciousness. The foundation of astrology and how it works can be simply explained and that's one reason why mainstream science is so instantly dismissive. The 'scientific' mind is obsessed with complexity. Any answer must be complex or it can't be true – 'I mean look at how much my degree in physiological, physicochemical and physiopathological complexity cost me.' Genius is not to understand complexity; it is to see the simple hidden by complexity. It is to see the whole and not only the parts. Mainstream science is so obsessed with the twigs that it can't see the forest. Serbian-American scientist Nikola Tesla (1856-1943), who was way ahead of the science mainstream, said:

The scientists of today think deeply instead of clearly. One must be sane to think clearly, but one can think deeply and be quite insane.

Scientist Robert Lanza put it this way:

When it comes down to it, today's science is amazingly good at figuring out how the parts work. The clock has been taken apart, and we can accurately count the number of teeth in each wheel and gear, and ascertain the rate at which the flywheel spins. We know that Mars rotates in 24 hours, 37 minutes, and 23 seconds, and this information is as solid as it comes. What eludes us is the big picture.

We provide interim answers, we create exquisite new technologies from our ever-expanding knowledge of physical processes, we dazzle ourselves with our applications of newfound discoveries. We do badly in just one area, which unfortunately encompasses all the bottom-line issues: What is the nature of this thing we call reality, the Universe as a whole?

Figure 103: Astrology is founded on the impact of wave entanglement between frequency waves of planets and stars and frequency waves of people, animals and all life. See Neil Hague Colour Section.

Astrology could hardly be more straightforward when you see this big picture. All form is a hologram decoded by the observer from wavefields and that 'all' includes planets and stars which are conscious wavefields emitting different frequencies of information – the 'music of the spheres'. They entangle with wavefields of other planets, stars and people and this is most powerful between heavenly bodies when they are in various alignments. Astrologers refer to these as conjunctions, squares, trines, oppositions, and the like. These alignments create wave entanglements which are collectively more powerful than the individual parts and amplify their impact on other wavefields they entangle with *including humanity*. Waves emitting from planets and stars, especially combinations of them in alignment, impact on the

human wavefield and the trillions of cells and their genes encoded with a myriad of instructions that affect health and behaviour depending on whether they are active or inactive ([Fig 103](#)). At birth/conception (a combination of both probably) the wavefield of the child's Body-Mind is imprinted with the astrological wave blueprint generated from the positions of the planets and stars. The blueprint will be different in one period than another as the heavenly bodies change their wave relationships and these periods are designated as astrological 'signs'. The astrological frequency field imprint on someone born in 'Taurus' will be different from a 'Leo' and even the 'time' in the day makes some difference with the astrological field constantly changing. Different astrological imprints will interact differently with ongoing astrological sequences throughout their life to give us the esoteric art of astrology. People born in the same astrological periods can have aptitudes for certain jobs or abilities and this is a reason why ([Fig 104](#)).

Figure 104: Our unique wave patterns, influenced by planetary wavefields at the moment of birth/conception, interact with wavefields of planets and stars through a human lifetime to provide the basis of astrology. The 'heavens' are once again *within* us. (Image Neil Hague.)

This background applies with the Chinese Zodiac and its years of the monkey, rat, ox, tiger, rabbit, dragon etc. and other cultural methods of reading the effect of astrological information waves. Consciousness in certain wave states can also be attracted to 'incarnate' through entanglement in life situations and locations that sync with that state. This would provide the wavefield basis of a reincarnation cycle in which one 'life' dictates the nature of the 'next' one. Reincarnation is not what it seems, however, in that with time an illusion and everything happening in the same NOW there is obviously more to know about the perception of a reincarnated 'sequence' in time. The Sun has an absolutely central impact on humanity ('astrologically') by bombarding us with photons (information) which are emitted by the Sun as ... *waves*. Photons (sunlight) are transformed (decoded) by cholesterol in the skin into the vital vitamin D. Cholesterol has many other crucial functions and the brain contains 20 percent of the body's cholesterol which is an essential component of cell membranes involved in cell signalling. Alzheimer's and dementia which have become an epidemic in recent times are names to describe brain cell signals misfiring and miss-communicating. You will have noticed the Cult-instigated systematic demonisation of cholesterol and the pressure to reduce it through changing food habits and taking ongoing statin drugs to do the job. Is this another coincidence? Not a chance. There is one other point to make here about the Sun which is relevant to everything else. We define the Sun by the circle of light in the sky when that is only the part that we can see. The Sun's influence is transmitted across the solar system in the form of waves and photons which are as much part of the Sun as the perceived ball of fire. Everything from a planet to a human has a frequency field that we can see and a far greater wavefield 'aura' that we don't see. The more powerful the mind and expanded awareness the bigger its auric range and influence.

I was just thinking the same

'Paranormal' telepathy and psychic phenomena are explained through wave connections. Forget about 'distance' which is an illusion of holographic decoded reality. Everything you think you 'see' in the night sky in the form that you think you 'see' exists only in your 'head' – Body-Mind decoding systems. What happened to stars billions of light years and trillions of miles away when they are located in that form between our ears?? As the near-death experiencer said of reality beyond the body: 'There is no time, there is no sequence of events, no such thing as limitation, *of distance*, of period, of place. I could be anywhere I wanted to be simultaneously.' We are *waves* and we can be anywhere we like and in as many 'places' as we choose once we are released from the focused attention of Body-Mind. Other levels of us are already operating simultaneously all over Creation while this wave of that same consciousness is having a human experience. Still frightened of death? Still think you are 'insignificant' Ethel on the checkout or Bill at the call centre?? Our waves can connect with other waves and through that entanglement exchange information with those on the other side of the world or in another dimension of reality. This is called telepathy, intuition, premonition and mind reading. Experiments galore have proved this to be real and it is widely used in covert operations by intelligence agencies and the military. The same wave connections allow plants, trees and the natural world to communicate with each other and us with them. Yes we can 'talk' to trees and plants. While they don't understand human language they feel the vibrations of the sound waves from the vocal chords and the waves we emit in general. They know love, danger, friend or foe, by *feeling* it. People with close relationships attune with each other's wavefields more powerfully and telepathy between them is more likely. One will say something and the other will respond with 'I was just thinking that'. There are endless stories of people thinking of someone followed by the phone ringing with the person on the other end. Others have premonitions that a fate has befallen a loved one which turns out to be true. 'Primitive' ancients knew about this, hence the origin of the term 'bush telegraph' when tribal peoples became aware of happenings 'far away' and could communicate telepathically with their family and friends back in the village while out on a hunt. We are all capable of this – *it is how we are supposed to be* – but perceptual programming has blocked these natural processes in most people. We need to bring them back.

Figure 105: Psychics and mediums are connecting their awareness with realities beyond the human five-sense frequency band. (Image Neil Hague.)

Psychic communication is another form of telepathy in which the psychic or medium attunes (entangles) with the wavefields of 'people' who have passed from human reality or with the wavefields of people still here. You might have seen TV programmes about 'psychic detectives' in which they solve crimes that have defeated the police. They do this by wave-attuning with the criminal and/or the deceased or missing victim and access what happened from that information source. This is sometimes done by going to the location of a crime. The wave-encoded representation of what happened will still be there in the energetic field. All events and actions are recorded in wavefields and have to be when all

events and actions *are* wavefields. In this way houses can be ‘haunted’ by fields of information containing happenings there. You could think of it as a wavefield recording like a CD or DVD and the more emotion involved in the events the more powerful will be the recording. Many ‘haunted’ places are not the result of discarnate entities, but happenings encoded in the wavefield like people hearing the ‘sounds of battle’ at the scene of some historic mass carnage. Psychics are not reading the ‘past’ or the ‘future’ when neither exists. They are reading wave patterns in the NOW. The most open psychics and mediums can connect with expanded states of consciousness that can communicate phenomenal insight about reality and the human plight ([Fig 105](#)). This happened to me in my ayahuasca experience and on endless other occasions far less dramatically. I say endless. It’s pretty much every day and mostly this is in the form of intuitively ‘knowing’ rather than hearing words. Wavefield information from these sources is decoded by the brain in the same way as human speech and when this happens it can sometimes sound like ‘voices in the head’. People are often condemned as crazy when they describe this experience, but when a friend or workmate talks to you what do you hear? Voices in your head! It’s the same brain information processing from a different source. Mediums can allow their bodies to be used as temporary vehicles for disembodied entities to speak through them. The entity instigates a wave entanglement strong enough to speak directly to the brain of the medium and the communication is decoded into words. I have witnessed situations where the connection is so powerful that the medium’s voice changes and even their face is transformed. Those that believe shapeshifting is not possible should have seen what I have on these occasions. The process is a form of temporary possession. The difference is that the medium makes the choice to allow that to happen rather than having it imposed upon them. Two things I would advise are to check out any psychic or medium you are thinking of contacting and research their history, accuracy or otherwise, with previous clients. Not everyone who calls themselves psychic is any good and remember that just because an entity is speaking through a psychic/medium does not mean they have your best interests at heart. Death is no cure for ignorance or manipulation. I am seriously discerning in these situations. You have to be or you can get scammed.

Blimey, what a coincidence!

Synchronicity is another wave phenomenon when people experience ‘amazing coincidences’ that make no sense when compared with statistical possibility. ‘Wow – fancy seeing you here – what are the chances of that?’ Well, actually, very good if you make a wavefield entanglement with the location and each other. This is how synchronicity works and people describe such experiences as ‘meant to be’. Sometime they *are* in the sense of wavefields being pre-encoded to meet as part of a planned life experience. Wavefields can be two people or a person, a situation, information or location. Other times ‘meant to be’ is simply ‘made to happen’ by the synchronisation and entanglement of wave patterns generated by the mind waves (perceptions) of the parties. Synchronicity has been a central feature of my life. I could not have compiled the enormous library of information that I have in the last 30 years unless constant synchronicity had led me to it. Many have described how they were perusing in a bookshop when one of my books dropped off a shelf next to them. This would appear to be ‘spooky’ and to others just a coincidence when it has happened too many times to be explained that way. The person perusing is a wavefield and so is the book. If something in the person’s subconscious field wants the conscious mind to look at information an electromagnetic wave connection is made that pulls the book from the shelf to say: ‘Hey, look at this.’ It can also be that someone searching for understanding who has a wavefield reflecting that intent entangles with information that will aid that understanding through a symbiotic frequency connection – ‘seek and you shall find’. People who begin to ‘seek’ often experience people and information ‘coincidentally’ coming into their lives that relate to what they ‘seek’. This has been happening to me for 30 years. Another example is when you view a row of books and your attention goes to one of them even though you don’t know at first what it’s about. The subconscious constantly communicates to the conscious mind in synchronicities, coincidences and ‘paranormal’ experiences and

you can learn to read the signs and symbols just as clearly as you do words. I call it the language of life. Everything that happens is telling us something. The trick is to see that and grasp what the language of life is saying. When people go through the process of awakening from Body-Mind into expanded states of consciousness they notice far greater synchronicity in their lives. Expanded consciousness generates both more powerful wave communication and at a higher and wider frequency which means we can make entanglement connections with a vastly greater range of other wavefields – people, places, situations, information, insight. We experience this as ‘My God, what a coincidence’ when it is really wave-magnetism at work. As your frequency quickens from expanding your awareness there comes a corresponding increase in the speed and scale of information processing. What would have given you a headache trying to understand before suddenly becomes clear and simple. A faster speed of processing can influence your perception of ‘time’ which is really the speed that you process information.

Speaking personally

My own conscious awakening got seriously underway when I was in a news shop in the spring of 1990 and what happened brings all these themes together. I was standing at the door when the atmosphere suddenly changed which I now know was a field of electromagnetic wave energy. My feet began to feel as if magnets (electromagnetic wave energy) were pulling them to the ground and I heard a strong thought (wave entanglement communication) pass through my mind which said: ‘Go and look at the books on the far side.’ I walked across the shop in a bewildered state to the single shelf of books and my attention immediately locked on (made a wave connection with) a title called *Mind to Mind*. I read the blurb on the back to find it was the biography of a professional psychic, Betty Shine. ‘Synchronistically’ I had been having the experience for the previous year of feeling a presence around me (wavefield of consciousness) even when I was in an apparently empty room. This became ever more powerful and tangible. It reached a peak just before my experience in the news shop and encouraged me to meet with Betty Shine to see if she would ‘pick up’ what was happening around me. I told her nothing except that I had arthritis and perhaps her ‘hands-on’ healing (an exchange of wave energy) might help. The first two visits were uneventful and then on the third while she was working ‘hands-on’ near my left knee I felt something akin to a spider’s web on my face (electromagnetic wave energy) and I remembered reading in her book that when ‘spirits’ are seeking to communicate you can feel this web-like sensation. Other dimensions of reality connect with us through electromagnetic entanglement. I said nothing but within a few seconds Betty threw her head back and said: ‘My God, this is powerful. I’ll have to close my eyes for this one.’ She said that a figure in her mind (wave projection from another reality) was communicating information to her to pass on to me. I was a BBC television presenter in 1990 and a spokesman for the Green Party. Now I was being told that I would go out on a world stage and ‘reveal great secrets’. A communication said: ‘One man cannot change the world, but one man can communicate the message that can change the world.’ Everything communicated to me that day and the following week, which I have detailed in other books, has happened or is happening. From the moment I left Betty’s home that morning my life became a constant series of synchronicities and ‘coincidences’. It had been before when I looked back, but now it became conscious. Synchronistic ‘coincidence’ has since taken me on an incredible journey of discovery which continues today. This book is the latest instalment.

Life-plans

Life is not what we are told that it is and neither is humanity ‘alone’. Creation is teeming with life – Creation is life made manifest. Consciousness beyond the myopic visual limits of visible light guides (or manipulates) other consciousness having a brief human experience. If you become entrapped in purely five-sense reality the connection to high-frequency benevolence can be lost to low-frequency malevolence. This is the goal of the Cult and its other-dimensional masters. Life is not random chance. Choices become consequences which become new choices and there are specific experiences that we set out to have

although manipulated perceptions can get in the way. This is why we are born to specific parents in specific situations and locations. It is why we can choose to enter the cycle at a certain astrological point to underscore the direction we plan to take. Information can be encoded into our wavefields to trigger certain events and happenings. I recognise those situations clearly when I look at my own life. My arthritis came out of nowhere at age 15 and finished my football career at age 21 to lead me into journalism and all that followed. Without the arthritis I would not have had the same life and I would certainly not have activated so much determination so early to overcome adversity that would come in rather handy later on. Mass ridicule that I went through in the 1990s set me free of the fear of what other people thought of me and so I had no problem talking and writing openly a few years later about seriously far-out subjects that would attract mass ridicule and abuse. I didn't know the far-out information was coming when the initial ridicule was in full-swing while other levels of me did and that which has been guiding me all these years from other realities. Freedom through extreme experience from the fear of what others say was preparation for what would follow. Life is not about any single experience. It is a long series of experiences which are all connected either through the choices that we make from the five-sense perspective or through pre-birth planning. The latter can be felt as a sense of 'destiny' and I guess it is in some ways if you take destiny to be something you set out to experience or achieve. Whatever happens, it is *just an experience* and there'll be another one along after that. Pre-birth planning can even pre-decide when you 'die' by encoding the moment when mind will free itself from entanglement with the body. Someone may die 'young' from a rare heart condition when the clock was ticking on that from birth because it was encoded in the wavefield. This may seem hard to believe from a human perspective and that's understandable. When you are free from prison cell perceptions of Body-Mind and its five senses life does not look the same. You know that life is all there is, death is an illusion and a human life only a very temporary experience.

Paranormal is perfectly normal (it's the 'normal' that's not)

Figure 106: Tarot cards and rune stones are electromagnetic fields which reflect the electromagnetic field of the person involved and what is happening in your field is most likely – though not certain – to manifest as a holographic experience. (Image Neil Hague.)

The wave nature of reality dissolves all the classic paranormal 'mysteries'. How do people stop watches with their mind? Thought/intention waves focused on the watch entangle with the wavefield of the watch and affect its function. Why do you pick card 'A' and not 'B' in a Tarot card reading to allow your 'future' to be discerned? Well, first it's not your future, only a sequence of possibilities and probabilities that can be identified by a skilled reader from the cards you choose and in what order. Even so, that's still crazy, right? No, it's not. The whole thing is happening on the wavefield level. Tarot cards are wavefields that represent certain states of mind, emotion and possibility/probability (frequencies). Your wavefield syncs with cards that represent the frequencies of thoughts, emotions and possibility/probability that exist in your field. They make an electromagnetic frequency connection between hand and card to portray what

is happening in your field as a series of symbolic cards laid out on the table ([Fig 106](#)). Rune stones symbolising different perceptual states and possibilities work the same way as do other forms of divination. I have had the runes read for me by shamans and the African version of bones carved into different symbols. You are asked to first put your hand over a basket of stones to sync and entangle your wavefield with theirs. Hands are a powerful centre for energetic exchange. The runes, or bones, are then thrown on the floor and the way they land in relation to each other is read by the shaman. To the closed mind it seems like gobbledegook until you realise that where the stones fell and their relationship was decided before they were thrown by the connections that were made with the person's electromagnetic field. The stones then reflect that field on the floor and can be read by someone who knows what they are doing (the quality of the reader is vital). Numerology is the reading of people through numbers. I have described how wavefields are decoded into *digital* holograms. The hologram is a digital version of the information in the wavefield. Numerologists and psychics are reading different forms of the same information. I have had psychic and numerology readings close together by different people as part of my research and the information I was given was in theme exactly the same. The synchronicity generated by wavefields can be seen with recurring numbers in people's lives. The number 8 seems to follow me around and it's been my favourite number since I was a child. I have lived at number 8 for two decades and it 'found' me not the other way round. Numbers are digital versions of frequencies and a recurring number is a recurring frequency. Language is a manifestation of both wave frequencies and numbers. Hebrew is very much a numbers language with words formed with particular number values that are, in turn, representations of particular frequencies. In this way language itself and its use is a frontline source of perceptual programming.

A great deal of paranormal phenomena happens via electrical systems. Lights dim or turn on and off, a music player starts or stops, and so on. Wavefields are electrical/electromagnetic in our reality and you can feel this when hairs on the back of your neck stand up in a spooky situation when an unseen wavefield entity or 'ghost' is around you. The same happens with an excited crowd generating a mass of collective wavefield energy. 'Atmosphere' in a sports stadium ('the atmosphere was electric') is the result of electromagnetic waves emitted by the crowd and through entanglement becoming collectively more powerful than the parts. Electrical circuitry can therefore be affected by waves generated by people or by entities projecting electrical waves across realities in what is referred to as a 'haunting'. Some of this manipulation can be malevolent while most of it is only perceived to be so by those who fear the unknown. The Cult seeks to keep the population in a state of unknowing so there is more unknown to fear. Witness how religion has been used to manipulate its followers to fear the unknown as the 'occult' when the word merely means 'hidden'. Such hidden knowledge can be used for good or ill. What people fear they tend to try to avoid – in this case knowledge that will set them free. My brother, Paul, experienced some otherwise unexplainable electrical and number happenings and 'coincidences' in the days after my mother died. This is a way that loved ones try to tell us – 'Hey, it's okay, there is no death'. On the first night of my ayahuasca experience in Brazil I was lying on a mattress in the pitch black in a big round hut in the rainforest. I was alone except for a facilitator overseeing the process who had taken ayahuasca many times. In fact, I think he had pretty much smoked and drunk the rainforest. He was playing music on a CD as the ayahuasca effect kicked in and I felt an incredibly powerful energy pouring in an arc from the centre of my chest (heart chakra) and into my forehead area (third-eye chakra). It was like a sensation of hands gripping my chest and forehead. The music stopped and then started again as if the electricity had been turned off and on. Then one of the strip lights illuminated followed by a second and third. I wondered why the facilitator was messing with the music and lights. When I looked he was sitting near to me and nowhere near either the music player or the light switch. Even if he had been the lights would have switched on all together around the hut, not as one, two or three. Electromagnetic energy that I was so powerfully feeling was affecting electrical circuits and that is what happens during paranormal events. One of the scariest examples for people is so-called poltergeist activity when

'physical' objects can move and even fly around the room. If we approach this from the perspective I am describing this, too, can be explained. 'Physical objects' are not physical. They are decoded holographic projections of wavefields which other fields can entangle with and make 'move'. This can be done by 'other-world' non-human entities, although moving objects of energetic density can take a lot of energy. Crazy as it may sound, this can also be caused *unknowingly* by humans. I have read many times how a common theme of poltergeist activity is the involvement of adolescent girls going through emotional trauma. On a wavefield level they would be emitting chaotic, imbalanced and potentially powerful emotional frequencies that could certainly entangle with other fields in the room and create mayhem that is blamed on a 'poltergeist'. During 'hauntings' people describe how the location becomes suddenly very cold and this is the 'ghost' (consciousness in another reality) sucking energy in the form of heat out of the field to gather the energetic power that it takes to communicate between realities. When people report feeling chills down the spine this is the electromagnetic field of an entity impacting on the central nervous system.

On and on we could go with perfectly simple explanations for apparently impossible happenings and events – if we clear our minds of the fake version of reality spoon-fed to us throughout our lives by the Mainstream Everything controlled by the Cult. Now consider the fact that politics, governments, corporations, science, medicine, academia, media, and all the other global institutions are making decisions every day affecting the direction of human society based on a world that doesn't actually *exist* except as a decoded illusion. WTF? No wonder they make such a mess of it. How can that not be the case when a world in which everything connects to everything else is perceived as nothing connecting to anything else? The dream is the dreamer and the dreamer is the dream. When we forget that we can create a nightmare.

CHAPTER FOUR

What is love?

Have enough courage to trust love one more time and always one more time – Maya Angelou

This is not a book that simply says: ‘Love is the answer.’ It is, by the way, because everything comes from that, but I want to lay out why it is the answer from the context of how reality and consciousness interact.

From *The Answer* come all the other answers, plural, to the range of challenges facing humanity and which humanity has brought upon itself. In the end when you break it down they have *all* been brought on ourselves through the way we have allowed others to dictate perception and self-identity. I am not referring, in terms of *The Answer*, to the human version of ‘love’ which is mostly founded on mutual attraction. I talked to a mind-control expert in the United States many years ago who said he could make two people who would otherwise pass in the street without a second glance fall deeply in (attraction) ‘love’ purely by stimulating certain chemicals in their brain (chemicals = wavefield frequencies). Love in its deepest sense goes way beyond: ‘Cor, fancy her, fancy him.’ This is why attraction ‘love’ can be so fleeting and temporary. It doesn’t have to be if other expressions of love are involved, but it definitely can as we see every day. Commitment to a lifetime together in the flush of attraction at the altar can be gone within weeks and certainly years. With no deeper love to maintain the connection the relationship unravels often in hostility. What happened to the words of love spoken so apparently genuinely at the vicar’s prompting? They were illusory and not founded on *real* love at all. Attraction love is captured in phrases like I love you *when* and I love you *because*. Love in its true and infinite sense does not love only *when* or *because*. It just loves infinitely and this love takes appropriately infinite forms. Sharing the same bed is only one of them and not even close to the most important. Love must also be freely given and not demanded because love is only love when it is given freely. ‘I want you to love me’ and ‘I’m trying to love you’ just doesn’t work.

Chemical ‘love’ in which the mind generates chemicals connected to ‘physical’ attraction can indeed be a manifestation of Infinite Love expressing itself through intimate relationships. The point is that ‘physical’ relationships are only one expression of love. We experience love most potently in human discourse as friendship. Couples attracted ‘physically’ that develop a deep friendship can stay together for a lifetime. ‘Physical’ attraction ‘love’ may fade, but friendship love – Infinite Love – never does. Its depth can be seen in this saying: ‘A friend is someone who walks into a room when everyone else is walking out.’ The friend may not agree with what you have done and may even be appalled by it, but they stand at your side anyway and say ‘how can I help?’ Friendship connects through the heart while purely attraction chemical ‘love’ prefers the groin. Okay, it can be both and that’s perfect. If it’s only the latter the clock is already ticking. To articulate this misrepresentation of love we have to employ terms like Infinite Love and unconditional love (without the ‘when’ and ‘because’) to describe what we mean. If

we only love 'when' and 'because' we don't really love at all. That is not love. It's a contractual arrangement of cause and effect – you do this and you get that in return. Sign here. Infinite Love is both cause *and* effect. It has no 'when' or 'because'. The nicest and most loving of people can be arseholes sometimes and real love goes on loving despite not liking the behaviour. I am not saying that people should stay in a close relationship with someone being constantly unpleasant. I mean to realise that they do what they do because love is absent both for others and themselves. Evil is the absence of love by the evil-doer for themselves and those they affect. I have spent 30 years exposing the psychopaths directing human society, but I don't feel hatred towards them. What would be the point for a start? Hatred would affect me, not them, and distort my own perception of reality and wavefield state. What you hate you become and what you fight you become and we see this everywhere there is hatred and perceived 'resistance'. Your hate makes a wavefield entanglement with what you hate and the same with what you fight. If I hated the Cult I would make a wave connection with the mega-hate that is the Cult. You become what you lovelessly oppose through this wavefield (information) interaction and entanglement. Look at all the 'anti-fascists' who behave like fascists as a perfect example of what I mean. Withdrawing love from those we don't agree with changes nothing and condemns us to more of the same.

Anti-hate Anti-love

The demise of love (though there is still seriously plenty hidden from the daily headlines) can be seen in the ubiquitous 'anti-hate' movement in all its apparently endless and constantly replicating forms. Note they are not 'pro-love' groups, but 'anti-hate', and 'anti-hate' is not love. 'Anti-haters' attack perceived 'haters' while having hate on their faces and violence on their minds. Other 'anti-haters', including many ultra-Zionist groups, set out to crush their targets financially, legally and by deleting their freedom of speech. Their closed hearts allow their hatred free-reign while couched in the virtue-signalled hypocrisy of opposing hate. Where is the love in such groups? 'Anti-hate' is not love – it's just another term for hate. The fact that the Cult in the shadows with a malevolent agenda for humanity is covertly funding and orchestrating these anti-hate hate groups is no coincidence. For the few to impose their will on billions requires the billions to be divided, and so ruled, and to be manipulated to enslave each other. The Cult achieves this by creating groups, factions and belief systems that can be played off against each other in violent conflict and battles for supremacy. 'Identity politics' is the latest version of the technique that religion has served so well throughout human history. What are identity politics and the associated Climate Change Cult if not modern-day religions that the manipulators seek to be *one* religion through what they call 'intersectionality'? This is defined as: 'The complex, cumulative way in which the effects of multiple forms of discrimination (such as racism, sexism, and classism) combine, overlap, or intersect especially in the experiences of marginalised individuals or groups.' This means from the manipulators point of view: Play different identity groups against each other on detail, but also unite them behind a common goal (your goal) of overturning society and imposing your long-planned blueprint for global centralised control and tyranny. Take the blinkers off and you see that very world emerging before our eyes day after day, especially through the Climate Cult founded on the human-caused global warming hoax, and more than anything the 'virus pandemic' scam I will be exposing in detail later. To secure the desired outcome you must create division and conflict and to do that you need an absence of love. In other words you need to transfer the psychopathic mentality of Cult manipulators to the target population which means sucking love out of human discourse in the way that love has been sucked out of Cult discourse. You transfer *your* mentality to your targets and make them an extension of you. Conflicts and injustices that plague human society are founded on the absence of love and its key components like empathy, the fail-safe mechanism in human interaction. Empathy is: 'The ability to share someone else's feelings or experiences by imagining what it would be like to be in that person's situation.' If you do this and feel something of what they must be feeling in the light of your actions those actions will change. If you can't feel empathy then anything goes. You have no emotional consequence no matter

what the extremes of your behaviour. We don't have to feel what others feel indefinitely. That would just drain us and mirror their energetic state. It takes only a brief empathic connection to either change our own behaviour or support someone affected by others. Without these key aspects of love such as empathy and compassion the Cult is emotionally free to drive its agenda for humanity. The Cult can be described in these terms: The *absence of love*. I have long referred to Cult personnel as psychopaths and that is spot-on accurate when the foundation trait of a psychopath is ... *the absence of empathy* which is the absence of *love*.

Loveless 'money'

Figure 107: Control money in the world as currently structured and you largely control freedom by controlling choice. (Image by Gareth Icke.)

The global banking system created by the Cult is, as you would expect, psychopathic as an extension of its creators' mentality. It is a manifestation of the absence of love and could not exist in its current form with an infusion of love. Banking is an organised crime network based on lending people 'money' that doesn't exist (except in theory) called 'credit' and charging interest on it. 'Credit' is illusory 'money' or figures on a screen that banks are allowed to create out of fresh air through something called fractional reserve lending. In simple language this means they can lend 'money' they don't actually have through a conjuring trick called 'credit' and control those they can lure into their lair of debt and criminal activity. The overwhelming majority of money in circulation begins life with private banks issuing fake 'money' called 'credit'. The Cult created-and-controlled banking system has the power to decide how much 'money' is in circulation by how many loans of 'credit' that it makes. This, in turn, dictates if we have an economic boom or collapse. Take 'money' out of circulation by reducing the availability of credit and you make it impossible for many to repay loans. There is not enough 'money', theoretical or otherwise, in circulation to do that no matter how hard debtors may work. Remember they called the economic collapse after 2008 the '*credit crunch*'. When people default because of the actions of the banking and financial system the *same system* can seize the possessions offered as collateral on the loan of 'credit'. In this way tangible wealth is constantly accumulated in exchange for non-existent 'money'. It's an incredible scam which political parties never challenge when it is a very foundation of human control and enslavement. Why do they never commit to a country creating its *own* money interest free and lending that to the population interest free? Simple – the Cult with its tentacles throughout finance and politics does not want that to happen and in my experience most politicians don't understand how banking works anyway. I expose all this in great detail in other books and its coldly-calculated effect is to entrap the population in debt which many can't repay. When that happens the bankers get their debtors' wealth in the form of their home, business, land and possessions in exchange for a 'loan' that does *not exist* except as a computer file – 'credit'. The virus '*pandemic*' hoax has offered the banks and financial system the opportunity to send in the hounds and vultures like never before to tear at the entrails of human misery taking their homes, businesses and resources for not paying back 'credit' loans amid the global financial catastrophe which Cult actions through idiot governments instigated. This is by calculated design, not random chance. This credit deception has been happening for many centuries and has led to

the wealth of the world being stolen from the population by a microscopic few. Hence we have the ‘One-percent’. Control ‘money’ (especially its *theoretical* creation in the form of ‘credit’) and you control choice which means you control freedom or rather delete it. Freedom is the ability to make choices and in today’s Cult-created structure of human interaction ‘money’ (who has it and who doesn’t) dictates who has choice and who doesn’t ... who has *freedom* and who doesn’t ([Fig 107](#)). Ponder that in the light of the events of 2020. Choice-dictatorship is enforced by banks and other financial money-controllers such as hedge funds and private equity operations. We return to love and the absence of it. Could anyone coming from a place of love ever conceive, let alone impose, such a system of financial control purely for personal gain, power and omnipotence? Empathy would prevent them. Could they throw families onto the street for the inability to repay loans of ‘credit’ that do not, have never, and will never exist except as a concept? Could bankers even do this to families in properties the bank did not lend ‘money’ to buy? This happened to so many after the crash of 2008 when banks and corrupt court systems forged documentation to secure eviction from homes with which they had absolutely no contractual connection. Love would never and could never do that. Psychopaths (the absence of love) most certainly could and get a sexual high for doing so. Here we have a very pillar of human control – the financial system dictating choice and thus freedom – which is built from its foundations on the absence of love.

Designer ‘love’

Figure 108: Entertainment – yes. Everything else – illusion.

Then there is what I call personalised or designer ‘love’ when you have genuine empathy with those around you like family and friends while not extending that to anyone beyond that circle. You see this when those with family or other connections attract empathy for their plight while those being bombed on the other side of the world do not. I have seen the ‘love your family’ mindset cheering or even demanding the mass bombing of other families far away just as I constantly see anti-haters seeking to crush and destroy those they don’t agree with. These are all examples of designer ‘love’ which basically means ‘loving’ only those close to you or those that think like you do. This is not Infinite Love. It is finite illusory love. Religion is a most potent example in which there is (illusory) ‘love’ between fellow believers and hostility for those that worship another version of ‘God’ through some other ritualistic label. India and Pakistan are centres for mutually-hostile religions that dictate who you must love (in theory) *and* hate. I say in theory because if you ‘love’ people identifying with one label and hate those of another then you don’t love anyone in its real sense. How can we truly love if we don’t grasp what love is? We can track designer love and empathy into sport where some people following one soccer team hate followers of another for the blasphemy of supporting the ‘wrong’ group of players kicking a bag of wind about trying to direct it into a net. I am not knocking football as a form of entertainment – I used to be a footballer. I am saying we have become so caught in the illusion of human life that we decide who we like, love and hate, on the basis of what colour shirts we cheer? I live not far from two football clubs on the English south coast, Portsmouth and Southampton, which require a big police presence when they play to deal with the fact that many supporters of both sides hate each other. Why? One group supports

Portsmouth and the other supports Southampton. Er, that's it. I don't support either club and yet if I went to one of their matches I could decide which group loves me and hates me simply by wearing a scarf in the colours of one of the teams. What madness ([Fig 108](#)). The absence of love tends to trigger madness (extreme imbalance) because love *is* balance – the balance of everything.

Wherever there is imbalance, and human society is often at the extreme end, the way to rebalance is always love. Take any situation of conflict, violence and discord (imbalance) and an infusion of love will turn it around – rebalance. We can observe the imbalanced madness that only love can heal in the endless wars between factions of the human family. We are points of attention in the same stream of Infinite Awareness and in the illusion of separateness we fight and compete to reach some illusory outcome. We are eternally exploring forever *forever* and the 'baddy' today may be the 'goody' tomorrow. There is no 'outcome', only current experience. Ponder on any 'outcome' and you'll see that it is only a temporary step to the next step ('outcome') which is a temporary step to the next step ('outcome'). There are no 'outcomes', only experiences following each other like waves of the ocean. Oh, but I must 'get somewhere'? I must 'be someone'? You are *already* everywhere. You are *already* everyone and everything. You may like to experience something, but that's not the same as feeling the need to 'get somewhere' and 'be someone' when you are already everywhere and everything. People are so busy and focused trying to 'get somewhere' and 'be someone' that they miss the experience of the only moment that exists – the NOW. We miss what is happening NOW when our perception is enslaved in the illusory 'past' (regret, resentment) and pulled into the illusory 'future' (I gotta *be* someone, I gotta *get* somewhere). The loss of this understanding – the systematic loss thanks to the Cult – is indivisible from the absence of love through which expanded awareness speaks to us. It is true that we can't be all things to all people and it is understandable that we feel the closest connection to those literally closest to us. That doesn't mean we can't have empathy with those outside our circle and care about the freedom, justice and plight of others though we may not know their names. I have heard the term 'compassion fatigue'. Compassion is love and love knows no limits and certainly has no fatigue. We can love and care for our families and still stand up for people far away of different races, religions and colour of face. Martin Luther King said:

Injustice anywhere is a threat to justice everywhere. We are caught in an inescapable network of mutuality, tied in a single garment of destiny. Whatever affects one directly, affects all indirectly.

This is indeed literally true on multiple levels of reality. When you strip away the illusions and the labels that underpin those illusions what is left is the understanding that we are all each other – points of attention in the same infinite flow of consciousness having a brief experience called 'human'.

Source of love

The love that I am describing is more than empathy and compassion. It is *everything* and I mean *everything* that we need to transform a prison to a paradise. Love is the very fabric of existence. Much of humanity has been disconnected from its influence by a malevolent network which is a Death Cult because it has *itself* been disconnected from the influence of love for longer and more profoundly than anyone. To understand this disconnection we come back to *The Void*, *The One*, *The Source*, *The All That Is in Awareness of Itself* – whatever term you wish to use. Some will prefer 'God', but that has become so discredited by religion that it has no meaning to me. I say it's a grotesque misrepresentation of reality to identify *The One* with the angry, bloodthirsty 'God' of the Old Testament; the 'God' that would sacrifice his 'son' on a cross in the New Testament; or demand the beheading of 'infidels' in the extremes of Islam. Religious fantasies have served the Cult agenda magnificently in replacing the source of love in the human heart with a mythical 'God' of violence, imposition and self-obsession which religious factions can claim for their own. Factions following this hideous version of 'God' can then be manipulated into conflict and battles for supremacy that have plagued, divided and ruled humanity for so long. I have been writing for

decades that the Cult was the force behind the creation of religion and we can also understand why the Cult installed a God-free version of mainstream ‘science’ to dominate the perception of reality in most of those who reject overt religion. Either way, *The One* has been written out of the script and this has been vital for the Cult’s absence-of-love agenda to block the influence of *The One* on human perception and behaviour. I have described my own experience of the ‘Dazzling Darkness’ of silence and stillness from which ‘Creation’ emerges from the *All Possibility* of *The One*. Creation is the realm of frequency and vibration while the Creator is stillness and silence. The foundation of all existence is the All-Knowing, All Possibility, of stillness and silence while sound and form are only possibilities within All Possibility. People experience stillness and silence in states of deep meditation through which they can access ‘knowingness’ – the *All*-knowingness of *The One*. ‘Quiet contemplation’ is a similar experience and we speak of the stillness of the heart and a quiet mind. Some say that yoga and martial arts like Tai chi take them into quiet mind states. I call my own experience of this ‘daydreaming’ when I allow my mind to open and flow without the mind-chatter and focus of five-sense attention to keep the door shut. These states take me into the stillness and silence from which knowing emerges. Funny, when I saw the dictionary definition of daydreaming it offered an example of the term in a sentence: ‘He never paid attention in class and seemed to be in a permanent daydream.’ That was me at school to a tee and most of my life to this day. *The One* is the source of Creation, the observer of Creation and the experiencer of Creation via expressions of itself like you and me and *everything*. As ‘Shakespeare’ (or whoever it was) wrote:

All the world’s a stage, and all the men and women merely players: they have their exits and their entrances; and one man in his time plays many parts ...

The nature of those ‘parts’ is decided by the strength of connection we have with *The One* while we are ‘on the stage’. These ‘parts’ are our ‘persona’ or actor’s mask. When people think of ‘God’ they tend to look to the sky (the symbolism of sitting on a cloud). This is a trait that follows from a belief in all-that-you-see-is-all-that-there-is. If you think you can see all there is to see in the ‘space’ before you then ‘God’ must be ‘up there’ if you can’t see ‘him’. When by contrast you know that your range of sight is only a band of frequency that your Body-Mind can decode then the concept of ‘God’ moves from ‘up there’ to ‘in here’ – a force that shares the same ‘space’ that we do beyond our range of vision. *The One* is not ‘up-there’. *The One* interpenetrates everything. From this perspective we can rightly say that ‘God is everywhere’ and ‘love is everywhere’. Yes, they are. Love is everywhere because *The One* is the source of love and interpenetrates everything. Love as in Infinite Love and unconditional love that is.

The heart – gateway to *The One*

Figure 109: The heart vortex in the centre of the chest – the gateway to ‘home’.

There is a level of Infinite Realty – including those in the Cult – which is the love of *The One*. Cult initiates have closed themselves off from its influence and so they behave as they do. Our prime connection (or

disconnection) with *The One* while in Body-Mind experience is through an open or closed heart vortex, or heart 'chakra' ([Fig 109](#)). Not coincidentally this is the balance-point chakra in the main sequence of seven. We feel love in all its forms, even purely attraction love, in the centre of the chest and we hear this described in terms of 'I love you with all of my heart' and 'You make my heart flutter'. The heart chakra through which we can connect with the love that is *The One* is the origin for the symbolism of the heart representing love. This symbol appears to relate to the 'physical' heart when the real connection to love is through the spiritual or energetic heart ('heart of hearts'). Even so there is a pivotal link between the two with the wavefield heart (chakra) impacting on its holographic projection or 'physical' heart. When the heart chakra is closed or energetically stressed through extremes of grief this can so affect the holographic heart that people do indeed 'die of a broken heart'. From this we can appreciate why, in a world awash with systematic, Cult-induced stress, frustration, anxiety and fear that heart disease is one of our biggest killers. Stress, frustration, anxiety and fear are all dense wavefields that impact on the heart chakra vortex – 'my heart aches', and 'I have fear in my heart'. The language is peppered with sayings and phrases that tell the truth about the spiritual heart while appearing to pertain only to the 'physical' heart:

Follow your heart; listen to your heart; heart of gold; heart of stone; change of heart; heart-to-heart; lose heart; heavy heart; joy in the heart; tug on your heart strings; big heart; all heart; no heart; from the heart; heart goes out; heart in the right place; from the bottom of the heart; heart sinks; take heart; young at heart; sick at heart; goodness of the heart; have a heart.

We also speak of 'hearts and minds' and 'heart and soul'. All these terms and many more reflect different states of the heart chakra and its connection, or disconnection, with the source of love – *The One*. We also speak of 'hearts and minds' and 'heart and soul'. These describe profound truths in the sense that they say heart and minds, heart and soul. The heart chakra is our prime connection from Body-Mind to Soul and *The One*. When that is closed or diminished enough the influence on perception and self-identity of *The One* (love) consequently also diminishes and we become isolated in the Bubble of purely Body-Mind. As the Cult would say: *Gotcha!* Many people have a feeling of being 'lost'. They have an emptiness they cannot explain and a yearning for something 'missing' that they can't put into words. These feelings are widespread and come from the loss of a conscious connection through the heart to *The One* ([Fig 110](#)).

Love is more than human 'love'

Figure 110: Open heart – opens to *The One*.

Figure 111: The head thinks.

Figure 112: The heart knows.

Think about love and most people will think about relationships in terms of true love, unrequited love, and so on. Love in the sense that I am describing – *The One* love – is far more than this and that's another central reason why the Cult seeks to close our hearts. The heart chakra is our connection to *The One* and *The One* is not only the source of love as we perceive that word; it is All-Possibility and ... All-Knowing. Many ancient cultures considered the heart to be the connection to real intelligence, the Soul and the *Source of All That Is*. If this is true then the heart must also be our connection to this innate or knowing *intelligence* and research is showing this to be exactly the case as I will shortly explain. We must first identify the massive difference between Body-Mind 'intellect' and the intelligence of the heart with its connection to *The One*. This can be defined by the gargantuan difference between thinking and knowing. Body-Mind *thinks* because it doesn't *know* and has to try to work it out through information processing in the brain. Knowing does not originate in the brain. It comes from the heart and the connection to *The One*. Verbal language and phrases tell the truth about the heart and so does body-language. When we say 'I'm thinking' we point to the head which is where the thinking is taking place ([Fig 111](#)); when we say 'I know' our hands go to the heart (chakra) where the knowing is coming from ([Fig 112](#)). Body is an extension of mind and what the mind is *perceiving* the body is *doing*. Body-language can therefore discern a person's mental and emotion state. Knowing is also called intuition which doesn't think – it *knows*. When we intuitively know something we haven't spent hours working it all out with the brain. It comes to us in an instant in one whole without a sequence of thoughts or dots leading to a conclusion. We say: 'I don't know why I know, I just *know*.' Isolated Body-Mind wants all the details and the research papers to 'prove' what you 'know'. People talk about something being 'counter-intuitive' when what they really mean is counter-programmed-perception.

Prison of the intellect

Human society celebrates the intellect while scorning expanded awareness of which the intellect is only a fractional part. It follows from this that professional 'sceptics' who demand five-sense 'proof' for everything are utterly dominated by the intellect. An example is the intellectual humanist movement which is founded on a belief in this-world-is-all-there-is with no continuation of consciousness.

Humanism is defined this way by the *Concise Routledge Encyclopedia of Philosophy*:

... a commitment to the perspective, interests and centrality of human persons; a belief in reason and autonomy as foundational aspects of human existence; a belief that reason, scepticism and the scientific method are the only appropriate instruments for discovering truth and structuring the human community; a belief that the foundations for ethics and society are to be found in autonomy and moral equality ...

Figure 113: The human perceptual illusion

Mainstream science and academia as you would expect are overwhelmingly directed by this mentality that cannot perceive beyond the five senses. How can you discover something when there are colossal areas in which you refuse to look? The foundation of five-sense intellectualism is the concept of 'reason' which is believed to be the arbiter of truth by mainstream science, academia and The System in general. Yet most of what is called 'reason' is only perception derived from limitation of awareness – ignorance – that comes with a closed mind. Mainstream Everything's version of 'reason' includes 'rational' and 'logical'. Their dictionary definitions reveal the perceptual feedback loop that maintains the state of ignorance: *Reason* is defined as 'to determine or conclude by logical thinking'; *logic* is 'a system of reasoning'; and *rational* is 'based on or agreeable to reason'. What is *reason* really? It is a process of assessing information on the basis of perceived (programmed) credibility and fact to reach a conclusion about how things are. The credibility and limitation of your 'reason' depends purely on how wide you are prepared to spread your explorational net. If it is only cast within the imposed Postage Stamp 'normal' you will get Postage Stamp 'reason' that can be, and invariably is, a load of old tosh ([Fig 113](#)). 'Reason' of this kind brings perceptual enslavement and never enlightenment. Blaise Pascal, the 17th century French philosopher and mathematician, said: 'The end point to rationality is to demonstrate the limits of rationality.' It takes those with open minds and expanded awareness to see what those limits are and to go beyond them. Here's an example from a Central American shaman:

We are perceivers, we are awareness; we are not objects; we have no solidity. We are boundless ... We, or rather our reason, forget this and thus we entrap the totality of ourselves in a vicious circle from which we rarely emerge in our lifetime.

These are perceptions that come when you step off the Postage Stamp of 'rational' and 'reason'. This is why Cult-created 'education' teaches children and young people throughout their entire formative years the myopic illusion of mainstream 'reason' that entraps the totality of themselves in a vicious circle from which they rarely emerge in their human lifetime. Limitations of mainstream science in grasping the nature of reality mean that once again if it can't explain intuition from a five-sense perspective then it can't exist or be happening. Open your mind a few notches and it *can* be explained. Intuitive knowing comes from a heart connection to expanded awareness and *The One* and through wave connections to other fields of information. The latter can be a wave frequency connection to a loved one which allows you to know what is happening to them and a similar connection to wavefields that we experience as events and happenings, current and 'historic'. People and situations are all wavefields that connect with The Field and through this conduit we can attune with that information in The Field, the energetic sea or

Cosmic Wi-Fi, and access awareness in the form of ‘knowing’. We are told it is a mystery why animals can sense when an earthquake or bad weather is coming despite the lack of five-sense evidence. It’s not a mystery. Animals that don’t go to school, watch the media or have a Smartphone retain their natural sensitivity to changes in The Field which all humans are supposed to have. They sense wave disturbances in the Field that indicate trouble coming and take evasive action where possible. What is this except a form of ‘intuition’ or knowing? My books since the early 1990s are packed with information that has subsequently happened or is happening. Until the mid-90s I would research five-sense information and come to conclusions about what was going on. Since then I have intuitively known what was going on and the five-sense confirmation in the form of facts and research have followed. Had it been the other way round I could never have connected the dots over such an array of subjects. It’s the knowing that connects the dots and five-sense research that adds the detail. Studies by the HeartMath Institute in the United States that researches the nature of the heart and heart chakra have shown that when someone is in heart-mind balance enormous creativity can be unleashed and that must be so. Open hearts in energetic harmony connect with the flow of *The One* which is ... *All Possibility* and so all creativity. Closed hearts do not ([Fig 114](#)).

No worries, mate

Figure 114: Closed hearts got us here. Open hearts will take us home. See Neil Hague colour section.

Another aspect of Infinite Love accessed through the heart is that it isn’t burdened, blocked and limited by fear. Humanity is so often frozen by fear – fear of losing, of winning, of failing, of consequences, of death, of the unknown, of what others think. The list could go on for pages. Fear is the bottom-line of how the Cult controls and direct billions worldwide (pandemic hoax, I rest my case). We are given endless reasons to fear and to fear each other. Every day there seems to be something else we are told to fear. Once it was fear of not finding food or an enemy coming over the hill. Today the list seems to be without limit – fear this, fear that, fear everything. We have the term ‘culture of fear’ to describe the manipulation of fear to secure control. Fear in totality leads to people looking to authority for protection from what they fear while fear of each other is the constant creator of division and conflict. The Cult wants the global population to look to its police state for protection and in doing so to accept the ever-increasing imposition of the Cult. What happened on 9/11 and in other Cult-orchestrated terror attacks is designed to manipulate people to demand, or at least not challenge, the erosion of their own freedom in the name of protection from ‘terrorists’. These ‘terrorists’ invariably turn out to be controlled by the same force that is imposing the new laws to ‘protect us’ from them. I coined the term ‘Problem-Reaction-Solution’ (PRS) to describe this technique of covertly creating a problem, getting the public response of ‘do something’, and then overtly offering the (Cult) ‘solution’ which changes society in the way that you want. The virus hoax is a glaring example which I will explore in detail later. There is another version that I call No-Problem-Reaction-Solution in which you don’t need a real problem only the *perception* of

one – ‘weapons of mass destruction’ in Iraq and once again the virus fraud. See my book *The Trigger* for a detailed exposure of this with regards to 9/11 and what it has been used to justify ever since. The key element in PRS (or ‘false flag’) events is to instil fear in the population which then makes them open to the ‘solution’. It is well-known in mind-control circles that fear and trauma makes people more open to hypnotic suggestion. Every day the media is brimming with reasons to fear including fear of each other. This is essential to securing mass control by setting the population at war with itself. The sense of division is crucially underpinned by the perception that our five-sense labels are who we really are. When we open our heart to the flow of Infinite Love and expanded awareness from *The One* our perceptions transform and these Cult techniques no longer work. We are not diminished by fear when Infinite Love knows there is nothing to fear. Whatever is currently happening is only a brief experience for Body-Mind while the True ‘I’ is observing the experience with the potential to change it. Infinite Love – *The One* – will always do what it knows to be right and no amount of manipulation, fear of consequences or anything else will make any difference. To consider consequences for doing what you know to be right is to consider the possibility of not doing what you know to be right. Infinite Love will never do that. I have never feared and will never fear what might happen to me for doing what I know to be right. More than that I know that if I flow with my heart such consequences will not manifest anyway. Only if I feared them could I attract them through wave entanglement. People are described as having a ‘faint heart’ when there is no such thing. A ‘faint mind’, yes, but the heart in its power is never ‘faint’.

Figure 115: Why judging people by their temporary and illusory labels is so crazy.

Love in its true and infinite sense is how we connect with expanded states of awareness, innate intelligence, wisdom, knowing, intuitive insight, courage and that which is beyond courage – the absence of fear. In fact fear is merely the absence of love when love in its purest and most powerful state is the absence of fear. What is the world of today and a long time ‘past’ except the absence of expanded states of awareness, innate intelligence, wisdom, knowing, intuitive insight, courage and that which is beyond courage – the absence of fear? All these are aspects of Infinite Love flowing from *The One*. There is an absence of love in human society, but that doesn’t mean ‘non-existent’ and far from it. We witness amazing acts of empathy and compassion in examples of personal and collective love. We see them in courage and self-sacrifice and they offer an insight into the Infinite Love that I am describing. Such acts are not the norm, however, and ‘it’s not my problem’ is a far more frequent response. It is also true, and with profound consequences for human wellbeing, that such acts of love are most rare in the seats and positions of economic, political and administrative power. The Cult has made certain of that and this must change if its goal of total human control is to be thwarted. That endgame is not even decades away as things stand and it most urgently needs to be rolled back. (I wrote that and 85 percent of this book before the Cult seized astonishing levels of global power through its manufactured virus scare). To impose its control the Cult must maintain the delusion of apartness to allow divide and rule to run riot. It is in our power any time we choose to bring down those walls of illusion and see the truth on the other

side – the truth that we are *all* love and always have been despite often wearing heavy disguise. We have forgotten and been encouraged and manipulated to forget. What has followed is a world that reflects this amnesia, but now there is a stirring in the hearts and minds of forgotten love. Many are remembering and the more that do so the quicker the illusions will fade and fall and a new reality must form from this new collective perception based on the understanding that we are each other ([Fig 115](#)). Love is *who* we are. The absence of love is *where* we are. So what is *The Answer*? The question answers itself

Science of love

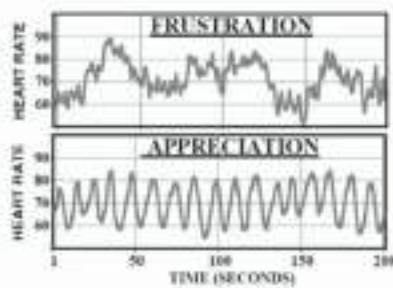

Figure 116: Different mental and emotional states create frequency coherence and incoherence – connection and disconnection from expanded awareness.

The HeartMath Institute was launched in California in 1991 to study the impact of the heart on human behaviour and psychological wellbeing along with much else. The Institute has since published a considerable body of information to confirm that the heart is far more than it appears to be. More than that the chakra heart and ‘physical heart’ are the central core of human psychology, perception and health (harmony) in all its forms. If heart energy (love) is flowing in harmony all is well and when it’s not the trouble starts in many and various ways. Love is in one aspect the balance of all things and you would expect HeartMath research to confirm that when the heart is open to the flow of love this brings balance to the systems and information processing of Body-Mind. We are told that the brain is the governor when in fact it is the heart which communicates its balance or imbalance to the brain to process as perception. When I talk of the heart in this context I am referring for simplicity to both the chakra heart and its holographic ‘physical’ projection with the chakra heart the key to it all. HeartMath research has established that when the heart, brain and central nervous system are in harmony, or ‘coherence’, the person enters an expanded state of consciousness and the opposite happens when there is disharmony or incoherence. I say this happens because the connection via the heart to the Soul and *The One* ceases to communicate the true magnitude of its awareness, innate intelligence and balance (love) to the systems, psychological and ‘physical’, of Body-Mind. Other studies reveal that with heart-mind harmony we enter states of consciousness known as ‘non-local’ or ‘outside the bounds of time and space’. Isolated Body-Mind lives in its Bubble of ‘time’ while the heart lives in the NOW. People also think with more clarity with heart-mind balance. Energetic distortion and chaos that results from heart-mind imbalance (like trauma and stress) stops them from ‘thinking straight’. For obvious reasons the Cult does not want its targets to be influenced by *The One* through the heart connection and seeks to isolate human brain perception (*in the world and of the world*) from heart perception (*in the world, but not of the world*). These two perceptual states are so immensely different. The Cult’s modus operandi is to structure human society to ensure maximum fear, stress, anxiety, depression, hatred, regret, resentment, inner and outer conflict etc., or what I call low-vibrational emotion. This can also be accurately described as disharmonious and incoherent ongoing emotion that I have seen referred to as ‘white noise emotion’ which is always there in the background. HeartMath studies have confirmed that this creates incoherence in heart-brain-nervous system communication and suppresses expanded states of consciousness ([Fig 116](#)).

Those in a state of energetic (information) incoherence withdraw perceptually into the *Bubble*. The more fear, stress, anxiety, depression, hatred, regret, resentment, inner and outer conflict, the Cult can generate the deeper perceptual enslavement will be as people are entrapped in the illusions of the five-senses. Heart-mind coherence or incoherence has a central impact on psychological and ‘physical’ health.

Figure 117: Heart consciousness connects and sees everything as One.

Figure 118: Head consciousness disconnects and sees everything as apart from everything else.

HeartMath researchers speak of ‘bio-communication’ or energetic transfer between open hearts. I am calling this wave entanglement. Heart waves (love, harmony, Soul, *The One*) connect with like waves in others to establish a *Oneness* connection of perceptual unity. This happens between people; people and animals; and people, animals, and the ‘natural world’ ([Fig 117](#)). When heart waves are weak or incoherent the perceptual unity of *Oneness* is lost to the domination of brain wave connections which, without the influence of the heart, present everything as apart from anything else ([Fig 118](#)). You can see from this even more profoundly why the Cult targets the heart.

Figure 119: ‘Human’ is a point of attention focused within a tiny band of frequency, but we can also open our minds to connect with expanded awareness and see our reality from a very different perspective. (Image Neil Hague.)

It can’t directly affect love in its true sense flowing from *The One* through the heart. The frequency is so high that Cultists and their non-human masters can make no connection. They behave as they do because they have closed themselves off from its influence and are thus described as being ‘heartless’ and from the ‘dark side’. Even so they are still expressions of *The One* that can return to perceptual unity whenever

they make that choice. While they are currently the ‘baddies’ in the stage show there’s another costume waiting for them to play another part. As things stand, given their inability to affect love directly, they must work to block its influence on their human targets. They do this by manipulating human life to generate maximum low-vibrational emotion which closes the heart chakra channel and creates energetic distortion and incoherence between the heart, brain and central nervous system to isolate Body-Mind in the Cult’s perceptual lair. Crucial to this is securing mass ignorance of true identity. Once that veil lifts we have the power to reconnect through the heart with our Soul and *The One* and for the Cult the game is over. We then speak and act from the heart and not only Body-Mind. With that everything changes. Once the heart opens to *The One* you see the unity of everything and not apartness. You see the experience of individuality and also the infinite stream of consciousness which connects us all. You see that judging people by their race and labels is so ridiculous and no one does this more obsessively than ‘antiracists’, ironically. I can speak from personal experience. My conscious ‘awakening’ in 1990 and 91 began the process of opening my heart triggered by the kundalini experience. From that moment, and ever more as it has progressed, I have seen the connections and unity (*The One*) that join all the apparent dots (people, experiences, everything). Heart-opening does not mean you suddenly start acting ‘perfectly’ (what is ‘perfect’ anyway?). It means you start to be influenced by something greater than only Body-Mind and your state of awareness expands. As this progresses you see that the dots are only different points of attention and awareness within a unified whole ([Fig 119](#)). Opening your heart doesn’t mean we never regress into isolated Body-Mind mode. Instead this becomes rarer the more your heart enters the formulation of perception.

Follow your heart

Figure 120: The Bubble seems to make sense until it bursts. Then the ‘real world’ within the Bubble appears as it really is – lunacy.

What changed my life more than anything came in the early 1990s. I decided that when my heart and head (intuition and thought) were at odds I was always going with my heart/intuition. The decision got me into some interesting situations, experiences and scrapes, including mass ridicule, and the brain screams: ‘See what happens when you don’t listen to me!!!’ Brain-heart conflict blights the life of almost everyone to some extent with their different ways of seeing the world and making decisions. Most people go with their head (‘use your head’) when their heart intuition is urging another direction. Heart doesn’t see reality and situations like the head. It has another perspective on life from a state of expanded awareness not confined to the perceptual ‘norms’ of human Body-Mind society. Follow your heart and you start acting differently to Postage Stamp normal which still the great majority believe (thanks to head perception) to be ‘the real world’. I took the consequences of that in historic levels of ridicule. Fortunately, I’m a stubborn bugger when I choose to be and I wasn’t budging and being absorbed back into the flock. I decided to stick with it and something amazing eventually happens. Your head perspective sees that while following heart intuition can lead to challenges it all works out in the end – and not *despite* the challenges but *because* of them. Our greatest gifts are often brilliantly disguised as our worst nightmare. Mass ridicule was the making of me however unpleasant it was to experience. My head (limited

awareness) didn't know what was happening; my heart (expanded awareness) most certainly did. Body-Mind can see to the next turn in the river. Heart can see the whole river from source to sea. Consciousness with which my heart was connecting, and urging apparently strange courses of action, knew that my life would later involve communicating information like shapeshifting people that would attract bucket-loads of ridicule and abuse. For me to put myself through that any concern about what others thought about me or said about me had to be deleted. Mass ridicule appeared to be a nightmare in the experience when it was really a gift to set me free. Such is the difference in perspective of the head and the heart. The head reacts to every happening. The heart plays the long game. For decades now my heart and head have worked in unison and when my heart says do this, go there, my head says 'Okay, let's go'. The war is over. Heart and mind become one. Almost everyone starts out in unconsciousness once The System kicks in and the pressure to stay there until the hearse rolls up is 24/7 incessant. No wonder we spend so much of our lives, even all of it, in the Bubble; but *we don't have to*. We can all open to expanded awareness any time we want – it's our natural state – and that's especially so when the 'how' is known ([Fig 120](#)). I'll come to that in the final chapter and it's far simpler than many believe it to be.

Heart-Brain-Belly

Figure 121: The heart field is the most powerful electromagnetic field in the body.

From this background I was not at all surprised to discover that major perception-dictating heart-brain connections have been identified through scientific research and study. Mainstream science has long believed that the brain is the brain and the heart is the heart in another example of the illusion that follows from seeing everything as apart from everything else. The brain has been thought to be the dominant processor of perceptual information when in fact the heart is far more influential than previously believed in the modern era. The heart projects the body's most powerful electromagnetic field, 5,000 times more powerful than the brain field, and the heart field can be measured several feet from the body ([Fig 121](#)). You would expect electromagnetic waves to be most powerful from the source of most expanded consciousness. The heart is the body's biggest source of bio-electricity – up to 60 times more than the brain. Far more communication is passed from heart to brain than in the other direction and the heart is the only organ that can independently send information to the brain. The heart can also act independently *from* the brain and has its own long and short term memory and nervous system. Sixty-seven percent of heart cells are nerve cells (neuron communicators). It has some 40,000 neurons and a network of neurotransmitters which led to the term 'heart-brain'. Research has revealed how the heart receives information *before* the brain and transmits this with its own perception to different parts of the brain which, in turn, communicates its coherence or incoherence back to the heart in a feedback loop. The heart can open the mind and the mind can close the heart. Communications from the heart have particular influence on the frontal areas of the brain that process thinking, reasoning, speech and language, coordination, distinguishing objects, long-term memories, empathy (of course), personality, attention and motivation. The frontal lobe also relates to seeking reward and the brain-chemical dopamine which is mercilessly manipulated by social media platforms such as Facebook (more later). Heart communications have immense influence on the perceptual systems of the brain when they are

working in harmony or coherence. These interactions are distorted when the connection is weak or in a state of disharmony.

An open heart and open mind produce a communication feedback loop in which both work and perceive as one. Divisions between brain and heart lead to the contrasting perceptions of 'What does your head say?' and 'What does your heart say?' There are other perceptual connections to the emotional centre in the abdomen which leads to 'What does your gut say?' and 'What is your gut instinct?' When heart, brain, gut and nervous system are communicating in harmonic coherence it becomes 'What do YOU say?' Unity and Oneness we have lift off. The gut, heart and brain are connected by the vagus nerve which is the longest and most complex of the cranial nerves that emanate from the brain. 'Vagus' comes from a Latin word meaning 'wandering' which describes its nature and function. Both the vagus and the gut are far more important to human psychological and 'physical' health than most imagine and the source of energetic power – 'fire in the belly'. This is also sabotaged by low-vibrational emotion which we feel in the gut through the belly chakra. You see people with 'beer gut' bellies, but at the same time you see the same extended bellies with spiritually-developed people in the East who don't drink beer. To them the belly is the location of the energetic power and point of perception they call hara or tandem. A six-pack may be the state pursued for ascetic reasons, but is it best for hara? Many people who study these subjects say no. We are ideally looking for a harmonious connection between heart, gut, brain and nervous system to be truly in our power. No, I'm not saying we should drink lots of beer. There is the beer gut and the hara gut. They are not the same. The HeartMath website says of the heart-brain connection:

Research has shown that the heart communicates to the brain in four major ways: **neurologically** (through the transmission of nerve impulses), biochemically (via hormones and neurotransmitters), biophysically (through pressure waves) and energetically (through electromagnetic field interactions). Communication along all these conduits significantly affects the brain's activity.

Figure 122: The Earth magnetic field and the body field again reflect the holographic principle.

Heart is love which is balance and waves from an open heart can balance all other systems, mental, emotional, 'physical', whatever, and ensure a harmonious connection to the consciousness field of the Earth which leads to a harmonious interaction between humans and nature ([Fig 122](#)). This balance is reflecting the unity, harmony and Oneness that is love and *The One*. I have said there is no imbalance or conflict that an infusion of love cannot harmonise and that includes the mental, emotional and biological systems of Body-Mind. The heart balances emotions through its connection to the emotion-regulating amygdala in the brain and the release of hormones. It becomes clear through this central connection between emotion and the heart why stress is such a cause of heart disease (imbalanced wave entanglement and a closing heart chakra impacting on the 'physical heart'). The oscillation of heart chakra energy, the body wavefield and electrical rhythms of the holographic heart are all connected. Wave imbalance from the heart chakra is transferred to the 'physical' heart, but when the chakra opens to love the more powerful and balancing are the energies we exchange with Body-Mind and its emotional

processes. Studies have shown that the heart's feedback loop with emotional states profoundly affects the nature and power of the heart's electromagnetic field which is diminished by low-vibrational emotion and empowered by others such as love, appreciation, compassion, empathy and joy ('I have joy in my heart'). We feel fear and anxiety in the gut while love, appreciation, compassion, empathy and joy are all 'heart-felt' emotions. This is one more reason for the Cult seeking to generate low-vibrational emotion to close human hearts. Heart waves can be so drawn into energetic density that we have the phrases 'closed heart' and 'heart of stone' which Cultists seek to manipulate to make humanity the same as them.

Heart is our access point to wisdom – the wisdom of expanded states of consciousness – and wise is the last thing the Cult wants humanity to be. Wisdom sees through the illusion. What is called heart-based living leads to wisdom, intelligence and clarity of perception through connection to expanded awareness and balance between heart, body and mind. I would add a warning here, too, though. I have observed many who believe they are heart-based and advocate the findings of HeartMath research that are certainly not street-wise about the world. Many are in denial of the Cult agenda and avoid exploring information they believe to be 'negative'. I witnessed this in the movement dubbed 'New Age' where I saw the same denial masquerading as being 'positive'. The Cult is quite happy for people to live in their own 'be positive' bubble so long as it allows the Cult free-reign to go about its business unexposed of manipulating the population into anything but heart-based living and 'positive emotion'. The 'spiritual' is a sitting duck without having the streetwise to watch its back. There is nothing more manipulatable than naive genuineness. There will be many 'heart-based' people who express compassion for the Earth by supporting action on human-caused climate change and the centralisation of power to 'save the planet'. This is, however, a Cult-created hoax to justify that very centralisation of global power. There is far more to the heart than just 'positive emotion'. We must be aware of reality *and* of that which works so hard to stop us being aware of reality. Ignoring the latter is not wisdom, heart-based or otherwise. It is denial. You don't have to be 'negative' to face reality so we can deal with it and know how the game is being played. Those truly in their hearts can disseminate unpleasant information without being affected in the sense of allowing this to disrupt their own fields and flows. How does *The One* observe such 'negativity' and not be pulled into it? The principle is the same. Since when was knowledge about *anything at all* 'negative'? Knowledge is not 'good' or 'bad', 'positive' or 'negative'. The way it is used, processed and dealt with is what matters. Love is intelligence – *all* intelligence – and not only the bits that suit us.

From the start

Love and emotions of the heart – or lack of them – can have a profound impact on babies in the womb and after birth. I read the book, *Why Love Matters*, by the British psychotherapist Dr Sue Gerhardt who documents the connections between the emotional environment and the development of the unborn child with especial emphasis between conception and two years. It is sobering to see images of a child in the womb jumping with shock at parents shouting at each other and there are some cultures which have understood this since ancient times. They demand that no one raises their voice and people remain calm around a pregnant mother. Gerhardt quotes a description of pregnancy in Patagonia in South America:

While a female Patagonian is with child, all disagreeable objects are kept from her; she is awakened by music; they study to divert her with amusements most suitable to her taste; her mind is brightened with joy, without allowing her to grow slothful for want of action ...

Sue Gerhardt explains why this is considered important. She describes how the child's brain systems are developing in the womb and are affected by the mother's diet and emotions in the form of biochemicals circulating in the mother's body. The nature of those emotions can seriously impact on the way the child's systems develop and they can open pathways that later lead to susceptibility to conditions such as

'anorexia, psychosomatic illness, addiction, antisocial behaviour, personality disorder or depression'. Gerhardt points out that stress in the mother can release certain chemicals in the womb that can produce a propensity for a pot belly later in life (a lot of which is unprocessed stored emotion around the emotion chakra). The child's environment before birth is showing the child what to expect and its psychological and bodily systems develop in line with that. Gerhardt calls this 'weather forecasting'. I say the child's pre-birth and post-birth parental environment and relationship is also one of wave entanglement and the kind of waves being transmitted are triggering in the child through epigenetics which gene functions are activated and which are not. Gerhardt points to the period from conception to two years as 'uniquely significant' because this is when 'the nervous system itself is being established and shaped by experience'. She continues:

During this period how parents **behave** has as much influence on their child's emotional make-up as his or her genetic inheritance. Their responses to the baby teach him what his own emotions are and how to manage them. This means that our earliest experiences as babies (and even as foetuses) have much more relevance to our adult selves than many of us realise. It is as babies that we first feel and learn what to do with our feeling, when we start to organise our experience in a way that will affect later behaviour and thinking capacities.

Figure 123: Why children and young people are so targeted by the Cult – they will be the adults of tomorrow that they want to enslave like never before.

You can see this learned behaviour in the response of parents to a child falling over. If you make it a big deal the child will follow that cue and cry. Children scan the faces of their parents for guidance on how to respond. If you act as if it's no big deal the child will get up and carry on as if nothing had happened. I have witnessed this with my own children and Gerhardt describes how 'faces with expressions of fear and anger will be registered ... and provoke an automatic response'. The Cult knows how a child's emotional environment locks in brain and emotional pathways that can affect their responses and interactions for the rest of their life (Fig 123). It doesn't want emotionally balanced and heart-centred people. They are far more difficult to divide and rule. The Cult financial system and Cult agents and gofers in government make life for parents as hard as possible to make the child's formative years as stressful as possible. Parents stressed, frustrated, anxious and fearful about paying the rent and affording food are dumping that emotion on their children with all the potential effects that Gerhardt lays out. The saying goes: 'Give me a child until he is seven and I will show you the man.' Many career mothers continue their stress-ridden lifestyle right up to birth and then continue as soon as possible afterwards. What does that do to the child? The Cult, as I have detailed in other books, was behind the rise of feminism to pressure women into careers when they would otherwise be at home with their children in the vital early years. The idea was to disconnect parents from their children for all the reasons detailed here and to be able to tax two people in a household instead of just one. I am not saying that women should not have careers. That's none of my business and of course it is right that women have sought to free themselves from a male-dominated society. The Cult is expert in piggy-backing on legitimate

grievances and twisting them to its benefit. I am only pointing out the downside when children are young and emphasising that the Cult is seeking at every opportunity to divide parents from their children so the state can control their formative years. This has now become ever more extreme with parental rights being eroded in every direction through dictatorial schools and satanic-like social services literally stealing children from caring parents for the most spurious reasons. This is happening all over the world because it's a global Cult agenda. What does being wrenched from loving parents do to a child? We will see later in the book where this is meant to lead.

Back to love

Sue Gerhardt notes that babies are born with a brain only a quarter the size of an adult's and much more incomplete than other mammals: '... Human care in early childhood (and beyond) plays a much bigger role in shaping the brain.' The Cult is aware of this and sets out literally to mould the minds of children to become the adults it wants them to be. Many parents have no choice except to keep working to pay the bills and this is not to cast blame on parents trying to financially survive and do their best for their children. The system is against them – on purpose – but we should not forget that studies have concluded that parental hostility affects the emotional development of a child more than poverty. I often wonder why some parents even have children at all when I see the lack of love and care they have for them. Rich families send their children away to residential private school from an early age and what message does that give them with regard to love and rejection? These are the kids that mostly grow up to run The System after a childhood that closed their hearts to survive emotionally. Can I come home this weekend, daddy? Not this time, son, I'm playing golf. Such parents see their kids as appendages and not as unique expressions of life – 'My children spent childhood prepping for exams and got a place at Oxford; I'm so proud they did what I told them.' Their childhood is stolen and their future decreed – you'll be a lawyer, banker, politician – by parents who exploit their children to be a symbol of their own perceived 'success'. Whenever you hear 'I only want the best for you' it usually means 'I only want the best for me' or 'What I say is best'. Don't stand for it, kids. Be what you choose to be. I have met many people over the years brought up this way and they are emotionally broken despite the outward facade. Most of them then treat their own children the same by sending them to residential schools when love is all they need. Well-off parents often say they give their children everything they want – money no object. What is missed is the key gift that money can't buy and doesn't have to because it's always available for free: *Love*.

Other children are told they are stupid, useless and idiots by parents who couldn't give a shit. The imprint can last a lifetime. Children are far more suggestable in their formative years and the Cult targets the young to 'suggest' what it wants them to believe for their entire lives. A teacher told me how he went to the home of a 'problem child' at school and found both parents in a pissed-up coma while a toddler played with their empty bottles. No wonder the kid was a 'problem child'. The emotion-processing amygdala in the brain which regulates pain, pleasure, fear, anger, grief and joy is formed within 15 weeks of conception and is affected by the mother's emotional state in that period and beyond. Once an emotional pattern is encoded it can produce 'press enter' reactions in which a stimulus (experience) triggers the same recurring response. As a result many who have never experienced the full joy and bliss of the heart define their state of happiness by their level of unhappiness. I am less unhappy today so this must be what happy feels like. Children tend to have fluid emotions in which they can switch from tears to laughter in seconds while the older people get the more the patterns are entrenched and emotional states can last for hours, days, weeks or even the rest of their life. Sue Gerhardt writes that 'a mother who has high levels of anxiety or depression ... is more likely to have the kind of baby who finds it hard to cope with stress or new stimuli and who takes longer to get over stress'. She adds:

Even, as a newborn, her baby may be more fearful, and is more likely to have higher than average cortisol [stress hormone] levels at the age of four months. At worst, babies ... are more likely to grow up with

behavioural and emotional problems ...

The opposite has been found to be the case when children enjoy a heart connection with their parents and environment and this is possible even with two working parents. Negative emotional effects are also reversible when love comes into play. Gerhardt points out that '... if love can be found, it still has the power to shape a new reality.' Children (like adults) crave a heart connection. A baby's heart beats before the brain is formed and a mother's brainwaves have been shown to sync with a baby's heartbeat in the womb. The nature of that connection is so vital to the life experience of a still-unborn child. Wherever you look love is *The Answer*.

Water tells the story

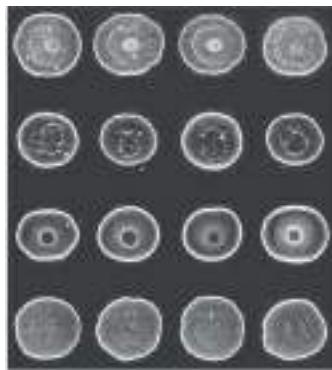

Figure 124: Each set of four droplets taken by each person was different, but the groups of four were virtually the same.

Figure 125: The amazing difference between water crystals reflecting words of love, gratitude and hate, and those from polluted water

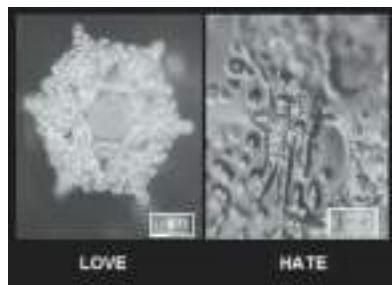

Figure 126: The difference in water crystals from water canisters labelled with words of love and hate. This is what states of love and hate do to ourselves, each other and The Field.

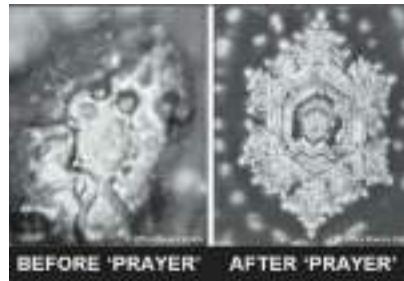

Figure 127: The power of love and focus ('prayer') to transform dark and negative states into beauty and harmony.

The impact of heart and brain waves has been clearly demonstrated by their effect on water. A team at the Aerospace Institute in Stuttgart, Germany, developed a means to photograph information in droplets of water. In one experiment they asked people from the locality to take four droplets from a communal tank and put them in a dish with their name on. The team then used their technique to photograph the droplets and discover that each set was unique from all the others and each drop in the sets of four was virtually the same ([Fig 124](#)). The simple act of a person taking a droplet from a tank and placing it in a dish had imprinted their own unique energetic signature on the water. Such is the interaction we have with The Field and each other. HeartMath research discovered that a person's heartbeat can be detected in water and given that the body is 80 percent water (a wavefield in its base state) we are exchanging heart rhythms all the time even on that level. The PH (measure of acidity) in water has been changed in experiments purely by someone focusing that intent (making a wave connection). A Japanese friend of mine, the late Dr Masaru Emoto, became well-known for his work in photographing the heart-mind impact on water. We wrote a book together published in Japanese and I visited his centre in Tokyo. Dr Emoto worked with small canisters of water that he would imprint with different frequencies and vibrations by for example writing 'love' and 'hate' on the canister. He would freeze the water very quickly, photograph the ice crystals, and the difference between them was amazing ([Fig 125](#)). Words such as love and appreciation produced beautiful crystals of balance and harmony to reflect the balance and harmony of the words. By contrast hate produced basically an ugly mess as it transferred its waves to the water ([Fig 126](#)). It may be asked how the written word can have such an effect and the answer is that *everything* is a wavefield of information in its base state with its frequency dictated by *intent*. We may see 'love', 'appreciation' and 'hate' as written words, but they are really wavefields reflecting their intent and meaning. These fields impact on the wavefield of the water and this is revealed in the crystals reflecting that effect when the water is frozen. In this way the hate of 'anti-haters' impacts on The Field in exactly the same destructive way as the 'haters' they claim to oppose. The Cult is behind both because they equally contribute to creating disharmony in The Field. Dr Emoto studied the impact on the crystals of polluted water, different types of music, and technology including a mobile phone. The theme was always the same: Harmony = beauty and disharmony = ugh!! Mobile phones created highly distorted crystals to reflect the way they distort the human wavefield. The crystal representation of polluted water is confirmation of what I said earlier about toxicity in all its forms being a chemical (holographic) expression of deeply imbalanced wavefields. Toxic chemical disharmony, like toxic emotional and thought disharmony, can be rebalanced as Dr Emoto's work clearly showed. He exposed water with distorted crystals (waves) to focused 'prayer' or harmonious intent and the negative impact of the waves was reversed ([Fig 127](#) overleaf). This is what we can do to The Field and human society by changing the waves we transmit. Many think they are interacting with 'God' and asking for help when they 'pray'. I guess this could be considered to be true in that *The One* is the awareness behind all experienced Creation. Prayer on a more human level is the focused interaction with The Field of thought and desire. If this connects – entangles – you with a wavefield that reflects your prayer then you can manifest that in your life. People say when this happens: 'My prayers were answered.' In truth you answered your own.

What is called prayer in the Emoto images is really focused intent from the heart to harmonise the wavefield disharmony in the water which becomes harmony in the crystals.

Wave impact on water explains how homeopathy works despite the arrogant dismissal by mainstream medicine of what it terms 'quackery'. Mainstream medicine is the quackery which is founded, thanks to the Cult's Big Pharma cartel, on complete ignorance of what the body really is – a wavefield. Professor Dame Sally Davies, UK Government Chief Medical Officer, said that 'homeopaths are peddlers and homeopathy is rubbish' while a UK newspaper reported that 2,500 'vets and animal lovers' had called for a ban on the use of homeopathy on animals. They claimed homeopathy was dangerous compared with 'proven medicines' (which with other mainstream treatments constitute one of humanity's leading causes of death). Simon Stevens, chief executive and medical director of the Big Pharma-controlled National Health Service in England, demanded that the Professional Standards Authority strip accreditation from the Society of Homeopaths. The clueless bloke claimed that endorsing the society gave it a 'veneer of credibility' that lured vulnerable patients towards 'bogus treatments'. Was he talking about homeopathy or mainstream medicine? He also claimed that homeopathy was reducing the number of parents having their children vaccinated which involves entangling a seriously imbalanced wavefield of toxicity with the wavefields of children. What could possibly go wrong? Simon Stevens, Sally Davies, and their like are infected by the mainstream disease that says: If we can't explain something it can't be happening. How can homeopathy be understood when your view of the body comes from Big Pharma-controlled (Cult-controlled) medical schools and professional bodies that police what doctors must believe and what treatments they can and cannot prescribe? A big problem that the Mainstream Everything has with homeopathy is that treatments (based on flowers and other natural substances) are diluted so many times that no 'physical' substance remains. The UK newspaper article said '... scientists argue that the cures are so diluted they are unlikely to contain any of the original substance'. In the isolated Body-Minds of the Mainstream Everything 'no physical' must by definition mean 'no possible effect'. Excuse me while I have a quick yawn. Another experiment by the team at the Aerospace Institute in Stuttgart involved a flower dipped into a tank of water and immediately removed. They then photographed droplets from the tank and found that every single one contained the information of the flower. How come? Wave information from the flower entangled with the wavefield of the water. It is not the *substance* that affects health in homeopathy. It is the wavefield *frequency information* of the substance which interacts with the wavefield of the body and as the Stuttgart experiment showed the wave information remains in the water when the substance has gone. Russian researcher Dr Vladimir Poponin found the same phenomenon in an experiment beaming a laser through DNA. When the 'physical' DNA was removed it remained in the laser in energetic *waves* in the same way as the flower in the water. This is known as the 'Phantom DNA Effect' when there is nothing 'phantom' about it at all. It is the wavefield effect. I would just say before I move on that while the basis of homeopathy can be explained (even though homeopaths I have met didn't know) the quality of the practitioner is as always crucial and not every problem will necessarily respond. Every situation can be different because of the wavefield differences involved with patients in different mental and emotional states.

All together now ...

Figure 128: We are constantly interacting with The Field as computers interact with Wi-Fi.

We are constantly emitting waves of thought, emotion and awareness into the collective field and in this way our own states of being are transmitted into the energy ‘sea’ – The Field – with which we are all connected and constantly interacting. The dominant waves (collective state of being) impact upon on everything connected with The Field and that means ‘us’ and the entirety of the natural world. What effect through The Field must Cult-instigated, technologically-generated radiation and 5G be having on all of us along with animals, birds, insects, trees, and all the rest? Technology waves are scrambling the radar systems of birds, whales and dolphins that use The Field to navigate. Among the consequences are birds losing their way and whales and dolphins beaching themselves. One level of The Field is the Earth’s magnetic field and we are affecting that with every thought and emotion. In turn, it affects us as an expression of The Field. The Cult’s central goal is to control the wave nature of The Field by making this as low-vibrational and disharmonious as possible through maintaining humanity in a low-vibration emotional state and by infusing The Field with technological frequency waves designed specifically to distort heart and Body-Mind communication systems. How do you affect all the fish at the same time? You affect the sea. The relationship with humanity and The Field is exactly the same ([Fig 128](#)). The Climate Cult and its Green Party political wing have been manipulated into such an obsession with the hoax of human-caused ‘global warming’ they are not interested in the effect on humanity and the natural world of the radiation tidal wave. The UK Green Party even denied its own members the right to debate 5G at a party conference and threatened a member protesting about this outside the hall with the police. To say it is not the party that I joined in the 1980s is to seriously underestimate. The Green Party, like the Climate Cult in general, has been seconded to the agenda of *the Cult*. Sadly this movement overall is in such a state of unconsciousness that it has no idea there even is a Cult, never mind that it is driving their agenda. The good news is that we neither have to add low-vibration to The Field or be affected by its low-vibrational chaotic state. We can change the nature of the waves we are emitting by opening our hearts and generating high-frequency waves which also block wave entanglement with low-frequency waves in The Field. We can interact with The Field on another level of frequency and be empowered rather than drained and disrupted. All roads out of here lead to and from the heart.

Global heart

Figure 129: If we connected and interacted through the heart the world would be transformed.

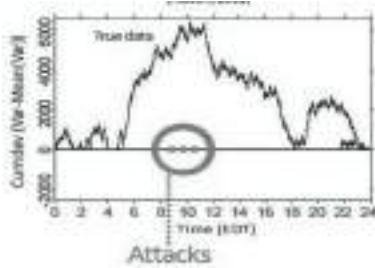

Figure 130: What happen to the Earth field when the world became aware of the 9/11 attacks.

We can see from all this the incredible impact that we can have on The Field and The Field has on us. I have discussed how this plays out in sports teams and it applies to all groups including families and work colleagues. HeartMath Institute research revealed that those in heart-mind (frequency) coherence reflect this personal harmony in collective harmony when they work together or interact ([Fig 129](#)). The opposite is the case with those in heart-mind incoherence through emotional imbalance. People in coherence or incoherence can transfer their state of being to others through wave entanglement as the dominant state prevails. The same process happens nationally and globally through The Field and our mental, emotional and heart resonance can bring about global societal coherence and cooperation or tear the world asunder. Hitler and the Nazis were dark occultists who understood how this works and they infused The Field in mid-20th century Germany with their frequencies to such an extent that they hijacked the Body-Mind of much of the German nation. To see a microcosm of the technique watch footage of Hitler's rallies in which music, marching and colour were used together with Hitler's carefully-crafted (wavefield) speeches to so dominate the frequency nature of The Field that vast audiences were transformed into a rabid frenzy with their own fields adding to the collective power of the event. Hitler was described as 'magnetic' as in 'magnetic personality' which is another description of electromagnetic wavefield energy. The focus of the crowd (entanglement) on his field, however, was the source of so much of this 'magnetism'. Talk about 'give me your power'. The Cult targets human and emotional perception to continually infuse low-frequency waves into The Field which then circulate back in a perpetual/perceptual feedback loop to humanity. We can break this cycle with the heart. We are being manipulated to create the feedback loop and we have the power to delete it. The HeartMath Institute has positioned sensors around the world to measure changes in the Earth's magnetic field which have related to events that cause major impacts on collective human emotion. They identified an enormous spike in the Earth field in precisely the period that the global population was learning about the attacks of 9/11 ([Fig 130](#)). The point is that this interactive effect does not have to be negative. Infinite Love in all its expressions is far more powerful than negativity and we can change the wave frequencies of The Field. Whether we will do that is our choice, but we *can*. We saw a simple example with the focused intent of love transforming the wave state of polluted water and its crystals. How do we change the 'world'? We change ourselves because the world is a collective manifestation of *us*. There is much more on that to come and the HeartMath Institute has many techniques to develop heart-mind coherence. See back of the book for the website.

Love – the ultimate strength

I have heard it said that love is weakness and marginal to changing anything. Change only comes when you 'put your mind to it' and hate your oppressors (who are only a vehicle for suppressing yourself through wave entanglement). What an utter misunderstanding of the love I am talking about. I am not referring to human or attraction love, but to something infinitely greater. The very word has become so misrepresented I only use it in the absence of a term more appropriate. Infinite Love, unconditional love, is the nearest we can get with human language which has not developed, certainly in the West, to

describe what it doesn't understand. I have said that love is without fear and will always do what it *knows* to be right. This deletes weakness from the equation immediately before we take another step.

'Weakness', both in thought and action, is always a manifestation of fear. On that basis alone love in its most powerful form is the absence of fear and the ultimate strength. Love doesn't consider consequences for doing what it knows to be right – it just does it. Nor does love always do what others would like it to do. Often love means doing the opposite. Is it love to give your children everything they ever ask for and protect them from every emotional upset and then they go out into the world and can't cope with its challenges? Or is it love to help them build inner strength and self-confidence in their growing-up years to face and overcome challenges and ensure that when they enter the adult world they have all they need to deal with it? We are now seeing the consequences for many young people of this misguided 'love' with 'helicopter' parents fussing over their offspring at every turn and producing what are called 'cotton wool kids' who then go on to the programming centres of college and university. They are the self-styled 'Woke' generation with an extraordinary sense of narcissistic entitlement (anything you want upbringing) and hurl their toys from the pram when adult society does not continue where their parents left off. More than that the Woke mentality has been infused with psychological weakness that makes people babes-in-arms to a system that claims to be protecting them by taking their freedom away (and everyone else's which is the point of the exercise). 'Wokers' are the foot soldiers and (Twitter) storm troopers of the Cult's agenda to delete all freedom with freedom of speech at the top of the list. Love in its true sense would have intervened long ago to head off this personal and collective disaster and in doing so parents would have faced much hostility: 'How can you say I can't have that?'; 'How can you say I can't do that?'; and, with due irony – 'You clearly don't love me.' Love, in fact, has many facets and faces and what pulls them together in unity is doing what you know to be right.

There is the myth that to 'love your enemies' means to lie down and let them walk all over you. How can it be 'right' to accept domination by others imposing their will upon you? Love won't stand for that and, in the absence of fear, *absolutely* won't stand for that. Love is also the self-love of self-respect that will not be cowered into submission. If you want to see stubborn in action try telling Infinite Love that it must not do what it knows to be right. You don't have to hate your perceived oppressors. Just don't stand for their impositions on your life and the lives of others. No hatred necessary. What we hate we entangle with and become. If I make a wave connection with the Cult it will be on *my* frequency not theirs. For this to happen I have to love them by my definition of love which involves compassion and understanding for why they are what they are. Their actions come from their perceptions and self-identity which are formed with their heart centres closed to the influence of *The One*. Would you like to be them? What a nightmare to be so isolated from love, for self and others, that you desire to hurt and dominate everyone else. They need our compassion – but NOT our acquiescence. Fake 'love' is everywhere and by that I mean 'love' only by word and facial expression and not by deed or heart-based integrity. I have met many 'New Agers' and observed endless Wokers who present the persona (mask) of being loving because that is what they want others (and themselves) to believe they are. Instead I have experienced a long list of New Agers (though *far* from all) who have been among the most unloving, manipulative self-deceivers I have come across in any walk of life. Wokers claim to be loving, compassionate, warriors for social justice while seeking to destroy the freedom, careers and livelihoods of those who don't agree with them. There is no empathy with anyone they target and no place for forgiveness amid their clenched-teeth fury for those who transgress the Woke tyranny which calls itself with more breathtaking irony 'anti-hate'. We urgently need a mass re-evaluation of what love is before we can get anywhere and when the truth about love sinks in we'll be able to get *everywhere*. I will develop all these themes as we go along.

So who are you? You are your heart. Who are we? We are all *One* heart. Why don't we live like that? The Cult doesn't want it. Is the Cult all powerful? No – *we* are *when* we follow our heart.

CHAPTER FIVE

Where are we?

You are deluded if you think that the world around you is a physical construct separate from your own mind – Kevin Michel

Yeah, good question in the chapter title. Where the hell *are* we? What is this ‘place’? Isn’t it amazing that so little consideration is devoted in the mainstream media to asking these profound and fundamental questions? But, then, if the Cult doesn’t want them to be asked the Cult-controlled media is not going to ask them in any way that is both deep and consistent.

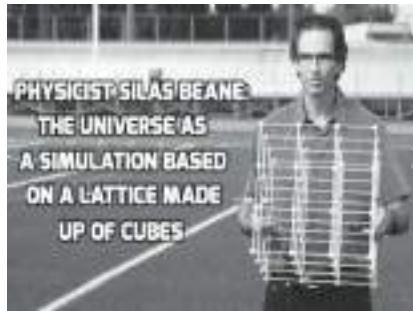

Figure 131: Silas Beane and the proposed cube structure of the simulation/matrix.

You see the odd snippet here and there about ‘scientists discover’ this; ‘scientific studies reveal’ that; or ‘scientists think’ something or other. Dots are rarely if ever connected and nor the truth about reality pursued with vigour in search of answers. Surely who are we and where we are should be at the forefront of human inquiry? Well, once again, not if those manipulating society don’t want their targets to know who they are and where they are because if they did it would change everything. I have written at length in *Everything You Need To Know* about my long-held view that we are experiencing some kind of simulation akin to an interactive virtual reality game. I came to this conclusion and began writing about it just after the turn of the millennium although I had considered the possibility before. In recent years an increasing number of even mainstream scientists have said the emerging evidence points to precisely that. Among them is Rich Terrile, director of the Center for Evolutionary Computation and Automated Design at NASA’s Jet Propulsion Laboratory, who went public a few years ago with his belief that the Universe is a digital hologram (true). He also made the obvious point that if reality is a holographic construct some form of intelligence must have created it. This fits with my own contention since the 1990s that an unseen force is manipulating our reality. American nuclear physicist Silas Beane led a team at the University of Bonn in Germany which explored the question of whether our reality is a simulation similar to the one portrayed in the *Matrix* movie series. They decided that it most likely was and Beane proposed that it could be cube-like in nature ([Fig 131](#)). I have been saying for decades that the speed of light is not

the fastest speed possible and my view is that this speed in fact represents the outer firewall of the simulation or Matrix. ‘Light’ and the electromagnetic spectrum is therefore the *Matrix* that we believe to be the ‘world’. Morpheus said in *The Matrix* movie: ‘You live in a dreamworld, Neo.’ And we do. Scientific orthodoxy claims that the speed of light – 186,000 miles per second – is the fastest speed possible; but then it also believes in the ‘Big Bang’ some 13.7 billion years ago when it claims the Universe was compressed into the nucleus of an atom which they call the ‘singularity’. They say this then exploded to create subatomic particles, energy, matter, space, time, planets, stars, and Ethel on the checkout. American writer and researcher Terence McKenna described Big Bang theory in these terms:

... give us one free miracle, and we will roll from that point forward – from the birth of time to the crack of doom! – just one free miracle, and then it will all unravel according to natural law, and these bizarre equations which nobody can understand but which are so holy in this enterprise.

Another observer brilliantly compared the chances of the Universe evolving by random accident as like a hurricane sweeping through a scrapyard and assembling a Jumbo Jet. Physicist Silas Beane points out that simply *being* a simulation would create its own ‘laws of physics’ that would limit possibility. I say this limit is the speed of light within which ‘time’ and ‘space’ are encoded within our holographic reality. Near-death survivors have described how the ‘light’ they experienced outside the body is not the same as sunlight (the speed of light). ‘It’s not like the light that burns your eyes’, one said, ‘not like sunlight’. I have been writing for a long time that sunlight is the Matrix or simulation. Virtual reality games and simulations have their own laws of physics and limitations which are encoded by the designer and our reality is in principle the same. The ‘laws of physics’ perceived by mainstream science are merely encoded limitations of the simulation and so near-death experiencers describe a very different reality and limitless possibility when they withdraw from the body which entangled them with the simulation and focused their attention within its illusions. Mainstream scientists are the ‘academics’ in Plato’s cave studying the shadows on the wall (simulation) while believing them to be ‘real’. Being ‘human’ is like donning a headset in a computer simulation with the five senses decoding the simulation into apparent ‘natural’ reality ([Fig 132](#)). The Silas Beane team in Bonn discovered that cosmic rays align with a specific lattice pattern of cubes which they suggested could be the foundation of the simulation construct. Cosmic rays are ‘atom fragments’ that rain down on the Earth at the speed of light from outside of the solar system. The [Space.com](#) website says:

Figure 132: The ‘real world’.

Discovered in 1912, many things about cosmic rays remain a mystery more than a century later. One prime example is exactly where they are coming from. Most scientists suspect their origins are related to supernovas (star explosions), but the challenge is that for many years cosmic ray origins appeared uniform to observatories examining the entire sky.

Figure 133: A standing wave created by the oscillation of two forces of equal strength pushing against each other.

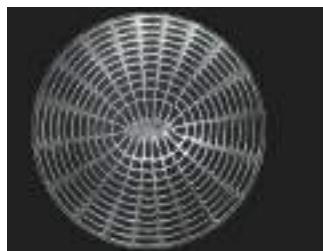

Figure 134: Cymatics image created by a sound vibration. Particles form together to reflect the frequency/vibration and in short the frequency/vibration is made ‘physically’ manifest. Change the vibration and the particles will re-form to reflect that. Image from Cymascope.com.

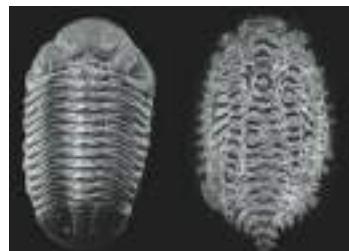

Figure 135: A stone alongside a cymatics image created by vibration. Images from Cymascope.com.

Figure 136: Real starfish and cymatics vibration starfish. Images from Cymascope.com.

Cosmic rays are actually an information source of the Matrix or simulation. The Bonn team highlighted what is known as the GZK cutoff (the Greisen-Zatsepin-Kuzmin limit). This is a boundary for cosmic ray particles that results from the interaction with cosmic background radiation. The process involves particles called ‘pions’ which I initially took to be the human race. The team’s paper ‘Constraints on the Universe as a Numerical Simulation’, says the GZK cut-off ‘pattern of constraint’ is exactly what you would find with a computer simulation. The consequence of this for human perception is described in these terms: ‘Like a prisoner in a pitch-black cell we would not be able to see the “walls” of our prison.’ This is correct although we have given the walls a name – the speed of light – which appears to be the

fastest speed when in truth it represents the limits of Body-Mind decoded perception. Consciousness can communicate instantly beyond the bounds of 'light' because it operates at frequencies outside the simulation. We are constantly communicating at faster-than-light speeds while our conscious perception is dictated by the brain decoding information within the frequency band of the simulation. The foundation construct of the 'Matrix' is formed by standing waves of energy and information. Standing waves 'stand' when held within an area of limitation (in this case the speed of light). Waves flow one way, strike a limiting obstacle and flow in the reverse direction to create an interaction in which the two opposing flows cancel each other out and oscillate 'on the spot' ([Fig 133](#)). It's like two people running in opposite directions and when they meet they both jog on the spot as they block each other's forward movement. Standing waves can be created by frequencies which act as the limitation and cause them to oscillate without forward momentum and they can also be formed by vibration. The principle can be seen in what is known as 'cymatics' which creates form through ... *vibration generating standing waves*. Particles or another medium are spread on a metal plate and when sound frequencies are introduced they form into patterns that reflect the frequency involved ([Figs 134, 135 and 136](#)). Cymatic patterns formed by sound vibration are standing waves that will remain in place until the frequency changes and then they will transform into another pattern to sync with the new frequency. This is how frequency waves create 'matter' and form. You can see videos of standing waves and cymatics on YouTube with these key words: 'Standing Waves.mov' and 'Cymatics full documentary bringing matter to life with sound'. A very good cymatics website is [Cymascope.com](#). A closed mind is also a standing wave as it oscillates within the perception Bubble to the frequency of lies and illusions ([Fig 137](#)).

Figure 137: A closed mind or Bubble is a standing wave oscillating on the spot and going nowhere.

Standing wave reality

Figure 138: Compare a standing wave

Figure 139: ... with DNA. Another coincidence? No chance.

Figure 140: The hexagram or ‘Star of David’ is a sound frequency vibration as confirmed by this one made by sound passing through a liquid medium. This is the symbol on the flag of Israel and from which the name Rothschild (Red-Shield) derives. It is also the symbol of Saturn which its frequency reflects.

Figure 141: A hexagon manifested in the same way from sound. All symbols – all *form* – are standing waves created by vibration/oscillation.

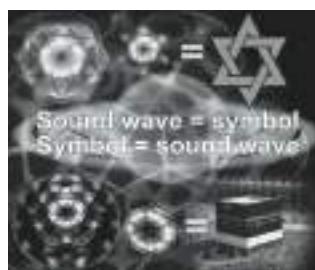

Figure 142: The hexagram/Star of David and cube (remember Silas Beane’s cube Matrix) are ancient symbols of Saturn because they are reflections of its frequency. The black cube in particular is a Saturn symbol and you have the black cube in Mecca, the holy place of Islam, and the Israeli ‘security’ company connected to Israel intelligence agency Mossad called Black Cube. The Jewish holy day of the week is Saturday or Saturn-day.

The Universe (simulation) is a standing wave and everything within the Universe including the human body. Now what are classic examples of standing waves? *Holograms*. You see how all the strands come together if you pursue reality with an open mind. The two wave sources that collide on a holographic print interact with each other to create a *standing wave* which when decoded appears as apparently three-dimensional form. Standing waves, holograms and cymatics are all versions of the same phenomenon. The heart oscillates – beats – with the body standing wave. When we talk of emotion affecting heart rhythms we are describing how emotion waves are affecting the rhythm of the body standing wave and the rhythm of the heart wave. While the standing wave is oscillating the form is ‘alive’ and when it stops this is ‘death’. Our minds are entangled with the standing wave oscillation and when that ceases we are released from the body. People can ‘lose the will to live’ and generate such energetic density (slow oscillation) through their mind and emotional wave states that the standing wave rhythm can cease. Dying from a broken heart is one example. In the same way mind and emotion waves of a different kind can empower the standing wave and bring it back from the brink of ‘death’. People cry ‘it’s a miracle’ when it is really wave interaction. Many near-death experiencers have returned to find their body healed of what nearly killed them. Their out-of-body experience changed their perceptions which changed their wavefield state which changed their body. DNA is a receiver-transmitter standing wave as a holographic representation of the universal wave. Check what DNA looks like compared with a standing wave ([Figs 138 and 139](#)). German biophysicist Fritz-Albert Popp discovered that DNA vibrates or oscillates to a particular frequency and this has been confirmed many times since by cutting-edge scientists and researchers. ‘Matter’ is the manifestation of standing waves resonating to different frequencies and that applies even to symbols which is why the Cult employs them throughout global society. Symbols are holographic manifestations of particular frequencies and they are placed all around us to influence human perception through sound vibration and wave entanglement. You will recognise the ones in

[Figures 140](#) and [141](#) which were created by passing sound at specific frequencies through a liquid medium. Frequency and form are different expressions of the same information and interestingly the hexagram ('Star of David' on the flag of Israel) and the cube are both symbols of Saturn ([Fig 142](#)). I expose the reasons for that in depth in *Everything You Need To Know* and it relates to the simulation. The very name 'Rothschild' from the German 'Red Shield' comes from the red hexagram on the family home in Frankfurt in the 18th and 19th centuries. Dynasty founder and Sabbatian-Frankist cultist Mayer Amschel Rothschild is known as the 'founding father of international finance'. He also founded the Cult's Illuminati. Everything connects in the end. Famous American esoteric and occult writer Manly P. Hall rightly described the power and significance of symbols in these terms: 'When the human race learns to read the language of symbols, a great veil will fall from the eyes of men.' While they remain undecoded those same Cult symbols are part of that veil.

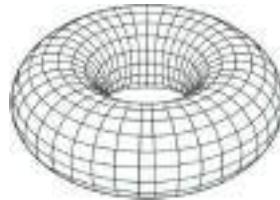

Figure 143: The shape of the Universe says 'ground-breaking' scientific study published in 2019. The torus nature of the Universe was in my books long before.

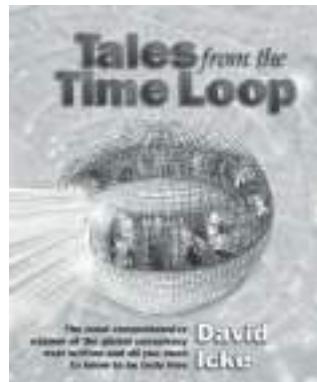

Figure 144: The front cover of my book *Tales From The Time Loop* published in 2003 which portrayed our reality as a torus ring passing through an illusory looped sequence of 'time'.

Figure 145: The torus in the human eye.

Figure 146: The Large Hadron Collider at CERN in Switzerland.

Figure 147: The Cern ring, or rings, remind me of a mini-version of the simulation.

Scientists announced the results of a ‘paradigm-shifting’ study in 2019 that found the Universe to be a closed loop in the shape of a torus or doughnut. Eleonora Di Valentino at Manchester University led an international team of astronomers studying data from the European Space Agency’s Planck satellite. They concluded that the Universe is a curved, closed and inflating sphere. Di Valentino called the findings a ‘cosmological crisis’ that warrants a ‘drastic rethinking of the current cosmological concordance model’. What kept them? I have written in previous books about the Universe being a closed loop shaped like a doughnut or ‘torus’ ([Fig 143](#)). I even named one book, published in 2003, *Tales from the Time Loop*, with the torus simulation symbolised on the cover ([Fig 144](#)). A torus can also be found in the human eye – as above, so below ([Fig 145](#)). The Universe is a closed loop because it’s a simulation within the frequency band of ‘the speed of light’. It is a wavefield construct decoded into a holographic closed loop which can be breached only by consciousness expanded beyond Body-Mind. You can liken this ‘loop’ to the Large Hadron Collider, the world’s most powerful particle accelerator, at the European Organization for Nuclear Research (CERN) in Switzerland ([Fig 146](#)). I address what this multi-billion operation is really about in *Everything You Need To Know* and it’s not the reason they’re telling us. The Collider is a ring tunnel or tube of superconducting magnets that extends for 17 miles hundreds of feet below ground across the Swiss-French border. Proton particles (waves) travel within the ring at the speed of light in both directions to crash into each other. Protons complete 11,245 circuits of the ring every second ([Fig 147](#)). It’s a long story why they do this which I tell in *Everything*. I mention the Hadron Collider here as a visual representation of the torus universe. Imagine being within that enclosed tube circuit while not knowing it was enclosed and decoding the circulating energy/information into a holographic world completely different to the tube as it would otherwise appear in an undecoded state. You would think that time was moving ‘forward’ when you were really in a loop. Where you were in the loop you would call the present and from that you would perceive ‘past’ and ‘future’. Human reality is actually a cycle in the NOW. The image symbolising this in [Figure 148](#) overleaf is from my *Human Race Get Off Your Knees* published in 2010. It is my contention that universal cycles such as the Great Year (nearly 26,000 years), Hindu Yugas or epochs, and the Mayan calendar of distinct periods or ‘counts’ are measuring cycles of the simulation program. Some researchers have identified points in these cycles when global catastrophes have happened many times which deleted most of what existed before along with knowledge of what life was like. ‘Known’ human history is a fraction of what has happened and fantastic ancient structures that we would struggle to build today are evidence that the apparent upwards progression from primitive people to the modern world is a fantasy. A simulation with ‘rebooting’ points would be a major way to isolate humanity in perceptual illusion.

Figure 148: The Time Loop ‘universe’ which we decode into illusory ‘physical’ reality and experience as the ‘human world’.

I am of the Light.’ Okay, but which Light?

Figure 149: I have seen the wrong kind of light.

Figure 150: The pyramid and all-seeing eye symbol of the Cult on the dollar bill as well as the reverse of the Great Seal of the United States and endless other guises.

Figure 151: The Statue of Liberty was given to New York by French Freemasons in Paris who knew what it really represented.

Figure 152: A mirror of the Statue of Liberty on an island in the River Seine in Paris.

This background explains many mysteries and indicates the knowledge hidden within the Cult. When people worship ‘the light’ they are worshipping their own perceptual prison ([Fig 149](#)). We can further understand why one of the hero ‘gods’ of the Cult is Lucifer, the *Light Bringer*. Yes, the bringer of the *simulation*. ‘Lucifer’ is portrayed as a ‘Fallen Angel’ – the Biblical term to describe the non-human force that manipulates through its hybrid human/non-human lackeys (the Cult Nephilim bloodlines) operating within the simulation along the lines of Agent Smith and company in *The Matrix* movies. If you have not seen the *Matrix* trilogy it is recommended – especially the first one – to get a feel for what our reality is and how we are manipulated. ‘Fallen Angel’ by my definition means those who have closed their heart centres to a connection with *The One* and now seek to do the same with humanity to assimilate human Body-Mind awareness into their own. This is what smart technology and artificial intelligence is really all about as we shall see. The so-called Lucifer ‘revolt against God’ is said to have followed his refusal to ‘return God’s love’ (closed heart centre) and set out to be ‘as powerful as his creator’. ‘Lucifer’ is also referred to as Satan and the Devil which are described in the Bible in reptilian terms as with the ‘Great Dragon’ and ‘that ancient serpent’. In turn Cult bloodlines are human-reptilian hybrids that worship their hidden masters through *Satanism*. I expose in *The Trigger* the Sabbatian-Frankism network within the Cult that was really responsible for 9/11. This aspect of the Cult is named after its inspirations, Sabbatai Zevi (1626-1676) and Jacob Frank (1726-1791), as I mentioned earlier. Sabbatian-Frankism hates Judaism and Jewishness and yet has manipulated itself into control of Israel and its global nexus while the great majority of Jewish people have no idea Sabbatian-Frankism even exists. We have the familiar theme of Lucifer worship with Jacob Frank who said Lucifer is the true god. The Kabbalah, or Kabala/Cabala, the Jewish bible of mysticism and esoteric belief, is the holy book of Sabbatian-Frankists and in particular the series of works called the Zohar which means ‘splendour’ and ‘radiance’ (light). From this came the concept of being ‘illuminated’ (kundalini activation) and the name of a highly significant grouping within the Cult known as the ‘Illuminati’ with its symbol of the ‘all-seeing eye’ which you see on the dollar bill and the reverse of the Great Seal of the United States ([Fig 150](#)). This elite satanic secret society was established in 1776 by three Sabbatian-Frankist cultists, Jacob Frank, Meyer Amstel Rothschild, founder of the Rothschild (Redshield/hexagram/Saturn) financial dynasty, and its frontman, Jesuit-trained fake ‘Jew’ Adam Weishaupt. The theme of Lucifer the Light Bringer (*simulation*) is widely on public display if you know what to look for and one example is the Statue of Liberty holding the lighted torch of ‘illumination’. The statue was given to New York by French Freemasons in Paris who knew the true meaning and a mirror image ‘Liberty’ stands on an island in the River Seine in the French capital ([Figs 151](#) and [152](#)). Freemasonry worships Lucifer as the ‘Great/Grand Architect of the Universe’ – the architect of the *simulation*. The same symbolism of the ‘Architect’ can be found in the *Matrix* movies which portrays him as the one who built the Matrix. You’ll find all the fine detail on these subjects and so much more in *Everything You Need To Know*.

Figure 155: The digital codes of the Matrix portrayed on computer screens in the movie series.

Figure 156: The physics and mathematics of video games and virtual reality is the same as our experienced reality.

Another mainstream scientist who has pursued evidence for a simulation is James Gates, an American theoretical physicist who has been Professor of Physics at the University of Maryland, Director of The Center for String and Particle Theory, and served on the Council of Advisors on Science and Technology to President Obama. A Gates-led team discovered computer codes of digital data embedded in the energetic fabric of our reality which take the form of 1 and 0 – the binary system used in computers of on-off electrical charges which looks so similar to codes of the Matrix in the movies and the A, C, G, and T codes that make up DNA and also have binary values ([Figs 153](#) and [154](#)). These codes and their relationships with each other decide what the ‘physical’ form looks like. Differences in coding between a human and rat are marginal yet their form is fundamentally different. DNA codes have digital binary values of A and C = 0 and G and T = 1. DNA code sequences look like binary number coding and the numbers on the computer screens in the *Matrix* movie series depicting the digital basis of the reality simulation ([Fig 155](#)). James Gates said they had no idea what digital computer codes were doing in the fabric of our reality, but this can be explained if we are dealing with a simulation. The Gates team also found error-correcting codes or block codes within the energetic fabric of reality. These are mathematical sequences employed in computers that return data to its original state or ‘default settings’ when something knocks it out of kilter. They would be necessary to hold the simulation together in the face of forces impacting upon it. Gates said they found a set of equations embedded in reality that were indistinguishable from those that drive search engines and browsers. The Internet and digital technology in general are actually mimicking the simulation to create a simulation within a simulation and enslave human Body-Mind in more extreme states of illusion and isolation than even the main simulation itself. I have said already that one level of our reality – the simulation – is digital and that the ‘physical’ world from the Universe downwards consists of digital holograms. Numerology reads reality at this level of numbers and Max Tegmark, a physicist at the Massachusetts Institute of Technology (MIT), said: ‘The

Universe can be entirely described by numbers and maths.' Tegmark, author of *Our Mathematical Universe*, says reality is encoded with numbers and mathematics in the same way as computer games and the physics of our reality and computer games are basically the same ([Fig 156](#)). He compares human experience with characters in advanced games. The characters would think because of the software codes that they were bumping into real objects, falling in love and feeling emotions. Eventually they might study the workings of the game more deeply and realise that everything (as with our reality on one level) was made of pixels. They would see that what they thought was 'physical' was in fact just numbers.

Tegmark then relates this to human reality:

And we're exactly in this situation in our world. We look around and it doesn't seem that mathematical at all, but everything we see is made out of elementary particles like quarks and electrons. And what properties does an electron have? Does it have a smell or a colour or a texture? No! ... We physicists have come up with geeky names for [electron] properties, like electric charge, or spin, or lepton number, but the electron doesn't care what we call it, the properties are just numbers.

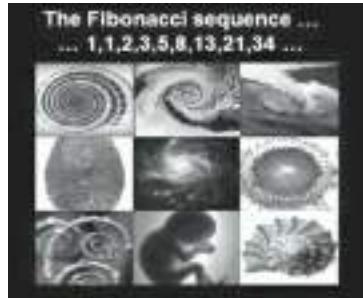

Figure 157: The Fibonacci number sequence can be found throughout our reality.

Everything these scientists are uncovering is what you would expect to see if we live in some sort of simulation. There is also the ancient concept of 'divine proportion' which is the term given to mathematical and geometrical sequences found throughout our reality, the 'natural' world and the human body (holographic as above, so below, once again). Initiates of the hidden knowledge understood these sequences and gave them names such as Phi, Pi, Golden Mean, Golden Ratio and Golden Section. They encoded them into their temples, cathedrals and important buildings to attract – entangle – with particular energies/information and frequencies to connect them with 'God', or 'the gods'. Artists like the initiate Leonardo Da Vinci encoded these proportions or ratios into their paintings. Da Vinci was so 'ahead of his time' because he understood reality by tapping into awareness outside the simulation and he would have had close associations with secret societies. The number of Golden Ratio is 1.61803398874989484820 ... which then goes on repeating indefinitely. Golden Ratio proportion comes from 'dividing a line into two parts so that the longer part divided by the smaller part is also equal to the whole length divided by the longer part'. Put simply it is a sequence that can be found everywhere and is obviously there by design and not chance. Another ubiquitous sequence is the Fibonacci number code which was identified at least in ancient India by a mathematician called Virahanka, but gets its name from the 12th/13th century Italian mathematician Fibonacci also known as Leonardo of Pisa. The Fibonacci sequence adds the two previous numbers to get the next one, as with ... 1, 1, 2, 3, 5, 8, 13, 21, 34, 55, and so on. The higher it goes the closer it gets to the Golden Ratio. The Fibonacci sequence is encoded in everything from the human face and body to animals, DNA, seed heads, pine cones, trees, shells, spiral galaxies, hurricanes and the number of petals in a flower ([Figs 157](#) and [158](#)). Then we have fractal patterns encoded in the fabric of reality and once again they are everywhere. Fractals are a 'never-ending pattern that is infinitely complex and self-similar across different scales' – the as above, so below, characteristics of holograms ([Figs 159](#) and [160](#)). Fractal patterns can be found in:

Figure 158: Fibonacci numbers are encoded in the ways that shells form.

River networks, mountain ranges, craters, lightning bolts, coastlines, mountain goat horns, trees and branch growth, animal colour patterns, pineapples, heart rates, heartbeats, neurons and brains, eyes, respiratory systems, circulatory systems, blood vessels and pulmonary vessels, DNA, geological fault lines, earthquakes, snowflakes, crystals, ocean waves, vegetables, soil pores and even the rings of Saturn (again).

Figure 159: Repeating holographic fractal patterns are found everywhere.

Figure 160: Fractal patterns are found in the torus of the human eye.

Figure 161: Binary DNA.

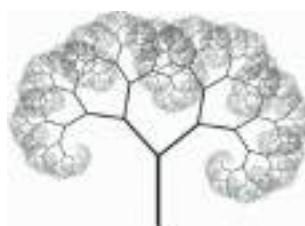

Figure 162: The way a tree grows follows fractal patterns.

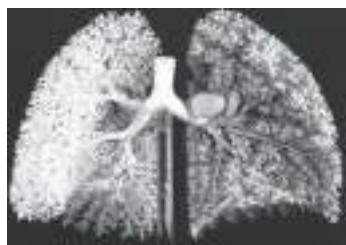

Figure 163: Fractal patterns in the human lung.

Fractal/holographic patterns are found in binary 1 and 0 on-off electrical charges encoded in our energetic reality that are also found in the DNA receiver-transmitter ‘hard drive’ of the body ([Fig 161](#)). A science paper captured the essence of DNA with its heading: ‘DNA is a Fractal Antenna in Electromagnetic Fields.’ DNA is a receiver-transmitter of information and is digital, binary, holographic and fractal because our experienced reality is digital, binary, holographic and fractal. American psychology professor David Pincus has said that as above, so below, repeating fractal patterns have been identified in psychology, behaviour, speech patterns and interpersonal relationships which begs the question of how much human behaviour comes from ‘free will’ and how much from simply following the simulation program? I’ll have more about this later. Fractal principles relate to ‘symmetrical mathematics’ which are ‘one shape being exactly like another’ when you move it, turn it, flip it or slide it. Symmetrical mathematics are found in everything from the way trees grow to the structure of the human lung ([Figs 162](#) and [163](#)). Dmitri Krioukov, a physicist at the University of California, San Diego, was coauthor of a study reported in *Nature’s Scientific Reports* which suggested that ‘undiscovered and fundamental laws’ may govern the growth of systems on all levels from electrical firing between brain cells to the growth of social networks and expansion of galaxies’ (the holographic principle *yet again*). Krioukov said: ‘Natural growth dynamics are the same for different real networks, like the Internet or the brain or social networks.’ He added that ‘for a physicist it’s an immediate signal that there is some missing understanding of how nature works.’ What’s missing is the understanding that we are dealing with a holographic simulation. The work of Krioukov and his team was reported by the *Huffington Post*:

When the team compared the Universe’s history with growth of social networks and brain circuits, they found all the networks expanded in similar ways: They balanced links between similar nodes with ones that already had many connections.

For instance, a cat lover surfing the Internet may visit mega-sites such as Google or Yahoo, but will also browse cat fancier websites or YouTube kitten videos. In the same way, neighboring brain cells like to connect, but neurons also link to such ‘Google brain cells’ that are hooked up to loads of other brain cells. The eerie similarity between networks large and small is unlikely to be a coincidence, Krioukov said.

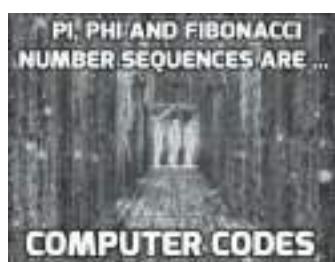

Figure 164: Bingo! Computer codes of the simulation.

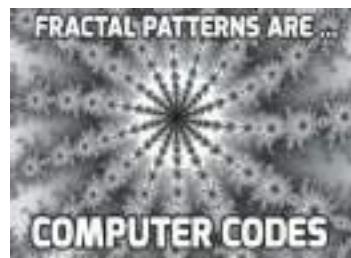

Figure 165: Bingo! Computer codes of the simulation.

What are all these recurring mathematical sequences that pervade our reality? I say they are the *computer codes* of the simulation ([Figs 164](#) and [165](#)). I watched a presentation by Donald Hoffman, a professor in the Department of Cognitive Sciences at the University of California, Irvine, in which he described his concept of our experienced reality acting like a computer interface which I agree that it does:

Evolution shaped us with a user interface that hides the truth. Nothing that we see is the truth – the very language of space and time and objects is the wrong language to describe reality.

I contend that it was not evolution which shaped this, but manipulation. The computer interface – the equivalent of a computer screen – is the simulation which gives a false sense of reality to hide the fact that it *is* a simulation.

Electric Universe (simulation)

Figure 166: Lightning is the most obvious example of an electric atmosphere.

Figure 167: The electrical phenomena of the Northern Lights or Aurora Borealis.

Figure 168: We see the heavens as stars and planets and space, but that's only one level.

Figure 169: On another level the Universe – or simulation – is a vast electrical system.

Figure 170: The simulation is an electrical/electromagnetic system which interacts with the human body and brain and overlays a fake reality to obscure prime reality. I call it the Cosmic Internet. (Image Neil Hague.)

Figure 171: Galaxies are ‘embedded in the same ‘large scale structure’ – the simulation.

A major pointer to a simulation comes with a highly-compelling area of independent scientific research that reveals the Universe to be an electrical/electromagnetic communication system which is how computers and virtual reality work. The research is known collectively and appropriately as the Electric Universe and also the Thunderbolts Project. I have been reading and watching their information for many years and you can find them at www.thunderbolts.info/wp. Everything from the Universe to the human body/brain is on one level an electrical/electromagnetic communication system. The electrical nature of the atmosphere can clearly be seen in lightning, the Aurora Borealis or northern lights, and the rapidly-rotating electromagnetic fields of tornadoes that appear during electrical storms (Figs 166 and 167 overleaf). The electrical fabric of our reality, however, goes much deeper than that. Electricity and electromagnetism pervade everything and Electric Universe researchers say that planets and stars are points or ‘devices’ in a colossal electrical circuitry that we experience as reality and see as the night sky (Figs 168 and 169 overleaf). The electrical impact on this circuitry of planets, stars and their combinations is another level of how astrology works and all together I call this the Cosmic Internet (Fig 170). I have said that the Sun is much bigger than it appears to the eye and that its wavefield oscillates throughout the solar system. This is also true of the Sun’s electrical circuits and communication systems. Electric Universe researchers have been pointing this out for a long time and official science confirmation of this electrical connection grid is beginning to mount. *The Astrophysical Journal* published a study in 2019 describing how hundreds of galaxies are acting and rotating in synchronised motions even with those tens of millions of light years away (the illusion of time and space). The study involved 445 galaxies within 400 million light years of Earth. Joon Hyoep Lee, an astronomer at the Korea Astronomy and

Space Science Institute, said that something appeared to be connecting them which caused them to behave exactly in sync. In some way they 'directly interact with each other', he said. The study suggested that the galaxies appeared to be embedded in the same 'large scale structure'. Yes – the electrical/electromagnetic grid of the Cosmic Internet or what I say is the simulation ([Fig.171](#)). Computer virtual reality is connected by the same codes and electrical communication which makes what appears on the screen happen in sync. Joon said: 'The dynamical coherence even out to millions of light-years was unexpected and surprising to us, because such distances are obviously too far for neighbour galaxies to directly interact with each other. The unifying force remained invisible or in other words outside the frequency band of human and technological sight. Then there is David Sibeck, a project scientist at NASA's Goddard Space Flight Center, who revealed satellite confirmation of these electrical/electromagnetic connections:

The satellites have found evidence of magnetic ropes connecting Earth's upper atmosphere directly to the Sun. We believe that solar winds flow in along these ropes providing energy for geomagnetic storms and auroras.

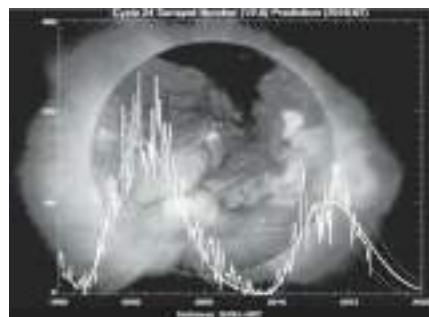

Figure 172: Solar power rises and falls in cycles and can be measured by the number of sunspots or massive explosions on the sun which project energy into the solar system.

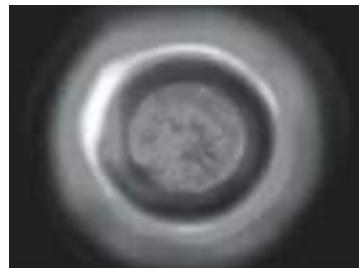

Figure 173: Sunspot explosions have been believed to originate inside the Sun, but Electric Universe researchers say the torus around the Sun absorbs electricity from The Field which goes through cycles of higher and lower power. When the torus becomes overloaded at high times it discharges energy like colossal lightning bolts that strike the Sun and punch the sunspots thus making sunspots a measure of solar activity.

Sun-Earth connections, wavefield and electrical, are what changes our climate and temperature in cycles of power increasing and decreasing. These cycles are revealed in the number of fantastic explosions of energy on the Sun's surface known as sunspots. This phenomenon is not factored into the manipulated 'climate models' devised purely to sell the hoax of human-caused climate change. The outrageous deceit is confirmed by climate projections that don't centrally include the foundation effect on temperature of the Sun while blaming carbon dioxide, the gas of life, without which we would all be dead (*much more later*). The Sun is electrical in nature and highly significantly the observable Universe is 99.999 percent plasma – so is the Sun. Plasma is often called the fourth state of matter and represents a near-perfect medium for ... *electricity and electromagnetism*. The plasma Sun is a *processor* of electrical power and not the origin of it. Solar power does not come from within the Sun as mainstream science claims from

assumption, not evidence. It comes from the universal electrical wavefield or circuitry. If you could see the heavens on another level of frequency you would see a vast electrical system with the stars and planets as points in the circuit that pervades the Universe. The Sun absorbs and processes power from this system which operates in cycles of higher power and lower power just as waves (of all kinds) have peaks and troughs ([Fig 172](#)). Electrical power is processed by the Sun (not created by it) and projected into the solar system affecting temperature, climate and much else within the planetary fields. These projections are decoded by the Earth's atmosphere and magnetic field into the heat that we feel. Space is cold and the higher you go in the Earth's atmosphere the colder it gets when, through mainstream scientific 'logic', it should be getting warmer as you move closer to the Sun. Why are planets nearer the Sun hotter, then? The closer you are the more powerful the energy to be decoded into heat and that is also affected by the nature of their fields. The Sun is much cooler on the surface than way out in its atmosphere when it should be the other way round if the heat is being generated from within.

Mainstream science estimates the Sun's surface temperature to around 5,000 degrees kelvin while much further out the temperature is said to be 200 *million* degrees kelvin. Encircling the Sun a considerable distance from the surface is a doughnut-shaped torus which has been recorded in ultraviolet images ([Fig 173](#)). The Sun's torus at its equator absorbs electricity from the universal circuit for the Sun to process. When it overloads massive versions of lightning are projected to punch holes in the Sun's surface that we know as sunspots. They are a pointer to the changing electrical power of the Sun because the torus only overloads and punches them at times of high power in the circuit. The Sun is known to dim in its low period of activity (electrical processing) although this is imperceptible to the human eye. Think dimmer switch. NASA reported in 2019 that predictions suggest the cycle of solar activity between 2020 and 2025 could be the lowest in 200 years and 30 to 50 percent lower than the previous one. Mainstream science is being forced to face the facts about the universal electrical system as evidence continually comes to light. Haimin Wang, a professor of physics at the New Jersey Institute of Technology, said of sunspot activity:

We used to think that the surface's magnetic evolution drives solar eruptions [sunspots]. Our new observations suggest that disturbances created in the solar outer atmosphere can also cause direct and significant perturbations on the surface through magnetic fields, a phenomenon not envisioned by any contemporary solar eruption models.

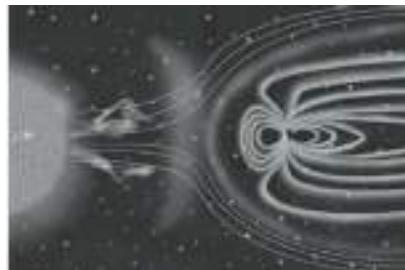

Figure 174: Planetary magnetospheres are formed by the resistance between different electrical charges in the plasma field between the planets and the wider solar system.

The Earth's magnetic field, or magnetosphere, is defined by the interaction of electricity with plasma (ultimately wavefield state with wavefield state). When plasma conducting electricity of one frequency/charge meets plasma with a different charge a barrier is automatically formed between the two which defines planetary magnetic fields. Planets and stars emit different electrical charges into the plasma medium and where these different fields meet the barrier is formed known as a 'Langmuir sheath' after American scientist Irving Langmuir (1881-1957) who discovered the phenomenon ([Fig 174](#)). Here is still more proof that planets and stars transmit different frequencies that form the basis of astrology. Increasing numbers of scientists are now seeing that the evidence points to our 'physical'

reality being a holographic simulation as I concluded nearly 20 years ago. Where I differ from these scientists is that they seem to see the simulation as external to us. My view is that in the form we experience as 'physical' reality the 'Matrix' only exists when we decode it into manifestation in the brain. The holographic level of reality is within us and not external to us. If we revisit what I said earlier about the human decoding system we can bring that together with electrical reality. The foundation information construct of the simulation is information encoded in waves and when this is decoded it becomes an electrical and digital/holographic reality. See how this fits perfectly with the five senses decoding waves into electrical information communicated to the brain to become digital/holographic information and perceived 'physical' reality. The Universe has wavefield, electrical, digital and holographic levels and so do human decoding processes. *Both are expressions of the same simulated system.*

Who created the simulation?

This all has revelatory implications for how the simulation was created by the non-human force behind the Cult and for the nature of our experienced reality. There are other levels of the Earth that operate on a far higher frequency band which means we can't see them. Many near-death experiencers have described this high-frequency Earth with its incredibly vivid colours they had never seen before. They are manifestations of the much higher frequencies that exist outside the perceptual confines of the Body-Mind simulation. Shamans and seers have talked since ancient times of this other 'Earth' as have those who have experienced psychoactive potions. 'Other Earth' reality existed before the simulation and continues to do so. Its high frequency means it is far less energetically dense which makes far more possible and negates the need for 'physical' food. Energetic sustenance is taken directly from the energetic field. Communication is by telepathy rather than voice and people can transport themselves by thought rather than having to 'physically' walk, drive or fly in aircraft. Why do they need planes when they themselves can fly with their lack of human-like density? High-frequency Earth is the planet's prime reality although it's still just a micro-fraction of Infinite reality. The biblical story of the 'Fallen Angels' and their 'revolt from God' (a theme repeated in non-biblical cultures throughout the ancient world) is really the story of the simulation. 'Fallen Angels' lost their heart-centre connection to *The One* to such an extent that they fell down the frequencies (hence 'fallen') and believed they were the 'gods' ruled by their master 'God' that Cultists know as Lucifer the Light Bringer – the bringer of the simulation formed from 'light' within the speed of light. The 'Fall of Man' refers to those in Prime Earth who the Fallen Ones enticed and manipulated down the frequencies with them. Prime Earth is what the Bible calls 'Eden' and humans left the 'garden' to be trapped in density and the false perceptions of self and reality that come from that. These are the same 'fallen' entities that the Cult and Satanists are connecting with in their rituals and the inner circle members of the Cult are incarnate 'Fallen Angels' hiding behind biological AI software 'human form'.

The Fallen Ones set about creating their own world to entrap indefinitely Prime Earth awareness that would become their slaves in a form called 'mind'. They created the simulation – a wave/digital copy of Prime Earth. I say this is described at the start of Genesis with 'God' making the world in 'seven days' after the declaration 'Let there be *Light*'. The Cult's central modus operandi is the technique of inversion to sell a perception of everything that's the opposite of what it really is. What a perfect example it would be for '*the God*' of the Old Testament to be the very 'Lucifer', 'Satan', 'Devil', that '*the God*' is supposed to 'fight'. Heads you worship Lucifer, tails you worship Lucifer. Ever wondered why the 'god' of the Old Testament is portrayed so differently to the 'god' of the New? Christianity's attempt to present them both as the same entity makes no sense whatsoever. I have concluded after 30 years of research into all these related subjects that the simulation is a wavefield information construct (think Wi-Fi) with a human body that can decode the construct, interact with it (think computer), and perceive it as reality. I have been referring to the body for decades as a biological computer. Carl Sagan's statement about humans being made of 'star stuff' – the carbon, nitrogen and oxygen atoms, etc. of stars – is another as above, so below,

confirmation. Chris Impey, professor of astronomy at the University of Arizona, said that because humans, animals and most ‘matter’ on Earth contain these elements ‘we are literally made of star stuff’. Look at this from the simulation perspective and you get the same story from a different route. Are characters in a computer game encoded with different maths and rules to the rest of the game? Are they made of different ‘stuff’? No, and it’s the same with the simulation and the human body specifically created by the Cult ‘gods’ to interact with the simulation. They are encoded with the same basic codes in their wavefields and express that through the ‘star stuff’ comparison in their holographic ‘physical’ state. The creation of the body-computer is told symbolically in the story of ‘God’ creating ‘Adam’ and ‘Eve’ along with the reference to the sons of ‘God’ (the gods, plural in the original) interbreeding with the daughters of men. We don’t have to be talking here of literal interbreeding through procreation. The body can be changed by broadcasting frequencies of information which the hard-drive, receiver-transmitter DNA decodes into holographic mutations through changes in the wavefield (5G, 6G, 7G?). A Russian research team transformed frog embryos into salamander embryos by transmitting salamander DNA information patterns. Dr Michael Levin at Tufts University in Massachusetts produced tadpoles with eyes on their backs and frogs with six legs by manipulating their electrical communication systems. Levin believes the same technique could be used on humans to regrow lost limbs. So much becomes possible once the Cult illusions are breached and the true nature of reality is grasped. The human body is a wave/digital copy of the forms in Prime Earth reality and far, far denser and more limited in nature. It does mean, however, that the Cult and its masters have had to leave in place many functions of the original form that allow awakening awareness to connect with expanded consciousness outside the simulation. The whole ‘smart’ technology and AI agenda is about deleting those connections by creating a new human form connected even more powerfully to the simulation and I’ll have much more later about this.

Come again? Mmm ... no thanks

Figure 175: To ‘evolve’ and find ‘enlightenment’ we have to keep incarnating onto a pin-head-sized planet over and over while ignoring the rest of Infinity. Yep, makes absolute sense, right? Or we only do it once and then ‘God’ judges us. What utter crap we are told to believe and so many do.

The simulation or Matrix is an artificially-generated field of information that has been overlaid on The Field or Infinite Field. Humanity has been manipulated to connect and interact with this artificial field or Matrix and perceive it as reality. Today’s ‘smart’ technology and Wi-Fi are overlaying *another* even more limited field over the main simulation field to further disconnect humanity from *The Field*. This could only be done once humans had developed intellectually to the point where they could build and operate such technology, but what is happening has been in the planning for thousands of years in our perception of ‘time’ (again much more later). The sequence goes like this: Create the wavefield/digital information construct as a copy of Prime Earth; create forms, human, animal, etc., which are wave-entangled with the construct; entice consciousness to make a wave entanglement with those forms (‘incarnate’). A key aspect to the enticement is the unique sensations of the five senses which are very different from Prime Reality and appear to act like a drug addiction. People become addicted to virtual reality games and the

frequencies emitting from smartphones while consciousness can become addicted to the sensations of the five senses. These addictions create a wave entanglement with the simulation that pulls consciousness in the form of mind back into five sense reality over and over and this is known as reincarnation. Eastern religions believe in the cycle of reincarnation and ‘karma’ in which we continually incarnate on Earth to work through the ‘karmic cycle’ of actions-consequences-actions-consequences until, through trial and error, we reach a frequency state (‘enlightenment’) high enough to escape that cycle and gravitate to Prime Reality. Mainstream science estimates that the Earth when compared with the perceived extent of the Universe is the equivalent of a billionth the size of a pinhead ([Fig. 175](#)). Do we really believe that to ‘evolve’ we have to keep incarnating over and over onto a planet a billionth the size of a pinhead compared with the Universe which itself is a fractional smear of Infinite Reality? That’s crazy. From my perspective there is another way to explain this. You are enticed into the simulation; you become addicted to the sensations of the simulation like people become addicted to computer games; you leave the body when its cycle ends, but you are still addicted (therefore deeply wave-entangled) with the simulation that it draws you back again and again (flies to a light, bees to a honeypot). This continues until you work out the illusion and in doing so raise your frequency to the level of vibration (through the heart) that allows you to escape the electromagnetic pull of the simulation. ‘Reincarnation’ does not *have* to happen – *we* make it so with encouragement and manipulation from the hidden ‘gods’. We can escape the Matrix anytime we want by realising it’s a flytrap and by remembering who and what we really are. Academic neurosurgeon Eben Alexander describes how in his near-death experience he first entered a dark realm of heavy vibration which he perceived as deep mud. He felt trapped and unable to free himself until an entity came to take him out. Once in Prime Reality when he realised his true self, and his frequency increased in sync with that, he said he was able to enter and leave the ‘dark place’ whenever he chose if you believe his account. Whether people do or not the theme is correct.

Reincarnation advocates say we select the body, situation and ‘time’ (astrology) of ‘incarnation’ to best suit the experience we wish to have. I say this can also be explained by the mind’s state of wavefield frequency entangling with other wavefields – bodies, situations, locations and astrological fields – that best suit (a) what it wants to experience and/or (b) what its wave entanglements draw the mind into purely by its wavefield attaching to like fields. What we come into and what we go out to is decided by our wavefield state which is decided by our *perceptual* state. Another relevant question with regard to this: Do addicts make choices about what they are addicted to? They are not in control – their addiction is. For those minds addicted to the five-senses of the simulation the ‘Matrix’ is in control. The point of this book is to offer the tools to free ourselves from that addiction which holds much of humanity in perceptual and five-sense servitude to the alleged ‘karmic cycle’. We should not forget there is quite a common theme with near-death experiences of a point, sometimes symbolised as a fence or wall, that they say if they pass they cannot return to their body in that particular ‘life’. By the very fact that they come back to tell the tale they don’t cross that line. They don’t know what lies beyond it. For sure Infinite Reality lies beyond, but is there also a realm from which minds still wave-attached and addicted to the simulation return here? I think there is and that is why our frequency state at ‘death’ is so important. I suggest that the great majority of even genuine psychics are accessing that realm with their ‘I’m getting a Mary, anyone know a Mary?’ communications. Only the most open and expanded attune to frequencies high enough for the really profound information to be passed through that is free of simulation manipulation and perspective. Addiction to the simulation has become so ingrained through this cycle with each new addiction increasing previous addiction that an intervention is being directed from Prime Reality to break the cycle. I’ll have more about this in the final chapter.

During my ayahuasca experience in 2003 I was shown a picture of a path across a field and then people began falling from the sky onto the path. As they walked in ever greater numbers they wore down the path which morphed into the dark groove of one of the old vinyl records. The people in the darkness just followed the groove and where it took them (round and round). The Voice said over the pictures that

humanity fell so easily for the programming in each ‘incarnation’ because they had been through it many times before. ‘She’ asked from the groove perspective if it was really so strange that people looked upwards for ‘God’ when it was the only direction they could see ‘light’. I have one other point about ‘reincarnation’. You hear people say when they have particular traits or something happens to them that ‘I must have been bad in a previous life’ or ‘it must be my karma’. In reality, it may have nothing to do with either although the basic like-frequency entanglement principle still stands. We inherit body wavefields encoded with the emotional states and traits of others. I have described the passing on of epigenetic on-off gene sequences caused by the wavefield interactions of ‘previous generations’. These can be ‘physical’, mental and emotional. A person feeling bad about themselves today because they are overweight no matter how they diet may have inherited the epigenetic gene sequence from someone who was a fast-food freak consuming toxic shite that switched on genes that pile on weight. This is happening to incredible numbers of people in the fast food era. An apparently irrational fear that makes no sense to a person’s experience in this lifetime does not always have to be ‘past life’ related. It can be a bad experience relating to that fear involving someone in the genetic line which is still encoded in the body field and triggers an apparently inexplicable emotional reaction to particular situations. Consciousness can delete these programs as I’ll be explaining.

Cult vampires and Agent Smith

Figure 176: Agent Smith in *The Matrix* symbolised Cult operatives within the simulation manipulating events for their unseen ‘gods’. Smith was a computer program or what we would call today artificial intelligence – so are the major Cult operatives running our world.

Figure 177: In the same way humanity is the power source of the Cult’s hidden ‘gods’. The more low-vibrational mental and emotional waves we produce the better for them.

Figure 178: The Cult’s unseen ‘gods’ feed off human low-frequency energy especially fear, anxiety, hatred, resentment, regret, and other such emotional states. (Image Neil Hague.)

Figure 179: The main all-seeing eye character in Disney's *Monsters, Inc* in which the monsters powered their world with the fear of human children.

Cult bloodlines (hybrid Fallen Angel/human wavefields) that I have been exposing for decades are the simulation's 'Agent Smiths'. He is the character in the *Matrix* movies who manipulates events in the simulation on behalf of those in the unseen that created the Matrix ([Fig 176](#)). This is the role of the bloodlines that run The Web of secret, semi-secret and public organisations and institutions (including politics and government) to advance the agenda for total human control dictated by the Luciferian Fallen invisible to human sight. Agent Smith is an artificial intelligence program that can replicate itself into multiple Smiths. I say that the major Cult operatives in our world are also biological software programs or AI that are seeking via AI to take over everything by connecting humanity to AI. To the Cult and its 'gods' the biological is a form of technology. One of the goals is to vampire low-vibrational mental and emotional energy emitted by humans who the Cult has manipulated into low-vibrational mental and emotional states. *The Matrix* movies symbolised this with the Morpheus character holding up a battery and saying the 'machines' (the Fallen Ones symbolically) had turned humans into batteries to empower themselves ([Fig 177](#)). I have heard the same theme from shamans and carriers of ancient knowledge all over the world. The Fallen Ones have closed their heart centres to the energy flow of *The One* to such an extent that they have had to develop their own sources of energy that match their own low-vibrational state. Humanity is one such source. The game is to entrap human perceptions and manipulate conflict, fear, anxiety, depression, hatred, despair, guilt, resentment and regret so mercilessly and incessantly that immense waves of low-frequency energy are transmitted for the Fallen Ones to absorb and feed off ([Fig 178](#)). When we stop generating these frequencies on the scale that we do the energy source is disconnected and the manipulators are correspondingly weakened (another benefit of opening the heart). Cult-controlled Disney released the movie *Monsters, Inc* in 2001 which portrayed a 'monster world' that had no energy source. They overcame this by entering the human realm to terrify children. Screams of the kids were caught in a tube device and the energy transferred to the 'monster' power system. The hero was depicted with one giant (all-seeing) eye ([Fig 179](#)). Satanic rituals making sacrifices 'to the gods' through the ages and still today are sacrifices specifically aimed at generating a rush of terror for 'the gods' to absorb. The rituals are designed to create maximum terror in the target in the run up to the sacrifice as a 'gift' or 'offering' to 'the gods'. All the 'sacrifice to the gods' shite comes from this. While the 'gods' are absorbing the wavefield level of the terror outside visible light the Satanists drink the blood which contains that same terror in the form of adrenalin. The Fallen are energy vampires and their Cult gofers are blood vampires. The 'gods' prefer children as sacrifices because of the particular frequencies of pre-pubescent children. Paedophilia rings connect at their core with satanic rings for the same reason. While possessed paedophiles are having sex with children the wave entanglements from the child to the paedophile and through to the possessing entity allow the entity to draw off and absorb the child's energy. So many rich and famous Cult operatives and bloodlines I have researched in royalty, politics, banking, business, intelligence agencies, military, law enforcement and 'entertainment' are connected to

both paedophilia and Satanism. Are we really so naive that we think it's just a coincidence that Jimmy Savile, the UK mega-paedophile and procurer of children for the rich and famous, had deep and decades-long inner-circle connections with the Cult bloodline British Royal family and Prince Charles in particular? Or that Savile was brought into the royal fold in the 1960s by Lord Mountbatten, a known paedophile and Prince Charles mentor? Or that Prince Andrew's close friendship with Sabbatian-Frankist Cult and Israeli Mossad agent, mega-paedophile and child procurer, Jeffrey Epstein, was more random chance? Or that UK Prime Minister Margaret Thatcher was a close friend of Savile in an administration that protected known paedophiles? Oh, *please*.

Figure 180: Yep, I'm getting some more. Plenty to come.

Maintaining Body-Mind humanity in low-frequency states of programmed ignorance is not only about feeding off our energy. The simulation is a band of frequency and to hold Body-Mind in perceptual servitude and illusion we must be entangled with the simulation through body, mind and emotions, and that means staying within its frequency band. From this we have had the age-old targeting of anyone who expands their awareness beyond that perceptual prison and sees the truth. The Cult created religions which insisted that everyone believed what they said on pain of death. 'Witches' (psychics) were drowned and 'blasphemers' of every kind were burned or in other ways mass-murdered. The Inquisition was a Cult operation to protect its control of human perception and when people began to turn away from religion the Cult instigated mainstream science to keep the truth about reality from the masses while continuing to pass on the hidden knowledge to each generation of the Cult 'elite'. This new religion called science has been policed by another inquisition for would-be scientists, academics and doctors in which they follow the prescribed 'truth' or find another job. Mainstream science is the same religion blueprint under another name. Scientism has its own holy books ('scientific orthodoxy'), imposes its beliefs through the 'education' system (just like religious schools), and through the mainstream and much of the 'alternative' media. All use holy Scientism orthodoxy as their point of reference for 'how things are' even though most of this is way off the mark ([Fig 180](#) overleaf). Where once people were killed for seeing the truth outside the simulation (though many still are) the weapons of choice in the West today are ridicule, condemnation and censorship by Cult-owned Google, YouTube, Facebook, Twitter, and all the rest. They are the modern face of the Inquisition and Nazi book-burners along with government agencies targeting alternative methods of healing based on knowledge denied by Scientism's religious dogma (the Cult).

Where are the 'aliens'?

Given the extent of the night sky alone in terms of stars and planets why isn't the Galaxy/Universe that we 'see' (decode) teeming with life? By the law of averages alone it should be. The ancients in cultures all over the world described non-human visitations. Rock and cave paintings dated to thousands of years ago feature images remarkably similar to those reported in the modern world by people claiming to have seen, or been abducted by, non-human entities. They clearly exist so why not make themselves openly visible to everyone? Italian physicist Enrico Fermi (1901-1954), who created the first nuclear reactor, asked this question and it became known as the Fermi Paradox. American astrophysicist Michael Hart studied the mystery and wrote an article for the *Royal Astronomical Society Quarterly Journal* in 1975

entitled 'An Explanation for the Absence of Extraterrestrials on Earth'. He concluded that the mystery had these possible explanations: (1) Aliens never came because of something 'that makes space travel unfeasible'; (2) aliens chose not to come to Earth; (3) advanced civilizations arose too recently for aliens to reach us; (4) aliens have visited Earth but we didn't see them. I would add another: The Fallen Ones behind the simulation don't want humanity to interact with extraterrestrials that would open their minds to the scale and nature of reality. They want us to believe we are alone (*alone* – isolated, disconnected). What would happen if people became consciously aware of non-human civilisations who came to impart knowledge that has been kept from us? Human minds would fly open and Cult control of perception would be over. Open visitations from benevolent and advanced extraterrestrials is the last thing the Fallen want and given they have so much control over the gateways to the simulation they can overwhelmingly stop that although not entirely. What they want is a closed system with them controlling the gateways and portals and most of the 'extraterrestrials' that people report (though not all) are reptilian in nature or the classic Greys – both of which are expressions of the Fallen Angels. Malevolent 'Greys' and 'Reptilians' are inserts into the Matrix to serve the Fallen and I believe the classic 'Greys' to be another form of biological/technological artificial intelligence which the Cult wants to connect to the human brain. Still other 'UFO' craft are really flown by humans with the technology developed through technology transfer between the Fallen and Cult operatives in underground bases, or DUMBS (deep underground military bases), run by Cult levels of the military. What is happening in these bases is denied even to elected governments. Make that *especially* to elected governments. The existence of 'flying saucer', or anti-gravity, technology has been widely documented for decades and the scam is to keep from the population and politicians an awareness of technology way beyond the public cutting edge. When people see glimpses of that they will immediately assume it's the work of 'aliens'. American military pilots have described seeing craft moving at speeds and changing direction in ways that are impossible to known human technology. The Pentagon has admitted to having these sightings, some caught on radar, but they refuse to release details of their internal 'investigations'.

Astrological inversion?

What are the chances of such an apparently limitless realm of stars and planets being seemingly devoid of life when life has evolved to the extent that it has on a planet the comparative size of a pinhead? You know, the same pinhead that we have to keep incarnating onto to follow 'God's Plan'. It's all ridiculous ... *unless* ... the simulation has been specifically encoded to be that way to give target minds the feeling of isolation which confirms we are all alone, a 'Little Me' in every sense. Remember the simulation is a *simulation*, an artificial construct, and its creators can encode information any way they choose just as video game creators do. The scale of the two may be very different, but the theme is exactly the same. Today's virtual reality technology is mimicking the simulation. The Universe and galaxy seems devoid of life, except for us, because the simulation is *made to be* that way. I remember being hit between the eyes in a revelatory sense on my first visit as a child to the then new London Planetarium which opened in 1958. I could have been no more than six or seven. There were many strange things about that trip including the fact that it happened at all. We didn't have much money and travelling anywhere outside my home city of Leicester was very rare in those days even to the seaside. My father came down the stairs that morning and said 'Get ready – we're going to London'. I couldn't believe it. Where did that come from? *London?* Wow, I'd never been there and it would be a long time before I did again. Even stranger is that my father announced we were going to visit the planetarium having shown no interest whatsoever in astronomy before or indeed after. I had no idea what a planetarium was and didn't know what to expect. I clearly remember the moment and the effect it had on me when the lights went down and I saw the night sky projected on the domed ceiling. 'It looks so *real*', I thought'. If someone had said it was nighttime and the roof had been removed I would have believed them. The experience struck me so profoundly and I never forgot the moment. I had no idea why until I began to realise that the night-sky

itself is a holographic projection. Oh, but when spacecraft send back pictures the planets look so real and solid. Of course they do – the decoded simulation is *holographic*. If the planets and stars are a projected holographic construct where does that leave the wave effects on humans measured by astrology? Well, I am going to be controversial here, but then I have been known to be. Where that leaves astrological influences is as ... *part of the control program*. These influences are constantly affecting us mentally and emotionally and laying out our life ‘path’ which is why it is important to expand into beyond-the-simulation consciousness to override astrological influences. Without expanded awareness a human life is the playing out of a software program with many different influences dictating the direction including the astrological. This is not to say that we don’t need astrologers or their readings. No, the opposite is true. Skilled astrologers are actually reading the influences of the simulation which is very useful information. I am saying that we need to know what these influences are and by opening our hearts and minds we can tap into the power of consciousness to overcome them when necessary.

Gnostics knew (and they were not alone)

Figure 181: The Royal Library of Alexandria.

The themes of what I am saying can be found all over the ancient world before Cult religions moved in to make revealing the knowledge a death sentence. This is certainly true of a group of people – a belief system rather than a race – known as Gnostics with their philosophy of Gnosticism. Wherever they located and their information began to spread the Roman Church, the Church of Babylon relocated to Rome by Cult operatives, would send its armies and mobs to destroy them. Most importantly this happened with regard to the Gnostics with the destruction of the Royal or Great Library of Alexandria in Egypt in the 5th century. Gnostic thinkers at the library collected an estimated nearly half a million scrolls, manuscripts and documents detailing ancient history and knowledge from many centres including Egypt, Assyria, Greece, Persia, India, and elsewhere ([Fig 181](#)). This was knowledge about history (the arrival of the Fallen Ones) and reality that the Cult-controlled Roman Church did not want to be circulated. Greek philosophers Plato, a pupil of Socrates, and Aristotle were among the inspirations of Hypatia, an Athens-educated mathematician, astronomer and philosopher who was head of the Platonist school in Alexandria. One of her quotes captured the spirit of open-minded inquiry at the Great Library: ‘Reserve your right to think, for even to think wrongly is better than not to think at all.’ Such commitment to free thought produced revelations about reality thousands of years before modern science ‘discovered’ them and claimed the credit. Gnostics in Alexandria knew that the Earth orbits the Sun 2,000 years before Polish mathematician and astronomer, Nicolaus Copernicus, confirmed this. The Cult was not happy with free-minded discovery and the Great Library was destroyed in a series of attacks by the Church. These included the murder of Hypatia in 415AD by a mob under the control of Cyril, Patriarch of Alexandria, who like so many mass killers before and since was made a saint by the Vatican. Gnostics also famously gathered in southern France centuries later under the name ‘Cathars’ before their mass-slaughter by the army of Rome in the siege in 1244 at the Castle of Monségur in the Languedoc near the Pyrenees.

Figure 182: Part of the fantastic Nag Hammadi find of Gnostic writings.

Figure 183: So many names, but the same force being described.

Figure 184: Gnostic texts describe how Archons appear in our reality in forms that are reptilian and sound very much like the 'Greys' of UFO research lore and legend.

When you read Gnostic philosophy it is easy to understand why the Cult's Roman Church wanted rid of them wherever they located. Gnosis means 'knowledge' and more specifically hidden or spiritual knowledge. What I am calling Body-Mind the Gnostics called 'Nous' and what I am referring to as Infinite Self they gave the name 'Pneuma'. From this comes the phrase about 'using your nous' which would translate as using your mind. It's much better to use your Pneuma – your expanded awareness. It was believed that any detailed record of Gnostic belief had been lost with their demise at Monségur until an amazing find in 1945 at Nag Hammadi about 80 miles north of Luxor on the banks of the River Nile in Egypt. A local found a sealed jar filled with Gnostic texts or scriptures that became known as the Nag Hammadi Library (Fig 182 overleaf). They included 13 leather-bound papyrus codices (manuscripts) and more than 50 texts written in Coptic Egyptian. The texts are estimated to date from about 350 to 400AD which would fit with the period before the attack on the library in which Hypatia was killed. It's thought likely they are representations of Greek works going back to maybe 120-150AD or earlier. From this incredible find far more is known about the Gnostic view of reality and this is especially significant with the texts hidden away and remaining unchanged when many religious texts have been manipulated, rewritten and translated to suit the authorities of the day. I was taken aback to read the Nag Hammadi works after what I had already concluded about the Fallen Ones and the simulation. More than 1,600 years ago (as we perceive 'time') the Gnostics wrote about a non-human force they called 'Archons' and a 'fake reality' which in modern parlance was, in effect, describing a simulation. No wonder the Cult-created-and-controlled Roman Church wanted them gone. Archon is a Greek word meaning 'ruler', 'prince', 'authorities' and 'from the beginning'. A fifth of the Nag Hammadi manuscripts are about the

Archontic manipulation of human society under the chief Archon which Gnostics refer to as 'Yaldabaoth', or the 'Demiurge', and the Cult calls Lucifer the Light Bringer. Other names for Yaldabaoth/Demiurge are Satan and the Devil which are biblically referred to in reptilian terms ([Fig 183](#)). Gnostics believed that Yaldabaoth and the Archons were the source of evil in human society and that they indeed *created* the material world that I am calling the simulation. They said human bodies were a trap to enslave us in the fake reality. Gnostic texts referred to Archons in their base form as energy beings (what I would describe as wavefields of consciousness), but they said Archons could take 'material' form. They described their most common manifestations as ... reptilian or serpentine and beings that look like 'an unborn baby or foetus with grey skin and dark, unmoving eyes'. Reptilian entities have featured in my books since the 1990s as manipulators of human life from the hidden realms with their bloodline human/reptilian hybrids operating within the simulation and appearing outwardly to be human. The description of grey foetus-like entities with dark eyes captures the appearance of the classic 'Greys' of UFO research fame ([Figs 184](#)). They are by far the most common 'alien' entities reported by witnesses and those dubbed 'abductees' across the world who describe in remarkably consistent detail how they were abducted by a non-human species, usually 'Greys'. Gnostic texts have their version of '*The One*' which they symbolically call 'The Father' and 'The All'.

The Nag Hammadi *Bruce Codex* says:

He is an incomprehensible one, but it is he who comprehends All. He receives them to himself. And nothing exists outside of him. But All exist within him. And he is boundary to them all, as he encloses them all, and they are all within him. It is he who is Father of the aeons, existing before them all. There is no place outside of him.

Figure 185: Gnostics described Prime Reality and fake reality – what I am calling the simulation. Prime Reality was a place of harmony, love and the NOW. Fake reality was a place of disharmony, evil and 'time' created by Yaldabaoth (Lucifer the Light Bringer).

What a perfect description of *The One*, the still and silent 'isness' of All Possibility and Infinite Intelligence pervading all existence and to whose influence we can open any time we choose. Nag Hammadi texts divide reality into what they call the 'Upper Aeons' (Prime Reality) and the 'Lower Aeons' or material world. Aeons in the Gnostic context are bands of perception, reality and potential. Upper Aeons, the realm of *All That Is in Awareness of Itself*, is 'The Silence', 'the silent Silence', 'the living Silence', with its 'Watery Light' ([Fig 185](#)). This light is very different from the simulation light within the speed of light and has been described by near-death experiencers. Water symbolism is often used by Gnostics for Infinite light as with '... the waters which are above'; '... the waters which are above matter'; and '... the Aeons in the Living Water'. The Bible describes in the opening to Genesis how the Old Testament 'God' (I say 'Yaldabaoth') created the earth from the 'void' by moving upon the 'face of the waters':

In the beginning God created the heaven and the earth. And the earth was without form, and void; and darkness **was** upon the face of the deep. And the Spirit of God moved upon the face of the waters. And God said, Let there be light: and there was light.

Gnostics said there is no ‘time’ or ‘space’ in the Upper Aeons as I described earlier. One text says that ‘since the emanations [from ‘The Father’] are limitless and immeasurable’ there can be no time or space and they are pure consciousness or awareness named Pleroma or ‘the totality’, ‘the fullness’ and the ‘perfection’ of ‘emanations of the Father’. The *Tripartite Tractate* text says:

The emanation of the Totalities, which exist from the one who exists, did not occur according to a separation from one another, as something cast off from the one who begets them. Rather, their begetting is like a process of extension, as the Father extends himself to those whom he loves, so that those who have come forth from him might become him as well.

Gnostics speak of the interaction between ‘The Father’ and ‘The Mother’ which they refer to as ‘The Thought’. Their interaction produced a third force or extension of The One which they symbolised as the Son. There are many themes in the Nag Hammadi texts which Christianity twisted through the centuries and took for its own.

Archontic fake reality

Figure 186: Gnostic texts said that Yaldabaoth created a ‘bad copy’ of Prime Reality and I say they were describing the creation of the simulation. (Image Neil Hague.)

Figure 187: What the Gnostic ‘bad copy’ really is.

Nag Hammadi manuscripts say the material world was created ‘in error’ when an emanation of the ‘The Father’ disconnected from his influence and this is the Gnostic version of ‘The Fall’ and Fallen Ones. The emanation called by Gnostics Yaldabaoth or the Demiurge (Lucifer/Satan/Devil) is said to be a ‘formless entity’ that proceeded to create a ‘bad copy’ of the Upper Aeons (Prime Reality) which became the Lower Aeons or ‘material’ world and what I say is a simulation ([Figs 186](#) and [187](#)). I suggest that using modern language what Gnostics described as a ‘bad copy’ is a wavefield/digital copy of cosmic Prime Reality – a virtual reality representation. A simulation could be very accurately dubbed a bad copy and once it was created the copy could be continually changed and downgraded just as once you have downloaded a copy of a website you can change its nature while the original continues to exist as it always was. This has been happening since the simulation was installed and never more so than with the current technological transformation. The Gnostic *Apocryphon of John* says that Yaldabaoth is a ‘counterfeit spirit’ and Nag

Hammadi texts describe this entity as 'The Blind One', 'The Blind God' and 'The Foolish One'. Samael, a name for Yaldabaoth in Jewish Talmudic writings, translates as 'Poison of God', or 'Blindness of God'. Gnostics said this 'insane' fake 'god' oversaw chaos without limit. The Nag Hammadi *Origin of the World* manuscript says: '...There appeared a force, presiding over the darkness [Lower Aeons]. And the forces that came into being subsequent to them called the shadow "the limitless chaos".' You only have to observe Planet Earth for confirmation. Nag Hammadi texts depict our reality of chaos as 'Hell', 'the Abyss' and 'Outer Darkness', where trapped Souls are tormented and manipulated by demons (as I have been writing for decades). The *Hypostasis of the Archons* quotes Yaldabaoth as saying: 'It is I who am God, and there is no other power apart from me.' You have heard similar in the Old Testament from the Genesis 'God' that 'created the world' – created the simulation: '*I am the LORD, and there is none else, there is no God beside me*' (Isaiah 45:5). The 'Lord God' of the Bible is the 'Lord Archon' or Yaldabaoth of the Gnostic manuscripts. Yaldabaoth is depicted in popular culture as the 'Dark Lord', 'Lord of Time', Lord (Darth) Vader and Dormammu, the evil ruler of the 'Dark Dimension' trying to take over the 'Earth Dimension' in the Marvel comic movie, *Dr Strange*. The angry, hate-filled, vindictive 'God' of the Old Testament, known as Yahweh/Jehovah, is quite clearly Yaldabaoth of the Gnostic manuscripts. Here he is quoted in Leviticus:

You will eat the flesh of your sons and the flesh of your daughters. I will destroy your high places, cut down your incense altars and pile your dead bodies on the lifeless forms of your idols, and I will abhor you ... I will scatter you among the nations and will draw out my sword and pursue you. Your land will be laid waste, and your cities will lie in ruins.

Figure 188: The Speed of Light is the simulation.

Figure 189: Once again different names, same story, same phenomenon.

Nice bloke. I emphasise that I came to all the conclusions outlined earlier from a list of other sources *before* I read the Nag Hammadi documents which made them even more compelling to me. The texts say that Yaldabaoth left the Upper Aeons (left the 'garden'). He created subordinate like-entities, AI software copies called Archons, and a likeness 'in him' of the Cosmos (simulation). Note the term 'in him'. I recall a quote by Caleb Scharf, Director of Astrobiology at Columbia University, who said that 'alien life' could be so advanced that it transcribed itself into the quantum realm to become 'physics' and numbers. He talked of intelligence which is indistinguishable from the fabric of the Universe. This has been my view for a long time and I say that 'AI' beyond what we have been told about is 'Yaldabaoth' and the

Archontic force which has transcribed itself into the quantum realm to become physics and numbers. This would explain why the physics of our reality are so different to those outside the speed of light ([Fig 188](#)). The AI connection will become incredibly important in the chapter 'Where are we going – if we allow it?' Gnostic texts say of Yaldabaoth: 'He became strong and created for himself other aeons with a flame of luminous fire which exists now.' Flame of fire = the 'light' of the simulation within the speed of light. The same themes can be found in ancient societies across the world as I have detailed in other works. Archons are the Gnostic name for the Islamic (and pre-Islamic) Jinn or Djinn (also genies), Christian demons, and Zulu Chitauri 'Children of the Serpent', or 'Devastators'. Satan is known by Christians as 'the Demon of Demons' while Gnostics called Yaldabaoth the 'Archon of Archons'. Both are known as 'The Deceiver'. Nag Hammadi documents call Archons mind parasites, inverters, guards, gatekeepers, detainees, judges, pitiless ones and the Deceivers. Gnostics describe Archons in terms of 'luminous fire' while the Jinn are said in Islamic belief to be made from 'smokeless fire' ([Fig 189](#)). Archons and Jinn are both said to be entities in the unseen manipulating humanity. I was talking to a Muslim taxi driver in New York about my work and I mentioned the Archons and how they were described. He said immediately – 'That sounds just like the Jinn'. Gnostics portray the 'material' world with words like 'deficiency', 'imperfection', darkness and the Abyss while the Upper Aeons are 'fullness'. Prime Reality is called 'the existent' while 'material reality (the simulation) is 'non-existent'. The *Bruce Codex* says:

And then the existent separated itself from the non-existent. And the nonexistent is the evil which has manifested in matter. And the enveloping power separated those that exist from those that do not exist. And it called the existent 'eternal', and it called the non-existent 'matter'. And in the middle it separated those that exist from those that do not exist, and it placed veils between them.

Figure 190: The 'Ouroboros', or 'Leviathan' is the reptilian symbol marking the walls of the simulation. We pass through those perceptual limits to escape the Matrix.

Figure 191: The ancient concept of the Ring-Pass-Not through which we must pass to return 'home' and as with the Gnostic version our perceptions hold the key. (Image Neil Hague.)

Gnostics make the distinction between our 'Spirit' in the Upper Aeons and our 'Soul' trapped in the

material world. Most psychics are connecting with the realm of Soul and only a relative few with Spirit where the really top-notch information can be accessed. If our point of attention remains in Soul (Mind/Psyche) and not Spirit when we withdraw from ‘physicality’ we are trapped in the Lower Aeons at other less energetically-dense levels before returning in another bodily form through ‘reincarnation’. Gnostics have a concept of what they call ‘the middle place’, a ‘space’ between the Upper and Lower Aeons which they describe as a state of temporary ‘non-existence’ as the Soul waits to reincarnate or is trapped there by ignorance (low-frequency wavefield). Archons are said to guard the exits and gateways, but they are low-frequency idiots and cannot block or affect high-frequency states. Texts entitled *Pistis Sophia* symbolise the limits of Yaldabaoth reality (simulation) as a dragon swallowing its own tail: ‘The outer darkness is a great dragon, whose tail is in his mouth, outside the whole world and surrounding the whole world.’ See the reptilian symbolism yet again. An esoteric/occult symbol portrays precisely this concept in the form of the ‘Ouroboros’, or ‘Leviathan’, which is a serpent swallowing its own tail ([Fig 190](#)). Gnostics said the outermost planetary sphere or Archon (of the Lower Aeons/simulation) is Saturn. Beyond that was the serpent Leviathan through which Souls had to pass to reach paradise (reconnect with pure Spirit). Readers of *Everything You Need To Know* will be aware of what I have written about Saturn and its role in the simulation which again fits with the Nag Hammadi manuscripts. Cult symbolism is awash with portrayals of Saturn which is dubbed ‘Lord of Karma’ and ruler of ‘time’ – both concepts of the simulation. I also say that the Moon (linked to the perception of ‘time’) and the constellation of Orion are very significant to the simulation and human control. The theme of the Gnostic great dragon or Ouroboros can be found in the ancient esoteric concept of the ‘Ring-Pass-Not’ ([Fig 191](#)). This is a definition:

A profoundly mystical and suggestive term signifying the circle or bounds of frontiers within which is contained the consciousness of those who are still under the sway of the delusion of separateness – and this applies whether the Ring be large or small.

It is a general term applicable to any state in which an entity, having reached a certain stage of evolutionary growth of the unfolding of consciousness, finds itself unable to pass into a still higher state because of some delusion under which the consciousness is labouring, be that delusion mental or spiritual.

Figure 192: Humanity is entrapped by ignorance through suppression of perception and true self-identity. This maintains a low-frequency state that keeps people in the Bubbles of the simulation. We can break out any time we choose as I will later explain. (Image Neil Hague.)

Figure 193: An 1888 depiction of the firmament or 'vast dome'.

Figure 194: A different portrayal of the firmament and two divided 'world' from 1475.

Common themes keep on repeating and among them are the following: Consciousness is trapped in the illusion of 'material' reality by perceptions of reality which dictate frequency. The simulation is a band of frequency which humanity and Body-Mind is manipulated not to breach by becoming aware of its true nature – formless Spirit ([Fig 192](#)). When this realisation is integrated as a *knowing* and not just an intellectual concept our Mind/Soul frequency quickens and we can pass after human 'death' through the Ring Pass Not/Ouroboros (outer frequency walls of the simulation). The Nag Hammadi *Tripartite Tractate* says of Souls trapped in the Lower Aeons: 'Therefore they fell down to the pit of ignorance which is called "the Outer Darkness" and "Chaos" and "Hades" and "the Abyss".' Pit of ignorance = caught in the illusion = low frequency state. Gnostics describe humanity as a whole as manipulated 'forgetfulness'. The way out of here is to remember our true nature and see through the illusion by opening the heart to a high-frequency state. The Jim Carrey film *The Truman Show* was very symbolic of this whether by accident or design. The Carrey character is born onto the mega-set of a TV soap and everyone around him is an actor although he doesn't know that. The Sun comes up and down every day and seems real to him while in fact it's a technological illusion orchestrated like the whole show from a control centre that looks remarkably like the Moon. Later in adult life Carrey's character begins to realise something is not right (he 'awakened') and he sails a boat out into what appears to be an endless ocean to find the outer wall of the dome that marks the limit of the movie set which he was never allowed to see. He finds a door in the wall of the dome and walks through to the 'real world' (symbolic of Prime Reality). Interestingly, the term 'firmament' means 'vast dome' and the Biblical reference to 'beyond the firmament' takes on a whole new meaning from this perspective. The concept has been portrayed for centuries as you can see in

[Figures 193](#) and [194](#) overleaf which are depictions from 1888 and even 1475. The inscription on the second one reads: 'A medieval missionary tells that he has found the point where heaven and Earth meet ...' Biblical texts describe how the Old Testament 'God' (Yaldabaoth) manifested the 'vast dome' firmament on the second day of the Creation sequence to divide the primal sea (Infinite Awareness) into upper and lower parts (Infinite reality and simulated reality):

Then God said, 'Let there be a firmament in the midst of the waters, and let it divide the waters from the waters.' Thus God made the firmament, and divided the waters which were under the firmament from the waters which were above the firmament; and it was so.

This biblical text is describing the division of what Gnostics call the Upper and Lower Aeons. Gnostic writings symbolise levels of conscious in terms of 'the waters' as we have seen with '... the waters which are above'; '... the waters which are above matter'; and '... the Aeons in the Living Water'. The simulation is an inversion (the Gnostic 'bad copy' 'shadow world') of Prime Reality. Gnostics compared the two with terms such as fullness/deficiency, immortal/mortal, spiritual/psychic, Spirit/Soul, existence/non-existence, no-time/time, no space/space. The deficiency of possibility compared with Prime Reality is why the Archontic force had to develop technology in an effort to bridge some of the ginormous gap in creative potential. Prime Reality manifests directly through consciousness with no technology necessary.

Software Archons

Figure 195: The bearded 'Architect' who built the *Matrix* in the movie series.

Figure 196: The bearded Kronos, ruler of 'time', and the Ancient Greek god of Saturn.

Figure 197: Kronos is known today as 'Old Father Time'.

Figure 198: The Grim Reaper is another Cult symbol of Saturn which is said to represent death as well as time. We are talking about a Death Cult after all and no wonder Cultists worship Saturn (see *Everything You Need To Know* for why).

Agent Smith and other agents in the *Matrix* movies are portrayed as software programs downloaded into the simulation to manipulate events and target dissidents on behalf of the creator of the Matrix who is called 'The Architect' (Fig 195). He is given a white beard which connects to Kronos, the Greek god of Saturn, who is depicted holding a scythe and an hour glass to symbolise control of 'time' (Fig 196). The chief god of Rome was also Saturn after which was named the festival of Saturnalia that became the Western Christmas (Santa is an anagram of Satan). Other versions of Kronos/Saturn are called 'Old Father Time' with the long beard and the scythe-holding Grim Reaper which symbolises the Cult obsession with death (Figs 197 and 198). The Grim Reaper is associated with Saturn which is astrologically associated with death. Archons are encoded in *arch-angels*, *arch-bishops* and many such terms. We see the same with the Jewish god of Saturn called El. We have Is-Ra-EL (with its Saturn symbol Star of David flag) and the *El*-elite, *El*-ections, and so on. Agent Smith in *The Matrix* can replicate himself countless times because 'he' is a software program and I contend that the same is true with the Cult bloodlines. They are biological software known through the ages as the 'Soulless Ones' and 'Heartless Ones'. They are cold, emotionless psychopaths who have no Soul and no heart connection to *The One*. We are talking AI biological robots or, in their base form, AI wavefields of encoded information. The Cult bloodline obsession with interbreeding is to hold fast the software codes. It's not really about protecting the 'blue blood' gene pool, but the wave-code 'pool' which becomes holographically the biological gene pool. Archons in general are wavefield 'software' and Gnostic texts refer to them in terms of what we would call cyborgs. The 'cold', 'emotionless', Greys are software programs while reptilian species are robot-like in their behaviour. Zulu high shaman and official historian Credo Mutwa, who left us in 2020 at the age of 98, told me decades ago that to understand the 'Illuminati' we must study the behaviour of the reptile. I did and I found them to be extraordinarily computer-like as I already mentioned. I read an article about Swiss clairvoyant, Anton Styger, which was about his life and not at all about these subjects. Nevertheless one of his comments was very relevant to what I am saying. Skilled clairvoyants are able to see deeper into the energetic field and outside purely visible light. Styger said:

When I see people in business or politics who are particularly trapped by the material world, for example, I notice that they no longer have any light bodies at all [wavefields associated with 'human']. In many of these people, the point of light at the heart chakra, which is otherwise always present, is no longer visible to me.

Instead, I see something like a layer of 'shiny tar' around them in which a monstrous being in the shape of a lizard can be distinguished. When such people speak on television, for example, I see a crocodile shape manifesting itself around the person like in a concave mirror; I don't see the light of their throat and forehead chakra.

They don't have 'light bodies' in the human sense because they are possessed software constructs and no light at the heart chakra explains their *heartless* behaviour and lack of connection to *The One*. These are software entities running our world through control of politics, intelligence agencies, military, banking, business, media, academia, science, medicine, 'education', Silicon Valley, and all the rest. Many have quick minds and intellects because they are AI, and this further explains why Gnostic documents say that Archons have no 'ennoia' ('intentionality' or 'creative imagination'). They have to trawl and exploit the creativity of their targets, in this case humanity, which is being manipulated to build its own technological prison. They have to manipulate the creative imagination of humans (which they don't have) to manifest the reality they want and this will become seriously relevant later in terms of current events. Archons can copy and imitate, but not innovate. Gnostics called this 'countermimicry'. One example is mimicking Prime Reality with the 'bad copy' simulated virtual reality and you can relate this concept to Hong Kong/China where so much is copied and not created – *it is counterfeit* as Gnostics called Yaldabaoth a 'counterfeit spirit'. Gnostic texts say Archons are expert in deception and 'phantasia' – creating *illusions* through 'Hal' or *virtual reality* with the goal 'to overpower humanity in its perceptual functions' and impose 'fear and slavery'. John Lamb Lash, author of the book *Not In His Image* about the Nag Hammadi texts, wrote:

Although they cannot originate anything, because they lack [without connection to *The One*] the divine factor of ennoia (intentionality), Archons can imitate with a vengeance. Their expertise is simulation (HAL, virtual reality). The Demiurge fashions a heaven world copied from the fractal patterns [of the original] ... His construction is celestial kitsch, like the fake Italianate villa of a Mafia don complete with militant angels to guard every portal.

It reminds me of a quote in the TV series, *The Hitchhiker's Guide to the Galaxy*: 'In the beginning the Universe was created ... This has made a lot of people very angry and been widely regarded as a bad move.'

Computer reality mimicking simulation reality

Figure 199: The interactive *No Man's Sky* universe with more than 18 quintillion planets.

The Gnostic view of reality is close to my own in the areas I have described, but that doesn't mean I am 'Gnostic'. There is just a convergence of view on the fake reality and its source. The last thing we need is any more black and white labels. There will be many other things on which Gnostics and I will disagree.

Themes describing a fake ‘god’ rebelling against ‘*the God*’ and manipulating humanity by deception are widespread in so many forms within the religions and cultures of the world. It’s a universal story and if people think that imposing a simulated reality on the *apparent* scale of the Universe is too far-fetched they should look at interactive video games like *No Man’s Sky* released in 2016 ([Fig 199](#)). This features more than 18 quintillion planets each with their own unique, flora, faunas and animal species. There are sentient alien races and those who are ‘mechanical lifeforms’. The controlling ‘God’, called The Atlas (Yaldabaoth), is a ‘ubiquitous entity represented by a red orb inside a black diamond’. The will of Atlas is imposed by the Sentinels (Archons) who are ‘mechanical lifeforms; self-replicating, non-organic machines ... [who] ... act as workhorse machines of The Atlas and as universal police, controlling the actions of those who reside within the universe’. This pretty much sums up the human plight. We are experiencing a false reality that takes the form of an interactive virtual-reality simulation in which information is encoded in the simulation’s version of The Field for us to decode into an apparently physical world. The human personality without a connection to beyond-the-Bubble consciousness is created by electronic/electromagnetic stimulus through a system of activation and reaction (input-output) between the simulation and the five senses. Body-Minds have major or subtle differences in their ‘wiring’ or wavefields and so can respond differently to the same input. One person may react to a situation with compassion and another with empathy-deleted contempt. These reactions will appear in the playing out as a person who cares and a psychopath. Human responses to electronic/electromagnetic stimulus (a situation) are what we call different ‘personalities’. At the same time there are enormous similarities in the way that humans react to stimulus that induces fear – the ‘press enter’ response as I call it.

So we have Body-Minds reacting to fear-based stimulus on a mass scale – especially that relating to fear of death and the unknown (same thing) – but in their five sense-stimulus feedback loops responding to other electrical input in different ways that appear to give us different ‘personalities’. I say those ‘personalities’ are largely the creation of electrical input-output interaction while a connection to expanded awareness takes you beyond the programmed limits of human personality. Heart consciousness does what it knows to be right and overrides the input-output feedback loops. It does not react to fear stimulus with an output of fear and fear-generated response. It calmly sees things as they are from a panoramic perspective and the awareness that it is an eternal state of Infinite Consciousness having a brief and transitory experience. It has no fear of death because it knows that ‘death’ is merely a transfer of attention from a myopic reality to an infinite one. Heart awareness may seem to have a ‘personality’ through the perception of its behaviour (not least because that is so different to the ‘norm’), but such people are responding from the ‘I’ beyond the Bubble and not five-sense dominated input-output. Heart consciousness overrides that simulation/Body-Mind interaction and those senses then respond to the heart and not the simulation. In this way we begin to impact upon the simulation and not the other way round.

The simulation gives the illusion of past-present-future just as a video game does when both are only encoded information following a pre-set program in the NOW. Also encoded are the reincarnation/karma/astrology cycles which are feedback loops maintaining Souls and minds in the illusion even after human ‘death’ unless we transform our self-identity, remember our true nature, open our heart connection, and expand into frequencies the simulation cannot control. Our enslavement depends in totality on us being held within the frequency band of the simulation within the speed of light through our perceptual state and we can change that any time we want. Nor should we think that the manipulating entities are all-powerful as the force behind an apparently gigantic simulated Universe. Who says it’s gigantic? The *No Man’s Sky* universe appears to be so and yet it is only computer codes giving the illusion of enormity. When I looked at the ‘night sky’ in the London Planetarium it appeared to be fantastic in scale while it only existed as a projection on the ceiling. The ‘real’ night sky seems gigantic when it only exists in that form in your brain. The simulation is 2D or ‘flat’ encoded information fields that we decode into illusory 3D through Body-Mind systems specifically designed to do that. Holograms

work the same way. The extent of the simulation can be minute compared with what we perceive it to be. At the time of release *No Man's Sky* was running from 600,000 lines of code which sounds a lot until you know that modern vehicles with their entertainment and Wi-Fi systems use 100 *million* lines of code with plans for this to increase by two to three times. Do we only decode wavefields into holograms when we are observing them to save computational power that would be necessary for the entirety to be in holographic form all the time in the same way that computer screens go blank to save energy when they are not being used?

Decoding our own prison

The key to control by the simulation is not only its wave information construct. The crucial part is getting incarnate minds to decode the illusion while believing it to be real. The brain/body is constantly decoding the Matrix into holographic form and while perception is dictated only by the five-senses (the point of Matrix-Body interaction) the simulation is in control. Minds are then in the world and of the world and have no other point of reference. Would computer game characters know they are only responding to software? They would think it was all real. The point about 'responding' is significant. Humanity is not ultimately manipulated and directed by agents of the Cult sitting around a table deciding their next move. The transformation of global society now unfolding could never be achieved on that scale by table-sitters alone. The Archontic plan is being encoded in the energetic fabric of the simulation field for humanity to *decode* into reality and this is how it can happen so fast and on such global scale. For this to happen humanity must be attuned with the wave frequencies carrying that information – 5G is the next stage. Incessant propaganda through the 'education' system and mass media is specifically designed to instil perceptions that will create the desired Cult reality by entangling with the wavefields infused with that agenda. What you believe you perceive and what you perceive you experience. Humanity, in short, is decoding and manifesting its own prison. Only a transformation of perception through a transfer of self-identity to the True Self will stop this. How much of human perception is already being delivered by the simulation? What is the real origin of the constant chatter passing through people's minds? I call this the 'Scenario Mind' because it spews out an endless list of scenarios and how we would respond even though the scenario is not happening. If he did this, I'd do that, if she said that, I'd say this. Where is all that coming from? Go into a quiet space and *observe* this chatter. Stand back from it. Listen as it rambles on. You can observe your own Body-Mind chatter and what does that tell you? It's *not you*. The *observer* of the chatter is *you*.

Benjamin Libet (1916-2007), a scientist in the physiology department of the University of California, San Francisco, generated many highly-significant experiments in his quest to understand human consciousness. One group was asked to move their hand whenever 'they' chose while their brain activity was being monitored. Libet found that brain activity to move the hand began a full half a second before any conscious decision to do so. John-Dylan Haynes, a neuroscientist at the Max Planck Institute for Human Cognitive and Brain Sciences in Leipzig, Germany, found in his studies that he could predict an action *ten seconds* before a conscious intention purely by monitoring brain activity. Frank Tong, a neuroscientist at Vanderbilt University in Nashville, Tennessee, said: 'Ten seconds is a lifetime in terms of brain activity.' Where was the decision-making really coming from if not the conscious mind? I say that *some* – not all, some – is coming from the simulation. Morpheus said in *The Matrix*: 'Are they your thoughts you're thinking now?' The body is encoded to be a limiting device for consciousness. In our no-form energetic state we can see, hear, feel, smell and taste without the body. We don't actually need it except to interact with the simulation. It focuses our attention within the frequency band of the simulation or in fact an even smaller band than that called visible light. It makes us believe that we can only see, hear, feel, smell and taste through the body which means people fall for the illusion that the body is who we are and without it we're nothing. Without it we're *everything*. Mainstream science and medicine constantly underpin this belief that the body is the totality of the 'I'. The body is *counter-*

mimicking consciousness and limiting our sense of self, reality and the possible. No wonder Gnostics said the body was a prison trapping the 'divine spark' within matter. One other mystery explained by all this is why Earth's atmosphere and ecosystems are perfect to sustain life as we perceive it when only a tiny change would spell disaster. Scientist Robert Lanza writes in his book, *Biocentrism*:

Why are the laws of physics exactly balanced for animal life to exist? ... If the strong nuclear force were decreased 2 percent, atomic nuclei wouldn't hold together, and plain-vanilla hydrogen would be the only kind of atom in the Universe. If the gravitational force were decreased by a hair, stars (including the Sun) would not ignite. These are just [some of] more than 200 parameters within the solar system and Universe so exact that it strains credulity to propose that they are random – even if that is exactly what standard contemporarily physics baldly suggests.

They are of course not random. They are *made* to be that way. How? Our world is a virtual-reality simulation with its own encoded rules and information. Why? To allow the Cult and its non-human 'gods' to enslave human perception in ongoing illusion and control. The simulation has been breached by many over the years who have sought to make humanity aware of its plight and they have often taken the consequences for that instigated by the Cult. This continues to be the case today as a concerted effort is underway by consciousness 'incarnating' from Prime Reality to wrest back control from the Fallen by informing the human family what is really happening in the manner of the prisoner in Plato's cave. We are making progress, but to say the very least the job is far from done.

CHAPTER SIX

Why don't we know?

Is there any point in public debate in a society where hardly anyone has been taught how to think, while millions have been taught what to think? – Peter Hitchens

The game of life – in this case human life – plays out in a stadium (the simulation) called *perception*. From this everything else comes. What we perceive becomes what we believe becomes how we behave becomes what we experience. This is the deal and to understand these connections is to understand the world and the human plight.

Figure 200: A closed mind emits a closed frequency which interacts with The Field only within that limited band of possibility and thus creates the feedback loop in which 'Little Me' and 'Label Me' perception produces through cause and effect limited experience and awareness. (Image Gareth Icke.)

Figure 201: Open your mind and expand your self-identity and you expand your interaction with The Field and possibility. 'Big Me' perception creates a 'Big Me' experience. (Image Gareth Icke.)

Figure 202: What I call the Postage Stamp Consensus is the narrow band of possibility taught in the ‘education’ system and promoted by the media which is the foundation belief system of academia, science, corporations, medicine, government, and the great majority of the public.

Our perceptions dictate our frequency and our frequency dictates our wave-entanglements with people, places, situations, and experiences. Through this process we create our own reality and experience by attracting into our lives a holographic representation of our *perceptions*. A ‘Little Me’ perception will transmit waves so limited and weak in terms of perceived potential (‘I have no power’, ‘I’m a victim’ and ‘I’ll never be up to much’) that the feedback loop between perception and The Field will deliver back to you just that sort of life ([Fig 200](#)). By contrast if you come at life from the perspective of being Infinite Awareness (All Possibility) having a brief human experience you make a very different feedback connection with The Field – one that is both greater in scale and much higher in frequency. An expanded sense of self automatically expands your accessed consciousness to match that perception and you are interacting with that range of possibility within The Field. Your life is transformed as more possibilities attach to your feedback loop and become your experience ([Fig 201](#)). Our self-identity is central to our relationship with The Field. The Cult well knows that if it controls perception it will control experience. This is why people are being herded into smaller and smaller perceived identities to the point where one American university has this code for its students’ perceptions of self-identity: LGBTTQQFAGPBDSM (don’t ask). I’m sure that string of letters will be longer by the time you read this with new and ever more myopic identities invented by the day. What is happening in the world in terms of manipulation and events falls into place once you know how reality works.

Figure 203: Virtual reality headsets perfectly symbolise the human perception program.

Figure 204: The Cult knows that if it hijacks perception it will dictate the frequencies that attract experience. Myopic perceptions create a myopic life and collectively mass control becomes possible. The Cult is creating the nature of our reality through the manipulation of human perception.

The Cult's prime objective then is to dictate perception and it has structured human society as a cradle-to-grave programming laboratory founded on what I have long called the 'Postage Stamp Consensus' ([Fig 202](#)). This is the tiny band of possibility indoctrinated in schools, colleges and universities and repeated 24/7 worldwide by the mainstream and much of the 'alternative' media. Postage Stamp belief dictates the perceptual limits of academia, establishment science, medicine, media, government, business and the Mainstream *Everything*, and provides the foundation of what I refer to as The Program ([Fig 203](#) overleaf). The Cult first exploited religion as its perception deception in which deviating from the imposed belief proclaimed in a 'holy book' was a death sentence. This was the Postage Stamp Consensus of its day. Religion still retained the concept of life continuing after death, but included subordination to a schizophrenic 'God', both loving and vindictive, that invited those who believed in him to eternal paradise while condemning non-believers to stoking the fires of hell forever. We are asked to believe that this eternal division was decided by 'God' on the basis of a brief life on Earth of anything from seconds to decades on a planet equivalent to a billionth of a pinhead. I don't know about you, but that makes perfect sense to me after a dozen gin and tonics with whisky chasers. Shockingly this belief still controls the perceptions (and the decoded experience) of billions. Ever greater numbers began to reject this form of control, however, and they were targeted with the new Cult entrapment wheeze of 'science' and state-controlled 'education'. Mainstream establishment science had the added benefit of deleting any concept of a Creator and believers in this religion masquerading as 'rational thought' drew its targets and advocates deeper into the perception of random existence within 'matter'. For religion in its most extreme form there is death to blasphemers and the milder version is ejection from 'the faith'. With the 'rational' religion of Scientism there is death to your career and ejection from the faculty ('the faith'). Mass indoctrination is further entrenched by Cult-controlled media bias and censorship now being taken to ever more extreme levels by Cult-owned Silicon Valley. If you control what people see and hear they will believe what you tell them so long as you also control what they *don't* see and hear ([Fig 204](#)).

The download begins

Figure 205: Perceptual programming begins the moment we leave the womb and in fact even before that through the wave and chemical connections to the mother.

Figure 206: 'Education' in a single image.

Figure 207: Children go to school to be perceptually programmed with a sense of reality designed to last their entire lives.

Human society is a laboratory for Body-Mind and other terms that capture the theme include conveyor belt, sausage machine and computer download. Human life is indeed a *perceptual* download that starts even in the womb and ends at the cemetery. When a child arrives blinking into the light the programming really starts ([Fig 205](#)). First there are parents who have already been processed by the programming system the child is about to go through and accepted what it told them to believe (if they are entrapped in Body-Mind which the great majority still are). Parents upload this indoctrination to their child in its earliest years and I am not saying this is done through malevolent intent. Often it is quite the opposite. They have themselves downloaded the system's version of reality and they think they are doing the best for their children by giving them the benefit of that 'wisdom'. Downloaded illusory 'wisdom' includes everything from what children are told and how they are treated to accepting the tidal wave of vaccinations they now receive to fill the coffers of the Cult-owned Big Pharma and undermine their immune systems and perceptual processes for life. When children are damaged by vaccines it often happens in the brain. How many kids who are not brain-damaged enough to be diagnosed still have their thinking and creative processes suppressed and limited for the rest of their lives? When this impacts on behaviour they are prescribed drugs made by the same Cult Big Pharma cartel that produced the vaccines to 'treat' the effects of vaccines. The same goes for food/drug (chemical/wave) distortions which skew the way that kids process information into perception and behaviour. Three or four years after arriving in the world the perception download goes through a colossal upgrade known hilariously as 'education' when an already toxin-infested child heads for school ([Fig 206](#)). Now parents start to lose influence over their offspring while children increasingly lose their distinct individuality to a programmed perception about everything ([Fig 207](#)). Life as it will be for their entire formative years has begun during which they will sit at a desk or in a lecture theatre day after day being told what to believe and not believe about themselves and the world in all its facets and forms by authority figures representing the perception program of the state. These may be anything from a primary school teacher to an 'eminent professor'. Either way their role is the same – to get children and young people to believe what the state (the Cult) wants them to believe. What more effective way can there be to dictate collective perception and behaviour than to have control of what young generations are told to believe throughout their formative years? The 'educator' at every level may themselves believe what they say thanks to their own programming, or they may not. It doesn't matter. The state insists that they teach what they are told to teach in the way they are told to teach it or they're out the door. Teachers and academics are in the same perceptual penitentiary as their students in the 'education' environment. I am going to detail in upcoming chapters how this is transforming society more blatantly and profoundly than ever before and to what end. Pressure to pass exams means that 'education' for both student and teacher becomes a daily rush to stuff state-approved (Cult-approved) alleged 'facts' into the memories of young people to be held for just long enough to repeat them on the exam paper. How much of what you 'learned' at school do you remember or have you used in your life apart from the basics of maths, writing and such like? Very little will be the answer from most people, or, in my case, next to sod all. In fact I have spent my life since deleting the crap I was told at school on the few occasions when I was paying any attention. The Cult doesn't mind that you don't consciously remember the programming. Its target is your subconscious which studies have revealed is

responsible for 95 percent of human behaviour. Your so-called conscious mind is the slave of the subconscious and the *subconscious* is what the Cult is after. When it has that it has *you*.

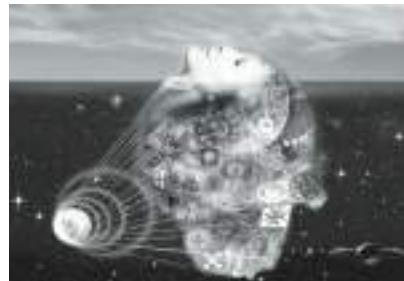

Figure 208: The subconscious is the target of perceptual programming and this seeps through to the conscious mind as what appears to be a 'personal' view or opinion. 95 percent of human behaviour derives from subconscious perceptions. (Image Neil Hague)

It is extraordinary how little conscious decision-making is involved in prompting actions. Most of them are computer-like responses and reactions often emotional in nature. Remember the research that showed how brain activity required to do something starts before a conscious decision is made to do it. The conscious mind retains very little, indeed perceives very little, as we saw with the quote about visual reality being constructed by the brain from 40 'sensations' a second from the 11 million received. Our subconscious absorbs it all and why wouldn't that be the governor of perception? People don't have to *remember* all they were programmed to believe by the 'education' system. The Cult knows the subconscious will do that and influence the conscious mind for life unless de-programming takes place called 'awakening' – awakening from the *program* ([Fig 208](#)). Observe people's reactions and responses to events and happenings and you will see reflex-action perception akin to pressing 'enter'. I have been ridiculed for decades for what I have said by those who have not spent a single second checking the facts or background. Their instant reaction is triggered by subconscious responses on the basis only of what they have been told is possible. Never have they had to consider shapeshifting while absorbing only information that says the world is solid. To them, therefore, shapeshifting must be crazy by reflex action. Subconscious programming seeps through to conscious perception. You have seen already my take on life that we are all one consciousness having different experiences and that human labels of race, sexuality and so on are illusions that we allow to divide us. I have been saying the same for 30 years. Compare that with what a British 'writer' called Gary Spedding posted on Twitter to my son, Gareth: 'You are the son of a known anti-Semitic white supremacist conspiracy theorist.' Has Spedding read any of my books? No. Has he been to my public presentations? No. Does he know anything about me that has not come from biased sources? No. Much of humanity is forming its perceptions in the same way which is why the great majority of what people believe is not true and only what the Cult wants them to *believe* is true. They are making 'conscious' decisions second by second considering validity in a whole range of subjects and situations from life-long programmed *assumptions* supported by no personal research whatsoever. To become *conscious* beyond The Program means to take control of our perceptions which involves reaching our *own* conclusions and not taking them off the shelf from someone else.

'Education': Systematic programming

Figure 209: The System told me what to think – if you say anything different you must be mad or stupid.

Figure 210: Big mistake.

From all this comes what I call ‘everyone knows that’ syndrome. We’ve all heard it – me more than most – when you challenge an assumption of reality and you are dismissed with an ‘everyone knows that’ repetition of the programmed possible (Fig 209). How come that ‘everyone knows’? Well, everyone has been through the same perceptual download. Er, that’s it (Fig 210). Children in religious families invariably follow that religion because it’s all they’ve ever heard and the same principle applies to the ‘education’ download. The general rule of the Cult is this: If that’s all they ever hear that is what they will believe subconsciously and so consciously. Any information challenging those assumptions has to break through the walls and layers of programming before an ‘Ah-ha’ moment can occur. There is another reason for the deluge of mostly irrelevant information heaped upon children and young people. While you were filling your mind with the daily deluge mostly utterly useless to you – and then revising it again for exams – your mind was focused on that and not going its own unique way. Five-sense focus is the goal. Once you focus at the exclusion of all else you lose peripheral vision where the truth lies and dots can be connected. The System adds still more focus time in the form of ‘homework’ to perpetuate five-sense focus and wire the brain to process information in a particular way which I’ll come to in a moment. It’s all coldly calculated by those in the shadows. Compartmentalisation means that the high 90 percents of those directly imposing the programming will have no idea why this is being done or even *what* is being done to the perceptions of the young. The Cult *does* and created the structure of ‘education’ through bloodline families like the Rockefellers. John D. Rockefeller, the American oil/banking/pharmaceutical tycoon and Cult agent, founded the US General Education Board at the start of the 20th century. He said: ‘I don’t want a nation of thinkers – I want a nation of workers.’ I want a nation of *slaves* would be more accurate. Frederick T. Gates, Rockefeller’s co-founder and business advisor, said it all:

In our dream we have limitless resources, and the people yield themselves with perfect docility to our moulding hand. The present educational conventions fade from our minds; and, unhampered by tradition, we work our own good will upon a grateful and responsive rural folk.

We shall not try to make these people or any of their children into philosophers or men of learning or of science. We are not to raise up among them authors, orators, poets, or men of letters. We shall not search

for embryo great artists, painters, musicians. Nor will we cherish even the humbler ambition to raise up from among them lawyers, doctors, preachers, statesmen, of whom we now have ample supply.

Cult ‘education’ has been imposed to condition children to believe and accept for life the following:

- Truth comes from authority
- Intelligence is the ability to remember and repeat
- Accurate memory and repetition are rewarded
- Non-compliance is punished
- I must conform intellectually and socially

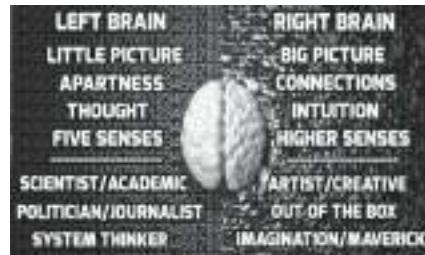

Figure 211: The left and right brain process information in very different ways to produce very different perceptions of reality.

Figure 212: The System, driven by the Cult, defends the left-brain from right-brain influence. (Image Neil Hague)

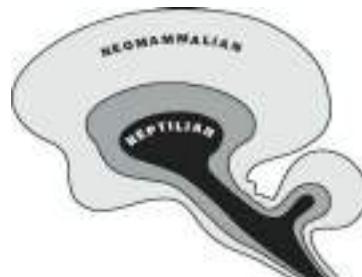

Figure 213: The reptilian brain works closely with the left-brain to dictate perception and behaviour. Reptilian brain? What a coincidence.

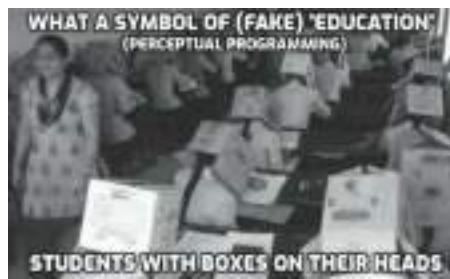

Figure 214: Once again the 'education' programming system in a single image.

The Cult 'education' system worldwide is so carefully moulded from its controlling core that it targets a particular part of the brain – the left hemisphere. This has a largely different function overall than the right hemisphere. The brain is holographic in its decoded form and will have all functions spread throughout, but on the whole-brain level the two hemisphere's have different emphasis. The left-brain decodes information in ways that dominate human perception. From here come words, language, numbers and the sense of everything being apart from everything else. It sees dots and pixels, identifies with labels and likes to conform within hierarchical structures ([Fig 211](#) overleaf). It is the orthodox politician, scientist, doctor, journalist, academic, business leader or worker, lawyer and judge. In other words all the people who run or serve The System. Current human society is overwhelmingly a holographic expression of the left side of the brain which is the foundation perception of the Mainstream Everything. The right-brain by contrast is free-spirit creativity, imagination, art, poetry, spontaneity, the maverick. It is authors (of certain types), orators, poets, great artists, painters and musicians which Frederick T. Gates said they didn't want the 'education' system for the masses to produce. Crucially the right-brain has a greater sense of oneness unity and connects dots/pixels into pictures and patterns that reveal the truth about life and reality. The right-brain has close connections to the heart and for that reason alone it is in the gunsights of Cult 'education' which is designed to close the heart chakra, suppress the right-brain, and enslave the young for life in the Body-Mind Bubble. Note how little school time is given to right-brain activities like art, drama and music, and how left-brain subjects dominate the curriculum ([Fig 212](#)). Exams are passed by compiling information through the left-brain and then repeating that on the exam paper. The left-brain to a fundamental extent is the home of The Program and its perception processing centre in conjunction with the reptilian brain, or R-complex', from where reflex-action, survival-instinct responses are activated ([Fig 213](#)). I say that the reptilian brain, at least in its present dominant form, comes from Archontic manipulation of the human body. The reptilian brain is constantly scanning the environment for threats to survival and not just 'physical' survival. I mean also financial survival, relationship survival, job survival, etc. Road rage and reflex-action, fight-or-flight, over-the-top emotional responses are reptilian brain 'press-enter' reactions and the underlying fear and anxiety felt by so many is reptilian brain connected. It is one of the major behaviour-control mechanisms and its impact on emotion keeps people in a low-vibrational state. *Is this really a coincidence given what I have been writing for decades about a reptilian connection to human control?* British psychiatrist Dr Iain McGilchrist has featured what he calls the divided human brain in his presentations. He describes how the left-brain has a narrow focus (point of attention) in terms of detail and the right perceives the panorama or big picture. You can see the recurring theme. Those focused in their left-brain have a narrowed 'window of attention' – window of perception – which leads to lower and less expanded frequency states. Brain hemisphere/heart separation also instils a sense of Body-Mind/Soul/Spirit separation. The 'education' system is specifically designed to be a conveyor belt to turn out life-long Bubble people. How symbolically appropriate that a school in India forced students to wear cardboard boxes on their heads to stop cheating during exams ([Fig 214](#)). Unseen boxes are donned by children the world over every time they start a school day.

Play time? What play time?

Figure 215: The very different perceptions of brain hemispheres portrayed in a car advertisement. We are meant to be whole-brained and balance the two.

The two hemispheres of the brain are connected by a bridge called the corpus callosum and we are supposed to be whole-brain people getting the best of both 'sides' (Fig 215 overleaf). Once they are divided we become divided in the way we process information into perception. Extremes of left-brain dominance create five-sense 'system' people and right-side domination produces highly-creative people who struggle to function and cope in a left-brain world. Another aspect of the dot-connecting, pattern-perceiving, right brain is to see *context*. Awareness only of dots denies context which comes from seeing how dots connect. An individual dot can look a certain way, but connect that to other dots – provide context – and the dots together look very different to dots by themselves. I spend my life connecting dots between apparently unconnected people, places, organisations and situations. Their meaning and relevance in and of themselves is transformed once connections give them context. Dots can tell you *what* is happening while dot-connected context tells you *why* it's happening. Clearly the Cult doesn't want people doing this or its game will be revealed. The race to manipulate brain processing to see only left-brain dots begins in earnest the moment a child arrives for the first day at school. From here children are 'taught (programmed) by teachers and academics who have been imprisoned in their own left-brain by the same programming system. The best way for children to activate their right-brain is to use their imagination by simply *playing*. They need to be allowed to ad-lib and *imagine* by enjoying this definition of play – 'Engaging in activity for enjoyment and recreation rather than a serious or practical purpose'. This presents such a danger to the Cult's programming strategy that play is being deleted from childhood through homework, the push for longer school days, and the youngest of children being introduced to left-brain activities at an ever earlier age. Democrat presidential candidate Bernie Sanders promised free education and 'Pre-K' (a pre-kindergarten classroom-based preschool program for children under five). This fits perfectly with the agenda to take children from their parents as soon as possible The Sanders website said:

For parents all over the country, taking time off or working fewer hours to care for their children is simply not an option. That leads many families to spend a disproportionate amount of their income to cover the cost of child care and early education.

Figure 216: Take children and young people in the prime of life with all possibility to explore and stick them at a desk all day while telling them what to believe for life. Utterly shocking village idiocy – but exactly what the Cult requires.

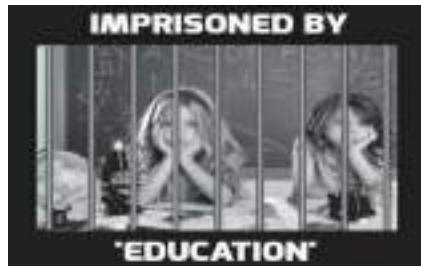

Figure 217: The walls and bars they increasingly build around schools capture the reason for fake ‘education’ – building walls and bars around the mind. (Image Gareth Icke.)

There was no mention of the consequences of parents spending a disproportionate amount of their time away from their kids while the state has control of their minds. No, no – just how to make even easier to spend a disproportionate amount of their time away from their kids. We had the same theme with one-time Democrat presidential candidate Kamala Harris who called for the American school day to be extended to 6pm to align with the adult work day and this was right in line with the agenda for kids which seeks to secure still more time for perceptual programming away from parents. Children sit at desks for hours every day being talked at while outside the Sun is shining and there are trees to be climbed and imagination to be explored (Fig 216). What little ‘time’ is left for children to play has been hijacked by smartphones and videogames that mostly stimulate ... the *left-brain*. John Taylor Gatto, a former teacher in the United States, realised what ‘education’ was really designed to do and wrote a series of excellent books exposing the game. Gatto was New York City Teacher of the Year in 1989, 1990, and 1991, and New York State Teacher of the Year in 1991. He became rather less popular with the authorities when he began speaking out. Gatto said the aim was to subdue creative, inventive, and bright students and make them obedient, subdued and dependent individuals by controlling their school-time and then hijacking what should be free time through homework (Fig 217). He said children on average watched television for 55 hours a week (perception programming) and slept for 56. This left them 57 hours ‘to grow up strong and competent and whole’, but 30 hours of that was spent at school (perception programming), 8 hours preparing for school and getting to and from school, and 7 hours doing homework (perception programming) totalling 45 hours related to school. Gatto went on:

After the 45 school hours are removed a total of 12 hours remain each week from which to fashion a private person – one that can like, trust, and live with itself. Twelve hours. But my kids must eat, too, and that takes some time. Not much, because they’ve lost the tradition of family dining – how they learn to eat in school is best called ‘feeding’ – but if we allot just 3 hours a week to evening feedings, we arrive at a net total of private time for each child of 9 hours ...

...This demented schedule is an efficient way to create dependent human beings, needy people unable to fill their own hours, unable to initiate lines of meaning to give substance and pleasure to their existence. It is a national disease, this dependency and aimlessness, and schooling and television and busy work ... has a lot to do with it.

Figure 218: In a nutshell.

Figure 219: Get where? And why? Gotta, gotta, gotta, get to the end as fast as I can. Enjoy the moment? What moment?

This is exactly the situation the Cult set out to create given that ‘education’ is all about producing children and young people that become adult mind-slaves for life (Fig 218). We hear spewing from the mouths of mind-slave politicians that ‘Education must prepare children for the workplace’. You must spend your childhood working hard, studying and swotting to ‘be someone’ and ‘get somewhere’. Oh, really? Be who? Get where exactly? You must have a career, a job, you must strive, strive, strive, gotta, gotta, gotta, there’s not a minute to be lost (Fig 219). The Red Queen says in Lewis Carroll’s *Through the Looking-Glass*: ‘Now, here, you see, it takes all the running you can do, to keep in the same place. If you want to get somewhere else, you must run at least twice as fast as that!’ In fact, when we understand reality, the best way to ‘get somewhere’ is to stop running and manifest. The current ‘education’ system must be dismantled to emphasise play and imagination to activate the right brain and develop whole people. I left school at 15 to play professional soccer and daydreamed through my school years. Somehow – it must be a miracle – I have managed to write and research a stream of highly detailed books and speak for ten hours a go to audiences around the world without a single note. How is that possible when I am officially so ‘uneducated’? A deeply-programmed alleged member of the ‘alternative media’ once said that I can’t be taken seriously because I ‘didn’t have a degree’. She had one. No further comment necessary. All that I have learned since I left school with no exam passes has been on my own terms. My son Gareth got an ‘E’ in some exams because he cared even less about school than I did. Today he’s a highly intelligent man aware of the world with a highly creative mind that makes him an exceptional singer-songwriter and all-round talent in many fields. There is absolutely no need to deluge young minds with information they will never use hour-by-hour, day after day, when they can easily find that information for themselves later should they want to or need to. The deluge is not for the benefit of children and young people. It’s for the benefit of the Cult and its incessant perceptual programming regime.

Diane Ravitch, an American education historian, policy analyst and writer, summed it up when she said: ‘Sometimes the most brilliant and intelligent minds do not shine in standardised tests because they do not have standardised minds.’ The Cult, however, wants standardised minds and set up the system to get them. Psychiatrist Iain McGilchrist rightly points out that the left-brain is focused upon *knowing ever more about what is already known*. It’s the right-brain and the heart that want to explore and uncover the unknown and have the awareness to understand it. Canadian-born psychiatrist Eric Berne described the perceptual difference between the hemispheres: ‘The moment a little boy is concerned with which is a jay

and which is a sparrow [left-brain] he can no longer see the birds or hear them sing [right-brain/heart].’ This is yet another example of label limitation and division at the expense of the unity of Oneness. The ‘education’ system is about indoctrination of the ‘known’ (allegedly). The Cult doesn’t want us to know the publicly unknown. I am not saying that all mainstream academics and scientists are knowingly suppressing knowledge. They’re in the Bubble, too. I am saying the Cult-asset academics and scientists are doing that which is a relative few. For the scam to work Mainstream Everything in general must also be kept from the truth and diverted into misunderstanding and dead ends. There is also the immense difference between knowledge and *knowing* which ‘education’ cannot teach. It comes from within. The mystic Osho said:

Knowledge has no capacity to dispel ignorance. Knowledge is a false phenomenon. It is not wisdom at all; it is just the opposite of wisdom. Knowledge is borrowed; wisdom is the flowering of your innermost being ... No university can offer it, no scripture can offer it and no scholarship is capable of doing it. They are all impotent efforts, but they have been deceiving millions of people for thousands of years. Yes they make you knowledgeable. To be knowledgeable is one thing, to ***know*** is totally different.

Perception lobotomy

Figure 220: The medicalisation of childhood.

Children and young people are indoctrinated with the Mainstream Everything’s version of history, science, medicine, politics, current events, life, self, all of it. ‘Education’ is a Cult-created programming machine constantly underscored by the Cult-controlled media which I’ll be coming to shortly. Kids that want to question, challenge the orthodoxy, or are plain bored stiff like I was, are called ‘disruptive influences’ and increasingly prescribed mind-altering drugs like Ritalin for ‘attention’ disorders. We have the medicalisation of childhood, medicalisation of growing up, and it extends into colleges and universities as the medicalisation of teenage experience essential to developing emotionally strong, fully-rounded, adults capable of looking life in the eye ([Fig 220](#)). Here we have children in the prime of life sitting in a prison waiting for the bell to ring to enjoy a modicum of freedom (homework apart) which today is defined as time on my smartphone. They are being prepared for an entire life in an adult prison after school becomes work, the teacher becomes the boss, and obeying authority is seen as essential to financially survive in adulthood while, as with childhood, often counting the minutes to home-time. Obey the teacher is replaced by obey the boss in a seamless life of external control in which only the characters and names change. ‘Quick, get up, you’ll be late for school’ becomes ‘Quick, get up, you’ll be late for work’; ‘What will the teacher say?’ becomes ‘What will the boss say?’ Children from the earliest age are programmed by representatives of authority with carrot and stick punishment and reward for those who conform or do not. This, too, is ingrained in the subconscious as a fear of not obeying authority. None of this is by chance.

Charlotte Iserbyt realised this fact when she was a policy advisor to the Reagan administration at the US Department of Education. She describes in her book, *The Deliberate Dumbing Down of America*, how she

saw documents laying out the ‘restructuring’ of American and global education through computerisation designed to make perception programming even more effective. Iserbyt said that what she saw was like ‘communist brainwashing’ and this will become extremely relevant later. One manual by a Professor Ronald Havelock was aptly titled *The Change Agent’s Guide to Innovation in Education*. Iserbyt said she was trained to identify ‘resistors’ who were ‘... those good, smart Americans who realise that anything that has education hanging off the end of it is probably not what they’re looking for’. She was told to ‘go up against them, and actually to go and try to get them to join us through the group process system’. This is the group-think, group-absorption, technique to either suck-in or marginalise opposing views and ideas – a modus operandi employed at every level of human society. What Iserbyt saw was planned in those documents in the 1980s has been rolled out – and worse – all over the world and it is transforming human life as the young subjected to this become adults. Central to mass indoctrination through fake ‘education’ in the United States is the programming operation called Common Core much promoted by big-time Cult asset Bill Gates who turns up in financial support of a long list of Cult agendas. These include mass vaccination of children worldwide. Gates is a very sinister piece of work and there is a lot more to come about him when I get to the ‘Covid-19’ hoax. The pillars of standardised state education (indoctrination) were erected by the One-percent through vehicles such as the Rockefeller and Ford Foundations and today state child programming is dominated by the One-percent Gates Foundation. The fronts may change but the Cult is always in control. Organisations associated with Cult agent George Soros were behind the transformation of the Russian education system based on the Western model after the fall of the Soviet Union. School life was extended by a year, textbooks replaced and schools amalgamated in a period that saw plummeting levels of education and literacy. Soviet education was of course dictated by government, but the Western model of Rockefeller, Gates and Soros is aimed at *global* standardisation of indoctrination and centralised control. I read a book published in 2018 by American teacher Rebecca Friedrichs and the title said it all: *Standing Up To Goliath*. Her 28 years in teaching showed her how children are being politically and perceptually indoctrinated on an industrial scale with tyrannical teaching unions forcing upon young minds what I am calling the Cult agenda. She describes how teachers who can see what is happening and vehemently oppose it are intimidated into silence and acquiescence. This is being done to parents and society as a whole through Cult-instigated political correctness.

I have exposed the plan for decades to delete parental rights and hand control of children and their upbringing to the state (Cult) by giving ever more power to schools and social services to destroy parental rights and control the lives of children. A primary school in England announced it would fine parents for every five minutes they were late picking up their children and threatened to call social services if they took too long. As usual the poorest parents struggling to juggle work to survive with getting to the school on time would be the ones to suffer. Parents fined by schools is a critical line to cross in the power of schools over families and this is already widespread in Britain with parents fined if they take their children on holiday in term time when the cost of holidays is so much cheaper (once again hitting the poorest). The deeply corrupt authorities on the Isle of Wight where I live, with a population of 142,000, revealed through a Freedom of Information Act request that they accrued more than £100,000 in the previous year fining parents and carers whose children had ‘unauthorised absences’. What must the figure be nationally? It’s an Orwellian racket. Schools are becoming dictatorships and tyrannies with surveillance cameras and, in America, police officers on duty preparing kids for their planned adult life in an Orwellian nightmare. It’s getting so extreme that the utterly ridiculous staff at Valley Forge Elementary School in Pennsylvania reported a six-year-old Downs syndrome girl to the police for pretending to shoot her teacher with her fingers. Little children pointing their fingers and saying bang, bang, is now worthy of police attention according to teaching staff who are more programmed than the kids they are programming. A *six-year-old* girl was handed over to the police by the Love Grove Elementary School in Jacksonville, Florida, without her mother being told after a ‘tantrum’ and held in a

facility for two days under a ‘mental health’ law. Police body-camera footage shows the girl walking calmly and quietly with a police officer saying ‘she’s fine, there’s nothing wrong with her’. Those of us old enough know what life was like before the extreme Big Brother state appeared have the radar and experience (those that are in any way awake that is) to see the scale of what is both happening and planned. Children and young people have been *born* into the world as it is and it’s all they have ever known. What are to people like me extraordinary extremes of control gathering by the day are, to young people enslaved in Body-Mind, just ‘how things are’ in human society. Such is the grip that the Cult-controlled state has on perception that many even demand more control and deletion of freedom which they and their own children will have to live with for the rest of their lives. Kyung Hee Kim, professor of education at the College of William and Mary in Virginia, ran a study involving a very large number of school-age children between kindergarten and 12th grade which tracked the effect of (the Cult’s) ‘education’ programming of the young. The study found the following as children were processed by the system:

A massive decline of creativity [right brain] as ‘children have become less emotionally expressive [right brain], less energetic, less talkative and verbally expressive, less humorous [right brain], less imaginative [right brain], less unconventional [right brain], less lively and passionate [right brain], less perceptive [right brain], less apt to connect seemingly irrelevant things [right brain], less synthesizing [right brain], and less likely to see things from a different angle [right brain].

I rest my case, M’Lud ([Fig 221](#)).

Figure 221: What the ‘education’ system does to young people. Tell them to fuck off, kids. (Image David Dees.)

Sending them crazy

When do you ever hear political parties and ideologies, whether ‘Left’, ‘Right’ or ‘Centre’, challenge what and how children and young people are ‘taught’? They argue incessantly over the money spent on ‘education’ and class sizes. They say next to nothing about ‘education’ as a programming operation from first to last. Some are Cult agents (very few) and the rest are as perceptually programmed as anyone after being subjected to the same download. There is a war on children, mentally and emotionally, and this is some of the background to the suicide rate among the young dramatically increasing through a combination, among other things, of exam stress (what the hell are the parents doing?) and the multiple pressures of the smartphone, social media, era which is orchestrated through Cult-controlled Silicon Valley. Adding still further to these pressures is the often near life-long levels of debt imposed on the young to pay for their college and university ‘education’. The merciless Cult-driven state has manipulated young people to pay for at least decades for their own *programming* through empathy-deleted universities that operate like multinational corporations selling a stream of made-up, for-profit-only, shit and useless ‘courses’ to dip their snouts in an ever-deeper trough at the expense of the young. To them young people are just commodities or punters to be exploited like the worse kind of spiv and to be indoctrinated with The System’s perceptual blueprint. The outstanding student loan ‘bubble’ in the United States accrued to pay outrageous college fees has passed \$1.6 *trillion*. This staggering figure

represents devastated young and adult lives crushed by debt and thus ... *control*. Analysis by the Institute of Fiscal Studies for the UK Department of Education suggested that one in five students would be financially better off if they had not gone to university and instead left school to get a job. It must be a similar case elsewhere. Wayne Johnson, former CEO of First Performance Corporation and Reunion Student Loan Finance Corporation, resigned his post at the US Department of Education to campaign for justice on this issue including cancellation of most outstanding student debt owed to the Federal government (though not to private Cult corporations). Johnson said that if the loan crisis is not fixed we would see the 'ever-increasing destruction of the fabric of America, it's that profound – people are not getting married, not having children'. This was always the plan as part of the transformation of human society. Tony Blair introduced student fees in the UK when he was prime minister and they have since soared as they were always intended to. Everything that Blair does and says is the Cult doing and saying. The man should be in jail for crimes against humanity for so many reasons including life-crippling student debt.

More parents are seeing through the calculated fraud and homeschooling their children either individually or in small groups with great success in both critical and creative thinking and career advancement. Eliezer Yudkowsky, the well-known American AI researcher and author of several academic books on the subject, never attended high school or college and had no formal 'education'. 'Liberal' Germany bans homeschooling – a policy instigated by the Nazis – and so do 'liberal' Sweden and the Netherlands. If you want to sell tyranny do it under the banner and smokescreen of liberal democracy. As homeschooling rapidly expands the pressure to limit or ban education outside the school system is growing. Parents are raided by armed police in Germany and children removed from parents for the crime of not wishing to have them indoctrinated by the state. My own preference is for 'self-directed learning' in which children pursue their own interests and experiences and in doing so learn all the other basic skills. If you research your interest you need to learn to read; if you compile information about your interest you have to learn to write. Children can learn what they *choose* to learn and as a by-product learn what they *need* to learn. Their minds don't have to be filled with what is irrelevant to most of them just because the state insists on that for its own ends. Children have their whole life to learn what they need to know from the far more relevant perspective of where their life takes them. How many ever use algebra once they leave school? What is the benefit to them of spending hours of their childhood working out what X equals??

A study by Dr Peter Gray, an American psychology professor at Boston College, found that children's mental health improved significantly when they engaged in self-directed education with more freedom and control of their own learning. He found after studying the data that the mental health of children is directly related to school attendance with psychiatrist visits falling dramatically during school holidays away from the pressure of lessons, rules and exams. They spiked once again when a new term began. Gray said that available evidence suggests 'quite strongly' that school is bad for children's mental health: '... behaviour, moods, and learning generally improved when they stopped conventional schooling.' He added that school is bad for 'physical' health, too: 'Nature did not design children to be cooped up all day at a micromanaged, sedentary job.' One of the most profound forms of mind control is familiarity. Once something becomes familiar it is no longer questioned and becomes another integrated subconscious program and assumption. Kids are born and then pretty soon they go to school and college for the rest of their childhood, right? Everyone knows that – it's how things are. Draw the 'education' system out of the subconscious and make it conscious. Now look again at how it works and the consequences for children. *Oh my God, it's a programming operation. Exactly.* The urgency with which this needs to be acknowledged can be seen in the figures for young people suicide and extreme levels of stress happening across the world. Suicide attempts by children under the age of 14 in Israel alone have risen by 62 percent in a decade, according to the Israeli National Council for Children. In Britain children under 11 contacting the help service Childline over suicidal thoughts and feelings increased by 87 percent between 2015 and 2020.

The Cult is killing childhood and parents need to get their arses in gear *fast* because it's meant to get much worse. A 2013 study by the American Psychological Association found that school is the main source of stress for teenagers with 83 percent of teenagers questioned saying school was 'a somewhat or significant source of stress' while 27 percent said they suffered from 'extreme stress' during the school year. This dropped to 13 percent during school holidays and out-of-school stress would fall even further if you delete smartphones and social media. Much of the academic pressure on kids comes from parents who have slavishly accepted the utter baloney that exam passes = intelligence and exam results decide success or failure for the rest of their lives. How many young people feel a failure because they didn't get high enough exam grades? Who gives a shit? You are *All That Is, Has Been, And Ever Can Be*.

Are you happy?

No.

Are you fulfilled?

No.

Are you super-stressed?

Yes.

So what's good about school?

I know what X equals. No, hold on, I forgot.

Most outrageous are those parents who treat their children and their academic success as a personal statement about themselves in some bizarre exercise in reflected glory which includes the follow-through of what the parents 'want' their children to be. 'Your father wants you to be a banker'; 'Your mother wants you to be a lawyer'. Well, tough – I'm going walking in India. Bye. This is nothing less than child abuse. We bring children into the world and we can give them advice, but it's *their* life, not ours. The late and very great American comedian, George Carlin, said: 'Here's a bumper sticker I'd like to see ... we are proud parents of a child who has resisted his teachers' attempts to break his spirit and bend him to the will of his corporate masters.' The Cult's war on children in pursuit of perceptual control is getting so extreme and intense that the consequences are destroying whole generations. Parents worldwide have a responsibility to say '*enough!*'

Postage stamp society

Young minds are at the mercy of the programming system throughout their key perception-forming years from at least aged four to nearly 20. Most – thankfully not all – absorb the program subconsciously if not always consciously and without the de-programming process called 'awakening' those beliefs and assumptions will drive their perception of everything for the rest of their lives. Ironically, and not by chance, those that teach (program) the next generations are academics who have rarely, mostly never, left the 'education' program. They absorb what they are told in their own 'education' and pass exams to prove that. Then they head for teacher training colleges and courses which further underpin the program and show them how to indoctrinate the next generation with The System's (the Cult's) version of everything. Freemasons climb their hierarchy in compartmentalised sections called 'degrees' and ambitious young people (and/or their parents) seek the ultimate goal in 'education' of securing a 'degree' from the false assumption (it's *all* assumption) that a degree is confirmation of intelligence. It is not. Some of the most intelligent people I have met have never been near a university let alone a 'degree' while

some of the least intelligent have had ‘educational qualifications’ coming out of their ears. This is not to say you can’t have a degree *and* be intelligent – only that one doesn’t have to mean the other and often does not. With both Freemasons and ‘education’ the degree measures the degree of programming thanks to another assumption that the information imparted in the lodge or the college is factually correct. Much of it isn’t and indeed Freemasons are told one thing in one degree and something different in another to keep them in ignorance of what the inner core knows. Armed with a degree, or at least some degree of perceptual programming, young people leave the halls of academia and go out into the ‘world’. Here they meet others who earlier went through the same programming machine and overwhelmingly accept the same *assumptions* about life, society and reality. They have all been given, and largely absorbed consciously and subconsciously, the system’s (Cult’s) version of history, science and reality, medicine, human biology, world events, what’s possible and impossible, the whole shebang. Together this forms what I have dubbed the Postage Stamp Consensus which is a staggeringly narrow band of perceived possibility designed specifically to keep humanity in the Bubble ([Fig 222](#)).

Figure 222: Jump off and RUN! (Image Gareth Icke.)

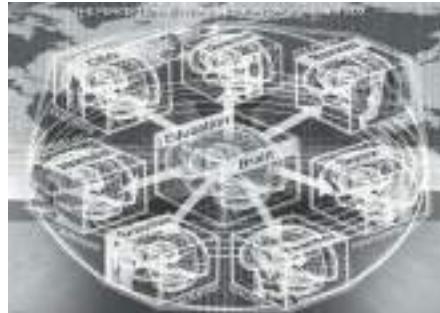

Figure 223: Those serving the institutions overwhelmingly have the same perceptions of reality because they have all been through the same ‘education’ programming system. Therefore: ‘Everyone knows that!’ (Image Neil Hague.)

Figure 224: A perfect description of those who believe what The System tells them.

Young people entering the adult workplace now have the assumptions they downloaded at school and college confirmed by almost everyone around them who earlier downloaded the *same* assumptions at their school and college. From this comes ‘everyone knows that’ syndrome. Even more accurately it should be ‘everyone *remembers* that’ syndrome. This is all it is – *memory*. The memory (conscious and

mostly subconscious) of what you were told some time and what everyone remembers because everyone was told the same thing. Indian ‘mystic’ Jaggi Vasudev (known as Sadhguru) talks about ‘mistaking memory for intelligence’ and he’s spot on. How can we intelligently see things as they are when memory (perception programming) is constantly telling us what we should believe they are? Sadhguru describes how people live out of their memory and not their intelligence and this is what The Program sets out to achieve. Postage Stamp Consensus and ‘everyone knows/remembers that’ are different descriptions of the same program which means that the institutions of politics, government administration, law, science, academia, medicine, media, business, banking, etc. are all founded (except the inner cores connected to the Cult) on the same assumptions about the world and reality when they are nothing more than illusions ([Fig 223](#)). They are founded (quantum physics excepted) on the world being solid, people being only their bodies and labels, everything being apart from everything else, and only through ‘physical’ change can anything *be* changed. Don’t change your perceptions and assumptions to instigate societal change. If you want change you have to physically protest on the basis of your current perceptions and assumptions which have contributed to the very situations you are protesting about. It is sobering to think that governments and politicians are making laws all over the world based on assumptions about reality that are utterly bogus. Politicians are arguing over what should happen to everyone and everything from perceptions of a world that doesn’t exist except in the way it appears to be experienced. No wonder the world is in the state it is. Which deluded programmed mind are you going to vote for, the one with the blue rosette, or the red, yellow, or the green? *Mmmm*, hard isn’t it? The Cult has created a system in which programmed ‘leaders’ clueless about reality impose the Cult agenda upon a population enslaved in the same ignorance if they only get their perceptions from the Mainstream Everything. Talk about the blind leading the blind. Watch that cliff now ([Fig 224](#)). More than that the institutions and personnel of the Postage Stamp continually confirm to each other that the nonsense is valid and each make their decisions about what to do from those flawed assumptions. Governments make laws, including those relating to health care, on the basis of what Postage Stamp science says. They instigate policy decisions on the basis of what Postage Stamp academics say. It’s a mad house in which crazy is credible and sanity is crazy. What a mess and I have likened the world to putting 20 kittens in a room with 100 balls wool and coming back two hours later to say: ‘Okay, sort that out’. Fortunately bringing harmony and sanity to human society does not have to be done ‘physically’ and cannot be because there is no ‘physical’.

Figure 225: Don’t think for yourself – prison is lovely. (Image Gareth Icke.)

Figure 226: Baa, baa, baa.

Every aspect of the Cult agenda comes with a protection system to stop those with a mind of their own demolishing the ludicrous assumptions which humanity has to believe for the agenda to prevail. This is where censorship comes in and one major example of that is peer pressure – the paramilitary arm of ‘everyone knows that’ syndrome which seeks to impose the worst of all censorship and that is self-censorship. I have seen this described as the tyranny of silence. There is no debate or conversation as people with different views keep their mouths shut to avoid peer pressure consequences ([Fig 225](#)). Peer pressure is a term for those who have allowed themselves to be programmed into believing mega-untruths and insisting that everyone else does the same. If people don’t acquiesce then ridicule, dismissal, abuse and even a lost job or career will follow. Intimidation and fear of consequences makes so many stay silent about what they think and leaves the field for ‘everyone knows syndrome’ to dominate perception unchallenged. Well, fuck that, I say. Let people follow others if they want – I’ll follow myself, thanks ([Fig 226](#) overleaf). Those with open minds are the black sheep of the flock or herd and it’s such a wonderful place to be. If you are there – *celebrate*. Would you want to be part of the herd?? Shit, what a nightmare. To be called mad by a system that’s insane is a confirmation of your sanity. You say I’m mad Mr System Believer? *Yippee*, thank-you, so kind. I refer to this peer pressure to conform as ‘psychological fascism’ and that’s what it is. We now have ever more extreme psychological fascism in the form of political correctness and the Climate Change Cult which together stand beneath the umbrella term of ‘Woke’. The emergence of social media as a vehicle for black sheep abuse by the herd mentality has added to the pressure to keep your head down. Well, fuck that, too, I say. That’ll be the day.

Media software

Figure 227: ‘Journalism’ the world over with honorable exceptions.

Cult ‘education’ instils the foundation perception program while the mainstream media is the constant top-up and confirmation that also plays the role of perception enforcer. Speak publicly in ways that challenge the Cult agenda and see what happens. I say *mainstream* media. Even much of the ‘alternative’ involves those who have been through the same perceptual programming and accepted its validity. Swathes of the ‘alternative media’ have ridiculed me over the years as much as the mainstream has for my ‘far-out’ concepts. Many of these same people with a Christian background believe that a man was born to a virgin mother, walked on water, turned water into wine, fed 5,000 from a few loaves and fishes, died on a cross, came back to life in a cave, and floated up to heaven promising to return on a cloud. Followers of Judaism, among them mainstream journalists and media owners that have ridiculed me, claim to believe that God parted the Red Sea and the wife of some bloke called Lot was turned into a pillar of salt. One thing you see very clearly when you operate outside the programmed ‘normal’ is that people don’t demand evidence for their own beliefs on anything like the scale they demand for others. Postage Stamp programming is again driving the perceptions and behaviour of the media. At ownership and key editorial levels you will find in-the-loop Cult operatives. The teeming majority of journalists, however, have no idea there is a Cult never mind that it controls their industry. They report the world from the perspective of their Postage Stamp programming and anything or anyone they come across that has disembarked its narrow band of perception is, by definition, mad, bad, or both. That mentality

dominates the nature of their reporting and treatment of individuals and organisations even without the added limitations set by their employers on what can and cannot be said ([Fig 227](#)). We have the ubiquitous subconscious programming at work in controlling the actions of the entire media as the propaganda arm of the Mainstream Everything: The only scientific truth comes from mainstream scientists; the only medical truth comes from doctors; valid explanations of world events come only from governments and mainstream commentators, and so it goes on. I watched an interview with a former mainstream journalist who had partly seen through the manipulation and good for her. She said that I say some ‘fantastic’ things about education, but dismissed the bit about a shapeshifting royal family. I understand why from the perspective of ‘normal’ and her life-long ingrained conscious and subconscious perceptions about reality. What I say about education is within her sense of the possible, so that’s fine. Once you breach the limits of programmed ‘normal’ and ‘possible’, that’s not fine. ‘I can’t get my head around that’, people say. *Exactly*. So try the heart and expanded consciousness. Give that a go. There are many from what is called the ‘Left’ and ‘Right’ who agree with what I say about the world from their perspective of Postage Stamp normal. They won’t say so publicly because they don’t want to be associated with things I say that are off the Postage Stamp. The foundations for these responses are (a) the world is solid so what he says can’t be true and (b) what would people think about me if I said he talked sense?

Figure 228: The BBC version.

Reporting parameters set by media owners and executives are another generator of self-censorship with journalists knowing the lines they can’t cross without resistance or the door. As a result they don’t cross them. No report or information is offered to their media bosses that breaches the dyke. At that point they are no longer journalists and little more than propagandists for the Cult’s version of everything. The money’s good, though, eh? The BBC in Britain is particularly adept at such ingrained censorship which it tries so hard to hide behind pompous self-congratulation about unbiased reporting when it is institutionally Postage Stamp biased. By the terms of its charter the BBC is supposed to be politically neutral yet exercises its political and system bias by what it leaves out, through the views of the guests it invites to pontificate on its output and by not inviting those who have a different perspective to the Postage Stamp ([Fig 228](#) overleaf). They’ll let you debate how much money should be in circulation but absolutely not the fact that private banks are lending people and governments credit ‘money’ that has never and will never exist. The BBC has outrageously skewed the climate change debate so it’s not a debate at all by virtually banning views and information that expose the hoax behind the orthodoxy. You don’t have to come out and say ‘vote for so and so’ or ‘believe this or that’ to manipulate information in favour of your political line and I am talking about a political *agenda* line and not necessarily *party* political in nature. The BBC is a department of the permanent government and takes its line on everything no matter who is officially ‘in power’. BBC ‘journalists’ are in fact little more than civil servants who know their place and where not to go. If you get your ‘truth’ from the BBC, well, by definition, you *don’t* because you *can’t*. It’s the same with all of them, but the BBC’s pompous self-congratulation about its ‘quality journalism’ is particularly sickening and stomach-turning, not to say

laughable. Journalist Tareq Haddad resigned from *Newsweek* in late 2019 claiming that editors stopped him reporting the story about a whistleblower at the OPCW, the world chemical weapons ‘watchdog’, who exposed how the organisation manipulated the facts to allow a chemical attack in Syria to be blamed on Cult-target President Assad. This was done by suppressing evidence that proved Assad had nothing to do with it. The attack was really staged by US-backed terrorists as an excuse to demonise Assad and justify unleashing missiles against Syria – a No-Problem-Reaction-Solution. Haddad confirmed that the media is the propaganda arm of the government-military-intelligence-industrial complex or what I call the Cult:

The US government, in an ugly alliance with those [that] profit the most from war, has its tentacles in every part of the media – impostaers, with ties to the US State Department, sit in newsrooms all over the world ... Inconvenient stories are completely blocked. As a result, journalism is quickly dying. America is regressing because it lacks the truth.

The Cult owns governments as it owns the media as it owns the armament companies. The late Dr Udo Ulfkotte, a leading journalist in Germany, went public to reveal how he was made to publish articles in his own name written by intelligence agencies or lose his job. The sources included the CIA even though he was working in Germany. The Cult has no borders.

Fake ‘grassroots’ programming

Former CBS News investigative reporter Sharyl Attkisson revealed in a Ted Talk how fraudulent grassroots movements, funded by political, corporate, or other special interests (the Cult), manipulate public perception. The technique is known as ‘astroturfing’, as in fake grassroots. Special interests hide behind coordinated groups and individuals who start Facebook and Twitter accounts, write letters to newspapers and post comments in support or opposition to something. The idea is to give the false impression that a grassroots movement is speaking and that opinion is going a certain way when neither is true. The media, naturally, very rarely question the origins or funders. An excellent example of astroturfing was when American Zionist communications firm Edelman launched a Walmart-supporting ‘grassroots’ group called Working Families for Walmart which turned out to be funded by Walmart.

Attkisson said astroturf groups try to change public opinion and marginalise opposition to what they want by attacking them and appearing to be part of a grassroots campaign that doesn’t actually exist. You see this throughout the Woke agenda of climate change, transgender activism, political correctness, anti-racism and other connected issues with the media reporting them as if they are spontaneous and genuine. Surveys and studies are funded by astroturfers to produce the answers and conclusions they want to advance their propaganda. This happens constantly with regard to climate change, transgender, drugs and vaccines. Attkisson highlighted the manipulations of Wikipedia which she called an astroturf dream come true:

Built as the free encyclopaedia that anyone can edit, the reality can’t be more different. Anonymous Wikipedia editors control and co-opt pages on behalf of special interests. They forbid and reverse edits that go against their agenda. They skew and delete information in blatant violation of Wikipedia’s own established policies with impunity, always superior to the poor schlubs who actually believe anyone can edit Wikipedia, only to discover they’re barred from correcting even the simplest factual inaccuracies.

Wikipedia is a shocking operation. The Off-guardian.org website pointed out that Wikipedia’s nine billion page views per month are overseen by just 500 active administrators and their real identity in many cases remains unknown. ‘Moreover studies have shown that 80% of all Wikipedia content is written by just 1% of all Wikipedia editors, which again amounts to just a few hundred mostly unknown people.’ Sharyl Attkisson recalled a huge scandal when Wikipedia officials were caught offering a PR

service that skewed and edited information for paid publicity-seeking clients in utter violation of Wikipedia's alleged policies:

All of this may be why, when a medical study looked at medical conditions described on Wikipedia pages and compared it to actual peer-reviewed published research, Wikipedia contradicted medical research 90 percent of the time. You may never fully trust what you read on Wikipedia again, nor should you.

Figure 229: Hijacking global perception.

You won't be surprised to know that Wikipedia is an agency of the agenda as a platform where billions get their information about people, events and every other subject (Fig 229). Israel (its Sabbatian-Frankist control system) has a colossal astroturfing and opinion-manipulating army driving its global 'Hasbara' campaign to promote the narrative of what I call the 'Anti-Semitism Protection Racket' (more shortly) and the far-right Sabbatian-Frankist apartheid Israeli government. Hasbara means 'explaining' which *really* means explaining what the Sabbatian-Frankists want you to believe. Ultra-Zionist ownership of the media in the United States is infamous although the Protection Racket intimidates most people from stating the obvious. Where there is not direct ownership there is a whole network operating out of Israel and exposed in *The Trigger* that manipulates media coverage of Israel. *Jewish News* reported in 2019 about an email sent to the wrong address by Lorna Fitzsimons, director of BICOM (the British Israel Communication & Research Centre). The email, which was never meant to be widely distributed, said: 'Throughout the weekend, BICOM staff were in contact with a whole host of BBC and Sky News desks and journalists, ensuring that the most objectively favourable line was taken, and offering talking heads, relevant to the stories unfolding.' Fitzsimons went on to describe a BICOM trip to Israel by a BBC news presenter:

Bicom has one of BBC News' key anchors on a bespoke delegation. When planning her very first trip to the region, Sophie Long got in touch with Bicom to see if we could help her out with meeting [sic] in the region. Sophie is now spending three days of her trip with Bicom Israel, taking a tour around the Old City, meeting [Israeli government spokesman] Mark Regev... as well as visiting Ramallah and Sderot.

This is how your 'news' is manipulated by ultra-Zionism alone every day. If you read *The Trigger* the scale on which this is happening out of Israel worldwide will blow your mind. Add into the mix the expanded definition of 'anti-Semitism' which includes criticism of Israel and Zionism and you see how any balanced coverage of Israel (Sabbatian-Frankists that control Israel) has long past. Ultra-Zionist Fitzsimons, a former Labour Party MP and president of the National Union of Students, said in the email that BICOM had 'briefed Jonathan Ford, the *Financial Times* leader writer for his upcoming leading article'. I wonder if the Palestinians had, too? That's obviously a rhetorical question. The now shocking scale of Sabbatian-Frankist control worldwide hiding behind 'Israel' was further confirmed, as with my own speaking ban from Australia in 2019, by the experience of former Pink Floyd singer Roger Waters and American journalist Abby Martin who are both critics of Israeli government treatment of Palestinians. *American Major League Baseball* banned advertising for Waters events on its platforms on the say-so of Rothschild-created B'nai B'rith International who have been on my case many times. B'nai B'rith president Charles Kaufman and chief executive Daniel Mariaschin said Waters was 'an avowed

anti-Semite whose views on Jews and Israel far exceed the boundaries of civil discourse'. This is Orwellian code for 'Waters tells the truth so we have to shut him up'. Abby Martin is suing the state of Georgia after she was prevented from speaking at Georgia Southern University for refusing to sign a pledge of allegiance to *Israel*. Some 28 states have so far mandated loyalty pledges to Israel to block exposure of the actions of its government, military and fantastic web of lobby groups. That is worth pondering for a moment to take in the full implications of Sabbatian-Frankist power in the United States. American citizens cannot speak in a country that claims free speech rights guaranteed by the First Amendment unless they sign a pledge of alliance to a country of a few million people 5,000 miles away. But no – saying that Israel has fantastically disproportionate global power compared with size and numbers is an 'anti-Semitic' trope even though it's blatantly true. This is what happens where the Cult is in control.

Forest protection agency

We now have global 'news' spewing out the Cult system's version of everything 24/7 on channels so many in number I'm sure they must breed overnight like luminous jackets appear to do in Britain. Media 'diversity' is a joke. Newspapers and TV channels may be biased to one political party or other, but they are all biased in support of the *same system* – the same *Postage Stamp*. They differ on the twigs while all promote the same forest. Arguments over twigs present the illusion of diversity. Challenge the forest, the structure of control and manipulation, and the truth about 'diversity' becomes self-evident. They *all* promote and protect the forest as I've found again and again in the last 30 years. The media first ridiculed me on a historic scale before turning to abuse and demonisation which morphed more recently into outright ignoring or censoring me. These phases directly relate to the scale of public interest in my work which has been growing exponentially year on year. That Icke is exposing the forest – *laugh* at him. Er, that didn't work – *demonise* him. Oh no, *that* didn't work – *censor* him! The censorship was never more obvious than with the publication of my absolutely explosive book, *The Trigger*, which exposes who was really behind the attacks of 9/11 and it wasn't 19 Arab hijackers working for Osama bin Laden. In revealing the central players in that horror I also reveal the Cult and its control system. It is *so* explosive and perceptually transforming that the usual suspects didn't even seek to attack me and the book as they normally would. Abuse would give the content publicity and they want the fewest number possible to know it exists. One of the main ways the Cult has sought to demonise me is through its anti-Semitism industry, or Protection Racket. Its method of operation is to condemn anyone (especially Jewish people) who criticise the government of Israel as 'anti-Semitic (which really means anti-Arab as I have explained many times). Cult gofers, many of which won't even know there *is* a Cult, have used this label to block my public events and media appearances including a ban by the Australian government from speaking in that country on the say-so of one ultra-Zionist asset and pressure from media outlets owned by Israel-fanatic Rupert Murdoch. This censorship network is a protection racket to protect the Cult from exposure and not Jewish people from discrimination. Jewish people who don't conform to the narrative are attacked even more vociferously than anyone else.

I did two interviews with the now Rupert Murdoch-owned TalkRadio in Britain which at the time of writing have accrued in excess of three million views on YouTube. The ultra-Zionist censor group, the Campaign Against Antisemitism (CAA), complained to the station for having me on because of 'anti-Semitism' even though neither Israel nor Zionism was discussed in either interview. Several TalkRadio programmes were later sent copies of *The Trigger*, but not one would have me on to discuss the content despite the previous two getting such big YouTube audiences. Protecting the forest is far more important to media owners than money. The Cult ensures their major assets are swimming in that. No British national newspaper or radio station would even mention *The Trigger* and 5,000 media releases sent out to newspapers, radio and television across Britain, Europe and North America met with no mainstream response. A TV booker told me that a well-known British television talk show refused to have me on

his show because I 'deny the Holocaust'. *I don't*, if you read my books, but he wouldn't know that because he takes his cue from other media promoters of The System. The mainstream media operates like The System in general with the perceptually-programmed confirming to each other that their perceptual-programming is the truth. Cult assets lie and misrepresent people; the media report the lies unchallenged; other media assets believe the lies and accept them as their reality; and they then repeat and further circulate the lies as 'everyone knows that' truth. Copies of *The Trigger* were sent to the Russian 'alternative' TV station RT in both London and Moscow. They didn't want to know either. RT is funded by the Russian government and as such conducts journalism with regard to the West more in the way the Western media should be doing. I'm glad RT exists from that perspective. It questions what the Western media refuses to do *except* when it comes to the Russian government. RT journalistic values are then immediately ditched and cap-touching 'yes sir, no sir', kicks in. I have been writing and talking for 30 years about all the subjects that RT covers and although it claims to be 'alternative' they have never had me on their news programmes while preferring many who from my perspective are nowhere close to 'alternative'. Why would a Russian government-funded station not want to discuss a mountain of evidence that the American government lied at every turn about 9/11?? I was approached out of the blue for a substantial feature interview by an RT reporter called Polly Boiko in September, 2019, which she said they wanted to go quickly to air. She and a crew came to my house soon after with a view to almost immediate transmission. They left after filming with me for hours and said they hoped it would be broadcast within days. As I write the best part of a *year* later I am still waiting. The mainstream media basically says question nothing; RT's motto is 'question more'; but I say question *everything*. That makes me an outsider to all of them. I dismantle the forest which their owners in multiple forms are pledged to protect. The Cult knows that seeing only the twigs keeps you in Body-Mind with a sense of apartness and twigs are not a problem. Seeing the forest and how it all fits together sets you free and that's a *BIG* problem. *Censor him!*

By the few, for the few

Incessant concentration of media ownership is the Cult gathering ever more control over what people see and hear to dictate perception and behaviour across the world. Major corporations (in the end *one* Cult corporation) have secured global ownership of newspapers, radio, television and the Internet through Silicon Valley and Pentagon agency DARPA which I'll come to shortly. The media once had some diversity of ownership and that could not be allowed to continue. Diversity is the enemy of central control and the campaign began to concentrate power for the benefit of the Cult. As recently as 1984 there were still 50 'independent' media companies in the United States. By 2019 some 90 percent of the US media was controlled by just *four* – Comcast (NBCUniversal), Disney, AT&T (WarnerMedia) and Viacom. The last two are owned by the National Amusements corporation. Control over what you see and hear is now ridiculously narrow and planned to get even more so. Political leaders sanction this as you would expect when the Cult owns politics as it owns major media. Such concentration allows what is written and broadcast to be centrally dictated and focused only on the twigs while exposure of the forest is censored. You can see video compilations on the Internet of TV presenters in cities and communities across America reading the same stories word for word and repeating with guests the same scripted phrases and talking points to push the same political agenda. There was once such a thing as 'independent radio' in Britain and I worked at a station in Birmingham called BRMB. It was owned by a single company and had an independent operation for local news. Today those stations are owned by corporations with centrally-dictated news broadcasts and even music playlists. I was libelled by the usual suspects in the UK in 2017 with outrageous claims about what I am saying. I saw the same lies repeated – again almost word for word with the same headline – on a series of newspaper Internet sites. When I checked I realised they were all owned by the same corporation then called Trinity Mirror and now Reach PLC. This is what that company owns (not an exhaustive list) and it will give you an idea for what I mean

about the centralisation of media power over what you see and hear:

National newspapers: *Daily Mirror*, *Sunday Mirror*, *Daily Express*, *Sunday Express*, *Daily Record*, *Sunday Mail*; *Western Mail*; *The Sunday People*; *Irish Daily Mirror*, *Irish Daily Star* (50% ownership). Local and regional newspapers; *Accrington Observer*, *Anfield & Walton Star*, *Barking & Dagenham Yellow Advertiser*, *Bexley Mercury*, *Birmingham Post*, *Birmingham Mail*, *Sunday Mercury*, *Bootle Times*, *Bracknell Standard*, *Brent & Wembley Leader*, *Bristol Post*, *Buckinghamshire Examiner*, *Buckinghamshire Advertiser*, *Chester Chronicle*, *Chronicle Extra* (Newcastle upon Tyne); *Colne Valley Chronicle*; *Coventry Telegraph*; *The Crawley News*, *Crewe Chronicle*, *Crosby Herald*; *Derby Evening Telegraph*; *Dover Express*, *Ealing Gazette*, *Ealing Informer*, *Ealing Leader*, *Ellesmere Port Pioneer*, *Enfield Advertiser*, *Enfield Gazette*; *Evening Chronicle* (Newcastle upon Tyne); *Evening Gazette* (Teesside); *Express & Echo*, *Fomby Times*, *Fulham & Hammersmith Chronicle*; *The Glaswegian*, *Gloucester Citizen*, *Gloucestershire Echo*; *Haringey Advertiser*, *Harrow & Wembley Observer*, *Harrow Informer*, *Harrow Leader*, *Havering Yellow Advertiser*, *Heywood Advertiser*, *Hightown Books*, *Hinckley Times*, *Hounslow Borough Chronicle*; *Hounslow, Chiswick & Whitton Informer*, *Huddersfield District Chronicle*, *Huddersfield Examiner*, *Hull Daily Mail*; *Ilford & Redbridge Yellow Advertiser*, *The Journal* (Newcastle upon Tyne); *Kensington & Chelsea Informer*, *Leicester Mercury*, *Lewisham & Greenwich Mercury*, *Liverpool Echo*, *Loughborough Echo*, *Manchester Evening News*, *Manchester Metro News*, *Maghull Star*, *Middleton Guardian*; *Mid Devon Gazette*; *Mitcham, Morden & Wimbledon Post*; *Neath Guardian*; *North East Manchester Advertiser*, *North Devon Journal*; *North Wales Daily Post*; *Nottingham Post*; *Oldham Advertiser*, *Ormskirk Advertiser*, *Paisley Daily Express*, *The Press* (Barnet and Hendon); *Prestwich Advertiser*, *Reading Post*, *Rochdale Observer*, *Rossendale Free Press*, *Runcorn & Widnes Weekly News*, *Salford Advertiser*, *Slough Express*, *Stockport Express*, *Macclesfield Express*, *Wilmslow Express*; *The Sentinel* (Staffordshire); *Surrey Advertiser*, *Southport Visiter*, *South Manchester Reporter*, *South Liverpool Merseymart*, *South Wales Echo*; *South Wales Evening Post*, *Staines Informer*, *Streatham, Clapham & West Norwood Post*; *Sunday Sun* (Newcastle Upon Tyne); *Surrey Herald*, *Surrey Mirror Advertiser*, *Sutton & Epsom Post*, *Tameside Advertiser*, *Glossop Advertiser*, *Uxbridge & Hillingdon Leader*, *Uxbridge Gazette*; *Walton & Weybridge Informer*, *The Wharf* (Canary Wharf). *Scottish and Universal Newspapers*: *Trinity Mirror Scotland*, *Airdrie and Coatbridge Advertiser*, *Ayrshire Post*, *Blairgowrie Advertiser*, *Business 7*; *Dumfries and Galloway Standard*, *East Kilbride News*, *Galloway News*, *Hamilton Advertiser*, *Irvine Herald*, *Kilmarnock Standard*, *Metro Scotland*, *Paisley Daily Express*, *Perthshire Advertiser*, *Scottish Business Insider*, *Stirling Observer*, *Strathearn Herald*, *The Lennox Herald*, *West Lothian Courier*, *Wishaw Press*. Digital online brands: Belfast Live; Dublin Live; Examiner Live (Huddersfield); Glasgow Live; Gloucestershire Live; Leeds Live.

When you look around news shops and stands and see all those newspapers and magazines on every conceivable subject it appears that media diversity is alive and well. Check who owns them and you realise that media diversity is history. I list in my book *Human Race Get Off Your Knees* the media outlets from television to magazines then owned by Time Warner. It is extraordinary in both length and range of subjects and goes on for more than one and a half pages. Two of America's most prominent newspapers, the *New York Times* and *Washington Post* are both owned by the same elite. The *Times* has been owned by the Zionist Sulzberger family since 1896 while the *Post* was controlled from 1930s by the Zionist Graham-Meyer family before being sold to Amazon's 'world's richest man' Jeff Bezos in 2013 whose company has close ties to the CIA. No potential bias there, then.

The Devil's Playground – media endgame

Figure 230: Cult to its DNA.

People get most of their information today in the form of 'news' through Cult-controlled Silicon Valley corporations such as Google, YouTube, Facebook and Twitter. Add to that the domination of the global book market by Amazon. The Cult created the Internet to serve its agenda for human control. In terms of the subject at hand they want all information to eventually be transferred to the Internet because then it can be censored through algorithms of artificial intelligence without even human involvement once the codes are in place. The Internet for all its short-term benefits has been a Trojan horse from the start and the real reason – or reasons – for its creation will become clear in later chapters. What a surprise that the Internet was made possible by the Cult-controlled US Defense Advanced Research Projects Agency (DARPA), the technological development arm of the Pentagon, which has seed-funded Silicon Valley corporations along with In-Q-Tel, or IQT, the technology-funding vehicle of the CIA ([Fig 230](#)). The Pentagon, DARPA and the CIA are all Cult assets and agencies of the 'Deep State'. When the Internet was launched it had to be censorship-free to attract the global audience necessary for the DARPA (Cult) goal of making the World Wide Web the central pillar of human society. In this essential honeymoon period we enjoyed the free flow of information which allowed people like me to circulate research to expose the Cult. This was an unfortunate though necessary consequence from the Cult's point of view in pursuit of its ultimate ambitions. Once the Internet was established as the said central pillar of human society in a way that is basically irreversible the mask could come off with a gathering frenzy of censorship to target information that in any way exposes the Cult agenda even without mention of the Cult itself. They, of course, don't present this as censorship. They invent a series of made-up excuses such as 'fake news' and 'hate speech'. The definition of both continues to be expanded to lasso ever more information, views and opinions into their calculated and systematic censorship in the guise of protecting the public from 'hate' and 'discrimination'. They claim to be advancing 'diversity' while destroying it and this particularly applies to the 'Woke' mentality that claims to demand diversity in another example of Cult inversion. Cult-created 'Wokeness' is exploited to justify and impose ever more Internet and media censorship under the guise of political correctness. The Woke British trade union organisation, the TUC, banned a premier of *Renegade*, a film about my life and work, from one of its buildings on the grounds that the TUC 'believes in diversity'. Well, clearly with the exception of anyone exposing the forest. For the TUC read the global mainstream media.

Technology is increasingly being introduced that will prevent the posting of information unacceptable to the Cult without the need to take it down. Even now YouTube, Facebook, Twitter and others employ 'ghost or shadow banning' in which material can be posted but algorithms ensure that they are seen by a fraction of what would otherwise be the case. My YouTube interviews about *The Trigger* and 9/11 were blatantly suppressed through the recommendation system and while they still got large numbers they were not on the scale they would have been if left unmolested. Highly significantly my video interviews have got by far their biggest audiences when posted on YouTube channels not subject to shadow banning than they did on my own algorithmically-manipulated channel before YouTube deleted me altogether in May, 2020 (more later). Facebook admitted in 2018 that it 'demotes' posts reported by users (easy to arrange) and rated as false by 'fact checkers' (working for the Cult agenda). Facebook claimed that this censorship reduced views of posts and pages by 'around 80 percent'. As all information is moved to the

Net the point will be reached when the Cult can literally control everything you see with the tyranny of (Cult-instigated) political correctness intimidating people into censoring even private conversations out of fear of being exposed for ‘hate speech’. Cult-serving Google, Google-owned YouTube, Facebook and Twitter are major actors in this stage show to hide the real reason that censorship is happening which to protect the Cult and its agenda for humanity from exposure. These Internet-dominating corporations and others like Amazon have been taken through the same process as the World Wide Web. First they allowed the free circulation of information and opinion because they, too, had to attract users on a world-changing scale on their way to near-monopoly. Once that line had been crossed by hugely predominant market share their masks could also be removed and censorship of Cult-unapproved information and opinion began as a drip before becoming the biblical flood that it is today. Amazon has long passed the point of domination in book sales to drive independent shops and publishers out of business and has now begun to target books for censorship in its version of the book-burning so beloved of tyrannies. We have reached the point where people cannot post anything questioning official narratives of 9/11, human-caused climate change or the ‘pandemic’ on platforms like YouTube without them adding links to read the official fairy tale version on Cult-serving *Wikipedia*. You want the official story of *anything*? Go to Wikipedia. How plain it is to see how information is being royally stitched up and we are still nowhere near where it is meant to go although the massive leap in censorship since the ‘Covid-19’ hoax gives you some idea. Another point here is that the Cult owns the financial system and has limitless funds by creating ‘money’ out of nothing. Money is therefore no object for corporations like Google, Facebook, Twitter and Amazon which had no need to post a profit as they were buying their way to monopoly. ‘Investors’ were always there to write the cheques. You see the same with anything related to Elon Musk (more later). How can other companies that do have to make a profit to survive compete with those that don’t have to be profitable and have the financial capability to buy out or crush any independent opposition? Genuine opposition that won’t sell-out is demonised by the media under the usual tag of ‘hate speech’ when they establish other social media and video platforms. Cult-owned website hosts and payment companies also ban them to destroy their ability to function.

Silicon censors

Self-deluding so-called ‘journalists’ who support this war on information are promoting their own demise as traditional media falls to Silicon Valley domination and its censorship algorithms. Google virtually monopolise Internet searches which are algorithmically manipulated to emphasise official narratives and suppress alternatives. Where Google doesn’t control searches other Cult operations pick up the slack. Google-owned YouTube monopolise video content and social media domination falls to Facebook and Twitter. What about Instagram? Owned by Facebook. I don’t use social media – I message with WhatsApp? Owned by Facebook. Big Tech was made exempt by government from lawsuits for postings on their platforms in return for acting as neutral vehicles rather than publishers who do face legal action for what they publish. Silicon Valley psychopaths have benefited from one while ignoring the other by censoring information challenging the official narrative and particularly those known in America as conservatives. Government could rescind the ‘liability exception’ deal, but hasn’t. It is indicative of how the Cult works that ‘conservative’ organisations funded by the billionaire Koch family (‘conservative’) and Big Tech have been exposed for campaigning *against* laws to stop Big Tech censorship of conservatives. Control both sides and you control the game. Even more sinister is that these mega-corporations connect into the Cult-controlled Pentagon and intelligence agency network. Big Tech is continually exposed for gathering user data of every kind including surveillance through microphones and this ends up with the military-industrial-intelligence complex on a scale never made public. Many people have noted that conversations they thought were private lead immediately to products relating to the conversation being offered to them in Facebook and other advertisements. Official owners of these Cult-fronts like Facebook’s Mark Zuckerberg are super-frauds who are not ultimately in control. They are

front people for forces much deeper in The Web than the Zuckerbergs will ever be. Silicon Valley giants are there to control what you see and keep detailed surveillance on what you do, say, and think. Facebook admitted in a letter to two US senators that it can locate where you are even if you have opted out of location tracking. Artificial intelligence can piece together other information to determine location including tagged photographs, addresses for purchases on the Facebook shopping section, and IP address information. Amnesty International said that Google and Facebook were 'posing a systemic threat to human rights' – exactly as they are meant to.

Tim Berners-Lee who is credited with inventing the World Wide Web unveiled a nine-point plan or 'contract' through his World Wide Foundation to 'save the internet' from 'digital dystopia'. Some things sounded good until you knew the flip-side. Authors of this 'contract' included the hate-speech, censorship-obsessed French and German governments and major Silicon Valley censors like Google, Facebook and Microsoft. A highly-significant sentence said it was necessary to 'develop technologies that support the best in humanity and challenge the worst'. When passed through an Orwellian translation unit this becomes 'develop technologies to silence dissenters and renegades'. Who decides what is the 'best' and 'worst', Tim? Ah, *The System* does which wants to silence dissenters and renegades. Ah, gotcha. World Wide Web Foundation president and chief executive Adrian Lovett said prime issues include the problem of 'disinformation'. Who decides what that is? Same answer. He said they will 'track progress of all of those who have signed on, and others too who haven't, and report that progress, make sure it's public, make sure that we're able to see who is going in the right direction and who is not.' Who decides what direction is 'right'? Same answer. The group hopes to enforce the contract through UN regulations and EU/national laws while companies that don't sign up would be ostracised. The group says it will have succeeded when governments and companies that don't back the contract 'principles' are 'true outliers' (defined as 'a person or thing situated away or detached from the main body or system'). Companies and governments that broke the Internet are claiming to save it by taking a rock-hammer to what's left of free expression. Claim you are stopping Internet dystopia while creating it and say at first this will be voluntary before enforcement by law. Does Berners-Lee know it's a scam to advance Internet dictatorship? It doesn't really matter. The corporations and the Cult do.

Wizard's spell

Figure 231: The human plight and we have the power to change it.

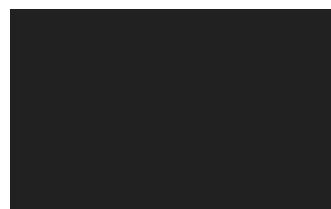

Figure 232: In close-up what is it? Just blackness?

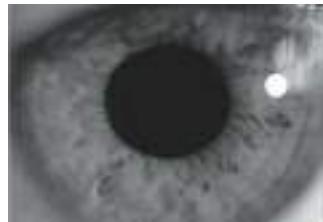

Figure 233: Expand your perspective and you see what it is. Expanding the mind has the same effect.

Pull all these strands together and you see that a human life is a cradle to grave download of Cult-desired perception. Postage Stamp parents are followed by Postage Stamp ‘education’, Postage Stamp media and Postage Stamp Silicon Valley. At the same time the arbiters of reality within human society are taken to be Postage Stamp scientists, Postage Stamp doctors, Postage Stamp academics, Postage Stamp government, Postage Stamp administrators, and Postage Stamp ‘experts’ of every kind. Their Postage Stamp narratives are enforced by Postage Stamp peer pressure and, should you be a public figure, by Postage Stamp journalists. A definition for my ‘Postage Stamp’ analogy is *unconsciousness* and my definition of unconscious for the purposes of this book is to be locked away in the perceptual Bubble of Body-Mind. Beliefs and perceptions enshrined in the Postage Stamp Consensus are designed to achieve just that end by suppressing awareness and firewalls people from frequencies where *knowing* can be accessed. Humanity has been mass-hypnotised every bit as much as the stooges in a hypnotist show ([Fig 231](#)). Do people on the stage shouting out on a word cue, playing a non-existent musical instrument or seeing the clothed audience as naked *know* they are hypnotised? Do those billions of people who respond to information and situations with their press-enter actions and behaviour *know* they are hypnotised? Of course they don’t *because* they are hypnotised. ‘Waking up’ and ‘The Awakening’ are terms for breaking the wizard’s spell. The idea is to so limit human awareness that we can’t see the picture. If people were asked what they were looking at in [Figure 232](#) they would likely say ‘blackness’ and that would be the extent of it. Expand the image (awareness) and they’d see it was really an eye ([Fig 233](#)). Expand still further and you’d see the eye was a person in a room in a house in a street in a city in a world. The Cult wants to enslave perception in that symbolic blackness of myopia and it has achieved this spectacularly in generation after generation by controlling mainstream information and through the constant repetition from all directions of its perceptual program until it becomes an ‘everyone knows that’. German philosopher Arthur Schopenhauer said that ‘every man takes the limits of his own field of vision for the limits of the world’. This is The Program. Limit their sense of the possible and make them believe that their sense of the possible is the limit of the possible. The truth will then be dismissed and ridiculed and the ‘blackness’ perceived as the limit of possibility. Schopenhauer was born in 1788. The Program is not new, just more expanded. American Neuroscience researcher Joe Dispenza was on the money when he said: ‘Ninety-five percent of who we are by the time we’re 35 years old is a memorised set of behaviours, emotional reactions, unconscious habits, hardwired attitudes, beliefs and perceptions that function like a computer program.’ Why would it be any other way given what I have described in this chapter alone?

Always back to wavefields

Humanity has been vibrated into conformity on the wavefield level of reality by downloading a collective perception which forms a mass wave-entanglement between like-perceivers (like *frequencies*).

Confirmation of Postage Stamp reality does not only happen in the realm of the seen. It is being communicated through wave connections of frequency entanglement. This is the real level at which the herd mentality is formed. A study published in *Current Biology* by researchers from New York University and the Max Planck Institute of Empirical Aesthetics found that brainwaves synchronise into similar patterns when students pay attention and are ‘engaged’ with each other. Co-lead author Suzanne Dikker said: ‘We think that all these effects can be explained by shared attention mechanisms during dynamic

group interactions.' From that 'shared attention' comes wave entanglement. What we 'see' is only the decoded holographic version of that. Intimidating people into collective conformity is really vibrating them into line. If you place violins together vibrating to the same note any other violin placed alongside them will start to vibrate to the same note even though it was playing another or none before. The dominant frequency will 'entrain' other frequencies and make them vibrate to its tune. Perceptions and pre-conceived ideas are frequencies and can both entrain others and prevent the person themselves from seeing other possibilities. Technological frequencies such as 5G are designed to have this effect on human brain activity. Some people go into politics with a genuine desire to make a positive difference and then transmute into everything they went into politics to challenge. They have been vibrated into line. Everything is a vibrational field including a parliament, political party or ideology and in the way of the violins the dominant frequency will prevail and absorb others into itself. The same is true of all groups and organisations, schools, universities, science, doctors, media, the whole lot. There's a saying that goes: 'When you dance with the Devil, the Devil doesn't change, the Devil changes you.' The dance in this case is frequency – oscillation – and the Devil is the Cult agenda.

Figure 234: The Cult controls by suppressing and leeching the power of humanity through perceptual programming – not through power of its own.

The Devil doesn't *have* to change you and the opposite can be true if you open your heart and mind to connect with consciousness way more powerful than the Cult and its 'gods'. They can only enslave humanity by making us more ignorant than they are (quite a task). We are not looking at some all-powerful force. It's more like the one-eyed man who can only be king in the land of the blind ([Fig 234](#)). The all-seeing eye is not all-seeing. It's a seven-stone weakling compared with humanity in its Infinite power. I've been exposing the Cult for 30 years and they have not vibrated me into line. Nor will they ever do so. It will be the other way round.

CHAPTER SEVEN

How are we manipulated?

Facts do not cease to exist because they are ignored – Aldous Huxley

Here's a way to read the world: Know the outcome and you'll see the journey. The Cult is desperate for you not to know what is planned for humanity because once we do the steps towards that end become crystal-clearly obvious day by day. Know the outcome and you'll see the journey, or see the 'where' and you'll see the 'why?' ([Fig 235](#)).

Figure 235: A brilliant way to 'read' daily events.

The Cult and its agents (knowing and overwhelmingly unknowing) in government, media and The System in general present everything in the form of dots. It is vital to maintain the illusion that policies, laws, media reports and 'education' depict a world in which everything stands apart from everything else. This policy is not connected to that policy, this law to that law, or this change to that change. When you perceive society from that perspective daily life appears to be a series of random and unfathomable events across the great spectrum of human experience. What the hell is going on? Why is this happening? Why are they doing that? Amid such bewilderment many people switch off and don't even try to work it out. I mean, what's the point? It's impossible to understand, right? No – *wrong*. At its core it's all very simple. Human society consists of fields of consciousness – some called 'human' – making wave entanglements on the basis of compatible frequencies generated by *perception*. Control perception and you dictate the entanglements that decide the nature of human interaction collectively known as 'society'. How do you control perception? You control information from which people form perception and at all costs you keep your targets in ignorance of one simple fact: What they see and experience are not the work of random chance but of carefully calculated steps in pursuit of a very specific and extraordinarily sinister end.

Figure 236: Both are controlled by the Cult network of Sabbatian-Frankism and so both work to the same script.

I'll give you a great example of this coldly coordinated 'random' before exposing the wider goals of the Cult and how humanity is manipulated to achieve them. I describe a sequence of events in detail in my mega-work, *The Trigger*, and mentioned them briefly at the start of the book. They involve the network within the Cult known as Sabbatian-Frankism which emerged in the 17th century and infiltrated communities, cultures and religions of all kinds. Sabbatian-Frankists pose as members of communities and followers of religions while infiltrating and directing them to serve the Cult's desired agenda. Sabbatian-Frankists (who hate Jewish people, by the way) control Israel; they *are* the Saudi fake 'royal' family; and they have networks across the world, especially in North America and Europe. Wait – aren't Israel and Saudi Arabia opponents? Not at the level of the Cult they're not. They are on the same team and any public divisions (increasingly few) are to hide these connections ([Fig 236](#)). Once you realise that apparent opponents ultimately answer to the same masters the cataracts of 'random' fall from the eyes. I have already explained how the Bible of Sabbatian-Frankism is the Kabbalah, the Jewish esoteric/spiritual/nature of reality work. Most important to them is the part known as the Zohar which means 'radiance' or 'illumination'. Three Sabbatian-Frankists chose the name 'Illuminati' for a Cult network they founded officially in 1776. They were Mayer Amschel Rothschild, founder of the Rothschild dynasty, Jacob Frank (hence 'Frankism') and Illuminati frontman, Adam Weishaupt. All the detailed background is in *The Trigger*. Sabbatian-Frankists, their Illuminati and Kabbalah, are yet another example of how global manipulation is founded on the knowledge of how reality works while keeping that knowledge from the target population.

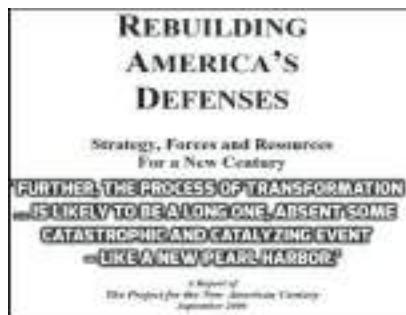

Figure 237: The document that listed countries for regime change in September, 2000, which presidents of 'different' parties have pursued ever since. It said that a 'new Pearl Harbor' would be needed to justify the plan and that's what we got – 9/11.

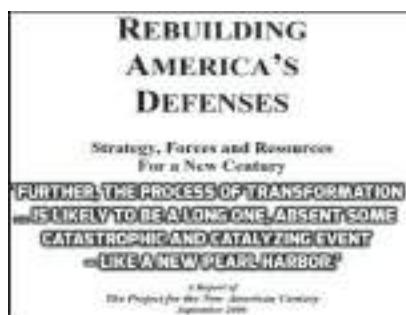

Figure 238: See *The Trigger* for who was really behind the 9/11 attacks and it wasn't Osama bin Laden.

Sabbatian-Frankists have long infiltrated America to the point of control and they created a 'think tank' in 1996 called the Project for the New American Century. Among their number were those who would be major players in the United States government and the Pentagon at the time of 9/11 during the regime of child-like puppet president, Boy George Bush. They included Dick Cheney (9/11 vice-president and de facto president); Donald Rumsfeld (9/11 Secretary of Defense); Paul Wolfowitz (9/11 Deputy Secretary of Defense); Dov Zakheim (9/11 Pentagon comptroller in charge of the entire military budget); and a long list of others either working within government and the Pentagon on 9/11 or promoting wars in the media in response to 9/11. The Project for the New American Century published a document in September, 2000, calling for American troops and military influence to be used to force regime-change in a series of countries including Iraq, Libya, Syria, Iran and North Korea leading in the end to regime-change in China. The document demanded (on behalf of the Sabbatian-Frankists) that American troops 'fight and decisively win simultaneous major theater wars' to achieve the desired regime change. It said, however, that this 'process of transformation' would be slow 'absent some catastrophic and catalysing event like a New Pearl Harbor' to justify attacks on target countries and the necessary gigantic increases in military spending. A year to the month after the document was published and nine months after those who wrote it came to power with Bush in January, 2001, America had what Bush called at the time 'the Pearl Harbor of the 21st century' – 9/11 ([Fig 237](#)). As a result of those horrific attacks a 'war on terror' was launched and the very countries named in the document have been targeted for regime change ever since under presidents and UK prime ministers of different (and apparently opposing) political parties. At the level of the Cult, which controls the always-there *permanent* government I described earlier, countries are one-party states. Whoever you vote for the Cult is in power. The sequence I have described is much longer and more detailed than outlined here and you'll find the full story in *The Trigger* which demolishes the official story of 9/11 and names those really involved – not 19 Arab hijackers ([Fig 238](#)). The point is that if you see each point in the sequence as an isolated in-and-of-itself event there seems to be no pattern and all appears random. Arab hijackers controlled by Osama bin Laden attacked America and the military invaded Afghanistan to find him; then along came the invasion of Iraq which was to stop Saddam Hussein and his non-existent 'weapons of mass destruction'; Libya was attacked and Colonel Gadhafi was killed to protect the people from Gadhafi violence; Syria was invaded to stop President Assad 'killing his own people'; Iran is being targeted for developing nuclear weapons and sponsoring terrorism. We are asked to believe that none of these events are linked in any way. Connect the dots while knowing the planned outcome and a very different picture can be seen.

Create the problem so you can impose the solution

Figure 239: War as creative destruction. Nothing changes a society quicker and more than war and that's why we've had so many.

The media, by emphasis and censorship, presents everything as random so the truth can be hidden and the great majority of journalists are doing this through ignorance, not calculation. Any who do make the

connections and want to report them are out the door very fast. It doesn't take many people to control the media so long as the Cult dominates the positions of ownership, editorial policy and hire and fire. This applies to every organisation and institution – government, 'education', banking, business, etc. The attacks of 9/11, regime-change wars and externally-manipulated 'people's revolutions' that followed are examples of two mass mind-control techniques that I dubbed decades ago Problem-Reaction-Solution (PRS) and the Totalitarian Tiptoe (TT). PRS is the mind-trick by which you covertly create a problem while blaming someone else (9/11); then you tell the public through an unquestioning mainstream media the version of the problem you want people to believe (Bin Laden and 19 Arab hijackers 'did it') to illicit the reaction of 'something must be done'; finally you offer the solution to the problem you have covertly created (a 'war on terror' to regime change countries as you planned all along). There is another version as I mentioned earlier that I call No-Problem-Reaction-Solution when you don't even need a real problem only the *perception* of one. The lie about 'weapons of mass destruction' to justify the catastrophic invasion of Iraq in 2003 is an obvious case and as we will see later so is the 'Covid-19' hoax. Iraq was on the hit-list and there was no reason to invade so the Cult made one up and had it promoted by Boy Bush and UK Prime Minister Tony Blair. The stablemate of PRS is the Totalitarian Tiptoe in which you instigate a series of happenings and changes that are all connected and leading the world in your desired direction while being presented as unconnected random events. Wars transform the world step-by-step as each follows the other in the Totalitarian Tiptoe technique of 'creative destruction'. A war destroys the status quo and creates a new one. The next war destroys that status quo and so on. With each new status quo you are moving closer and closer to your end goal. Look how the two world wars utterly transformed global society ([Fig 239](#)). The European Union is a Totalitarian Tiptoe planned from the start to be a centralised bureaucratic (Cult) superstate which they could never have openly admitted. The public backlash and resistance would have blocked it at birth. Instead they sold the superstate tyranny at first as just a free trade zone (the 'Common Market') before, step-by-step, incessantly centralising power to delete national sovereignty on the journey to what was planned from the start – a bureaucratically-controlled United States of Europe. Observe the world with this knowledge and you will see Problem-Reaction-Solution and the Totalitarian Tiptoe constantly at work across the entirety of human life. When something new is introduced by the Tiptoe technique where it starts is never where it is intended to finish. Taser stun guns unleashing 55,000 volts of electricity were introduced by police 'only for trained firearms officers', but it was obvious to anyone who understands the game and the Tiptoe that they would soon be widely distributed. By the year to March, 2019, Tasers were used thousands of times in England and Wales alone and broke all previous records. We now have 70-year-old grandmothers being Tasered multiple times in America by psychopathic goons in uniform for asking them to show a warrant before entering their home. Crucial to making PRS and TT techniques effective is to program the population to believe *your* version of why these manufactured events happen and to keep the real reason hidden. The alternative media and alternative opinion is being censored to ever greater extremes by the Cult-owned Internet giants to stop the truth being exposed about PRS and TT events (which went into overdrive to stop exposure of the 'Covid-19' hoax).

Cult movie

What I am about to describe really is a movie in the sense there is a script designed to tell you what you are seeing and experiencing. If you watch a series of pictures with no commentary or voiceover you can reach your own conclusions about what they mean. Instead a reporter will tell you what you are seeing and what the pictures mean when often what is said is not true at all. Most of the time the *reporter* doesn't know what is happening. They get their information from official sources, repeat that in the voiceover and call it 'journalism'. Whatever the event may be – a terrorist attack, war, financial collapse – the media is telling you the official version 99 percent of the time. We are back to one of the most profound techniques of mind control which is repetition. Media sources may seem numerous but they will be

quoting the same official narrative ad infinitum until it fuses into ‘everyone knows that’ and a widely accepted version of history (memory). Stop people in the street anywhere in the world and ask them what happened in an historical or more recent event and they will invariably give you the official version (often thanks to Hollywood or ‘Tinseltown’). Hollywood is a Cult creation to program perceptions of the global masses. Ask many people for a version of history and it will come from the script of a Hollywood movie. That John Wayne was a war hero wasn’t he? No, he was in make-up in LA while the guns were firing on the other side of the world. Wayne was there to tell you what to *believe* about the guns firing on the other side of the world. Moment by illusory moment you are being told what to think – to perceive – about *everything*. I will pull together over the next few chapters the elements of a coordinated global control system which are happening before our eyes every day while being presented as random events.

Figure 240: The structure of the planned global tyranny.

The foundation manipulation is centralisation of power which has been unrelenting thanks to the Cult. A few can’t control the many without centralisation of power. The more power is devolved from the centre the less control the global Cult at the centre can have. Humans once organised in tribal groups which decided what happened to the tribe. Then tribes were brought together under centralised control called nations and countries and a few people could dictate to all the former tribes. Today nations are being centrally controlled through superstates like the EU, trading blocs, United Nations agencies, the World Health Organization, World Trade Organization, International Monetary Fund, World Bank and so many more. The all-encompassing name for this phenomenon is ‘globalisation’ – the centralisation of global power in every area of human life which I have been warning about for 30 years. Globalisation is the Totalitarian Tiptoe to the imposition of a world government, army, central bank and currency underpinned by a microchipped population connected to AI ([Fig 240](#)). The more you centralise power the more power you have at the centre to centralise even quicker and centralisation gets faster and faster. The European Union has been created this way as each power-grabbing and centralising step has followed another. A single world currency, which I have again been predicting since the early 1990s, is meant to be purely digital with the deletion of cash. We are seeing cash disappearing so fast in favour of digital transactions through cards and smartphones in the Tiptoe to this end with planned microchips waiting to take over from them. Bank branches and ATMs are being closed and removed to make it ever harder to have cash transactions. The plan is to make it near-impossible to function without a smartphone. I went to a railway station car park during the writing of this book and the only way I could pay was by a smartphone which I don’t use. It meant I couldn’t park there and this is the way those who don’t want to succumb to the agenda are being pressured into doing so. The sequence in all subject areas goes like this ... voluntary ... can’t function without doing it ‘voluntarily’... compulsory. Individual cash currencies are disappearing with the Cult-created EU deleting many European currencies through the introduction of the euro that itself is planned to be assimilated into the world currency (look at the utter demonisation of cash and refusal to deal in cash transactions as a result of the ‘Covid-19’ hoax). Global government would

not even be run by elected people as I have long warned. Rulers would be bureaucrats and technocrats serving the Cult through what is termed a technocracy – ‘Government or control of society or industry by an elite of technical experts’. Silicon Valley which already has far more power than governments is this very emerging technocracy at work as are the unelected bureaucrat dictators of the European Union. A world army is designed to impose the will of the world dictatorship on those who resist. Recent plans for a European Union army (which I predicted in the 1990s) and the long-established European Central Bank are Totalitarian Tiptoes to the world army and world central bank, as is NATO. The same goes with regard to world government with the World Health Organization, World Trade Organization, International Monetary Fund and World Bank. The biggest stalking horse of all for the world government structure is the Cult-created-and-controlled United Nations which is being transformed step-by-step into a world government dictatorship. I’ll say more about this when I deal with the climate change hoax being driven through the UN.

Hunger Games Society

Unrelenting centralisation of global power is sold as ‘the world coming together’. This illusion and lie has been bought in its totality by desperately naive ‘Woke’ progressives and their associated Climate Cult which is an offshoot of The Cult although only a few of its advocates will know that. Do they really believe that a Cult obsessed with driving people apart to divide and rule wants the world to ‘come together’? It’s about centralisation of total power in the hands of a few at a global level from where they will control AI which, by then, will be connected to the human brain. Helloooooooo!!! My God – wake the hell up, people. It is a skin-pinch to think that the political ‘Left’ that I grew up with – the one that stood for freedom of speech and challenged elite power – has now been so hijacked by the fake ‘progressive’ ‘Woke’ mentality that it demands freedom of speech is deleted through Cult-created political correctness (PC) and that the elite be handed ever more power through the Cult-created EU. Who will eventually reap the consequences of the tyranny they are demanding to be implemented? They will – and their kids and grandkids still more so. The original truly liberal Left has been so absorbed by Cult-created ‘Woke’ that real liberals are today condemned as ‘far-right’ and ‘Nazis’ for defending basic liberal values like freedom of speech. The label ‘Woke’ which this mentality awards itself is a serious misrepresentation of its origin and maybe, ironically, ‘cultural appropriation’ in the language of PC. ‘Woke’ is apparently a political term used in African-American culture since the 1900s and relates to an awareness of social and racial justice. Its use by fake ‘progressives’, however, does not mean that although they claim it does. ‘New Woke’, as I will call it from here-on, means campaigning for the agenda of the very Cult responsible for social injustice of all kinds throughout what we perceive as human history. This includes the slavery and oppression of black and other non-white people and the oppression of most white people.

Hunger Games – the real-life movie

Figure 241: The Hunger Games Society I have warned about for decades that is now clearly being imposed. (Image Neil Hague.)

Figure 242: The Hunger Games Society is a global fascistic society.

I have long described where the Cult and New Wokeness are leading us as the 'Hunger Games Society' and the Tiptoe to that continues every day worldwide. Clearly my phrase comes from the *Hunger Games* movie series which portrays a privileged elite hoarding all the wealth and power while living in a hi-tech city of mega luxury. They are protected by a vicious and merciless police/military state from the rest of the population working as slaves to the elite (today's Cult-connected One-percent) in abject poverty under extreme levels of surveillance and control. The masses are isolated in 'sectors' to prevent a unified response (divide and rule). I have been warning for decades that this is the very structure the Cult seeks to impose with a brain link to AI thrown in ([Fig 241](#)). Scan the world and you can't miss the pieces being put into place ever more quickly. I saw an image of Adolf Hitler at a mass Nazi rally. He stood alone at the front delivering his psychopathy to a massive military presence and beyond them were thousands of people kept in line by that military to ensure whatever Hitler demanded would be done. I had that image flipped upside down and overlaid on the Hunger Games Society structure and they are exactly the same. We are indeed looking at a global version of Nazi Germany with the added control-system of advanced-technology and AI ([Fig 242](#)). Now add the 'virus' lockdowns to what I said there.

Figure 243: People die of hunger and sleep in the streets while a handful of multi-billionaires like these hijack the world's wealth. The fact that many claim to be 'caring' and have 'values' is a real challenge to the stomach.

Figure 244: A cause and effect that never fails.

The plan is for the leaders and key agents of the Cult to control the wealth and power at the top of the pyramid in the way of the *Hunger Games* movies. We have already reached the point where we talk about

a ‘One-percent’ and an Oxfam report in 2019 estimated that the world’s 26 richest men owned as much wealth as the poorest *half* of the global population – some 3.8 billion people at the time ([Fig 243](#)). The 26 are themselves in hierarchical order with the top few dominating the wealth and multi-billionaires Jeff Bezos at Amazon and Bill Gates at Microsoft up there at the top. By 2020 the world had a record 2,816 billionaires worth \$11.2 trillion which is more than the gross national product of every country except the United States and China. Another Oxfam report in 2020 said the wealthiest 2,153 people have more money than the poorest *4.6 billion* while the 22 richest men have more than all the women in Africa. We should be careful even then of believing these are the wealthiest people. Behind the scenes Cult leaders have wealth way beyond a Bezos or Gates who are relative artisans and gofers compared with those with the most power who don’t put themselves on public display. They hide the extent of their holdings through a stream of nominees and proxies. The One-percent and their operatives own governments and buy politicians and parties ([Fig 244](#)). Multi-billionaire financier George Soros owns the Democrats in the United States along with much of the New Woke network of organisations while multi-billionaire Sheldon Adelson owns the Republican Party and has been Donald Trump’s biggest funder. The Cult technique is control all sides and you control the game. The Sabbatian-Frankist House of Rothschild is a player even above all of those I have mentioned and they are global experts at hiding the extent of their wealth and power. Cult-controlled corporations are far richer than countries. Sixty-nine of the world’s leading economic entities are corporations not countries and 157 of the top 200. Corporations such as Walmart, Apple and Shell attract more wealth than countries like Russia, Belgium and Sweden while a mere one percent of the wealth of Jeff Bezos is equivalent to the entire health budget of Ethiopia with its 105 million people. Mega corporations own governments, dictate laws – and wars – and hand themselves all the aces at the expense of potential competition. You have laws making it ever more difficult (on purpose) for small and medium size non-Cult businesses to survive while Cult corporations get what they like (*update* – look what has happened to small business and even bigger ones all over the world because of the ‘virus’ hoax lockdowns). Control of governments and the system in general means that billionaires and their corporations pay a far smaller percentage of their income in taxation than people struggling to survive. Google paid just £6 million in tax in 2011 on a turnover of £365 million and avoids tax like the other vampires by moving tens of billions into shell companies in offshore tax havens. They and their famous front people have utter contempt for you. Fair Tax Mark, a group campaigning for tax transparency, reported in 2019 that the big six US tech firms Amazon, Facebook, Google, Netflix, Apple and Microsoft had ‘aggressively’ avoided \$100 billion of global tax over the previous decade. It claimed that in this period Amazon paid only \$3.4 billion in tax on revenues of \$960.5 billion and profits of \$26.8 billion. How can smaller less connected companies compete with that? They can’t. How can they compete with those like Amazon and global taxi firm Uber who have apparently unlimited funding to buy and expand their way to monopoly? They can’t and that’s the idea.

Global sweatshop

The Cult controls – indeed created – the global banking and financial system in which it conjures money out of fresh air called ‘credit’ and its financial pot is therefore unlimited. The gathering monopoly of Amazon alone has devastated bricks and mortar shops, mom and pop businesses, and dominates the book industry at the expense of independent stores which are driven out of business (see ‘virus’ hoax lockdowns which have left Amazon with a massively-increased global market share). US retail giant Walmart, the largest company in the world by revenue, has done something similar in the bricks and mortar sector through a business model described by one commentator as ‘selling foreign goods to domestic consumers, cheap Chinese garbage manufactured offshore in factories that pay slave wages – wages that American manufacturers could never match’. One study estimated that America lost 400,000 jobs between 2001 and 2013 because of Walmart’s Chinese imports and this devastated many towns especially in rural areas. This depopulation of rural land just happens to be a major Cult agenda as you

will see. Walmart even has a policy of selling goods at a loss until competitors are destroyed to secure a monopoly (see Amazon) and employs mostly part-time staff to avoid paying them benefits while knowing that the taxpayer via the government will top up the wages with welfare payments. This goes on while the Walmart family is reported to be worth \$150 billion. Walmart and its methods are straight from the Cult playbook. It's a disgusting company exploiting and living off the backs of the poor. Walmart was once widely condemned by genuine liberals of the genuine Left, but not by New Woke since the Walmart family, the richest in America, began spouting the language and agenda of New Woke. Monopoly means control and the plan is for Cult corporations to dominate every sector and market so that you buy from them or no one. Where do the bankrupt business owners and their employees go? They slide into the lower reaches of the Hunger Games Society along with everyone else – look at the effect of the ‘virus’ hoax lockdowns which have accelerated this process on a staggering scale ([Fig 245](#)).

Figure 245: The global dynamic.

While global wealth is sucked into the One-percent and the Cult the poor and what are called the middle class are being stripped of income and assets in line with the Hunger Games pyramid. I warned long ago that those who thought none of this applied to them were in for a shock. By that I mean those at the time who had a well-paid job, nice car, good home and money for holidays. I pointed out that the Cult had its sights on them, too. The plan is for everyone outside the elite to be enslaved in dependency and poverty by controlling the wealth and replacing people with AI. The Cult-instigated financial crash of 2008 contributed immensely to this while the mega-rich went on getting mega-richer. Figures I saw for 2017 and 2018 revealed that a new billionaire was created every two days as formerly ‘comfortable’ or even ‘well-off’ people were finding themselves on the street. A headline captured the trend: ‘In rich countries, the middle class is getting smaller and smaller, generation by generation.’ It describes the Totalitarian Tiptoe to the Hunger Games Society. Many people who once thought that what I was exposing did not affect them are now sleeping in tent cities or shop doorways and this is planned to continually expand until the Cult’s job is done. Suicide rates in America have increased by 40 percent in 17 years and many of them are among those termed ‘blue collar’ workers or ‘working class’ who have been profoundly affected by One-percent accumulation of wealth and systematic mass immigration competing in their job market. Vast numbers of people even in work are living from week to week with a missed pay check or two meaning financial disaster and a lost home. A national survey by UK homelessness charity Beam found that the average British person is only two pay cheques away from homelessness at a time when AI is sweeping away jobs traditionally done by humans (and that was before the lockdown). This has all been planned. Food charity Move for Hunger says that one in eight Americans or 40 million people are food insecure with more than twelve million children and five million seniors not sure where their next meal is coming from (again before lockdown). Homelessness was rising all over the world through lower incomes, unemployment and social factors even before the ‘pandemic’ with the cost of housing right up there as a prime cause. British homeless charity Shelter said in December, 2019, that a child becomes homeless in the UK every eight minutes. None of this has to happen when you consider that the United States government has spent \$2 trillion (at least) on the Cult-created unwinnable war in

Afghanistan, the longest in American history. Much of that \$2 trillion has ended up in the coffers of Cult-owned arms and 'defence' corporations while homeless numbers incessantly rise. Why would they spend the money on the population when they want to make the masses impoverished, destitute and dependent on them? I have described the Hunger Games agenda in all its form at length in *Everything You Need To Know* and if you want the detailed background for all I am saying in this book then *Everything* is a must-read.

Gather them in cities

I have long exposed the agenda for financially forcing people out of the rural areas into mega cities controlled by AI where they would live in micro-homes – some the size of a single decker bus and many even less. All these years after I made that warning those micro-homes are being built all over the world and the movement of people from financially-devastated rural communities into the cities where they can be kept under surveillance 24/7 gathers apace ([Fig 246](#)). The US federal government already owns 28 percent of the land in America and there's a lot more to come. Patrick Wood at Technocracy.news described how this process is happening even more directly in China where vicious government control has allowed no opposition:

... China unveiled a plan in 2014 to summarily move 250 million farmers off their land by 2026 and into megacities that had already been constructed but sat vacant. The vacated farm land is being combined into giant factory farms to be operated by advanced technology such as agricultural robots and automated tractors. Ostensibly, the farmers who refuse to leave will be helped along with the barrel of a gun.

Figure 246: Micro-homes for the serfs being built around the world for the Hunger Games masses in AI-controlled cities.

Figure 247: 'Ghost cities' built all over China waiting for the masses to be forced to relocate from the land.

For years people have been asking why China has been building a stream of new 'ghost cities' with few or no one living there ([Fig 247](#)). This is why. The guiding rule for the West is China today and you tomorrow or in fact not even tomorrow. Abandoned homes, family farms, shops and factories can now be seen right across rural America between the coasts thanks to companies like Walmart with its imports from Chinese sweatshops and pricing to destroy competition. Then there are hedge fund billionaires who asset-strip local employers and devastate rural areas. American cable news host Tucker Carlson, one of the last proper journalists on US television, highlighted one sickening example involving ultra-Zionist New York-based hedge fund manager Paul Singer who has a personal fortune according to Forbes of more than \$3 billion. Carlson told the story of how Singer's predatory hedge fund targeted the only major employer in the small town of Sidney, Nebraska, and destroyed it for a fat profit. The town lost 2,000 jobs

in a population of 6,000. No wonder *Bloomberg News* dubbed Singer as ‘the world’s most feared investor’ and he is reported to be ‘a strong opponent of raising taxes for the wealthiest 1% of taxpayers’. You don’t say. At the time of writing ultra-Zionist Singer is reported to be buying shares in Twitter to oust chief executive Jack Dorsey. Carlson described Singer-like asset-stripping practices as ‘vulture capitalism feeding off the carcass of a dying nation’. He said of the Sidney disaster: ‘A heartbreakingly familiar cascade began: people left, property values collapsed, and then people couldn’t leave. They were trapped there. One of the last thriving small towns in America went under.’ This is happening systematically all over America to drive people into the cities and a life of poverty, which means dependency, which means control. A further aspect of this agenda is the Cult’s campaign for people to eat a vegan diet in response to the climate change hoax which would ultimately cause many animals to disappear from land that could then be absorbed in state and One-percent land grabs from which the public in the mega-cities would be excluded. You could drive there? Your autonomous car won’t take you. Fracking is endangering the viability of rural life. Each fracking well consumes between 1.5 million and 16 million gallons of water while whole communities don’t have enough to drink and have to leave the country for the cities. Injected water used in fracking to access oil and gas fields is polluted with hundreds of chemicals which then seep into ground water further reducing supplies to drink.

Figure 248: Exploit any disaster or human catastrophe to advance your agenda.

Figure 249: Smart cities with everything controlled by AI and human choice deleted are referred to as ‘human settlement zones’ in official documents.

Figure 250: The ginormous smart city being built by Sabbatian-Frankist-controlled Saudi Arabia not far from Sabbatian-Frankist-controlled Israel which is planned to be the key centre of the global smart control grid.

Around 2010 the world passed the point where more people live in urban areas than rural and it has been speeding in that direction ever since. In Australia people are being forced out of rural areas by catastrophic forest fires (hardly difficult to start) and lack of water as rivers dry up. They blame human-caused climate change when honest Australian scientists have admitted there is no evidence to link

climate change to either fires or drought and dwindling rivers. In fact, water is being siphoned off before it reaches communities by dams owned by private corporations who use it for their own ends including mega-cotton production operations for the benefit of Chinese and Japanese ‘investors’. I recommend the Internet videos of Max Igan with regard to Australian fires and water shortages. Climate Cult child goddess Greta Thunberg of course blamed the 2019/2020 catastrophe in Australia on ‘climate change’ when forest fires have always been part of Australian life and were once mitigated by controlled burning in the winter to create barriers that fires struggled to jump ([Fig 248](#)). Non-burning policy instigated at the behest of the Greens has since created a disaster waiting to happen. But, no, hey, it’s global warming – the script says so – and the fact that nearly 200 people were arrested for ‘fire-related offenses’ according to New South Wales police, including some for deliberately starting them, is not at all relevant. There have been horrific fires in other regions including Indonesia which also have human and not climate change origins through forest and land mismanagement by timber and farming companies. At their most extreme these fires have produced more carbon dioxide than the US economy to put industrial production of CO₂ into perspective and killed monumental numbers of animals including many from endangered species. The same has happened in Australia with one biodiversity specialist estimating that a billion animals had been killed in the fires of 2019/2020. The real causes of this don’t matter to the climate obsessives – only their agenda that everything is ‘climate change’ – and still more people are forced out of rural areas into urban centres. Mega-cities where the masses are being forced to relocate from rural areas are known as ‘Smart Cities’ which is code for densely-populated centres of mass surveillance and control of everything through artificial intelligence with no private means of movement and only state-controlled driverless vehicles and communal transport systems. You go where the state says you can go and nowhere else. Current cities are being transformed into Smart Cities while others are being built from scratch around the world as in China ([Fig 249](#) overleaf). To give you an idea of what I mean Saudi Arabia, controlled by the Sabbatian-Frankist fake royal House of Saud, is developing a \$500 billion Smart City dubbed the ‘NEOM project’ which is planned to be 33-times the size of New York ([Fig 250](#)). NEOM means ‘New Future’, but ‘Cult agenda’ would be more accurate.

Prison camp cities

We have in San Francisco and Los Angeles perfect examples of the Cult’s Hunger Games programme and also California in its entirety. New Woke California has twelve percent of the American population but 25 percent of its homeless and 25 percent of people in the state are poor amid incredible wealth (what must it be now with the lockdown?). There have been outbreaks of typhus among the shit-laden, piss-laden, streets of Los Angeles with fears that the plague will follow while the millionaires and billionaires of the Hollywood elite look the other way from their ivory towers and conspicuous wealth. Human waste goes into the LA River bypassing sewage treatment and how does anyone think that will turn out? If you want to see the Hunger Games Society let’s go to San Francisco and this time there’ll be no need for flowers in your hair. Watching where you walk will be far more important. San Francisco and the associated Silicon Valley is the most unequal society on Planet Earth. I have been to the ‘Golden Gate’ city many times starting before the emergence of the billionaire technocracy when the city really was a place to sing about. I have been there recently and it’s a shithole – literally. ‘New Woke’ owners of Google, Facebook, Twitter and the like live in their multi-million walled mansions with private security while the streets of San Francisco are awash with homeless people, human piss and shit, and spent needles left by addicts often desperately trying to escape from their daily nightmare while suffering from mental illness. There are now more drug addicts in San Francisco than high school students. Residents reported about 5,500 cases of human shit in the city’s streets in 2011 and by 2018 it was more than 28,000. One bloke I saw on video defecated in a supermarket aisle. San Francisco’s response to all this has been to stop prosecuting people that piss and shit in public places which of course has made the situation far worse. Seattle in Washington State is another city that has taken the route of San Francisco with all the same consequences. The multi-

billionaire George Soros and other One-percenters behind New Woke have been funding their gofers to become district attorneys across America and when they win office crimes are downgraded or no longer prosecuted. The aim is to destroy human society and let rule by the mob take over. The result in the same period has been a surge in murders in America as well as other crime. San Francisco has just such a district attorney in Chesa Boudin whose parents were jailed for what would today be called Woke terrorism with a group called the 'Weather Underground'. Boudin's city has the highest rate of property crime of any big city in the country with an average of 60 cars broken into every day. San Francisco's Board of Supervisors decided to act decisively in true New Woke fashion by deleting the term 'convicted felons' to be replaced with 'justice-involved individuals' which is the term also used for the targets of crime. We have the same term for both robber and robbed, attacker and attacked. Young people committing crime are now 'young people impacted by the juvenile justice system'. Drug addicts are 'people with a history of substance use'. The Cult New Woke technique is to ignore the problem (it *wants* the problem) and instead delete the language that makes talking about the problem in factual detail impossible. New York has done something similar by abolishing cash bail for certain crimes. In the first month after introduction car theft surged 67 percent and robbery 33 percent with six suspected drug dealers accused of running a \$7 million operation given this get out of jail card. Will any of these people come back for trial? A former New York police commissioner described how people have been arrested for rape, been let go and raped again, while others have been arrested on serious charges, let go, and committed murder. There are many people in jail who shouldn't be, but that's not the motivation here. It's about still keeping the wrong people in jail while setting free those who should be there. New Woke California voted to make crime involving less than \$950 a misdemeanour with likely no investigation or consequences. You'll never guess what has happened. I mean who could have predicted it? Crime in that category has soared with some thieves even carrying calculators to make sure their shoplifting booty totals less than \$950. Small businesses are being especially badly hit and anyone who wants society to be a see-want-take lawless free-for-all would be ecstatic. California even reduced penalties for knowingly exposing a sexual partner to HIV and the same with knowingly donating HIV-infected blood. What about those infected? New Woke is not interested in real victims, only inventing fake ones. Ultra-Zionist multi-billionaire one-time Democratic presidential candidate Michael Bloomberg described California despite all this as a model for all of America. To the Cult it is.

I have been exposing for decades the systematic drugging of American and other communities worldwide to enslave the population in addiction with the Bush and Clinton families centrally involved in the Cult drug networks that control the drug cartels. China is circulating drugs in America via Mexican drug gangs crossing large swathes of the basically undefended southern border (see *The Trigger* for background to Cult drug networks and the Bush/Clinton/CIA/Israeli Mossad involvement). Addiction to opioids, a class of drugs derived from the opium poppy plant, has been devastating for America and especially a synthetic opioid called Fentanyl which is some 100 times more powerful than morphine and overwhelmingly sourced to China. Opioids are brain manipulators promoted as painkillers and have been mass-circulated by Purdue Pharma owned by the multi-billionaire Sackler family. The result of their mega-marketed drug OxyContin can be seen in horrific numbers of deaths, destroyed lives and destruction of whole communities. OxyContin was promoted with big help from Purdue-funded Washington Deep State Zionist 'think tank', the American Enterprise Institute, which had many connections to the Project for the New American Century. A commentator described how 'many hundreds of thousands of Americans have entered into a death spiral of addiction after being prescribed these drugs by doctors'. Purdue is offering compensation pay-outs of \$12 billion which does not even nearly match the horrors that its drug has perpetrated. Addiction to drugs, alcohol, smartphones and all the rest is fuelled by despair and the need to escape from the life people are living as the Cult dismantles countries, lives, and psyches in pursuit of the Hunger Games Society. Opioid deaths have been sharply higher in American communities where Cult-owned vehicle-makers have closed their US plants and

outsourced jobs to other countries where they can pay people less. This is 'globalisation' at work. The manipulated problem of homelessness is waiting for a solution that will advance the Hunger Games Society even further on behalf of the Cult and its Sabbatian-Frankist network. American website Politico reported that 'the growing homeless encampments — which have led to a rise in human waste, trash and open-air drug dealing — have united unlikely allies'. They were talking about Republican Donald Trump and ultra-Zionist San Francisco Democrat state senator Scott Wiener. This guy cares, you see: 'The crisis is so bad people's minds are really opening up and the policies are shifting ... Legislation that would have had no chance five or ten years ago can pass.' Problem-Reaction-Solution. Wiener's 'solution' is the forced internment of homeless people under certain circumstances (which the state would interpret) using the Orwellian term 'involuntary commitment'. These 'circumstances' will be planned to constantly expand until it involves all homeless people. Julie Winter, mayor of Redding, California, has suggested that the homeless be put in a 'shelter' which they would not be allowed to leave until they 'demonstrate self-sufficiency'. In other words she is talking about internment in a de-facto jail for the crime of being homeless. These may currently be isolated attempts at authoritarian laws but they will grow and not least because populations of towns and cities are going to be impacted more and more by the homeless crisis. The Cult doesn't want a real solution. To these empathy-deleted, stone-hearted crazies, the homeless are a means to an end.

Guaranteed poverty and control

Figure 251: The fantastic mass-surveillance system in China in the process of coming to the West.

Another Cult agenda to exploit the plunge to the Hunger Games Society is a guaranteed income. When multi-billionaire New Woke professional frauds like Facebook's Mark Zuckerberg support a 'universal basic income' you know it's not what it seems. I have believed since childhood that there should be a level below which no one should be allowed to fall in a civilised society, but that is not what the Cult's guaranteed or basic income plans are all about. The motivation is *control*. Billions and billions are planned to be forced into the lower reaches of the Hunger Games pyramid by manipulation of the financial system, giant corporations and hedge funds destroying communities and job opportunities, and by the utter devastation of employment with the AI takeover (this was again written even before the lockdowns). AI means still more money being transferred to ever fewer hands in that AI doesn't get paid. Technology represents the most crucial factor in the creation of a Hunger Games world (along with the effects of lockdowns). One 'solution' to this 'problem' is the guaranteed income which will be guaranteed by whom and on what basis? Look no further than China for the answer. Cult-assets of the state will decide who gets what on the basis of acquiesce to the state. China is the fast-developing blueprint for the Cult control system. New Woke billionaires far from criticising China work to support its psychopathic dictators in the creation of the very system planned for the West and the rest of the world. One Chinese city alone has 2.6 million cameras and the country has a surveillance system that scans facial features to create a virtual map of the face in real time to be checked by AI against a state database ([Fig 251](#) overleaf). The same system is fast coming to the West thanks to the Cult and its Silicon Valley multi-billionaire celebrity technocrats. 'Smart' technology (I'll explain the real context in a later chapter) allows for constant mass surveillance and China's communist/fascist (same thing) government is exploiting this

potential for its ‘social credit’ system. This tracks the behaviour of the entire population and awards or deletes credits based on that behaviour. Do what the government wants and you get credits; do what the government doesn’t want and they are taken away with major consequences. A government document in 2014 said the system is designed to ‘allow the trustworthy to roam everywhere under heaven while making it hard for the discredited to take a single step’. They are not kidding. By the end of 2018 the National Public Credit Information Centre revealed that Chinese courts had banned the purchase of plane tickets 17.5 million times and 5.5 million for train tickets for becoming officially ‘discredited’ (the fake ‘pandemic’ is being exploited to do the same in the West). Apply this to a guaranteed (tiny) income that would be paid only if you conform to what governments demand. That’s the real story behind guaranteed income and why One-percenter frauds and censors like Zuckerberg give it their support while promoting themselves as kind and caring. A small guaranteed income with no alternative way of earning money = the Hunger Games Society. A glimpse of how the China system is being introduced in the West can be seen with the Silicon Valley company Airbnb which is causing people to be thrown out of their permanent homes around the world as they are rented to tourists through Airbnb just as Silicon Valley’s Uber is destroying local taxi firms across the globe in its money-no-object business plan leading to autonomous taxis. Airbnb has developed technology to scour the internet and social media accounts to check potential renters for character traits. The company’s ‘trait analyser’ software employs artificial intelligence to give black marks to people ‘associated’ with ‘drugs or alcohol, “hate websites”, or sex work’ by ‘scanning keywords, images and video footage across the internet linked to a potential customer to assess their trustworthiness’. The programme assesses their ‘behavioural and personality traits’ including ‘conscientiousness and openness’ – see China’s social credit system.

Cult gun-grab

Figure 252: Police are looking and acting like the military because they are planned to fuse into a global police-military state.

This brings me to the middle section of the Hunger Games pyramid – the police/military state emerging before our eyes all over the world. Its role is to protect the One-percent from the Hunger Games masses and enforce the will of the One-percent upon the rest of humanity as per *Hunger Games* movies (see the lockdowns). The plan is to eventually fuse police and military into one force and we have the police looking more like the military with every passing year ([Fig 252](#)). Police officers are armed to the enamel on their teeth at the same time that constant pressure is being applied to disarm Americans even including those living in isolated homes with no chance of a swift police response. Is this a coincidence? Not a chance. I speak as someone who wishes there were no guns. I can’t stand them and I have never used one except to win – or not – a coconut at the fair; but we need to see the world as it is and not only as we would like it to be. If you have a heavily-armed Cult-controlled police and military and an unarmed population how is that going to end? It is such a cinch with today’s sophisticated mind-control techniques to program kids and others to go on shooting sprees in schools and shopping malls to increase the demand for gun confiscation. Do people really think that criminals and crazies won’t locate and use guns because the law says they should not? They are *criminals and crazies* for goodness sake. Are armed criminals more likely to attack a home where they don’t know if the occupants are armed or one where

they know they are defenceless against their weapons? Ultra-Zionist multi-billionaire Michael Bloomberg, former Mayor of New York and failed Democrat presidential wannabe, is funding campaigns to target gun owners in a move that promotes the Cult agenda. The desire to remove guns from the law-abiding population cannot be divorced from the extraordinary level of surveillance now in place because it's all connected. It's the Totalitarian Tiptoe to a global Cult-controlled police-military world army state to impose the agenda of the Cult-controlled world government. China's social credit system is only a glimpse at how extreme this is meant to be. Cult-owned Silicon Valley and associated Cult technology giants around the world in countries like China have constructed an immense and ever-expanding network of 24/7 surveillance in which your every action is logged and stored on databases planned to become one global database. You are watched and recorded by smart televisions, smart phones, smart personal assistants, cameras, increasingly with face-recognition, and through your every action online. The list is becoming endless. Smart streets with microphones in lamp posts are another development and the roll-out of 5G will expand the tracking and data-gathering potential by gigantic leaps. A beyond-Orwellian technological tyranny has been introduced so fast.

Open the borders

I have exposed Cult insiders over the years describing how they want to impose the 'law of the jungle' in which people are constantly in states of fear and anxiety and open to more Orwellian control to protect them from what they have been manipulated to fear. Part of the fear and chaos agenda is opening the southern border of America to psychopathic gangs arriving through Mexico such as MS-13 with its lovely motto 'kill, rape and control'. Mexican drug cartels that have taken psychopathy and brutality to still new depths of depravity exploit the near-open border areas to flood America with drugs and they are major suppliers worldwide. Mexico is run by those cartels and law and order has basically been deleted. The idea is for the situation to get so bad that there will be an exodus of people into the US on such a scale from the south that it is unstoppable. Many who cross the border illegally give birth to children in the United States to secure them US citizenship in the knowledge that the rest of the family will then not be sent home. The number of so-called 'anchor babies' born to those living illegally in America was reported to be 372,000 in 2019 which was greater than US citizen birth rates in 48 states. Billionaire financier George Soros, part of the ultra-Zionist global network no matter how much he may try to hide that, is funding both the movement of illegal migrants into America and Europe and election campaigns of New Woke district attorneys across America who then refuse to prosecute illegal migrants, criminals (including killers) and decriminalise a list of offences. This is creating the 'jungle' that Cult insiders talk about. We can also see the real meaning behind this Bloomberg pledge: 'I believe we can once again be a country that welcomes immigrants, values immigrants, respects immigrants, and empowers them to pursue the American Dream.'

Figure 253: The reason for mass migration of cultures and the obsession with seeing 'racism' everywhere and in everything. (Image Gareth Icke.)

Mass migration into Europe and the United States is a frontline Cult agenda to transform societies with the goal among many other things of creating conflict (divide and rule) between indigenous and incoming cultures ([Fig 253](#)). The Cult doesn't give a shit about the migrants. They are just pawns in a

game to secure the will of the same Cult that has bombed their countries and turned them asunder in places like Libya and Syria in the full-knowledge that it would start a trek to the north into Europe in search of safety. I am all for giving succour to migrants fleeing persecution and wars mostly of the Cult's making via the West to create chaos and control. The point that needs to be made is the great majority of migrants are not fleeing war. They only want to get into Europe and the United States and if I were them I would want to do the same. Some perspective is urgently required, however, on what that means for European and American society. German newspaper *Die Welt* has conceded that most of the migrants arriving in Europe across the Mediterranean are not genuine refugees: 'Contrary to popular belief, the majority of those arriving in Italy are not refugees ... the main countries of origin for boat migrants in January [2020] were Algeria, Ivory Coast, and Bangladesh.' Italian Interior Ministry figures suggest that large numbers are arriving from Tunisia, Algeria, and Turkey. Most of these people are not given asylum or refugee status but most stay in Europe anyway. Germany's Federal Office for Migration and Refugees agreed that only a small fraction of failed asylum seekers from Africa had been deported and that most probably never will be. Those that are deported just come back. The time is planned when an unstoppable exodus of people will head into Europe and the United States from the south. I said in *The Trigger* that Turkey would at some point lift its ban agreed with the EU on migrants crossing its border into Europe and that would lead to potentially millions more migrants heading northwards. In late February, 2020, the Turkish government of the tyrannical President Erdogan said it would no longer hold back people from Syria and other countries who wish to go to Europe and seek asylum there. Turkish officials spoke of 'opening the floodgates of migrants on Europe'. I'm not a prophet. I just know what the game is and that makes predicting events quite straightforward. Erdogan said the situation would continue until the EU renegotiated the deal and even if that happens the threat is ongoing. This tyrant is supposed to be 'anti-Israel', but somehow manages to promote the Israel-based Sabbatian-Frankist cult plans for both flooding European society with migrants and continuing the efforts launched by the ultra-Zionist Project for the New American Century to remove President Assad in Syria. Maybe he's just confused, eh? I publish evidence in my last two books that Mustafa Kemal Atatürk, first president of the Republic of Turkey, was a Sabbatian-Frankist fake Muslim interloper.

None of this is a condemnation of migrants who are looking for a better life. It is simply laying out what the plan is. I have been warning about this agenda for many years since mass migration began and it went mainstream in 2020 when Hungarian foreign minister Péter Szijjártó warned that the (Cult-created-and-controlled) United Nations is funding a program of mass migration that threatens 'the whole of humanity'. He told a United Nations conference in Vienna that the UN is funding agencies encouraging people to leave their homelands and head to western countries. Szijjártó was talking about the UN Compact on Migration passed in 2018 to press Western governments to assimilate ever more migrants from other cultures which then British MEP Janice Atkinson said could lead to Europe being faced with 59 million new migrants within a few years. Watch for criticism of mass migration and its consequences being criminalised as 'hate speech' to protect the cultural elimination policy from exposure. We are close already. The long-planned theme is confirmed by the UN document in 2001 called 'Replacement Migration: Is It a Solution to Declining and Ageing Populations?'. This said that dealing with a declining population would mean potentially hundreds of millions of migrants heading for Europe. It estimated that Europe would need at least 159 million migrant workers to arrive by 2025 'to maintain the current balance of 4 to 5 workers for a pensioner' with perhaps at the most extreme 1.4 billion migrants required by 2050 at an average of 25.2 million a year. At that time 1.7 billion migrants, or their descendants, would make up nearly three quarters of the total population of 2.3 billion. The document said that in the United States 'it would be necessary to have 593 million migrants from 1995 to 2050, an average of 10.8 million per year' and 'by 2050, out of a United States total population of 1.1 billion, 775 million, or 73 per cent, would be post 1995 immigrants or their descendants.' It is chilling in the light of this to watch Internet videos by ultra-Zionist and Sabbatian-Frankist extremists and 'rabbis'

saying openly that they are using Islam to transform European society and destroy ‘Edom’ – Rome and Christianity. David Touitou, a ‘Rav’ or Hebrew ‘teacher/spiritual guide’, said: ‘You will have no place to run. Islam is the broom of Israel.’ These crazies say that the Jewish Messiah will only return when Europe and Christianity are ‘totally destroyed’ (see also the United States). Touitou, who is far, far from alone in his shocking extremism, said:

So I ask you. Is it good news that Islam invades Europe? It is excellent news! It means the coming of the Messiah [who will rule the whole world from Israel] ... You will pay dearly for it Europeans. To such an extent you have no idea ... You will have no place to run to. Because of all the evil you have done to Israel you will pay for it a hundredfold.

When Italy will be gone ... when Edom (Rome) ... when that place is gone, and that’s what Islam is going to go. Islam is the broom of Israel and you have to know it.

Figure 254: Mass migration of people and cultures into Europe and the United States is being driven by the Cult and its One-percent cheered on by the ‘Woke’ that claim to oppose the One-percent. Babes in bloody arms.

Once ‘Edom’ was gone the same insanity will turn its attention to destroying Islam and so on. See *The Trigger* for the detailed background to what is being orchestrated out of Israel by the Sabbatian-Frankist Satanists and you will see why the definition of ‘anti-Semitism’ is constantly being expanded and enforced by censorship through the Sabbatian-Frankist ‘Anti-Semitism’ Protection Racket to stop any of this being exposed and debated. The New Woke mentality funded by billionaires like ultra-Zionist frontman George Soros is keen for open borders while considering none of the consequences (which the Cult wants) for countries and their current populations including former migrants. They certainly don’t realise – except the inner core – that they are promoting a population transformation agenda directed by the One-percent. There is no rational contemplation of what must surely follow when all that matters to New Wokers is posturing their self-purity in a constant exercise of round-the-clock virtue-signalling. This New Woke mindset – or emotionset – is a perception-virus that first infested political parties supposedly of the ‘Left’ and then expanded into centre and even ‘conservative’ parties having long infected almost the entirety of the self-obsessed celebrity ‘Luvvies’ who fly first class or in private jets to and from their walled mansions to lecture the great unwashed on the urgency to save the planet from climate change, help the poor and needy, and oppose border walls like the ones they have around their own properties. Unchecked migration is a disaster more than anything – as usual – for the poor and unemployed and yet wonderful for the rich. Wages at the lowest end are driven down by competition from people amid a labour surplus willing to work for less and job opportunities are reduced. The rich meanwhile see their wage-bill fall and enjoy a limitless supply of servants and cleaners at very reasonable rates in their big houses ([Fig 254](#)). Black communities in America have been particularly hit by this predictable sequence and it’s happening in all countries with mass immigration. Billionaires benefit and the poor lose out thanks to an outrageous and transparent deception incessantly promoted by New Wokers who call themselves ‘social justice warriors’. If it wasn’t so tragic for those who take the consequences this claim would be comedy club territory.

Tiptoe-by-Tiptoe

The long-planned outcome is being brought about by a series of interconnected steps that generate a domino effect to impose the Cult's transformation of Western society:

- 1) Manipulate wars in the Middle and Near East and support drug gangs and crime cartels to terrorise communities in Central and South America while financially trashing those societies to create a combination of extreme danger and deprivation.
- 2) You know that great numbers will seek to flee and with both the Middle and Near East and Central and South America you know they will head north into Europe and the United States.
- 3) Fund groups that will aid their passage and encourage far bigger numbers to join them in a piggy-back operation in which you assure them they will reach their 'promised land'. George Soros networks have been centrally involved in this.
- 4) You instigate such a mass movement of people that your target countries are overwhelmed with the support of the Cult-created European Union and leaders like Cult asset Chancellor Merkel in Germany who opened her borders and said 'let them all in'. The same happened in Sweden and the full force of New Woke Democrats in America cry 'open the borders to everyone'. The Swedish Employment Service revealed that just 6.1 per cent of new arrival migrants were able to find full-time work not subsidised by the government in 2019. Migrants are only a means to an end.
- 5) Democrat-controlled New Woke city and state governments introduce 'sanctuary cities' to protect those who have crossed the border illegally from US Immigration and Customs Enforcement, or 'ICE', which you demonise and demand be disbanded.
- 6) Calls to build a wall or fence to secure borders are condemned as racist bigotry and Nazi ideology in a black and white fantasy that says all migrants are good and anyone questioning the numbers and their effect is automatically evil and must be silenced. Censorship is then provided by billionaire heads of Silicon Valley giants who promote their New Woke credentials from their corporate headquarters and walled mansions – 'Make some tea, Sergio, and there's still dirt on that floor'.
- 7) The often catastrophic consequences of these events for jobs, crime, and economics in countries such as Sweden and Germany are suppressed through a compliant gutless media and by attacking anyone speaking the truth as a bigot, racist and Nazi leading to vilification and lost employment. Observers with the same concerns stay quiet in fear of similar repercussions. In this way you silence dissent and give yourself free-rein to expand the influx and increase the consequences.
- 8) The point is reached – as now in Sweden – where the truth can no longer be hidden amid bombings, arson, murder and rape. Swedish Moderate Party leader Ulf Kristersson cited figures from the Crime Prevention Council about 230 bombings in 2019 alone as proof that the government had lost control of the country. By now it doesn't matter with the job done and irreversible.
- 9) Even more extreme New Woke governments are elected, the floodgates open, the target society is transformed, and the Hunger Games structure installed.

Group protection

Figure 255: If you want the truth about the 'Woke' tyranny invert everything they say and claim to stand for.

What I am saying here is not a condemnation or mass-labelling of migrants. I want instead to expose the cold and calculated exploitation of often tragic people for political ends and the insanity of judging migrants and minorities *en masse* as groups and not through individual behaviour. Show me any racial, cultural, sexual or religious group and I will show you nice people, okay people and psychopaths – *every time*. Cult-programmed New Wokeness cannot process, or cope with, such basic subtlety. It sees only black and white racially and literally and inclusivity becomes exclusivity in that white is bad in totality and other shades are all victims of the bad white people. White supremacy and privilege extends to white homeless living amid the shit in San Francisco. My goodness, the billionaires behind New Wokeness know how to manipulate a mind. New Woke is another term for inversion – everything is inverted ([Fig 255](#)). The Cult New Woke agenda for the end of America in any form even close to what we have known is laid out in the Democrat-sponsored New Way Forward Act proposed by Mexican-born socialist Jesús García, a member for Illinois in the US House of Representatives. The bill would decriminalise illegal immigration and remove any disincentive for untold numbers to walk across the often weakly-defended border. Once in the US the bill would make it very difficult for illegal migrants to be deported and that goes even for violent criminals. The bill would open the way for those who have committed serious crimes in other countries to be allowed to settle in America. Immigration law and enforcement would basically disappear. What would be the point of border patrols when it's not illegal to cross and those who do can't be detained? Cable news host Tucker Carlson, who alerted the public to the context of the bill that was being virtually ignored by the New Woke media, said:

Under current US law, legal US immigrants can be deported if they commit an 'aggravated felony' or a 'crime of moral turpitude' – that is, a vile, depraved act, like molesting a child. Under the New Way Forward Act, 'crimes of moral turpitude' are eliminated entirely as a justification for deportation. And the category of 'aggravated felony' gets circumscribed too. What does that mean?

Consider this: Under current law, immigrants who commit serious crimes – such as robbery, fraud, or child sexual abuse – must be deported, regardless of the sentence they receive. Other crimes – less severe ones like racketeering – require deportation as long as the perpetrator receives at least a one-year sentence. But if this bill passes the House and Senate and is signed into law by the president, there will no longer be any crimes that automatically require deportation. None.

The minimum prison sentence under the bill for crimes that still require deportation would rise from one year to five and even then judges would be given the discretion not to deport. Immigration and Customs Enforcement (ICE) would have to convince a court that an illegal migrant was dangerous or a flight risk, but officers would be banned from quoting prior criminal behavior to prove this – including rape, child molestation and drug trafficking. Even more insane is the provision compelling the government to create a 'pathway for those previously deported to apply to return to their homes and families in the United States' if they would not have been deported under the new rules. It is a retrospective open border. Taxpayers would have to pay for the previously deported to be located and

brought ‘back home’ from where they had been removed for criminality. To put this in perspective 480,000 were deported for illegal entry or re-entry into America between 2002 and 2018 and they would be eligible to ‘come home’. The bill has next to no chance of being successful before the scheduled 2020 election when it would have to be signed by Donald Trump and to do so would be electoral suicide. The bill does indicate, however, what would happen once New Woke came to power and confirms the Cult agenda to destroy America by setting criminals free to create mayhem and the domination of the strongest. For this open border plan with Mexico to be proposed by a Mexican-born US politician, Jesús García, shows that they don’t care if you see they have no integrity or have any wish to hide their intent. They are now quite happy to put that on public display. There is a chasm of difference between migrants seeking a better life for themselves and their family or fleeing from war and the psychopaths of America’s MS-13 and violent gangs in Sweden, Germany and France which terrorise once-peaceful communities. There is a gathering list of no-go areas in Sweden where police won’t go except in numbers and ambulance crews won’t go after migrant attacks. The response was to launch an initiative to recruit a ‘more diverse’ police force with ‘language and cultural competence’. This was soon in trouble when half the applicants failed the admission tests. Never mind – watch the admission criteria be reduced. Sweden’s top migration official Mikael Ribbenvik, head of the Swedish Migration Agency, went public to warn Swedes that their country was becoming a ‘safe haven for war criminals and potential terrorists’ with the government giving passports and benefits to suspected dangerous criminals that were protected by law from deportation (see the common theme). Ribbenvik said that other countries ‘have a hard time understanding how we consider people dangerous but still continue to give them passports and residence permits’. Once you realise that the idea is to destroy white Swedish culture and turn its society into an arena of fear and might-is-right there is no longer any ‘hard time’ in understanding why such things are happening. Political correctness and ‘hate speech’ are smokescreens to stop this being openly discussed and exposed.

Figure 256: MS-13 are only ‘fleeing tyranny’ to impose a new one in the United States. What’s wrong with that you rascist?

Pakistani and Asian gangs raping and trafficking underage and teenage white girls in British cities were ignored by police and politicians who knew what was going on for years before officially coming to light and it’s still happening on an industrial scale. One girl was forced to have sex with 300 ‘men’ by the age of 15 in the northern town of Huddersfield. They are called ‘grooming’ gangs when rapists, psychopaths and child traffickers is what they are. They are brutal, sexist, racist, and everything and more that New Woke rails against – if you’re white. New Woke silence is deafening otherwise. Exposing these psychopaths challenges the mass immigration narrative and that is far more important to The System than shockingly abused young girls. Had they been white gangs and Pakistani girls the police would have been on them in an instant and quite right, but you see the systematic bias based on race which, of course, is blatant racism. ‘Grooming’ (rape) gangs are clearly still operating across the UK with new cases now regularly coming to light and how many more – far more – are not being caught? A leaked document from the French internal security service, the General Directorate for Internal Security, said that up to 150 communities in France are controlled, or ‘held’, by Islamist radicals. The document was classified to stop the information being known by the public and to protect the agenda. This is not

how all migrants behave, the great majority do not. The fact is, however, that some *do* and political correctness is silencing their exposure and the scale of the problem. The El Salvadorian migrant gangs of MS-13 are terrifying communities in US cities with their signature savagery of dismembering people with machetes and their prime target is other migrants from El Salvador (one in three El Salvadorians now live in America). Donald Trump was furiously attacked by New Woke Democrats and media when he described MS-13 as ‘animals’. Chopping people up with machetes? *Bless ‘em* ([Fig 256](#)).

The more the merrier

There is clearly a policy of encouraging more migrants to cross the border illegally with moves to give them driving licences, the right to vote and free health care. At least tens of thousands, some claim far more, enter the United States on a visa and never leave. These policies are protected from scrutiny by making criticism of them increasingly illegal or a reason for censorship. There is a fundamental difference between those willing to respect the culture and traditions of countries they enter and cultural supremacists and bigots who seek to impose their society and prejudices on everyone else including migrant sharia police telling Swedish girls what they can wear. Those that have allowed this human disaster to happen in Sweden, Germany and elsewhere should be in a prison cell for crimes *against* The People and *for* The Cult. What does all this do collectively? It creates the very daily fear and anxiety that the Cult wants to impose everywhere. The House wins yet again. I have charted the mass migration agenda in other books back to at least the 1920s and those connected to the Habsburg and ultra-Zionist banking families behind the creation of the EU. I have quoted the extraordinarily accurate predictions of ultra-Zionist doctor and Rockefeller family insider Richard Day who told a meeting of paediatricians in Pittsburgh, Pennsylvania, in 1969 how the world was going to change across a wide range of subjects and all of which have happened or are happening (you’ll find a summary in [Appendix 1](#)). Day knew for the same reason that George Orwell knew 20 years earlier in his *Nineteen Eighty-Four* and Aldous Huxley knew in 1932 in *Brave New World*. If you are either part of the agenda (as with Day) or have access to the plan through research or contacts you can comfortably predict the ‘future’ because unless something intervenes to stop the plan it will play out. See my book *Phantom Self* for the detail of what Day said in 1969 which will take you aback in the light of what has happened since. He predicted among so much more the emergence of the Internet, the surveillance state, smart televisions, the plan to ‘make boys and girls the same’, clearing rural areas and forcing everyone into cities, and calculated mass migration to transform Western society. Lawrence Dunegan, one of the paediatricians present, took notes and in 2004 he recounted in audio interviews with an alternative website what Day said that night. Dunegan was prompted to do so when he saw the predictions were happening. He quotes Day as saying this in 1969 about the plan for mass migration:

There [will] be mass movements and migrations of people without roots in their new locations because traditions are easier to change in a place where there are a lot of transplanted people, as compared to trying to change traditions in a place where people grew up and had an extended family, where they had roots.

This is the real reason for mass immigration – to manipulate an infusion of people from other cultures that have no connection to the history and traditions on which target societies are founded. Those with a sense of nationhood will resist the deletion of nations and countries under a world government dictatorship and the more you dilute that sense of nation and culture the more you dilute that resistance. As older people die out and the young take over who know nothing except the current society the historical and cultural foundations fall and disappear. The manipulation and dilution of the indigenous sense of nationhood is further systematically undermined by denigration of the culture as we have seen so clearly in Sweden. This has included an advertisement by SAS, the biggest airline in Sweden, Denmark and Norway, promoting the belief that there is no Swedish culture and nothing ‘truly Scandinavian’.

Swedish politicians supporting mass immigration and TV documentaries by the state broadcaster have said the same. SAS featured a black guy saying 'We are no better than our Viking ancestors' and the advertisement (propaganda) said everything considered 'Swedish' was a copied culture which came from foreign lands. Swathes of the public were outraged, but the theme will continue because it's the Cult agenda. Something similar is emerging in America with Democrat politicians saying that migrants are 'more American' than Americans. The absorption of national sovereignty into superstates like the European Union is part of the same plan and explains why the same people who plotted in the 1920s to introduce the EU also plotted even then the mass movement of people that we have today (see *Everything You Need To Know*).

The takeover sequence

There is another sequence that follows in the overthrow of the indigenous culture in any country in the face of mass immigration. Not immigration at all – *mass*, basically open-border, immigration. First you have an influx from another culture that tends to gather in certain areas and transform their cultural nature. Members of the indigenous population move out into familiar surroundings. This has happened in the extreme in the East End of London where its cultural status has been utterly transformed in little more than a generation. I have seen this referred to as people losing their 'cultural security' in the face of the incoming culture or cultures. Next the numbers reach levels where how new culture communities vote decides who is elected to local councils and as Members of Parliament. At this point parties of Left, Right and Centre begin to pander to the new cultures with their election-deciding potential. At the same time they ignore and take for granted those parts of the wider community who would normally vote for them. I call this the 'gimme vote' and gimme voters get nothing from political parties – 'they'll always vote for us anyway'. The British New Woke pro-mass immigration Labour Party found in the 2019 national election that those days are now over as the kick-back after decades of 'gimme' exploitation of the white urban class demolished their support. New cultures become the focus as their numbers continue to rise. Politicians from incoming cultures start to be elected and eventually they become leaders with an ever-increasing body of support with new culture birth-rates far exceeding those of the indigenous culture. This is happening as Western women have children later or not at all in the ridiculous and encouraged assumption that this will save the world from 'climate change'. Fertility rates for white women were down in every US state in 2017 according to the Centers for Disease Control and Prevention (CDC) and the same is happening in countries like Germany. They have fallen below the rate needed for the population to replace itself. Pointing out these facts is not racism. It is to expose the agenda behind it and that affects us all no matter what your racial background and skin colour. London now has a white minority population as does my birth city, Leicester, with Birmingham, Britain's second biggest city, going the same way. The transformation has happened in 50 years with the speed increasing. The BBC reported in 2018 on a study projecting university places which predicted that three in four London students will be from ethnic minorities by 2030. A British 'journalist' and self-proclaimed communist activist called Ash Sarkar, British-born of Bengali descent, pointed out in a 2016 video that the white population of London had fallen by 600,000 while non-whites had increased by 1.2 million. Her response to this was: 'So yes, lads, we're winning.' She claimed she was joking (I don't think so) when people were appalled by the remark, but it showed once again how we live in a two-tier system of political correctness. Had a white person said the same if the figures were reversed they would be condemned and banned in a fury of 'racist, bigot, Nazi' and Ash Sarkar with breathtaking hypocrisy would be leading the charge. To Sarkar white Britain is a racist society and in line with true New Woke orthodoxy only white people can be racist and not those of Bengali descent who describe the white population of London falling and the non-white increasing as 'we are winning'. The bias and unfairness is transparent and systematic. Census projections in the United States predict that whites will be a minority by 2045 with Hispanics the next biggest group. If the One-percent-controlled New Woke mentality gets political power

it will be much sooner. We should not forget that white people occupied the land that was once the domain of Native Americans and it is not the demographic change by itself that is the point here. It is why it is being systematically manipulated by the Cult and to what end and why white people are being so targeted.

Figure 257: Don't reveal what he's actually doing or you are an 'anti-Semitic'.

While this sequence of societal change unfolds any criticism or exposure of what is happening, any complaints from the indigenous population about their home areas being transformed into what is to them a foreign land, are dismissed and silenced by political correctness. New Woke thought police brand every dissenting voice as racist. They demand that people must be 'non-judgemental' (while themselves being constantly so) when in fact 'non-judgemental' is Orwellian code for having 'no opinion' outside the New Woke perceptual prison camp. The sub-text here is that if people are not allowed to criticise what people and the Cult are doing this automatically blocks all exposure of what is happening to enslave and manipulate the population. New Wokeness pervades the Cult-owned media to ensure PC reporting of events and government agencies are infused with Wokeness including the police as laws are introduced to make illegal any criticism of the impact of incoming cultures on the indigenous culture. Legitimate criticism is labelled 'hate speech'. The cumulative effect eventually is that incoming cultures override and replace the original culture and legislation is passed to change the cultural basis on which the country is governed. It's no good New Wokers shouting bigot at me for pointing this out which is ridiculous given my view of reality and the Oneness of everything. The sequence I have described is factually how it works and this has been *made* to happen by the Cult and its agents like war criminal British Prime Minister Tony Blair to serve its agenda for the cultural and racial transformation of Western Society. If people don't like me speaking the obvious truth I have a finger that I will gladly put on public display.

Soros money

Figure 258: Have you thought this through, people? Have you thought at all? It seems not.

I have exposed billionaire manipulator George Soros in great detail in many other books including *The Trigger* and *Everything You Need To Know* ([Fig 257](#)). His global vehicle operating in 100 countries is the Open Society Foundations (OSF) to which he has given at the time of writing some \$32 billion. OSF is dubbed an NGO, or non-governmental organisation, and these along with 'think tanks' are a major source of Cult manipulation and government policy. Note the giveaway name – Open Society. This is code for open borders and the end of countries and nations which just happens to be the goal of the Cult as I have been highlighting for 30 years. The Cult's planned global structure requires an end to countries

to make way for a world government overseeing superstates like the EU with regional entities replacing nations and countries. Maps of a regionalised Europe have come to light through the EU. People would be designated 'global citizens' and be subject to the impositions of an unelected global government run by 'experts' and technocrats directing the 'Smart' technological control grid. Making countries disappear means borders must disappear and this is the whole idea of what is happening. Without borders there can be no countries, individual value systems, or safety nets for the poor, disabled, sick and destitute – you know, all those things the New Woke social justice warriors claim to care about ([Fig 258](#)). Anyone just walks in to the land of a former country no matter what their background and attitudes and demands they are looked after; but by whom and with what? Very soon after open borders the game would be up. There would not be the money, jobs, housing, healthcare, 'education' for all those who would want them as hordes of people move in. I shake my head when I hear New Wokers demanding open borders *and* more spending on healthcare, housing, unemployment and schools. They have no self-awareness to see the obvious contradictions. New Woke is purely about virtue-signalling and not rational thought. Ask them if they could stop a jug running over while the tap was still on and they might say 'of course, not'. Then they would call for open borders *and* more spending on healthcare, housing, unemployment and schools while believing that at some point there would be enough for everyone. No such point could ever be reached. The more you spend on healthcare, housing, unemployment and schools the *even more* would be needed to meet ever-increasing demand through ever-increasing numbers. Cabal asset Soros directs his tens of billions at all the facets of the agenda and funds Open Society operations to overthrow governments, control politicians and parties, impose the New Woke agenda, and encourage mass migration into Europe and the United States. He also bankrolled organisations in an effort to stop the UK leaving the European Union or at least in a way that could genuinely be called 'Brexit'. Soros money from someone who lives in the United States and is not British was directed against Brexit. The sheer arrogance of it is mind-numbing. The Strategic Culture Foundation website detailed in a 2017 article the control that Soros has over the European Union:

It's an open secret that the 'Soros network' has an extensive sphere of influence in the European Parliament and in other European Union institutions. The list of Soros ['reliable allies'] has been made public recently. The document lists 226 MEPs from all sides of the political spectrum, including former President of the European Parliament Martin Schulz, former Belgian PM Guy Verhofstadt [a major opponent of Brexit], seven vice-presidents, and a number of committee heads, coordinators, and quaestors. These people promote the ideas of Soros, such as bringing in more migrants, same-sex marriages, integration of Ukraine into the EU, and countering Russia. There are 751 members of the European Parliament. It means that the Soros friends have more than one third of seats.

George Soros, a Hungarian-American investor and the founder and owner of Open Society Foundations NGO, was able to meet with President of the European Commission Jean-Claude Juncker with 'no transparent agenda for their closed-door meeting', and [it was] pointed out how EU proposals to redistribute quotas of migrants across the EU are eerily familiar to Soros's own self-published plan for dealing with the crisis.

The report is talking about ways to respond to the very migration 'crisis' *created* by Soros, his masters and his Open Society Foundations – Problem-Reaction-Solution. The European Center for Law and Justice revealed in 2020 that in the period 2009-2019 nearly a *quarter* of the judges on the bench of European Court of Human Rights have had strong links to the Soros Open Society Foundations or to organisations that he funds including Amnesty International which has received \$100 million since 2010. The study found that some NGOs are so funded by the Soros networks that they are effectively wholly-owned subsidiaries. But there's no conspiracy, George Soros is a shining light of unimpeachable virtue, and it is 'anti-Semitic' to say otherwise.

'Soros Spring' technique

Soros-funded groups have a particular role in manipulating protests against target governments to give the illusion of spontaneous 'people's revolutions'. If the Cult continually invades countries with military force the pattern will be clear and opposition will gather with each one. Instead the ideal is to manipulate the population in the country to overthrow the government as you hide in the shadows saying 'Who, me?' Open Society place-people and agent provocateurs instigate the unrest and this is followed by thousands from the population who have no idea that it's all a scam. Cult-controlled American and European governments then give public support to the protestors and demonise the country's leader. This is often quite straightforward with so many psychopaths of all kinds that kill, terrorise and otherwise manipulate themselves to power in country after country. The Open Society Foundations of Soros were frontline players in the so-called 'Arab Spring' when protests across the Arab world removed governments and replaced them with military dictatorships as in Egypt and warring warlords trafficking children in open slave markets as in Libya. If the Soros network can't overthrow a regime by protest alone American and European governments send in the bombers to finish them off under the PR cover of 'saving the people from violence' – by bombing them from the sky. Precisely this happened in Libya when the country with the highest per-capita income in Africa was bombed into the Stone Age by Cult-created-and-owned NATO. Countries targeted by Soros and US/NATO psychopaths happened to be the same ones demanded for regime-change by the Cult's Project for the New American Century organisation founded in the United States by Sabbatian-Frankist ultra-Zionists that included the major players in the White House and Pentagon in 2001 when the Cult-orchestrated 9/11 gave them the excuse to start picking off the list. Another Open Society-manipulated overthrow was that of President Viktor Yanukovych in Ukraine in 2014 and was overseen by ultra-Zionist Victoria Nuland, Assistant Secretary of State for European and Eurasian Affairs at the US State Department, and the wife of ultra-Zionist Robert Kagan, co-founder of ... the Project for the New American Century. More than 2,200 Open Society Foundation documents secured by the group DC Leaks reveal the manipulation of Soros and his lackeys including US policy toward Ukraine after the 2014 coup during the fake-liberal Obama administration. One document described the 'New Ukraine' as a key that 'reshapes the European map by offering the opportunity to go back to the original essence of European integration' (the plan for the tyrannical centralisation of power over the whole of Europe by Cult-controlled bureaucrats which explains why Soros sought to thwart Brexit). British academic Frank Furedi has personal experience of the arrogance, reach and agenda of the Soros network and exposed what he saw in a British national newspaper. He said he was a guest speaker at an event funded by a Soros foundation in Budapest, Hungary, where Soros was born. Furedi recalled:

It was later during lunch at a plush Budapest hotel that I encountered the full force of the arrogant ethos promoted by the Soros network of organisations. At my table I listened to Dutch, American, British, Ukrainian and Hungarian representatives of Soros NGOs boast about their achievements. Some claimed that they played a major role in the Arab Spring in Egypt. Others voiced their pride in their contribution to the democratisation of the Ukraine. Some bragged about their influence in preparing the ground for the overthrow of the Gadhafi regime in Libya. I sat quietly and felt uncomfortable with a group of people who so casually assumed that they had the right to play God throughout the world.

At one point, the head of the table – a Hungarian leader of a Soros NGO – asked me what I thought about their work. Not wishing to offend, I quietly remarked that I wasn't sure whether the external imposition of their idea of democracy on the people of Libya was legitimate nor that it would work. Without a second's hesitation, my interlocutor rounded me with the response: 'I don't think that we have the luxury of waiting until the Libyan people come with their own Jefferson.'

The overthrow of Colonel Gadhafi in the Soros foundation 'people's revolution', and manipulation in

other countries including Syria, led to the start of the mass movement of people out of the Middle and Near East and Africa into Europe aided by the same Open Society Foundations as you can read in detail in *Everything You Need To Know* where you will also see how Soros-funded groups are behind the attempts to relocate masses of people from Central and South America into the United States. Yet another Cult think tank was launched in 2018 called the New Center that campaigns for an amnesty for all 'illegal aliens' in the United States to allow them to stay permanently. The New Center is headed by William Galston of the Brookings Institute and ... ultra-Zionist *William Kristol, co-founder of the Project for the New American Century*. The demands of the 'New Center' are supported to their DNA by the New Woke mentality funded to a pivotal extent by ... *George Soros*. The Soros Open Society network officially left Hungary, the country of his birth, in 2018 after Prime Minister Viktor Orban's government passed the 'Stop Soros' law to criminalise the organisation's manipulation of the country ([Fig 259](#)). Others have seen through the Soros game with Russia banning Open Society activities as representing 'a threat to the foundations of the constitutional system of the Russian Federation and the security of the state'.

Figure 259: The Hungarian government knows what the Soros game is and displayed these posters exposing his activities.

The defence-mechanism to stop exposure of Soros is that he is Jewish and any criticism of him must be 'anti-Semitic'. This is the Anti-Semitism Industry and Protection Racket at work blocking legitimate investigation into anyone who is Jewish or Zionist purely *because* they are Jewish and Zionist. Is that supremacist or what? A whole new definition of 'anti-Semitism' is being introduced by governments and institutions around the world that includes criticism of Israel for the specific reason of expanding the definition to dub ever more information and opinion as 'anti-Semitic' to protect the Cult and its operatives from exposure. Is it really discriminatory to ask why 0.2 percent of the world population and two percent of the American population have so much power over politics, finance and censorship by the mainstream media and Silicon Valley? It is a very legitimate question in a society that values its freedom.

The Cult doesn't want these questions asked because its Sabbatian-Frankist wing, which hates Jews, would soon be secret no more – not least to Jews. This would be a mortal blow when hiding behind and within the Jewish community is their essential cover. Few make these points or ask these questions for fear of being condemned as 'anti-Semitic'. I don't give a shit. I want the truth and if that means taking an onslaught of misrepresentation and abuse then so be it. For now the incessant intimidation of the non-New Woke population means that what the Cult wants the Cult gets and it will go on doing so until humanity stiffens its backbone and summons some self-respect.

We'd better do that fast – like now – before the chance is gone.

CHAPTER EIGHT

Why demonise the gas of life?

Belief can be manipulated. Only knowledge is dangerous – Frank Herbert

New Wokeness is a cult religion in every sense and its sub-section known as ‘human-caused climate change’ is most certainly so. Climate orthodoxy is a theology, a term which derives from two Greek words together meaning ‘the study of God’. In this case the ‘God’ is the Virtuous Self and the Devil is carbon dioxide ([Fig 260](#)).

Figure 260: The Climate Cult and its constituent parts like Extinction Rebellion are just another religion and tick every box. ‘Rebel for life’ means rebel for the One-percent. Like all religions the Climate Cult is a perception program to ensnare its followers. (Image Gareth Icke.)

Religions have an orthodoxy founded on unsupportable beliefs that include walking on water and virgin births and so does the Climate Cult. Religions label non-believers of these unsupportable beliefs as heretics and blasphemers and so does the Climate Cult. Religions have had inquisitions to demonise and silence such heretics and blasphemers and so does the Climate Cult. Religions dictate a narrative and tell followers to unquestioningly believe whatever it claims and so does the Climate Cult. Religions say that belief in the orthodoxy must be founded on faith and not facts and so does the Climate Cult. You must believe the crap spewed out by faith-based religions like Extinction Rebellion and the Climate Cult priesthood in the form of people like New York New Woke congresswoman Alexandria Ocasio Cortez or you are a ‘climate change denier’ (see heretics and blasphemers). Don’t question – *believe*. These methods are straight from the Cult manual for its ‘astroturf’ fake protest groups described by former *CBS News* investigative reporter Sharyl Attkisson:

Hallmarks of astroturf include use of inflammatory language such as ‘crank’, ‘quack’, ‘nutty’, ‘lies’, ‘paranoid’, ‘pseudo’, and ‘conspiracy’. Astroturfers often claim to debunk myths that aren’t myths at all. Use of the charged language test well. People hear something’s a myth, maybe they find it on Snopes, and they instantly declare themselves too smart to fall for it. But what if the whole notion of the myth is itself a myth, and you and Snopes fell for that? Beware when interests attack an issue by controversialising or attacking the people, personalities, and organisations surrounding it rather than addressing the facts. That could be astroturf.

And most of all astroturfers tend to reserve all of their public scepticism for those exposing wrongdoing rather than the wrongdoers. In other words, instead of questioning authority, they question those who question authority. You might start to see things a little more clearly. It's like taking off your glasses, wiping them, and putting them back on, realising, for the first time, how foggy they'd been all along. I can't resolve these issues, but I hope that I've given you some information that will at least motivate you to take off your glasses and wipe them, and become a wiser consumer of information in an increasingly artificial, paid-for reality.

Questioning those who question authority is at the very core of Climate Cult and New Woke propaganda in general and both are drowning in astroturf fronts because they are a means through which human society is being transformed into a global dictatorship by the Cult as we'll see in following chapters. In this chapter I want to first unpick the truly mendacious climate change narrative.

Cult doctrine and its many faces

Here are some archetypal traits of a cult: Unquestioning submission to leaders of the cult and what they insist you believe; those beliefs are the only truth; control cult members through the constant repetition and indoctrination of this orthodoxy; invoke an 'us' against 'them' mentality and claim that any outside challenge is 'persecution'; salvation through association with the cult – only we can save the world by everyone doing what we demand; group think with pressure by the group to conform and target any individual with doubts; if doubters persist shun or expel them so they don't pollute the group-think with legitimate questions; avoid critical thinking and ignore blatant contradictions in the orthodoxy; often impose a cult form of clothing or uniform so a cult member can be recognised purely by what they wear or what they do with their hair. All of these traits can be observed with the Climate Cult which has been funded and manipulated into existence by billionaires like George Soros (again) and decades of climate change indoctrination in the schools and universities. This has led to great swathes of whole generations believing utter baloney because that's all they've heard. Climate Cult theology is founded on one of the most powerful forms of perception control – repetition of the orthodoxy at the exclusion of other views, opinions and information. Even Princeton professors who don't accept climate hoax theology after a lifetime of expertise in climate science and the effects of carbon dioxide have their YouTube videos tagged to a *Wikipedia* page promoting the official lies (which goes without saying when Wikipedia actually *exists* to promote official lies). I typed in key words for YouTube videos that questioned climate change doctrine and the Wikipedia page parroting that doctrine was at the top of even that list. What a con job by this Cult propaganda operation YouTube owned by Google.

The Climate Cult demands that people 'listen to the science' when the Cult is anti-science. It's not interested in allowing all scientific opinion and research to be heard in a spirit of openness and balanced understanding. The aim as with all New Woke agendas is to silence opposition and block open debate which they know they would lose. George Soros, a member of the United Nations High Level Advisory Group on Climate Change Financing, funds a list of organisations seeking to silence 'denial' of climate change orthodoxy. These include Avaaz ('Voice') which has been described as 'the globe's largest and most powerful online activist network'. It was established in 2007 by two other Soros-funded groups, Res Publica and [MoveOn.org](#). Avaaz claims to have 55 million members with campaign teams operating in 30 countries and presents itself as a global grassroots operation working in pursuit of 'people-powered politics'. It campaigns in 15 languages with a 'core team' on six continents and this Soros-funded group is leading a campaign to have Google-owned YouTube ban all information and opinions challenging the official propaganda about human-caused climate change. Avaaz ('Voice') doesn't want others to have one. We have also had a Soros-connected Democrat Congressional committee (New Woke political wing) demanding that Google-owned YouTube censor videos that contain 'climate misinformation' which means challenging the official narrative. Fascistic committee members wrote to Google CEO Sundar Pichai to urge that YouTube stop 'driving millions of viewers to climate misinformation videos every

single day'. The contempt for freedom is extraordinary, but it suits the Cult agenda perfectly. Avaaz claims that 'climate denial = death' which is only another way of saying that if you can't win a debate – ban it. 'Grassroots' Avaaz has a long record of campaigning for items on the Cult wish-list. It has helped Iranian protestors demanding the removal of the country's government that the Cult has long worked to remove; supported a no-fly zone for Libyan military aircraft which allowed America, Britain and NATO to bomb the country and its people shitless without challenge and delete Colonel Gadhafi; supported the US-instigated 'civil uprising' against Cult-target President Assad in Syria and this was reported to include training activists and delivering \$1.5 million of Internet communication technology to protesters. Avaaz claims to 'unite practical idealists' to make the world a better place when its support for Western (Cult) actions against Libya and Syria alone played a part in the human nightmare that followed in a frenzy of death and destruction of the innocent. All those countries were on the September, 2000, list of targets named by the ultra-Zionist Sabbatian-Frankist Project for the New American Century.

To those who trust Avaaz I would suggest a call to Naivety Anonymous. To those who trust George Soros I would say don't waste a call – even they can't help you. How could anyone if you believe that a man who has caused financial mayhem for whole populations by targeting their currencies for financial gain is funding 'progressive' 'people-power' groups from the kindness of his heart. The best of luck finding that, by the way. Soros has also funded groups behind the worldwide Friday school 'climate strikes' fronted by the Climate Cult's Greta Thunberg who has copyrighted the terms 'school strikes for climate' and 'Friday's for future'. America's Media Research Center, a non-profit conservative media watchdog, reported that at least 22 activist groups listed as partners in the Global Climate Strike received almost \$25 million from Soros through his Open Society network between 2000 and 2017. They included Fund for Global Human Rights, Global Greengrants Fund, 350.org, Amnesty International, Avaaz, Color of Change and People's Action. Has the penny dropped yet Green movement? Unfortunately probably not, but maybe it will when we get to *why* human-caused climate change is being hoaxed. A major funder of Extinction Rebellion is Sir Chris Hohn who heads one of the world's biggest hedge funds valued at multiple billions. The UK *Mail on Sunday* revealed the fund's investments in companies at the centre of environmental scandals. Everywhere the Climate Cult and New Woke have a remarkable ability to attract billionaire sponsorship and support. Amazon's mega-billionaire Jeff Bezos announced in early 2020 that he would spend \$10 billion on 'fighting climate change' by funding 'scientists, activists and non-governmental organisations (see Soros) through a new 'Bezos Earth Fund'. It was still more confirmation that human-caused climate change is a One-percent hoax. Bezos picked up the script and said the climate was changing faster than had been predicted. 'Those predictions were bad but what is actually happening is dire'. Bloody yawn. He said that Amazon was ordering 100,000 electric delivery vehicles from Michigan-based, Amazon-invested Rivian, which again is straight from the Cult agenda. To underscore the power of programming hundreds of Amazon workers, who face losing their jobs to 'climate-friendly' (it's not) AI, had protested that Bezos was not doing enough about climate change. Manipulate the serfs to demand that you do what you want to do anyway (it happens all the time). The Climate Cult works to silence the ever-growing list of scientists worldwide who can see that climate change orthodoxy is mendacious nonsense. They are demonised, targeted in the courts, denied access to the media, and their careers and income disappear. By contrast those self-proclaimed 'scientists' prepared to sing from the song-sheet (the ones Bezos will support) are constantly wheeled out by the Cult-owned media and can dip their snouts in an almost unlimited trough of protection money – money to protect the lies.

The cult (literally) of New Woke climate celebrity

Once belief in the orthodoxy is secured in the mainstream it becomes 'cool' to support that orthodoxy. If you are a virtue-signalling celebrity it's a must to build your own image and support-base. New Woke is 'in' while not being New Woke can be the death knell for a career in the media, entertainment and comedy. It's the same technique that controls scientists. Say what we want and you get a stack of money

or tell your truth and we'll destroy you. Do you want lots of likes on Facebook or a Twitter storm? As a result we have a lengthening list of celebrity arselickers proclaiming Climate Cult orthodoxy of 'Thou Shalt not fly' while heading in private jets to climate conferences and protests. In the case of virtue-signal world champions like actor Leonardo DiCaprio this involves taking private jets to receive climate protection awards. Celebrities are used by the Cult for their public platform to spread the message while almost every one of them won't have a clue who is really pulling their strings and why. Britain's Prince Harry and his American wife Meghan Markle constantly virtue-signal their climate change New Wokeness while being driven in limousines to private jets and telling others to reduce their 'carbon footprint'. Isn't that hypocrisy? No, no – I said *you* must reduce your footprint, not *me*. Harry's contribution to saving the planet has been limited to the New Woke posturing of making a speech in bare feet. Put your shoes on, mate, or you'll hurt your feet on the tarmac when you leave. The couple announced in January, 2020, they were 'stepping down' as 'senior royals' and heading for Canada. Part of this will involve super-Woke Markle being able to publicly promote her virtue-signalling super-Wokeness (including climate change theology) while Harry follows behind doing what he's told and apologising for being a white male. New Wokers supported the move because the pair are New Woke while the now hijacked original Left would have been exposing their unearned privilege, opportunism and narcissism. Oh, how the Cult is going to exploit them both – and make them very rich – to promote the climate change and New Woke agenda. Their first big, *big* pay-day came with a 'speech' to the assembled mega-rich One-percent fake Woke at a JP Morgan Chase event in February, 2020, for which they were reported to be paid between \$750,000 and \$1 million. JP Morgan Chase is America's biggest bank and the world's sixth biggest with assets of \$2.6 trillion. Here we have fake Wokers selling their souls to speak for big bucks to other fake Wokers with limitless pockets whose investments have done so much to devastate the environment and create widespread inequality and injustice. The hypocrisy and lack of self-awareness of these royals-on-the-make is chilling.

Figure 261: Sad, real sad.

The 'royal' couple, said they were seeking to become 'financially independent' which means exploiting their royal connections and privilege to make lots of money and freeing Markle from her royal restrictions to stay out of party politics. Now she can campaign for the New Woke agenda including all the demands of the Climate Cult which she and her husband appear to ignore at every turn. Prince Harry was caught on tape by two Russian pranksters thinking he was talking to Greta Thunberg. The result was toe-curling and absolute confirmation that he just repeats the climate hoax script word-for-word without a thought of his own. How Woke and aware Markle really is can be gleaned by her closeness to the Clintons, particularly Hillary, one of the most corrupt partnerships on Planet Earth. We can expect the royal private jet passengers to be even more vocal now in support of the Climate Cult and every last facet of New Woke while living their own life in the 'privilege' that New Woke claims to despise. The System will give them every support. American TV host Tucker Carlson accurately described celebrity climate New Wokeness as 'the theology of the private jet class'. Meanwhile we are told that the rest of us will soon be flying in planes (as a stepping-stone to not flying at all) that fly together in V-shape formations

like migrating birds to save fuel and CO₂ emissions by reducing air resistance like racing cars that get close to the one in front. As someone who has experienced what happens to a plane when it gets too close to another and is twisted by the air turbulence I can't wait. Swedish Climate Cult goddess Greta Thunberg has been used to promote the Swedish term 'flygskam', or 'flight shame', to pressure people to stop flying (except the private jet class). The shame that Thunberg will feel when she realises the scale on which she has been manipulated does not bear thinking about ([Fig 261](#)). She and the Climate Cult have created a situation so crazy that the UK's University of Derby introduced 'climate anxiety classes' for staff and students worried about the planet and the eco-system. The university said the classes are aimed at dealing with feelings of anger, guilt and grief and combatting their 'sense of loss'. I mean – *pinch me*. One student said the 'climate emergency' made her feel she 'isn't going to have a future'. Oh, congratulations Greta and your handlers. Well done you. Dr Jamie Bird, university deputy head of health and social care research, said people suffer 'climate grief' when they see what they are losing. They are not losing *anything* except their bloody minds. Despite incessant public indoctrination great numbers of people can see through the garbage, but most are frightened to say so for fear of the backlash and consequences. Perhaps, however, we saw a turning point in 2019 when narcissistic, self-obsessed Extinction Rebellion protestors were pulled off the roofs of London Tube trains by commuters who just wanted to get home after a day's work. They'd had enough and rightly so. We've *all* had enough.

Monumental mendacity

A key component of mass indoctrination is the sheer scale of deceit which the Nazis described in terms of the bigger the lie the more will believe it. Lie a little bit and you may get caught out on the basis that people are open to smaller-scale lies. What most resist are the ginormous super-whoppers pedalled by the Cult. Okay, people say, they might lie here and there to support climate change orthodoxy, but they wouldn't lie about the whole *shebang* would they? Oh yes they would and they have and they are. They lie both about the individual components of the climate hoax *and* about the hoax in its entirety. I'll explain why shortly. In fact, the entirety of the hoax is the totality of the individual hoaxes. The Cult seeks to protect this fact from exposure by silencing and demonising dissenters to ensure only one version is ever heard by most people. The foundation of the hoax is the ever-repeated claim that 'the science is settled' when it is absolutely not and becomes less so by the day. Pedro Sanchez, acting prime minister of Spain, reached still new levels of ridiculous when he said: 'Only a handful of fanatics deny the evidence.' He's talking about an ever-increasing list of experts in their fields worldwide who are exposing climate change orthodoxy as the claptrap that it is. All Sanchez and almost every other politician will have heard is the official version ultimately emanating from the Cult through The Web and they repeat that orthodoxy as solid-gold unquestionable truth. This is what teachers and academics are doing with their daily indoctrination of the young to believe in climate change mendacity. You don't want to indoctrinate the kids? Then find another job and we'll replace you with someone who will. It's the programmed programming the next generation of programmed. Once the orthodoxy is established as accepted reality political leaders and parties compete with each other (with a few exceptions) over who will do the most to 'fight' a problem that doesn't exist. To question the climate change religion is political suicide especially on the New Woke 'Left' and those who have seen through the hoax zip their mouths as they seek election. The Cult knows that from the moment it secures official belief in the 'conventional wisdom' about any subject the dominoes will begin to fall right across society with all institutions making decisions and introducing laws on the basis of that flawed and manipulated 'wisdom'. The climate change hoax is such a wonderful example. The official narrative is taught in the schools and universities, promoted by the mainstream media and infused into the law of the land while dissenters are silenced, abused and demonised. No wonder that narrative has become accepted 'truth' among those who don't question. I am no supporter of Donald Trump for many reasons, but at least he has spoken out against climate orthodoxy while others cower or believe what they're told.

In support of ‘the science is settled’ baloney we have the associated lie about 97 percent of climate scientists believing that humans are the main cause of climate change (a climate that is *always* changing and has been since the Earth was formed). I saw Jonathan Bartley, co-leader of the Green Party for England and Wales, parroting this deceitful figure on a BBC programme while he berated the BBC for allowing ‘climate deniers’ to appear. I was a national spokesman for the UK Greens for a short time in the 1980s when it still campaigned for freedom of speech and wider environmental issues before it was completely hijacked by New Woke. Even the establishment *Wall Street Journal* has debunked the 97 percent claim. When you track back to where it came from, and on what basis, this figure being cited as fact by those who wish to sell the orthodoxy is ludicrous. Al Gore just pulled the figure out of nowhere and subsequently the most quoted source is John Cook, ‘Climate Communication Fellow’ for the Global Change Institute at the University of Queensland who is not a climate scientist. He just promotes the official story. I have read many articles explaining how Cook examined 11,944 papers by climate scientists and found that 97 percent agreed that humans were the main cause of ‘warming’. This is not the case at all. In his own words Cook writes that 32.6 percent endorsed human-caused warming (though very few as the main cause) while 0.7 percent rejected that and 0.3 percent were uncertain. Now here’s the most important figure … 66.4 percent *expressed no position*. I see it claimed again and again by the Climate Cult and the media that 97 percent of climate scientists say humans are the main cause of climate change when even by Cook’s flawed methodology the figure refers only to those who *expressed a view* and not the scientists in totality. One study of Cook’s figures found that only 64 of the 11,944 papers – (0.5 percent) – said humans are the main cause of global warming and nowhere was mentioned terms such as ‘crisis’ or ‘emergency’. Even if you apply this to the 3,974 papers that did express a view the figure of 64 pointing the finger at humans as the main culprit plays out as 1.6 percent. A later study of Cook’s source papers found that in fact only 41 of the 64 papers endorsed the view that humans are the main cause of warming. That’s 41 out of 11,944. Where does the 97 percent of climate scientists agree come from? They *made it up* like they have made up virtually everything else. Science is about evidence not a show of bloody hands from song-sheet scientists with their nose in the climate trough and nor is it about fiddling temperature figures to support your case because the actual temperatures don’t do that. This has been exposed over and over and if you are telling the truth you don’t need to manipulate the data. How many people know that US Senator Timothy Wirth admitted they even manipulated the temperature of the room when NASA scientist James Hansen really kicked off the global warming scare at a Senate hearing in 1988? Wirth said:

... We ... went in the night before and opened all the windows, I will admit, right? So that the air conditioning wasn’t working inside the room and so ... when the hearing occurred there was not only bliss, which is television cameras in double figures, but it was really hot ...

... So Hansen’s giving this testimony, you’ve got these television cameras back there heating up the room, and the air conditioning in the room didn’t appear to work. So it was sort of a perfect collection of events that happened that day, with the wonderful Jim Hansen, who was wiping his brow at the witness table and giving this remarkable testimony ...

Senator Wirth also said:

Believe it or not, we called the Weather Bureau and found out what historically was the hottest day of the summer. Well, it was June 6 or June 9 or whatever it was, so we scheduled the hearing that day, and bingo: It was the hottest day on record in Washington, or close to it. It was stiflingly hot that summer. [At] the same time you had this drought all across the country, so the linkage between the Hansen hearing and the drought became very intense.

You can see that from the start the climate change hoax was not about facts, but manipulating perception to believe a fantasy.

You were saying?

Figure 262: Al Gore, the One-percent gofer to sell the lie.

Hansen's dire claims that day more than 30 years ago have not happened and it's the same with long-time Cult asset Al Gore who became the global sales-pitcher for the Big Lie and has made a fortune from being so ([Fig 262](#)). Gore said in 2006: We have ten years to save the planet (big-time wrong); the Arctic will be ice-free by 2014 (big-time wrong); the Gulf Stream will slow down (it's been speeding up); polar bears are in danger of becoming extinct (big-time wrong); sea levels will rise by 20 feet in the near future (big-time wrong). Read some of my other books and you'll see the background to Gore who has a personal carbon footprint the size of Godzilla. He was a vice-president to Bill Clinton and you don't get that job if you have any inclination whatsoever to tell the truth. The Cult controls the Nobel Peace Prize, which is why so many Cult-asset war-mongers and mass killers have been recipients, and it also dictates Oscar winners whenever that would promote the agenda. Gore, you will not be shocked to know, was handed both awards for lying about climate change and frightening the life out of whole generations of children and the young. Prince Charles said in 2009 that we had twelve years to save the world from irretrievable climate and ecosystem collapse (big-time wrong) and with extraordinary idiocy he claimed that climate change was the 'root cause' of the Syrian conflict which was actually triggered by terrorists funded and armed by the United States and Gulf State allies like Saudi Arabia. Here are some other climate and environmental catastrophe warnings that turned out to be utter crap around the period that the annual Earth Day was established in 1970:

Harvard biologist George Wald:

'Civilization will end within 15 or 30 years unless immediate action is taken against problems facing mankind.'

American biologist Paul Ehrlich:

'The death rate will increase until at least 100-200 million people per year will be starving to death during the next ten years.'

Peter Gunter, a North Texas State University professor:

'Demographers agree almost unanimously [see 97 percent of climate scientists agree] on the following grim timetable: by 1975 widespread famines will begin in India; these will spread by 1990 to include all of India, Pakistan, China and the Near East, Africa. By the year 2000, or conceivably sooner, South and Central America will exist under famine conditions ... By the year 2000, thirty years from now, the entire world, with the exception of Western Europe, North America, and Australia, will be in famine.'

Then there was the climate temperature prediction in 1970 from ecologist Kenneth Watt:

'The world has been chilling sharply for about twenty years. If present trends continue, the world will be about four degrees colder for the global mean temperature in 1990, but eleven degrees colder in the year 2000. This is about twice what it would take to put us into an ice age.'

The threat to human existence went from an ice age to runaway super-heating in the blink of an eye. How could that happen? They just changed the propaganda. The lies are constant and apparently without end.

Make-it-up mythology

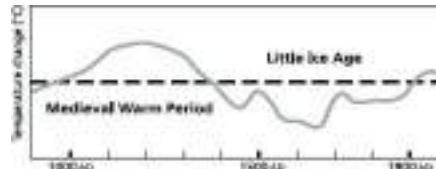

Figure 263: The Medieval Warm Period began around 1,000 years ago when temperatures were warmer than today without industrialisation. Then came the Little Ice Age when freezing temperatures were the winter norm which makes temperature comparisons between that period and now utterly irrelevant.

Figure 264: Depiction of the frozen-over River Thames during the Little Ice Age.

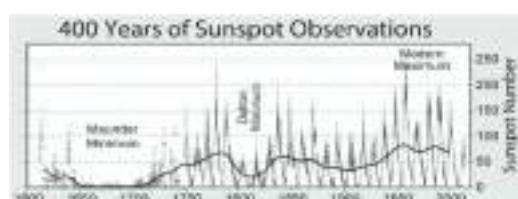

Figure 265: The correlation between solar activity measured by sunspots and Earth temperature. It is an obvious comparison and connection which the Climate Cult ignores because it destroys the narrative. The 'Maunder Minimum' corresponded with the coldest point of the Little Ice Age.

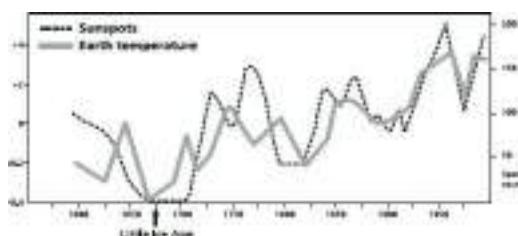

Figure 266: Another sunspot-Earth temperature chart.

We hear claims about the 'hottest day ever recorded' and even when you factor out manipulated data the key word is *recorded*. Many times this will be deleted in headlines to read 'hottest day ever'. Some background before I make my point. The planet has been hotter for much of its life than it is today and there was the Medieval Warm Period that began around 1,000 years ago which eclipsed current temperatures when there were no factories or 4 x 4s or indeed any carbon producing vehicles at all ([Fig 263](#)). The warm period was also a time of abundance compared with cold periods. Grapes were grown for wine in the far north of England and even Scotland. There was, in short, no climate catastrophe. Temperatures began to cool and previous abundance disappeared in what is called the Little Ice Age between the 16th and 19th centuries (some say it started earlier). It was so cold in this period they held ice fairs on the River Thames in London which froze over every year. Some Christmas cards still depict the scenes ([Fig 264](#)). It was highly significant that during the Little Ice Age fantastic explosions of energy on the Sun known as sunspots, which indicate solar activity, all but disappeared. This is known as the sunspot 'Maunder Minimum' after the man who conducted the research studies ([Fig 265](#)). You don't think there could be a connection between Sun activity and Earth temperature do you? There can't be, surely, or the Climate Cult would mention the Sun sometimes instead of being utterly obsessed with carbon dioxide. Maybe they think it's just a coincidence that when the Sun comes out it gets warmer; or perhaps they think that when solar energy projected at the Earth increases this couldn't possibly affect our temperature ([Fig 266](#)). They are experts after all. Scientists at CERN recorded an extremely close correlation between Earth temperature and the penetration of cosmic rays into our atmosphere. Records of 'the hottest day/year since records began' started mostly as we were still coming out of the Little Ice Age and of course temperatures are going to be warmer now. What use is a comparison between an extremely cold period and one after that period ended? It's a pointless comparison unless you are trying to mislead which they are. Why would the trough-snout scientists of the Climate Cult seek in leaked emails and documents to delete from the record the existence of the Medieval Warm Period and make it appear that today's temperatures are 'unprecedented' and caused by the industrial era? To mislead, of course, and people mislead to hide the fact that they're lying. Here are some other climate propaganda myths:

- **The migrant crisis is caused by climate change lowering crop yields that force people to relocate in search of food:** This has been alleged to explain why so many are heading out of Central America to the United States border and supports the Cult migration agenda which I have described. In fact, crop yields in Honduras, Costa Rica, Mexico, Panama, Ecuador, etc., have been consistently increasing.
- **Climate change will empty the North American Great Lakes:** This is shown to be without substance by all-time recorded high water levels and no downward trend over 100 years. These high volumes were reported with the question: 'Why are water levels on the Great Lakes fluctuating so widely?' How about through misrepresentation of the trend?
- **Climate change will mean ever-greater extremes of weather such as tornadoes and hurricanes:** Strong tornadoes and devastating landfall hurricanes have been steady in number or in decline in recent decades according to peer-reviewed scientific literature that says the same about droughts, floods, and other extreme weather events. The worldwide death rate caused by weather events has dropped more than 98 percent since the 1920s.
- **Polar bears are heading for extinction as climate change makes their ice habitat disappear:** Polar Bears became the poster children of the Climate Cult as a symbol for a terrifying future. Polar bear specialists like Dr Susan Crockford, former adjunct professor at the University of Victoria in Canada

and a forensic zoologist, demolishes the official narrative in her book, *The Polar Bear Catastrophe That Never Happened*. Indeed she destroys the polar bear hoax so well that she lost her role at the university in what she described as ‘an academic hanging without a trial, conducted behind closed doors’. This is what happens when you challenge Climate Cult orthodoxy.

Figure 267: You can always bet on the BBC’s David Attenborough parroting (appropriately) the official narrative.

Figure 268: Yet another constant misrepresentation to promote CO2 as a pollutant.

Crockford shows how polar bears are flourishing and communities are either stable or increasing. Polar bears in part of the Barents Sea increased by 42 percent between 2004 and 2015; in Baffin Bay where bears were predicted to decline by 25 percent they increased by 36 percent; and in Kane Basin they more than doubled. The global average had risen to more than 30,000 bears which Crockford says is ‘far and away the highest estimate in more than 50 years’. Crockford exposes the BBC’s climate change propagandist David Attenborough for misleading the public on polar bears and much else in an Internet video *Attenborough’s Arctic Betrayal* ([Fig 267](#)). Greta Thunberg said she became an activist on climate change after watching reports of polar bear decline that *isn’t happening*. The same BBC of course gave her a TV programme (program) to promote her propaganda.

- **Images show belching chimneys pouring out ‘dangerous’ carbon dioxide:** CO2 is invisible to the human eye and what they are showing you is pollution and not CO2 which is the gas of life and without it there would be no plants and so no humans or animals ([Fig 268](#)). They show you pictures of pollution to make you believe that carbon dioxide is a pollutant. Most of the ‘journalists’ who do this don’t know the difference themselves in yet another exercise in the blind leading the blind.

Protecting make-it-up mythology

How could a hoax based on so many lies become accepted fact in the minds of so many – especially the young – and drive much of government policy? The hoax has been possible by control of information to indoctrinate a belief system underscored by the fear that ‘we’re all going to die’. I’ve said that once you implant the orthodoxy of ‘everyone knows that’ the rest follows largely unaided. Older people are more sceptical of the climate claims because they’ve not had a lifetime of climate propaganda in the schools and universities. The young have and it’s clear why many children and young people believe the lie pedalled through all Cult institutions of government, ‘education’, and crucially the media. Unless people seek out information beyond the Mainstream Everything they live in a one-track world. Without alternative sources of information the population is only being told what the Cult wants them to think.

Pictures of distressed polar bears have been explained as the consequences of ‘global warming’ when the cause of their distress and emaciated state were later revealed to have had other origins unrelated to climate. Show a bear in trouble and say it is climate change and most people believe that to be true when it fits the narrative they have already been suckered to believe in. I read an excellent book by American meteorologist and weather forecaster, Joe Bastardi, a vehement and outspoken exposer of the climate lie. He describes in *The Climate Chronicles* how he has studied weather patterns going way back to show that weather now being blamed on human-caused climate change has happened in a recurring sequence long before the industrial era. The difference is that before the climate hysteria the same weather was just weather. Today it’s always caused by global warming (which became ‘climate change’ when temperatures stopped rising and then the ‘climate crisis’ as the scare was ramped up). It’s so easy to be scammed if people don’t check the facts. We have a hurricane – it’s global warming!; tornado – it’s global warming!; drought – it’s global warming!. It’s hot – it’s global warming! It’s cold – it’s global warming! Bastardi calls them Climate ambulance chasers. He says: ‘What happened before naturally is happening again, as is to be expected given the cyclical nature of the climate due to the design of the planet.’ Bastardi presents many examples of these cycles now blamed on human activity and this is one relating to droughts in the United States:

... Major US dry periods are a product of a cooling tropical Pacific. In the decades such as the 1950s through the 1970s, when the tropical Pacific is cooler overall, the US is drier than normal in much of the nation.

It is exactly the opposite in the years the Pacific warms, which, by the way correlates nicely to an increase in global temperatures until the atmosphere adjusts to the warming tropical ocean and temperatures level off. But the idea that global warming causes droughts here in the US is the opposite of the facts! It’s when the Pacific starts to cool and global temperatures start to drop that we see it dry out.

Bastardi’s book is highly recommended as is *The Politically Incorrect Guide to Climate Change* by Republican insider Marc Morano who charts the blatant political manipulation behind the climate hoax. A good website for hoax-challenging information is the Global Warming Policy Foundation at thegwpf.com. We should not forget that all the projections upon projections about climate Armageddon don’t come from observing the climate. They result from putting data and assumptions into computer models and believing what they tell you is going to happen. The fact that they have been wrong by shocking margins so many times might have given them a clue by now that this doesn’t work due to a simple cause and effect: If you factor in shit the computer will process that shit to produce ‘predictions’ that are nothing more than a feedback loop of shit-in and shit-out. Assume something with your input and you’ll get the answer you want, but rarely the truth. There are so many variables and influences that affect climate that long-term predictions are a mug’s game anyway. Follow the cycles that have happened before if you want to predict the climate. There’s another angle to this that we should be constantly vigilant about. Technology to manipulate weather is now highly-advanced and there would not be international treaties agreeing not to manipulate weather if it was not technologically possible to do that. See *Everything You Need To Know* for detailed background about how extremes of weather can be made to happen and we can expect the Cult to continue to strike in this way around the world to convince people climate disaster is at hand.

The gas of life

Figure 269: Carbon dioxide is the gas of life and the natural world's version of oxygen. I know – let's demonise the gas of life and transform society into the global centralised tyranny to make sure we have less of it.

The Cult takes facts and inverts them to become the very opposite of the truth before selling the inversion as 'conventional wisdom'. This way the public *perception* of reality becomes the opposite of actual reality. We are told we face 'catastrophe' when if what the Climate Cult demands are followed through we will have a real, not imagined, human catastrophe in economics, food production and energy supplies (this was written before the 'virus' lockdowns which have had the same effect). Global society would be devastated by plans to be 'carbon neutral' by 2025 to 2030 or 2050. There can, however, be no better or more blatant example of inversion than carbon dioxide (CO₂) itself. This is the gas of life without which we really would all be dead and yet CO₂ has been thoroughly demonised ([Fig 269](#)). If it was human it could sue for libel. You'll find interviews at [Davidicke.com](#) with professors at Princeton University emphasising both the central role played by carbon dioxide in human life and that far from having too much in the atmosphere *we don't have enough*. This will be amazing to people who have bought the carbon-is-a-pollutant narrative and it reveals the scale of inversion that we are dealing with. William Happer, Professor of Physics at Princeton University and long-time government advisor on climate, is one scientist who says the planet has a CO₂ deficiency and needs more for optimal plant growth and food production. Such views have made him a big hate figure for the Climate Cult as the truth always does. He says that most of the warming in the last 100 years happened as we emerged from the Little Ice Age and was over by 1940. Happer points out that in a peak year for warming in 1988 there was a 'monster El Nino' which is a natural and cyclical warming of the Pacific that affects global weather patterns and temperature and has nothing to do with 'climate change'. He says the nature of the CO₂ effect can be likened to painting a wall with red paint. Once two or three coats have been applied it doesn't matter how much more paint you add the wall will not get much redder. He explains that almost all the effect of the rise in CO₂ has already occurred and the amount in the atmosphere would now have to *double* for even a single degree increase in temperature:

I know a lot about CO₂ compared with most climate scientists ... there's an interesting thing about CO₂ which is unique to CO₂ – it's not true, for example, of water vapour, methane. [This] is that if you get one degree of warming from doubling CO₂, so going from say 400 parts per million for simplicity to 800 ... then to get another degree of warming you have to double 800, you have to go to 1,600. So it gets harder and harder to warm. Technically they call that the logarithmic dependence of temperature rise on CO₂ concentration.

Happer said that this fact was realised early in the climate hysteria and to overcome such a demolition of the orthodoxy we had advocates of the hoax inventing theories about 'feedback loops' amplifying the CO₂ effect. These are the doom-laden predictions that you constantly hear parroted by climate activists including Greta Thunberg. Happer said he laughs when he hears about 'carbon pollution' given that people, plants and animals are made of carbon and without it there would be no life. He said that an increase in CO₂ in the atmosphere would make plants more drought resistant because when plants open holes in their leaves to absorb CO₂ they leak water and the holes have to be open for longer to take in enough carbon dioxide amid what he calls a 'CO₂ famine'. Happer emphasised that CO₂ increases since

industrialisation have had a ‘huge effect’ on plants and increased their growth: ‘When people talk about the social cost of carbon it’s absurd. The social cost is negative of CO₂.’ He said climate computer models don’t look at the world as it is, but at *other computer models*. How much funding would the modellers get, by the way, if their predictions did not support the Climate Cult hypothesis? Imperial College in London which has produced many of the ridiculous ‘climate change’ models was also responsible for the computer models warning of insane numbers of ‘Covid-19’ deaths in the UK, United States and other countries which led to the lockdowns that have destroyed the lives of billions. Needless to say the insane ‘projections’ did not materialise, but provided the excuse for global house arrest.

Too much CO₂? We don’t have enough

The central importance of CO₂ was a theme developed by Greenpeace co-founder Patrick Moore in a presentation to the Global Warming Policy Foundation. Scientist Moore left Greenpeace in 1986 and has criticised the green movement for scare tactics and disinformation with particular emphasis on climate change. He makes the point that other scientists have made about how dangerous it is to have low levels of CO₂. Plants start to die at 150 parts per million and Moore says that even when CO₂ fell to 180 ppm 18,000 years ago plants began to starve. This only turned around when the *temperature went up* for reasons I will shortly explain. Calling for a reduction in carbon dioxide is the plant equivalent of humans demanding a reduction in oxygen – CO₂ is, in effect, plant oxygen. Today Moore says CO₂ stands at around 400 ppm and plant life is still ‘relatively starved of nutrition’ with the optimum levels for plant growth *five times* higher at 2,000 ppm and in some periods of the Earth’s history the ratio has reached 4,000 ppm. These facts explain why since CO₂ levels began to rise with industrialisation the Earth is getting *greener* as CO₂ has risen from 280 ppm in an 1880 measurement in Hawaii to 413 ppm in 2019. The Climate Cult that claims to be ‘saving the planet’ wants to *reverse* that process! Why do they think people pump extra carbon dioxide into greenhouses?? The Climate Cult contends amid its mass-hysteria that we face extinction when the gas of life is at way below optimum planet-growth levels and 500 million years ago there was *17 times* more CO₂ in the atmosphere than we have today. Patrick Moore said levels have been falling for hundreds of millions of years as it was absorbed from the atmosphere and locked away by many and various sources. Over the last 150 million years CO₂ levels in Earth’s atmosphere had reduced by *90 percent*. By the time humans began releasing carbon dioxide through fossil fuels Moore said we were at ‘38 seconds to midnight’ in terms of threats to plant life (thus *all* life) through plummeting levels of CO₂. Not only aren’t humans causing extinction they are *preventing* it. ‘Release of CO₂ has turned around the constant fall’, Moore said, and in this sense ‘Humans are [the Earth’s] salvation’. Moore also noted that only half the CO₂ emitted by fossil fuels ends up in the atmosphere. You read these facts about the fundamental importance of CO₂ and then hear as I did an interview with ‘carbon footprint expert’ Mike Berners-Lee, a professor at the Institute for Social Futures at the UK’s Lancaster University, and brother of Tim Berners-Lee who is credited with inventing the World Wide Web. The interview was on the London-based TalkRadio in which Mike Berners-Lee told an unchallenging host how *emails* add to carbon emissions and that ‘a low-carbon world is better than a high-carbon world’. Breathes deeply, shakes head, moves on. Some other information in Patrick Moore’s speech that the Climate Cult should know: The Earth has been in a major cooling period since the maximum of 50 million years ago when it was as much as *16 degrees* warmer. Today’s poles were ice free and covered in forests. The ancestors of today’s species came through that temperature period fine, but a *two percent* rise is now supposed to threaten mass extinction! Even in our current interglacial period we are experiencing one of the coldest climates in the Earth’s history. The Medieval Warm Period (long before fossil fuels) was still cooler than temperatures in the last 10,000 years, Moore said.

Temperature doesn’t follow CO₂ – it’s the other way round

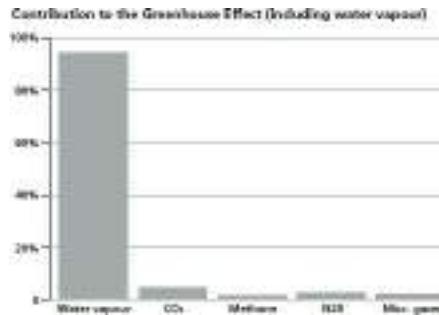

Figure 270: CO₂ is a tiny fraction of greenhouse gases which are almost entirely water vapour and clouds. What's more the great majority of that CO₂ is naturally-occurring and nothing to do with humans.

Oh, Climate Cultists may say, higher CO₂ might be better for plants, but it will cause the Earth to heat catastrophically. I mean, Greta Thunberg says we should believe that our house is on fire and she wouldn't mislead us, right? Well, if she has been mercilessly mislead herself I think she probably would. In fact, temperature rises don't follow increases in CO₂ – *it's the other way round* as the records clearly show. In the last 400,000 years CO₂ has lagged temperature by an average of 800 years. As Patrick Moore rightly says carbon dioxide cannot be the cause of rising temperature when the increase in temperature comes *before* the increase in CO₂. How can the effect come *before* the cause? It can't. So here's a shocker for New Wokers ... *temperature must be affecting CO₂ levels* and not vice-versa. Here we have yet another classic Cult inversion of the truth. How could temperature increase CO₂? The ocean contains 45 times more CO₂ than we have in the atmosphere and the ocean *releases* carbon dioxide in *warm periods* and *absorbs it* in colder periods. The lag between the two is around 800 years and look what was happening 800 years ago the *Medieval Warm Period*. Carbon dioxide does not cause the Earth to catastrophically warm. The history of CO₂ correlation with temperature shows that for immense periods the two have been completely out of kilter. Temperatures have risen and remained high as CO₂ went down. Carbon dioxide is also only 0.117 percent of what are called greenhouse gases while more than *90 percent* of those gases are water vapour and clouds ([Fig 270](#)). Only a fraction of that 0.117 percent is CO₂ caused by human activity and the rest happens naturally. Professional conman Al Gore tried to obscure this fact by saying that if you 'take water vapour out of the equation CO₂ is 30 percent of greenhouse gases'. Don't buy a used car from that man or even a new one. How can you 'take water vapour out of the equation' when that together with clouds makes up close to the entirety of greenhouse gases? To deceive – that's how. Calculated demonisation of CO₂ is so transparent. Professor Leslie Woodcock, Emeritus Professor at the University of Manchester, fellow of the Royal Society of Chemical Engineering, a recipient of a Max Plank Society Visiting Fellowship, and former NASA researcher, said:

Water is a much more powerful greenhouse gas, and there is 20 times more of it in our atmosphere, around one percent of the atmosphere, whereas CO₂ is only 0.04 percent. Carbon dioxide has been made out to be some kind of toxic gas, but the truth is that it's the gas of life. We breathe it out, plants breathe it in and it's not caused by us. Global warming is nonsense.

British scientist James Lovelock was a one-time Green icon with his Gaia theory of the Earth as a living entity (true). He became even more acclaimed by climate alarmists when he predicted in his book *The Revenge of Gaia* that 'billions will die' and humanity was doomed. Lovelock wrote that any survivors would have to live in the Arctic which would be one of the few habitable places on Earth. Then reality dawned and to his enormous credit he had the courage to publicly change his mind. Humanity was not in imminent peril after all. Lovelock now says that climate alarmism is not 'remotely scientific', computer models are unreliable and anyone who tries to 'predict more than five to ten years is a bit of an idiot'. A single volcano can make more difference to global warming than humans ever could, he has stated. He

accuses the Greens of exaggeration and behaving ‘deplorably’. Weather Channel founder John Coleman has said human-caused global warming is a myth and the list of scientists saying the same is getting longer by the week. Such honesty often comes at a cost, however, in the form of lost jobs and income. Dr Judith Curry, a respected climatologist and tenured professor at Georgia Tech University, left her ‘dream job’ when she refused to pledge unquestioning obedience to the Climate Cult. She told Fox News:

I've been vilified by some of my colleagues who are activists and don't like anybody challenging their big story ... I walk around with knives sticking out of my back ... In the university environment I felt like I was just beating my head against the wall.

Curry is a target of an establishment-promoted ‘climate advocacy group’ called Skeptical Science which operates a ‘blacklist’ of scientists who won’t comply with Climate Cult orthodoxy. Dana Nuccitelli, one of the principals of Skeptical Science, wrote of Curry: ‘If you look at the statements we catalogued and debunked ... it should make her unhireable in academia.’ Judith Curry is a former chair of the School of Earth and Atmospheric Sciences at Georgia Tech and a Fellow of both the American Geophysical Union and American Meteorological Society. She was only ‘unhireable’ because the Climate Cult made it so. Curry was asked to step down by her university for her views on climate and had ‘numerous inquiries from academic headhunters encouraging me to apply for major administration positions, ranging from Dean to Vice Chancellor for Research’. She didn’t even make the shortlist. Curry said in a *Forbes* interview:

They thought I was an outstanding candidate, looked excellent on paper, articulated a strong vision, and interviewed very well in person. The show stopper was my public profile in the climate debate, as evidenced by a simple Google search.

Figure 271: Refuse to sing from the song-sheet and you're gone.

Google is so helpful in ensuring that Skeptical Science is on the first page and sometimes the top listing for a word search for Judith or Judy Curry. This is the tyranny that genuine academics and scientists are facing from the Climate Cult in all its forms. Who created Skeptical Science? *John Cook*, the Australian bloke most quoted about ‘97 percent of climate scientists’ agreeing that humans are most responsible for climate change when his ‘research’ doesn’t say that at all. Small world, eh? Those that don’t accept climate change orthodoxy are labelled ‘anti-science’ when questioning every hypothesis is what real science is all about. It’s the Climate Cult that is anti-science (another inversion). French television weatherman Philippe Verdier was fired by the France 2 channel for publishing a book accusing ‘climate experts’ of misleading the public and the Cult-controlled UN Intergovernmental Panel on Climate Change of publishing deliberately misleading data ([Fig 271](#)). What he said is true and he was sacked *because* it is true. Programmed New Woke trade union members at the station demanded he was dismissed. Verdier wrote his book after French Foreign Minister Laurent Fabius asked TV meteorologists to highlight climate change issues in their broadcasts. ‘I was horrified by this speech,’ Verdier said.

Cult narrative: humanity is the enemy

Figure 272: An academic promoting the end of humanity. She is teaching young people, right? Wow. Her extreme of extreme views are fine with Woke. It's when you say men and women are biologically different that you trigger their ire.

Greenpeace co-founder Patrick Moore is a scientist who says the Greens have abandoned science and replaced it with emotion and sensationalism based on an ‘anti-human’ agenda that paints humanity as the enemy of the Earth. If you are a Death Cult targeting humanity would you not want them to believe that they were the problem? Wouldn’t you want them to despise themselves and turn against themselves? You surely would. We breathe out carbon dioxide and even the act of breathing is harming the planet – *ahhhhhh!!!* Humans are deadly. We must kill them. A vegan father-of-four voiced this anti-human mentality when he called a UK radio station to say humans shouldn’t breed to produce more offspring to ‘harm animals’. He urged people to encourage a ‘graceful ending of our time on the planet’. The caller, who gave the name ‘Danny’, said he had recently discovered ‘anti-natalism’ – ‘the idea that we shouldn’t be breeding humans when it causes so much unnecessary suffering to animals, especially people who bring up children to eat meat’. Should we then not allow animals to breed when they cause so much harm to each other in the killing fields that are the ‘natural world’? ‘Danny’ said there was nothing wrong with human extinction and admitted that he tells his nine-year-old son and older daughters to question their own reproduction and whether they should be here in the first place. ‘I don’t want grandchildren, and I don’t want them to impose life on another generation for no good reason.’ He’s not psychologically damaged or anything and this is not in any way psychological abuse of his children. These views may seem seriously extreme, but the guy is far from alone and they are just the attitudes you want to engender when you are a Death Cult led by unseen ‘gods’ that wish to replace humanity as we know it today (more later). It would be easy to dismiss an anonymous caller to a radio station if what he said was not being promoted by academics such as Patricia MacCormack, a professor of continental philosophy at Anglia Ruskin University in Cambridge. She argues in her book, *The Ahuman Manifesto*, that ‘the only solution for climate change is letting the human race become extinct’ ([Fig 272](#)). This was the headline in an interview with MacCormack in which she set out a ‘positive view’ for the future of Earth without humans. She said she came to these conclusions through her interest in feminism and ‘queer theory’ and railed against ‘this hierachal world where white, male, heterosexual and able-bodied people are succeeding, and people of different races, genders, sexualities and those with disabilities are struggling to get that’. Well, best get rid of everyone then.

MacCormack further argues that we need to dismantle religion while clearly not realising that she is a member of one. She said that humans are already enslaved to the point of ‘zombiedom’ (oh, the irony) by ‘capitalism’ and because of the damage this has caused ‘phasing out reproduction is the only way to repair the damage done to the world’. This is straight from the Cult agenda for a mass human cull as will become clear and she will be utterly oblivious to that. The realisation that such mentalities are teaching young people is very sobering while at the same time explains so much about where New Woke is coming from.

To summarise what Patrick Moore has said, and what I have observed for decades, the Green movement that he and I remember has been hijacked by New Woke and real environmental issues are being marginalised and sacrificed on the altar of global warming. We have the obsession with ‘climate

change' while genuine pollution increases, including radiation pollution, and US Green New Deal promotor Alexandria Ocasio-Cortez represents a district awash with trash in the streets. I am so glad I was briefly a national spokesman for the Green Party in the 1980s. It has given me such an insight into the mentality that drives the tyranny of the New Woke Climate Cult today. Moore brings sanity to the debate when he says that carbon dioxide is a building block for all life on earth and without its presence in the global atmosphere in sufficient concentrations this would be a dead planet. He says that all life is carbon-based including our own and he describes carbon dioxide as 'the currency of life' and the most important building block for terrestrial life. 'Yet today our children and our publics are taught that CO₂ is a toxic pollutant that will destroy life and bring civilisation to its knees.' Once again if you were a Death Cult with humanity in its gunsights wouldn't you want them to believe that what keeps them alive threatens their existence? Wouldn't you want them to dismantle what gives them life? What a testament to the programming of human perception that so many believe this absurdity to their core.

Climate Cult veganism - not so simple

We have a perfect system in which humans breathe in oxygen and breathe out carbon dioxide (how dare we?) while plant life and trees absorb carbon dioxide and produce oxygen during the day by converting sunlight, carbon dioxide and water into carbohydrates and oxygen in a process called photosynthesis. The Sun, like carbon dioxide, is obviously essential to life on Earth and notice that both are being targeted. We are encouraged to fear the Sun through the climate hoax on the grounds that it generates heat (while not presenting the Sun as a source of global temperature!) and we are urged to cover our skin with cancer-causing chemicals in sun lotion when the skin turns sunlight into the essential vitamin D so vital to human health. This process of synthesising sunlight into vitamin D is achieved through *cholesterol* in the skin cells – the same cholesterol that is also *vilified* as we are urged to 'lower your cholesterol' and take ongoing, health-destroying statin drugs to do so (ka-ching say the Big Pharma tills). We are told by officialdom that LDL cholesterol, or low-density lipoproteins, is 'bad cholesterol' and can cause heart disease. To save ourselves we should take statins. A global team of 17 doctors published a study of nearly 1.3 million people in 2018 that concluded there is no link between high LDL cholesterol and heart disease and that statins were, with serious understatement, of 'doubtful benefit'. The study, published in the *Expert Review of Clinical Pharmacology*, exposed the demonisation of cholesterol and reported that heart attack patients were shown to have *lower* than normal levels of LDL or 'bad cholesterol'. Professor Sherif Sultan, one of the authors, said the 'strongest finding' was elderly people with high levels of LDL live the longest. The big rule of thumb to remember: If 'The System' is pushing something it's bad for humanity. If it is targeting something it's good for humanity. It works every time. The highest concentration of cholesterol is in the brain – 20 percent of the body total. The brain is 60 percent fats and without cholesterol it cannot function effectively. This explanation comes from [Psychologytoday.com](https://www.psychologytoday.com/):

Synapses – the magical areas where communication between brain cells takes place – are lined by cholesterol-rich membranes responsible for passing neurotransmitters like serotonin, GABA, and dopamine back and forth. Myelin, the white matter that insulates brain circuits, is made from tightly-wound membranes containing 75% of the brain's cholesterol.

Cholesterol also helps guide developing nerve endings to their destinations on 'lipid rafts'. If the brain is too low in cholesterol, its membranes, synapses, myelin and lipid rafts can't form or function properly, bringing all brain activity – including mood regulation, learning, and memory – to a screeching halt.

We are witnessing soaring numbers of people with forms of dementia. Is this a coincidence? No, it's not. There are other reasons for this, too, but if you significantly lower or eliminate cholesterol and fat consumption this is what happens. Check the facts for yourself. Every vegan and vegetarian should read for their own sake the book by David Evans called *Low Cholesterol Leads to an Early Death: Evidence from*

101 Scientific Papers. There are also the books of Barry Groves including *Trick and Treat: How healthy eating is making us ill*. I am not saying vegans and vegetarians should change their lifestyle – that's none of my business. I am saying check the facts first and you won't get them only by reading mainstream sources. Is it still another 'by chance' that the Climate Cult (a stooge of the Death Cult) is demanding a major decrease (ideally the elimination) of meat consumption with its mega sources of cholesterol and fats? The theme is being promoted by pathetically-named documentaries such as *Apocalypse Cow: How Meat Killed The Planet* fronted by *Guardian* 'journalist' virtue-signaller and fast-asleep New Woker 'vegan' George Monbiot who bizarrely shot a deer on the programme and ate it as a burger. Go figure. I understand why vegetarians and vegans choose not to eat animal products and I absolutely respect the intent. I was a vegetarian myself for some 15 years. It is not, however, that simple. Firstly vegans and vegetarians might consider that *all* life is conscious including the plants they eat themselves. I have written a number of times over the years about research revealing how plants and trees feel pain and stress which can even be generated by the tone of voice and someone's intent towards them. When people 'talk' to plants it generates a wave interaction with the frequency field of the voice and this is picked up by the plant. They may not understand human words, but they pick up the 'vibe'. A team of scientists at Tel Aviv University published a study in 2019 revealing that tomato and tobacco plants emitted multiple ultrasonic 'stress' sounds between 20 and 100 kilohertz when deprived of water or their stems were cut. Plants with no environmental threat or damage emitted less than one ultrasonic sound per hour. Many other experiments have confirmed the theme – plant life is conscious and feels forms of emotional pain and stress when threatened. What does a tree feel when it is cut down? What do other trees feel when it is well established that trees operate in 'families' and communicate?

There is no consumption of food in higher frequencies and these moral dilemmas do not arise. Within the simulation there is such density and a comparative deficit of energy that the difference is made up by consuming 'physical' food which is really wavefields. I wish that didn't have to be, but the point to remember is that *everything* is conscious. We are told that meat eating must end to protect animals when animals eat each other second by second. It is the way the simulation is set up to be a killing field. Animals eat each other to secure the sustenance they need to survive and biologically humans have the same basic make-up and nutritional requirements. We may wish it was different, okay, agreed. But for now that's how it is. Animals that provide the basis for human food will, of course, disappear altogether as a consequence of what is being demanded by a few imposing their lifestyle choice on everyone else. The meat industry is going to be subjected to full-blown demonisation and financial attacks to secure the desired Cult outcome by claiming it is 'not sustainable' – I'll explain the real significance of 'sustainable' in the next chapter. Vegans should make their choices as they see fit and have those choices respected. I just wish the same respect came the other way and self-righteous vegan activists didn't act like another cult with its deep connections to the Climate Cult which is largely the unknowing puppet of the Death Cult. By all means campaign for animals to be treated humanely – I'm with you – but please open your eyes to what you are being used to bring about. I am not telling people what they should eat. I am saying look at the pattern and how the climate hoax and other excuses are being used to target carbon dioxide, sunlight and cholesterol which, without sufficient quantities, there would truly be extinction. I find the same perceptual arrogance at the *extreme* end (not everyone) of those who contend that the Earth is flat. If people want to believe that then good luck to them I say. Unfortunately the same respect often doesn't come the other way. If you don't accept what they claim you are subject to attacks and dubbed an agent of the elite – even those who have spent their lives exposing the elite and who do more to that end in a month than 'flat Earth' extreme obsessives will do in a lifetime. The Earth is 'flat' in a sense at the level of its wavefield construct or 'interference pattern'. Its holographic decoded projection called the 'physical' Earth is quite something else. Those who see this differently have every right to do so and I won't call them agents of the elite just because they believe something that I don't. Why do so many people insist that what they believe must be accepted by everybody? This book is my view and research. I don't insist

for a second that people have to believe it if it doesn't make sense to them.

The Cult is exploiting the climate change hoax to pressure people to be vegan and that should start alarm bells ringing. I can tell you after tracking these people for 30 years that they do *nothing* without intent to harm humanity and if they want the population to be vegan it's for a reason that benefits the agenda. Some schools are imposing vegan food and banning meat including one in Sweden where preschool teacher Markus Sandström said: 'The more we thought about it, the better it seemed ... sustainable development is [our] starting point and the meat has a great impact on climate.' Sandström doesn't know what he's talking about. He's just repeating what he has been programmed to believe so he will pass on that programming to children and enforce it in this case. This is what teachers are there to do from the Cult's point of view. Vegetarian and vegan diets imposed by schools is a gathering trend with a school in Oxford, England, banning children from bringing their own packed lunches if they are not meat and fish free. We see yet again how the New Woke and climate tyranny works. It is not about winning arguments with freely-debated facts; it's about imposition. Head teacher Kay Wood said that the move allowed them to serve better quality meals for the same price. Okay, so explain how that scans with banning packed lunches brought from home. How would price be significant when the school is not paying? Who says they are better quality meals when many nutritionists have the opinion that meat and fish are essential to a balanced intake of what the body and brain needs? Who is Ms Wood to make those decisions about what children can eat and its effect on their well-being? A second reason she cited was the yawn, yawn, 'huge environmental and sustainability benefits' as she once again repeated the Cult script while not knowing there even is a Cult. Reason number three was that banning meat 'allows students of all faiths and different dietary requirements to eat together'. She wouldn't be able to see the deeper consequences of this which is imposing one set of beliefs on everyone. Why wouldn't you justify that to yourself when *I am right*. One parent at the school said banning meat and fish had made her children and other pupils hungry, but none of this matters – *I am right*. A UK property company Igloo Regeneration has decreed that all corporate entertaining and catering must be vegetarian and meals including meat cannot be reimbursed on expenses after they bought the same lie as the schools. They certainly won't be the last and watch this theme expand because it's a Cult agenda. There is pressure to introduce meat taxes and we even have people taking neighbours to court for the smell of their barbeques. *I am right* has spoken and you will comply! Why should you have choice when *you are wrong*? There are many lovely vegans who understand this defence of basic freedom. I'm sure others will be cocking their abuse ready to fire. If you want self-righteous abuse by the truckload tell an extreme vegan activist that the world is not as black and white as they think it is. You will see as we go along what the endless references of 'sustainability' really mean although these teachers won't have a clue what that is. They are just repeaters like the entire system in all its forms – repeating the Totalitarian Tiptoe agenda of the Cult like a broken record while thinking it's true. Where the delete-meat Cult agenda is really going, via veganism, is to laboratory-produced synthetic food for reasons I will be explaining.

So the gas of life is being demonised to provide the foundation of the religious orthodoxy promoted by the Climate Cult and all its associated offshoots like changing what people eat. The next question is why the global Death Cult would go to such lengths to convince us that humans are threatening the planet's very existence of the world we have come to know. The answer is both clear – and devastating.

CHAPTER NINE

Why is ‘climate change’ being hoaxed?

Evil people rely on the acquiescence of naive good people to allow them to continue with their evil – Stuart Aken

The answer to the question posed in the chapter heading is once again very simple and armed with this knowledge everything else falls into place. We are looking at a global example of No-Problem-Reaction-Solution. The Cult was only able to invade Iraq in 2003 by lying about ‘weapons of mass destruction’ which they knew didn’t exist. Without the lie they had no excuse to do what had long been planned. The climate hoax is another no-problem that gives the Cult the pretext for almost every aspect of the Hunger Games Society and the agenda for extreme Orwellian control. The NO-P-R-S goals of the Climate Cult and the ‘pandemic’ lockdowns are indivisible.

All the strands come together in the end because everything is connected. I have laid out the Hunger Games structure of a world government controlling other global institutions and dictating to every community through superstates like the European Union and regional entities underneath overseeing an utterly dependent human population. This won’t just happen – it has to be *made* to happen and for that you need reasons/excuses to do what you want like a ‘climate crisis’ and a global pandemic. If those excuses are not naturally-occurring you need to make them up. You lie in other words and ... the BIGGER the lie the more will believe it. The problem must relate to the solution and when you want a global solution in the form of world government etc. you need global problems for which your solution can be applied. A planet-wide hoax about human-caused climate change and a ‘pandemic’ fit that bill perfectly. The scammers can claim that the only way to ‘save the world and humanity’ is to centralise global power in a world government and institutions to stop any ‘bad people’ from taking actions that threaten human existence by producing the gas of life or infecting others with a ‘virus’ (which doesn’t exist as we will see). How can they stop the ‘bad people’? Well, a world army would come in handy don’t you think? Do people really believe that the climate change hoax and pandemic hoax are random happenings when they both demand centralisation of power and draconian imposition by the state which have been the aim of the Cult all along? Watch eventually for demands that an external military force be used to impose climate change measures on countries that don’t play ball. Hey, I have another idea. The threat of extinction is so ‘existential’ that we need a police/military state to keep people in line to protect everyone else and we must take control of the upbringing of children to ‘educate’ (indoctrinate) them into being good citizens obedient to their masters who know how to save the planet. We certainly don’t need parents getting in the way. So many things that humans do, including breathing, are dangerous. The police/military surveillance state must watch every World Citizen’s every move and every citizen must watch every other citizen and report on them immediately about anything the surveillance state may have missed (nothing in the end). Dystopia is vital – our very existence depends upon it. Those good people who obey will be rewarded and those who still have a mind of their own will be tracked,

recorded, punished or eliminated (see China).

The only way to save the world and humanity from imminent extinction is for everything to be controlled. This includes your energy use, what you eat, where you go, how you go, if you go, and what you say and think. Travel must be restricted to electric autonomous vehicles controlled and tracked by computers that decide where you can go and when (or if). Flying must be eliminated (except for the elite) to save us all. With so little travel possible in the interests of preventing extinction it would be more efficient and better for the Earth if people were organised in sectors like in those *Hunger Games* movies with only the elite and their police/military operatives able to pass between them without securing permission. Work must be taken over by far more efficient and less carbon-producing (they claim) artificial intelligence leaving the population in general unable to earn a living (see also 'pandemic'). The state is kind, however, and they will be paid a meagre 'guaranteed income' in return for slavery and total obedience. Don't believe for a second that you will be able to rebel. We will know what you plan before you do through mind-reading technology tracking your brain activity. Humans are very *dangerous* and they must be vastly reduced in number. Billions must be removed for the good of the rest and we must introduce a maximum length of life in the interests of the young. Birth rates must be controlled and dictated by the world state with forced abortion for women who are pregnant without the right paperwork. In the end there will be no parental procreation or parenthood as I will come to in a later chapter. If you think this is extreme to the point of fantasy you should read my other books and see in detail the evidence and documentation for all that I have described here. Observe what is demanded by the New Woke Climate Cult in the form of Extinction Rebellion and the Green New Deal of American congresswoman Alexandria Ocasio-Cortez supported by private-jet flying Democratic presidential candidate Bernie Sanders with its price tag of \$16 trillion. We also have the EU version of the Ocasio-Cortez plan in the 'European Green Deal'. Something similar would be supported by Joe Biden who clearly has serious cognitive problems and the most obvious signs of some form of dementia. Even so when Sanders pulled out of the race in April, 2020, Biden was given a free run to be the Democratic candidate barring some unforeseen circumstances like people realising in large enough numbers that Biden is unfit to run. The corrupt Wall Street-owned Biden would be an empty vessel for his handlers to dictate policy although his blatantly failing mental capacities would give Israel-owned Trump an excellent chance of a second term unless the effects of 'virus' lockdown can shield Biden from that exposure to enough of the voting population. The hate-Trump mentality would also vote for a traffic light rather than him. The Cult often likes second-term presidencies when the presidential puppet does not have to temper his policies to win another election and in Trump's case that could mean policy on Iran which Israel (Sabbatian-Frankists) want to destroy. Trump is utterly controlled by Israel and its masters with ultra-Zionist Stephen Miller, his senior advisor for policy, right up there as the most influential of his handlers. A truly New Woke president will be in the plan at some point, however, as New Wokers become ever more significant at the polling booth and Trump (74 as I write), Biden (77) and the failed Sanders (78) have the look of the last of the line before a new and seriously Woke political generation are planned to take over.

Figure 273: Well said, George.

If the ‘carbon-neutral’ demands of these suicide notes are implemented industrial society as we’ve known it will be over, finished, kaput, through curtailed energy production and CO2 bans alone. Billions of jobs would be lost and the Hunger Games Society would be installed (words written before the ‘pandemic’ which rushed forward exactly the same agenda). It is madness and unfortunately there is nothing more blind to its fate than madness. I don’t use the term as some kind of metaphor for stupidity. I really do mean madness, as in lunacy ([Fig 273](#)). Despite these consequences most politicians are falling over themselves to comply at some level with carbon neutral demands whether that be by 2025, 2030 or, at most, 2050. Simon Bramwell, co-founder of Extinction Rebellion, was filmed calling on New Woke to ‘bring down civilisation’. He wanted to see humanity return to a ‘wild’ and ‘feral’ state: ‘... it is part of our duty in my opinion that we’ve also got to not only take down civilisation but shepherd ourselves and incoming generations back into a state of wilding as it were, into like a feral consciousness that is also one of the biggest tasks remaining to us.’ A definition of ‘feral’ is: ‘Characteristic of wild animals; ferocious; brutal.’ Bramwell said modern eco-activism was finding it impossible to convince people to go ‘without food’ or ‘see their child die because we don’t simply have the machinery and technology to keep them alive any longer’ – ‘So we have to offer them something else along as [sic] these trajectories of civil disobedience and direct sabotage of civilisation.’ Gail Bradbrook, a former partner of Bramwell and a co-founder of Extinction Rebellion, is a career activist with numerous connections to NGOs, major corporations, banks and very rich people.

Environmental catastrophe – thanks to ‘Greens’

CO2 obsession, like all obsessions, ignores the consequences. Take the Climate Cult’s support for vehicles run by electricity (still largely produced from fossil fuel) and their lithium batteries which have created human and environmental devastation in the Democratic Republic of Congo where New Woke Apple, Google, Tesla, Microsoft and Dell have been accused of exploiting child labour by families who say their children were killed or severely injured mining cobalt used in lithium batteries and coltan used in cell phones and other electronics. Tens of thousands of children are involved in the cobalt and coltan trade – some as young as four – and all spend their days breathing toxic fumes. An Amnesty International report said most cobalt miners in the Congo lacked basic protective equipment like face masks, work clothing and gloves while many employed on pittance ‘wages’ complained of frequent coughing or lung problems. An article in *Forbes* magazine described the plight of a child named Lukasa who starts a 12-hour day at 5am for pay of less than \$9. He hacks at ore by hand and carries it on his back in an hour trek to a trading post where he sells it to Chinese traders who make massive profits literally off his back. Lukasa then walks another two hours to his home. The Democratic Republic of Congo has been ravaged by war that has killed millions. It is called a ‘civil war’ when in fact it is a war for control of ‘smart’ resources and has destroyed rainforests, the ancient life-style of indigenous people and threatened to make wildlife species extinct. Where are you Climate Cult?? Oh, yes, on the bloody phone demanding electric cars.

It is disgusting modern slavery and here’s the kicker for the Climate Cult – making lithium batteries for electric cars and other technology is a major emitter of *carbon dioxide*. A report in *IndustryWeek* said: ‘Just to build each car battery – weighing upwards of 500 kilograms (1,100 pounds) in size for sport-utility vehicles – would emit up to 74% more CO2 than producing an efficient conventional car if it’s made in a factory powered by fossil fuels in a place like Germany ...’ Now contemplate the pollution, child exploitation and CO2 consequences of every vehicle in the world eventually being electric and autonomous. I know that CO2 production is not dangerous, but the Climate Cult thinks it is and still supports mass mining of cobalt for electric vehicles to ‘fight climate change’. Then there is the environmental problem of what happens when batteries are expired after less than ten years. Researchers including Professor Andrew Abbott at Leicester University have calculated that the one million electric cars sold in Britain in 2017 will produce 250,000 metric tons, or half a million cubic metres, of unprocessed

battery pack waste. What will that be *globally* when all vehicles are electric?? How very green. Beautiful landscapes and seascapes are being destroyed by highly inefficient ‘green’ wind turbines that kill birds, disturb wildlife and destroy silence with their loud noise. The blades can be bigger than a jumbo jet wing and there are tens of thousands already past their working life with only landfills to deal with them. Some 8,000 will have to be disposed of in the next four years in the United States while 3,800 a year have to be dealt with in Europe according to Bloomberg. These figures reflect the number built a decade ago and there are far more now that will be coming up for disposal. Save the world by trashing it. Many millions of acres of *forest* have been cut down to locate the turbines and a Freedom of Information Act request revealed that in a small country like Scotland almost *14 million trees* across 17,283 acres have been felled for the turbines since the year 2000. These are trees that take CO₂ out of the atmosphere and clearly the CO₂ hysteria is a monumental hoax. Wind turbines also technologise the natural environment which technocrats would love.

How the Climate Cult was birthed by billionaires

New Wokeness and the Climate Cult have not emerged with such speed by random chance. They have been long in the making and in *Everything You Need To Know* I have laid it all out at length. In brief we can pick up the story in 1968 with the creation of the Club of Rome although it goes back much further. The Club of Rome is a cusp organisation in The Web which stands at the point where the hidden levels of the Cult meet the seen. Cusp entities like the Bilderberg Group, Council on Foreign Relations and Trilateral Commission have their own specific role and with the Club of Rome this has been from the start to exploit environmental concerns to justify the transformation of global society. The Club published a report in 1972 warning about environmental disaster by the year 2000 – an outcome supported by a computer model that Club of Rome co-founder Aurelio Peccei would later admit was encoded to produce the desired predictions. This would be the recurring technique for climate change propaganda using computer models. Italian industrialist Peccei said in the Club’s 1991 publication, *The First Global Revolution*: ‘In searching for a new enemy to unite us, we came up with the idea that pollution, the threat of global warming, water shortages, famine and the like would fit the bill.’ The document emphasised that these things were caused by human intervention and so *here we go ...* ‘The real enemy, then, is humanity itself.’ Bingo – the narrative and the target was set. The Club of Rome includes global political leaders (and former), government officials, diplomats, scientists, economists, business leaders and, very significantly, United Nations bureaucrats. The Cult-created UN is a stalking horse for world government through the Totalitarian Tiptoe and both the climate change hoax *and* the ‘solution’ to the hoax are being orchestrated through the United Nations as a No-Problem-Reaction-Solution. Richard Haass, president of the Cult-controlled Council on Foreign Relations, has said that world government is needed with national sovereignty reduced to ‘fight’ global warming: ‘Moreover, states must be prepared to cede some sovereignty to world bodies if the international system is to function ... states would be wise to weaken sovereignty in order to protect themselves ...’

Figure 274: Annual meeting of Naivety Anonymous.

A major event in the emergence of the Climate Cult came with the 1992 Earth Summit in Rio de Janeiro, Brazil, which was hosted by Cult asset and Canadian oil multimillionaire Maurice Strong who fronted for the Rothschild and Rockefeller dynasties. Strong believed that the United Nations should become a world government. He was appointed a founding director of the UN Environment Programme (UNEP) and from the 1980s became the promotor of human-caused climate change or 'global warming' as it was then before temperatures stopped rising. Strong's UNEP was behind the creation of the UN's Intergovernmental Panel on Climate Change (IPCC) which has been the central body in the climate change hoax ever since. He also established the UN Framework Convention on Climate Change (UNFCCC). Through this body he hosted the Rio 'Earth Summit' attended by 108 world leaders and 20,000 'green activists'. Maurice Strong, remember, was a big-time Cult operative. The UN Framework Convention on Climate Change is the organising force for the series of conferences in Kyoto (1997), Copenhagen (2009), Paris (2015) and Glasgow (2020) pressing governments to impose laws to reduce emissions of the gas of life. Strong saw out his last years in China where he had been close to the Communist Party leadership going back to Chairman Mao. He moved there after being exposed for being paid \$1 million from the UN's Oil for Food programme which was supposed to be a mechanism to trade oil to feed starving people in Iraq. This is the same Maurice Strong who claimed to be a (multimillionaire) 'socialist' and became the darling of what would become New Woke. George Soros plays a similar and more expansive role today and New Wokers still can't see through it ([Fig 274](#)). Strong was appointed to a series of other influential positions to serve the Cult including Senior Advisor to the UN Secretary General, Senior Advisor to the World Bank, Chairman of the Earth Council, Chairman of the World Resources Institute, Under-Secretary-General of the United Nations and Co-Chairman of the Council of the World Economic Forum which would become a major promotor of Greta Thunberg. This is what happens to your career when you are a Cult asset.

An insider speaks

Figure 275: The World in our hand – perfect symbolism for what the game is.

I have written over the years about the warnings of George Hunt, an accountant and investment consultant, who was an official host of the Fourth World Wilderness Conference in Colorado in 1987 attended by Maurice Strong along with Edmond de Rothschild, David Rockefeller and executives from the World Bank and International Monetary Fund (IMF) who were there because they cared so deeply about the environment and the poor. It was nothing to do with stealing land from the poor in the name of saving the world. Well, actually, it *was* – see my book *The Perception Deception*. Hunt's experience of these mega-criminals and others led him to realise that the so-called environmental movement was a Rothschild/Rockefeller global banker front driven by what I refer to as the Cult. He said the global population was described by a banker attendee as the 'canon fodder that populates the Earth'. Hunt made a video a month ahead of the June, 1992, Earth Summit in which he called out the game before it even became public. You can still find the video on the Internet. He pointed out that the logo of the summit was a hand holding the world with the slogan 'In Our Hands' which given the Cult's obsession with symbolism was a statement of intent in itself ([Fig 275](#) overleaf). The official name was UNCED

(United Nations Conference on Environment and Development) and was pronounced ‘unsaid’. That’s a ditto. Hunt described those behind the Earth Summit in these terms:

The same World Order [Cult] families that planned World War One and World War Two, that tricked the Third World countries to borrow funds and rack up the enormous debts, the same World Order that stole much of the money borrowed by Africans and other nations and hid it in Geneva banks. They are the persons who financed Hitler and purposely [create] war and debt to bring societies into their control. The World Order crowd are not a nice group of people.

Hunt said in 1992 that ‘the world environment movement will soon be in the hands of the World Order’ if its supporters did not act on what was happening. They didn’t, of course, and they have been, as Hunt predicted, absolutely absorbed by the ‘World Order’ elite to become the New Woke Climate Cult with its teenage ‘spiritual leader’ Greta Thunberg. Hunt said:

I learned later that the World Order refers to the coming one-world government as the Fourth World. A world controlled by the World Order where there is no more First, Second and Third World ... just a boundary-less planet which is called the Fourth World Wilderness. Yogis and shamans refer to it as the Fourth World Wilderness, the lostness of the mind. The lostness of the mind refers to the collective consciousness. Persons will be coerced through lies, drugs, fear and pain to surrender their selves, their egos, to the collective consciousness.

I stress here that while I speak of us being expressions of *The One* we are both the collective *and* the individual point of attention. We must not concede that sense of individuality and personal sovereignty to any group-think or collective mind which the Cult plans to be a technological hive-mind controlled by artificial intelligence. Hunt said the ‘Fourth World’ will be a return to a society much like the Caesars or Babylon or the Fourth Reich. He said this society was described in Aldous Huxley’s *Brave New World* and *Brave New World Revisited* and George Orwell’s *Nineteen Eighty-Four*. The new World Order sought to create a society out of the ashes of chaos, a collectivist Fourth World complete with collectivist religion, collectivist finance and unchecked world national socialism. Hunt said in 1992:

The World Order will offer Gaia, Mother Earth, to the masses as the Big Brother image to worship in the Fourth World. Maurice Strong has already set up a 140,000 acre project in Creston, Colorado, to develop this Earth religion system. Projects are funded by the Rockefeller Fund among other foundations. The Earth Summit will link environment with industry, the Lords of the UNCED conference will be the masters of who gets what and when if we don’t do something about it quickly.

I repeat: George Hunt was speaking in 1992. How sobering when you see what is happening today. Hunt described how Maurice Strong identified Edmond de Rothschild as the creator of the environment movement and perhaps Climate Cult supporters will now understand why billionaires like Soros, a Rothschild lackey, are falling over themselves in support. Greta Thunberg crossed the Atlantic on a yacht once named the Edmond de Rothschild sailed by an elite crew with connections to the Monaco royal family. How very ‘of the street’.

UN double whammy

The United Nations is working a pincer movement on behalf of the Cult. On one side you have the UN Intergovernmental Panel on Climate Change (IPCC) which drives the hysteria by lying incessantly about human impact on the climate. On the other you have UN Agenda 21 and Agenda 2030 which seek to transform global society into a centralised Orwellian state to ‘meet the challenge of climate change’. When you think that the United Nations was created by the Cult as a Trojan horse for world government dictatorship the game becomes transparent. One UN agency hoaxes the problem and others promote the

solution. The IPCC is not a scientific organisation, but a *political* one and its claims and behaviour are dictated by politicians, activists and place-people – not by scientists who are merely the prop. Some ‘scientists’ say what the IPCC demands when they lift their snouts from the money-trough while other genuine scientists either have their work misrepresented in IPCC ‘reports’ or are ignored all together. Many scientists mentioned in IPCC documents have complained of being misquoted and having their opinions distorted as I have detailed in other books. Another sleight-of-hand is for IPCC reports detailing alleged ‘scientific findings’ to be preceded by a ‘summary’ of those findings. These ‘summaries’ are written by the IPCC hierarchy to misrepresent or exaggerate what is in the main report in the knowledge that the world’s media will, almost in its entirety, use the summary as the basis for its reporting. For many years the IPCC was headed by a railway engineer, Rajendra Pachauri, who was succeeded by Hoesung Lee, a South Korean former economist with ExxonMobil and brother of former Prime Minister of South Korea Lee Hoi-chang. The IPCC is indeed a *political* not a scientific organisation churning out propaganda about climate change to justify the imposition of global centralised tyranny. Christiana Figueres, who is UN to her DNA, was executive secretary of the United Nations Framework Convention on Climate Change for six years and in 2020 published a book with her ‘strategic advisor’ and ‘climate change’ political lobbyist, Tom Rivett-Carnac, from a family of aristocrats. The book, *The Future We Choose: Surviving the Climate Crisis*, naturally ticked all the boxes. Figueres parroted climate change orthodoxy, endorsed Extinction Rebellion and Greta Thunberg, and promoted ‘civil disobedience’ as ‘a moral choice’ to pressure politicians to act on climate change. She even names Martin Luther King as an example when she could not have named anyone less appropriate. King was campaigning for freedom and not, as with the Climate Cult, demanding it be deleted. Funny how the establishment promotes ‘civil disobedience’ to advance the climate hoax, but those who engage in such activities in support of freedom, fairness and justice are labelled ‘enemies of the state’. How would King have responded to an article posted on the United Nations Educational, Scientific and Cultural Organization (UNESCO) website headed ‘Climate crimes must be brought to justice’. These ‘crimes’ highlighted by British academic Catriona McKinnon turn out to be refusing to believe in the UN climate hoax. McKinnon is yet another confirmation that academia, once a noble profession, is now a very sick joke. This genius wrote:

Criminal sanctions are the most potent tools we have to mark out conduct that lies beyond all limits of toleration [or none in the case of New Woke]. Criminal conduct violates basic rights and destroys human security. We reserve the hard treatment of punishment for conduct that damages the things we hold most fundamentally valuable. Climate change is causing precisely such damage ...

... I have proposed that international criminal law should be expanded to include a new criminal offence that I call postericide. It is committed by intentional or reckless conduct fit to bring about the extinction of humanity. Postericide is committed when humanity is put at risk of extinction by conduct performed either with the intention of making humanity go extinct, or with the knowledge that the conduct is fit to have this effect.

When a person knows that their conduct will impose an impermissible risk on another and acts anyway, they are reckless. It is in the domain of reckless conduct, making climate change worse, that we should look for postericidal conduct.

From this bizarre journey through what passes for McKinnon’s thought processes comes the demand that challenging climate hoax orthodoxy should be a criminal offence under international law. The fascistic nature of such a demand will not have penetrated her New Woke self-obsession. McKinnon published a book entitled *The Ethics of Climate Governance* – the ethics of *global* governance would be more like it. No wonder UNESCO promoted her article. By the way, surely Cambridge academic Patricia MacCormack must be guilty of McKinnon’s ‘postericide’ given that she says: ‘The only solution for

climate change is letting the human race become extinct.' Ah, no, you see MacCormack and McKinnon are both New Woke and believe in the climate change hoax and that is always a get out of jail card.

Greenpeace co-founder Patrick Moore, an open-and-shut case of 'postercidal conduct', emphasises another deception in the climate change racket. The IPCC's brief is not to investigate the causes of climate change, but only *human* causes. No wonder it basically ignores the Sun. It is specifically focused on alleged human causes because that's the answer the Cult needs for its manipulation. If IPCC personnel found there was no significant human impact there would be no reason for its existence and they would lose their share of what the *Climate Change Business Journal* estimated to be \$1.5 trillion a year even at the time of the UN Paris climate conference in 2015. It will be much more now. American writer Upton Sinclair said: 'It is difficult for a man to understand something when his salary depends upon his not understanding it.' This is another Cult technique to pressure its gofers to do and say what the Cult wants or lose their income. The IPCC outrageously claims to be dedicated to providing the world with objective, scientific information when its controlling core is a climate Mafioso. Scientist and engineer David Evans, a full-time or part-time consultant for eleven years to the Australian Greenhouse Office (now the Department of Climate Change), has a far more accurate assessment of what is a fantastic conspiracy to deceive. He said the theory of human-caused global warming was based 'on a guess that was proved false by empirical evidence during the 1990s', but most scientists wouldn't say so when 'the gravy train was too big, with too many jobs, industries, trading profits, political careers, and the *possibility of world government* and total control riding on the outcome' (my emphasis). With that Evans hit the nail bang on the sweet spot. This is what the hoax of the human-caused 'climate crisis' is really all about. He said that 'governments and their tame climate scientists now outrageously maintain the fiction that carbon dioxide is a dangerous pollutant' when the evidence they are wrong was overwhelming.

Agenda 21/2030

These two interconnected UN 'agendas' are the major means through which the Cult is exploiting the climate change lie to impose its Hunger Games structure of global control. Agenda 21 was launched by Maurice Strong (the Rothschilds and Rockefellers) at the Rio Earth Summit in 1992. Agenda 2030 was established by the UN General Assembly in 2015. Agenda 21 refers to centrally-controlling everything in the 21st century while Agenda 2030 is a series of 17 target 'goals' which, if implemented in the way planned, would achieve the global dictatorship demanded by Agenda 21. In short they are two versions of the same conspiracy. Agenda 21 has been accepted and promoted across the world right down into local councils. Check your council or state and see if they are implementing Agenda 21 and 'sustainable development'. The latter might seem at first to be laudable. Why wouldn't we want human activity to be 'sustainable' in the long term? BIG RED FLAG AND BRIGHT FLASHING LIGHTS: That's not the United Nations or Cult definition of the word. To them it means the excuse to impose world dictatorship. These are the 'sustainable development goals' and headings of Agenda 2030:

1. No Poverty
2. Zero Hunger
3. Good Health and Well-being
4. Quality Education
5. Gender Equality
6. Clean Water and Sanitation
7. Affordable and Clean Energy
8. Decent Work and Economic Growth
9. Industry, Innovation, and Infrastructure
10. Reducing Inequality
11. Sustainable Cities and Communities

12. Responsible Consumption and Production
13. Climate Action
14. Life Below Water
15. Life On Land
16. Peace, Justice, and Strong Institutions
17. Partnerships for the Goals

Once again these would appear to be supportable ambitions except that we are looking at a constantly-used Cult technique that tells people what they want to hear without revealing the real reason for what is planned. We should always filter claims to 'care about humanity' with the knowledge that those behind the UN are Death Cultists motivated by horrific intent. Why would practicing Satanists and paedophiles of the Cult with a pathological hatred for humans want those 'goals' to be achieved including no poverty or hunger? These are the controllers of global finance that have created poverty and hunger and use both as political tools. The Devil is not so much in the alleged 'goals'; it is in the means to achieve them (or the illusion of achieving them more to the point). This is how Agenda 21 intends to do that as outlined in its own documents:

- End national sovereignty
- State planning and management of all land resources, ecosystems, deserts, forests, mountains, oceans and fresh water; agriculture; rural development; biotechnology; and ensuring 'equity'
- The state to 'define the role' of business and financial resources
- Abolition of private property
- 'Restructuring' the family unit
- Children raised by the state
- People told what their job will be
- Major restrictions on movement
- Creation of 'human settlement zones'
- Mass resettlement as people are forced to vacate land where they live
- Dumbing down education
- Mass global depopulation in pursuit of all the above

This is the very wish-list of the Cult that I have been exposing for more than 30 years and the US Green New Deal proposed by New Woke Democrat extremists is a political manifesto to implement Agenda 21/2030 as are similar versions of the 'Deal' around the world. This is what the UN Agendas and the Green New Deals really mean behind their Orwell-speak:

An end to national sovereignty:

I don't really need to elaborate on this one after what I have said already about the plan to delete countries for a structure of world government, superstates and regions. Maps already exist for a regionalised Europe with countries eliminated and America is being regionalised by the Tiptoe technique through 500 regional councils in the 50 states called Councils of Governments (COGs) and Metropolitan Planning Organizations (MPOs). The next stage, the Smart Region Initiative (SRI), was launched in Arizona in 2019 with a view to expansion across the country.

State planning and management of all land resources, ecosystems, deserts, forests, mountains, oceans and fresh water; agriculture; rural development; biotechnology; and ensuring 'equity':

This is the centralised control of everything that I have been warning about and it's already happening

with some American states even claiming ownership of rainwater that falls on private land.

The state to 'define the role' of business and financial resources:

This means the central control of all finance and business and the end of private enterprise not supported by the World State. The systematic targeting of small mom and pop businesses and much bigger ones with taxation and regulation is aimed at destroying them all eventually so that only giant Cult corporations answering to the Cult world government will control everything – see Amazon for a start and survey the world since the 'virus' lockdowns for the extraordinary acceleration of this goal. Global financial dictatorship is the role of the planned world central bank with the European Central Bank, World Bank and International Monetary Fund all Totalitarian Tiptoes to that end and the same with the cashless single global digital currency that I have been saying was coming since the early 1990s. This is today being implemented with the disappearance of cash (again accelerated by its insane demonisation as a source of 'catching the virus'). The economic sales-pitch of 'sustainable development' includes an 'end to poverty' which really means a re-distribution of wealth to make the mega-rich even richer and Western middle and working classes seriously poorer. Another pledged goal of 'eliminating hunger' (as if the Cult cares) is to justify health-destroying genetically-modified crops requiring stupendous amounts of pesticides and herbicides to grow and the end of eating meat.

Abolition of private property:

This is the central control of all property (except for the elite) with rents so high that people are forced into the micro-'apartments' that are now being built around the world. Calls for an end to private property ownership have now started in line with this plan. Young people are being prevented from entering the property market by sky-high prices, student debt and other financial suppression.

Rockefeller family insider Dr Richard Day told those Pittsburgh paediatricians in 1969:

Privately-owned housing will become a thing of the past. The cost of housing and financing housing would gradually be made so high that most people couldn't afford it ... Young people would more and more become renters, particularly in apartments or condominiums.

People would not be able to buy [homes] and gradually more and more of the population would be forced into small apartments [the micro-apartments]. Small apartments which would not accommodate very many children.

The last point is part of a depopulation agenda and Day also indicated the control aspects of telling you where you are going to live:

Ultimately, people would be assigned where they would live and it would be common to have non-family members living with you. This by way of your not knowing just how far you could trust anybody. This would all be under the control of a central housing authority. Have this in mind ... when they ask, 'How many bedrooms in your house? How many bathrooms in your house? Do you have a finished game room?' This information is personal and is of no national interest to government under our existing Constitution. But you'll be asked those questions ...

Dictating where people live is happening in the Cult blueprint for the world – China.

'Restructuring' the family unit

The end of the family is a constant theme of Cult-related documents and organisations. The deletion of ever more parental rights which are handed to state institutions like schools and social services is this

aspect of the agenda unfolding in plain sight without the dots being connected. Remember how student debt campaigner Wayne Johnson said the loan crisis was leading to the ‘ever-increasing destruction of the fabric of America’ with people ‘not getting married, not having children’. It’s all calculated cause and effect.

Children raised by the state

This is obviously related to the end of the family and the longer term plan is for the end of even human procreation as I will be coming to. Fantastic numbers of children now being literally stolen from loving parents by social services through outrageous misrepresentation and lies in secret ‘family courts’ is this plan at work. Insider Aldous Huxley described the end of parenthood in his prophetic *Brave New World*.

People told what their job will be:

George Orwell wasn’t kidding in his portrayal of a Big Brother world in which every aspect of human life is dictated including work slavery.

Major restrictions on movement:

Why do you think Cult-serving and manipulated climate extremists are targeting flying and car use? Look at the effect on movement of the ‘pandemic’. This further explains the obsession with imposing autonomous vehicles in which the computer limits where you can go. Governments are banning the sale of petrol and diesel vehicles in favour of anything-but Green electric power because that is the stepping-stone to full-blown electric autonomous vehicles. ‘Saving the planet’ is only an excuse to advance this agenda. Britain is committed to banning new petrol and diesel vehicles from 2035 while others including Denmark, Ireland, the Netherlands and Sweden go for 2030. The knock-on effect for employment in the auto-industry can be seen with predictions of massive job losses due to the nature of electric car production. Where do those people go? Did I mention the Hunger Games Society?

Creation of ‘human settlement zones’:

Translated from the Orwellian this means people being forced into tightly-packed mega-cities of round-the-clock surveillance and micro-apartments that I have described. Their code-name is ‘Smart Cities’ (once again see China). Tightly-packed teeming cities of human chaos and misery will also provide low-vibrational energy centres on which the Cult ‘gods’ can feed.

Mass resettlement as people are forced to vacate land where they live:

Another reference to what is now happening with the destruction of rural communities, businesses and job opportunities, removal of shops and banks, plus increased transport costs, to pressure people to head for the cities.

Dumbing down education:

This has already been achieved and is programming the mentality of New Wokeness in which ‘education’ is confused with indoctrination and downloading the Cult perception program is perceived as ‘knowing it all’. Ponder the following climate change excuse for ‘dumbing down education’ from the United Nations (again) Education, Scientific, and Cultural Organization (UNESCO):

Generally, more highly educated people who have higher incomes can consume more resources than poorly educated people who tend to have lower incomes. In this case more education increases the threat

to sustainability.

Are you getting it yet New Wokeness?

Mass global depopulation in pursuit of all of the above:

With the advent of the AI world humans are no longer required by the Cult in such numbers and even more so with the end of procreation. The plan for a mass cull of the global population appears in many Cult-related documents under terms like 'population control' and a 'sustainable population'. There are many ways this is being done through the systematic undermining of immune systems through food, drink, vaccines and radiation fields, and this really becomes a cinch once human brains are connected to AI. Those you want to remove are just a press of a button away or the click of a mouse.

Figure 276: The Pied Piper of Stockholm.

The horrific multi-faceted agenda for humanity outlined here is being justified by the 'climate emergency' and an 'existential threat' to humanity which *isn't actually happening*. We are looking at mass-hysteria which is defined as 'mass psychogenic illness, collective hysteria, group hysteria, or collective obsessional behavior, which transmits collective illusions of threats, whether real or imaginary, through a population in society as a result of rumours and fear'. Mass hysteria is another example of wave entanglement with individual hysteria feeding the entangled collective to generate group hysteria. Pump-primers shout fire and the crowd starts running while others keep shouting fire ongoing in science, academia and media. Everybody's shouting fire and so there must be a fire even if no one can see the smoke (see 'virus' hysteria). The term 'hysteria' is such a perfect description of what is happening that a panel of German linguists decided to 'ban' it in relation to climate change. They choose a new word or phrase to 'ban' every year and went for 'climate hysteria' on the grounds that it 'defames climate protection efforts and the climate protection movement, and discredits important discussions about climate protection'. This is Orwell's Newspeak which deletes words that allow the 'wrong' opinions to be articulated. The 'panel's' other banned words and terms include 'alternative facts', 'do-gooder', 'liar press' and 'welfare tourism' (a description of migrants exploiting the welfare system). I'm sure you have no problem seeing the pattern. Another head-shaker is that those eventually sitting at the centre of the target for freedom-deletion are the very people demanding in organisations like Extinction Rebellion that their own mass slavery – and that of their children and grandchildren – is implemented while anyone arguing against that should be silenced ([Fig 276](#) overleaf). I do not exaggerate when I say that great swathes of humanity are descending into mental illness although thank goodness far from everyone. Patrick Moore was right when he said of the green insanity movement: 'I fear for the end of the enlightenment. I fear an intellectual Gulag with Greenpeace as my prison guards.' That is exactly the plan, but it doesn't have to be. The idea has been to indoctrinate the young through constant climate programming in schools and universities to ensure the Big Lie is so ingrained that they will accept and even demand the Cult agenda for total global control of every man, woman and child.

Heere's Greta (right on cue)

The Swedish 16-year-old Greta Thunberg was wheeled out specifically to rally the young to rebel against their elders in climate protests that insist freedom is deleted for the rest of their lives. I don't say for a second that Thunberg knows this. She is a tragic puppet and her story connected to organisations pressing the Cult agenda while she won't know there is a Cult never mind she is doing its bidding. She is, however, revealing in her arrogance ever-increasing signs of believing her own publicity and hype. Thunberg doesn't seem to know much at all and only parrots a stream of mantras and platitudes such as 'listen to the science' when she has no idea what 'the science' is. She never expands on 'the science' and mainstream media sycophants never ask her. The 'science is settled' mantra is utter bullshit and leads to people who would otherwise question climate change orthodoxy to stay quiet in fear of being accused by climate propagandists of 'denying the science'. The theme applies especially to those in the academic arena who have jobs to protect. What if the 'science' wasn't 'science' at all? What if it's only a script written by the Cult to which most of mainstream 'science' has long sold its soul? Well, it is. Greta Thunberg has been diagnosed with obsessive-compulsive disorder, autism and Asperger's syndrome and been credited with mystical powers by her Climate Cult mother, Malena Ernman, a super-New Woke Swedish singer, while her father Svante Thunberg is a talent agent and managing director of a media company. Greta's 'powers' are claimed to include the ability to see carbon dioxide with the naked eye and how it flows out of chimneys and changes the atmosphere. I kid you not. Does she see the plants grow bigger and stronger, too, when CO₂ increases? What absurdity although perfect if you want to create a new religious icon. Exploiting a 16-year-old connects with the young and gives her a free-ride with the mainstream media despite the impact of her elite-orchestrated words and actions being global in nature and fundamental to the transformation of human society. By contrast German teenager Naomi Seibt who once bought the climate change lie and then spoke out after seeing through the hoax is treated rather differently. The girl dubbed the 'anti-Greta Thunberg' is highly articulate and well-researched which means she does not get invited to elite events. Instead she is presented through implication and association as some kind of white nationalist extremist and of course the ubiquitous 'anti-Semitic' by the usual suspects that include, as always, the 'anti-establishment' establishment-to-its-DNA London *Guardian*. I bet you're in shock. We should have a live public debate between Thunberg and Seibt for all young people to watch. An Internet video reveals a code that Thunberg uses whenever she is questioned in the street about 'the science'. She takes off her hat and immediately a minder steps in to whisk her away. She is watched over by unpleasant and aggressive plain clothes security guards sometimes outnumbering protestors with her in Sweden. These heavies will not let anyone with real questions anywhere near her. Who is paying for them? Who is financing the whole Thunberg phenomenon? Members and agents of the One-percent are certainly involved in the bankrolling of this most blatant of propaganda operations. I recommend the YouTube video *Greta Thunberg Incorporated: The Exposé* to see the arrogant, authoritarian thugs among her 'security'.

Is anyone really so naive as to believe it's a coincidence that a 16-year-old protesting alone in Sweden suddenly finds herself invited by the One-percent to speak at their elite World Economic Forum conference in Davos, Switzerland, and berate them about climate change? Or that she was given a platform to speak to the world at the Climate Cult-orchestrating *United Nations*? Or that she was sailed across the Atlantic to get to the UN in a ridiculous stunt by those connected to the Monaco royal family in a multi-million yacht that used to be called the Edmond de Rothschild – the man Maurice Strong said was the creator of the environmental movement? Or that a crew filming a high-profile documentary followed her from the time she was sitting 'alone' in her 'spontaneous' one-girl protest outside the Swedish parliament? Or that the person who 'discovered by chance' her 'lone protest' was public relations and financial expert Ingmar Rentzhog who has close connections to the Club of Rome that hatched the climate change hoax from the start? He claims to have come across Thunberg 'by chance' minutes after she

started her first ‘school strike protest’ outside the Swedish parliament. I’m laughing already. Rentzhog trained with the Climate Reality Project led by climate change global propagandist Al Gore and founded the social media platform ‘We Don’t Have Time’ to promote the climate change narrative. Two months after Rentzhog ‘discovered’ Greta in 2018 the Club of Rome held a joint conference with Rentzhog and ‘We Don’t Have Time’. The person who encouraged Thunberg to start her ‘school strike’ and protest at the parliament was the head of Extinction Rebellion in Sweden who had said they needed a cute young face ‘to get help from young people to increase the pace of the transition to a sustainable society’.

Figure 277: Greta and parents promoting Antifa, a violent ‘anti-hate’ hate group so beloved of New Woke.

Figure 278: Pawn in a game she doesn’t begin to understand.

Figure 279: Saint Greta, the Climate Goddess.

I guess another coincidence is that a Thunberg climate change mentor is German climate politician Luisa-Marie Neubauer who is an asset of the ONE Movement funded by other Cult assets like Bill Gates and George Soros (yes, them again) and involving their mate, virtue-signalling rock singer Bono. Soros funds other Thunberg-connected organisations. Luisa-Marie Neubauer has appeared with Thunberg at many public events. ONE is among the most obvious of New Woke astroturf operations you could imagine. The Bill and Melinda Gates Foundation website describes ONE as an organisation that ‘pursues its goals through policy advocacy, grassroots mobilization, communications, and creative campaigning’ which is straight off the pages of the New Woke manipulation manual. The website continues: ‘ONE also mobilizes its 3.2 million members to pressure policymakers to increase their effort, accountability, and transparency in the fight against disease and poverty, particularly in Africa.’ Multi-billionaires care so deeply about poverty, you see. ONE makes ‘the most of technology and social media … [and has] … also become a leading force in educating the public about global health and development and in changing perceptions about aid and its impact’. If we translate that from the bullshit ONE campaigns for the Cult

agenda just like the Open Society network of Soros. Thunberg and her parents profess to be ‘anti-fascist’ in their ‘intersectionality’ with other New Woke sectors and all three have been photographed in t-shirts promoting the violent ‘anti-fascist’ fascist group, Antifa ([Fig 277](#)). ‘I didn’t know’, said Greta. Oh, really – what about your parents? Human-caused climate change is an elite scam and why wouldn’t there be all these elite connections to its propaganda princess? Thunberg is just their unknowing and increasingly arrogant stooge. In my view her climate extremist parents should be ashamed of how they allow her to be exploited and have played such a central role in that. Her obsessive-compulsive disorder can be clearly seen in her unquestioning obsession with a climate end-of-the-world and it’s sad to witness such outrageous exploitation ([Fig 278](#)). The Cult of Greta now includes a huge painting of her looking down in disdain over New Woke and shit-infested San Francisco and her every public move is documented by the media in a colossal exercise in public relations programming – especially of the young ([Fig 279](#)). A further crucial part of the elite promotion of Thunberg is to drive a wedge between old and young, adults and children. This was her carefully-scripted speech to the UN in 2019 and all elements of the Climate Cult agenda are there:

My message is that we’ll be watching you. This is all wrong. I shouldn’t be up here. I should be back in school on the other side of the ocean [Well, go then]. Yet you all come to us young people for hope. How dare you! [Divide young and old by blaming the old for something that’s not happening]. You have stolen my dreams and my childhood with your empty words. [No, Greta, those exploiting you have stolen your childhood]. And yet I’m one of the lucky ones. People are suffering. People are dying [not from human-caused climate change they’re not]. Entire ecosystems are collapsing [not from human-caused climate change they’re not]. We are in the beginning of a mass extinction [no, we’re not], and all you can talk about is money and fairy tales of eternal economic growth [which the Cult wants to delete for the mass of the population]. How dare you! [Ditto to you, Greta.]

For more than 30 years, the science has been crystal clear [like hell it has]. How dare you continue to look away and come here saying that you’re doing enough, when the politics and solutions needed are still nowhere in sight. You say you hear us and that you understand the urgency. But no matter how sad and angry I am, I do not want to believe that. Because if you really understood the situation and still kept on failing to act, then you would be evil. And that I refuse to believe. [So how evil are those seeking to terrify the young that their world is going to end when it’s all a gigantic hoax to delete their freedom for life?]

The popular idea of cutting our emissions in half in 10 years only gives us a 50% chance of staying below 1.5 degrees, and the risk of setting off irreversible chain reactions beyond human control [chain-reactions that don’t exist]. Fifty percent may be acceptable to you. But those numbers do not include tipping points [made up to explain the lack of CO₂ impact], most feedback loops [ditto], additional warming hidden by toxic air pollution or the aspects of equity and climate justice [more bunkum]. They also rely on my generation [divide, divide] sucking hundreds of billions of tons of your CO₂ [the gas of life] out of the air with technologies that barely exist. So a 50% risk is simply not acceptable to us – we who have to live with the consequences [divide, divide].

To have a 67% chance of staying below a 1.5 degrees global temperature rise – the best odds given by the [Cult-created Intergovernmental Panel on Climate Change] – the world had 420 gigatons of CO₂ left to emit back on Jan. 1st, 2018. Today that figure is already down to less than 350 gigatons. How dare you pretend that this can be solved with just ‘business as usual’ and some technical solutions? With today’s emissions levels, that remaining CO₂ budget will be entirely gone within less than eight and a half years.

There will not be any solutions or plans presented in line with these figures here today, because these numbers are too uncomfortable. And you are still not mature enough to tell it like it is [but you are Greta by repeating the crap you have been told to say?]. You are failing us. But the young people are starting to understand your betrayal [divide, divide]. The eyes of all future generations are upon you [divide, divide].

And if you choose to fail us, I say: We will never forgive you [divide, divide].

We will not let you get away with this. Right here, right now is where we draw the line. The world is waking up. And change is coming, whether you like it or not.

Figure 280: The Cult is desperate to turn the young against the old.

Figure 281: The plan is now so transparent. (Image Gareth Icke.)

Yes, Greta, the Cult's change is coming if we and your generation believe garbage like that. We are witnessing yet another inversion in which children tell adults what they should do. There are many stupid adults, large numbers of which are in politics. There are some aware children who have not allowed the Cult to program their perceptions (Greta Thunberg is not one of them). But the idea that children know better in general than intelligent adults with decades of experience is absurd. When I was six, twelve and sixteen I would not have dreamed of telling the world what should be done because, like those of the same age today, *I hadn't lived long enough to credibly know*. The young-old inversion has a clear motive for the Cult: Children and young people today have been subjected to the perception program at its most extreme and it wants those perceptions to prevail and transform society in its image. Program the kids and then have their will imposed on adults who will have known life and experience before child-programming reached its current extremes. No one ever asks Greta Thunberg how many hundreds of millions will die if her carbon targets are met through loss of jobs, food and warmth. The climate hoax divides advocates and 'deniers' and splits young from old on the grounds that the old are responsible for the 'existential threat' to the young (Fig 280). The German branch of the school strike organisation Fridays for Future, officially founded and copyrighted by Greta Thunberg, promoted this agenda when it tweeted: 'Why do grandparents talk to us each year? They won't be around much longer.' German public broadcaster WDR produced a song video featuring a choir of young girls castigating older people for climate change and eating meat. It referred to an imaginary grandma as 'an environmental pig' and warned we 'will not let you get away with this'. WDR called it 'satire' in the face of a disgusted public reaction when it was clearly calculated. 'Satire' is the excuse often used when attempts at indoctrination become too blatant and people see through it. The 'how dare you?' rant about older generations by 16-year-old Cult puppet Thunberg was also an example of this theme. Yes, Greta, how dare older people and the long-gone create an industrial society that allows multimillion dollar yachts to be built for your propaganda stunts and aircraft to quietly – *shhhhh* – fly your sailing crew back home across the Atlantic

while you posture your carbon self-purity? The Cult's desire to start a war between young and old has many motivations. One is that older people were born long before the climate change hoax began and many can see through the manipulation and contradictions. They must be perceived by the young as the villains and the enemy to be vanquished rather than wisdom and experience worth listening to ([Fig 281](#)).

Increasing the hype

Figure 282: Why would the One-percent invite Greta Thunberg to berate them on climate change? This is why.

Figure 283: Same song-sheet, different singers.

Thunberg was invited again in 2020 to the World Economic Forum in Davos, Switzerland, a 100 percent front for the One-percent and the Cult behind the climate change hoax and the creation of an Orwellian, AI-controlled, Orwellian global state ([Fig 282](#)). Why would these multi-billionaires invite a 16-year-old to castigate them at their own conference for the second year in a row and repeat the crap that 'our world is still on fire'? This chapter alone has answered that question and they will drop her like a stone when she has served their purpose. She outrageously claimed that if we don't do what she said we are not acting 'as if you loved your children above all else'. She added that 'we don't want these things done in 2050, 2030, or even 2021 – we want this done now'. Who is this '*we*'? The One-percenter watching her speak at Davos for sure and certainly not the general public. Donald Trump appeared at the elite propaganda-fest to deliver a speech warning against believing the climate 'prophets of doom' in a clear reference to Thunberg sitting in the audience. He was, however, pretty much a lone voice. Instead we had another burst of baloney from Prince Charles who remember said in 2009 that we had twelve years to save the world from irretrievable climate and ecosystem collapse ([Fig 283](#)). Charles travelled to Davos in a private jet and electric car to make a speech promoting the demands of the Climate Cult. In the less than two weeks before the speech Charles had flown four times in private jets and a helicopter with the aircraft flying a total of 16,000 miles at a cost to the UK taxpayer of \$280,000. This is a man who has flown 125 miles in a helicopter to make a speech about the dangers of aircraft emissions. Without a hint of embarrassment he presented himself at Davos as an environmental champion and called for 'eco-taxes', a world economy with nature at its centre (while reducing CO₂ that sustains nature), and new AI technologies – all from the Cult's letter to Santa, or Satan. He of course championed 'sustainability' and proposed a transformation of the global economy justified by climate change that precisely reflected the Cult agenda. He said:

Now it is time to take it to the next level. In order to secure our future and to prosper we need to evolve our economic model.

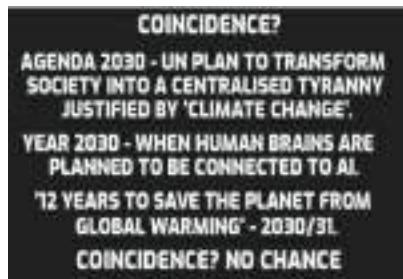

Figure 284: The year by which the Cult wants its agenda pretty much in place.

So many deadlines for the end of the world through ‘runaway’ climate change have come and gone, but like all good cults they just keep announcing a new date when the last one passed without incident. The latest doomsday is around 2030 which is a highly significant date that turns up in many guises. It was mentioned yet again by Prince Charles in his Davos speech. Here are three other examples: When the latest date of ‘twelve years to save the planet’ was first announced that would take us to around 2030. The UN list of goals to save the planet from climate change by transforming global society into a centralised dictatorship is called Agenda 2030. The year given by Google executive Ray Kurzweil and other Silicon Valley technocrats for connecting the human brain to artificial intelligence is 2030 ([Fig 284](#)). Is this yet another coincidence? What do you think when AI is being promoted as an answer to climate change? The hoax has hog-tied almost every politician into some level of compliance. There are the majority who buy the lie and say ‘something must be done’ and the rest who may be somewhat or totally sceptical, but still feel they have to go along with the farce for electoral or reputational reasons. This is what happens once the Cult has decreed and implanted the ‘norm’. Even people who see through it are mostly too intimidated to say so.

Then there is the feeling that the orthodoxy wouldn’t be repeated so incessantly if there was nothing to it. Not every fact may be true, this mentality says, but there must be some basis of truth or why would everyone keep repeating the same claims? Well, when a disease is (genuinely) spreading – in this case a perceptual disease – does everyone get the same disease? Yes. Everyone in the establishment was repeating that Iraq had weapons of mass destruction. Was there *any* truth to that *whatsoever*? No. Once people grasp that human-caused climate change and its alleged catastrophic consequences is a mega-scam – not some of it, *all of it* – the mist clears and the monumental deceit is in plain sight.

Wake up Wokers. You are being hypnotised, mesmerised and shafted and I care about that enough to take your abuse when freedom for the rest of your lives at stake.

CHAPTER TEN

Are you New Woke?

Whom the gods would destroy, they first make mad – Euripides

How strange that the gas of life is depicted as the gas of death while China, the world's biggest industrial producer of CO₂, is not the focus of Climate Cult outrage. China's emissions in 2019 were more than the United States, European Union and Japan combined and reportedly some 27 percent of the world total.

Outrage instead is reserved only for Western countries which, crazy as it may be, are making efforts to reduce their 'carbon footprint'. One commentator said of Greta Thunberg: 'I don't see her in Beijing or Delhi.' There is a reason for that. China is the blueprint for global control and must not be criticised by those who seek to globally emulate this New Woke utopia. Oh, no, New Wokers might cry, we don't want to be like China. The evidence proves otherwise. Demand after dystopian demand by the New Woke and Climate Cult mentality is straight from the playbook of the Chinese Communist Party and Stalinist Russia come to that – and so is every aspect of the 'virus' lockdowns. Chairman Mao who forced communism on China's immense population in 1949 was a Cult operative and in the decades that have followed the country has been the incubator for the global technological surveillance dictatorship. The Second World War was a Cult-manipulated Problem-Reaction-Solution that brought pre-planned colossal political change. China became communist; Stalin's Russia swept across Eastern Europe; Israel was established; and the United Nations and other globally-centralised institutions were created on the Tiptoe to world government. Brutal centralised political and military control in China had allowed the Cult's Orwellian society to advance more quickly than in the West where they still (until the 'virus' lockdowns) had to pay lip-service to freedom and 'democracy'. In China when they want to impose a new stage of dystopian control they simply do it (and now so does the West). If you want to see what is planned for the rest of the world tomorrow look at China today and therefore we have 'New Woke' billionaires and corporations owned by the Cult, including Google, working closely with the Chinese dictators while claiming to care about 'values'. A report in the *Wall Street Journal* described how US tech giants including Google and IBM are supporting China's multibillion-dollar surveillance industry: 'US companies, including Seagate Technology PLC, Western Digital Corp. and Hewlett Packard Enterprise Co., have nurtured, courted and profited from China's surveillance industry ... Several have been involved since the industry's infancy.' IBM was exposed for collaborating with the Nazis and their concentration camps (the Cult has no borders). The emulation of China in the West is now in overdrive thanks to the pandemic scam. China is where Maurice Strong ended up, the instigator for the Rothschilds and Rockefellers of the climate change hoax. We are led to believe that China is a self-contained entity and the Western world is on the other 'side'. Not at the Cult level they're not. Where did the 'virus pandemic' publicly start? *China*.

'Capitalism' is cartelism

A question quite understandably asked is why would the Cult and its One-percent which have secured

predominance through capitalism want a global society based on communism and Marxism? It would appear to be a contradiction, but it's not. First of all the Cult wants its own form of centralised tyranny called a technocracy or government and control of society and industry by an elite of technical experts with no ballot box required. This is the global control system fast-emerging out of Silicon Valley. I will be explaining the background to the technocracy and for now I'll stay with the familiar communism/Marxism of which technocracy is a technological impersonation and expansion. All are interchangeable with fascism. The experience for the population is the same – top-down dictatorship. A second answer to why the One percent would want a communistic-type society when they appear to be 'capitalists' is that the Cult has secured global power through *cartelism* not *capitalism*. If you take capitalism to be a free market in which the most efficient, effective and creative win the day then that is absolutely not the world that we live in. When Cambridge academic Patricia MacCormack denounces the hierarchy of 'capitalism' as the problem and the reason that human existence must cease she is missing this very point. There are many flaws in leaving everything to the 'free market' and I don't believe that essential public services should be subjected to often vicious and people-destroying 'free-market capitalism'. Even worse, however, is when the market is not even close to being 'free' in the first place. The Cult is not interested in 'free' markets when it seeks complete control of everything. Instead it has constantly sought to impose its monopoly over every aspect of human life through ever-expanding corporations that destroy or buy-out opposition until capitalism is replaced by rigged-market cartelism. Prices are kept low to undercut competitors until monopoly is secured and then those prices (or *censorship* in the case of social media and Google/YouTube/Facebook/Twitter) begin to soar. You don't like the new price? Too bad. Who else are you going to buy from? You don't like our censorship? Where else are you going to go? Limitless Cult money means that its corporations don't have to make a profit on the way to monopoly while 'competing' companies have to watch the bottom line and can't compete. Amazon, Google, YouTube, Twitter and Facebook are examples and we have the cartels of Big Pharma, Big Biotech, Big Oil, Big Media, Big Food, and so on. They become so powerful – and so lavish with their political donations – that they own governments no matter what politicians may say in public. Facebook's Mark Zuckerberg is 'questioned' on Capitol Hill by politicians that take Facebook political donations. It's called democracy apparently.

Figure 285: A man who says this ploughs tens of billions into 'social justice' and New Woke groups worldwide? Don't worry – he's not playing them like a stringed instrument or anything.

If you compare Cult cartelism with Cult communism/Marxism they are the same accumulation of power at the centre, or the top in MacCormack's hierarchy. Anyone think that the leadership elite in communist China don't live a vastly more privileged lifestyle than the rest of the population? Or that the same didn't happen in Stalinist Russia and every other Marxist utopia? Why do New Wokers think that communism/Marxism/socialism has been responsible for the deaths of some 100 million people amid mass-murder in Cambodia, Siberian gulags, and 're-education' camps of the Chinese Cultural Revolution? Western cartelism and Chinese communism are the same elite control systems with communism even more effective as an elite blueprint. Cartels in the West have to be manipulated into place through a sequence of acquisition and deletion of competition while with communism you have an

imposed hierarchical structure of top-down control through which the government dictatorship enforces its will over everything and everyone. What is a communist/Marxist government except a single gigantic *cartel*? The Cult prefers communist structures for this reason and it is working to impose a technological version of that on the entire world with the climate change and ‘pandemic’ hoaxes as the predominant excuse for its imposition. Marxism is not ‘government of the people’ but government of the Cult with the added bonus of enforcement by a police/military state. Perhaps it may now dawn on New Wokers why a ruthless ‘capitalist’ (cartelist) like George Soros would pour tens of billions into New Woke and climate change organisations while saying this: ‘I am basically there to make money, I cannot and do not look at the social consequences of what I do.’ He’s scamming you Wokers and *big-time* ([Fig 285](#) overleaf). The perceptual game has been to sell the idea that you either believe in capitalism or communism/socialism. What they don’t want you to know is that either way the Cult and its elite are always in control. Which ‘polarity’ do you want to rule you because either way it will be *us*. I coined the term in the 1990s of ‘opposames’ to describe apparent opposites that are in fact the same. Communism and fascism which are different names for the same basic control system are obvious cases. From this perspective you will not be shocked to hear that Karl Marx (1818-1883), the official originator of Marxism, was a Cult asset and gofer. In particular he was a front man for the major network within the Cult known as Sabbatian-Frankism which is represented by, among so many others, the Saudi Arabian fake royal family and the controlling networks of government, intelligence agencies and military in Israel with their serious influence on government, intelligence agencies and military in the United States and worldwide. I reveal in *The Trigger* the Cult background to Karl Marx and the creation of Marxism.

How New Woke was created

The Cult has established an army of naïve New Wokers to campaign for socialism, the don’t-scare-the-children name for Marxism, and it has been coordinated through control of ‘education’. Rebecca Friedrich, a 28-year teacher in the United States who also worked with teacher unions, has detailed in her book, *Standing Up To Goliath*, how those unions have been imposing political indoctrination on children. It turns out that this agenda is precisely what I am exposing to be the Cult agenda. Soviet KGB defector Yuri Bezmenov described decades ago in 1985 how a four-step technique works to subjugate societies for communism. He called the first stage ‘demoralisation’ which he said took 15 to 20 years and involves at least three generations of students being indoctrinated in schools and colleges with the desired perception and ideology while other information is suppressed and demonised. The ideology must not be challenged or questioned and accepted to be self-evident truth. Bezmenov said of the demoralisation stage:

Exposure to true information does not matter anymore. A person who is demoralised is unable to assess true information – the facts tell nothing to him. Even if I shower him with information, with authentic truth, with documents, with pictures, even if I take him by force to the Soviet Union and show him concentration camps he will refuse to believe it until he gets a kick in the back bottom [realises he has been had by a Marxist government taking over his country]. When the military boot crashes then he will understand.

I keep emphasising that when the dystopian society which New Wokers demand is in place they will be the first to feel its boot up their arse. Try doing what Extinction Rebellion does in London on the streets of Beijing. Yuri Bezmenov said of such ‘revolutionaries of the people’: ‘They think they will come to power, but that will never happen, of course.’ They are only Cult fodder to impose its will before they, too, will be targeted or eliminated. It’s already happening with feminists once high in the New Woke hierarchy now attacked for having the wrong opinion about transgender activists dismantling the freedoms of women. There are many areas and subjects on which I would disagree with Victor Davis Hanson, an American military historian and professor emeritus of Classics at California State University,

Fresno, but he was absolutely right in an article in 2019 about the way ‘revolutionaries’ become the targets of their own ‘revolution’. He said that ‘liberalism and progressivism’ (actually New Wokeism which has hijacked liberalism) will go the same way. Winston Churchill talked of how ‘each one hopes that if he feeds the crocodile enough the crocodile will eat him last’. I tell the story in *The Trigger* about how the Jacobins were a Cult front which hijacked the French Revolution and were behind what is known as ‘The Terror’ in France in 1793 and 1794 which killed 17,000 ‘enemies of the Revolution’. Victor Davis Hanson wrote:

Once liberalism and progressivism give way to Jacobinism – and they often do, as we have seen in revolutionary France, China, and Russia – no leftist is safe from the downward spiral to ideological cannibalism. Yesterday’s true believer is today’s counter-revolutionary and tomorrow’s enemy of the people ...

... the voices of the sane and the moderate are usually crushed in revolutionary cycles where extremism operates on its own logic and trajectory – until chaos and cannibalism finally lead even to the extremists’ own suicide.

We have reached the point in Bezmenov’s demoralisation where creations of the New Woke perceptual download are entering politics as with Congresswoman Alexandria Ocasio-Cortez and her Green New Deal Marxism. The influence of her mindset has turned the Democrats into the New Woke Party increasingly dominated by the likes of Ocasio-Cortez and the rest of the so-called ‘Squad’ – Representatives Ilhan Omar of Minnesota, Ayanna Pressley of Massachusetts and Rashida Tlaib of Michigan. The same has happened to the Labour, Liberal Democrat, Green and Scottish National Parties in the UK and their like across the world. This is certainly the case in Germany and Sweden where New Woke parties have opened the doors to the Cult’s mass migration agenda and dubbed anyone who questions the impact as Nazis, bigots and racists. US President Abraham Lincoln said: ‘The philosophy of the school room in one generation will be the philosophy of government in the next.’ Oh, how the Cult knows that. Bezmenov’s demoralisation stage is followed by what he called ‘destabilisation’, ‘crisis’ and ‘normalisation’ by which time what would earlier have been dismissed as crazy is now the new normal and society is transformed. Can anyone really deny that this has happened in those same 15 to 20 years (actually even less) with the extremes of climate change hysteria, political correctness, censorship, mass immigration, and immensely expanded definitions of racism, sexism and gender? New Wokeness is calling for everything required for the Hunger Games world to become reality: Economic devastation, de-industrialisation and global control to ‘save us from climate change’; political correctness to make the population silence itself to block exposure of what is happening; censorship of non-Woke information and opinions by Cult corporations cheered by New Wokers when before the Bezmenov sequence young people were protesting to *demand* freedom of speech; mass immigration and open borders to fulfil the Cult plan for divide and rule and deletion of countries; and the transformation of the sense of gender for deeply sinister reasons that I’ll be coming to.

It may seem that I am condemning those that call themselves ‘Woke’ when actually I’m not doing that. I am not condemning the *people*, but exposing their *actions and behaviour* which is a different thing. I understand *why* they do and say what they do. Their perceptions have been programmed from the day they were born and ever more emphatically as they have passed through the ‘education’ indoctrination machine. The programming has been merciless and unceasing and I have been saying for years that we are looking at the most perceptually-manipulated generations in known human history now technology and social media are employed to that end. It is amazing that so many young people have seen through the program given how fierce and extreme it has been and they must summon the courage to speak out and refuse to have their world and campuses transformed into tyrannies by New Woke insanity. Would you condemn a computer for doing what someone else has encoded it to do? This would be crazy and

with the scale of today's human programming that analogy is valid. I am pointing out the consequences of New Woke behaviour and the facts that are kept from them. I am offering another way of viewing the world to maybe stimulate some self-reflection on how The Program is impacting upon society. I don't condemn *them*. I feel sorry for them for what they are being subjected to by a psychopathic and satanic system that cares nothing for their wellbeing and uses them as imposition fodder.

Re-education is working

A poll of American 18-24-year-olds in 2019 found that 61 percent were open to a 'socialist society' and another found that 70 percent of millennials (born approximately between 1981 and 1996) would be 'somewhat or extremely likely' to vote for a socialist candidate. Two others found that 42 percent of Americans aged 18 to 39 would vote for a socialist president and that nearly 50 percent of young Americans would like a socialist government. The openly-socialist multi-millionaire, private jet passenger Bernie Sanders had young people as his support base to be the Democrat contender to face Trump in the 2020 election. He failed, but you can see the trend and 'socialism' (communism/fascism/technocracy) will be pushed even more in the wake of the 'Covid-19' hoax as we shall see. The other associated finding is that young people have a diminishing respect for capitalism. Those *for* socialism and *against* capitalism have their origins in 'educational' indoctrination (another version of communist 're-education') and in the economic consequences that the Cult has imposed upon them. First you tell young people that cartelism is capitalism and indebt them for much of their lives with student loans from 'capitalist' companies. This understandably turns them against capitalism which they mistake for cartelism while they are also indoctrinated at school and university into believing that socialism (communism/Marxism) is the panacea for all their ills. Marginalisation and misrepresentation of history purposely suppresses the horrendous reality of Marxist/socialist totalitarian regimes on the grounds that those who do not learn from the mistakes of history are destined to repeat them. After all, *repeating* them from the Cult's point of view is the whole idea and this time on a global scale. The Cult *wants* people to see how unfair society is because it adds to demands for 'change' in the form of socialist 'change' which is nothing more than changing the nature of One-percent control. The theme appeared to be further emphasised in a survey of 34,000 people by the US Zionist Edelman communications company across 28 countries in which 56 percent said capitalism is doing more harm than good. Damage done by cartelism masquerading as capitalism is far worse and I note that with capitalism (the misrepresentation of capitalism) as a target of the Cult this 'survey' and its findings were perfectly timed. The Cult both inverts the truth at every turn and seeks to present everything as a choice between black and white, literally and symbolically. You must choose between capitalism (cartelism) and socialism (communism). The fact that it's possible to protect the poor and needy (with a view to them not being poor and needy), have public control of essential services and a vibrant truly free market without cartels is not something that enters the equation. Nor is the fact that devolving power from the centre for people to make decisions about their lives within their own communities is a nightmare for cults and elites when it denies them the centralisation of power essential for the few to control the many. Every solution is more centralisation when the opposite is the case (as usual). Global bodies should be vehicles for *cooperation* between countries and communities – not centrally-directed dictatorships.

Figure 286: Mirror anyone?

Many New Wokers demand equality of outcome which is the death knell for freedom, vibrant creativity and drive. The Soviet Union had equality of outcome in that everything was shite for the general population. Equality of outcome always creates a race to the bottom which is what the Hunger Games Society requires to impose a world where everyone is equally poor and dependent on the One-percent to drop their crumbs. Equality of *opportunity* is surely what we should pursue with the understanding that not everyone is equally talented in every aptitude or skill. You can't do something if you can't do it. I repeat: *You can't do something if you can't do it.* This statement must be among the most unchallengeable you could imagine although not for New Wokers who leave rationality on the coat-hook when they enter any situation. To them everything is the result of discrimination, racism, sexism, homophobia, transphobia, any ism or phobia will do (Fig 286). It has nothing to do with ability, drive or expertise. A black woman actress not getting the part to play a white man is simply racism. It's the only possible explanation. Okay, that example is extreme, but when you see how far we have descended into New Woke insanity how long before that, too, is true? How more extreme is that than a bloke with a dick in Canada insisting that female staff at a women's beauty parlour wax his dangly bits because he chooses to self-identify as a woman? If I had said only a few years ago that schools around the world would have drag queens reading stories to very young children for the purpose of gender confusion and indoctrination people would have said that was too farfetched and could never happen. Oh, yes it could – and *is*. Cult indoctrination and extremism has no limits. It was even claimed with extraordinary stupidity that Prince Harry's missus Meghan Markle was forced out of Britain through racism (New Woke orthodoxy) relating to her mixed race when in fact it emerged that she had been planning the move to North America virtually all along. Lawyer Shola Mos-Shogbamimu, a monumental New Woker from what I can see, was doing the rounds of television studios (how very privileged) promoting this line of 'racism' against the mega-privileged private jet climate campaigner Markle. Mos-Shogbamimu describes herself as 'a political and women's rights activist who teaches intersectional feminism to female refugees and asylum seekers, scrutinizes government policies from a gender and diversity inclusion perspective, and co-organises women's marches and social campaigns'. Well, that just about covers everything. She was asked for examples of 'racism' against Markle and her reply was standard New Woke: 'Stop asking me – it's not my job to teach you about racism.' In other words she didn't have any. When a 'race and ethnicity lecturer' called Rachel Boyle claimed on a BBC show that Markle's departure to Canada was a result of 'racism' the British actor Laurence Fox told her: 'It's not racism ... We are the most tolerant lovely country in Europe.' Boyle responded: 'What worries me about your comment is you are a white privileged male.' We now live in a press-enter society founded on tidal-wave levels of brainwashing. When anything happens you press enter and New Woke says racist, sexist, transphobic or climate denier. Fox's reaction to the claim that he was an example of white privilege was right on the money:

Oh my God. I can't help what I am, I was born like this, it's an immutable characteristic: to call me a white privileged male is to be racist – you're being racist.

The New Woke mentality is permanently firewalled from that self-realisation and instead members of Fox's family were targeted for abuse and one was spat at in the street by an 'anti-hate' hater. Fox quit Twitter in the face of the abuse fearing it would damage his career and the ability to provide for his family. At the same time he was getting widespread support from the non-New Woke majority that don't have access to mainstream microphones. By far the largest number of people – even among the young most subjected to the programming – don't buy the extremes of New Woke. The domination of the media narrative and fake grassroots, elite-funded, astroturf groups give a seriously false impression of what the population in general believe. A black lady called June Sarpong, so oppressed by white privilege that she is the BBC's Director of Creative Diversity (don't ask), said of Laurence Fox: 'He couldn't possibly know what it's like to be a person of colour.' Nor could Ms Sarpong know what it was like to be a black slave in apartheid America or South Africa. Claims you often hear from New Wokers that racism is worse than ever today is such an insult to those who experienced full-blown slavery. There are imbalances that still need to be addressed – of course, there always are, and that is also true for white people; but to claim that racism today is more extreme than ever is so obviously a fantasy that it requires no further comment. Jordan Peterson, the Canadian clinical psychologist and professor of psychology at the University of Toronto, has attracted both widespread support and New Woke abuse for his defence of masculinity and true racial equality. He summed up the reverse racism that I am highlighting here:

The idea that you can target an ethnic group with a collective crime, regardless of the specific innocence or guilt of the constituent elements of that group – there is absolutely nothing that is more racist than that. It's absolutely abhorrent.

Halleluiah to that and you can see why New Woker racists hate him.

Press-enter for crazy

Figure 287: Don't tell me anything I don't want to hear.

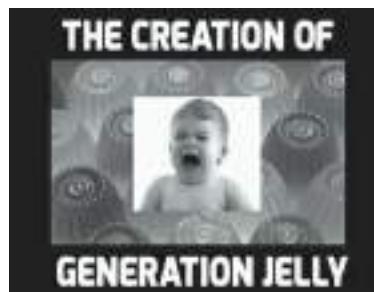

Figure 288: Fortunately it is not a whole generation. Many young people have seen through the manipulation, but it's the others that dominate the microphones to promote the Cult agenda they don't even know exists.

Figure 289: NOOOO! I only want to hear what I have been programmed to believe.

Figure 290: Being offended – the quickest way to hand your power to others.

Figure 291: The 'you must be offended by everything' Program. You're offended? Then choose not to be.

New Wokers have been enslaved in software minds by those that encode the software with the required sense of reality. Codes go on being expanded into ever-greater extremes of ridiculous as they are literally guided through wave entanglement with Cult manipulation along the path to complete mental illness. Daily perceptual programming ('education') throughout their formative years has achieved this supported by their friends and peers affirming the programming that they have also been downloading. Major Internet information sources like YouTube algorithmically offer 'recommendations' that match their search history to discourage access to other information and opinions. New Woke students are described as 'snowflakes' over their demands for safe spaces where they can't be subjected to other views (Fig 287). The cancel culture of de-platformed censorship achieves the same end of *I am right* never being subjected to challenge. I refer to the phenomenon as Generation Jelly although it's not really a generation (Fig 288). Large numbers of young people don't fall for it, but enough do and they are re-writing human society because they have the whole Cult-controlled system and establishment behind them. Demands for 'safe spaces' in colleges and universities are expressions of the fast-emerging monoculture myopia and the same with protests that ban or 'de-platform' speakers who have a different view (Fig 289). One commentator said: 'Very often we [New Wokers] cancel people, destroy people, for saying what everyone thought until 24 hours ago.' New Wokers become locked in an information bubble which becomes their perceptual Bubble. If all they see and hear is their own perceptual programming played back to them no wonder they are convinced at how right and all-knowing they are. We have the indoctrination of the New Woke belief and its imposition on the public by the New Woke Thought Police. The law is that no

one must offend or upset those in the New Woke hierarchy of victimhood by saying anything New Woke does not agree with ([Fig 290](#)). This perfectly serves the Cult agenda of destroying freedom of speech. Meanwhile, if you attack or criticise people and beliefs that are not in the official victim hierarchy (like white men and Christianity) you can be as abusive and racist as you like and the ‘inclusive’, ‘anti-racist’, mob will cheer you on. We all know how stupendously extreme the protection of Woke ‘victims’ has become to destroy human language and discourse in line with Orwell’s Big Brother state. The breathtaking absurdity of PC ‘transgression’ is constantly plumbing still new depths of extremism and ludicrousness. Some are so crackers that even Wokers call them ‘microaggressions’ which are defined by Columbia University psychology professor Derald Wing Sue as ‘brief and everyday slights, insults, indignities and denigrating messages sent to people of colour by well-intentioned white people’. From what I have seen ‘all white people are privileged racist Nazis’ doesn’t seem to be listed as a ‘microaggression’ never mind a macro one. Maybe I missed that meeting. Anything connected to another culture is now ‘cultural appropriation’ and this includes wearing a sombrero sold to you by a Mexican in a tourist shop. The Mexican *wants* to sell it to you, but Wokers say you should not buy it because *they* are offended on the Mexicans’ behalf even when Mexicans are not offended. PC is the world of victimless invented ‘crimes’ in which those not affected dictate what people should be offended about ([Fig 291](#)). This gathers momentum the more the victim culture manipulates through repetition and intimidation and the more people become offended about more and more things that didn’t offend them before. Being offended by people demanding you are silenced doesn’t count. To be offended is to hand your power to that which offends you and this is Planet Cuckoo when being offended is simply a *choice*. You can *choose not to be*. There you go – sorted. The professionally offended should have followed me around for 30 years if they want to see what ridicule and abuse is like. Have I been offended? *No*. I choose not to be offended by *anything* – least of all by ridicule and abuse from bubble-wrap minds. There is no more profound confirmation of your balance and self-security than being able and willing to laugh at yourself which New Woke can’t do, so seriously does it take itself. I don’t understand the sequence of being offended when I don’t experience it. Someone says something you don’t like or agree with. Okay, *and?* Have your say if you feel it’s necessary (it usually isn’t) and get on with your life. Why scramble your emotional state and wavefield state by the irrelevance of being *offended*?

Methodical madness

Figure 292: I'm against everything!!!! (Image by Ben Garrison at Grrgraphics.com.)

If we really cared about the wellbeing of children and young people we would not be protecting them from things they are told to be offended about. We would be encouraging them to be strong, sovereign, individuals who don’t give a shit, never mind take offence, at what anyone says to them or about them. New Wokeness is a virulent, contagious, psychological virus unless you are conscious beyond mind and the five senses. This is the reason we need to understand why New Wokers think and act as they do. They are prisoners of New Wokeness – a perceptual computer virus. Tim Hunt, a Nobel Prize-winning British biochemist, was vilified and had his career severely damaged for a so-called ‘misogynistic joke’ that turned out to be nothing like it was reported to be by a professionally-offended New Woker. What is said,

or more to point *meant*, doesn't matter. How New Woke perceives what is said, while permanently scanning the environment for potential offence, is all that matters for fast-asleep Wokers ([Fig 292](#)). A doctor in England praised a father for stepping in 'manfully' to bring his daughter for an appointment when his wife couldn't make it, but the doctor and his hospital apologised after the family complained that 'manfully' was sexist (the father was a man). It apparently implied that 'women are there to do the childcare' and not men. The complainants are deeply sad people if they think saying 'manfully' to a man is a subject for complaint and all doctors seeing what happened will no longer be focusing fully on the medical problem of the patient. They will be carefully prepreparing every statement in their mind before delivering the words. All over the world in every walk of life this verbal tenterhooks and eggshell-interaction is being experienced and destroying natural discourse, driving wedges between people, and causing ongoing daily anxiety with concern about anything you say. This is again what the Cult requires and New Wokers deliver. Here are just a few of millions of examples of discourse contraction that keep people in a state of constant anxiety to avoid saying the 'wrong' thing:

Oxford University's Equality and Diversity Unit tried to accuse people who avoid eye contact with others of 'racist microaggression'; transgender campaigners condemn such phrases like 'born a man' or 'born a woman' as inaccurate and offensive; 'biologically male' and 'biologically female' are deemed 'problematic' by a US gay rights 'media monitoring' group; Suffolk County Council in the UK stopped using traditional 'Cat's eyes removed' warning signs over fears that people thought real cats may have been killed to manufacture these reflective road safety devices; applause was banned by the National Union of Students' Women's Campaign over concerns that it could 'trigger anxiety' among nervous students with whooping and cheering also targeted. Instead people are told to 'applaud' with 'jazz-hands' which means waving your hands in the air silently like a bunch of prats; braided hairstyles on white people are 'cultural appropriation'; the word 'exotic' is apparently 'a major verbal microaggression' with 'nasty racial underpinnings' (me neither); 'Fat-liberation activists' say the term 'fat' shames people 'who might not fit the conventional beauty standards of our society', but if you *are* fat and okay with that you can 'reclaim' the word as your 'empowering identity'; a guide released by The New School, a private college in New York, said the size of chairs was deemed a microaggression against overweight people. I take it they mean chairs that are not big enough for fat arses; Lucy Delap, a lecturer in British history at Cambridge, says that words including 'genius', 'brilliant' or 'flair' should be discouraged as they carry 'assumptions of gender inequality and also of class and ethnicity'. Ms Delap can at least be sure that no one will ever accuse *her* of being a genius; migrants entering a country illegally cannot be called 'illegal', but 'all white people are racist Nazis' is still okay; anyone who cooks and names their dish 'Jamaican Stew' or 'Tunisian Rice' while not being Jamaican or Tunisian is guilty of microaggressions in the form of 'cultural appropriation' which also includes any white woman wearing hoop earrings. People from Jamaica cooking an 'English breakfast' are fine, though. Phew; a student at Louisiana State University wrote that women styling their eyebrows to make them appear thicker ('eyebrow culture') is an example of 'cultural appropriation'; 'Mother' is a no, no, because it offends transgender activists. The British Medical Association advised members that mothers-to-be should be referred to as 'pregnant people' to avoid offence and 'celebrate diversity' if not sanity; any term that includes the word 'man' is definitely a felony you sexist bastard; singer Ellie Goulding was accused of racism after tweeting a picture of herself wearing an Native American headdress – 'Don't mock a dying race, you insensitive and ignorant excuse of a person' responded a Woker; referring to the United States as a 'land of opportunity' is a microaggression because it 'asserts that race or gender does not play a role in life's successes'; a lecturer at Harvard Law School was told by a student not to use the word 'violate' as in law violation on the grounds that it might trigger traumatic fears about rape; others said rape law should not be taught to protect *law* students from 'distress'. These students are going to make super lawyers and judges then; Sussex University Students' Union warned against using the pronouns 'he' and 'she' to avoid

assumptions about identity. ‘They’ and ‘Them’ are said to be the correct, gender-neutral terms. It’s good that I don’t go there because I’d tell them to stick it up their arse. This phrase avoids microaggressions by the fact that everybody has one – but give them time; ‘Where are you from?’ or ‘Where were you born?’ could be racist microaggressions according to the University of California, Berkeley, as ‘a covert way to say you don’t belong here’; the Student Federation at the University of Ottawa banned yoga sessions. Apparently they were Western ‘cultural appropriation’ of a practice with its origins in Indian Hinduism and there were ‘cultural issues involved in the practice’ that related to ‘oppression, cultural genocide and diasporas due to colonialism and western supremacy’; Clemson University’s diversity training decrees that to be told to be ‘on time’ is a microaggression as ‘time may be considered fluid’ in some cultures; a ‘Seattle councilman’ (shouldn’t that be ‘person’?) expressed concern that hosing down human excrement on sidewalks might be insensitive ‘because it brought back images of the use of hoses against civil-rights activists’.

STOP! STOP! Have mercy, *please*. Only a short while ago you would have been laughed into oblivion if you said any of these things would happen never mind that they would increasingly be the norm.

The dark side of ludicrous

It is easy just to shake the head, laugh and dismiss all this as monumental craziness with the usual ‘political correctness gone mad’ and not to see it as that relevant in the overall scheme of things. Oh, but it is. The tidal wave of insanity is transforming human society and discourse and rapidly re-writing the language in exactly the way that Orwell described in *Nineteen Eighty-Four*. Confirmation of the real intent comes with a \$1.5 million grant by the *US military* to develop a device to allow AI to identify ‘microaggressions’. Why would the military with its focus on killing people be so concerned about people being upset by microaggressions? Well, of course, it wouldn’t. Behaviour modification is the motivation in all of this. The money is being handed to associate professors Christoph Riedl and Brooke Foucault Welles to embark on a three-year project to develop a microaggression sensor. My timbers would be shivered if it doesn’t already exist. Riedl said:

The vision that we have is that you would have a device, maybe something like Amazon Alexa, that sits on the table and observes the human team members while they are working on a problem, and supports them in various ways. One of the ways in which we think we can support that team is by ensuring equal inclusion of all team members.

Put another way: Modify behaviour and give AI an ever greater say in decision-making until it is making *all* the decisions. Now the reason for such military (Cult) interest becomes clear. We are heading down a dark and dangerous road and we have reached the point where the New Woke *Independent* in the UK published a parody article it believed to be real calling for hate laws to be imposed on comedians who tell the ‘wrong’ jokes. The article was submitted under a fake name and not checked out even though its real author, comedian Andrew Doyle, said the content was ‘clearly a hoax’. Doyle has become well known for his invented character of New Woker Titania McGrath through which he exposes New Woke extremism. The article was published suggesting comedians become subject to hate laws because it promoted the *Independent*’s own stance. New Woke tyranny is now so extreme that parody is dying in the face of real life. An example is the British feminist writer Vicky Spratt who said that men who are not willing to date Woke women was an ‘insidious’ trend that will inevitably lead to women being killed by terrorists. How do you make men go out with women they are not attracted to – state-enforced dating? How about a Western version of arranged marriages? A confirmation of the sinister nature of the New Woke mindset and its imposition came from Kyle Jurek, a ‘field organiser’ for the openly-socialist Bernie Sanders campaign to be US president. Jurek was caught on camera by the Project Veritas undercover journalism operation saying this about America under a Sanders New Woke government:

Germany had to spend billions re-educating their fucking people to not be Nazis ... we're probably going to have to do the same fucking thing here. That's kind of what Bernie's fucking like ... 'Hey, free education for everybody', because we're going to have to teach you not to be a fucking Nazi.

Figure 293: Inclusivity is not enough because that's not the Cult agenda.

Who decides what constitutes a 'fucking Nazi'? *They do*. Those decisions are made by black and white minds that are blind to context or shades of grey. It is or it isn't. You are or you're not. You are an 'us' or a 'them'. Tyranny was imposed by Orwell's Big Brother's police state in ways akin to the brutal and notorious Stasi secret police in communist East Germany which enforced the dictatorship and employed an army of spies among the population to inform on those who 'transgressed'. PC censorship, surveillance cameras and fingerprint/eye-reading technology in schools and colleges are specifically designed to make Big Brother tyranny the 'norm' so the adults that children and students become will accept the same norms in global society. Today colleges have organisations under names like 'diversity units' that impose reeducation PC orthodoxy on students while encouraging, even paying, other students to spy on their friends and colleagues and report PC transgressions to the authorities. This includes reporting academics for being non-PC in lectures and their comments. Many have been fired or forced to step down for the mildest of statements and as they have gone those that remain are frozen in fear of transgressing in any way. Britain's University of Sheffield announced plans to hire 20 of its own students to police language on campus that could be seen as 'racist' (opening your mouth is enough). They are being paid £9.34 an hour as 'race equality champions' to seek out microaggressions which it defines as 'comments or actions that might be unintentional, but which can cause offence to a minority group'. What about offence to a majority group? Oh, no, that doesn't matter. It's not about equality and inclusivity – exclusivity is what New Woke is after (Fig 293). Sheffield vice-chancellor Koen Lamberts, who will not have enough self-awareness to see that his policy mimics Stasi-like political tyrannies, said the initiative sought to 'change the way people think about racism'. More like simply changing the way people think as in East Germany, the Soviet Union, North Korea and China. Among the university's targeted microaggressions is anyone asking why everything has to be a race issue and why people are searching for things to be offended about. Impose your tyranny and then make it an offence to question the tyranny. Another microaggression that must be stamped out apparently is 'being compared to black celebrities that I look nothing like'. I wonder when such people plan to grow up? Not soon, I'll wager.

The tyranny of 'I am right'

If New Wokers believe themselves to be all-knowing then everyone who disagrees with them must by definition be wrong or motivated by racial and sexual bias or other dark motives. The only right becomes *I am right* – there is no other possibility. New Wokers despise for this reason freedom of speech for those with different 'wrong' views. If *I am right* then it follows that those who disagree with me are wrong and what is the point of freedom of speech for those that are wrong especially when humanity faces the existential threat from climate change and mortal dangers from rampant racism and sexism? Freedom of speech must be deleted to protect our freedom. It's so obvious and given that *I am right* it must be true.

These attitudes have both been downloaded from a multitude of Cult sources and been further ingrained through the encouragement of narcissism and a sense of entitlement where me, me, me is the only show in town. These are some officially-recognised traits in what is termed narcissistic personality disorder. Observe the behaviour of extreme New Wokers and you'll see the stupendous correlation:

- An exaggerated sense of self-importance (*I am right*).
- A sense of entitlement (*I am right* and what I say must be acted upon).
- Require constant, excessive admiration (*I am right* and you must recognise that and look up to me as your moral and intellectual superior).
- Expect to be recognised as superior even without achievements that warrant it (*I am right* and what I say requires no factual basis. *I am right* is enough).
- Exaggerate achievements and talents (*I am right* because I am all• knowing).
- Believe they are superior and can only associate with equally special people (*We are right*).
- Monopolise conversations and belittle or look down on people they perceive as inferior (*I am right* and if you disagree with me you must be inferior).
- Expect special favours and unquestioning compliance with their expectations (*I am right* and you must do what I say – see Greta Thunberg).
- Take advantage of others to get what they want (*I am right* and so what *I am right* about must be enforced even if it means crushing people).
- An inability or unwillingness to recognize the needs and feelings of others (*I am right* and if you challenge that fact we will target you with abuse, demonisation, a Twitter storm and efforts to get you fired and destroy your life and your family's life).
- Behave in an arrogant or haughty manner, coming across as conceited, boastful and pretentious (*I am right*, er, that's it).
- Become impatient or angry when they don't receive special treatment (*I am right* and you must dismantle the industrial system immediately no matter what the consequences because *I say so*).
- Significant interpersonal problems and easily feeling slighted (*I am right* and you say I'm not??).
- React with rage or contempt and try to belittle the other person to make themselves appear superior (*I am right* you moron).
- Difficulty regulating emotions and behavior (*I am right* and I get sooo angry when others say something different – they must be de-platformed. *Silence them!*).
- Experience major problems dealing with stress (*I am right* and I get so stressed when people won't accept that).
- Have secret feelings of insecurity and vulnerability (*I am right* and I won't have that questioned with facts in case you prove that I'm not).

Narcissistic *and* insecure and vulnerable? What a psychological combination. Narcissism is indeed a cover for insecurity. I feel so sad for them and how they have been perceptually and emotionally abused. Life behind the New Woke facade must be a psychological nightmare.

Save us from everything

Figure 294: New Woke's permanent state.

New Wokers are now indeed so vulnerable that they demand 'trigger warnings' to warn them of anything upcoming in lectures or exams that might upset them. The 'anything' is closing in on the *literally* anything as young people are pressured to be upset and offended by an ever-lengthening list of perceived horrors and verbal transgressions ([Fig 294](#)). Trigger warnings alert the permanently anxious and fearful of something coming up in a book, video, lecture or stage play that might trouble them. This has now reached such extraordinary levels that trigger warnings include: *Theology* students alerted to upcoming images and discussion of the crucifixion so they can choose to leave; archaeology students warned about any 'well-preserved archaeological body from an archaeological context' in case they find it 'a bit gruesome'; forensic science students warned before lectures involving blood patterns, crime scenes and dead bodies; Carleton University in Canada removed scales from the campus fitness centre to protect people with a special sensitivity to learning their weight. One student said: 'Scales are very triggering.' Don't bloody use them then. An article in the London *Guardian* listed some trigger warning subjects: misogyny, the death penalty, calories in a food item, how much a person weighs, terrorism, drunk driving, racism, gun violence, drones, homophobia, post-traumatic stress disorder, slavery, victim-blaming, abuse, swearing, child abuse, self-injury, suicide, talk of drug use, descriptions of medical procedures, corpses, skulls, skeletons, needles, discussion of 'isms', shaming, slurs (including 'stupid' or 'dumb'), kidnapping, dental trauma, discussions of sex (even consensual), death or dying, spiders, insects, snakes, vomit, pregnancy, childbirth, blood, Nazi paraphernalia, slimy things, holes (don't ask) and 'anything that might inspire intrusive thoughts in people with obsessive compulsive disorder'. *The New York Times* reported that activists want many classic works to have trigger warnings printed on them like health advisories on cigarette packages. Shakespeare's *The Merchant of Venice* would need the label 'contains anti-Semitism' while Virginia Woolf's *Mrs. Dalloway* would require a warning that it mentions suicide. Chinua Achebe's *Things Fall Apart* is another book of concern which may 'trigger readers who have experienced racism, colonialism, religious persecution, violence, suicide and more'. The 'anti-Semitism' industry and Israel Protection Racket has even called for trigger warnings to be inserted in the Bible and Koran to alert readers to upcoming 'anti-Semitic' texts. The self-obsession and sense of entitlement is just extraordinary from self-appointed 'leaders' of 0.2 percent of the world population. The 'anti-Semitism' Protection Racket was New Woke before New Woke and has had a highly-significant role in creating it. Kent University professor Frank Furedi rightly calls the trigger warning phenomenon and its associated 'snowflake' mentality the therapy culture, therapeutic censorship and the medicalisation of reading.

Figure 295: You need protection. Give me your freedom and leave the rest to me.

Figure 296: I demand you take away everybody's freedom to save us from what you have told us to be frightened of and offended by. (Image by Ben Garrison at Grrrgraphics.com.)

The term 'trigger' appropriately comes from the language of the mind control industry as I have been describing for decades long before it became part of PC New Woke culture. 'To trigger' refers to key words, phrases or sounds that trigger or activate preprogrammed 'Manchurian Candidate' behaviour by mind-controlled assets of government/military/intelligence agency mind control programmes like the infamous MKUltra in the United States. We need to face the fact for the sake of young generations that they are being subjected in schools and universities to systematic mass mind control and a major part of that is to have them perceive themselves as victims. New Woke verbiage is constantly focused on seeking out ever more reasons for victimhood. The Cult sub-text is that once you fall for being a victim you give your power away to the perceived victimiser and look for state protection from them often in the form of censorship ([Fig 295](#)). Victimhood is worn like a badge of honour by many New Wokers and allows the ongoing life dramas of the grievance, victim culture in which so many permanently live. You say you're a victim? Well, choose not to be. You say you're offended? Well, choose not to be. Do that and see your power return. I don't wonder that New Wokers suffer from ongoing anxiety when they are manipulated to want protection from anything that moves and a lot that doesn't. Everything around them is potential danger from which they must be protected and most notably the perceived demise of the planetary ecosystem through climate change. The technique is to indoctrinate children and young people to fear an ever-lengthening list of dangers and then have them demand that Big Brother authority protects them from the big bad world ([Fig 296](#)). This is the real reason for the 'Health and Safety' culture in the UK in which once everyday happenings are now perceived as highly dangerous. Words that people say are defined as a form of violence that require protection and this provides the added bonus of censoring people against the list of PC offences and fears. Many parents mollycoddle their children and protect them from all upset to the point where they don't have the emotional skin and skills to cope with life's challenges or anyone questioning their perceptual certainty. Writer Claire Fox, a former Brexit Party member of the European Parliament, said:

Why are we surprised that teenagers demand safe spaces? Historically, adolescents might have been risk-takers and adventure-seekers, but today we rear children to perceive the world as an endlessly scary

place. NGOs and charities [ultimately the Cult], in particular, promote panic ... Reared on a diet of disaster hyperbole, it's no wonder children grow up scared of their own shadows ...

... Today, parents go to ludicrous lengths to eliminate all risk from their children's lives. Inevitably this narrows their horizons and teaches them to be less daring. Health-and-safety mania means the young are denied resilience-building freedoms that past generations enjoyed, such as playing outdoors, climbing trees and walking to school unaided.

Fox said modern mollycoddling means that the young have been prevented from engaging in activities such as leapfrog, marbles and conkers while a child-protection industry actively encourages children to see potential abuse everywhere. Schools are surrounded by prison-like fences and systems which constantly infuse a perception of danger. Fox described how safeguarding has become the top priority in every organisation that works with children to the extent that parents are banned from taking photographs of their own children at swimming galas and adults are only allowed into many parks 'if accompanied by a child'. She continues:

There is no mystery to the absurdities of the Stepford Student. Nor should we wonder at their sudden appearance. We – adult society – protect children from criticism and suspend our critical judgment in order to massage their self-esteem. We scare them rigid by 'catastrophising' an endless list of fears. We make them hypervigilant about potential abuse from adults and their peers. We encourage them to equate abusive words with physical violence. And we have, in short, shaped our own overanxious, easily offended, censoriously thin-skinned Frankenstein monster. We created Generation Snowflake.

Some students say that even being called a snowflake is dangerous to their mental health and there's a whole new industry specialising in the psychological health of children and young people in the light of so many being diagnosed with 'mental health problems'. Suicide among the young is soaring. There is a reason for all this – children and young people in big numbers are being driven crazy by a merciless Cult-controlled system that wants to break their spirit and have them bow to its will for the entirety of their adult life.

In search of certainty

Figure 297: Woke self-delusion.

Insecurity seeks out *certainty* to placate that insecurity and from this comes the 'moral' and non-factual 'certainty' of New Wokeness. 'I am right' also includes 'I am nice', 'I am good' and 'I am ethical' – all with the proviso that anyone thinking differently must therefore not be right, nice or ethical ([Fig 297](#)). UK activist Jordi Casamitjana took his employer to a tribunal to secure the term 'ethical veganism' as a 'protected philosophical belief'. He won the case – of course he did. Notice the 'protected belief' was not 'veganism', a lifestyle choice people have every right to make, but 'ethical veganism'. Casamitjana said this involved much more than not eating food with animal ingredients: 'It's a philosophy and a belief system which encompasses most aspects of my life.' This is New Woke intersectionality. His lifestyle

includes: Walking rather than taking a bus to avoid any ‘accidental crashes with insects or birds’ (so he never unknowingly stands on insects when he walks and never travels in cars?); on occasions that he does take a bus he avoids holding on to leather straps; and he doesn’t eat non-meat figs because they are ‘grown with a symbiotic relationship to a microscopic wasp’ and so ‘you [can’t] be sure whether any of the wasp’s larvae is still inside the ripened fig and therefore I consider consumption of figs to be inconsistent with veganism’. Will you tell him or shall I that everything is conscious? ‘Ethical veganism’ is not something that can be defined unless you credibly define ‘ethical’. One person’s ethical is another person’s madness. The dictionary tells us that ethical ‘pertains to or deals with morals or the principles of morality and pertains to right and wrong in conduct.’ Who decides what is right and wrong? Who decides what is ethical? Casamitjana likely thinks it’s ethical to demonise the gas of life and tell kids they are facing climate meltdown when I say that’s seriously irresponsible and unethical.

To the New Woke mentality what *they* think and ‘ethical’ must be interchangeable. How could it be any other way? My view by contrast is that those who want their claim to be ‘ethical’ enshrined in law might benefit from checking out the definition of up-your-own-arse. Dr Jeanette Rowley, a vegan rights campaigner, said that in her direct experience ‘veganism is a way of life that defines the vegan individual as much as someone saying, for example, they are Christian or Muslim’. New Wokeness is indeed a religion designed to eventually replace all the others. Rowley said ‘the ethical vegan’ [one means the other by definition] makes a defining statement that their outlook on the world is grounded by justice, respect, duty, care and compassion in a community of sentient others, human and nonhuman, whom they do not wish to harm and whom they will endeavour to protect.’ What about harming non-meat plant consciousness? What about the ‘respect’ of seeking to impose their life choices on everyone and in many cases abusing those who make another choice? What about potential harm to the health of converts when the idea that one food choice fits all is fantasy and at odds with the evidence? What about frightening kids into believing the world could end and telling them veganism is essential to saving humanity so your agenda prevails? What about the enormous numbers of bees and insects that die (along with animals) as a result of the artificial pollination (known as ‘migratory beekeeping’), herbicides and pesticides involved in most plant-based production? What about the devastation of human society and employment through ridiculous demands to curtail the gas of life that produces the very vegetation they eat? I could go on and a lot of things that vegetarians and vegans eat is absolute crap like soy and tofu. Once anyone claims a monopoly on being ‘ethical’ the hypocrisy and contradiction soon starts to unravel. They would put their case much more effectively if many were not so obviously convinced of their own perfection and self-purity. But, then, that is the very foundation of New Wokeness. Are they trying to convince the rest of us – or *themselves*?

Why facts are so dangerous

Narcissists are always insecure and vulnerable. Narcissism is a cover to hide their insecurity from other people and again most importantly from themselves. All the most outwardly and exaggeratedly self-assured characters I have met have been frightened little boys and girls behind the facade. Genuine self-security doesn’t need narcissism when it doesn’t need external confirmation or self-promotion of its sense of identity through the reaction of others. You agree with me and think I’m intelligent and wise? Okay. You think I am wrong and an idiot? Equally okay. Genuine security treats them both as twin imposters. It is *insecurity* that needs the facade of perceived security not least to convince itself. In the same way *I am right* is terrified of being wrong and it’s another reason New Wokers don’t deal in facts. They are manipulated to perceive everything through the filter of emotion and moral superiority which is easy to induce. Facts are the sworn enemy of such emotional certainty and they have to go. New Woke congresswoman Alexandria Ocasio-Cortez captured the theme perfectly when she said: ‘There’s a lot of people more concerned about being precisely, factually, and semantically correct than about being morally right.’ Without the facts what is there to be ‘morally right’ about? What is the bloody point of

being ‘morally right’ about a human-caused climate disaster that is *not happening*? Facts immediately usher black and white perceptions into shades of grey and this is another reason why facts are so yesterday. How can you sell a belief in imminent climate mass extinction which isn’t happening if you have to deal in facts? The impossible only becomes possible when you can lie and misrepresent while censoring those with a factual response that exposes *I am right* as utter bollocks. This technique can be seen everywhere with climate change, race, sexuality and transgender activism. It goes like this: When you cannot support your stance and demands with facts and would therefore lose the debate you shut down the debate with abusive labels, de-platforming and media censorship.

There is no need to factually justify your re-writing of human biology and that’s good because you never could. Instead you assert that a man can be a woman and vice-versa by merely claiming to be so. You campaign to have professors of biology dismissed and their careers destroyed for saying otherwise. Once a few scientists and academics have been vanquished by the mob others will keep their head down or even parrot New Woke claptrap to protect their careers and income. This has happened across a great swathe of subjects and situations as Yuri Bezmenov’s ‘demoralisation’ has hurtled so fast to its ‘normalisation’. In this way schools and college campuses have been invaded and overrun by Cult New Wokeness and places of alleged ‘education’ have become initiation centres for a lifetime in La, La Land. I saw a British ‘social activist’ (whatever that is) called Lee Jasper complaining that film producer Guy Richie should have had a ‘broader social conscience and responsibility’ over the content of a film about gangsters because it was ‘not reflecting the kind of future which is of a more inclusive sense of British nationalism.’ The *fact* that gangsters don’t act like New Wokers and the film was about *gangsters* could not breach the New Woke filter which believes that everything should be portrayed as it would like it to be rather than as it really is. Facts are so lethally dangerous to the Cult’s collective emotional reality construct that they must be censored and deleted. This is being done through the Cult’s ‘education’, mainstream media, Silicon Valley and government legislation where only one version of everything is allowed to be emphasised and eventually even heard at all. Put these aspects together of faith-based belief and unquestioning certainty with silencing the blasphemers and you have a religion. New Wokeness is a faith-based, facts-unnecessary, religion or cult which imposes its will by indoctrinating the congregation and accepting no dissent. Burned at the stake becomes a Facebook ban and a Twitter flogging. Jesus walked on water becomes the gas of life is a deadly pollutant and a man can be a woman simply by saying so. The Climate Cult, as a sub-division and in many ways foundation pillar of New Wokeness, is itself a religion as you would expect in such circumstances.

Systematic censorship

We return here to knowing the outcome and seeing the journey. The outcome planned by the Cult in terms of speech and information is that eventually no one will see or hear anything not sanctioned by the World State. We are heading there with quickening speed through Silicon Valley censorship of alternative information by Cult-owned billionaires (rapidly advanced since the lockdowns) while New Wokers break into applause (well, ‘jazz hands’) with each new extreme of silencing free discourse. I have described in other books the sequence going back to the Cult’s (Rothschild) Frankfurt School of social engineering in the 1920s which led to the ‘sudden’ (long-planned) emergence of political correctness or ‘PC’. Political correctness is a Cult ruse to manipulate the target population to silence itself. Who needs a sheep dog when the sheep keep each other in line? I have said that every facet of the New Woke agenda follows the Cult agenda and that, of course, is why the Cult has created and funded New Wokeness into being. Political correctness and the end of free speech is yet another example. Freedom of speech is the freedom to speak and while that exists the situation can never be reached where the public only ever see and hear what the authorities allow. Free speech would always have its say and expose the official narrative which makes free speech a locked-on target for both the Cult and its storm troopers in New Wokeness. We see why Cult-manipulated New Wokers have to be clinically-adverse to facts that challenge *I am right* and

why they demand that such facts are censored. If it was about seeking truth all views and information would be welcomed from which truth could be discovered; but it's not about truth. It's about selling *untruth* for which facts would be fatal. Therefore facts and non-PC opinions must be silenced while fact is replaced by emotion-triggered 'feelings'. Facts or 'truth' are claimed to be only the norms of an oppressive state. Those confident of their views have no problem with other opinions being heard and they know that free speech only exists when all views can be communicated, debated, challenged and questioned. Anything less than that and there is no freedom of speech only freedom to conform to what is considered acceptable to the censors. Research at King's College in London found that one in five students, or 22 percent, say they can't speak their minds while on campus with 59 percent of those with conservative views reluctant to express them. The figures would be even higher as a percentage if the study had been focused only on non-New Woke students. Given that New Woke opinions are not subject to censorship when they parrot their orthodoxy they would believe that students are free to express their opinion. They are if you're New Woke, but try voicing a different one and see what happens. You are *free* to say what we tell you. You are *free* to do what we tell you.

The key is *when* speech is challenged. Is it before the point of delivery or after? The difference between the two is the difference between freedom and tyranny. I am not saying that people should be able to say anything without consequences such as urging violence against people and property. The question is *when* do you deal with it? The Cult wants you to believe that algorithms and other pre-post censorship should be used to stop 'unacceptable' views and information from ever being seen or heard; but who decides what is 'acceptable'? Well, the authorities do – the Cult in reality. The Totalitarian Tiptoe first makes a case for censorship that it believes most people would accept like, for instance, campaigning for terrorism. Once the precedent of pre-post censorship is set they roll out more and more reasons to expand its use – 'fake news', 'hate speech', 'upsetting people' and so on – with ever-widening definitions through the Totalitarian Tiptoe of what the terms mean and what can be censored in their name. The narcissistic insecurity of *I am right* provides the motivation to support the silencing of facts that would expose *I am right* as *I am wrong*. By contrast if speech is challenged after the point of delivery there could never be a situation in which authority could dictate what you could see and hear. It would all be out in the open and dealt with in the open. There are laws against incitement to terrorism and violence and they can be invoked without extremes to expand censorship into areas that are only silencing dissent and opinion. It would also mean that authority would have to justify its claims about speech in open debate and courtrooms instead of letting algorithms do it quietly without challenge. This could all be done so long as speech is challenged *after* the point of delivery and, anyway, don't we want to know who is campaigning for terrorism instead of pushing it into the shadows? The new definition of 'anti-Semitism' tells the story. A fair and accurate definition would be 'hatred and discrimination towards Jewish people for being Jewish'. This, however, does not preclude criticism and exposure of the far-right Sabbatian-Frankist-controlled government in Israel or the political philosophy of Palestinian-destroying Zionism. The Cult has expanded the definition to include both and protect the Cult and its agents. Ironically many New Wokers are critical on college campuses of Israel and its treatment of Palestinians and they are being censored themselves in a prelude to what will happen on a much bigger scale when their New Woke utopia is in place and they are no longer needed to demand it. Israel-owned and sponsored Donald Trump signed an executive order decree in late 2019 that added 'Jewishness' as a nationality to the list of prohibited 'discrimination'. This was specifically designed to ban criticism of Israel and Zionism, especially on college campuses, and at the same time Trump endorsed the new definition of 'anti-Semitism' which includes ... criticism of Israel and Zionism. The UK government of Boris Johnson has former Labour Party MP and ultra-Israel *fanatic* John Mann as its 'anti-Semitism' tsar to brand critics of Israel as 'anti-Semites'. Johnson has also passed laws to target the Boycott, Divestment, Sanctions (BDS) movement which calls for Israel to be boycotted over its apartheid regime that many New Wokers criticise. Be careful what you wish for New Wokers or you just might get it. In the case of criticising Israel

you already have.

Who are you? I'm LGBTTQQFAGPBSM

Figure 298: Little Me becomes Littler Me.

At the core of New Wokeness is self-identity. The above list of letters depicting ever-multiplying self-identities is actually used by an American University and with 26 letters in the alphabet and the possibility of using each one as many times as you like we are far from finished yet. Who are you? I am LGBTTQQFAGPBSM. How far is that perceptually from being *All That Is, Has Been, And Ever Can Be*? The Cult must be laughing itself to sleep. A Liberal Democrat politician in the UK came out as a 'pansexual' in early 2020 which I can only think must relate in some way to the kitchen. There are so many reasons why the Cult instigated identity obsession and identity politics. Firstly it's about enslaving people in even tinier self-identity myopia than ever before. Imprisoning perception in only five-sense reality while firewalled from expanded awareness is vital to human control. Before New Woke the Cult was limited to labels like man, woman, race, culture and religion to entrap five-sense identity and prevent expansion into identity with True 'I' – *The One*. The invention of identity politics gives the Cult limitless potential to sub-divide and sub-divide those labels ([Fig 298](#)). With each sub-division people identify with ever-smaller and fine-detail-defined labels and senses of self that squeeze them into ever-smaller perceptual Bubbles and ever-greater disconnection from *The One*. How can you identify with the True 'I' when your sense of self is defined by a letter amid a daisy-chain of others? Why do people have to define themselves in such detail anyway which includes agender, androgyny, aromantic, asexual, bicurious, bigender, binder/binding, biological sex, bisexual, butch, cisgender, demiromantic, demisexual, genderqueer, gender variant, gynesexual/gynephilic, pansexual, queer, questioning and third gender? Who gives a damn? Decide how you want to live your life and live it. Why do people have to give that choice such a fine-detail name and even more why should choices that they have every right to make be imposed on the rest of us? In Britain a well-known TV presenter called Philip Schofield 'came out' as 'gay' after 27 years of marriage and such a fuss and circus followed. Why do we have to be told where he sticks his thingamajig? Who cares except him and his family? Get on with your life, it's none of our business. Another celebrity felt the need to tell us she had just had sex for the first time in five years? Why? Who could care less apart from her and the bloke involved? Narcissism enters the equation for sure with New Woke identity-obsession in terms of attention seeking, look at me, me, me, and what I want is how things must be. Whatever the individual reason may be to publicly identify with a sub-label the same result will always follow. Their Bubble of 'I-am-a' continues to diminish in size and perception and that advances the Cult agenda magnificently. Identity politics is encouraging people to identify the 'I' only with a sexual preference. Do people really believe that who they are is where they stick their dick? Or don't? Bloody hell. What have we come to? None of this is happening randomly. It's the Cult at work and I am happy to take the abuse from New Wokers for what I say when unless they *awaken*, instead of Woke, they and their children are going to live out their lives in a technological dystopia long after I have relocated to Infinite Forever.

Figure 299: This, of course, is the whole point of identity politics.

Figure 300: New Woke is now beyond parody.

Two other Cult motivations for identity politics are divide and rule descent into tribalism and the imposition of the Big Brother state ([Fig 299](#)). There are far too many people in the world for the Cult to control them all. They plan to do that soon by connecting the human brain to artificial intelligence, but for now they don't have the numbers to impose their will on a population on its way to eight billion if people would choose not to cooperate. They overcome this problem as they always have by manipulating people to control each other in line with the Cult agenda (something we have seen in abundance in the lockdowns). Divisions generated by New Wokeness are self-evident with the obsession with race, culture and sexuality which offer endless potential to divide the general population and even the sub-divisions of self-identity. We see this increasingly happening as the revolution consumes its children. The calling card of New Wokeness is to do *everything* that it condemns others for doing and there are many precedents for this with religion. Inquisitions in their various forms that persecuted, tortured and killed untold millions were orchestrated by alleged followers of 'gentle Jesus' and opponents of 'the evil Satan'. They were convinced of their self-purity and believed they were doing the 'work of God' while acting like the children of Satan and murdering men, women and children in the name of the 'Prince of Peace'. You could hardly imagine such an inversion or self-delusion, but had anyone pointed this out to the inquisitors they would never have seen the contradiction. The belief in their own self-righteousness would have firewalled any reappraisal or glance at the mirror. They were *right* and anyone who disagreed had to be deleted. It's what 'God' wanted them to do. We have moved on for now from burning at the stake, heated metal pincers and thumbscrews and today's Inquisition goes for demonisation, vitriolic abuse and attempts to destroy the lives and careers of non-believers ([Fig 300](#)). The methods may have changed but not the basic mentality and ideology. It is still what *I* think that must be imposed on everyone.

Fake 'social justice'

Figure 301: Real inclusivity. The awareness that we are all One.

A crucial self-deception required to enforce fascism while claiming to be ‘anti-fascist’ is to act with cold, heartless, intolerance and be quite happy to wound, hurt and destroy other people and their families while retaining a self-identity as someone kind, tolerant, full of love, coming from the heart, and caring deeply about ‘social justice’. Woke ‘tolerance’ is a state of permanent anger and fury seeking out the ‘enemy’ with the ‘wrong’ opinions. Self-deception is such a foundation of the New Woke persona (‘actor’s mask’) that advocates are widely referred to as ‘social justice warriors’ when their extremists and activists (as with their major funder George Soros) could not give a damn about ‘social justice’ any more than Cult operatives behind the Russian or Chinese Revolutions which deleted all vestiges of social justice. In the same way they are ‘anti-racist’ and ‘anti-sexist’ while being utterly obsessed with race and sexuality and viewing the entirety of human behaviour and interaction through that filter. They are *themselves* racist and sexist as they treat people differently based on skin colour and sex, but they will never see it. I should remind them again that race is only a label for a brief experience of the same consciousness that we all are ([Fig 301](#)). Woke activists don’t actually do anything about social justice. They just use the concept to ‘smash and destroy’ and dance to the impulses of their software download. An Internet commentator described the difference between a genuine activist in search of social justice and a New Woke ‘social justice warrior’:

Social activist: ‘Oh look, there’s no wheelchair ramp into that building. Let’s build a ramp.’

Social justice warrior: ‘Let’s persecute the people using the stairs and make them feel bad for having legs!’

Figure 302: I hate you for hating. Yep, well thought through, mate.

I do understand the approach, though. I mean why should social justice warriors waste their time campaigning and acting in pursuit of homes for the homeless, jobs for the destitute, food for the poor, and the end of wars of mass murder, when there are epic historical battles to be won over whether some bloke calling himself a woman is referred to as ‘Her’, ‘They’ or ‘Them’? It’s all about *me, me, me*, and my self-identity. There are many people on the genuine Left that do care about fairness and social justice and they have allowed themselves to be swamped and hijacked by the social justice fakery of New Woke with its support and promotion by the entire establishment which in the end answers to the One-percent and the Cult. New Wokeness ‘fights racism’ by being racist; demands tolerance with stunning levels of intolerance; and ‘fights hate’ with hatred on its face and venom in its mind ([Fig 302](#)). They can no more

see their inversions and hypocrisy than could the Spanish Inquisition and are certainly not self-aware enough, informed enough, or with sufficient humility, to see that the same Cult behind the Inquisition is the force behind them. New Woke feminist extremists were asked on an Australian television show: 'When trying to bring about significant change when is aggression and violence a better option than assertiveness, strong argument and modelling the behaviour you expect of others?' *Never* would have been the answer if New Wokeism was the genuine article; but it's not. The first Woke extremist replied: 'When none of that other stuff works.' Another said that she wanted 'the patriarchy to fear feminism' and 'the most important thing for me as a feminist is to destroy patriarchy'. She also had a question: 'How many rapists must we kill before men stop raping women?' It was pointed out that in her reply there seemed to be a lot of 'smashing and destroying' to which she said: 'Yes ... to create a world in which I am not raped and murdered.' Neither of which had happened to her with the latter being self-evident. Make no mistake New Woke extremists are the Cult's vehicle to 'smash and destroy' democracy and freedom to clear the ground for the Hunger Games Society. As the extremists become ever more extreme they are insisting that other New Wokers share their expanding extremism or they, too, will become 'bigots, racists, Nazis and tools of the patriarchy'. Revolution, your children are served.

Destroying the language and censoring yourself

Figure 303: New Woke inclusivity. But once white people are vanquished they'll be coming for the rest of you.

Advertisements are being infused with every aspect of the New Woke Cult agenda because people see them everywhere and they are a perfect medium for perception and behaviour modification. We have ads being banned for not having a woman in them; for using the term 'girl'; and for violating 'gender stereotypes' by showing a woman caring for a baby. We are told they must be more 'diverse' which means ignoring the world as it is and portraying the world as the Cult wants it to be. Muslim Mayor of London, the mega virtue-signaller Sadiq Khan, revealed the winner of the 2020 award for 'diversity in advertising' which included no white people ([Fig 303](#)). You see the theme. 'London's greatest strength is our diversity' said Khan without even a smear of irony. Notice how many mixed race couples are featured in advertisements. I have no problem with mixed-race relationships, I think it's lovely, but when that is consistently portrayed in mass-audience advertisements in a far greater ratio to what is actually happening there is perception manipulation at work. Human society is being reformed by hijacking popular culture and the language through political correctness which is a Cult creation destroying discourse and freedom of expression. Crucial to this is policing the language through which people communicate. Delete words used to articulate your opinions and how do you verbalise those opinions any longer? George Orwell wrote in *Nineteen Eighty-Four* about 'Newspeak' which replaced 'Oldspeak' in the Big Brother dystopia. Oldspeak is the former language which contained words to describe thoughts and opinions in detail while Newspeak is a highly-edited and censored language which deletes words describing detail and bans topics and subjects from discourse altogether. Newspeak is the language of today's political correctness deleting words through censorship of opinion in the name of hate speech, fake news, and microaggressions. As generation follows generation those words no longer need to be censored. They are lost in history and not even known never mind used. We *think* in words, too, and

when all that is left are the bland, meaningless platitudes of PC-speak the language is no longer there to even *think* in detail. Words in five-sense reality make thought possible. Control words and you control the population even down to how they think.

Politically-correct intimidation leads to the most insidious form of censorship which is self-censorship when the population chooses to remain silent and opinions and information that expose the orthodoxy disappear. With everyone a potential Stasi spy and informant – even family members – and with 24/7 cyber surveillance and microphones in smart televisions, smartphones, computers and even street lamps the fear of saying the ‘wrong thing’ to any person in any situation silences all except speech that conforms to the official narrative. This is further enforced by potential employers checking social media postings going way back to decide if someone is PC enough to be hired and others being vilified and fired as adults for posts they made as kids when often what they said then was not considered non-PC. Every aspect of this is designed specifically to chill unwanted opinion and debate and Wokers are the current Stasi before a real Stasi takes their place and targets *them*. Authors and publishers are even employing ‘sensitivity readers’ to check their text. You may have noticed that I don’t use them. Comedy has been destroyed by the PC Stasi and few ‘comedians’ have had the guts or self-respect to stand up against them. Celebrity Luvvies fall over themselves to show they are New Woke. This is what happens once a new orthodoxy takes hold (see ‘climate change’). Celebrities and politicians desperate to be liked support and impose the orthodoxy to confirm their Wokeness and self-purity. They want to be seen as ‘good people’ by those who have also convinced themselves they are ‘good people’. These are the same ‘good people’ with closed hearts and minds who purvey hatred and destroy the lives of those who don’t conform to New Woke orthodoxy. Once you have a need to be liked as an end in itself, as celebrities and politicians do, your independence of thought and action is over. You no longer speak your truth, but only what you think will get a Facebook thumbs ups. I have another approach. People don’t like me? I don’t give a fuck ([Fig 304](#)).

Figure 304: Ahhh, the freedom.

Other New Woke PC ruses to silence the population are called ‘tropes’ and ‘dog whistles’. A trope is a figure of speech in which a word or phrase conveys a meaning other than its literal sense (or interpreted by PC zealots to have done so). A dog whistle is defined as ‘statements that appear innocent to the general public but use coded language to communicate a secondary message to an intended group’ (or interpreted by PC zealots to have done so). Almost anything that people say in criticism of PC-protected groups is now a trope or dog whistle to provide still more excuses to brand people racist and Nazi to justify condemnation and censorship. A classic of the genre is that anyone who says an elite cabal controls the world is labelled an ‘anti-Semite’ on the basis of the ‘trope’ that Jewish people control the banking system, media and so on. The speaker does not have to mention Jewish people or even mean Jewish people. They get the abuse and censorship anyway because the ‘anti-Semitism’ industry and Israel Protection Racket always claims that this is what they mean. It’s another fraud to justify censorship which goes on being ever expanded. A writer in the *Canadian Jewish News* said it is ‘anti-Semitic’ to say that there’s a war on Christmas (it’s a trope) or to use the terms ‘New York lawyers (and bankers)’,

'Hollywood culture', 'secularists' and 'internationalists'. Say any of them and you are an 'anti-Semite'.

I am waiting for the anti-whaling movement to be condemned as 'anti-Semitic' for being a dog whistle for the Wailing Wall in Jerusalem where Jewish people go to wail and sway back and forth. 'Anti-whalers are really saying Jews shouldn't wail – they're anti-Semites!' That's too fantastic? Stick around. The world is not simply crazy any more. It's clinically insane.

CHAPTER ELEVEN

Why white people? Why Christianity? Why men?

Hating people because of their colour is wrong. And it doesn't matter which colour does the hating. It's just plain wrong – Muhammad Ali

The way New Wokeness and political correctness have appeared and taken hold with such lightning speed can only be understood by awareness of the Cult agenda for humanity. Cult/New Woke symbiosis is so blatant because one created the other. When you connect New Wokeness to the Cult everything falls into place. Here's a brief summary of only some of the goals they have in common:

- Centralisation of global power (demanded by New Woke to save the world from climate change).
- Censorship of all criticism and exposure of the Cult and its agenda for humanity (demanded by New Woke through political correctness).
- Enslaving perception in ever-smaller self-identities (promoted by New Woke through identity politics).
- Divide and rule (promoted by New Woke through identity politics and the '*I am right*' mentality).
- Transformation of Western society and the dismantling of its culture and way of life (promoted by New Woke through identity politics and open door immigration from other cultures).
- Targeting of men, white people and Christianity for reasons I will come to shortly (promoted by New Woke through identity politics, claims of 'toxic masculinity', 'anti-racism' which is never applied to racism against white people, and anything goes in condemnation of Christianity while other religions are PC-protected).
- The creation of a no-gender, non-procreating human (promoted by largely unknowing New Woke and transgender activist extremists transforming the world into a no-gender society and indoctrinating children to question their gender when they otherwise would not).
- Disarming the American population before a coup by armed-to-the-teeth AI law enforcement and military (promoted by New Woke with demands for gun bans and confiscation that open the way for complete domination of the population by armed agents of government and a criminal free-for-all especially in rural areas which the Cult wants to depopulate).

There are many other aspects to the Cult agenda that New Wokeness serves magnificently and one is the AI technology endgame. Wherever you look the New Woke mentality and the Cult agenda are as one.

All the aspects and sectors of New Woke are Cult agendas – climate change, racial division, sexual division, transgenderism and political correctness. Cult-serving New Wokeness seeks to paper over the cracks of the divisions and contradictions between its fragile minority group coalition through something called ‘intersectionality’ which is ‘the interconnected nature of social categorisations such as race, class, and gender as they apply to a given individual or group, regarded as creating overlapping and interdependent systems of discrimination or disadvantage’. This means when translated from the Orwellian to persuade minority groups they are all united by oppression from society and white privilege and should unite to bring them down despite all that they don’t agree on and compete with each other about. Intersectionality is the Cult working to unite disparate groups into a single force to transform society in its image. New Woke activists tend to move between these different ‘sectors’. In the end it’s all one agenda from the Cult’s perspective. German New Woke activist Carola Rackete (how appropriate) personifies these interconnections. She was the ‘sea captain’ arrested for delivering migrants from Libya to Italy on the pretext of ‘saving them’ while the Dutch government under whose flag the vessel operated described what she was doing as ‘not a rescue service but a ferry service’. Rackete next turned up as a climate change activist supporting Extinction Rebellion, spouting all the Climate Cult rhetoric, and demanding society be disrupted to save the world. She’s a professional Woker in other words and there are legions of them. One other point about New Woke and LGBT etc. is the logo which is now *everywhere* of the rainbow colours. The Sabbatian-Frankist arm of the Cult has long developed through a false cover story a series of sinister and draconian laws that it wants to impose on the whole of humanity. This is justified on the basis that the laws were allegedly given to ‘Noah’ by ‘God’ and as Noah is the ‘father of all post-flood humanity’ they must be imposed on everyone. They are called the Noahide Laws and see [Appendix 2](#) for more background. The reason I mention them here is that their logo since way back before New Woke appeared features the same rainbow colours symbolising the rainbow in the Noah flood story. When you are as utterly obsessed with symbolism as the Cult is this is not a coincidence.

A whiter shade of male

New Wokeness and the Cult are targeting *Western* society which for all its many faults has been the freest region of the world. Remember those quotes from earlier by Hebrew ‘Rav’ David Touitou about the need to destroy European and Christian society before their ‘Messiah’ can come. The European Union is part of this operation, too. Communist/fascist countries such as China are already heading where the Cult wants the whole planet to go. The West is what the Cult has to change to bring about global dystopia. Climate extremists say nothing about China, the biggest producer of demonised CO₂, while vehemently insisting that Western economies are destroyed. Australia won’t build new coal-fired power stations because of the Climate Cult while Australian coal fuels power stations in China, India, Japan and other parts of Asia. The total annual carbon dioxide emissions of Australia are less than China’s *annual* increase. The West is the target because it’s the Cult’s target. All of which brings me to the perceptual war on white people and especially white men. The foundation racial group of the Western world is white or ‘Caucasian’ and here you have the reason why every racial group is protected by political correctness censorship *except* white people. When abuse against one race is allowed, but no other, there is a name for that – *racism*. For those non-white people who think this is okay because it doesn’t affect them I give you the words of Pastor Martin Niemöller about Nazi Germany:

First they came for the socialists, and I did not speak out because I was not a socialist.

Then they came for the trade unionists, and I did not speak out because I was not a trade unionist.

Then they came for the Jews, and I did not speak out because I was not a Jew.

Then they came for me and there was no one left to speak for me.

White people are being targeted to a large extent for being the dominant race of Western society which the Cult seeks to destroy. Were that position held by another race *it* would have been targeted and the white race more PC-protected. ‘Nothing personal, mate, it’s just business’ although I do think there are other reasons, too, for the Cult to seek the subjugation of white people. Once again we have the inverted hypocrisy of New Wokeness on public display and it is *calculated* hypocrisy by those in the shadows. We have even had calls for UK national parks to be made ‘more diverse’ on the grounds that they are ‘too heavily weighted towards older, able-bodied white people’. These are landscapes where anyone is free to walk no matter what their racial or sexual background and it’s their own choice not to do so if indeed that is the case. Those choices don’t suit the agenda, however, and government funding for the parks becomes dependent on more diversity being artificially introduced. What would be the reaction if someone said that a place was ‘too heavily weighted’ towards black, Asian or Muslim people, or even young people? Reverse racism and hypocrisy is everywhere today and there’s a reason for it.

Black singer Stormzy launched a scholarship to fund the fees of black Cambridge University students and good luck to him; but when philanthropist Sir Bryan Thwaites offered two leading private schools a £1 million bequest in his will to fund poor white boys it was turned down by Dulwich and Winchester Colleges for not being ‘inclusive’. Thwaites made the offer in the light of white British boys performing worse at school than nearly every other ethnic group. They are less likely to attend university than their peers and they perform relatively poorly in exams. Trevor Phillips, a black former head of the Equality and Human Rights Commission, said poor white boys were ‘today’s educational left-behinds’. His racial fairness could only end one way and Phillips was later suspended from membership of the New Woke-hijacked Labour Party for ‘Islamophobia’. To be banned or suspended by the Labour Party for racism these days is confirmation of your grip on reality. Kehinde Andrews, UK professor of Black Studies at Birmingham City University, director of the Centre for Critical Social Research, founder of the Organisation of Black Unity, and co-chair of the Black Studies Association (you get the race-obsessed picture), referred to Phillips as ‘formerly of the Black community’ because although you have a black face you are actually white unless you toe exactly the line of the New Woke tyranny. Sir Bryan Thwaites rightly asked: ‘If Cambridge University can accept a much larger donation in support of black students, why cannot I do the same for underprivileged white British?’ The answer is that New Woke does not seek equality for all – while I *do* – because Wokeness is a Cult-driven agenda that in part is targeting white people as a means to transform Western society. Classic New Woke racist extremism is that the subjugation of black people in South Africa and Zimbabwe was disgusting (true) but black racists killing white farmers and their families in those countries under black rule today is okay and what they deserve (absolutely not true).

In a possible response to this racist denigration of a single race for *being* that race we have had posters appearing with the words: ‘It’s okay to be white’. One example in Perth, Scotland, was met with the usual storm of New Woke anger. The posters didn’t say ‘white is the master race’ only ‘it’s okay to be white’ – which it is, by the way. It’s just a body. ‘It’s sickening and disgusting to know that people think like this’ was one reaction and John Swinney, Scottish Parliament member for Perthshire North, said the signs were ‘atrocious’ – ‘We must stand together to resist this unacceptable material.’ Good virtue-signalling Mr Swinney. Well done you. I will take Wokers seriously when they have the same reaction to ‘It’s okay to be black’, ‘It’s okay to be Asian’, or ‘It’s okay to be Muslim’. Until then I will perceive them as what they are – reverse-racist hypocrites. I am against racism in every form and not only that which suits the Woke (Cult) agenda, thank-you. Significantly the local police said no members of the public had complained about the posters. Their existence had been made known to them (by New Woke activists no doubt) and they were investigating.

What has happened in Sweden and Germany through open-door immigration is the blueprint for the entire West. Swedish society as it had been for at least hundreds of years is already gone and what has happened is irreversible thanks to New Wokeness controlling the country. Neighbouring Finland is

seriously Woke with 34-year-old Social Democrat Sanna Marin becoming the world's youngest prime minister in late 2019 heading a cabinet dominated by women (12 of the 19 ministry positions) and a coalition of four other parties all led by women with three of them under 40. Take an imbalance and reverse it is the Woke technique when ability and experience should be the criteria for government and not age, race or sex. Finland is another country feeling the chill on speech from political correctness for those who question events including the effect of immigration from other cultures on the Finnish way of life. What you can't talk about or criticise is *always* an aspect of the Cult agenda.

Yale University, home of the infamous US president-producing Cult secret society, the Skull and Bones, dropped a course on art history 'from the Renaissance to the present' due to the 'overwhelming' whiteness, maleness, and straightness of the artists according to a report by *The Yale Daily News*. Course instructor Tim Barringer told the newspaper that focus on Western art in a Western country was 'problematic' – a word much beloved of New Wokeness. Student Mahlon Sorensen said: 'If you get rid of that one, all-encompassing course, then to understand the Western canon of art, students are going to have to take multiple art history courses.' That, mate, is the idea in this Cult-driven cultural carnage. Students at Reed College in Oregon successfully campaigned to have all European texts removed from a humanities course and replaced by non-European books as a form of reparations 'for Humanities ... history of erasing the histories of people of colour, especially black people'. What a statement about the Woke mentality. To increase the amount of black history you have to delete white history. The fact that the Cult wants to delete white history is pure coincidence. American booksellers Barnes & Noble introduced a series of literary classics for Black History Month with non-white people on the cover – *Dr Jekyll and Mr. Hyde* with a man wearing a turban; *Frankenstein* depicting the monster with brown skin; and Juliet in Shakespeare's *Romeo and Juliet* with brown skin and wearing a headscarf. These were withdrawn after it was pointed out that the text remained the same. The books were written by white people reflecting white culture of the time and how do you promote black culture and history by overwriting white history? Instead of changing white culture classic books you promote black writers portraying black culture. Ah, but if you do that you don't promote black history by erasing white history. You celebrate them both. This is not, however, the Cult's desired outcome. The theme can also be seen with Cult-controlled corporations like the ultra-Zionist 'investment bank' Goldman Sachs which announced in 2020 that it will no longer work on stock market launches with companies that have only 'straight white men' on their boards. Goldman Sachs, which gives hypocrisy new meaning, is headed by a white man, Chief Executive Officer David Solomon, and the same white man theme continues with its finance chief, operating chief and international head. Solomon said at the One-percent-fest World Economic Forum in Davos that the no all-male policy would be imposed in North America and Europe, but not in Asia where diversity is even less prevalent. Well, grab a feather and knock me down. Whatever the company claims to be the motivation behind this it will not be pursuit of 'diversity' for the sake of diversity. Goldman Sachs was founded by Jewish white men in 1869 and most of its partners and almost all of its leaders have been Jewish white men ever since so spare me the sermon about diversity *pl-ease*. Goldman's stance is typical of thousands of examples of corporate giants dictating public and private policy outside the democratic process. This is the very foundation of post-democratic technocracy.

PC-free zone

White people, especially white men, and even more *old* white men (divide young from old), are all racists expressing 'white privilege' according to New Woke extremists. This includes white people sleeping amid the shit, disease and freezing cold on the streets of major cities. By contrast white billionaires of real privilege are fine to New Wokers so long as they are funding 'progressive' groups and censoring 'bad people'. White homeless living on the street are 'white privilege' while privileged blacks like Democrat politician Cory Booker with his rich background and Harvard education are victims of white oppression. White people are all racists except those who ask for forgiveness for things that happened before they

were born from non-white people who were also not born when they happened. An Internet video shows a white couple kissing the boots of members of the deeply-racist Black Hebrew Israelites group in penance for what their 'ancestors' did. 'They showing what it means to really salute a prophet and a priest,' one pathetic member says. 'This is a white couple here that's proving they are sorry for what their forefathers have done.' It's not the colour of the skin that matters, it's the colour of the heart and mind, and here you had a black man with the same heart and mind as those white psychopaths who oppressed black people and treated them with contempt. American 'civil rights' leader (hilarious) Al Sharpton is a New Woke hero with his rants and rhetoric against white people despite being a racist, crook, fraud, promotor of transnational corporations, and FBI informant (code-name 'CI-7'). Even super-Woke [Vice.com](#) described him as 'a world-class scumbag with criminally under-acknowledged ties to the Mafia'. Wherever there is high-profile racial tension Sharpton is there seeking out the nearest camera to pour fuel on the fire. He has rightly been described as a 'racial arsonist'. No matter that he doesn't give a damn about rights for black people. He attacks whites and that's enough for New Woke. Sharpton was an advisor to President super-fraud Obama who with typical Obamaesque poppycock lauded him for his 'commitment to fight injustice and inequality'. Democratic presidential candidates get their tongues out to secure Sharpton's blessing in pursuit of the black vote that largely can't stand him. Black people who reject New Woke (most of them) know a fake when they see one. Great numbers of black people see through it all and realise that to judge anyone by their colour, including white people, is racist, ridiculous and divisive (on purpose). Black and other non-white people born or settling in the West who want to protect its culture are considered 'enemies of the revolution' as are gay and transgender people who don't support the hysteria and impositions of the mindless fake revolutionaries. It's amazing how many New Wokers come from white comfortable or wealthy financial backgrounds while posing as oppressed (privileged 'victims') or promoting themselves as the heart-on-the-sleeve voice of the truly oppressed without permission or the personal experience to do so ([Fig 305](#)). What if the minority doesn't want them as its spokespeople or isn't offended by what New Wokers insist they should be? That's just too bad. *I am right – we know best* ([Fig 306](#)). The way minorities are patronised by New Woke is extraordinary.

Group dynamics

Figure 305: It's all about me.

Figure 306: Love is truly expressed by deeds, not words, and certainly not by virtue-signalling.

There's no perception of individual behaviour or circumstances irrespective of race (real non-racism).

Everyone has to be judged as a group. This group *bad* – all other groups *good*. The fact that this is what the Cult wants to divide and rule is another pure coincidence and absolutely nothing to worry about. Cult-manipulated New Wokeness takes a genuine oppression such as disgusting white-instigated black slavery and male domination of women and presents it both as far worse now than it was at its grotesque historical peak and pins the blame on the entire white race and male population for things done by the few before most white people and men today were even born. Richard Fochtmann, a US Democrat candidate for senator, was caught on a phone camera *celebrating* the alarming increase in suicides by white men. He said: ‘Today I saw a thing and it said a lot of men, white men, were committing suicide, and I almost thought, “Yeah, great” – then I thought about it little more, and I thought maybe I shouldn’t say that out in public.’ Some of his audience actually laughed. Donald Trump asked in response to the comments: ‘What kind of animal is this?’ Fochtmann described him with the usual New Woke irony and deleted self-awareness as a ‘racist’. It is also relevant to note that Fochtmann is Jewish. Think what would have happened had someone celebrated the suicides of Jewish men? The statement would have been dubbed ‘hate speech’ and could possibly have led to a prison sentence. What happened to Fochtmann? *Nothing*. Jewish writer and professional racist Noel Ignatiev, who died in 2019, was co-editor of *Race Traitor*, a journal founded on the belief that ‘treason to whiteness is loyalty to humanity’. Ignatiev said: ‘Make no mistake about it: we intend to keep bashing the dead white males, and the live ones, and the females too, until the social construct known as ‘the white race’ is destroyed – not ‘deconstructed’ but destroyed.’ I ask again: What would be the response if someone said that about the 0.2 percent of the global population that is Jewish? But then when Israeli rabbis have no consequences for saying that slaughtering Palestinians gets Jews closer to God and killing them is a ‘religious duty’ you know that anything goes so long as you are either not white or ultra-Zionism doesn’t like you. There is a clear and obvious agenda to target white people and to deny that in the face of the evidence is to dig a hole in the desert and insert your head.

Saira Rao, a ‘first generation Indian-American activist’ and former Colorado congressional candidate, hosts something called Race2Dinner – ‘a place to start thinking through how you actively uphold white supremacy every minute of every day’. This means, apparently, self-loathing white women programmed to hate themselves and their race paying \$2,500 to attend dinners where they are castigated by Rao and her mate Regina Jackson for being racist. One jabbering attendee apologised for apologising with this perspective: ‘I want to hire people of colour. Not because I want to be ... a white saviour. I have explored my need for validation ... I’m working through that ... Yeah. Um ... I’m struggling.’ It’s re-education and women of all ‘colours’ would benefit by giving this pair of prats the finger and getting on with their lives. I went to the Race2Dinner website to be met by a massive headline saying: ‘White women. Let’s talk racism and your complicity.’ Saira Rao is so New Woke it’s beyond parody. She does, however, provide an insight into the mentality and its contempt for white people. Among her gems is that ‘private messages of support is another form of white supremacy’; the helicopter crash that killed the black multi-millionaire basketball legend Kobe Bryant and his daughter was somehow connected to Donald Trump, racism and bigotry; and that ‘white women’s obsession with “being nice” is one of the most dangerous tools of white supremacy’. There is added irony is that Rao’s India is a seriously racist country with the caste system still alive and well despite claims to the contrary. The UK *Daily Mail* exposed how dating website Shaadi.com, which claims to be the top site for Indian singles, insists that users state their caste or ‘sub-community’ when they join. The *Mail* said:

It was discovered that a profile set up by a Brahmin, who are elite in the caste system, would not be offered potential matches from the lowest of the social divisions – the so-called untouchables, officially known as ‘scheduled caste’.

But, no, you can’t be racist unless you are white. The sight of non-white extremists acting with the same

state of mind as white extremists while thinking they are somehow morally ‘superior’ is a real head-shaker. We reached another stage that was always coming in 2020 when the Climate Cult was declared ‘too white’. German-based Filipino climate activist Karin Louise Hermes said she left the movement because of its whiteness and lack of intersectionality: ‘Anti-racism and anti-capitalism need to be made part of organizing ... If “Green” policies fail to consider anti-racism and migrant rights, how is any person of colour supposed to feel voting for them or organizing in the same spaces?’ How about to protect the planet if you really believe it is on the brink? Instead she was off into the sunset indignant that the Climate Cult was not paying enough attention to what ‘whiteness, capitalism, and inequality have to do with climate change’ (*not* caused by humans). Open the window will you? I need some air. No, scrap the window. Make that a large gin.

Woke is not a joke

We have long passed the point where just laughing at such idiocy is not enough as it increasingly becomes public policy. Filmmaker and world class New Woke virtue-signaller Michael Moore said that white men are not good people and ‘you should be afraid of them’. That, I take it, includes him? Moore warned on the so appropriately-named Useful Idiots podcast that people should cross the street if they see three white men approaching because at least two would have voted for Donald Trump. The legend in his own mind, but no one else’s, said:

Two-thirds of all white guys voted for Trump. That means anytime you see three white guys walking at you, down the street toward you, two of them voted for Trump. You need to move over to the other sidewalk because these are not good people that are walking toward you. You should be afraid of them.

Moore has turned talking mind-numbing bollocks into an art form to match his ‘anti-establishment’ films that exquisitely serve the Cult agenda. The desired psychological consequence of all this is that white New Wokers tend to hate themselves for being white. They wallow in emotional states of self-loathing and wish they had been born into one of their oppressed minorities. Democrat presidential candidate Elizabeth Warren was so desperate to be seen as a persecuted New Woke minority that she hilariously invented Native American ancestry that didn’t exist and a story about her discrimination for being a woman that never happened. In fact, women are hardly a minority with their numbers close to those of men. The New Woke rule is that not only should white people be hated they should hate themselves and spend the rest of their lives paying penance and begging forgiveness for *things they didn’t do*. The body, no matter what the colour or background, is only a vehicle for the consciousness that we *all* are. This makes racism *and* New Woke reverse racism absolutely child-like. How easy it is to see within New Wokeness the Cult agenda for disconnecting humanity from the awareness that we are all *One*. How inverted genuine equality has become in the New Woke fake ‘Left’ since civil rights leader Martin Luther King said this in his ‘I have a dream’ speech in 1963:

I have a dream that my four little children will one day live in a nation where they will not be judged by the colour of their skin, but by the content of their character.

So do I, but, if you’re white, New Wokeness does not. Is it really yet another coincidence amid this psychological New Woke war on white people that testosterone and sperm counts are plummeting in Europe and North America along with Australia and New Zealand? Even CNN ran an article highlighting the fact that ‘total sperm count in North America, Europe, Australia and New Zealand dropped by up to 60% in the 38 years between 1973 and 2011’ with the trend continuing to present day. ‘If sperm was an animal, science might worry that it’s heading toward extinction in Western nations,’ the article said. No one knew for sure what was causing this, the article continued, but it had been blamed on processed foods, chemicals in food, radiation, air pollution and water. All of which lead back to the Cult

with smartphones in trouser pockets right up there along with the ever more significant 5G.

With the cross of Jesus taken off the door.

Figure 307: Christian festivals must go – but don't you dare criticise anyone else's you Nazi.

Western culture is founded on Christianity and that doesn't mean, of course, that everyone is a Christian. I'm certainly not. It means that the architectural and intellectual influence of the Christian religion has been the backdrop to the development of Western society. Christian influence and legacy is woven into the fabric of the Western way of life. Now, with the Cult targeting Western society, we can see why political correctness protects from criticism and exposure every religion *except* Christianity as with every race *except* white. New Wokeness has become ingrained so quickly that even stalwarts of the Christian religion like the UK Archbishop of Canterbury Justin Welby have become advocates of the very Woke/Cult agenda that seeks to destroy their religion. The major Christian festival is Christmas (ironic because it's a pagan midwinter festival), but because Christmas is associated with Christianity it has to be targeted by the Cult and its Wokers to the extent that saying 'Merry Christmas' is now code in the bewildered mind of Woke for 'white supremacy' (Fig 307). US Supreme Court judge Neil Gorsuch found this out when he uttered the deeply offensive, clearly Nazi, greeting on television in 2019 and faced a backlash. A British mother said she was 'shamed' for saying 'Father Christmas' (indicating a man) instead of the 'gender-neutral' term 'Santa' (which is an anagram of Satan). The last time I looked the mythical figure with the beard and sleigh was a man – hence Father – and had not yet transitioned into a lady in red stockings called Geraldine. The 'shamed' mother told a newspaper she felt 'on edge' in the wake of the criticism. Fortunately, I have a cure for that which goes like this: 'Don't be so bloody ridiculous.' There, all sorted, with no need at all to be 'on edge'. Non-Christian religions are allowed to practice their festivals and rituals in Western countries without any push-back or interference and they should be if they operate within the laws of the country that reflect the values of the country. It's the bias for one and against another that I am highlighting and the reason for it.

Attempts to indoctrinate children into non-Christian religions in Christian-dominant or secular countries can be seen in places like Sweden among many others. Furious Swedish parents reported how teachers at their school told pupils to kneel on prayer mats facing Mecca while the class was divided by gender with girls told to gather at the back of the room. What uproar there would in the media if Muslim children were told to practice Christian rituals against the will of their parents. The school said it was 'role play'. *Bullshit*. Anyone with a brain knows what it is. A further reason for the assault on Christianity (and in the longer term all current religions) goes much deeper. I don't support any religion, but for all their many flaws, faults and misrepresentations, they do accept the existence of another power or reality beyond human. Some even describe their 'God' in terms of light and love while obscuring that simple fact with a tsunami of ritual, rules and regulations. Religions were created as an interim step between the many ancients who understood reality in a much more expanded way and the Cult's end goal of isolating humanity in a sense of reality in which only the Bubble is perceived to exist. The interim Tiptoe has been

major religions that believe in another force outside the Bubble and yet worship this as an external, dictatorial, judgemental God and not as the non-judgemental whole of which we are all an expression. In other words we are not 'God' and must only do what 'God' wants. What *does* God want? The priests will tell you, or rather the Cult will.

The endgame is to remove *any* concept of another force beyond human reality and 'New Woke' is being used to achieve that end in Western countries by targeting its major religion of Christianity. Recent polls reveal how successful this has been. In 2009 the percentage of Americans who identified as Christians stood at 77 percent; by 2019 it was 65 percent. Among Democrats, a political home of New Woke, the fall is even more extreme with 72 percent becoming 55 percent. Those considering themselves 'non-religious' increased from 17 percent to 26 percent. The most significant figure was not polled: What do those who say they are non-religious believe instead? I am not religious in an organised, bricks-and-mortar-religion sense, but I do accept the reality of a state of Infinite Awareness of which we are all part. The Cult wants those who consider themselves non-religious to instead believe in a random mechanical universe in which 'nature' has to be conquered by scientists and experts of the technocracy. You will see when I get to the technocracy that this is of crucial importance to the Cult. I also see the dominoes starting to fall towards the ultimate end of the British monarchy – the monarch is the official head of the Church of England – with what has happened with Prince Andrew, the buddy of mega-paedophile Jeffrey Epstein, and with New Woke self-obsessives Prince Harry and Meghan Markle heading for the airport and relocating to North America. The concept of royalty has served the Cult magnificently and I would be delighted to see it disappear. We have to be streetwise, however, over why suddenly it is taking such potentially mortal blows in the closing years of Queen Elizabeth. Royalty and all its trappings, history, ceremony, buildings, and central influence in law, is, as with Christianity, running through the very fabric of British culture – the culture the Cult wants to destroy to allow assimilation of British society into its global monoculture technocracy. Even the royals are dispensable for the cause when necessary and the Cult agenda enters a whole new stage.

Toxic masculinity

Figure 308: New Woke is driving men and women apart on the Tiptoe to ending all gender and male-female procreation. (Image Gareth Icke.)

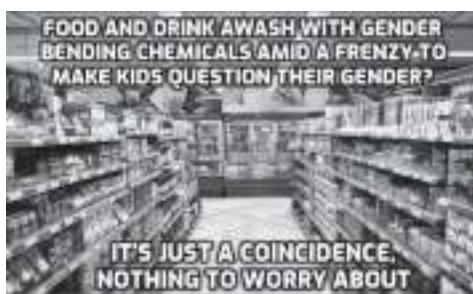

Figure 309: One big racket to transform human sexes and sexuality.

New Woke portrays non-Woke men as demons and purveyors of ‘toxic masculinity’ in the promotion of another Cult agenda. Men and women are being driven apart with the #Metoo movement employing the usual Cult-encouraged New Woke extremism of blaming every man for the actions of a few like ultra-Zionist former movie mogul Harvey Weinstein. *He* abused women so *all* men are to blame. Many men now watch every word in the company of women and seek to avoid being in a room alone with them in case they are accused of something. This is seriously damaging male-female interaction as it is meant to ([Fig 308](#)). Advertisements are employed as usual to sell the required perception of men in abominations like the Super Bowl maximum-audience ad by Gillette, owned by elite corporation Proctor and Gamble, which was a blatant attack on men and tarred them in their entirety with ‘toxic masculinity’. The sexual and racial themes in increasing numbers of advertisements are promoting societal change through perceptual change and remember they are paid for by major Cult-controlled corporations that couldn’t give a damn about ‘equality’ and ‘inclusivity’. Music videos aimed at the perceptions of children and the young have taken the same path with the 2020 Taylor Swift video ‘The Man’ an example that can only be described itself as toxic. Every stereotype about toxic masculinity is included to influence the perceptions of the young when even the mildest hint of female stereotyping attracts a storm of protest and, if it appears in advertisements, a ban. A commentator asked: Do you want your daughters growing up thinking all men act the way Taylor Swift portrays men in this video? Do you want young girls growing up resentful and distrustful of men? Do you want your sons to feel attacked and bullied by powerful women advocating for them to be shamed and subjugated by the whims of angry new-wave feminists? The answer to all of those questions from a mind in any way in a state of balance would be ‘No’. But if you are the Cult your response would be *Yes! Yes! Yes!* We even had Ann Francke, head of the UK Chartered Management Institute, saying that bosses should crack down on men talking about football and cricket at work because many women ‘don’t follow those sports and they don’t like either being forced to talk about them or not being included’. The scale of sheer undiluted arrogance that it must take to think you can tell people what they must and must not talk about is beyond my comprehension and so is her lack of awareness about how many women do like sport. Here’s another New Woke mind patronising the people she claims to speak for. What are the chances of someone demanding that women don’t talk about subjects of their choosing in case men feel left out? We live in a world now so infused with narcissism that imposing your will on others is taken as a gimme and a right. ‘Toxic masculinity’ is only code for masculinity as the Cult seeks to feminise the male and masculinise the female on the Tiptoe to the no-gender human. Crucially it wants to reduce the male hormone testosterone in men to delete the type of man that straightens his spine, lifts his chin and says: ‘I’m not having it’. Men are being ‘demasculined’ into passivity and you have testosterone levels falling around the world along with sperm counts. The feminising of men is being achieved on many fronts including contact with the contents of plastic bottles, till receipts, and other items and substances containing gender-bending chemicals including food and drink from plastic containers ([Fig 309](#)). This is a media report about a study at Exeter University in the UK:

Four out of every five British teens have their hormones upset by gender-bending chemicals found in plastics, new research suggests. The chemical, called bisphenol A (BPA), is used to make plastics, including materials that come into contact with food. But it can mimic the female sex hormone, estrogen, and cause a lower sperm count in men.

The chemical is also thought to be linked to several different types of cancer, including breast and prostate [which is soaring]. Researchers at Exeter University studied the blood and urine of 94 teenagers aged 17-19 and found 80 percent had the hormone-disrupting chemicals in their bodies.

In the gender-bending chemical era those identifying as gay or ‘LGBT’ is rapidly increasing and a US study estimated that those born before and across the millennium to be nearly twice as likely to identify

as LGBT as other American adults – ‘Millennials Are the Gayest Generation’, as one headline put it. This is a *coincidence*? Dr Richard Day told those paediatricians in 1969 they were going to ‘make boys and girls the same’ as people became ‘gender-neutral’. In support of the chemical infusion is the psychological onslaught in which being gay is celebrated and being straight is increasingly marginalised and again ‘so yesterday’. We see the same bias that we do with whiteness and Christianity and this was never more obvious than when UK TV celebrity Phillip Schofield came out as ‘gay’ in 2020 after 27 years of marriage. Celebrity Luvvies swooned and you would have thought he had dived into a raging torrent and pulled out a dozen drowning children. Schofield was described as ‘very brave’ when The System celebrates you for declaring your gayness. See what happens if you come out as straight on Twitter. ‘*Straight??* What are you a bloody pervert?’ It’s not only men that the Cult wants to weaken physically and psychologically – it’s everyone – to create a compliant population that looks to Big Brother for protection. Men and their testosterone are, however, the prime target. Patricia Hunt, a researcher at Washington State University who first identified BPA as a cause of cancer and other diseases, developed a more accurate means of measurement and her subsequent findings were stunning. Dr Hunt said in her report in 2019 that ‘safe’ limits of BPA decided by the US Food and Drug Administration are *44 times higher* than what can be considered ‘safe’. This is no more a ‘mistake’ than all the other ‘safe’ limits that turn out to be way too high. It’s done for a reason and in this case to manipulate gender and de-masculinise men. Since the introduction of the birth pill women have been peeing estrogen, or oestrogen, the primary female sex hormone, into the water supply to be consumed by men. Chemical pollution in rivers is changing the sex of fish. Soy products consumed by many vegans and vegetarians can raise estrogen levels and lower testosterone and those diets are being heavily promoted by the establishment to ‘save the planet from climate change’. Seth Siegel, author of *Troubled Water* about the shocking amount of pollutants and drugs in water supplies, described the effect on fish:

I don’t want to call it transgender fish, but I will call it inter-sexual fish. One recent study studied 19 rivers and they found that there was a very high level of male fish that were now growing eggs from the estrogen that is getting into the water ... 50% of the fish they studied in the Great Lakes had psychiatric drugs in their brains and their organs. So, Prozac, Celexa, and drugs like that, and generics.

The only way it comes into the water supplies, humans take those pills, they pee it out after they’ve taken it a few hours later. It gets flushed through the wastewater treatment system into a waterway. All perfectly legal. Exactly compliant with the law. And then it gets uptaken in fish. It gets uptaken in our drinking water. It gets uptaken in the water we use for our irrigation.

Men, especially white men, are at the bottom of the New Woke hierarchy along with white people in general and Christianity. No aspect of political correctness is willing to protect them as it protects other New Woke categories. Even saying that all lives matter is now a breach of political correctness so crazy has it become. Well, sod that – *All LIVES MATTER* because they *do*. Notice, however, how white men are promoted as the ‘good guys’ when they send the troops and bombers at the Cult’s behest to attack non-white countries. It’s nothing to do with ‘right’ and ‘wrong’; it is whether it suits the Cult agenda or not. Conservatives with a capital and lowercase ‘c’ are a particular focus for PC abuse and Silicon Valley censorship for the first two syllables in the word ... *conserve* – to ‘protect something, especially something of environmental or cultural importance, from harm or destruction’. Yes, *conserve-atives* (small ‘c’) usually want to conserve Western culture and this is another reason they are treated as they are in flagrant contrast to those who wish to usurp and delete that culture.

‘Anti-fascist’ fascism and the billionaire alliance

From all that I have discussed and exposed in the last few chapters we can explain other apparent mysteries of the New Woke-hijacked political or liberal ‘Left’. One is why people who call themselves

'liberal' and 'anti-fascist' behave with such a fascistic lack of liberalism. A dictionary definition of 'liberal' is the following: 'Someone who has liberal views believes people should have a lot of freedom in deciding how to behave and think.' Synonyms given for 'liberal' include tolerant, enlightened and open-minded. You could hardly find a better definition of what New Wokeness is *not*. The self-deceit necessary to perceive yourself as 'liberal' in the light of extreme illiberalism is fantastic, but essential. How can the Cult manipulate those with genuine liberal views to demand the imposition of a fascistic tyranny when genuine liberals believe people should have freedom in deciding how to behave, speak and think? Instead you ingrain *I am right* self-identity and self-righteousness (which you call 'liberal') and get New Wokers to believe that everyone else (including *genuine* liberals) are wrong, Nazis, bigots, racists, sexists and expressions of pure evil. In this way *I am right* self-identity and Big Brother behaviour becomes the new 'liberal' while real liberals who want freedom for everyone are 'far-right fascists'. The campaign by the New Woke Democratic Party hierarchy to destroy the liberal presidential campaign of Tulsi Gabbard, a woman of colour, exposes the extreme nature of New Woke hypocrisy. She may be a woman and she may not be white (she's a Samoan-American Hindu), but none of that matters when she stands for ending the American-Israeli wars in foreign lands demanded by the ultra-Zionist Project for the New American Century. With this background we can see why New Wokers who claim to be of the 'liberal Left' are in alliance with billionaires and mega-corporations like financier George Soros and Silicon Valley Internet censors. They still claim to be against billionaires and the One-percent, but the evidence is quite the contrary. The genuine Left once railed against the power of corporations and marched in support of freedom of speech. Today we have the inversion of both with New Wokeness organisations funded to the tune of tens of billions by Soros and others from the One-percent who could not care less about social justice. At the same time every new censorship of non-Woke opinion by Internet corporations is greeted with 'social justice warriors' punching the air. The reason the dynamic has changed is that New Woke is founded on Cult-invented identity politics and not social justice. Billionaires and corporations are not judged by their scale of social destruction, but by whether they speak the language of New Woke and bung their organisations a wad of money. When the Left was genuinely demanding social justice it would obviously target those who were accumulating mega-wealth for the few at the expense of the many. Soros would never have been allowed to fund the genuine liberal Left. They would have seen him coming from 200 miles away and the same with fake New Wokers like Zuckerberg at Facebook, Page and Brin at Google, Wojcicki at YouTube, Dorsey at Twitter, Wales at Wikipedia and Cook at Apple. British comedian Ricky Gervais talked in a brilliant speech at the 2020 Golden Globe Awards about Apple hypocrisy: 'Apple roared into the TV game with *The Morning Show*, a superb drama about the importance of dignity and doing the right thing ... made by a company that runs sweat shops in China.' He told the assembled New Woke Hollywood 'A-listers' who insisted on a vegan meal after turning up in gas-guzzling limousines: 'You say you're Woke but the companies you work for, unbelievable, I mean, Apple, Amazon, Disney – if ISIS started a streaming service, you'd call your agent wouldn't you?' Gervais went on:

So, if you do win an award tonight, don't use it as a platform to make a political speech. You're in no position to lecture the public about anything. You know nothing about the real world. Most of you spent less time in school than Greta Thunberg. So, if you win, come up, accept your award, thank your agent, thank God, and fuck off, okay?

How refreshing it was to see a very rare celebrity with balls calling out the fakery of LA Hollywood and Silicon Valley Hollywood. New Wokeness does not challenge the billionaires – it breaks bread with them. The obsession is with identity and *not* social justice. As long as billionaires and their corporations support New Woke PC identity positions they are 'one of us' and 'on our side'. The fact that they don't mean it and act in ways that cause phenomenal social *injustice* does not enter the equation. All the

billionaires have to do is hand out the dosh, pose as Woke, use the language of PC and censor all those that question or challenge New Woke *I am right* orthodoxy. This is where the apparently bizarre alliance comes from and why New Wokers are the foot soldiers of the Cult agenda of the One-percent. It explains why the Cult-controlled FBI was exposed many times for infiltrating and undermining the then genuine Left and targeting its leaders like Martin Luther King while today the FBI's focus is on the Right and New Woke is allowed to operate unmolested so long as it refrains from criticising Israel. Whatever is the Cult agenda at any stage it will be enforced by Cult-controlled agencies like the FBI and CIA and the rest of the Deep State and Permanent Government.

I emphasise again that I am not condemning New Wokers as people. Many are genuine in what they believe and in my view just seriously misguided. It's the manipulation and its source and goal that I am exposing. I understand why Wokers do what they do, think what they do, and feel such anxiety about the world around them. The programming is merciless and incessant on the say-so of psychopaths moulding the young into adults that will demand 'social justice and inclusivity' which is code for the post-fact, post-freedom, post-industrial Big Brother Hunger Games Society.

CHAPTER TWELVE

Where are we going – if we allow it?

By far the greatest danger of artificial intelligence is that people conclude too early that they understand it – Eliezer Yudkowsky

The Time-Loop simulation has been spinning through its sequence to a specific destination and we are now living through its endgame – synthetic humans with synthetic minds known as artificial intelligence or AI. This twin goal connects ‘smart’ technology to the transgender hysteria.

Figure 310: Some of the Nazi regime technocrats brought to the United States from Germany after World War Two under Operation Paperclip.

The control system structure and nature of the Hunger Games Society is planned to be a technocracy in which scientists, engineers and other unelected ‘experts’ run the show (and every human mind) on behalf of the Cult and its non-human masters. We are seeing the technocracy in the making with the ever-increasing global dominance of Silicon Valley which has vastly increased still further in the wake of the ‘virus’ lockdowns. You’ll find some excellent background information at the website Technocracy.news and I can recommend a book called *Technocracy Rising* by Patrick Wood. Promotion of technocracy emerged publicly in the 1930s (although it goes back further) and most predominantly operated out of Columbia University School of Engineering. Despite the failure to win wide support at the time its advocates continued to pursue their agenda behind the scenes and now they are sprinting for the line. Interestingly, Aldous Huxley’s *Brave New World* (1932), George Orwell’s *Nineteen Eighty-Four* (1948) and Dr Richard Day’s speech to the paediatricians in 1969 all came when or after technocracy promoters set out their ambitions for human society. All three very accurately predicted current events. Adolf Hitler and the Nazis operated a technocracy in many ways and I have described in my books how at the end of the war more than 1,600 Nazi technologists were spirited out of Germany to the United States under a military and intelligence escape plan called Operation Paperclip ([Fig 310](#) overleaf). These were the technologists that would establish NASA and ran the infamous United States military-intelligence mind-control programme MKUltra (Mind Control Ultra). The letter ‘K’ for ‘control’ comes from ‘Kontrolle’, a German word for control, to acknowledge the source of the programme. Among these German technologists was Werner von Braun, a member of the Nazi Party and SS, who designed the V2 rockets the Nazis fired at Britain. Von Braun designed the Saturn V rockets for the US Moon programme while working at NASA/NAZI. The Cult and its technocracy have no borders just as they don’t want the world

to have any. Technocracy demands a monoculture global society which is why the Cult is targeting all cultures to fuse them into one. Hence we have systematic mass immigration and a war on Western culture before absorbing all the others. Dismantling Western culture is only stage one. Defined borders and boundaries of every kind are the target of the Cult including biological boundaries between men and women.

If you don't want anyone to know – don't do it (Chinese proverb)

China, the Cult's blueprint for the world, is already a technocracy thanks in large part to covert Cult technology transfers from the West through cusp organisations in The Web like the Trilateral Commission. Trilateral documents from the 1970s reveal this fact which has been confirmed by subsequent events. Big-time Cult insider Zbigniew Brzezinski, National Security Advisor to President Jimmy Carter, described in his 1970 book, *Between Two Ages: America's Role In the Technetronic Era*, how a technocracy would emerge from its precursor stages, communism and socialism. You could call technocracy a form of 'technological Marxism/fascism' in which the police state is not even imposed by humans in uniform, but by artificial intelligence dictating through cyberspace, robots and other technology controlled by unelected technocrats. Brzezinski co-founded the Trilateral Commission in 1973 with another life-long Cult initiate, David Rockefeller, and he was a 'political scientist' at Columbia University where a technocracy movement was publically spawned in the 1930s. The Rockefeller family have had major connections with the university. Bill Clinton attended Columbia where he was taught by Professor Carroll Quigley who would later publish books exposing how a small cabal was manipulating world events and the direction of society. It was during Brzezinski's time as US National Security Advisor that relations were 'normalised' between the United States and China while Cult-owned Bill Clinton played a major part during his presidency in opening America to Chinese goods and infiltration. This is a glimpse of Brzezinski's technocratic vision from 50 years ago:

Such a society would be dominated by an elite whose claim to political power would rest on allegedly superior scientific know-how. Unhindered by the restraints of traditional liberal values [which New Woke is destroying], this elite would not hesitate to achieve its political ends by using the latest modern techniques for influencing public behavior and keeping society under close surveillance and control. Under such circumstances, the scientific and technological momentum of the country would not be reversed but would actually feed on the situation it exploits ...

... Persisting social crisis, the emergence of a charismatic personality, and the exploitation of mass media to obtain public confidence would be the stepping stones in the piecemeal transformation of the United States into a highly controlled society.

What Brzezinski accurately predicted in 1970 (because he knew the plan) is what we have fast emerging today with so much more due to come (more words that I wrote before the 'virus' lockdowns which were triggered by happenings that first emerged in China). Technocracy is what Cult agents mean when they talk of a post-industrial and post-democratic society which is being advanced by the climate change and 'pandemic' hoaxes. See how it all fits together? The Cult has been developing its China blueprint technocracy with a view to its expansion across the world. China (the Cult) is infiltrating global society through money, technology, infrastructure projects, railways, and myriad covert means while also heading out into space. The world is planned to be centrally-controlled by a 'Smart Grid' in which everything, including all technology and the human brain, is connected to the Internet and a global Wi-Fi 'cloud' with all the shots called by artificial intelligence or AI. China is a leading player along with the United States and Israel. Cult-controlled Morgan Stanley has predicted the next phase of Chinese growth will come with 'smart super-cities through 5G connectivity, smart grids, renewable energy and modern transportation' (the first 'smart city' to go online in China was Wuhan just before the 'virus' emerged

from there). The investment bank sees China's current 60 percent of the population living in urban areas expanding to 75 percent by 2030 – an increase of some 220 million people moving to cities. Morgan Stanley Chief China Economist Robin Xing said: 'In our view, China is poised to be a global leader in smart city and city cluster development.' In our *view*? No – in our *knowledge* of what is planned. All that I have described there is straight off the pages of the Cult blueprint for humanity. China's gathering influence on India represents a combined population of 2.8 *billion* and that's some 36 percent of the world population even without China's other regions of influence in Asia, North and South America, Africa and even Europe. Gigantic levels of systematic outsourcing of manufacturing to China by American and worldwide corporations at the expense of jobs at home has made the West dependent on keeping China sweet despite the criticism of the trade links by Donald Trump. This dependency was driven home after the 'coronavirus' outbreak in China in late 2019. A reported 96 percent of America's antibiotics alone now come from China and something similar will be true with other countries. What if China decides as an act of war to cut off supplies of essential products it now dominates that were previously produced in America by Americans? This is precisely what the official government-controlled Chinese news service threatened in terms of drugs as the coronavirus hoax expanded out of China to the United States and the rest of the world. We will also come to see how many operatives and agents – 'spies' – that China has working within America in areas that include stealing research. Add to this the long list of 'former' US Pentagon military officials who work for China directly or indirectly after 'retirement'.

China's efforts to buy influence in education (and steal research) were revealed in 2020 with the news that Harvard and Yale failed to disclose some \$375 million in gifts and contracts from China and Saudi Arabia in the previous four years. *The Wall Street Journal* reported that American universities have hidden \$6.5 billion received from foreign countries since 1990 with lots of money from China included. China's infiltration of the United States is already extensive and growing by the day. Remember the Cult controls China as it controls the United States and this infiltration is the Cult transforming American society into its Chinese society global blueprint with Silicon Valley absolutely on board with that. A casualty of this increasing Chinese control is free speech with criticising China in Chinese-funded academia and business heading in the same direction as criticising Israel. You always know your real masters by who you can't criticise. A big supporter of the Chinese leadership is failed Democrat presidential candidate, the ultra-Zionist Michael Bloomberg, who has made a fortune from Chinese investments. No wonder he ridiculously claims that the vicious Chinese dictator Xi Jinping is not a dictator. Bloomberg's global news operation has been accused of blocking the publication of stories exposing corruption in Xi Jinping's family and he admits they submit to China's censorship rules. The more the United States is embroiled by the Cult in mega-costly wars as American society and infrastructure disintegrates the better that is for China which is taking over great swathes of Africa alone by building roads, bridges, railways, skyscrapers and whole cities. One writer described the rapid emergence in Africa of 'Chinese factories staffed with Chinese managers that are supervising Chinese workers that are using Chinese equipment to make their products.' China is colonising Africa with two million Chinese already in the continent and more arriving every week along with ten thousand Chinese companies. The plan is to then impose the control system of the Chinese government which is really the Cult's government. The two are inseparable and the coronavirus hysteria gave the Chinese dictatorship the excuse to impose even more draconian control and offered the rest of the world the same opportunity. I'll come to this hoax in great detail in chapters fifteen and sixteen and how it was perpetrated.

Israel global technocracy

Figure 311: Part of the massive Beersheba cyber operation as Sabbatian-Frankists that control Israel seek to establish that land as the centre of the global Smart Grid of human control.

China, Israel, the United States, Europe, etc. are all assets at the deepest level of the Cult and this explains why Israel, controlled by the frontline Cult network of Sabbatian-Frankism, has so many ties with China that go on increasing. The ultra-Zionist Michael Bloomberg connection is only one of endless examples. Israel is central to the global technocracy as I expose in detail in *The Trigger* and Sabbatian-Frankists – not 19 Arab hijackers – pulled off 9/11 to a large part by controlling the computer systems of the Pentagon, the US Air Force hijack response system NORAD, the White House and the Federal Aviation Administration civilian air traffic network. They also controlled and still do the inner core of the American ‘Deep State’ including the CIA. Israeli intelligence and military front companies cross-reference with US intelligence by employing ‘former’ CIA personnel to create an interconnecting Cult-serving web both sides of the Atlantic. Israel’s ever-increasing global cyber influence is delivered through its vast military intelligence cyber centre at Beersheba and its elite military cyber-manipulation unit known as 8200 with its multiple fronts like the cybersecurity companies Team8, operating out of Israel, and Boston-based Israeli company Cybereason which form a web that connects with Israeli and American intelligence, or the ‘Deep State’ (Fig 311). Israel military and intelligence networks specialise in setting up ‘cybersecurity’ fronts posing as private companies because to design security protection (in theory) requires the actors involved to have access to the entire computer system and all its codes and passwords. This allows them to write ‘security’ encoded with hidden ‘backdoors’ for Israel (Sabbatian-Frankists controlling Israel) to access everything from then on and even manipulate in real time (see 9/11 and *The Trigger*). Given that Israeli ‘security’ software has been used by governments, intelligence, military and corporations, especially in the United States, you can see the significance for spying, blackmail and stealing data.

Infamous Israeli intelligence arm Mossad and domestic intelligence, Shin Bet, are of course fundamentally involved in all this. Cybereason was founded in 2012 by three ‘former’ (are you ever?) members of this 8200 military elite cyberwarfare division. Unit 8200 is active in manipulating elections, not least in the United States, through hacking and psychological warfare against the electorate (see the articles of Whitney Webb at Davidicke.com). Funding for this network includes the 3.8 billion that the US government gives to Israel for military expenditures every year. America is funding cyber sabotage against *itself* because Sabbatian-Frankist networks operate in both Israel and the United States and one hand gives the cash to the other. As a result tiny Israel is the biggest recipient of American aid and the contempt that its Sabbatian-Frankist leadership has for America can be seen in the story of the Iron Dome missile defence system. American taxpayers gave more than \$1.5 billion to the Israeli government to build the ‘dome’ system, but when the US military wanted to buy aspects of the technology from Israel which Americans had paid to develop for Israel’s benefit the ultra-Zionist government refused to supply the necessary source code to allow the technology to be efficiently deployed. They are laughing at you America. Cybereason software is used by a stream of ‘American’ companies including Lockheed Martin, the world’s biggest arms producer, which benefits so monumentally from any US war. A number of ‘simulations’ have been run by Cybereason based on scenarios of hacking the 2020 US presidential election. The company has stressed the election manipulation potential of the ‘coronavirus’ (an article

they took down after just an hour). Why? Too much information. Cybereason and this 8200 network operating out of Israel are connected to so-called ‘deepfake’ AI technology which can very credibly make people appear to say and do things they did not say and do. See the Internet for many examples. Israeli tech firm Canny AI is a deepfake market leader that has partnered with Cybereason and has been funded by Israeli domestic intelligence Shin Bet. Another Israeli cybersecurity firm is Upstream Security which specialises in security for cyber-connected and autonomous vehicles. These systems can be hacked to crash cars, buses and trucks (think terrorist truck attacks) just as anything connected to cyberspace can be hacked and taken over from afar right down to opening and closing car windows. Justin Rohrlich at qz.com wrote this about one Cybereason simulation:

The Red Team then took control of 50 autonomous cars and five driverless buses – a move that may be more likely rooted in a future reality – and deployed a cell-site simulator that allowed them to track people’s locations and intercept their phone calls. They seized control of ... traffic lights, causing accidents, and distributed a deep-fake video of the Democratic candidate engaging in racial and domestic violence.

Cybereason simulated US election manipulation by a foreign state or non-state source – but which state? For sure they would not have mentioned Israel. The Project for the New American Century, utterly controlled by ultra-Zionists who answered to Israel and Sabbatian-Frankism, called in its September, 2000, regime-change document for America (really Israel) to control cyberspace. All the dots connect in the end.

Military control of cyberspace

The Beersheba complex is surrounded by research and development centres of all the major Silicon Valley corporations and involves *literally* an army of soldiers in uniform and others on the payroll who constantly post on the Internet while posing as members of the public to promote Israel’s narrative and dub critics ‘anti-Semitic’. Beersheba, the biggest infrastructure project in Israel’s history, can accommodate 20,000 ‘cyber soldiers’. Military and intelligence groups and ‘private’ companies are now to Israel and its worldwide networks all the same team pursuing the same ends. Israel is a global player in Smart Grid technology and control with a view to replacing Silicon Valley in importance and power. Behind the scenes and in the shadows it already has with its controlling presence and influence in Silicon Valley through Jewish owners and heads of key companies that include Facebook (Mark Zuckerberg and Sheryl Sandberg); Google (Sergey Brin and Larry Page); YouTube (Susan Wojcicki); Barry Diller (Vimeo); and Apple (Arthur D. Levinson). As I write ultra-Zionist hedge fund multi-billionaire Paul Singer is reported to be seeking to buy control of Twitter to remove its chief executive Jack Dorsey. Should Singer secure that control Twitter will even more be a vehicle for censorship of any criticism or exposure of ultra-Zionism, Israel and the global cult agenda. What a concentration of Internet power in 0.2 percent of the world population and two percent of Americans to decide who sees what globally. That list of Zionist sympathisers heading Silicon Valley corporations does not include other Zionists like Elon Musk and Google’s AI-brain connection obsessive, Ray Kurzweil. Meanwhile, Paul Singer, like ultra-Zionist Sheldon Adelson, is a big donor to the Republican Party and a board member of the Republican Jewish Coalition which promotes Jewish Republicans. Major Democrat donors include ultra-Zionist multi-billionaires Michael Bloomberg, George Soros (whatever he may say), Donald Sussman, Dustin Moskovitz, a co-founder of Facebook with Mark Zuckerberg, Jim Simons, Seth Klarman, co-founder and chairman of *The Times of Israel*, and Haim Saban who says he is ‘a one-issue guy, and my issue is Israel’. Big Tech giants including Google, Microsoft and Intel Corporation have been moving thousands of jobs and billions in investment to Israel while ‘America first’ Donald Trump, owned by Israel, zips his mouth and then tapes it over. The same Silicon Valley Internet-dominating corporations, including Facebook, are employing leading managers and executives from Israel and its infamous military intelligence. The

transfer of cyber jobs and investment from America to Israel is largely driven by yes, him again, ultra-Zionist Paul Singer and his Start-Up Nation Central which is part of the 8200 cyber-control network. Singer's predatory hedge fund destroyed the town of Sidney, Nebraska, as I described earlier. Singer funds the ultra-Zionist-controlled 'think tank', the American Enterprise Institute (AEI), which had very close connections to the Project for the New American Century with its list of regime-change countries from September, 2000. The non-violent BDS Israel boycott campaign is largely thwarted once Israel has complete control of cyberspace which was another goal on the list of the ultra-Zionist Project for the New American Century document. Change 'American' in the title to Israeli, or even more accurately *Cult*, and you're there.

Figure 312: Israel-controlled 'New York'.

Israeli newspaper *Haaretz* reported that Israeli tech start-ups in New York increased by five times between 2013 and 2017 alone. Crucial to the functioning of the global Smart Grid is quantum computing that takes computer systems on to a whole new level of potential. Israel is again at the forefront of this through companies such as Tel Aviv-based start-up Quantum Machines (QM). We now have enormous Israel-controlled cybersecurity centres opening in Sabbatian-Frankist-controlled New York and paid for with \$30 million of American taxpayer money which will take Israeli (*Cult*) manipulation potential over US computer networks to still new extremes. This includes access to America's voting systems and claims about Russia manipulating US elections are, in large part, to divert attention from Israeli (Sabbatian-Frankist) manipulation. The New York 'cybersecurity centres' are being operated by Israel-based SOSA, a 'global innovation platform' connected to the Israeli military, and Jerusalem Venture Partners (centrally involved in the Beersheba operation) who were tasked by the city authorities to make New York the 'cyber capital of the world' (Fig 312). They are connected to an ultra-Zionist network known as the 'Mega Group' and again I highly recommend the detailed articles about these subjects by Whitney Webb. The Mega Group and the 8200 network in general has ties to child-abusing ultra-Zionist Israeli intelligence asset Jeffrey Epstein who ran his child sex network as a blackmail operation for Mossad and hence so many rich, famous and influential people were connected to him including Trump, the Clintons and Prince Andrew. Epstein's 'madam' Ghislaine Maxwell is the daughter of long-time Mossad agent, the late (killed by Mossad eventually) UK businessman and crook-to-his-DNA, Bob Maxwell (see *The Trigger*). Epstein was also an investor for his masters in the Sabbatian-Frankist network in Big Tech and Silicon Valley. Whitney Webb describes 'Mega' as 'a group of pro-Israel oligarchs with clear and direct ties to organized crime, alongside Leslie Wexner, the main financier of Jeffrey Epstein's operation that involved the sex trafficking of minors on behalf of Israeli military intelligence'. Guy Franklin, General Manager of SOSA, is connected to the Israeli American Council (IAC), an Israel lobby group funded by ultra-ultra-Zionist Sheldon Adelson and his wife. Adelson is the biggest donor to the Republican Party and Donald Trump. As a result of this and other reasons when Israel tells Trump to jump he says: 'Yes sir, how high?'

The plan is for the Cult via Sabbatian-Frankism to control the entire Smart Grid of human subjugation from a central point – Israel with its massive nuclear arsenal. Connections that lead to 'tiny' Israel are absolutely fantastic and how clear it is why the definition of 'anti-Semitism' has been expanded and

expanded to stop this coming out in the main public arena. The global Smart Grid – with connections to the human brain – is ultimately planned to be controlled out of Jerusalem and Beersheba and this relates to the ancient belief in a Jewish ‘Messiah’ who it is claimed will rule the world from Jerusalem. Sabbatian-Frankism is founded on this with its ‘Jewish Messiah’ background and history with self-proclaimed ‘messiahs’ Sabbatai Zevi and Jacob Frank although for the inner core of the Cult the whole thing is only a cover story for global control. The Cult has designed its agenda from the Jewish perspective to appear to follow biblical prophecy and ancient legend which many in the non-Cult Jewish community have taken to be confirmation of the prophecy and the fulfilment of ‘God’s will’ when in fact they are being scammed to support the imposition of something that will ensnare them as much as the rest of humanity. Those people need to wake up fast. The Jewish messianic prophecy of global rule by a ‘World King’ out of Jerusalem seemed ridiculous and impossible until the emergence of the Smart Grid and the plan to connect all technology, devices and the human brain to a centrally-controlled AI. The ultra-Zionist crazies and extremists orchestrating the ‘invasion’ (their word) of Europe by Islam to overthrow Christianity and European society is all connected to this plan and so is the rebuilding of the alleged ‘Solomon’s Temple’ on what Jews and Christians called Temple Mount in Jerusalem where the gold-domed Al Aqsa Mosque stands today. Sabbatian-Frankist-owned Donald Trump has given them everything they want to achieve their sick and sinister ends including moving the US embassy to Jerusalem and promoting the ‘Deal of the Century’ complete stitch-up of the Palestinians to clear the way for the total control and ownership of Jerusalem where the global technocracy world government is planned to be located. See *The Trigger* for all the detailed background to Sabbatian-Frankist control of the global Smart Grid.

Is it ‘anti-Semitic’ to ask why Israeli-controlled and military-connected companies increasingly dominate ‘smart’ technology and systems, effectively globally-control what you see and hear, and set out to modify perception and behaviour, are headed by people from 0.2 percent of the world population? Is it ‘anti-Semitic’ to ask why Israeli cyber firms connected as they are to Israeli (Sabbatian-Frankist) intelligence and military have so much control over American government, military and intelligence computer systems? They want you to believe that it is for no other reason than stopping those questions being asked. Yet these are questions that must be *constantly* asked and credible answers demanded when you think that 68 percent of Americans get their ‘news’ (and so perceptions) from social media and that Israeli tech firms are seizing control over Smart Grid technology.

Insider Donovan knew (of course)

I would urge you to read *The Trigger* to find out more about Israel’s AI Smart Grid and technocracy ambitions and if you do the real reason for the burgeoning China-Israel relationship will come into sharp focus. China’s ‘economic miracle’ was orchestrated from the West through Cult corporations and by 2001 Hedley Donovan, editor of Cult-controlled *Time* magazine, was describing China as a technocracy. Donovan just happened to be a founding member of the Cult’s Trilateral Commission. He wrote:

The nerds are running the show in today’s China. In the twenty years since Deng Xiaoping’s reforms kicked in, the composition of the Chinese leadership has shifted markedly in favor of technocrats. ... It’s no exaggeration to describe the current regime as a technocracy ...

... During the 1980s, technocracy as a concept was much talked about, especially in the context of so-called ‘Neo-Authoritarianism’ – the principle at the heart of the ‘Asian Developmental Model’ that South Korea, Singapore, and Taiwan had pursued with apparent success. The basic beliefs and assumptions of the technocrats were laid out quite plainly: Social and economic problems were akin to engineering problems and could be understood, addressed, and eventually solved as such.

Donovan said Scientism (the religion of scientific orthodoxy with scientists as the new priesthood) was behind China’s post-Mao technocracy and those that challenged its control were considered heretics.

Those words were written by a Cult insider in 2001 and cannot be denied today. I have described China's deeply Orwellian Social Credit System and the stupendous numbers of AI-operated face-recognition cameras supported by eye-scanners and DNA-scanners with nothing left to chance. China is already a technological dystopia and operates at the global cutting edge in all the areas necessary for total human control including, like Israel, AI and quantum computing. I have been saying for decades that China today is the world tomorrow unless humanity opens its eyes and that is now being laid out before us. London police announced in January, 2020, that they would be deploying facial recognition cameras after a 'trial' that was always only a prelude to a permanent roll-out. Other police forces in Britain are planned to follow. Leaked documents in early 2020 revealed that the European Union is preparing to connect national face-recognition databases through its EU-wide database-cross-referencing system known as Prüm. The plan is to link this EU database with a similar system in America as the global surveillance system I have warned for decades was coming is moved into place step by step. It's all the Cult agenda unfolding. General Electric (GE) was paid \$30 million by San Diego city council to install thousands of surveillance cameras and microphones in street lights and sold the data collected to third parties earning a billion dollars according to the *California Globe*. So-called 'smart streets' like these are appearing in ever more locations.

The Devil's playground and 'education' control

From this background we can see why 'Woke' Silicon Valley corporations have so many ties to the China dictatorship when those corporations are ultimately owned by the Cult. Global banking is a Cult technocracy in which financial experts make decisions (increasingly with AI) unmolested by elected officials and whoever controls the money controls the world. I have detailed in my books the part played by the Bank for International Settlements (BIS) in Basle, Switzerland, in coordinating national central banks into *one* global (Cult) network. The Bank for International Settlements is another Rothschild-Rockefeller (Cult) creation. Heads of central banks meet regularly at the BIS to coordinate policy and advance the transformation to global technocracy. No surprise, then, that a *Bloomberg Markets Special Report* in 2018 described the Bank for International Settlements as 'a bastion of global technocracy'. The cashless – (digital/technological) – single world currency is all part of the technocracy plot and so is the increasing impotence of politicians over the power of Silicon Valley technocrats and their global impact on the life of every human being. Government departments the world over are dominated by technocrats of many and various types who drive the 'Deep State' operating beyond anyone who has ever seen a ballot box. *The Technocrat* magazine, the publication of the Technocratic movement, said in the late 1930s: 'Technocracy is the science of social engineering, the scientific operation of the entire social mechanism to produce and distribute goods and services to the entire population.' All of this is happening with increasing severity today. Politicians are losing control as this passes to the technocrats and what is the European Union, so beloved of New Wokers, except rule by an unelected technocracy? The so-called 'democratic' European Parliament is just a cover to hide bureaucratic control. We can understand from this perspective why we had years of delay and resistance to the UK leaving the EU after a majority voted for Brexit in the 2016 referendum and why George Soros, an American citizen, funded groups trying to stop Brexit. It took three more years before the people spoke again in 2019 and finally thwarted the opposition by giving pro-Brexit Boris Johnson a thumping majority in a General Election. How much the *type* of Brexit which emerges will actually free British people from EU technocrats we have to wait and see. Deletion of national sovereignty by the EU is a central demand of the technocracy along with the end of private property, Common Core education (indoctrination), Public-Private Partnerships, carbon trading justified by climate change, and communistic deletion of personal choice and liberties. Each one is a pillar of a technocratic society. The Archontic force in the unseen is itself a technocracy in the sense of manipulating through its simulation and using technology to overcome the limitation of its lack of creative consciousness. There is no need for technology in our out-of-body state where creativity and

manifestation is achieved directly through thought and awareness. Control of 'education' and the indoctrination programming of the young has been a prime necessity highlighted by technocrats in the 1930s as 'an educational system to train the entire younger generation indiscriminately as regards all considerations other than inherent ability – a continental system of human conditioning'. William Akin wrote the following in his 1977 book, *Technocracy and the American Dream: The Technocrat Movement, 1900-1941*:

A continental system of human conditioning will have to be installed to replace the existing insufficient educational methods and institutions. This continental system of general education will have to be organized as to provide the fullest possible conditioning and physical training ... It must educate and train the student public so as to obtain the highest possible percentage of proficient functional capacity.

Since the basic need of society was technical expertise, their education system would abolish the liberal arts, which addressed outmoded moralistic solutions to human problems. It would essentially replace the humanities with the machine shop. In the process, members of society would be conditioned to think in terms of engineering rationality and efficiency. Man, in short, would then be conditioned to assume the character of machines, to accept 'a reality understood in terms of machine-like function'.

Figure 313: Funding global transformation behind the smokescreen of 'philanthropy'.

I ask everyone to take just a moment to scan the world today in relation to what Akin described nearly 45 years ago. It's *happening*. Constant cut-backs on spending for the arts in schools across the world now becomes easy to explain as does the fusing of children and adults with machines through Smartphones and other means. America's *privately-funded* and controlled Common Core Education Standards Initiative imposed upon schools across the country is straight from the pages of technocracy literature and backed to the tune of hundreds of millions by Microsoft technocrat Bill Gates and his Bill and Melinda Gates Foundation. My long-time observation of Gates and his funding is that if he backs it then it's bad for humanity ([Fig 313](#)). This is the bloke putting billions into worldwide vaccination through his front, GAVI, or the 'Vaccine Alliance'. Wait till I get to the 'pandemic' hoax for a major exposure of Bill Gates and the agenda he drives for his hidden masters. It's sobering to think that Gates' Microsoft has access to most computers on earth. The world has been quietly ensnared while making its latest Google search, sending another text, or posting a picture of its lunch. This is the case more than anyone with New Wokers. They think they are demanding 'social justice' and old fashioned Marxism or 'socialism' when they are being used overwhelmingly without their knowledge to pressure humanity into a technocracy in which a Marxist/fascist-type dictatorship will be enforced by technology. Climate Cultists are pressing for the dismantling of the global economy as it operates today which must be destroyed for technocracy to replace the current status quo. Prince Charles called for exactly this at the One-percent Davos conference in January, 2020, and so does Pope Francis, another Cult asset, who wants 'a different kind of economy', a 'new economy' and, of course, 'sustainable development'. Global central banks including the US Federal Reserve, Bank of England, European Central Bank and the Bank of Japan are pursuing the same end as they commit to treating climate change as a 'core mission'. It's all the same global web working in unison. Mantras parroted by the United Nations and the Climate Cult such as 'sustainable development', the

'green economy' and 'Green New Deal' are all codes for technocracy. The 'goals' for 'sustainable development' that I listed earlier are still more aims (mostly in disguise) of the technocracy. The end of private property described by Rockefeller insider Dr Richard Day in 1969 is also technocracy policy.

It is no longer a mystery why technocratic billionaires and their corporations now occupy the same bed as Green 'idealists' who require a new description for their childlike naivety when 'naive' does not even nearly suffice. Agenda 21 and 2030 are the script for global technocracy and control by scientists who are planned to be the new God. Remember Greta Thunberg's mantra from this context – 'Listen to the science' – and political leaders around the world locked-down countries and destroyed economies and livelihoods because they said they were advised to do so by 'the scientists'. Anyone ask what was the agenda of the 'scientists' and to whom they really answer? A key part of technocratic control is complete power over the distribution of energy – who has it, who doesn't, and how much can be used. Climate Cult, anyone? Non-carbon energy sources will not be able to supply current energy needs in the transition to technocracy and that's the plan with all the deprivation that will cause. Once the global dictatorship is in place, however, they will bring out technology they already know about which takes its energy from the wave and electromagnetic fields of the energy sea or The Field. Legendary scientist Nicola Tesla was doing this in the first half of the 20th century, but his work was suppressed to protect energy companies and the Cult from the consequences of the population having access to free energy both in terms of cost and the way it is accessed without the need to use energy to produce energy. The Cult could use this technology now to 'save the world'. Instead it keeps it under wraps out of self-interest. Technocracy wants control of all resources to be transferred to a global authority while ownership of anything is removed from the population including their homes.

The AI 'human'

Figure 314: Ray Kurzweil – Frankenstein's sales-pitcher.

Mass control in the Hunger Games technocracy is planned to be enforced by connecting the brain to AI. We have Silicon Valley crazies openly describing such a world and giving a date for activation – 2030 according to Google technocrat Ray Kurzweil ([Fig 314](#)). This is the same year highlighted by United Nations Agenda 2030 which sets out the transformation of global society into a centralised tyranny to save the world from human-caused climate change and 2030 represents the period for the end of the nonsensical '12 years to save humanity' stated by the Climate Cult at the turn of 2019. Prince Charles called at Davos for a transformation of the global financial and economy system by 2030. A study by the UK House of Commons Library estimated that by 2030 the One-percent will own *64 percent* of the world's wealth – the Hunger Games Society. Ray Kurzweil describes how in the 2030 period human brains will be connected to AI and what he calls the 'cloud':

Our thinking ... will be a hybrid of biological and non-biological thinking ... humans will be able to extend their limitations and 'think in the cloud' ... We're going to put gateways to the cloud in our brains ... We're going to gradually merge and enhance ourselves ... In my view, that's the nature of being

human – we transcend our limitations.

As the technology becomes vastly superior to what we are then the small proportion that is still human gets smaller and smaller and smaller until it's just utterly negligible.

Figure 315: Invasion is exactly what it is.

Figure 316: Step, step, step, tick, tick, tick.

Kurzweil is describing the assimilation of human consciousness (within the simulation) into AI and this begs the question of what is AI? On one level it refers to algorithmic codes and on another to a form of AI that learns from data input and is aptly dubbed 'Learning AI'. The *true* and deeper meaning of AI, however, is something they obviously don't talk about when it reveals where all the Cult manipulation has been leading from the start. This level of 'AI' is the very force that has been orchestrating the perceptual enslavement of humanity all along – the force known by different cultures and religions as demons, Fallen Angels, Jinn, Archons, Chitauri and the Shining Ones among many other names. We are being invaded ([Fig 315](#)). People need to realise that this force while it can take form in fact has no form in its base-state which is waves of awareness that can communicate electrically like the human brain. An AI connection with the brain allows a connection with this force that will then *become* the human mind. Up to this point the Cult and its hidden 'gods' have had to control information to manipulate perception to dictate behaviour. Religion has played a central role in this and now the new religion of Wokeness is coming to the fore with its frenzy of censorship. The censorious 'cancel culture' is vitally important for the Cult as we approach its endgame. What I am describing must be kept from the main public arena or the game could still be thwarted in its finishing straight. Once the AI-brain connection is made even controlling information will no longer be necessary. Human perception and emotional response will come direct from AI with no middleman media required ([Fig 316](#)). In those words of Kurzweil: 'As the technology becomes vastly superior to what we are then the small proportion that is still human gets smaller and smaller and smaller until it's just utterly negligible.' Individuality of human perception would be history with a centrally-controlled AI hive-mind taking its place ([Fig 317](#)). The AI-brain connection is designed to absorb humanity even deeper into the simulation on the road to absorbing Body-Mind awareness in its entirety into cyberspace. The code-term for this transition is 'immersive technology' which is described as 'technology that attempts to emulate a physical world through the means of a digital or simulated world by creating a surrounding sensory feeling, thereby creating a sense of immersion'. It is the Tiptoe to assimilation in steps that include 'augmented reality' which combines

the ‘physical’ world with the digital. It’s being very cleverly done unless you are awake in which case it is a pathetically open book.

Figure 317: The Hive Mind. Connecting the human brain to AI means that whatever controls – or is – AI controls the perceptions of the entire human race. (Image Neil Hague.)

Simulation within a simulation

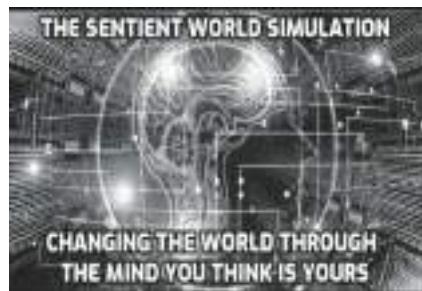

Figure 318: Real-time mirror of human society to manipulate events in human society.

‘Learning AI’ is the level planned to run the ‘Smart Grid’ control system which is fast being introduced by the Cult and its unseen ‘gods’. People are rightly concerned with the mass-surveillance state in which our every move is being tracked, every Internet post, opinion and behaviour, but this is not only for surveillance. All the information about human activity, thought, emotion and reaction gathered digitally worldwide minute by minute is being fed into Learning AI to provide ever-expanding fine-detail knowledge of what makes humans ‘tick’. The processing of this information means that AI already knows humanity far better than humanity does. This is being used to further manipulate perception and action. Every time you post personal information on Facebook, Twitter and all the other Cult-controlled platforms it is absorbed by Learning AI to add to its awareness of human thought, emotion and behaviour and the data-gathering includes live microphones embedded in computers and smartphones to track what should be private conversations. For this we can thank those lovely fake New Wokers like Zuckerberg, Brin and Page who always say one thing and do the other while the New Woke army applauds and worships. Learning AI is behind the ‘Sentient World Simulation’ (SWS) based at the Synthetic Environment for Analysis and Simulations Laboratory at Purdue University in Indiana. The SWS is mass-collecting data to predict (and manipulate) human behaviour and operates under DARPA, one of the world’s most sinister organisations (and think of the competition), which I have been exposing for decades. DARPA, or the Defense Advanced Research Projects Agency, is the technology arm of the Pentagon and the force that oversees Silicon Valley corporations and their direction on behalf of the

global Cult. It has seed-funded vital Cult operations such as Google and works in tandem with the CIA technology venture capital firm In-Q-Tel (also IQT). Both fund the development of technology and organisations to advance the Cult technocracy agenda. DARPA claims to have created the Internet which required military technology to launch and it just so happens that the Internet is the foundation of the technocracy and the unfolding technology control grid or 'Smart Grid'. This Cult agency is behind the Sentient World Simulation ('sentient' = AI) which is constantly processing information from every man, woman and child on the planet, scanning behaviour and buying patterns, and producing a 'continuously running, continually updated mirror model of the real world that can be used to predict and evaluate future events and courses of action' ([Fig. 318](#)). The Sentient World Simulation is a micro-version of the Time-Loop simulation which is impulsing the collective human mind to follow its agenda. The defence against both is consciousness in awareness of its true self that has burst through the Bubble in which the simulations operate and here we have another reason why the Cult works so hard to keep the Bubbles intact. The Smart Grid is laying another simulated information field over the main simulation field which itself is laid over the Infinite information field beyond that. Humans were first attuned with the overall simulation and now they are being connected to the 'smart' information grid to further contract their perception in deeper myopia and block out with even greater efficiency any connection to Infinite Self.

The Sentient World Simulation and its data predictions explain why we are hearing more and more about identifying 'pre-crime' in the way portrayed in the movie, *Minority Report*, set in the year 2054. Pre-crime is a version of pre-censorship in which potential posts are algorithmically blocked before they can appear. People would be targeted for pre-crime on the basis of Sentient World Simulation predictions and not necessarily on what they really planned to do. The motivation for this is not pre-crime but pre-deletion of any people or groups planning to challenge the AI dystopia and the force behind it. Cult-controlled Hollywood and other media increasingly portray dystopian themes which portray the world the Cult seeks to impose and this relates to a psychological manipulation technique known as 'preemptive programming'. The Cult's Brave New World is so extreme and beyond anything humans alive today, or in known history, have ever experienced. This scale of change has obvious potential to invoke resistance. You want to do *what??* Pre-emptive programming via Hollywood, television and other sources continually feeds the conscious, and especially subconscious, mind with portrayals of the world that the Cult is planning. The idea is to make people *familiar* with an AI technology-controlled dystopia so that when it happens for real a lot of resistance will be diluted by that induced familiarity. Cult psychologists are well aware that once something is familiar it gets a free ride and ceases to be questioned as it fuses into everybody-knows-that. The programming machine ridiculously called 'education' is rarely questioned as a way of bringing up children because people are familiar with it. Introduce the same system today to replace one based on freedom and respect for children's individuality and there would be an outcry. I have spent 30 years questioning the familiar and accepted realities and when you do they dissolve like ice in a heatwave. Unquestioned familiarity is their only means of survival.

Aligned to pre-emptive programming is the very fact that AI extremists like Kurzweil are openly telling us about an AI connection to the brain. Why would they do that? The endgame has reached the point where this is happening and they can't hide that any longer at a time when they want to actually *do it*. Instead they have to sell it rather than hide it. The sales-pitch is that an AI connection will make us superhuman when the plan is to make us sub-human and post-human. Once AI attaches to the brain human thought patterns can be fed into the Sentient World Simulation to produce an even more accurate picture of individual and mass perception and with that their predictions of human behaviour. Another fact crucial to understand is that through an AI connection the World Simulation can send thoughts and emotions *the other way* to defuse those with a challenge to The System in mind. 'I am going to stand up for freedom ... Nah, actually, I won't bother it's not worth it.' The development of quantum computers capable of infinitely more than conventional computers is taking the potential for all this to a whole new level as is the roll-out of 5G. In the end human 'thought' would be AI in totality. Professor Oren Etzioni,

CEO of the Allen Institute for AI, has said in a paper entitled ‘How to know if artificial intelligence is about to destroy civilisation’ that humanity must be ready for signs of robotic super-intelligence. He asked: ‘Could we wake up one morning dumbstruck that a super-powerful AI has emerged, with disastrous consequences?’ Well, given that this is the idea the answer must be ‘yes’. Etzioni said one test suggested for this was that ‘human-level AI will be achieved when a person can’t distinguish conversing with a human from conversing with a computer’. This is a point that we are clearly heading for very, very fast, and Etzioni rightly says that this isn’t really a warning sign because it would be confirmation that human-level AI had already arrived. Etzioni then destroys his credibility and grip on reality by saying we are far away from machine super-intelligence and we will have a comfortable amount of time to deploy ‘off-switches’. He must have majored in naivety, surely?

‘Smart’ Grid to make you stupid

Figure 319: The idea is that attachment to the ‘cloud’ via AI will block all influence from expanded states of awareness.

Figure 320: The Internet of Everything is the Internet of Things – plus the human brain. (Image Neil Hague.)

Know the outcome and you’ll see the journey comes into play again. If I describe the planned outcome for the technological control of humanity you will certainly see the journey over decades to where we are now. Kurzweil’s ‘cloud’ would cover every inch of the planet and every human would be attached through an AI-brain connection. The AI-controlled cloud would then *be* the human mind ([Fig 319](#)). It’s only a few years ago that I was warning in my books and talks about the then-planned Internet of Things (IoT) in which all aspects of life including domestic appliances, vehicles, heating systems and a stream of surveillance devices would be connected to, and controlled from, the Internet (an expression of the cloud). Today we are already there with more devices added by the day. The Internet of Things is critical for the technocracy to control all aspects of human life and so is 5G and digital control of information via Silicon Valley censorship ([Fig 320](#)). The plan is for humanity and all technology to be connected to artificial intelligence via the Internet and Kurzweil’s cloud which would give AI (and whatever is behind it) control of everything including human thought and perception. Driverless autonomous vehicles would dictate where you can and cannot go and that’s why their introduction is planned to be enforced with each new generation of vehicles adding more AI features on the Tiptoe to total computer control.

The University of Glasgow is working with the European Space Agency and UK Space Agency on 'Project DARWIN' which aims to introduce driverless cars in Britain guided (controlled) by satellites using 5G communication. Passengers would be fried on every journey in other words. We have the British road system being transformed into 'smart motorways' specifically for the use of smart autonomous vehicles and the fact that the changes are making the roads far more dangerous and killing a lot of people is irrelevant to the psychopaths. The agenda is all that matters. There would be nothing in your life that AI would not control – even which doors would open or close – and there would be nothing you do or say that AI wouldn't immediately know about. Look around – it's happening with a gathering pace and it's all been long planned.

Figure 321: The technological sub-reality or Smart Grid isolating human awareness from Infinite Awareness. (Image Neil Hague.)

We have smart televisions with their cameras and microphones, smart assistants, smartphones, smart doorbells with cameras, smart meters, smart cards, smart cars, smart driving, smart pills, smart patches, smart watches, smart skin, smart borders, smart pavements, smart streets, smart cities, smart communities, smart environments, smart networks, smart growth and smart planet (the Smart Grid). These are only a few of them. Every technology dubbed 'smart' (almost everything these days) and any system called 'smart' are all designed to interconnect to form the global grid or what I have been describing for many years as the technological sub-reality ([Fig 321](#)). What a surprise that it was announced in late 2019 that Amazon, Apple and Google will work together to create a new common standard that will make it easier for smart devices to speak to each other. I was so shocked I had to take to my bed. The Zigbee Alliance is part of the group that includes companies such as IKEA, Legrand, NXP Semiconductors, Samsung and Signify. The 'alliance' will connect existing smart assistants such as Google Assistant, Amazon Alexa, Apple's Siri, and others, which in the end all transmit their data and surveillance to the same Cult sources. They claim this will benefit users when it is another step forward for the Smart Grid. The same is true of the Amazon device called Ring with its camera on your doorbell which can be accessed from anywhere by smartphone and allows a conversation between a visitor and a distant resident. This is a great example of how the public is sold technology with a cover story to hide the real reason for its introduction. Amazon promotes Ring for home protection and convenience when it is another Trojan horse to add still further to the Smart surveillance grid. An article at [Technocracy.news](#) revealed:

Ring has over 600 partnerships with law enforcement agencies around the country, and this number is increasing daily. The company has spent the past three years systematically making sure police everywhere know and recognize Ring, quietly building a nationwide surveillance network through police partnerships, and embedding itself into the functions of law enforcement ... Behind the scenes, Ring is experimenting with emerging technologies, as well as pursuing a partnership with at least one other private surveillance company.

The number of Ring partnerships with police grows almost daily, and, to date, there has been limited

public debate about whether these partnerships should exist in the first place. Unless lawmakers curb or regulate the expansion of these partnerships, what we are seeing now is just a minuscule version of this company's full potential.

Also connected to the Smart Grid are 'green' lightbulbs that produce crap light compared with incandescent bulbs and emit radiation that can permanently redden the skin if you get too close. LED lights must have killed a lot of people already because they are so dim when used as street lamps. I know from experience how in many streets you can't see people crossing the road until they are in your headlights. All forms of 'green' lighting (or lack of it) have come courtesy of Climate Cult and the climate hoax along with wind turbine farms that have technologised landscapes and seascapes and destroyed their natural beauty. The same people call themselves *environmentalists*. Greens pressed for diesel to be encouraged over petrol until it was found that particulates in diesel were killing large numbers of people who breathed them in. What a gift to humanity and the environment the Climate Cult has been. The speed of the technological takeover is designed to have it installed and in control before most people realise what's happened. To them the Tiptoe has just been an endless series of unrelated new devices and technologies 'the latest thing' and only when the control system is in place will they see that what appeared to be random was really a calculated sequence to impose total control. Or maybe they won't even see it then with AI controlling their minds. AI will tell them not to.

Cutting edge 'new' technology has been there all along

The Cult is not sitting around waiting for essential ever-advancing technologies to be invented. The Archontic force as I call it, manipulating from the unseen, had the know-how for Smart Grid technology – and far ahead of even what we see today – when humanity was supposed to be knocking rocks together and living in caves during another simulation stage of 'history'. Human limitations of knowledge and technology apply only to this tiny band of frequency we experience as the world (the *simulation*). Beyond its firewall lies Infinite Reality and Possibility with even the low-vibrations occupied by the Archontics having far more knowledge than humans in Bubble-mode can access. Some of that knowledge is transferred to initiates of the Cult to advance the perceptual control of humanity. The transfer has included technology crucial to the Smart Grid which has been developed in beyond-top secret underground and within-mountain facilities before being introduced to the public arena in a carefully-planned sequence through a list of front men and women and their companies. These Cult agents are used, along with well-crafted cover stories, to explain where the technology came from (geeks in garages is often in the script) and we have a long list of cover-story tellers like Gates, Zuckerberg, Brin, Page, Wojcicki, Bezos and Musk among so many others. The world of high-technology is awash with Cult operatives in among genuine people who have no idea what is really going on around them. Humanity, in turn, has had to be perceptually developed to have enough intellectual (Bubble) awareness to work with and enslave itself with technology while not being wise enough to see that this is what is happening. Developing cleverness without wisdom was the plan and as I said earlier this is the most destructive force on earth. It is clever to make a nuclear weapon, but not wise to do so. The Cult 'education' system is all about cleverness, not wisdom. We have brilliant engineers and others with incredible intellectual abilities who, at the same time, believe that a man was born to a virgin mother and walked on water, or that 'God' parted the Red Sea and men should wear beards because a bloke called Mohammed had one some 1,500 years ago. I have used the following quote from a Central American shaman several times in my books and it captures the theme magnificently. He refers to the Archontic force as 'the predators':

Think for a moment, and tell me how you would explain the contradictions between the intelligence of man the engineer and the stupidity of his systems of belief, or the stupidity of his contradictory behaviour

...

... Sorcerers believe that the predators have given us our systems of beliefs, our ideas of good and evil; our social mores. They are the ones who set up our dreams of success or failure. They have given us covetousness, greed, and cowardice. It is the predator who makes us complacent, routinary, and egomaniacal ...

... In order to keep us obedient and meek and weak, the predators engaged themselves in a stupendous manoeuvre – stupendous, of course, from the point of view of a fighting strategist; a horrendous manoeuvre from the point of those who suffer it. They gave us their mind. The predators' mind is baroque, contradictory, morose, filled with the fear of being discovered any minute now.

The shaman is describing from my perspective the impulses delivered by interaction with the Archontic simulation while the direct AI-brain connection is meant to take this to a whole new level of perceptual control. We must be able to build our own AI prison without realising that we are doing so and every day I watch it happening.

Here kitty, kitty ...

Figure 322: Keep walking – just a bit longer and the carrot will be yours.

Humanity has been brought to the point where many of its number have become technologically savvy enough to build and operate the control grid while the masses have been enticed along the road to an AI mind in the way a donkey might trot forward in pursuit of a carrot always dangling just out of reach inches from the end of its nose ([Fig 322](#)). The technology version of this is to constantly bring out new devices each one slightly closer to the endgame of AI-brain connection. As people seek out each latest gadget or 'upgrade' they are unknowingly being seduced down the trail to the end of humanity as we know it ([Fig 323](#)). Apple was fined for slowing down older phones that made people more likely to upgrade with new products because, as you know, Apple is Woke and has 'values'. The cold, calculated sequence planned from the start goes like this: First you get the target population addicted to technology they hold – i.e. smartphones; next you advance to on the body with Apple watches, Bluetooth earphones, fitness wristbands, internet-connected spectacles and an explosion of other devices; finally you get inside the body (your goal all along) with microchips which is already happening as I have been predicting and warning about for nearly 30 years ([Fig 324](#)). Today 95 in every 100 Americans have access to cell phones and three out of four adults worldwide as the first stage of 'kitty, kitty' is almost complete and human discourse and relationships have been devastated ([Fig 325](#)). When I say microchips I am not referring only to those that we can see and agree, however stupidly, to be implanted. Most sinister of all are the nano-microchips invisible to the human eye known as 'smart dust' and 'neural dust' that are being released into the atmosphere for the population to breathe in. I have exposed this at length in *Everything You Need To Know*.

Figure 323: This has been the aim of the Cult and its 'gods' since the hijack of humanity began.

Figure 324: The premeditated sequence ... hold, on, in.

Figure 325: Anyone observing humanity today knows that this is working big-time. (Image Gareth Icke.)

Figure 326: Technology is already in control of vast numbers of people.

Crucial to this whole scenario has been to get people addicted to technology so *it* becomes the master and not them. This has clearly been achieved with fantastic numbers of global humanity addicted to phones and especially the young who are the prime target for everything when they will be the adults at the time the Smart Grid is planned to be imposed full-blown (Fig 326). They are manipulating the perceptions of the young to compliantly agree to the AI takeover of their minds and world a few years hence. I will be revealing an immensely important aspect of induced smartphone addiction that no one seems to be talking about and it absolutely *is* addiction. Schools in America who take away phones during the school day found that students were suffering from 'separation anxiety'. Some allowed students to *hold* their phones in pouches when they can't open them during class time. One school principal said they were allowed to 'personalise' the pouches to 'make them as cool as humanly possible for something that's keeping them from their device'. What the hell are we doing standing by while Big

Tech psychopaths addict young people worldwide in this way? What I have described with the hold-it-wear-it-insert-it sequence from phone to microchip can be identified in two other Tiptoes involving the progression from 1G to 5G and the progression of the Internet and its dominant corporations. The Cult wants us to believe that 5G is only the next more advanced stage after 1G, 2G, 3G and 4G when in fact 5G is a whole new frequency band called millimetre waves (millimeter in the US) and a whole new ball game. 5G was known about in the inner core of the Cult before 1G was even introduced through cutting edge research and the technology transfer between Cult initiates and their non-human 'gods'. I was sent a study dated 1974 from Soviet era Russia that was detailing research on the effect of millimetre waves now called 5G on viruses and pathogens and adverse effects on reproduction processes. The sequence has been a step-by-step deception to turn our reality into a microwave oven and the same technique has been used with the Internet itself.

Trojan Internet

Figure 327: One of the world's most sinister organisations.

Cult Pentagon agency DARPA claims credit for the Internet using military technology and whatever DARPA wants is bad for humanity ([Fig 327](#)). Stage one was to create the Internet and introduce the World Wide Web. The know-the-outcome-and-you'll-see-the-journey here was to make the Internet the foundation pillar of human society in a way that was irreversible in preparation for the Smart Grid. Technology needed to do this was once again known to the Cult long before it ever became public. Cult-insider Dr Richard Day was therefore able to describe the coming World Wide Web in his speech to those paediatricians in Pittsburgh in 1969 when it would not be officially 'invented' until 1989 and publicly available until 1991. DARPA and the Cult had to allow the free-flow of information and opinion in the early years to attract a global population to use the Internet. They would not have made the Web the central pillar of society if they had started with the endless wave of censorship we have today. In this period people like me were able to use the Internet to circulate information worldwide that the Cult certainly didn't want people to see. They had to bite the bullet on that in pursuit of longer-term ambitions. Once the Net had become the said central pillar and irreversibly so through functional dependency the kind of Internet planned all along removed the mask from its face. The censorship began and has become more extreme by the month. The Cult had the means which it set out to create of mass surveillance, a vehicle for AI control, and the ability to delete information it didn't want the public to see. The same sequence has been followed by Cult corporations specifically developed to dominate the Internet. The Facebooks, Googles, YouTubes, Twitters, Amazons, etc. also allowed the free circulation of information and opinion in the beginning as they had to do to pave the way for their near-monopolies. Once that had been achieved through securing a situation of 'Where else are you going to go?' their censorship began in earnest and has continued ever since picking off more and more dissenting voices.

Figure 328: America's real Silicon Valley with Israel emerging fast through Sabbatian-Frankism.

Figure 329: Regina Dugan – strange career unless you know what's going on. This was her job-description at Facebook.

These sequences that were planned from the start have been fishing lines thrown out to catch the people and then reel them in for the Hunger Games technocracy. Silicon Valley giants like Facebook and Google (YouTube) have fundamental connections to DARPA and the Pentagon as do Microsoft and Amazon ([Fig 328](#) overleaf). All of them are at the centre of the AI-controlled surveillance society while posing as New Woke and supported by Wokeness mobbery. Regina Dugan, promotor of transhumanism and post-humanism, was DARPA director between 2009 and 2012 before being hired as an executive of Google. She then transferred to Facebook in 2016. That's quite a career CV – heading DARPA, one of the world's most sinister organisations, before moving to a global search engine and social media platform ([Fig 329](#)). When you know the game there is a clear thread of consistency and that is AI control of humanity. Her brief at the secretive Facebook Building 8 operation was to develop 'technologies that fluidly blend physical and digital worlds.' Her *theoretical* 'boss' Mark Zuckerberg has talked of the need for 'a global superstructure to advance humanity'. Post-human advocate Ray Kurzweil is a Google executive and co-founder of the Singularity University in Silicon Valley which seeks to promote the AI human. Not without reason I refer to Silicon Valley as the Devil's Playground. It is a very sick place run by very sick people with a very sick agenda for humanity while posturing its New Wokeness to get the desperately naïve on board.

Behind the Musk

Figure 330: Elon Musk, the smirking fraud making possible the Smart Grid of mass and total human control.

Big names in Silicon Valley are all technocrats driving the world into technocracy including Jeff Bezos at Amazon (an orgasmic company for technocrats); Brin and Page at Google/YouTube and parent company Alphabet; Zuckerberg, the frontman at Facebook; and Elon Musk at Tesla and SpaceX. There are so many

others, too. Musk is a mega-fraud Silicon celebrity who comes into the story in many guises. For the Smart Grid to enslave the totality of humanity Kurzweil's 'cloud' has to cover every inch of the planet and that can only be done from space. Enter Mr Showman-Bullshitter Elon Musk ([Fig 330](#)). This is the man who said that AI could be the end of humanity (true) and heads a company called Neuralink working to connect the human brain to computers. *The Wall Street Journal* reported that this involves a 'neural lace' or mesh-like system which would 'implant tiny brain electrodes' with a view to uploading and downloading thoughts. Musk is the big name at Tesla cars which is developing 'smart' electric driverless vehicles and in terms of the global cloud he heads the rocket corporation SpaceX which is in the process of delivering thousands of satellites into orbit to fire the Wi-Fi cloud at the entire Earth. Space X received \$1billion in funding from Google and Fidelity Investments in 2015 amid the usual incestuous Silicon Valley interconnections. Musk officially requested permission from the Federal Communications Commission (FCC) in late 2016 to launch 4,425 satellites into low orbits at between 715 and 823 miles to provide Wi-Fi worldwide when at the time there were only 1,500 active satellites in orbit. The number planned by Musk is actually far, far higher as we'll see shortly. The UK *Independent* questioned the economics involved without realising that to the Cult agenda money is no object:

The astronomical cost of the satellites and launch may be the limiting factor. The customers for the service are the very poorest populations in the most remote regions on earth. The initial cost of the satellite network will be difficult to recover.

Covering costs is not the prime goal – covering the Earth with the Wi-Fi cloud and 5G is the goal. Elon Musk is an extraordinarily arrogant man and very dangerous in terms of human freedom and health. He only gets away with his behaviour because what he's doing serves the Cult. He was warned that his Starlink programme to launch 12,000 satellites to, among other things, fire 5G/Wi-Fi at the planet would seriously damage astronomy by blocking out the stars with light. Musk of course didn't give a shit and did it anyway. *Forbes* magazine reported how in November, 2019, Musk's SpaceX launched 'a network of 60 bright, large, reflective and radio-interfering satellites ... ruining numerous professional observations'. If 60 are doing that what are 12,000 going to do or the 42,000 that Musk wants? How much skin cancer alone are Musk's satellites going to cause as well as a long list of other health and psychological problems from 5G transmitted from space? Skin and sweat ducts directly interact with 5G. Musk announced a programme to launch 60 new satellites every two weeks to have 1,500 in orbit by the end of 2020 and the *Forbes* headline described the consequences: 'Latest Starlink Plans Unveiled By Elon Musk And SpaceX Could Create An Astronomical Emergency'. The article said: 'With competitors such as Kuiper Systems and OneWeb planning on launching similar networks, and Starlink attempting to procure approval for a total of 42,000 satellites, it's possible that looking through a pair of binoculars in 2030 [that year again] would reveal more satellites than stars.' Facebook is also involved in satellite Wi-Fi cloud-creation through a front company called PointView Tech along with other companies including Boeing. A Musk Space X rocket exploded at Cape Canaveral in 2016 before it was due to launch an Israeli-built communications satellite for Facebook to bathe a large area of sub-Saharan Africa in Wi-Fi. I'm sure as many search for food to survive they are desperate to watch CNN and cat videos on YouTube. Mark Zuckerberg said after the explosion that Facebook was 'committed to our mission of connecting everyone and we will keep working until everyone has the opportunities this satellite would have provided.' Google is also involved in the race to 'get everyone connected' purely from the light of human kindness. Satellite systems can also manipulate Earth weather which can then be blamed on human-caused 'climate change'.

This is what is happening to our world as the technological sub-reality I have for so long warned about is put in to place with no public approval or even knowledge in most cases. More confirmation of Musk's arrogance and fakery came in Germany where his Tesla electric car company fought off a campaign from

the public and environmental groups to build a ‘Gigafactory’ that involved levelling 227 acres of what was described as serene forest in the ironically-named in the circumstances Gruen[Green]heide municipality. Protestors said it would turn the idyllic area into a dirty industrial zone. What does Musk care? Billionaire fake Wokers say one thing and do the opposite. Musk claims that electric cars are the future with ‘the advent of sustainable transport and energy production’. First of all electric cars are not sustainable with the devastation caused in Africa alone in making the batteries and what is ‘sustainable’ and morally sustainable about deleting 227 acres of forest in a community that doesn’t want that when you live on the other side of the world? Musk’s activities are typical of a technocracy in which technocrats like him do what they like without the global population having any say and working above and beyond the level of elected politicians. Unbelievably self-obsessed people like Musk think they own the world and yet he is seen by many New Wokers as some kind of hero. How did Musk get permission for what he’s doing? Cult asset Musk was given approval by the Cult-owned Federal Communications Commission – the usual story. He doesn’t hold the positions that he does by accident. How interesting that his Jewish grandfather Joshua Haldeman was head of the Canadian Technocracy Party and campaigned for a technocracy between 1936 and 1941 when the movement was banned for a time by the Canadian government over alleged subversion. Now here we have grandson Elon Musk playing a front-line role in leading the world into technocracy. Aren’t coincidences amazing?

Demonising democracy

The world government is planned to be a technocracy as the Cult leads us into a post-democratic society without elected representatives and a psychological campaign has been underway for decades to discredit the concept of democracy in the public mind. This is done by misrepresenting democracy by equating it with corrupt place-people in all parties doing the will of the Cult in the same way that cartelism is sold as the ‘free market’. The Bennett Institute for Public Policy, a think tank based at the UK’s University of Cambridge, published a survey of 400 million people worldwide conducted between 1973 and 2020 which claimed that nearly 58 percent were ‘dissatisfied’ with democracy. The highest level on record came in 2019 when violent street protests broke out across the world. The World Economic Forum of the One-percent was quick to highlight the survey results given that dissatisfaction with democracy is the whole idea. The Cult is encouraging contempt for politics and politicians to transform democracy into technocracy and not least by ensuring that so many crooked and clueless people get elected to office. The System isn’t working because it is not *meant* to work. Witness the ever-increasing power over global society by the big names of Silicon Valley and how they are usurping and buying the political class. Politicians have already lost control of Silicon Valley technocrats, their Deep State handlers and the technology they oversee. The ground is being prepared for a full-blown technocracy wherever you look. *The Atlantic* magazine, yet another vehicle to promote the elite agenda, praised the technocrat takeover in an article headed: ‘It’s Jeff Bezos’s Planet Now’:

... in an age of political dysfunction ... Bezos has begun to subsume the powers of the state. Where the government once funded the ambitious exploration of space, Bezos is leading that project, spending a billion dollars each year to build rockets and rovers. His company, Amazon, is spearheading an experimental effort to fix American health care; it will also spend \$700 million to retrain workers in the shadow of automation and displacement.

Meanwhile, swaths of the federal government have contracted with Amazon to keep data on the company’s servers. Bezos is providing the vital infrastructure of state [is absorbing the state]. When Amazon locates its second headquarters on the [Washington DC] Potomac, staring across the river at the capital, it will provide a perfect geographic encapsulation of the new balance of power.

The article asked, perfectly describing the Cult methodology for destroying elected government: ‘Isn’t a

private government run by Bezos preferable to a public government run by Donald Trump?' How transparent can you get if you know what is going on? Even UK Prime Minister Boris Johnson has warned about what I am calling the Smart Grid. He said in a 2019 speech at the United Nations that 'digital authoritarianism is not, alas, the stuff of dystopian fantasy, but of an emerging reality.' When I said the same decades ago it was called conspiracy nonsense and here was a Prime Minister saying the same at the UN. He called for new technologies to be designed for 'freedom, openness and pluralism, with the right safeguards in place to protect our people'. That ship has already sailed, Mr Johnson, and it's going to be a hell of a job to roll back what is already happening never mind what is becoming more Orwellian by the day (written before the lockdowns). Fake 'populist' Johnson was handed a big parliamentary majority in 2019 which he could have used to defend freedom and put his policy where his mouth is. Instead he has done quite the opposite. Ofcom, the UK media watchdog tyranny, has been given new powers by the Johnson government to censor social media platforms, websites, comments, forums and video-sharing. Content deemed (by the state) 'harmful' would have to be removed by law. This is sold as protection for children when as always the plan is to expand the law and its interpretation to include critics of the official narrative. 'Harmful' is so open to interpretation you can make it apply to anything and that's why that term is used. Platforms would have to remove 'illegal' (state censored) content quickly and 'minimise the risk' of it being posted at all. The latter means using AI pre-post censorship algorithms which Facebook and company have long said they have been developing. Cult-controlled governments tell Cult-owned Internet giants what they must do and they comply to ensure the introduction of Cult-demanded censorship. This is happening with regard to an increasing list of countries. It is also interesting, and I say that ironically, that this UK government law is in line with the World Wide Foundation of 'Web-inventor' Tim Berners-Lee which proclaims to be saving the Internet from 'digital dystopia' with censorship dystopia. Authors of the Berners-Lee plan include ... Google, Facebook, Microsoft, and the censorship-obsessed German and French governments. Johnson's regime also employs an absolute Israel *fanatic* policing 'anti-Semitism' (criticism of Israel) in the form of one-time Labour Party MP John Mann with his blue and white tongue on permanent stand-by. Any connection between Johnson and freedom is purely coincidental on his record and he allowed himself to be overridden by 'the scientists' and outrageous 'computer modellers' to lockdown Britain and create economic Armageddon and fascistic control.

(Cyber) Space: the final frontier (for the end of freedom)

The Smart Grid cannot function without communication systems of at least 5G, or 'Fifth Generation', which operates in the millimetre wave band of the electromagnetic spectrum. Cumulatively-lethal 5G is being rolled out across the world and beamed from satellites without any official independent testing for its health and psychological implications. There is a simple reason for this lack of testing: 5G is crucial to the Smart Grid and independent, publicly-circulated, studies of 5G consequences for body and mind would mean it would never be allowed to happen in the face of mass public opposition. China is a world leader in 5G and already talking about 6G using terahertz waves. The authorities and the Cult telecommunications industry know that truly independent publicly-funded testing published in the mainstream would be the death knell of 5G and so they don't have any. If you can't win a debate don't have one. Senator Richard Blumenthal asked US telecommunications industry representatives during a session of the US Senate Commerce, Science and Transportation Committee how much money they had spent on independent research into the effects of 5G. Their answer was *nothing*. Blumenthal said: 'No research ongoing – we're flying blind here so far as health and safety is concerned.' It may appear to be that way from the public perspective, but industry insiders and the Cult are not 'flying blind' at all. They know the cumulative health and psychological consequences for large numbers of people and they don't want you to know. The International Society of Doctors for the Environment, with subsidiaries in 27 countries, joined more than 200 doctors and scientists in urging the 5G roll-out be stopped over concerns

that its radio frequency radiation will harm human health. The body and its systems are an electromagnetic field communicating and processing information electrically as does the brain. Any frequency that disrupts this electrical and electromagnetic harmony will cause 'physical' and psychological dis-ease or disruption and the more powerful the frequency the greater the disruption. The Cult doesn't care – that's the effect it *wants* in its war on humanity. Tom Wheeler, then chairman of the US Federal Communications Commission (FCC), told the media that all urban and rural communities would be saturated with 5G to connect to the Internet everything from water supplies to pharmaceutical drugs and domestic appliances. Obama-appointed Wheeler was formerly a venture capitalist and lobbyist for the cable and wireless industry which he then became responsible for 'regulating'. No wonder this disgraceful man said that 5G safety standards simply didn't matter:

We won't wait for the standards to be first developed in the sometimes arduous standards-setting process or in a government-led activity. Instead, we will make ample spectrum available and then rely on a private sector-led process for producing technical standards best suited for those frequencies and use cases.

We'll allow the industry that admits it has done no testing to set the safety standards in line with what they require for the industry (the Cult) to do whatever it wants. The technocracy's need to cover the planet with 5G or higher can be seen in the \$9 billion fund announced by the same Federal Communications Commission (now chaired by Ajit Pai) to 'help' the billionaire telecommunication industry to specifically install 5G connection (radiation) across rural America. How kind.

5G coming to your street

Figure 331: 5G with its destructive frequencies will require transmitters along every street.

5G is designed to add still further to the technological sub-reality disconnecting humanity from Infinite Reality which is being constructed all around us step by step. Its millimetre waves don't pass well through buildings and other dense objects which means that 5G transmitters are needed down every street ([Fig 331](#)). Some estimates claim one for every twelve buildings. This will mean having untested 5G transmitted directly outside homes and children's bedrooms. The human cost is going to be considerable over a period and it's meant to be for reasons I will be explaining. In fact 5G is so potentially destructive that the International Commission on Non-Ionizing Radiation Protection (ICNIRP) which is recognised by the Cult-created World Health Organization said it is 100 percent safe. Wow, it must be bad then. The ICNIRP calls itself 'independent' which it is perfectly at liberty to do, but I don't believe it. The inability of 5G to pass through dense objects explains why phenomenal numbers of trees, especially in urban areas, are being cut down. You know those trees we are told are so essential to 'stop global warming'. A *Sunday Times* investigation using the Freedom of Information Act found that 110,000 trees had been chopped down in three years by UK councils including Newcastle (8,414), Edinburgh (4,435) and Sheffield (3,529). The excuses for doing so were pathetic and the real reason is 5G and the preparation for autonomous vehicles which need a clear connection to 5G. Scientists and doctors independent of the industry and the Cult have spoken out about the multiple dangers posed by 5G. One is Dr Joel

Moskowitz, a public health professor at the University of California, Berkeley, who says the deployment of 5G is a mass experiment on the health of all species because millimetre waves are weaker than microwaves and predominantly absorbed by the skin which takes the focus of the 'hit'. He says skin contains capillaries and nerve endings which allow 5G bio-effects to be transmitted through molecular mechanisms and the nervous system (the skin is actually an antenna like the skeleton and the body in general). Dr Moskowitz warned that '5G will use high-band frequencies, or millimetre waves, that may affect the eyes, the testes [end of procreation agenda], the skin, the peripheral nervous system, and sweat glands ... Millimetre waves can also make some pathogens resistant to antibiotics.' Something rarely mentioned is that 'viruses' and diseases are, like everything, expressions of specific frequencies and if you broadcast those frequencies powerfully enough you can spread disease among the population without chemicals and direct contact and most certainly weaken the immune system which makes 'viruses' and pathogens more destructive (you'll see why I am putting 'virus' in quote marks when we get to the pandemic hoax). Dr Ben-Ishai from the Department of Physics at Israel's Hebrew University has warned that human sweat ducts 'act like an array of helical antennas' when exposed to 5G wavelengths and Dr Devra Davis, an internationally-renowned American epidemiologist, President of the Environmental Health Trust and director of the Center for Environmental Oncology at the University of Pittsburgh, said at the start of the 5G roll-out:

If you are one of the millions who seek faster downloads of movies, games and virtual pornography, a solution is at hand, that is, if you do not mind volunteering your living body in a giant uncontrolled experiment on the human population. At this moment, residents of the Washington, DC region – like those of 100 Chinese cities – are about to be living within a vast experimental millimeter wave network to which they have not consented – all courtesy of American taxpayers.

This work shows that the same parts of the human skin that allow us to sweat also respond to 5G radiation much like an antenna that can receive signals. We need the potential adverse health impacts of 5G to be seriously evaluated before we blanket our children, ourselves and the environment with this radiation.

Unravelling human biology

Frank Clegg, former President of Microsoft Canada, is another vocal campaigner highlighting the dangers of 5G to health and DNA which is another receiver-transmitter of information waves and immensely vulnerable to being unravelled and mutated by waves of technological radiation. Then there is John Patterson, an Australian telecommunications engineer and radiation expert, who was so concerned about the dangers he identified that he 'borrowed' a former British army tank and demolished six Sydney mobile phone transmitter towers in 2007. He wanted to highlight what he called the devastating risk to human life, nature and the planet all of which are wave and electromagnetic fields and seriously affected by technologically-generated electromagnetic waves. Patterson's protest came even before the roll out of 5G and we should not allow a focus on 5G to obscure the fact that all electromagnetic technology is potentially harmful to humans, 3G, 4G, or whatever label is used. It's only a matter of scale. John Patterson took his drastic action after being fired for producing a report revealing mega-levels of technological radiation and being ignored by every government and telecommunications agency including Standards Australia, Australian Communications Authority, Australian Radiation Protection and Nuclear Safety Agency, Local Government Association, national parliament and the military – all of which will be tools of the telecommunications industry which is a tool of the Cult. The same story can be found throughout the world because the Cult is running the show. Patterson's campaign began when he was very sick himself and this became even worse when two mobile phone base stations were installed close to his place of work. By then he was having regular heart attacks and suffering many health effects that he saw in work colleagues, some of whom died. Patterson said that 'Telecom had a very high number of suicides' and we have suicides soaring among young people deluged with technological

waves from smartphones and masts. Electromagnetic wave disruption imbalances the wavefield mind as well as the body while the brain processes information (perception) electrically. Remember, too, that when you make a call the cell tower broadcasts a dedicated radiation connection just for you and you unknowingly irradiate everyone and everything in its path *every time you use the phone*. Patterson offers this advice to mobile phone users: Minimise the use of phones in buses and trains in peak hours; avoid closed rooms with mobile phones; wind all the windows down if you use a mobile phone in the car – ('For a mobile phone signal to go through 3mm of glass it has to double its power'); Tinted glass is less permeable to mobile phone signals so causing the phone to increase power; pregnant women definitely should not use mobile phones given that the foetus absorbs radiation that its mother absorbs; don't send SMS text messages as the mobile phone transmits at maximum power for this. These are some of the mind and body effects described by Cairnsnews.org which Patterson experienced himself and witnessed in others after radiation exposure from nearby phone masts:

- Short-term memory loss
- Long-term memory loss
- Involuntary contraction of muscles and tendons
- Sleeplessness
- Chronic fatigue
- Problems with balance
- Sore neck muscles
- Jaw out of alignment
- Vertebrae in shoulders and bottom four vertebrae out of alignment caused by cramping of muscles
- Reduction in elasticity in body, especially throat, resulting in a 'choking' effect when swallowing
- Thyroid problems [which delete the immune system]
- Heart problems (including heart attacks)
- Stomach valve not opening properly, leading to heartburn and nausea
- Changes to gait
- Numbing of the skin
- Black rings around the iris
- Kidney problems
- Liver problems leading to skin problems, rashes and pimples that don't heal. Patterson says he saw at least a thousand workers with similar skin problems.
- Inappropriate emotional responses

I repeat – this was even before 5G. Patterson points out that overhead powerlines become conductors of mobile phone signals when people make calls close by and while science tests the impact of single phones the public is being exposed to simultaneous sources from multiple phones and masts making the cumulative effect far, far worse. He likens a crowded bus or train with many people using phones to a microwave oven. Now they are making them possible on aircraft. Patterson's overall conclusions are the same as those I have highlighted in my books over decades – technological fields disrupt natural fields and the consequences are cumulatively catastrophic. A major effect is on the polarity spin of body cells. Patterson said:

The body is like a spinning top charged through nature's fields and waves. Synchronicity to these fields creates good health. When we're unsynchronised to the spinning top effect, sickness and disease appear. Continual exposure to the polarisation of mobile phones is diminishing our ability to recognise nature.

Martin Pall is a Professor Emeritus of biochemistry and Basic Medical Sciences at Washington State

University and a man I will quote later with regard to 5G and ‘coronavirus’. He has published a very long list of articles and papers on the subject of electromagnetic fields and 5G. His findings support the direct experience of John Patterson and he emphasises the effect on the heart for all ages, a ‘rapid crash in collective brain function’, very early-onset Alzheimer’s and both ‘a rapid and irreversible crash in human reproduction to close to zero, based mainly but not solely on the impacts on male reproduction’ and ‘massive deterioration in the human gene pool, caused by the DNA effects in human sperm and possibly also on human eggs’. The latter two relate to the Cult’s end-of-procreation and population cull agendas which I will detail in the next chapter. Professor Pall relates how widespread neuropsychiatric effects are produced by low-intensity electromagnetic field exposures, including depression: ‘Depression can cause suicide and various neuropsychiatric effects may well lead to abusive behavior.’ Here we are with suicide rapidly increasing especially among the young in the ‘smart’ era with 5G exponentially increasing the impact of technological electromagnetic fields. Pall also said in 2018:

I predict that many organisms will be much more impacted than we will. This includes insects and other arthropods, birds and small mammals and amphibia. It includes plants including even large trees, because trees have leaves and reproductive organs that are highly exposed. I predict there will be major ecological disasters as a consequence of 5G. This will include vast conflagrations because EMF exposures make plants much more flammable.

Professor Paul said that ‘putting in tens of millions of 5G antennae without a single biological test of safety has got to be about the stupidest idea anyone has had in the history of the world’. Stupid if you care about humanity, but perfectly explainable if you don’t. Pall’s assessment is that ‘5G presents threats of the sort that we have never seen before – multiple imminent existential threats to our survival.’ From the Cult’s point of view that’s the idea and what better way to hide that reality than behind a fake ‘climate emergency’ promoted by your puppets in the Climate Cult and claimed to be ‘an existential threat’ to humanity?

World-changing

Figure 332: Schumann Resonance through which life in our reality can connect and interact is being destroyed by the tidal wave of technologically-generated electromagnetic frequencies.

Figure 333: While the ‘Greens’ are obsessed with the human-caused climate change hoax the real danger to the natural world and humanity is ignored or even supported.

Figure 334: Plant growth with Wi-Fi and no Wi-Fi.

Figure 335: Plant growth with microwaved water and purified water.

Confirmation for Pall's and Patterson's words comes from the devastating impact of technological radiation on the planet's natural frequency state known as Schumann Cavity or Schumann Resonance which is named after German physicist Winfried Otto Schumann. This operates in the extremely low frequency or ELF range between 6 and 8 Hertz which is the frequency band of human brain activity and all biological systems ([Fig 332](#)). The frequency of 7.83 Hz is said to be where everything can connect and communicate in unity. The Cult is purposely scrambling the frequency connection – *Oneness* – between humans and nature and humans and each other. We are part of a vast universal electrical system and we interact with the Earth's magnetic field which itself is part of the universal field or The Field. Humans have a flow of electromagnetic energy from The Field entering through the top of the head (crown chakra) which is distributed throughout the body by the chi acupuncture network – chi is electricity encoded with information. The dismantling and distorting of this connection by technological radiation (with 5G taking the effect to a level beyond anything we have yet experienced) is having untold consequences for body/mind health and the term 'health' is just another way of saying balance or harmony. This interaction with The Field has a profound impact on the body-field oscillation which is what we call life in this reality. When the oscillation stops the body dies and the weaker the oscillation gets the weaker we get. The same interaction applies to the entire natural world and this is why bees and insects among much else are disappearing. Older people will remember how insects were constantly hitting their windscreens in the summer because they were so abundant; but now? None of this appears to be a problem for the 'Green movement' and its Climate Cult which in many ways sees the technology dystopia as an answer to 'climate disaster'. I described earlier how members of the UK Green Party were denied by its Climate Cult hierarchy a debate on 5G at the 2019 annual conference and one member was threatened with the police while protesting the decision outside the venue ([Fig 333](#)). They don't seem at all interested in a 5G technology that threatens the natural world in all its forms with mass disruption from its wave frequency impact on animals, insects, plants, trees, the lot. What does the US Green New Deal call for? The building or upgrading to energy-efficient, distributed, and 'smart' power grids. I saw a headline at the New Woke 'Eco Warrior Princess' website which said: 'Smart Grid Technology in the US: Benefits to Environment and Social Justice.' Many experiments have revealed how Wi-Fi blocks plant growth and 5G has the potential for a serious effect on nature and food production to add to the Green demand to reduce the gas of life or plant oxygen ([Figs 334](#) and [335](#)). Nature is being destroyed from insects to bees to birds by technological frequencies and humans are going the same way.

A study in India exposed bees to a cell phone for ten minutes and found that they stopped metabolising sugars, proteins and fats – in *ten minutes*. Now apply this to the staggering increase in human diabetes (flawed metabolising of sugars); heart disease (which is affected by frequency impulses); and cancer (cell growth can be distorted by technological electromagnetic fields). Is it really a coincidence that in the period that all this has happened dementia has soared? We are in a real crisis caused by technological wavefields while the Cult sells the fake crisis of climate change and has hijacked the Green movement to attack those exposing the facts. Whales and dolphins that navigate through a Schumann connection have been beaching themselves in large numbers while birds, bees and insects are being similarly affected through navigational disruption. Physicist and Schumann researcher Wolfgang Ludwig said: ‘Measuring Schumann resonance in or around a city has become impossible ... electromagnetic pollution from cell phones has forced us to make measurements at sea.’ Professor Rutger Wever from the Max Planck Institute for Behavioural Physiology in Germany built an underground bunker isolated from Schumann resonance to study student volunteers for a month. Isolation from Schumann frequencies caused biological rhythms (circadian rhythms) to be scrambled and they suffered emotional distress (see humanity today) and migraine headaches. These symptoms disappeared after only a short exposure to 7.8 Hz. There are gathering numbers of people worldwide suffering so seriously from what is termed ‘electrical sensitivity’ that they have to live alone as far from technological radiation as possible, but where can they run with this shit blasted everywhere from satellite thanks to Musk and his masters? They are technology-generated radiation sensitive and the number is bound to soar with 5G. American activist Arthur Firstenberg, author of *Microwaving Our Planet: The Environmental Impact of the Wireless Revolution* and *The Invisible Rainbow: A History of Electricity and Life*, said in 2018:

At least 20 million people in the world, and I estimate that conservatively, have already been injured by cell phones and their infrastructure so severely that they cannot work. They are driven out of their homes and cities and cannot live in society.

They are environmental refugees and they are in every country. Many are housebound and cannot venture outside ... many of these people are homeless, living in cars and tents, in remote areas, committing suicide and no one comes to their aid.

Firstenberg was speaking even before 5G. The manipulated frequency disconnection between humans and their environment has many benefits for the Cult agenda including that technocracy requires a disconnection from the natural world. A survey by Britain’s National Trust in 2020 found that more than 70 percent of children say they rarely or never watch clouds, butterflies and bees and most adults had rarely or never listened to birdsong or smelled wild flowers over the previous year. Never mind they could always watch videos of them on YouTube or download images from Instagram.

Give children smartphones?

Figure 336: Assimilation now starts early.

Children are far more damaged by radiation and they are sitting in Wi-Fi fields at school all day and then going home to the same Wi-Fi along with the added radiation fields of smart meters, smartphones and Wi-Fi in the street. *No safe level* of wireless radiation has been determined for children or pregnant women and that's likely true for everyone. Brain cancers in children have rapidly increased where they put phones to their ear – adults, too – and tumours of the heart (disrupting the heart on the wavefield level is a prime objective of the Cult). What a grotesque sight it is to see parents allowing babies to play with these devices or toddlers in highchairs for no other reason than to keep them placated ([Fig 336](#)). Phone use for just 20 minutes a day can triple the risk of a brain tumour with thinner-skulled children at the greatest risk. The *Chicago Tribune* reported in 2019 that eleven smartphone models exceed federal radiation safety levels (already ridiculously high) by *500 percent*. An investigation by the Swiss Tropical and Public Health Institute which replicated an earlier study established memory damage in teenagers who had used a cell phone for a year. This was especially the case with those putting the phone to the same ear with impaired memory in those parts of the brain getting the biggest exposure to phone radiation. A BBC report revealed that most children surveyed in the UK sleep with their phone by the bed, which can be seriously detrimental to both health and sleep, while mobiles are being handed to children at an ever earlier age with most having a phone by age seven. Ownership becomes 'pretty universal' by age eleven. Even against this background of phone and Wi-Fi health consequences Apple is selling 'Airpods' which people stick in their ears to pick up Wi-Fi. Bluetooth does the same. It is cumulative suicide and the *companies don't know that?* How many phone users realise that in the fine print these companies tell you not to put the phone to your ear? This is the get-out clause for the tidal wave of lawsuits they know will eventually come their way. Lloyds of London, one of the world's premier insurance groups, refuses to insure health claims made against 5G and Wi-Fi technologies. What do they know that the public is not being told? *Plenty.* Cancer, heart malfunction, dementia, weakened immune systems, miscarriages, stillbirths, insomnia, extreme nosebleeds, eye problems, depression, suicide, and other conditions and behaviour are all potential effects of 5G. Firefighters in San Francisco have reported memory problems and confusion after 5G was installed outside their stations and they said this only stopped when they moved to non-5G locations. These are the 5G waves impacting on the information processing of the brain and imagine what the situation will be when it is *everywhere* and being fired at us from Musk's satellites. Anyone still surprised at the soaring increase in teenage suicide when electromagnetic frequencies emitted by technology affect information processing by the brain? *The Cult is taking over the human mind* and for this reason laws are being passed to impose 5G on every community and stop anyone opting out. Another effect of technology waves is to break down the blood-brain barrier that keeps toxins out of the brain including nanochips. Children are being hit with this stuff before their blood-brain barriers are even fully developed. The telecommunications and Silicon Valley corporations promoting all this are controlled by pure psychopathic evil (the extreme absence of love). I hear some say there is no such thing as evil when there *is* by that definition. Indeed there must be the potential for evil and the absence of love within the infinity of All Possibility.

Cauliflower blood

American researcher Lena Pu is the environmental health consultant for the National Association for Children and Safe Technologies and she has the experience of working with military and government agencies. She is a vehement campaigner against 5G and Wi-Fi in schools, but even she was taken aback when she tested the blood of a teacher after a day in a classroom that wasn't even dowsed in maximum Wi-Fi power as many others are. She said the teacher's blood was the worse she had ever seen – 'sticky', coagulating and brown in colour. 'This is the first time that the blood was so thick that I could see the colour on a slide', Pu said. She described it as 'looking like cauliflower'. It took her a few minutes to talk to the teacher because she was in 'pure shock'. What was happening to the blood of the students in the same environment? What is happening to all children at school across the world every day with Wi-Fi

transmitted in almost every classroom whether they use it or not? Now 5G is being installed in schools across the world and hospitals. Blood is liquid and the Wi-Fi affect becomes obvious when you think that Wi-Fi operates in the same frequency band as microwave ovens which generate frequencies specifically designed to energise water molecules. What does the holographic human body mostly consist of? Water. Microwave ovens dry out food and Wi-Fi dries out (dehydrates) humans. What could possibly go wrong and what a coincidence, eh? I guess it's also a coincidence that driverless cars operate in the waveband that affects water. Consequences for body and mind include depression (see skyrocketing teen suicides again). Apathy is another symptom which is exactly what the Cult wants to provide a free run to its endgame.

Lena Pu found that Wi-Fi and technology transmitters can change their frequency which means that while they are officially transmitting on one frequency they can covertly be delivering other frequencies at the behest of whoever is in control. Pu's research has also shown her how technology frequencies are effecting the very formation and intake of oxygen and this connects with the global population cull I have been warning about for decades. The Smart Grid is the delivery system, but the controllers of the Grid decide at whatever time what is *being* delivered. We are told that this network is for 5G or 4G when that is only the technology to deliver other frequencies far beyond what we are told about. Humanity is not only building its own prison cell. It is watching its own microwave oven being installed step-by-step every day. Pu said something else that I have been pointing out year after year. These 'technology' waves are actually '*alive*' and a form of consciousness. Remember what I said about the most advanced AI being in truth a name for the very force behind human control? The introduction of 5G is going to increase the radiation effect of all of the above by many, many times. Nevertheless the mainstream media takes the side of industry and government, *of course*, with the *New York Times* running headlines such as 'The 5G Health Hazard That Isn't'. This was the same *New York Times* that partnered with Verizon 'to explore how 5G can be used in journalism'. Why the *Times* would want to know about the effect on journalism when it doesn't do any was not explained. A *Times* reporter was accused of violating a truth and accuracy code by the Press Council of Ireland with regard to an article about 5G. Given that the paper is an ultra-Zionist-owned rag that serves the interests of the Cult there is no surprise there then. A 'journalist' called Alex Hern wrote an article in the 'anti-Establishment' deeply-establishment London *Guardian* headed: 'How baseless fears over 5G rollout created a health scare'. Hern licked the arse of the industry and its '5G is perfectly safe' propaganda while basically dismissing any concerns as 'junk science'. What a disgrace to journalism, but oh, so typical of his kind across the media. All these health concerns are believed acceptable for faster Internet speeds that are already fast enough. Endanger your health and you can download your movies quicker – you know it makes sense. Faster speeds are just another 'here kitty, kitty' to the Smart Grid dystopia ([Fig 337](#)).

5G is a weapon

Figure 337: Faster downloads – faster surveillance and data collection – and faster and more powerful the impact on human wavefields. (Image by Ben Garrison at Grrrgraphics.com.)

Figure 338: Active Denial weapons in the millimetre band of 5G. The skin – an antenna – decodes the frequencies into the feeling of intense heat as if the skin is on fire.

Ultra-high millimetre frequencies used by the 5G band are in fact employed as a *weapon* by the American, Israeli and other military and law enforcement (same thing) under the name ‘Active Denial Technology’ ([Fig 338](#)). This transmits millimetre band frequencies from military/law enforcement trucks to rapidly disperse protests and crowds. People scatter when their skin (an antenna) decodes the frequencies into the feeling that their skin is on fire and they run to get away from it. A US Department of Defense report said: ‘If you are unlucky enough to be standing there when [the beam] hits you, you will feel like your body is on fire.’ With such skin-5G interaction how many people will die of skin cancer as a result of its imposition? The disruptive potential is obvious for body and brain of 5G waves everywhere you go and for affecting even the wave oscillation of the body that gives it life. Consider the effect on the whole electromagnetic soup in totality on the wave oscillation of the body. The military potential is fantastic and NATO countries agreed to ‘guarantee the security of our communications, including 5G’ at their 2019 summit in London. The real reason for the 5G roll out is military and anti-human. The Pentagon-advising Defense Science Board detailed the military potential of 5G in a document called Defense Applications of 5G Network Technology: ‘The emergence of 5G technology, now commercially available, offers the Department of Defense the opportunity to take advantage, at minimal cost, of the benefits of this system for its own operational requirements.’ Get your Cult ‘private’ companies and taxpayer money to fund a 5G network that’s really intended for the Cult military. 5G will take war fighting, mass killing and mass surveillance on to a new level. Fortunately, public resistance to 5G is growing despite Cult industry propaganda parroted by the Cult media and Cult social media and the Cult’s YouTube deleting accounts and videos of those exposing the dangers. Be careful, however, as with all apparent opposition groups, that some are not fronts for what they claim to oppose. Astroturfing is everywhere today.

Poison from the sky

Figure 339: The chemtrail phenomenon all over the world.

One other crucial point about 5G and other forms of technological radiation is the phenomenon known as ‘chemtrails’ which started to be noticed in the 1990s and has subsequently been reported all over the world. I will be brief because I have detailed this subject at length in *Everything You Need To Know*. People

are familiar with *contrails*, or condensation trails, that flow from the back of aircraft and quickly disappear. *Chemtrails*, or chemical trails, do not disappear. They slowly expand and combine until even a clear blue sky can appear cloudy and hazy. The content of chemtrails falls to earth to infest people, animals, water sources, trees, plants, soil, everything ([Fig 339](#)). Tests have revealed that chemtrails contain aluminium, barium, radioactive thorium, cadmium, chromium, nickel, mould spores, yellow fungal mycotoxins, polymer fibres, smart dust nanotechnology, and so much more in cumulatively lethal concentrations for human health. The aluminium content is a major source for the aluminium/glyphosate impact on the pineal gland and aluminium, a brain toxin, has been rightly linked to Alzheimer's and other forms of dementia which have become an epidemic affecting younger and younger people. Why wouldn't that be when aluminium, in effect, short-circuits the brain? With regard to the technological sub-reality, or 'cloud', chemtrails add to the conductivity of the atmosphere and turn it into an antenna. It's all connected to the same end. Chemtrails were dismissed as a 'conspiracy theory (of course) and then Bill Gates (of course) began officially promoting and funding them to 'block the sun' to save the world from 'global warming'.

AI world army

The world army enforcing the will of unelected technocrat world government is not ultimately planned to be human and the transition to an AI military is already well underway. We are moving rapidly to artificial intelligence (the Archontic force essentially) making global decisions about life and death through control of weapons that truly are weapons of mass destruction. AI won't only control the Smart Grid and every facet of 'human' life. It will decide if you live or die and that can be done en masse through humanity's AI connection to the Grid. The middle strata of the Hunger Games Society between the elite and the masses is planned to be occupied by an AI world military/police state of constant surveillance with the elimination of all dissenters. If you've seen the *Matrix* movies you'll be aware of the 'Sentinels' or machines in their seek-and-destroy missions against humans operating outside the AI control system. This in theme is the AI world army consisting of AI robots and weapons systems that even military commanders would not in the end control. For autonomous vehicles see autonomous weapons, too, directed by the Archontic force and its Cult operatives. AI control would at some point allow the Cult elite and its technocrats to take refuse from any protesting humanity in mega underground and within mountain cities that I was writing about as long ago as the 1990s. All this has been planned a very long time. Cult arms companies are developing laser weapons controlled by AI – tanks, planes, helicopters and battleships are all being designed and introduced with AI making the decisions. DARPA as you would expect is at the centre of this although itself answers to those much deeper in The Web. This is the same dark and sinister Cult-created DARPA behind the Internet and Silicon Valley corporations like Google and Facebook. Aircraft drones equipped with weapons are being developed with a 'neural microchip' that lets them 'think like a human'. Drone surveillance systems are well advanced and in 2019 Turkey unveiled a fleet of drones equipped with a machine gun and 200-rounds of ammunition. The thought of the military flying AI drones with machine guns would once have been science fiction territory. Even so Turkey is way back from the cutting edge of drone capability compared with the United States, China, Russia and Israel. How about AI controlling laser and other focused energy and beam weapons that can strike anywhere on Earth from satellite? Anyone who dismisses that has not been paying attention to what is actually *happening*. The contempt that the Cult has for the human population was confirmed yet again when the US Department of Defense appointed Eric Schmidt, Trilateral Commission member and former CEO of Google, to chair the Defense Innovation Board established in 2016 to formulate 'ethical standards' in the use of AI in the battlefield in line with the 'best practice' of Silicon Valley. What 'best practice'? Walter Isaacson, another Trilateral Commission member, former President of the One-percent's Aspen Institute, chairman and CEO of CNN and Managing Editor of *Time*, is also on the board. The members are selected by Schmidt in consultation with the Secretary of Defense.

The idea that Schmidt is going to propose genuine and enforceable ‘ethical standards’ on military AI is a joke so sick it is beyond laughable when he fronted for Google as it was transforming the Internet into the censorship-ridden, freedom-deleting, AI-dictated abomination that it has become.

Figure 340: The Cult is creating a world military force in which decisions are made by artificial intelligence outside the control of humans.

Satellites are being launched all the time without publicity in pursuit of global control and when they are mentioned it is their civilian and commercial uses that are emphasised when many have military applications. Russia’s President Vladimir Putin made this point in 2019 when he said that world powers were increasingly weaponising space and Russia had to respond: ‘The US political and military leadership openly consider space a war theatre ... Developments demand that we pay increased attention to strengthening our orbital group as well as our rocket and space industries.’ Russia’s ‘orbital group’ is reported to have 150 satellites with two-thirds of them having military applications. The United States will be much further ahead than that and then there is China, too. President Trump created the US Space Force, the first new military branch since 1947, when he signed the 2020 National Defense Authorization Act. ‘Space is the world’s newest warfighting domain’, Trump said. ‘American superiority in space is absolutely vital.’ This was delivering exactly what the ultra-Zionist Project for the New American Century called for in its September, 2000, document demanding that list of regime changes which followed the Sabbatian-Frankist-instigated 9/11. The fact that Trump is owned by Israel is naturally purely coincidental. Space is another ‘domain’ for the child-like playground bullies to fight. The world is run by a psychopathic playschool. Academics and scientists have warned that killer robots will leave humans defenceless while not appearing to realise that *this is the very idea*. ([Fig 340](#)). Even using humans in the military/police state carries with it the possibility of rebellion once they see what the game is. That is avoided with AI and those in the military and police today should realise that they would be in the Hunger Games masses once AI law enforcement took over. The world’s first robot officer officially joined the Dubai police in 2017. ‘Robocop’ can read facial expressions, respond in six languages, and has a built-in tablet that can be used to report crime and pay fines. Brigadier-General Khalid Nasser Al Razzouqi, Director-General of Dubai Police ‘Smart Services’, said:

With an aim to assist and help people in the malls or on the streets, the Robocop is the latest smart addition to the force and has been designed to help us fight crime, keep the city safe and improve happiness levels. He can chat and interact, respond to public queries, shake hands and offer a military salute.

Dystopian vision

Authorities in the Dubai fake-royal tyranny want at least a quarter of its police force to be robots by that year again – 2030 – which also turned up in an article by Danish politician and World Economic Forum insider Ida Auken which was posted on the Forum website in 2016. It was headed: ‘Welcome to 2030. I own nothing, have no privacy, and life has never been better.’ She described her home at that time as ‘our city’ and was concerned for those who did not want to share the then AI technocratic society. She

described them as 'Those who decided that it became too much, all this technology' and 'Those who felt obsolete and useless when robots and AI took over big parts of our jobs.' In Auken's scenario such people lived a different life in 'little self-supplying communities' or 'just stayed in the empty and abandoned houses in small 19th century villages'. She continued in her 2030 prediction:

Once in a while I get annoyed about the fact that I have no real privacy. Nowhere I can go and not be registered. I know that, somewhere, everything I do, think and dream of is recorded. I just hope that nobody will use it against me.

All in all, it is a good life. Much better than the path we were on, where it became so clear that we could not continue with the same model of growth. We had all these terrible things happening: lifestyle diseases, climate change, the refugee crisis, environmental degradation, completely congested cities, water pollution, air pollution, social unrest and unemployment. We lost way too many people before we realised that we could do things differently.

She was describing the Problem-Reaction-Solutions and NO-Problem-Reaction-Solutions that led to the technocracy so long planned by the One-percent mentality behind the World Economic Forum except that the 'little self-supplying communities' would not be allowed.

We can see how a very few could control the entirety of humanity through an AI brain connection, a centrally-directed AI global army and a Smart Grid controlling everything. A further aspect of AI in relation to the Hunger Games Society is the absolute carnage which Auken indicated that is coming for jobs and income through the mass-replacement of humans with AI technology which is already happening at a quickening speed (written before the carnage of jobs and income that came with the manipulated lockdowns).

Even news items are being written by artificial intelligence with AI digital news and sport presenters being developed. None of this is by chance. It's by Cult. How few do you need to dominate the world through the global Smart Grid when centrally-controlled AI can decide what happens with everything connected to the Internet, all surveillance, communication systems, transport, economics, food production and distribution, what news items say, and even the digital AI that presents them? All this and so much more is planned to be centrally dictated and I make the strong case in *The Trigger* that this point of control in the Smart Grid is planned eventually to be Israel, the fiefdom of the Sabbatian-Frankist cult, the prime network in the global Cult.

CHAPTER THIRTEEN

What is really behind transgender hysteria?

Tolerance isn't about not having beliefs. It's about how your beliefs lead you to treat people who disagree with you - Timothy Keller

I have indicated a number of times so far that there is a deep and sinister motive behind transgender hysteria that has gripped the mind of New Woke and been tyrannically imposed on the rest of society. Know the outcome and you'll see the journey.

The Cult wants a no-gender synthetic 'biological' human to replace what we have now. The new human body is being designed to better interact with AI and to be able to survive the catastrophic levels of destructive radiation necessary for the Smart Grid to function in its final form which the current human body would struggle to survive. 5G is not the end in terms of the impact of frequency transmissions; it is only the next stage. Synthetic genetics is advancing rapidly in public arena projects and far more so in underground bases where the Archon-to-Cult knowledge transfer takes place. Synthetic biology or 'SynBio' is a fast-emerging area of science that includes everything from genetic and molecular engineering to electrical and computer engineering. The content of the Bill Gates 'virus vaccine' is designed to advance this process as I will be explaining. Definitions of synthetic biology include: 'A multidisciplinary area of research that seeks to create new biological parts, devices, and systems, or to redesign systems that are already found in nature'; 'the use of a mixture of physical engineering and genetic engineering to create new (and, therefore, synthetic) life forms'; and 'an emerging field of research that aims to combine the knowledge and methods of biology, engineering and related disciplines in the design of chemically-synthesized DNA to create organisms with novel or enhanced characteristics and traits'. When translated from the Orwellian this means synthetic post-humans. Transgender hysteria is the Tiptoe on a road that leads to synthetic *everything*. The pressure for vegan diets being pushed to 'save the world' is only a Tiptoe to synthetic food which will be further advanced by manipulated food shortages in the wake of the 'virus' hysteria – if we let them do it. American scientists claimed in 2020 they had developed 'Xenobots' that are 'neither robot nor animal' constructed from living frog cells and described as 'living machines'. Research groups are leading the world to artificial wombs and gestation and these are only projects publicly known, not the cutting edge that we don't see. A lamb was grown in an artificial womb for four weeks and Australian researchers have experimented with lambs and sharks. A 2017 article in the London *Guardian* was headed 'Artificial wombs could soon be a reality. What will this mean for women?' It said:

We are approaching a biotechnological breakthrough. Ectogenesis, the invention of a complete external womb, could completely change the nature of human reproduction. In April this year, researchers at the Children's Hospital of Philadelphia announced their development of an artificial womb ...

... Researchers at Cambridge University, meanwhile, have also kept a human embryo alive outside the

body for 13 days using a mix of nutrients that mimic conditions in the womb. The embryo survived several days longer than previously observed and research only stopped because they were approaching the 14-day legal limit for the length of time an embryo can be kept in a lab. In other words, our ethics rather than our technology are now the limiting factor.

Figure 341: This is how far machine humans have come in the public arena and this is far from the cutting edge in the secret projects and underground facilities.

Figure 342: It goes with the territory once you break free of The Program.

Reflect on that phrase ‘could completely change the nature of human reproduction’ in the light of what I have said in this book and much earlier ones about the plan for the end of human procreation described by Aldous Huxley. Many research centres around the world are seeking to develop synthetic skin,

organs, blood, even brain tissue. Public experimentation reveals the direction while giving the impression that the development is at a really early stage. Behind the scenes synthetic biology is extremely advanced through Archon-Cult knowledge transfers in the underground facilities hidden far from the public gaze. Genuine research by genuine people provides the cover with an apparent process of development while the finished article is already waiting to be played out in the public arena when the time is right.

Synthetic robots are even looking ever more like the humans they mimic and the ‘consciousness’ of these robots is artificial intelligence ([Fig 341](#)). We should not only think of AI with regard to robots and machines, but also with digital virtual people that don’t exist except in cyberspace. The plan in the end is to absorb human minds into only cyber reality with no ‘physical body’ at all and the stepping stones to that are already clear to see. Remember that picture from earlier of very human-looking people that don’t exist except as cyber creations. Once you know the game the world becomes an open book and Bubble minds confirm that by calling you crazy ([Fig 342](#)). Transgender hysteria has come out of nowhere to be suddenly everywhere because the Cult has pressed the button on the preparation for the synthetic human which will have no gender and not be able to procreate. Aldous Huxley who operated in the arena of Cult operatives envisioned just such a society in his prophetic *Brave New World* in 1932:

Natural reproduction has been done away with and children are created, ‘decanted’, and raised in ‘hatcheries and conditioning centres’. From birth, people are genetically designed to fit into one of five castes, which are further split into ‘Plus’ and ‘Minus’ members and designed to fulfil predetermined positions within the social and economic strata of the World State.

Huxley was precisely predicting the Cult agenda the best part of 100 years ago. Understanding how

Huxley in 1932, George Orwell in 1948 and Dr Richard Day in 1969 could know what was coming relates to how I have been able to so accurately predict events in my books over the last 30 years. If you have access to the hidden agenda as an insider, as with Day, or penetrate the plan by decades of research, you can comfortably predict what we perceive as the future. It can be done on this basis: If there is an agenda for the world and nothing intervenes to stop that then what is planned will happen and in this way by uncovering the plan you 'predict' the 'future'. The idea from my perspective is to alert enough people so the plan is stopped. It will rightly be asked how Huxley and Orwell could predict events so far ahead which involved technology and drugs that didn't even exist at the time. This included Orwell's Big Brother 'Telescreens' keeping constant surveillance in every home. Today they are known as Smart TVs although there are much more extreme versions in the pipeline. That question of how they could be so accurate about technology that didn't exist can be answered this way: There are two realities in human society working alongside each other with very different levels of knowledge. One is Postage Stamp Society with strictly limited information and the other is Cult reality interacting with Archontic reality through the inner sanctum of secret societies and Satanism. The latter connection especially allows inner-core Cult initiates to know about technological possibility and projected plans even when they are not yet available or happening in human reality. Those that operate in those circles can pick up themes of where the world is being taken and technology that will be possible to take us there even if they are not directly part of the Cult itself. Non-insiders who don't operate in those circles have to work their backsides off to breach the secrecy with both five-sense research and expansions of consciousness that can connect with levels of awareness working to end human enslavement and help people awaken from their perceptual coma.

Confuse gender then fuse gender

Figure 343: Non-binary on the road to no-binary as self-identity goes on being squeezed into smaller and smaller bubbles.

The current obsession with transgender and its imposition on children and the young (as always) by schools, universities, media and peer pressure is an intensely malevolent campaign to confuse gender on the way to *deleting* gender with the synthetic technologically-created no-gender human. From this comes an even smaller bubble of self-identity ([Fig 343](#)). Cult insider Dr Richard Day told the paediatricians in 1969 that the plan was to make boys and girls the same and children would be produced without sexual procreation. The Cult is confusing gender on a Totalitarian Tiptoe to *fusing* gender. The largely unnoticed first stage was to dilute the differences between men and women and increasingly treat them as biologically the same when they have clear differences that should complement each other. Their body information fields process information differently and women have gifts and aptitudes that most men don't have and vice-versa. The idea has been to dilute that uniqueness and most importantly the *perception* of uniqueness with slogans like a woman can do anything a man can do just as well. Actually that's not true in many cases and the same with a man doing anything a woman can do just as well. There are differences and we must not let New Woke insanity kid us otherwise. I am not saying that women

should not do whatever they choose and good luck to them. My point is how the manipulation has been operating slowly and then ever-quicker towards the end of gender and the blurring of differences between men and woman was stage one. We have had as a result the feminising of men and masculinisation of women. Recall the progression (Tiptoe) in how first we had 'unisex' clothing for both men and women and now no-gender clothing. Female uniforms are being phased out for a no-gender variety with police forces and military increasingly scrapping traditional men's and women's uniforms for 'gender-neutral' versions and the same with school uniforms. Tiptoe, Tiptoe, Tiptoe.

The deletion of the terms 'ladies and gentlemen' and 'boys and girls' are also calculated to delete the concept of male and female gender from the language and so the psyche. We are well into the next stage today with the number of young people questioning their gender increasing dramatically and kids suddenly bewildered about their gender who would not have been before without the systematic programming. Why does anyone think 'question-your-gender' studies are becoming compulsory in schools? Why do they think gender-confusing drag queens are being invited into schools in country after country to read gender-confusing stories to even very young children? Why are parents and anyone else challenging this calculated and disgraceful manipulation of kids instantly branded 'transphobic' by often vicious transgender New Woke activists and the media? It's the same modus operandi that we have with climate change activists, 'anti-racist' activists, gay activists, political correctness activists and all the other mix-and-match permanently-offended intersectional expressions of New Woke serving the Cult while overwhelmingly in ignorance that there is a Cult. Nothing is more certain to scramble the brain than the virulent up-your-own-arse syndrome that pervades New Wokeness like a roaring epidemic. Maybe we should shut down the global economy and put everyone under house arrest until it passes. The consequences of this tyranny for many children are horrific and life-long. Research by doctors in Australia revealed that those attending gender identity clinics are many times more likely to show signs of autism than the general population. The doctors reported their findings in the *Journal of Autism and Developmental Disorders* and quoted a US study of nearly 300,000 children that suggested those with autism were more than four times more likely to be diagnosed with gender 'dysphoria' compared with those without autism. Stephanie Davies-Arai, founder of the campaign group Transgender Trend, said people with autism spectrum disorder (ASD) are more likely than others to become fixated on an idea which they can find almost impossible to drop (see Greta Thunberg). She warned: 'We should not just be cheering on this vulnerable group towards life-changing medical interventions.'

Figure 344: And it is planned to become ever more a thing of the 'past'. Female is a sex/gender and they are all planned to disappear. Men are the first target, but women are following fast.

Figure 345: Big powerful male bodies self-identifying as women are destroying women's sport – another way that the female sex/gender is being targeted for eventual elimination.

Figure 346: Parody is now almost impossible in the face of what is really happening.

Transgender Trend is a group of UK-based parents questioning the trend to diagnose children as transgender which has led to the unprecedented number of teenage girls suddenly self-identifying as 'trans'. The group challenges laws which put transgender rights 'above the right to safety for girls and young women in public toilets and changing rooms along with fairness for girls in sport' ([Fig 344](#)). These legitimate questions and concerns are condemned as serious transphobia by the ever-scornful face of New Wokeness. I mean how could it possibly be valid to protect young girls and women from a strapping bloke walking into their toilet or changing room with his bollocks dangling claiming to be female; or a big muscular man taking part in the women's weightlifting championship because he goes by the name of 'Vera'? American Fallon Fox is a transgender mixed martial arts fighter who identifies as a woman while walking around in a powerful male body. Her/his self-identification allows her/him to compete against much less physically powerful women and she/he knocks the crap out of them. One woman had her skull broken. Criticism she/he faced for this, however, was purely transphobic and nothing to do with protecting women from life-changing harm. Outsports, a sports news website focusing on LGBT issues in sports, described Fox as the 'bravest athlete in history' to confirm yet again that transgender activism is not interested in fairness, balance and inclusivity. It seeks dominance for its view while itself being clueless about how and why it is being used by the Cult. What New Wokers call 'inclusivity' for one minority means exclusion and even a broken skull for another. Where you are in the hierarchy of Wokeness decides who dominates who and transgender is now way above female. Consequently women's sport is being destroyed by those in men's bodies self-identifying as women running away with the prizes and destroying previous female performance records. Why? Their bodies are *not female* ([Fig 345](#)). By the way, how come 'women' in male bodies can so out-perform those who are born women if males and females are not biologically different? Transgender extremism is a parody of itself ([Fig 346](#)). Transgenderism gets whatever it wants even though Catherine McGregor, a highly-intelligent and perceptive Australian transsexual, said: 'We are a telephone booth minority.' That's correct even with all the propaganda, but the Cult's no-gender human Tiptoe demands what is happening and so it happens. Transgender activist extremism is nothing *whatsoever* to do with support for transgender people. They are only pawns and the excuse just as with the Jewish community and

Sabbatian-Frankism. Support for Cult ambitions is what this is all about and as you would expect Sabbatian-Frankist, Cult-owned Hollywood has taken up the cause with transgender ‘superheroes’.

‘Unregulated live experiments on children’

I have detailed in *Everything You Need To Know* the list of ways that gender confusion is being manipulated from indoctrination in schools from the earliest ages to inhuman pressure applied by ‘gender’ doctors and clinics to push children and adults into gender transition without any evidence that this is necessary or advisable. Gender-changing and puberty-blocking drugs are being handed out at an alarming rate because that’s what the Cult wants. So blatant and extreme has this become that 35 psychologists resigned in three years from London’s Gender Identity Development Service (GIDS) at the Tavistock and Portman NHS Foundation Trust. They cited ‘over-diagnosis’ with too many children put on puberty-blocking drugs when they should not have been diagnosed with so-called gender dysphoria. Whistleblower workers have said children as young as three are having ‘unnecessary gender reassignment treatment’ after being incorrectly diagnosed with gender dysphoria. Carl Heneghan, director of the Centre of Evidence-based Medicine at Oxford University, described the policy as ‘unregulated live experiments on children’. The number of children treated at GIDS is reported to have increased in a decade from 77 to 2,590 – a trend that is happening across the world as the Cult agenda is enforced. Former GIDS staff said they were not able to properly assess people for fear of being dubbed ‘transphobic’. New Wokeness is nothing if not predictable and desperately naïve although its inner core knows exactly what it’s doing. One psychologist said: ‘We are extremely concerned about the consequences for young people … For those of us who previously worked in the service we fear that we have had front row seats to a medical scandal.’ Another said:

The alarm started ringing for me … I didn’t feel able to voice my concerns, or when I did I was often shut down by other affirmative clinicians. Looking back there are young people who I now wouldn’t necessarily put on medication.

Lisa Littman, assistant professor of the practice of behavioural and social sciences at Brown University in Rhode Island, said that many teenage girls are identifying as transgender after seeing a friend do so or after reading transgender material online. Teenagers with no previous history of ‘gender dysphoria’ suddenly proclaimed themselves to be transgender in the wake of an individual or multiple members of their peer group doing the same. Littman called these ‘cluster outbreaks’. A decade ago most ‘gender dysphoria’ children were biologically male but today they are biologically female. Clearly perceptual programming and group-think is playing a major role here. As you would expect Lisa Littman was subjected to major abuse from transgender activist extremism – so much so that her study was withdrawn and revised. Michelle Cretella, executive director of the American College of Pediatricians, said she has heard from dozens of families about teenagers experiencing ‘rapid-onset’ gender dysphoria. The majority are girls between 13 and 15 with often a history of depression and no previous signs of gender dysphoria. They suddenly announce they are transgender and should have hormone treatment. Cretella said:

Human beings are biological creatures heavily shaped by social relationships, especially during adolescence. It is at this most critical stage of development that our culture now holds out the lie that teens should embrace a mental illness – gender dysphoria – not only as their ‘authentic transgender identity’ but as the answer to all that ails them mentally and emotionally … [these children are] being needlessly led down a path of irreversible long-term physical and emotional harm.

The programming is incessant today with the BBC as always right up there. It aired on its *children’s* channel CBBC the documentary *I Am Leo* about a 13-year-old going through transition treatment at the

increasingly infamous Tavistock and Portland clinic. It naturally won an award. I have no problem with those who genuinely believe they are transgender. The problem is confusing children about gender who were not confused before. That's child abuse. Former BBC journalist John Humphrys – far too much of a journalist for today's BBC – recounted his experience of a doctor seriously concerned about what was being done to children in the transgender arena, but she was terrified of the backlash for saying so. Humphrys said the doctor 'was afraid of being viciously attacked on social media and having her reputation destroyed. She is not alone in her fear. Far from it.' He said the doctor was 'desperately worried' over far too many children being treated as victims of 'gender dysphoria' when they were suffering from a more common condition – 'being a confused teenager'. What can you say in the light of all this about the UK Liberal Democrat Party taking money from a puberty-blocking company while peddling an extreme transgender policy that benefits such organisations? *And the kids ...?* Graham Linehan, co-creator of the hit TV comedy *Father Ted*, spoke out against both this mistreatment of children and transgender extremism after seeing a feminist beaten up by trans activists. He faced an onslaught of abuse and hate from the anti-hate brigade that hasn't looked in the mirror for years. It wouldn't dare. Work opportunities dried up for Linehan from gutless potential employers. He said: 'I think there's just a stink around me, the stink of bigotry, you know, that has deliberately been created, by radical trans-rights activists. It has had a chilling effect.' Good on him for refusing to back down although with the proviso that Linehan himself had been involved in Woke-style censorship before he realised by experience what a tyranny it is. This chilling effect is now increasingly being written into law and the incessant propaganda led to Swiss voters supporting in a 2020 referendum the plan to make it illegal to 'publicly denigrate, discriminate or stir up hatred based on a person's sexual orientation'. This sounds fair enough, but it's the way this will be applied that is the danger to free speech. Who decides if something is discrimination or a freely held opinion? Who decides if transgender people don't get a job because they are transgender or because the potential employer thought another applicant was better qualified? Well, the state does and that's the Achilles heel of such laws when it comes to the deletion of basic freedoms.

In writing ...

Law website Rollonfriday.com and its reporter Jamie Hamilton revealed documents in 2019 that exposed the covert and highly manipulative nature of transgender activism targeting children. The document advises on campaign tactics and was written by staff at Dentons, described as the world's biggest law firm measured by the number of lawyers, which merged with Sonnenschein Nath & Rosenthal in 2010. The document was produced in conjunction with the Thomson Reuters Foundation and LGBT pressure group IGLYO. A Denton disclaimer states that the content 'does not necessarily reflect the personal views of any of the lawyers, staff or clients of Dentons'. Thomson Reuters Foundation apparently said something similar. Reporter Jamie Hamilton wrote that Mosaic, an LGBT youth group, contributed to the UK portion of the report along with an NGO that 'wished to remain anonymous'. The Denton report, headed 'Only adults? Good practices in legal gender recognition for youth', says in the foreword: 'We hope this report will be a powerful tool for activists and NGOs working to advance the rights of trans youth across Europe and beyond.' It contends that 'every child has an accurate conception of their own gender identity which they should be entitled to affirm in law without impediment'. To anyone still in touch with reality this is a breathtakingly ridiculous statement, but extreme transgender activism is dependent on not staying in touch with sanity let alone reality. We see the ever-recurring theme of deleting parental rights over their children to isolate the kids and hand power to the state and transgender extremists. Reporter Hamilton described the main thrust of the Denton document:

'The right to legal gender recognition is crucial for young trans persons to secure all other rights', it states, advising that the UK should 'eliminate the minimum age requirement' at which children can change their legal gender 'on their own volition, without the need for medical diagnoses or court determination'. The

document emphasises that there should be ‘no eligibility criteria, such as medical or psychological interventions’. And UK authorities should ‘take action’ against parents ‘who are obstructing the free development of a young trans person’s identity in refusing to give parental authorization when required.

Could it be any more sinister? Allow children to make life-changing decisions about their gender and ‘take action’ against any parents who challenge what is being done to their kids. In the words of the document: ‘It is recognised that the requirement for parental consent or the consent of a legal guardian can be restrictive and problematic for minors.’ Restrictive and problematic for transgender activism and extremism would be a better way of putting it. The Denton document says it is ‘crucial’ there are ‘no limitations’ to ‘gender confirmation treatment’, including ‘no requirement to be diagnosed with gender dysphoria’. It deletes all potential barriers and delays on any child ‘persuaded’ they are living the ‘wrong’ gender to be set on course to puberty blockers and surgery. Maybe someone could give me a better definition of child abuse because I can’t think of one in this moment. Another point is that through epigenetics or passed-on gene sequences the changes in one generation’s transgendered hormonal re-write will pass to the next. Rollonfriday.com reporter Hamilton continues:

The report advises activists to ‘de-medicalise’ their campaigns ‘so that legal gender recognition can be seen in the eyes of the public as distinct from gender confirmation treatments’. It explains that this is because one of the reasons opponents often cite for ‘denying such access to minors’ is the view that ‘young people should not have irreversible surgeries until they are of the age of maturity’.

The document really is a shocker and confirms in writing the experience of parents and wider society of transgender impositions that have become the norm. Such are the sinister extremes demanded by transgender activism that the Denton report warns campaigners to ‘avoid excessive press coverage and exposure’ because the ‘general public is not well informed about trans issues, and therefore misinterpretation can arise’. Translated from the PR-speak this means ‘avoid excessive press coverage and exposure’ because if the ‘general public knew what you really want then horror and fury can arise’. The document describes how activists in Ireland ‘have directly lobbied individual politicians and tried to keep press coverage to a minimum in order to avoid this issue’. It says the chances of success are increased if activists ‘target youth politicians’ who in successful campaigns in Europe ‘brought up the issue at every meeting of any sort – even ones which were not directly relevant, to ensure the issue was at the forefront of everyone’s minds’. You can see why the transgender ‘issue’ involving ‘a telephone box minority’ is everywhere and impinging on everything. Writer James Kirkup featured the Denton document in an article for *The Spectator* in which he summed up the content (and the transgender agenda) in two sentences:

In short, this is a handbook for lobbying groups that want to remove parental consent over significant aspects of children’s lives ... A handbook written by an international law firm and backed by one of the world’s biggest charitable foundations.

Transgender lobbyists will always have the system on their side when they have the Cult on their side. Kirkup said the document explained some transgender mysteries such as why bodies like the police – ‘not famous social liberals’ – were in the vanguard of the transgender transformation of society ‘even to the point of checking our pronouns and harassing elderly ladies who say the wrong thing on Twitter’. Kirkup notes the advice given to activists on how to secure protrans laws. This includes ‘get ahead of the government agenda’ which means publishing ‘progressive’ (New Woke) legislative proposals before governments had time to develop their own and in this way have the proposals of activists simply transferred into official policy. New Woke employs this tactic across all its fronts with the Cult pulling the necessary strings. Kirkup points out that a UK House of Commons select committee report in 2016

'adopted several positions from trans groups' and was followed in 2017 by 'a government plan to adopt self-identification of legal gender'. Another way to scam the public is to 'tie your campaign to more popular reform', the Denton document says. Slip it in alongside something that most people would support. This happens constantly with government and lobby groups to hide otherwise controversial plans behind non-controversial legislation. The document offers an example:

In Ireland, Denmark and Norway, changes to the law on legal gender recognition were put through at the same time as other more popular reforms such as marriage equality legislation. This provided a veil of protection, particularly in Ireland, where marriage equality was strongly supported, but gender identity remained a more difficult issue to win public support for.

The Denton document stresses that countries where deletion of parental rights over their children's gender decisions have moved with the greatest speed have been those where trans lobby groups have been successful in stopping the wider public learning the extreme nature of the plans and the consequences for kids before they were a fait accompli.

It's about 'discrimination'? Yeah, right

A good way to assess the genuineness of New Woke activism is to observe how they treat members of the community they claim to be representing who don't support the party line. In all aspects of New Wokeness the response to this is the same – attack them, abuse them and do everything you can to silence them. New Woke censorship has taken its blueprint from the 'anti-Semitism' industry Protection Racket specifically created to protect the far right Sabbatian-Frankist-controlled government in Israel from criticism and *not* to protect Jewish people from discrimination. The same approach can be witnessed every day with climate change, 'anti-racism', extreme feminist, gay and transgender activism. You may care about the environment, oppose racism or be a woman, gay or transgender, but that doesn't matter if you don't believe *everything* we tell you. Those who have been through gender transition, regretted that and warned others, are subjected every time to abuse from transgender activists who set out to gag them. I have read books by transitioned people who had their lives destroyed by the decision they were encouraged to take by the 'experts' and they are doing this to *children*. It is absolutely tragic to see how their lives have been devastated. In many cases the reason they initially questioned their gender was being sexually abused as a child that led to a psychological state in which they wanted to be a different gender to the one that was abused. Psychological support and understanding was what they needed. Instead the puberty blockers were handed out and their lives torn apart. One example is Debbie Karem from Hertfordshire in England who lived as a man for 17 years only to realise after counselling that she was suffering the psychological consequences of sexual abuse. She said other transgender people she knows regret their surgery and are too frightened of the activist backlash to be honest about it. See what I mean – she said they weren't *brave enough* to tell their story. Why do they need to summon such courage? Is it because of the reaction of general public? No – because of the reaction of *transgender activists* who are a tyranny and everything they attack others for being. In fact, they could not qualify for any version of New Woke if they didn't condemn others for what *they* do. That's in the contract.

Transgender activist extremism and its contempt for genuinely transgender people and for freedom of speech and opinion was confirmed in two stories and their aftermath in 2019. Debbie Hayton, a 51-year-old physics teacher in the English Midlands, changed her gender from male to female in 2012, but sent transgender activists into a fury of knicker-twisting (or underpants-twisting) when she wore a t-shirt that said: 'Trans women are men. Get over it.' Well, my goodness, you could hear the sound of gusset tearing from ten miles away. Debbie wore the shirt at an event organised by campaign group Fair Play for Women which has not been the case since transgender storm troopers imposed their will (the Cult's will) over women's rights. Hayton served on the LGBT+ committee of the New Woke-hijacked Trades Union Congress (TUC). This was irrelevant once she became a *blasphemer* and twelve members of the committee

complained to TUC General Secretary Frances O'Grady. They said that wearing the shirt had 'gone beyond discourse, and the expression of alternative viewpoints, and is now propagating hate speech against the trans community.' Don't be ridiculous, oh, sorry, you are being. New Woke definition of 'hate speech': 'Any statement that we don't want people to hear.' I love the bit about going beyond discourse and alternative viewpoints – there are no alternative viewpoints about transgenderism that activists don't want to silence. Nicola Williams, founder of Fair Play for Women, summed it up when she said:

Accusations of transphobia are thrown at women so often for so little that the word has lost all meaning ... When even trans people can get called transphobes, I hope people now understand how ludicrous and far-fetched these attacks have always been. The trans movement has been hijacked by gender extremists.

Exactly right and in their extremes of arrogance they are destroying freedom on behalf of the Cult. The British Labour Party, closely-associated with the TUC, has long been licking the arse of the 'anti-Semitism' industry Protection Racket in 24-hour shifts. Now the same is happening with transgender extremists. Getting slaughtered at the polls in 2019 was no Wake-up call for the Labour Party. Woke doesn't do Wake. Would-be Labour leader Rebecca Long-Bailey supported a campaign to label a party women's rights organisation as a 'transexclusionist hate group'. The Labour Campaign for Trans Rights published a plan designed to 'rid the Labour Party of transphobia and to stand up for trans people'. The Protection Racket modus operandi is repeated. Well, if it works why not? It got rid of anyone who criticised Israel and now it can be used to delete the membership of anyone that won't concede their own rights to transgender extremism. The Long-Bailey-supported campaign called for 'expulsion from the Labour Party of those who express bigoted, transphobic views'. Keir Starmer, who beat Long-Bailey for the leadership of this excuse-for-an-opposition party, is another New Woker who lives on his knees with his tongue extended pointing to Tel Aviv. The Labour Party was already on a life-support machine and then someone switched it off. The New Woke war on women's rights is constantly gathering pace. The students union at Leicester University in the city where I was born changed International Women's Day into International Womxn's Day in reference to 'transgender women' to include a 'more inclusive spelling of women'. This is the same student body that elected a trans woman called Dan Orr to the position of women's officer. International Women's Day of 2020 also saw Sefton Council in the UK take down two flags at town halls which displayed the dictionary definition of 'woman' as an 'adult human female'. It took a single complaint from a New Woke *man* to have the flags taken down. A bloke posting with the name 'Adrian Harrop' told the council: '... the flag you're flying at the moment is a hostile transphobic dog whistle, recognised as a symbol and brand of one of Britain's most outspoken and visible trans-antagonists, and the leader of a transphobic hate group.' The dictionary definition of woman is now transphobic and offensive. I did mention that male and female sexes are the target of the Cult didn't I?

Promotion and relegation

Figure 347: The illusion of inclusion and equality. Privilege (ironically) is the real goal.

Figure 348: It's already well underway. (Image Gareth Icke.)

Women were once top of the PC sexual hierarchy in its early days. Now this has entered the next stage of the Totalitarian Tiptoe to the no-gender human they have given way to the transgender movement.

Women who challenge the imposition of transgender rights on women's rights have become enemies of the revolution ([Fig 347](#)). No-gender people will eventually take over and transgenders will become enemies of the revolution. This is how it works. Women are falling down the PC hierarchy because they are a *gender* and their only remaining role from the Cult's perspective is to diminish the influence of men before themselves being deleted. How about men and women coming together in mutual support? How about that for an idea? Far more important than women to the Cult is mass immigration of other cultures into Western Society and this also puts those cultures and religions above women in the PC hierarchy. New Wokeness says it stands for women's rights while silencing criticism and exposure of religions that treat women like slaves and garbage. Criticism cannot be allowed, nor exposure of the effect of mass immigration of other cultures in transforming communities, oppressing women and reducing work opportunities. That would open the whole mass-immigration strategy to public questioning and any open debate must be stopped. This is the real reason that ultra-Zionist censors say they won't debate with 'anti-Semites' while 'anti-racist' censors often won't debate with 'racists' or 'anti-transphobia' censors with 'transphobes'. They know they will lose on the facts and they make an excuse to avoid that exposure. Women who highlight the effect on rape crisis centres, single-sex hospital wards and women's sport of 'gender self-ID' (decide your gender any time you want) are dismissed as 'TERFs', or 'trans-exclusionary radical feminists' ([Fig 348](#) overleaf). It is an age-old trick for those with extreme positions to paint their reasonable opposition as extremists. This happens right across the New Woke arena and with ultra-Zionists who treat Palestinians like vermin while branding any challenge to that as 'anti-Semitic'. Another example of the transgender war on free speech was that of Maya Forstater, a tax expert at the think tank Center for Global Development, who did not have her contract renewed (she was fired) after posting tweets disagreeing with government plans to let people declare their own gender without any supporting evidence. She demanded her right to refer to people by the gender she felt appropriate and not by how she was told to do so. It's an opinion that she has a right to have in any free society. Not, however, according to employment judge James Tayler who spouted New Woke orthodoxy in his verdict after Forstater appealed against her dismissal to an employment tribunal (she never stood a chance). Mr Woke Tayler said with jaw-dropping irony that her views were 'not worthy of respect in a democratic society'. But, of course, Tayler's *are* because they represent the imposed orthodoxy. To have someone legally judging others who clearly does not grasp the basic tenets of freedom or democracy is both appalling and par for the course in the Brave *New Woke* World. Once you set the perceptual blueprint for what society must believe you co-opt the entire system including academia, government agencies, police and judiciary to enforce that blueprint. Go to court with something the system supports and you will win almost no matter what the evidence. Go to court with something the system does not support and you will invariably lose. This is how society is stitched up all over the world. *Independent judiciary?? You must be joking.* Christians have lost cases over the right to express their beliefs, such as wearing a cross, while vegans who avoid buses because flies hit windscreens win cases to protect their beliefs. The question is

not about right or wrong; it's whether the Cult via authority wants it or doesn't. How much abuse you get from New Wokers is directly associated with where your subject of criticism stands in the PC hierarchy.

Harry Potty

Maya Forstater made the intelligent response to Judge Woke Tayler that 'framing the question of transgender inclusion as an argument that male people should be allowed into women's spaces discounts women's rights to privacy and is fundamentally illiberal (it is like forcing Jewish people to eat pork)'. Her solicitor Peter Daly said: 'Had our client been successful, she would have established in law protection for people – on any side of this debate – to express their beliefs without fear of being discriminated against.' No wonder she lost. The decision becomes all the more outrageous when you see a picture of the person Forstater refused to call 'They' – local Dundee councillor Gregor Murray who looks exactly like a man including a male haircut and a beard. He was suspended for two months in May, 2019, for calling feminist critics 'scum', 'hateful' and 'vile'. I wonder if that fits Judge Tayler's criteria for being worthy of respect in a democratic society? The controversy of Tayler's ludicrous decision kicked off further when *Harry Potter* author J.K. Rowling posted this:

Dress however you please.
Call yourself whatever you like.
Sleep with any consenting adult who'll have you.
Live your best life in peace and security.
But force women out of their jobs for stating that sex is real?
#IStandWithMaya #ThisIsNotADrill.'

This was the cue for New Woke virtue-signalling to reach still new heights of gusset wringing as 'human rights' organisations including the New Woke Amnesty UK gushed forth in condemnation of Rowling that 'trans rights are human rights'. And, er ... *women's* rights? How about the right to free speech and opinion? My god, it's pathetic. The response was ironic in that Rowling often tweets in support of multiple New Woke causes. This is no defence. Your loyalty to Wokeness must be total in every facet and form or you are an enemy of the revolution. *Star Wars* actor Mark Hamill further infuriated the permanently-infuriated New Woke Mafioso by 'liking' the Rowling tweet and as with so many in the world of spineless celebrity he fell to his knees begging for forgiveness:

Ignorance is no excuse, but I liked the tweet without understanding what the last line or hashtags meant. It was the 1st 4 lines I liked & I didn't realize it had any transphobic connotation.

Put your tongue back in, mate, and consider the 'connotations' of your gutlessness for human freedom.

New Woke Stasi closing in

Figure 349: Freedom-destroying New Woke lunacy is being infused into the police and all institutions because it's the Cult agenda.

Former British police officer Harry Miller was contacted by police to ‘check his thinking’ over a series of tweets about transgender issues that were not ‘hateful’, but simply his opinion. They admitted he had not broken the law and put him in the Orwellian category of ‘crime, no crime’, whatever the hell that supposed to mean, and recorded the matter as a ‘hate incident’. Miller took the police to the London High Court where fortunately the case was handled by a judge who wasn’t Woke-obsessed. Justice Julian Knowles said Miller’s tweets were ‘lawful’ and police actions had a ‘substantial chilling effect’ on his right to free speech which should not be underestimated. ‘To do so would be to undervalue a cardinal democratic freedom’ the judge said. ‘In this country we have never had a Cheka, a Gestapo or a Stasi. We have never lived in an Orwellian society.’ On that, in current circumstances, I would beg to differ. Police across the world are now ignoring real crime to seek out thought-crime like this with 120,000 ‘non-crime hate incidents’ logged since 2014 in the UK on a system that appears in criminal record checks that can stop people being employed. While many officers are appalled and aghast at having to do this their careers depend on compliance as the Cult co-opts foot soldiers of The System against their will. New Woke police are destroying freedom by the hour orchestrated in the UK though the College of Policing established in 2012 to infuse New Woke into law enforcement ([Fig 349](#)). The College defines a ‘hate incident’ as ‘any non-crime incident which is perceived, by the victim or any other person, to be motivated by a hostility or prejudice against a person who is transgender or perceived to be transgender’. It’s a victim’s charter as it is meant to be and it takes only a tiny few – sometimes *one* – to complain for a police investigation to be launched or for Silicon Valley and other corporations to ban speech or withdraw products from sale. This would appear to be insane when in fact the agenda needs complainants to justify its imposition and if there is only one that will have to do. Even transsexual women who say *themselves* they are still a biological man have been banned by Twitter. Madness? Yes, calculated madness to serve the Cult agenda. Jon Caldara, the most-read columnist on the *Denver Post*, said he was fired for believing there are only two sexes. He said of his sacking: ‘What seemed to be the last straw for my column was my insistence that there are only two sexes and my frustration that to be inclusive of the transgendered (even that word isn’t allowed) we must lose our right to free speech.’ Caldara said he supported gay marriage, had LGBT friends and didn’t care who used what bathroom. Even this was not enough to save him. New Woke demands total obedience or else. Another sinister aspect of the Caldara story is that his article was about the ‘style book’ of the *Associated Press* which lays out for staff a common grammar and word style. He said the book claims there are more than two sexes and that ‘They’ is now a word to describe a single individual. ‘Illegal alien’ was also banned in favour of ‘undocumented alien’. This is all agenda-pushing language. There are not more than two sexes. There might be multiple self-decided sexual *identities*, but that’s not the same as *biological* sexes, and the idea that ‘They’ can be seriously used to convey the singular is so grammatically crazy I’ll move on. We really are looking tyranny in the eye here. You will have seen the extremes to which children, adults and whole populations are being subjected to transgender manipulation with endless examples every week. Here are just a few headlines at [Davidicke.com](#) over a period of only a few months:

Jury rules against dad trying to save his 7-year-old from gender ‘transition’; California Adds Iowa to ‘Travel Ban’ Because of Refusal to Fund Gender Transitions; Ban on harmful gender stereotypes in ads comes into force; UNESCO claims Siri & Alexa promote gender stereotypes; Three-year-old changes gender from boy to girl after being sent to live with foster parents whose own son had just transitioned to become a female aged seven; Transgender lessons for two-year-olds: Girls are skipping school to avoid sharing gender neutral toilets with boys after being left to feel unsafe and ashamed; France seeks to ‘desegregate’ children’s toys in battle against gender stereotypes (to create a new gender stereotype); School locks out protesting pupils outside gates as they rail against new ‘pointless’ gender neutral uniforms that force girls and boys to look the same; Drag artists read to children as library aims to teach youngsters about gender identity at story time sessions; Swedish Government Grants \$175,000 to Fund

Drag Queen Shows For Children; Drag Queen Flashes Children During Story Hour; School in Brooklyn Hands Out 'Drag Queen in Training' Stickers to 4-Year-Olds; Drag Queen Teaches Toddlers How to Twerk; Another Drag Queen Story Hour pervert exposed as a sex offender ... why are public schools subjecting our children to these deviants?; Houston Chapter of 'Drag Queen Story Hour' Folds Amid Paedophile Scandal; Child drag queen poses next to almost-naked adult counterpart, but mother says boy not sexualized; Drag queen who teaches toddlers about sexual tolerance posts abusive tweets including one calling former Tory Minister Ann Widdecombe a 'fucking venomous hypocritical bint'; Drag queens drafted into nursery schools to teach children about sexual diversity; Drag Queen strips for kids in the King County Library; Elementary School Invites Convicted Felon Drag Queen to Talk to Children; Vice News Celebrates Prepubescent Boys Dressed in Drag, 'Next Generation of Drag Queens'; Drag Queen Admits He's 'Grooming Next Generation' in 'Story Hours'; Furious parents slam primary school for inviting drag queen who calls herself 'Bristol's Resident Slag' and a troupe of cross-dressers to read stories about tolerance to the children; Progressive men literally start cutting off their own balls as gender insanity reaches new level of dangerous mental illness; Transgender model claims sanitary brands should be re-designed because using 'pretty and pink' products targeted at women causes him psychological pain; United Airlines to Introduce 'Non-Binary' Gender Flight Booking; Northamptonshire Police now issues US-style baseball caps which they think will somehow encourage transgender recruits.

Figure 350: The fact that it's suddenly happening in country after country is pure coincidence and nothing whatsoever to do with systematically confusing the gender perceptions of children from the earliest possible age.

Figure 351: Why would schools and The System do this if not to target children and their perceptions of gender? What consenting adults do is none of my businesses. The manipulation of children, however, is ALL of our business.

Story follows story day after day and we have already reached the point where it is impossible to exaggerate through parody what is really happening. Some of those headlines reflect the out-of-nowhere explosion of drag queens all over the world suddenly recruited to read stories to small children as young as five or less in schools and libraries – everywhere from North America to Scandinavia to Europe and Australia. It's just another coincidence ([Fig 350](#)). The idea is to sexualise children and confuse them about gender. Scottish National Party MP Mhairi Black invited a drag queen called 'Flowjob' who posts explicit images on Twitter to read stories to children as young as four at a primary school and when parents complained she dubbed them in typically New Woke fashion as 'homophobic'. An Internet video shows a drag queen dancing suggestively and crawling on her/his hands and knees in front a little girl while

adults applaud and cheer. The drag queen then strokes the girl's hair and kisses her. It's a sickening display and will any of the parents involved be getting a visit from social services like loving parents do? Not a chance. An American drag queen called Kitty Demure posted a video in which he said he was shocked that parents allowed this to happen. He asked: 'Would you want a stripper or a porn star to influence your child?' Demure further questioned why the Woke 'Left' had so much respect for drag queens when they 'put on make-up, jump on the floor and writhe around and do sexual things on stage'. He said this was not an avenue that parents should want their children to explore and he rightly said that many did so because they wanted to appear cool or Woke. 'You can raise your child to be just a normal regular everyday child without including them in gay, sexual things.' Not if the Cult has its way you can't. I have no problem with drag queens. What people do is none of my business among consenting adults. The systematic indoctrination and manipulation of children is *quite another thing* and we should say that loudly and constantly until sanity dawns ([Fig 351](#)). It is sobering to ponder that we are still only in the first stage. Imagine what is to come for children if parents don't grow a backbone and get together to stop this. We have even had claims that the murder of transgender people, and especially those of colour, is an 'epidemic' when the figures expose this as still more mendacity. This lie has been repeated by Democratic presidential candidates, the Cult-controlled American Medical Association and New Woke organisations like the US Human Rights Campaign. The 'epidemic' numbered 26 transgender murders in 2018 using Human Rights Campaign figures which means an average of 1.8 per 100,000 transgender people. The murder rate for the general population in 2018 was 4.9 per 100,000 meaning that transgender people are considerably *less* likely to be killed by violence. An *epidemic*? The technique is to fire lies in all directions knowing that almost everyone that hears them will not check the facts and believe the lies to allow the agenda to be advanced.

One conspiracy with many faces

Falling global sperm counts, especially in the West, connects with the plan for the transgender, then no-gender, non-procreating human. Sperm counts are plummeting though gender-bending chemicals in the environment, including food and drink, and radiation constantly generated from smartphones in the pockets of men, Wi-Fi and the 5G roll-out. Confirmation comes with all the fertility clinics now on a scale never seen before. The fertility rate in America fell by nine percent between 2007 and 2011 and in 2016 fell to the lowest since records began. Meanwhile the benefits of staying single are being promoted with Dr Elyakim Kislev, professor at the Hebrew University of Jerusalem, saying that 'being single can be an advantage instead of a source of agony'. This is a theme that turns up in many guises. The lifestyle that people choose is their own business, but when you put all these things together there is a clear theme: The Cult *wants humanity to be infertile*. There will be no need for male and female sexes in a no-procreation world and we are witnessing their systematic elimination. We may be in the relatively early stages but that is the goal and Cult agendas move faster and faster as they get closer to the stage of 'normalisation'. When non-white people celebrate the demise of the white race they should know that they will be next. This is not a war only on white people, but the entire human race and we need to come together and not allow the Cult to drive us apart (written before imposed 'social distancing'). Remember that to children being born today the madness that many older people can see through is their 'normal'. This is another reason why divisions are being manipulated between young and old. By 'normalisation' here I mean the normalising of insanity brilliantly captured in George Orwell's concept of $2 + 2 = 4$ versus $2 + 2 = 5$. He wrote in *Nineteen Eighty-Four*: 'Freedom is the freedom to say that two plus two make four. If that is granted all else follows.' If the freedom survives to speak facts the official lies can still be challenged. Big Brother knew that and decreed $2 + 2 = 5$ and everyone had to believe it – or else. What happens at first is that you know the answer is 4, but eventually it is easier to agree the answer is 5 and finally to protect your own self-respect you *believe* the answer is 5. The transition period we are now experiencing between '4' and '5' is dependent on another Orwell concept – that of 'doublethink' which is defined as holding two

contradictory beliefs and accepting both to be true. This way 4 and 5 can coexist until 5 takes over completely. Having open borders *and* enough homes, jobs, school and hospital places, is a potent example of doublethink. Orwell's book and methods of manipulation and control are everywhere you look. He wrote:

In the end the Party would announce that two and two made five, and you would have to believe it. It was inevitable that they should make that claim sooner or later: the logic of their position demanded it. Not merely the validity of experience, but the very existence of external reality, was tacitly denied by their philosophy. The heresy of heresies was common sense.

And what was terrifying was not that they would kill you for thinking otherwise, but that they might be right. For, after all, how do we know that two and two make four? Or that the force of gravity works? Or that the past is unchangeable? If both the past and the external world exist only in the mind, and if the mind itself is controllable – what then?

This is what becomes possible when a few know the truth about reality and keep that from the masses. External world or not the point is that we need to recognise that we are Infinite Awareness *and* an individual unique perception. I am a unique experience called David Icke and *All That Is, Has Been, And Ever Can Be*. New Wokeness is enforcing upon the population a long list of demands that come down to $2 + 2 = 5$. These range from human-caused climate change to political correctness and most certainty to post-biological sexual orthodoxy. Professors of biology are being attacked, abused and 'investigated' for saying that men and women are biologically different. Oxford University professor Selina Todd, a historian who specialises in the lives of women and the working class, was given security guards after threats from transgender activists over her support of women's rights. Dr Allan M. Josephson, a former head of Child and Adolescent Psychiatry and Psychology, was demoted by the University of Louisville for saying children who insist they are transgender should not be instantly believed and Professor Nicholas Meriwether at Shawnee State University in Ohio was rebuked for refusing to refer to a student with a male body using 'female pronouns' when it was against his religious beliefs. Many others have already been outright fired or forced out by mass, even violent, New Woke protests for the mildest of statements based on $2 + 2 = 4$. Such activists insist that society be transformed on the basis that there are no genders except what people choose them to be any time they like ... $2 + 2 = 4$ usurped by $2 + 2 = 5$. The Cult plan for the world can only happen if facts and freedom to express them is abandoned. To do that $2 + 2 = 5$ must be the norm and $2 + 2 = 4$ the enemy of the revolution. Facts are replaced by *perceived* facts and once generations born in the $2 + 2 = 4$ era have gone all humans will be born ('decanted' in Huxley's words) into the post-fact world of $2 + 2 = 5$ which is all the population will hear from cradle to grave. This is a quote from Adolf Hitler:

When an opponent says to me, 'I will not come over to your side,' I reply calmly, 'Your child belongs to us already ... What are you? You will pass on. Your descendants, however, now stand in the new camp. In a short time they will know nothing but this new community'.

Another $2 + 2 = 5$ imposition is the 'pronoun' tyranny in which transgender men and women insist they are called by their preferred pronouns of 'he', 'her' or the utterly bizarre 'They' and 'Them'. I will never call an individual 'They' or 'Them'. I have some respect for language and if you concede to stupid you become stupid. The way around this is real simple. Transgender people in male or female bodies that call themselves by the opposite pronouns should be free to do so and anyone referring to them who doesn't feel comfortable using 'he' for a woman's body or 'her' for a male body should be equally free *not* to do so. This is the solution in which freedom is the winner on both sides. It doesn't happen because freedom is the *target* of the Cult and not the desired outcome.

Silence the parents, program the teachers

Many parents who are deeply unhappy with what is happening to their children at school fear the consequences of saying so. Most teachers are programmed to believe in the program and those that can see through the insanity, and even the conspiracy, know that if they challenge the imposed orthodoxy their career will be over. New Woke follows the methods of the Cult as an expression of the Cult by imposing an agenda while intimidating or silencing anyone who can see what is happening. If people concede to that intimidation the world's children are lambs to the perceptual slaughter. We are seeing the Totalitarian Tiptoe to complete state control of children and the end of parental rights which are being constantly eroded to this end. A teacher in Texas personified what is happening when he said that parents should not have the 'final say' in raising their own children. He was responding to complaints by parents about yet another drag queen employed to indoctrinate their children. The adult drag performer (stage-name 'Lynn Adonis') spent the day with the kids at Willis High School and exchanged social media contacts. School Principal Stephanie Hodgins defended the decision and proved she is in the wrong job while clueless English teacher Anthony Lane said parents should submit to the will of the 'community' over the upbringing of their own kids. Here we go – right on message and it's becoming a common theme as the Cult targets parental rights and the family unit itself. 'I believe that raising a child is the responsibility of the community and that parents should not have the final say,' the brain of America gushed forth. 'Let's be honest, some of you don't know what is best for your kids.' Ah, but this expression of academic arrogance does know (*I am right*) and insists that their well-being is best served by advice from 'Lynn Adonis', a man dressing as a woman who dances provocatively while people wave dollar bills as an Internet video revealed.

The Vatican has long been controlled by the Sabbatian-Frankist wing of the Cult (see *The Trigger*) which owns the position of Pope. The current incumbent, Pope Francis, can often be seen promoting the Cult agenda like climate change and subjects relating to education and the upbringing of children. He called for a new 'Global Pact on Education' to create a 'new humanism' under the title 'Reinventing the Global Educational Alliance'. The Pope hosted a conference of people from politics, economics, academia, science and sociology along with celebrities from areas like sport. A 'Global Pact on Education' was signed to 'hand on to younger generations a united and fraternal common home' and 'create a global change of mentality through education' (indoctrinate the young). Orwell would have noted the language that included a quote used by Cult asset Hillary Clinton: 'It takes a village to raise a child.' Pope Francis called for an 'educational village' with an 'educational path involving everyone'. Nowhere did the Francis announcement refer to parents as the central voice in the education of their children because the state is taking over as the Pope well knows and promotes. He has also said it's our 'duty' to 'obey international institutions' like the United Nations and European Union. His call for a 'new humanism' is ironic given the word is defined as 'a rationalist outlook or system of thought attaching prime importance to human rather than divine or supernatural matters'. A rationalist outlook or system of thought in this context means the technocracy which requires the deletion of spirituality in all forms to be replaced by the religion of New Wokeness. The Pope is a 'man of God'? Yep – and I'm a jelly baby.

Figure 352: Secret courts in alleged 'free' countries are stealing children from loving parents on an industrial scale while parents are banned from speaking publicly and the media is excluded.

A major Cult vehicle for the intimidation of parents is the social services Mafia operating in all countries of the West (and elsewhere) through which enormous and ever-increasing numbers of children are stolen by the state from loving parents for ridiculous and patently invented reasons. Paedophile and Satanist rings operating through social services even have children stolen to order. I have exposed this outrage and its consequences for children and parents in other books. Secret 'family' courts which can include Satanist and paedophile judges, lawyers, social service operatives and police, are used to seize children for the state and the Cult from parents who adore them ([Fig 352](#) on previous page). 'Family' courts do not have juries so paedophile or satanic judges – or paedophile and satanic rings working through the judges – can control the outcome. The phone call or knock on the door from social services is now one of the biggest fears that parents have and this state-kidnapping is part of the Tiptoe to the end of parenthood and procreation. Teachers, doctors, police and other professions are encouraged and mandated to tell tales on parents to social services and that would be justified if real abuse was evident. In the cases I am talking about (and they are legion) the children are not being abused at all – quite the opposite. Parents are frightened to stand up, challenge and complain about drag queens and transgender indoctrination in schools in fear of reprisals from increasingly authoritarian schools and social services or abuse from New Wokers and even other parents locked away in the land of Cult-induced perceptual coma. The poor kids are left unprotected to have their minds absorbed into the belly of The Beast to become the next and even more extreme generation of New Woke as the family unit is dismantled to be replaced by AI technology and the world state.

I can understand how intimidating it must be to face the potential wrath of the school and social service tyrannies, but if that doesn't happen your kids will be left at the non-existent mercy of the Cult and Cult-owned state every day when they go to school. Parents coming together in groups for mutual support must happen to challenge and expose what is going on so that individuals are not isolated and alone. They are after your kids and even more so with your kid's kids. It's time to draw a line while there is still one to be drawn.

CHAPTER FOURTEEN

What is the New World Symphony?

Control your vibrations to be the master of your own harmony – Suzy Kassem

The conventional answer to the question posed in the chapter title is that the New World Symphony is a piece of music by the Czech composer Dvorak made most famous in Britain in a television advertisement for Hovis bread. I am talking instead about another version that I shall call the *Brave New World Symphony*.

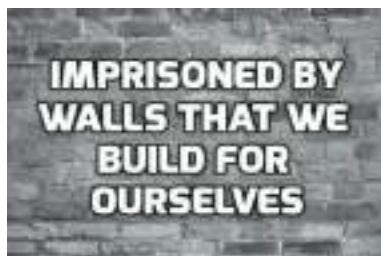

Figure 353: We built the walls – so *WE* can take them down.

Dvorak's work is made possible by vibrations emanating from musical instruments while my version is played by vibrations emanating from people via perception. I have focused in the last few chapters on the effect of Cult manipulation in the realm experienced by the five senses or the 'seen', a holographic projection of the wavefield unseen. The foundation of our reality is information encoded in vibrations and waves that express in their frequencies the nature of that information. For example hate is a slow, dense frequency while love, joy, gratitude and forgiveness generate quick, high and expanded frequencies. One represents a vibrational prison cell and the other is the way out of the Matrix. The *Brave New World Symphony* is a low-vibrational information and perceptual construct that disconnects humanity from its expanded self and the True 'I'. If we could hear this 'symphony' of waves it would sound like the backdrop to a horror movie, slow, low, morbid, heavy and dense. It would be akin to the guttural voice of life-long Cult operative Henry Kissinger and the sound transmitted by Saturn which you can hear in YouTube videos. The association between Saturn and what I am calling the wave 'symphony' of the simulation is explained in *Everything You Need To Know*. To build prison walls around ourselves with bricks and bars would be seen as crazy. When humans do that with the frequencies we emanate this is called being 'normal' and living in the 'real world' ([Fig 353](#) overleaf). Those that refuse to comply with their own perceptual/vibrational imprisonment are by contrast 'weird, mad, pseudo-scientists and conspiracy theorists'. The world is indeed upside down. The sequence is simple: Information = perception = nature of the vibrations and frequencies emitted by people in the form of waves. These waves entangle with like-waves to generate collective networks of the same

vibration/frequency which influence the perceptions of all involved ([Fig 354](#)). This is the wave equivalent of only hearing one version of something to the extent that you believe what it says in the absence of any alternative. It is a collective version of the Bubble.

Figure 354: Wave-entanglement, perception-entanglement, perfectly symbolised.

Figure 355: Bubbles and burst Bubbles speak a different language.

Perceptions are not only ingrained by information received by the five senses. They are most powerfully embedded by wave-entanglement with those of like-mind – like-vibration/frequency – a vibe which solidifies the longer you remain in that perceptual state. The vibration becomes more powerful through unchallenged repetition and the constant confirmational connection with the collective field of like-wave entanglement. In turn, the wave-state impacts upon the formation of brain pathways or neuron networks (also waves in their base form) that dictate how information is processed into perception. When I speak of people not being able to process or compute certain information or concepts I mean that literally. Wavefields emanated by Postage Stamp perceptions and processed through brain pathways reflecting those wavefields cannot decode information outside their perceptual limits any more than a computer can process information when encoded and firewalled not to do so. 'I can't get my head around that' is the phrase you often hear in response to off-stamp information accompanied by the assumption that if they can't understand (process) that possibility then it can't, by definition, have any validity. I can best describe what I mean with the assumption of the mainstream scientific mind that if I can't see, touch, taste, smell or hear it then whatever is being claimed can't be true. I am describing here a self-generating vibrational prison cell that I call the 'Bubble' ([Fig 355](#)). Limited perceptions and self-identity transmit limited frequencies which can only connect or entangle with like-frequencies. These Bubbles transmitting the same frequency waves (perceptions) entangle with each other and through those connections mutually and collectively confirm '*I am right*'. This is the wavefield basis of the New Woke mentality and why it is so Dalek-like immovable no matter what the evidence – *emergency, emergency, cannot compute, cannot compute*. Try telling Greta Thunberg that CO₂ is the gas of life. Internet AI systems such as Google-owned YouTube that continually offer you information that corresponds with your search history are feeding the Bubble with perception-confirming information as is the censorship through Silicon Valley and political correctness of information and opinion at odds with the official Postage Stamp narrative.

Wave awakening

Figure 356: Another version of the Bubble and how they are formed. (Image Gareth Icke.)

Figure 357: Bursting the Bubble. (Image Gareth Icke.)

Figure 358: Another inversion. When madness calls you mad it is confirmation that you are not. (Image Neil Hague.)

As people's perceptions change so do the frequencies they transmit and what follows is disentanglement from the previous wavefield networks created by former perceptions. In the world of the seen those once close to you, or of like-mind, drift apart as new wave networks are formed with others that match the new perceptions. You are beginning to see what they can't see (Fig 356). In the transition period people can feel alone and isolated as they disconnect from the old before synchronising widely with the new. Stick with it – it'll all work out. The more that we expand our sense of self-identity and perception of reality the more the frequencies we generate expand and quicken and the more of Infinite Awareness that we can consciously access (Fig 357). This is known as 'waking up', a term that means the opposite to being New Woke. Brain pathways re-form to sync with expanding consciousness and they are able to process information and awareness beyond the Bubble. By this time the Bubble has burst anyway and confirmation that your consciousness is really 'de-Bubbled' comes when you are censored or called crazy, mad and even dangerous. Whenever I am described by Bubble people in those terms I quietly say thank

you, much appreciated. There comes a point in this expansion where you breach the firewalls of the simulation and begin to see what human reality really is. You become aware of the illusions, manipulations and smokescreens designed to enslave us in ongoing ignorance and the scale of the perception program begins to dawn. When you first speak out to expose what is happening those still in the Bubble – the ones you are trying to alert – will be your greatest opposition. This is not because they are ‘bad’ people just as New Wokers are not bad people in and of themselves. They just can’t see – *yet* – what you can as your consciousness expands beyond the Matrix. Expanded awareness is perceived as insane by enslaved awareness ([Fig 358](#)). We have to understand and be patient or we’ll be in a permanent state of frustration and anxiety which feeds the dragon its low-vibrational fix. Almost everyone is in the Bubble to start with and being holier-than-thou is never justified. A scene in the first *Matrix* movie has the Morpheus character giving Neo the facts of life about what I am calling Bubble people:

The Matrix is a system, Neo. That system is our enemy. But when you’re inside, you look around, what do you see? Businessmen, teachers, lawyers, carpenters. The very minds of the people we are trying to save. But until we do, these people are still a part of that system and that makes them our enemy. You have to understand, most of these people are not ready to be unplugged. And many of them are so inured, so hopelessly dependent on the system, that they will fight to protect it.

That’s an excellent description of how the program works except for the bits about ‘our enemy’ and saving people. I don’t see anyone as an enemy. We are all *One* even though we may have dramatically different attitudes and patterns of behaviour. Once we refer to ‘enemies’ we externalise those we are challenging when they are only another aspect of ourselves in a different mental and emotional state. I am challenging and exposing patterns of behaviour as they impact negatively upon others and their freedom. I don’t see those involved as enemies. From my perspective they are being perceptually misdirected and enslaved. Nor am I trying to ‘save’ anyone. People can only emerge from a perceptual straight-jacket through personal choice. I am only offering a different way of looking at life and the world. What people do with that, or don’t, is up to them and none of my business except where it impacts on individual and collective freedom. With this proviso we need to find peace with others having different views. Freedom is the freedom to make choices, experience the consequences, and make new choices. It is not to be forced to make someone else’s choices. That is called tyranny and New Woke (same thing). If you focus anger, hatred and resentment on those with whom you disagree that very focus creates a wave entanglement with them on the frequency of anger, hatred and resentment *if* that person feels the same about you. This sets up a wave connection through which frequencies of anger, hatred and resentment are mutually exchanged to the emotional and vibrational detriment of both or, in the case of the Cult and its unseen ‘gods’, you feed them the low-vibrational energy that sustains and empowers them. Are we really going to change anything by making such a frequency wave connection with the Cult through hatred of the Cult? What you hate you become. What you fight you become. Wave entanglement is how that happens. Burst your Bubble and everything changes ([Fig 359](#) overleaf).

Mirror, mirror ...

Figure 359: Bursting the Bubble.

I have watched so many people become what they first set out to oppose and you see this in politics all the time. The Cult wants us to hate its assets because it knows that in this state we will be fly-trapped in its vibrational lair. Martin Luther King said: ‘Darkness cannot drive out darkness; only light can do that. Hate cannot drive out hate; only love can do that.’ Hate empowers the vibration of hate while love empowers the vibration of love. It really is that simple. In fact once we love in the totality of *The One* there is no vibration at all – just the still and silent *All That Is* which is love in its Infinite form and that means *intelligence* in its Infinite form. We can feed the Cult and its non-human masters with our low-vibrational focus or we can starve the Cult of its power source by not transmitting on its frequency. Macho-man fury and hatred may seem to many to be the way to respond to Cult manipulation when the opposite is the case. Loving (or at least not hating) perceived ‘enemies’ while challenging vociferously what they do are not contradictions. This is the only way to challenge behaviour while not entangling with its vibrational state and becoming what you claim to oppose (see New Woke). What is not transmitting on your frequency cannot connect with you. You can be affected by the actions of others who *are* on its frequency, but not you directly. As your consciousness expands and your frequency quickens you are operating on a completely different vibe to mainstream society and become less and less affected by its madness. In that state we stop emitting the waves that can connect with those that seek to hurt us and if we do that they *can't* hurt us. I am often asked how come I am still alive while exposing such *apparently* powerful forces. My answer is that if they *can't* make a wave connection with me they cannot affect me in the holographic ‘physical’ realm which is a decoded projection of wave information fields. It’s at the *wavefield* level that everything happens and holographic reality is only its projection on the symbolic movie screen. If you want to change a movie do you scream at the screen or pull out a banner and protest? No – you change what is being projected on the screen. Human life is the same. Change what is happening at the wavefield level and the holographic movie screen of ‘human society’ must automatically change to reflect that. Humanity is constantly seeking change in the wrong place and the Cult encourages this. Change yourself and you change your life experience. Change collectively and we change the world. If you want change without *personal* change – vibrational change – you will be waiting forever. I said that we entangle with people on the frequency of anger, hatred and resentment *if* they feel the same about us. If they don’t there can be no wave connection on that frequency when the other person is not transmitting on that frequency. You are then generating frequencies of resentment with nowhere for them to go except to entangle you with others consumed by resentment. For this reason forgiveness does not only benefit the forgiven, but also the forgiver. Here’s a way to disentangle destructive relationships and their aftermath *if* you mean it: ‘It was just a mutual experience for, in the end, mutual benefit, so let’s shake hands and wish each other a great life – all my love to you and see you on the other side when we’ll laugh at what we thought was so important.’ Isn’t that rather better than ‘I’ll always hate that bastard’ (and always be affected myself by that same hatred)? The mutual vibe of hatred and fear is the basis for all conflict and war and when it’s gone so have they. As John Lennon wrote: ‘War is over if you want it.’

Frequency freedom

Figure 360: No, no, no – I am *All That Is, Has Been, And Ever Can Be.*

From this perspective of how we are vibrationally enslaved and how we can set ourselves free *everything* starts to make sense when it didn't before. Human society has been specifically structured and manipulated to create maximum possible fear, anxiety, hatred, anger, depression, resentment, and all the other low-vibration emotions and their consequences like conflict and war that entrap people within the firewalls of the simulation. Love in its Infinite sense is to the Cult like garlic to a vampire and this explains why authority throughout 'history' has been terrified of anyone saying that love is *The Answer*. Anything that would expand and raise the vibrational state of the population is all the Cult's worst nightmares arriving at once. It knows that once that happens the game is over and the outward arrogance of the Cult masks the constant terror that somehow humanity will awaken and call 'time' on the plot. They need *us* – we don't need them. We are their power source. What appears to be swagger is really whistling in the dark as they desperately pursue the AI-brain connection to block perceptual change and frequency change. Low-vibrational states of Bubble consciousness have been achieved through the rule-book myopia of religion; by playing off cultural, racial and religious groups against each other in wars of control, dominance and acquisition; giving the population constant reasons to fear (especially fear of death) and to be in states of anxiety, hatred, envy and resentment; selling a self-identity based purely on human labels and/or servitude to an ever-demanding god; and downloading the Postage Stamp narrative every day that excludes everything that people need to know to see through the camouflage and deception. You will observe many other ways that this is done, too. What a coincidence that New Woke delivers everything on that list including religion because New Woke *is* a religion. The constant sub-division of labels into micro-labels is taking self-identity further and further away from I am an expression of *All That Is* and the expansion of consciousness that follows from that. With each subdivision into micro-identities we see that identity myopia becomes consciousness myopia. I am LGBTQQFAGPBDSM? You are Infinite Awareness having a brief experience that you *call* LGBTQQFAGPBDSM ([Fig 360](#)). It's all a trap which particularly the young are being indoctrinated to walk into through Cult control of the 'education' system, mainstream media and all the New Woke activist groups supported by giant Cult-owned corporations and frontmen like Bill Gates, George Soros and Silicon Valley celebrities such as Musk, Zuckerberg, Brin, Page, Wojcicki, Bezos, Kurzweil, and a long, long, list of others.

Figure 361: The simulation is a wavefield interactive information source that humanity decodes into holographic reality in the brain. (Image Neil Hague.)

Once the Cult has captured perception and self-identity everything else follows. Perception dictates the frequency of the waves we transmit and those frequencies dictate how much Infinite Awareness we can access. The extent of Infinite Awareness that we connect with dictates the size of our Bubble and that becomes our perception of everything. This in turn becomes a self-fulfilling prophecy as our perceptions create the Bubble and the Bubble confirms our perceptions in a feedback loop of perceptual enslavement (and therefore every other kind). Who enslaves us? *We do*. We do so by allowing the Cult and all its

agencies of state and media to impose our perception of both the world and our very self-identity. This is great news because what we have created we can uncreate. Break that feedback loop and the power of the Cult is no more. How do we do that? Open our minds to all possibility. Open our hearts to the love and wisdom of *The One*. It can't be that simple? Oh, but it *is*. The Cult knows that it is and constantly works to keep minds and hearts closed to the greater reality beyond the simulation which is nothing more than a perceptual feedback loop. The simulation is *in our heads* ([Fig 361](#)). It's a perceptual program which can close hearts, but not enter them when the frequency difference is so great. Open your heart and what is released as love, intelligence and wisdom will change your life and collectively transform human reality. The whole foundation of the Cult agenda is to close hearts and minds to turn Infinite humanity into perception Bubbles which then connect to form a hive mind through wave entanglement. New Woke is a hive mind which is policing everyone who won't conform to the hive. The illusion of diversity allows Bubbles and groups of like-Bubbles to be set at war with each other to divide and rule. We have 'anti-fascists' acting like fascists. The Bubble perceptions of both are basically the same which makes their behaviour the same because their *frequency* is the same. They are convinced they are polarities of each other while being '*opposomes*'. Beyond the realm of the seen they will be seriously wave entangled by the like-frequency connections between them. Extreme Muslims (or fake Muslims) such as the Saudi Sabbatian-Frankist 'royal family' and their terror groups do the work of the Devil while claiming to serve 'God'. Their hatred and violence wave entangle with all others who express hatred and violence and even those like the extreme right that think they oppose extreme Islam. The way the vibe is expressed may be marginally different, but it's the *same vibe*. Indian author Nitya Prakash said: 'Do you ever notice how much you have in common with the person you hate?' This is true on many levels and one is most certainly the same vibe at war with itself through the illusion of being different.

Digital drugging

Figure 362: The childhood hijack.

The plan is to make humanity in its entirety one centrally-controlled hive mind through the collective connection to artificial intelligence. I have described the Tiptoe to this in the world of the seen, but again the real deal can be found at the wavefield level of reality. The endgame is to connect the human mind to machines and the manipulation of wave entanglement between people and smart technology is happening all around us while at the same time destroying human to human discourse (entanglements). Here is the prime reason for social media which achieves both goals. People are not communicating with each other face to face – human waves to human waves – but via technology in which AI machine waves act as the conduit. In this way machine waves intervene and intercept human wave connection (this has happened on an unprecedented scale during the 'virus' lockdowns). People who used to talk with each other at home, in the street, in restaurants, now stare mesmerised at the screen ([Fig 362](#)). I will first discuss the holographic effects of this on a chemical level and then how this plays out in wavefields to connect humans to machines and AI. High-placed insiders of deeply sick organisations like Facebook have publicly exposed how Zuckerberg and his cohorts set out to addict Facebook users to stay on the site for as long as possible. Sean Parker, the first president of Facebook and now a critic, said the idea was

to absorb as much of a Facebook visitors time and attention as possible. Floyd Brown and Todd Cefaratti describe how successful this effort has been in their Silicon Valley exposure, *Big Tech Tyrants*:

... Facebook is only the tip of the social spear. It's well documented that kids are spending an average of ten to twelve hours a day across all digital media. And adults aren't far behind at almost six hours, up from three hours a day in 2009. This includes all the time spent on cellphones, computers, gaming consoles, and streaming devices. Cellphone use alone has mushroomed from a third of an hour a day in 2008 to 3.3 hours currently.

This is partly explained by techniques to trigger a 'dopamine rush'. *Psychology Today* describes dopamine as 'the feel-good neurotransmitter – a chemical that ferries information between neurons'. Dopamine contributes to 'feelings of pleasure' and acts as a 'reward system' which can very soon become addictive. *Psychology Today* says that 'a person seeking pleasure via drugs or alcohol or food needs higher and higher levels of dopamine ... This neurotransmitter enables us not only to see rewards but to take action to move toward them.' It points out that drugs such as cocaine increase levels of dopamine and 'alter behavior accordingly'. Facebook and other disgusting companies abusing mostly the young have exploited the dopamine rush to addict people to their sites. A Facebook 'like' for a post can stimulate a dopamine reaction which becomes addictive and leads to people only posting what they think the majority will like to ensure their dopamine fix. This slowly at first and then more quickly modifies behaviour and opinion to the majority (Cult-induced) view especially when to go against that view is to unleash often systematic abuse. What starts out as a conscious posting of an opinion that may not be genuine just to get maximum 'likes' eventually fuses into the perception of the person – $2 + 2 = 5$. Chamath Palihapitiya, an early senior executive at Facebook, said that 'the short-term dopamine-driven feedback loops that we have created are destroying how society works'. But, then – that's the idea. I have seen it called the 'magic of maybe' when people keep looking at the phone to see if 'maybe' they have a communication or 'maybe' they got a 'like'. Studies have shown that when communications or likes appear there can be a 400 percent spike in dopamine which is only slightly less than the effect of cocaine. Part of the addiction is concern about what other people think and how others respond to a post or picture when freedom comes from not giving a damn what anyone thinks of you. Concern with what others think deletes your personal power. You become *them* so they like you. Seek popularity as a goal in itself and it will destroy your uniqueness. Comparing self with others and their often fake lives portrayed on social media leads to depression, loss of self-esteem and feelings of inadequacy. Studies reveal that the more time people spend on social media the more lonely and isolated they become. Phone addiction also hijacks and scatters concentration with the potential to permanently destroy the ability to concentrate. Social media and smartphones are Cult behaviour modification devices and it's all been carefully worked out by psychological specialists in the pay of Silicon Valley psychopaths like Zuckerberg. One observer rightly said that highly addictive drugs are being put into the hands of children before they have any defences against them. Sam Vaknin, a contributor to the Internet documentary *Plugged In* which exposed the effects of social media, said this about the calculated assault on the minds of the young:

Facebook, Twitter, all these networks are surfing the wave. They know it's a dangerous wave. They know that people are drowning. They read all the statistics, the increased suicide rate, depression, anxiety. They know absolutely everything. They have designed maliciously, malevolently and possibly criminally, they have designed the networks exactly to cater for human pathology in its most extreme form.

Even those who can see some of what is happening tend to explain this calculated manipulation as an effort by Zuckerberg and Chief Operating Officer Sandberg to extend Facebook visits to increase the value of advertising. It's actually far darker and more sinister than that and the real explanation comes with the understanding that these platforms are fronts for the Cult. Their domination of discourse and

information exchange allows the Cult to modify and manipulate perception and behavior while censoring to ever-increasing extremes information and opinion that challenges that narrative. Social media is a very foundation of the technocracy. The minds of the young (tomorrow's adult population) are being fucked-with on a monumental scale and New Woke is one of its creations in league with other Cult agencies including the Gates-manipulated 'education' system. Are people so totally lost in Fairyland that they don't see how soaring rates of suicide, depression and anxiety among the young that have taken off in the smartphone/social media era are centrally connected to the emergence of those phones and platforms? In this period there has been a 50 percent increase in suicides in America among girls under 17 and a 30 percent increase in boys. Anxiety in teenagers is reported to have increased by 70 percent in 25 years; children and young people attending accident and emergency units with a psychiatric condition has more than doubled since 2009; teenagers admitted to hospital with eating disorders almost doubled in three years up to 2019. English schools buying in professional mental health support for pupils has nearly doubled in three years from 36 per cent to 66 percent because the National Health Service (NHS) can't cope. Some of this is due to growing up becoming a medical condition and some is the effect of social media and the smartphone culture. Should we be surprised when insiders have described how Silicon Valley technocrats are so deeply sick they boast about how they capture users in 'isolation boxes' and 'filter bubbles' in which they 'inflict torments that anger or sadden the users without them realizing why'? Facebook and other social media companies hire 'attention engineers' using techniques employed by casinos to make their platforms as addictive as possible. People like Zuckerberg are calculated abusers of young generations on a scale that defies belief. Headlines galore tell the story and reveal the consequences of this psychopathy: 'Social Media Use and Perceived Social Isolation Among Young Adults'; 'Facebook's Emotional Consequences: Why Facebook Causes a Decrease In Mood and Why People Still Use It'; 'Facebook Use Predicts Declines in Subjective Well-Being in Young Adults'; 'Association of Facebook Use With Compromised Well-Being'. The young are being conditioned and broken to be the unquestioning adults that will passively accept the technocracy and AI-brain assimilation. The war on men and 'toxic masculinity' is precisely planned to induce such passivity. Jaron Lanier, an American computer scientist, said:

Society has been gradually darkened by this scheme in which everyone is under surveillance all the time and everyone is under this mild version of behaviour modification all the time. It's made people jittery and cranky. It's made teens especially depressed which can be quite severe.

He's right although Lanier is considered a founding father in the field of virtual reality and he might ask himself where that is heading when the Cult agenda of augmented reality and immersive technology leading to full-blown assimilation is factored in.

Virtual 'humans'

Figure 363: Assimilation masquerading as the 'latest thing'.

Figure 364: You are feeling *sleeeeepy*.

We have the emergence of virtual humans with body movements, voices and emotional expressions generated by AI that you could not tell from 'real' humans. The Smart Grid is a simulation within a simulation and virtual reality technology is a virtual reality within a virtual reality. Samsung's highly secretive Neon project was reported in early 2020 to have developed artificial intelligence virtual 'avatars' almost indistinguishable from biological humans. Samsung engineer Pranav Mistry said the technology can 'autonomously create new expressions, new movements, new dialogue (even in Hindi), completely different from the original captured data.' Base the original on a human and then have it become its own personality. Facebook has its Codec Avatars project designed to let people create realistic virtual versions of themselves for use in cyberspace. The company claims the avatars would help 'social connections in virtual reality become as natural and common as those in the real world'. The avatars are planned to allow Facebook users to connect with friends and family in a three-dimensional social network. Yaser Sheikh, the director of research at Facebook Reality Labs, said: 'The real promise of augmented reality and virtual reality is that it lets us spend time with whomever we wish and build meaningful relationships no matter where people live.' Excuse me I feel a 'bollocks' coming on. This is really about absorbing humanity and particularly the young into a virtual reality world in which the one we currently experience is lost and even more importantly further disconnect humanity from expanded reality outside the simulation. The human mind is being prepared for assimilation into AI and drawing the young particularly into a virtual world generated by technology is a vital stage and step in that direction ([Fig 363](#)). Young people are already living their own virtual lives presenting a perfect face to the world through social media with the downsides deleted by omission, self-delusion and Photoshop. There is even a term now of 'Snapchat dysmorphia' for young people who have plastic surgery in an effort to make them look like the fake image they have Photoshopped to post on social media. Beyond the facade so many are drowning, desperate and unable to compete with the illusory perfect lives they read about while their true and unique self is lost to them in the deluge of 'this is how you should be'. Envy turns to depression when you cannot be what you have been conditioned to envy. Jamie Chiu, a Hong Kong-based psychotherapist, said growing up in a social-media-obsessed environment damages self-esteem with camera filters in particular 'leading to a dangerous trend where people feel insecure about not being as beautiful as their own filtered selves'. The Cult is creating an illusion within an illusion so that its targets become utterly lost with no grip on *any* reality. With every step along this dark tunnel of manipulated myopia and misdirection the influence of the True 'I' is diluted by fake self-identity. Virtual interaction via AI has diminished the life-skills of personal interaction eye to eye with real live people. Eyes are more interested in staring at screens than looking into other eyes to see the window on the soul that a Facebook post can never do ([Fig 364](#)). Social media has been specifically designed by the Cult to generate psychosis in the population which is defined as 'a severe mental disorder in which thought and emotions are so impaired that contact is lost with external reality'. The Cult knows that once a sense of reality is lost a new reality can be imposed to fill the void – the technocracy and assimilation into AI. Floyd Brown and Todd Cefaratti write in *Big Tech Tyrants*:

With everyone carrying a cellphone all the time [not me!]; with teens even sleeping with theirs; with the majority of girls telling researchers they would give up their boyfriend before they would relinquish their

cell phone, Facebook had the perfect behavior modification platform designed to detect, examine, react, and provide feedback on the most mundane, or the most intimate, of human activities.

Users could now be constantly tracked and measured and unknowingly given cues and prompts on a steady drip, all custom-tailored. Users could be hypnotised little by little by technicians [technocrats] they'd never see, for purposes they may or may not approve of. They could be reduced to prompt-and-respond lab animals ... which is exactly what happened.

Figure 365: This is where self-censorship ends with the silencing and subjugation of all humanity. Speak your truth or there will be no truth for anyone to hear.

The authors describe social media platforms as essentially 'a crime scene'. Yes – crimes against humanity and the young. Anyone still think Zuckerberg and company who coldly calculated this are New Woke heroes? Jaron Lanier's point about being under constant surveillance is why the Cult *wants us* to know we are tracked 24/7. This in itself leads to behaviour modification through the fear of whatever you do being seen and recorded. In response people stop doing, even in what used to be called 'privacy', what they think the state might find unacceptable (see China). Cameras everywhere in streets, schools, universities, and other buildings and those constantly checking speed on the road network are designed to make people constantly aware of authority and trigger anxiety about 'breaking the rules' to cumulatively induce acquiescence (see lockdowns). When we at Davidicke.com post news stories about certain subjects on social media we know the sharing numbers and likes will be lower when those opinions can be accessed for example by potential employers. It's time to summon the courage and do it anyway. Not to do so is a dark and dangerous road that ends only one way in total human subjugation ([Fig 365](#)).

Who creates the Matrix? We do

Extraordinary mass-addiction to smartphones and social media cannot be explained in total by dopamine. You see people transfixed by smart screens while not on social media in search of 'likes' and approval. I have been saying for years something is coming off those phones to induce such addiction and that something are electromagnetic waves which entangle with the human waves of the user and make the person's energetic field (mind) literally part-human and part-machine. This is crucial to the Tiptoe leading to assimilation of the human mind into AI ([Fig 366](#) overleaf). Influence through entanglement of technology-generated waves explains the multiple electromagnetic effects on the body that change the nature of cells, blood, tissue, bone marrow and brain by impacting upon the wavefield body blueprint to manifest as dementia, cancer, autoimmune diseases and so much more.

Figure 366: Smart technology and Wi-Fi are emitting waves of frequency that are entangling with human wavefields to create addiction and assimilate human frequencies into AI machine frequencies. Those that capitulate become ever more machine-like until they *are* machines. See Neil Hague colour section.

Figure 367: If humanity can be manipulated to subconsciously believe that the technocratic dystopia is inevitable we will decode it into experienced reality. This is the foundation of all human control – subconscious programming becomes experienced reality. (Image Gareth Icke.)

AI smart technology is assimilating the human consciousness field through entanglement ever more profoundly with each screen session for those *unconscious* to this effect. It is a form of possession by machine and AI. People are literally being *possessed by their phones* and other smart technology through wave entanglement. I will come later to how being conscious of the process can lessen or block the connection. You can tell if you are wave-entangled with smart technology by how easy it is for you to stay away from it. Do you feel anxious or that almost *part of you* is missing if you don't have your phone? If so you are wave-entangled with what the phone emits. It is taking you over. Try putting your phone in a drawer and forgetting about it. Can you do that? If not, it's got you. Should you need to use a phone for work and income observe how many times you are scanning the screen when work is not involved. Can you stop? If you can't you are machine wave-entangled – machine *possessed* – and through that connection perceptions can be fed to your subconscious mind. *This is happening all the time*. It's not only about dopamine. Wave connections between machines, AI and humans are feeding people states of perception. If you are not conscious beyond the Matrix then the Matrix is thinking for you. I observed long ago how the Cult agenda was being introduced in country after country, culture after culture, at the same time and this could only be partly explained by the secret society networks of The Web. It is happening in far too much common detail in far too many communities worldwide for that to be the whole story. The Cult transformation of human society is actually being imposed as a wavefield construct absorbed and decoded by the collective human mind through these hive connections ([Fig 367](#)). What I call The Web is in fact a web of *waves* – frequencies – which attach to human wavefields as flies are caught by a spider. The Cult and its secret society inner cores create and surf those waves and seek to lure humanity into their frequency lair.

We decode holographic reality from wavefield information fields and the Cult and its 'gods' are technologically infusing their Brave New World into those fields in the form of information which

humanity is decoding into holographic experience. Information waves are encoded by the Cult with its endgame reality for humanity to decode and manifest and this is what I am calling the *Brave New World Symphony*. One of the reasons the speed of change has quickened so dramatically since smart technology appeared is because it gives powerful entanglement access to the human energy field through which that information can be fed. Those in sync with its frequencies will succumb first to the agenda and support its introduction and the idea is to pull everyone into those frequency states to ensure that even those resisting today eventually submit to its oscillation. This does not have to happen. Consciousness in its expanded form is far more powerful than the Cult and its silly games. Consciousness isolated in a perception Bubble is, by contrast, a babe in arms. New Woke once again provides the most potent example. The perception system, the result of life-long programming (frequency programming), cannot process possibilities beyond *I am right* while it is held fast in the vibrational control of the *Brave New World Symphony*. Every time someone censors themselves in fear of the consequences they are being teased further into the 'symphony' and the frequencies through which society is being transformed. Saying what you believe without fear and censoring yourself *because* of fear are quite obviously not the same frequencies. The first cannot be synchronised with endgame information fields while the second certainly can be even if this happens in stages. The process is further empowered by people like Ray Kurzweil and others telling us that the AI endgame is inevitable and unstoppable and through the technique of pre-emptive programming that I highlighted earlier. Both induce the population into the endgame frequency which they can then make manifest.

AI-brain synchronisation - how smart

Another major impact on perception related to what I have described and to smartphone wave addiction is something called entrainment which means that the most powerful frequency in any given situation will 'entrain' other frequencies into its own. It's another example of entanglement. The best example is one I gave earlier of the string vibrations of three violins tuned to the same note causing a fourth violin to vibrate to the same note as the most powerful frequency entrains the other into synchronisation.

Technological frequencies that now flood our reality and atmosphere are getting more cumulatively powerful and they are entraining brainwaves and human wavefields to sync with those frequencies. 5G is a massive stepping up of that potential. Once human waves are entrained with technology waves information (perception) can be transferred from AI to the human mind. Even before a direct connection to the brain we have AI assimilating human consciousness through entrainment with waves emitted by smart technology. Disruption of human wave patterns explains why people living or working close to phone and communication towers, electricity pylons or nuclear stations, can suffer depression, anxiety and diseases like cancer to a much greater extent than the average. Mainstream scientists parroting the official line say there is no evidence of such a connection and they cannot explain how it would be possible while ignoring wavefield connections or entanglement. If they did the mist would clear.

Entrainment of brain frequencies connects with brain placidity that I described earlier in which the way the brain processes information is changed by the nature and form of that information. The brain has been bombarded by wave and digital information from technology in an extremely short period that it has never had to deal with in all known human history. Study after study has concluded that the human brain is being seriously rewired by digital/electronic stimulus and I say this is a holographic reflection of wavefield rewiring. *Of course* the brain must change in the circumstances I have described. We have yet another way that human perception is being transformed and a further reason for smartphone addiction. The brain is stimulated by digital input, rewrites itself to sync with that input, and then goes into cold turkey when you put the smartphone down and the stimulus stops. We see this with people putting down the phone after an already long session and immediately picking it up again for no particular reason. This is the brain screaming 'Hey, I want my fix'. Once these new body wave and brain wave frequencies and codes are in place they are passed on via epigenetics to the next generation who start out

the way their parents had to be manipulated into becoming. With each generation they are more and more machine-wave dominated until they *are* the machines. Frequency-matched communication with DNA can transmute the body into another form in the same way until it is nothing like we see today. Genetic manipulation in laboratories is the Stone Age by comparison.

Figure 368: What's the best way to deal with these surveillance tools if you already have one? Smack - in the bin. Job done.

Figure 369: Perception assimilation before total assimilation.

The human mind is being entrained with AI through all the smart gadgets that are vehicles for AI and another aspect of the assimilation is to manipulate human interaction with AI as if it is human-human interaction. How many people now interact with their smart assistants as if they are human or are induced into perceiving the AI voice on the Sat-Nav as human? Smart assistants are being introduced to vehicles to add to Sat-Navs and make car journeys a constant interaction with AI (Fig 368). Call government agencies and big companies and you will be greeted by an AI voice. Observe the burgeoning number of dolls and other characters for young children that speak with AI voices through Internet connection (Fig 369). All is systematic preparation and conditioning for the fusion of AI with the human mind while human-human interaction is being destroyed equally systematically through smartphones, social media and the technology takeover (more words written before the lockdowns and social distancing). Everywhere direct human discourse is being deleted and this includes supermarkets where check-out staff you could chat with are being replaced by technology to delete human-human contact. Cult technocracy giant Amazon is opening stores that are entirely automated and the plan is for that to be the case everywhere as it is with banks as local branches disappear and people are forced online. Bricks and mortar shops where you interact with human beings are being destroyed by online shopping and faceless, soulless AI. People find it increasingly difficult to buy things away from the Internet as this trend increases apace. Laws are going to come which protect AI machines and eventually they will go above transgender in the New Woke hierarchy. I know that sounds fantastic, but who would have guessed what would happen with transgender in such a ridiculously short time? Who would have believed that Democratic presidential candidate Elizabeth Warren would say that as president she would have her Education Secretary chosen or vetoed by a transgender child? I had to check the speech video to confirm she really said it. She did. If what is happening now with transgender activism had been predicted only a few years ago they would have said that was crazy. It *is*, but it's here anyway. The Cult agenda is

protected from all criticism and exposure. How can you criticise AI robots for taking over human society? That's an 'anti-Semitic' trope or transphobic – no, wait, it's transtechnologic, yes, a *transtechnologic* trope and you are *transtechnophobic*. As AI becomes ever more pre-eminent (and it's happening so fast), so a conscious connection with expanded awareness and *The One* is ever further diminished until we are completely isolated. This is the game and a crucial part of *The Answer* is to know that.

Vaccine shit, food shit, drink shit, it's all shit

Vaccinations and toxic food and drink would appear to affect the body on the chemical/biological level and obviously in one sense they do. Chemical/biological, however, pertains to the hologram and that is a decoded projection of wavefield information. Toxicity, whether in the form of vaccinations, food, drink, pesticides, herbicides and poisons of every kind, are in their base state highly distorted wave frequencies. Toxic gunge pouring from a pipe into a river is changing the wavefield nature of the river and this affects the wavefields of the fish and other marine life. Remember the work of Japanese researcher Dr Masaru Emoto and how toxicity distorted the water crystals (wavefields) of water. Toxicity appears to affect the body directly as poison-to-biological when in fact it distorts wavefields of the body which plays through to the hologram as a reflected distortion. If extreme enough this can so damage the body's wavefield oscillation that it stops and the person dies. Vaccinations, toxic food and drink, pharmaceutical drugs, technological radiation and ultimately an AI connection to the brain are all weapons in the Cult's anti-human armoury through Body-Mind wavefield distortion. I have detailed in *Everything You Need To Know* the near-unbelievable shite in vaccines, food and drink that you would never think anyone would put into anything destined for the body. When you know that the Cult is specifically targeting Body-Mind it all makes sense. The Cult wants the population addicted to shit food, shit drink, shit drugs, shit smartphone waves, shit everything, and all of that is produced by giant Cult corporations. Shit in these cases means shit frequencies which are absorbed by human frequencies that become shit themselves through entanglement. This entangled shit becomes holographic shit which we experience as mental, emotional and 'physical' dis-ease, dis-harmony. To make this happen the Cult wants control of what enters the body through mouth or injection and the ever-increasing pressure through many and various agencies and stooges to impose mandatory vaccinations is a *key* part of the war on humanity and the young ([Fig 370](#)). I wrote those words once again before the 'pandemic' and the subsequent Bill Gates global vaccine agenda.

Figure 370: Welcome to the world where you are a pin cushion for toxic shite. It's only because we care.

This is a summary of vaccine ingredients and substances used in manufacture: Aborted foetal tissue; aluminium; mercury-based thimerosal; gelatine; human serum albumin (found in blood plasma); sorbitol and other stabilisers; emulsifiers; taste improvers; antibiotics; egg proteins (ovalbumin); yeast proteins; formaldehyde (used to embalm dead bodies); acidity regulators; human cell strains, animal cell strains and genetically-modified organisms (GMOs); recombinant DNA technology; bovine products.

Aluminium alone is a brain toxin. Health consequences linked to vaccines and it is far from a full list include: Anaphylactic shock; aseptic meningitis and meningitis; Bell's palsy, facial palsy, isolated cranial

nerve palsy; blood disorders; brachial neuritis; cerebrovascular accident (stroke); chronic rheumatoid arthritis; convulsions, seizures, febrile seizure; death; encephalopathy and encephalitis (brain swelling); hearing loss; Guillain-Barré syndrome; immune system disorders; lymphatic system disorders; multiple sclerosis; myocarditis; nervous system disorders; neurological syndromes including autism; paralysis and myelitis including transverse myelitis; peripheral neuropathy; pneumonia and lower respiratory infections; skin and tissue disorders including eczema; sudden infant death syndrome (SIDS); tinnitus (ringing in the ears); vaccine-strain versions of chicken pox, measles, mumps, polio, influenza, meningitis, yellow fever, and pertussis vasculitis (inflammation of blood vessels).

Figure 371: Herd immunity means natural immunity, not shite in vaccine immunity.

Against this background the number of vaccines and insane combinations, including *six-in-one*, have exploded and we have ever-quickenning and expanding moves around the world to impose compulsory vaccination ([Fig 371](#)). Why would they do this with so much potential harm? Why would they do this when there can be few better definitions of fascism than telling people what they will and will not by law put into their own bodies and those of their children? One answer is they were preparing for the 'pandemic' hoax and the Bill Gates-fronted vaccine being prepared in response that they want to be compulsory worldwide or at least with people facing major restrictions on movement if they don't agree to have it. I'll have *much* more about that in the next two chapters.

Immunity by vaccine? No – immunity from prosecution

Cult-owned pharmaceutical companies or Big Pharma were facing so many lawsuits for life-changing and life-ending vaccine damage that laws were passed in 1986 by Cult-owned Capitol Hill to give them *immunity from prosecution*. No matter what vaccines do to your kids the National Childhood Vaccine Injury Act (NCVIA) protects Big Pharma from any consequences. Instead compensation claims are handled by a federal 'vaccine court' on a no-fault basis without a jury and payments are made by taxpayers for the results of Big Pharma actions. This is the same Big Pharma that makes staggering fortunes every year for killing and damaging extraordinary numbers of children and adults through vaccines and pharmaceutical drugs. One of the biggest causes of death in the United States alongside heart disease and cancer is pharmaceutical-based *treatment* and that's without all the cases never recorded because another cause is given to hide the real one. Add them to the number and it would be by far the biggest cause of human demise. Aldous Huxley said long ago: 'Medical science is making such remarkable progress that soon no-one will be well.' Even with a very high bar to prove your case the US vaccine court had paid out \$4.2 billion as of October, 2019, for damage by vaccines that the Cult wants to make compulsory worldwide and is already doing so in the United States and elsewhere. Robert F. Kennedy Jr, son of the US attorney general assassinated by the Cult in 1968, is among America's leading opponents of the vaccine narrative. Writer Kristina Kristen described at the Kennedy-connected childrenshealthdefense.org how the number of vaccinations soared after the immunity law was passed and how Big Pharma is actually producing drugs for profit to 'treat' health effects of vaccines:

Following the passage of NCVIA, the number of vaccines on the childhood schedule mushroomed, creating a gold rush for vaccine makers: the vaccine industry went from a \$1 billion industry to a \$50 billion industry. But this expansion in the vaccine industry, in fact, is relatively small in comparison to the even greater gold rush for the BIG 4 companies. The drug ‘treatment’ side of the equation, which is substantially more lucrative than the ‘gateway’ vaccine side the BIG 4 already monopolized, now also increased substantially.

The vaccine manufacturers began to capitalize on the known adverse effects of their vaccines, and have since created drugs for the ‘treatment’ side of the equation as well. The lack of incentive to make safe products, which created the bloated vaccine schedule, became the gateway to the lucrative drug treatment side for these companies. Today, the BIG 4 monopolize vaccines as well as the drug ‘treatments’ for chronic illnesses known to be induced by vaccines. First, vaccines push kids off the cliff, and then vaccine makers profit from ‘rescuing’ those they don’t kill.

If ever you needed a concise description of Cult psychopathy and empathy deletion then there it is. If evil is the absence of love, which I suggest it is, the Cult can justifiably be described as evil and that same evil is being applied across its entire agenda for humanity. ‘They wouldn’t do that?’ Oh, yes, they would and get sexually high while doing so. Yale University researchers studying records from a health insurance database discovered correlations between specific vaccines and neurological problems in children aged between six and 15. They included obsessive-compulsive disorder and anorexia nervosa which were found more likely to be diagnosed in children three months after vaccination. Influenza vaccine was one highlighted – ‘get your flu shot’ as the idiot media tell people every year. The study was published in the journal *Frontiers in Psychiatry*. No matter the documented health and psychological dangers to children we are going to make vaccines compulsory. In typical Cult fashion anyone who challenges and exposes the consequences and motivation of vaccines is demonised. Those dubbed ‘anti-vaxxers’ are attacked by moronic people in the media and by parents who have conceded the right to think and so believe whatever the Cult tells them is true. It brings us back to that quote from Morpheus in *The Matrix*: ‘You have to understand, most of these people are not ready to be unplugged and many of them are so inured, so hopelessly dependent on the system, that they will fight to protect it.’ Those that refuse to vaccinate their children – ‘anti-vaxxers’ – and seek to circulate information Big Pharma doesn’t want people to know are increasingly censored by Cult-controlled Big Tech including Facebook, Twitter, Google and Amazon. The Cult makes the vaccines, passes laws for immunity from prosecution for the consequences of vaccines, and silences opposition through its Big Tech near-monopolies in league with the Cult-controlled mainstream media. It’s simple when you connect the dots. If the population allows the few to dictate events for much longer no one will escape vaccination or be allowed to campaign against it. This is the real reason for attacks on ‘anti-vaxxers’ (written before the ‘virus’ scam when those attacks increased dramatically).

Britain is now a totalitarian state and a new Law Commissioner called Penney Lewis announced in 2020 that she was ‘considering’ making the posting of ‘anti-vaccine propaganda’ on social media a criminal offence even when people believed the information to be true. ‘She’ was not considering anything. ‘She’ is just a place-person to officially make it happen and what a coincidence this happened just before the ‘pandemic’ hoax along with Bill Gates stepping down from Microsoft to spend more time on his ‘charitable’ (vaccine) interests. The System (ultimately the Cult) is the force behind this fascistic plan and the same with the pathetic puppet who said in the same period that he was ‘looking very seriously’ at making vaccinations compulsory in the UK. This was ‘Health Secretary’ Matt Hancock in temporary *official* charge of health policy that is really driven by the civil servants in his department representing the Permanent Government. It is highly unlikely that either Lewis or Hancock will know their arse from their elbow about how what they are ‘considering’ is really part of a global agenda emerging out of the shadows. ‘Considering’ obviously means planning to impose when we think we can

get away with it. Attacks on ‘anti-vaxxers’ get more hysterical by the week. Republican political strategist, media consultant and Deep State insider Rick Wilson said: ‘Anti-vaxxers are a scourge and a strong argument for re-education camps, the immediate seizure of their property, and putting their children into protective custody.’ Those concerned about their children’s safety are a ‘scourge’ but someone advocating outright extreme fascism/Marxism is not? Such is the lunacy of New Woke. American Medical Association (AMA) delegates want laws to allow minors to ‘override refusenik parents on vaccination’ (after they’ve been indoctrinated by the authorities, of course). The direction we are being taken is so clear once eyes are truly wide open and not wide shut. It is all the more grotesque when you think that compulsory vaccinations for those who would not otherwise have them is statistically alone condemning some of those children to vaccine damage, even death, and effects of their psychology. The arrogance and psychopathy of these people is stunning.

Herd immunity is the problem? No it's not

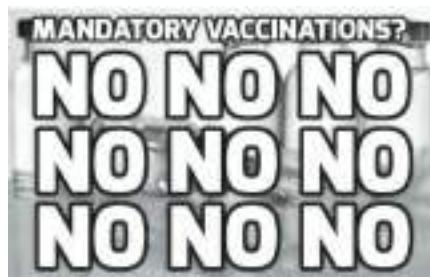

Figure 372: Mandatory vaccinations are only fascism under another name.

One of the biggest scams to justify compulsory vaccination is the lie about ‘herd immunity’ which claims that almost everyone has to be vaccinated for a vaccine to work ([Fig 372](#)). They need to sell this deceit to both support mandatory jabs and explain why so many vaccinated children get the very diseases they are supposed to be vaccinated against. It’s not that the vaccines haven’t worked. It’s those terrible parents who won’t have their kids injected with toxic potions. American neurosurgeon Russell Blaylock put this myth to bed:

In the original description of herd immunity, the protection to the population at large occurred only if people contracted the infections naturally. The reason for this is that naturally-acquired immunity lasts for a lifetime. The vaccine proponents quickly latched onto this concept and applied it to vaccine-induced immunity.

But, there was one major problem – vaccine-induced immunity lasted for only a relatively short period [if at all] and then this applies only to humoral [body fluids] immunity. This is why they began to suggest boosters for most vaccines, even the common childhood infections such as chickenpox, measles, mumps, and rubella.

The claim is that vaccinations produce antibodies for a disease, but this does not constitute proof of immunity. The following quote is from [Learntherisk.org](#):

... science has long known that antibodies alone do NOT create real immunity. Some people with high levels of antibodies can be exposed to an illness and still get sick, while others without antibodies can be exposed and not get sick. Dr. Merrill Chase, nicknamed the Grandfather of Immunology for his pioneering work, did clear-cut research on this issue back in the 1950s.

His results are clear: antibody levels don’t determine immunity. The immune system is a highly complex system and science is still in its infancy understanding how it functions. In fact, immunology textbooks

were completely rewritten recently after a University of Virginia study finally proving the link between the gut and the brain through the lymphatic system. Before this 2014 study, immunology books were adamant there was no link.

The quickest way to understand the world is to invert everything you've been told is real by The System (the Cult). The method is next to foolproof. American children and young people are now given from birth to 18 years between 53 and 70 vaccines depending on how you count them. Many are given in one jab and the childhood schedule has tripled in little more than 30 years which takes us back to the time when Big Pharma secured immunity from prosecution. In this same period children have got sicker with once-rare autism, food allergies, asthma, brain malfunction, autoimmune diseases and cancer in children dramatically increasing. There has been a mega-rise in autoimmune diseases in the vaccine era and especially the mass vaccine era. The immune system attacks its own body by picking up signals indicating a threat from foreign bodies that shouldn't be there and this is known as autoimmune disease or malfunction. Does anyone really believe that injecting or swallowing toxic substances and material that attach to the body does not cause the immune system to attack itself in this way? Still-developing immune-systems of babies are deluged with this toxic crap and the body's natural protection will never be what it would have been after that assault so early. These are the same immune systems targeted by 5G and Wi-Fi. Childhood diseases were just part of life when I was a kid and parents would take their children to those who were sick so they would get the disease. It was seen as kicking in the immune system to protect them for life and give life-long immunity to conditions that can be far worse in adults. Today an outbreak of measles is propagandised into a deadly threat that justifies compulsory vaccinations and vicious attacks on 'anti-vaxxers'. It's all manipulation. New York mayor Bill de Blasio declared an emergency after a measles outbreak and ordered vaccinations on threat of a fine of up to \$1,000. 'We cannot allow this dangerous disease to make a comeback here in New York City', he said. This was the 'dangerous disease' that was met in my childhood with 'So and so's got measles' – 'Oh, week off school, then.' It should also be stressed that when we are told there has been an 'outbreak' we are not informed how many vaccinated kids have the disease and how many *un*vaccinated are not affected. That would be bad for the sales-pitch. My two big strapping sons were not vaccinated and they somehow seemed to have survived. I can't think how and maybe someone can explain how their vaccinated mates got diseases they didn't.

Vaccine waves

To understand the deeper agenda of vaccinations and all the other shite I've described we need to return once more to the wavefield level of reality. Here vaccines are disrupters of wavefield harmony which in itself undermines wavefield information codes that are the immune system. At the wave level information can also be encoded with perception patterns and disease patterns. Once you have access to the body field anything becomes possible with the knowledge the Cult is working with. Toxic fast food and processed food and drink have the same effect as do pharmaceutical drugs and technological radiation. Drug 'side-effects' are wavefield disrupting effects (nothing 'side' about them) caused in the same process as the one effect that is claimed to be beneficial to a condition. Even then drugs and alternative treatments can appear to have 'cured' a problem when it has only caused the wavefield flaw to move to somewhere else in the field to manifest as another condition that is not apparently related to the first one that was 'cured'. But it *is*. The 'cure' has only made the symptom disappear and not the flaw. You could think of it as like a bubble in a bottle of water that moves from one place to another as you turn it around. These wavefield flaws are caused overwhelmingly by emotional trauma as imbalanced waves of low-vibrational emotion impact upon Body-Mind fields, but they also result from the toxins swallowed and injected which can lead to diseases many years after they have been consumed and administered. Cause and effect is never identified because of this delay. Only when the flaw is deleted rather than

moved is the healing process over and this is mostly done by bringing to the conscious mind the emotional trauma that has manifested the flaw. This can be something that happened in childhood which didn't show itself as a condition in the body for maybe decades. Once the conscious mind acknowledges the cause and effect of the flaw the wavefield is rebalanced. The acknowledgement generates a wave pattern that does the job. For most people the connection remains in the subconscious given that mainstream medicine does not recognise these connections. Disease really is all in the mind, and has to be when the body *is* the mind, and it can be 'cured' (rebalanced) by the mind.

Vaccinating chips

Figure 373: Nanotechnology released in the air, water and food is designed to connect humanity to the Smart Grid.

There is still another reason for vaccinations to benefit the Cult. I was told by a CIA scientist in California in the 1990s that nano-microchips far too small to be seen by the human eye were being infused into the population through hypodermic needles in public vaccination programmes. Nano-technology is now commonplace and can be found in an ever-increasing number of foods. When I met the scientist it was not nearly as widely known about as it is today. I cannot emphasise enough that the cutting edge of technological possibility in the secret projects is far in advance of anything we see in the public arena. Nanotechnology is easily small enough to be injected with vaccines and no one would know. It takes a tiny few to add the nanochips which large numbers of unsuspecting 'medical professionals' then inject. Today these chips are called nanobots, nanorobots, nanoids, nanites, nanomachines, nanomites, neural dust, digital dust and smart dust ([Fig 373](#)). Once in the body these micro-machines can according to the literature 'assemble and maintain sophisticated systems and build devices, machines or circuits through molecular manufacturing and produce copies of themselves through self-replication'. They can also connect the body to the Smart Grid and manipulate genetics. What an amazing coincidence with all these crucial benefits to the Cult agenda of vaccinations that we find their most prominent global promotor to be Microsoft billionaire technocrat Bill Gates. His father, William H. Gates Senior, supported the beliefs of infamous eugenicist Thomas Malthus (as did his son 'at one time') and Father Gates headed the Rockefeller-created Planned Parenthood which was part of the eugenics movement and involved Cult 'prophet' Dr Richard Day who told those paediatricians in 1969 that diseases would be inoculated through vaccinations (very relevant when I come in detail to 'Covid-19' and the Gates vaccine). Austrian doctor, molecular biology researcher, and now dentist, Jaroslav Belsky, pointed out a connection between vaccinations and the 1918 'Spanish flu' which actually began in American military bases in the last year of the First World War before spreading worldwide to affect about 500 million people, or one-third of the world's population. At least 50 million deaths were estimated with about 675,000 in the United States according to reports. Belsky said:

An orgy of vaccination took place for the soldiers of the war. In 1918 up to 36 vaccinations took place with no rules at all. It happened just before the Spanish Flu appeared in different places at the same time.

Medical historians confirm today that it was a vaccination disaster.

Bill Gates made his billions from Microsoft technology essential to the Cult technocracy agenda and funds and promotes a long list of Cult demands including vaccines, surveillance technology, education programming like Common Core, geoengineering of the atmosphere (weather modification and so much more), and genetically-modified food which is designed to genetically-modify *us*. You can read about all this in detail in *Everything You Need To Know*. Gates announced in March, 2020, that he was stepping down from the Microsoft board to spend more time on 'philanthropic activities' which means funding the elite agenda. He said he wanted to focus his efforts on global health and development, education and tackling climate change. Yeah, yeah, mate, we get what you mean. (We did indeed because shortly after I wrote those words Gates immediately launched into promoting 'virus' lockdowns and a vaccine without which life would, in his words, 'never get back to normal'.) What a conman this bloke Gates really is – and worse as we shall see. I should emphasise, too, that vaccines damage and change DNA and the next generation of vaccines specifically *target* DNA – including the Gates 'Covid-19' vaccine. The theme is clear. These new vaccines don't inject a virus to stimulate an immune response but instead inject *synthetic* genes – here we go – which will permanently alter DNA. A *New York Times* article about 'immunoprophylaxis by gene transfer, or I.G.T.' quoted Michael Farzan, an immunologist at America's Scripps Research Institute:

I.G.T. is altogether different from traditional vaccination. It is instead a form of gene therapy. Scientists isolate the genes that produce powerful antibodies against certain diseases and then synthesize artificial versions. The genes are placed into viruses and injected into human tissue, usually muscle.

The viruses invade human cells with their DNA payloads, and the synthetic gene is incorporated into the recipient's own DNA. If all goes well, the new genes instruct the cells to begin manufacturing powerful antibodies.

'The synthetic gene is incorporated into the recipient's own DNA.' Ponder on that in the light of what I have been saying about the synthetic human. Is anyone still naive enough not see what is happening, why vaccines are being made compulsory and what the Gates 'Covid-19' vaccine is really all about?

Vaccine surveillance

Figure 374: This is not only the Gates doctrine – it's the Cult doctrine everywhere you look.

Crucial to the imposition of vaccination for *everyone* by law is tracking who has been vaccinated and who hasn't. Is it really another coincidence that the major organisation in the Bill Gates campaign to vaccinate the world is calling for the tracking of people to confirm vaccination? Seth Berkley, CEO of the Gates-funded GAVI, the Vaccine Alliance, says the organisation spends an average of nearly \$2 billion a year to vaccinate children in the poorest countries and invests tens of millions in 'innovations to monitor immunisation'. He wants technology to track who has been vaccinated and to give everyone an 'identity'. All this fits with the Cult agenda as he might take time to find out if he doesn't already know. I bet he

does. Berkley formerly worked for the Big Pharma-controlled US Centers for Disease Control and Prevention and the Rockefeller Foundation. The Rockefeller family – its inner core is Cult to its DNA – was the family that imposed Big Pharma ‘medicine’ on the world at the exclusion of other forms of healing that they didn’t control. Berkley’s desire for everyone to have ‘identity’ carbon-copies is the goal of the United Nations which aims for all 193 member countries to impose a legal form of identity by the ever-recurring year of 2030. Is it random chance that the Bill and Melinda Gates Foundation is funding the development of a ‘tattoo’ that will identify those who have and have not been vaccinated? Gates has funded research by scientists at the Massachusetts Institute of Technology (MIT) to create a new ink for an ‘invisible quantum tattoo’ to be embedded in the skin and read by a smartphone camera app ([Fig 374](#)). [Sciencealert.com](#) reported:

The invisible ‘tattoo’ accompanying the vaccine is a pattern made up of minuscule quantum dots – tiny semiconducting crystals that reflect light – that glows under infrared light. The pattern – and vaccine – gets delivered into the skin using hi-tech dissolvable microneedles made of a mixture of polymers and sugar.

MIT researcher Kevin McHugh described the outcome perfectly while quite probably being firewalled in compartmentalised cluelessness from the real reason behind it: ‘In areas where paper vaccination cards are often lost or do not exist at all, and electronic databases are unheard of, this technology could enable the rapid and anonymous detection of patient vaccination history to ensure that every child is vaccinated.’ There you have the Cult agenda in a sentence and this will allow authorities – and employers – to know if you have been vaccinated and are therefore ‘safe’ to roam or be employed. (When the ‘virus’ hoax was played weeks after I wrote those words Gates was promoting his invisible digital ‘tattoo’ to track who had been vaccinated with the ‘Covid-19’ vaccine that HE was funding into worldwide use. It’s shocking. No wonder I call him the ‘Software Psychopath’.) The same tracking system is planned to ensure that everyone is drugged to make them docile. ‘Smart systems’ already introduced include microchipped ‘smart pills’ that tell doctors that drugs have been taken in another Tiptoe to this end. The concept was well portrayed in the 2002 movie *Equilibrium* in which the population has all emotion suppressed by a daily injection monitored to ensure compliance. Proposals to add lithium to public water supplies is another Tiptoe. Lithium is used to treat manic depression and its advocates say mass medication of lithium will make people ‘happier’. Children and adults are already being mass-drugged with psychology-changing potions on a scale never seen before at the first sign of emotional problems or off-Postage Stamp behaviour. *Brave New World* author and establishment insider Aldous Huxley predicted this in 1961:

There will be, in the next generation or so, a pharmacological method of making people love their servitude, and producing dictatorship without tears, so to speak, producing a kind of painless concentration camp for entire societies, so that people will in fact have their own liberties taken away from them, but rather enjoy it, because they will be distracted from any desire to rebel by propaganda or brainwashing, or brainwashing enhanced by pharmacological methods. And this seems to be the final revolution.

How did Huxley know this? How did Orwell know what he did? How did Richard Day? How did I? The agenda has been long in the planning and is ultimately sourced from outside this reality which doesn’t share the same ‘timeline’ as the human world. If you are an insider or spend 30 years lifting the stones you can know what is planned.

Micro-everything

Figure 375: Mmmm, yummy.

The world is being deluged with microplastics that resonate to the frequency of synthetics. Wave entanglement with increasing numbers of synthetic waves will make body wavefields more ... *synthetic*. A Reuters report using data from 50 studies on the ingestion of microplastics gave devastating confirmation of how far this has already gone. Microplastics are described as particles under five millimetres. The report, based on the findings of a study by the Worldwide Fund for Nature (WWF), found that people are consuming on average every week some 2,000 tiny pieces of plastic mostly through water but also through marine life and the air. Every year humans are ingesting enough microplastics to fill a heaped dinner plate and in a life time of 79 years it is enough to fill two large waste bins ([Fig 375](#)). WWF International director general Marco Lambertini said: 'Not only are plastics polluting our oceans and waterways and killing marine life – it's in all of us and we can't escape consuming plastics,' Plastic-wrapped food absorbs the chemicals and I see even fresh food wrapped in plastic labelled 'organic' which by definition it can't be in such circumstances with the content of plastic leaching into the food. American geologists found tiny plastic fibres, beads and shards in rainwater samples collected from the remote slopes of the Rocky Mountain National Park near Denver, Colorado. Their report was headed: 'It is raining plastic.' Microplastics have been found in snow in remote areas and deep in ocean sediment and in plankton. 'Everywhere we look, we find it', one researcher said. Microplastics are also added to foodstuffs with scientists from McGill University in Canada revealing that billions of microplastic particles are released into every cup of tea using plastic tea bags. Who could have forecast that using plastic tea bags would release plastic into the tea? You'd have to be a genius, surely? It's systematic at the inner core of the Cult. Health consequences of plastic infiltration of the body are nothing like fully understood, but the London *Daily Mail* quoted Rachel Adams, senior lecturer in Biomedical Science at Cardiff Metropolitan University, as saying that among them are internal inflammation (with many knock-on effects) and immune responses to a 'foreign body' (see also vaccine contents and autoimmune disease). She further pointed out that microplastics become carriers of toxins including mercury, pesticides and dioxins (a known cause of cancer and reproductive and developmental problems). These toxins accumulate in the fatty tissues once they enter the body through microplastics. I have described in other books how the body's survival system often will not allow fat to dissolve because it knows that this will release the accumulated poisons – 'No matter what I do I can't lose weight'. A study by King's College London discovered the astonishing microplastic pollution in the UK capital. Researchers found that 'microplastics in the atmosphere are falling from the skies onto roofs and into human lungs in alarming quantities'. Researcher Stephanie Wright said they found 'a high abundance of microplastics, much higher than what has previously been reported' and the same will be true of all other cities. She repeated the point about unknown consequences: 'The biggest concern is we don't really know much at all. I want to find out if it is safe or not.' Well, clearly it's not safe and what is being missed as always are the consequences at the wavefield level where synthetic vibrations are infiltrating the human energy field which becomes the human hologram. When you are entering your endgame the last thing you want are healthy, strong, psychologically-balanced, sharp-thinking, people. You want the very opposite and you

suppress the mind by suppressing the body which together make up Body-Mind. A study by the University of Vermont found that obese children have a thinner region in the brain which relates to decision-making, the ability to plan and control behaviour, and this is where most information is consciously processed.

Too many people'

Figure 376: Another Wi-Fi field planned for every home and business to connect you to the cloud and let the cloud communicate with you.

I have been warning for decades about a planned mass-cull of the global population and all that I have described makes that possible. When entrainment/entanglement between technology frequencies and the human field is powerfully established one can so disrupt the other that the heart stops beating and the oscillation of bodily life is switched off. If the Cult has the precise frequencies on which a person is transmitting an individual can be isolated and targeted. The Cult is using every excuse to compile DNA databases which provide that information. Many people claim they are already being specifically harassed by Deep State technology and refer to themselves as 'targeted individuals'. They say thoughts and perceptions are delivered to their brain technologically and I have explained how this is possible. I say that in less obvious ways this is being done on a mass scale through information delivered in waves by Wi-Fi, 5G and other technology networks. Taking out people individually and collectively is only a step on from that and based on the same principle. Cult gofers and operatives quoted in other books have long called for a colossal decrease in the global population (and I mean by billions) and now there is the added excuse that too many humans mean more danger from climate change. Climate Cultists are urging a reduction in the population and for people to stop having children at all. Bill Gates is among those very vocal on these subjects and would have talked about this with his father who supported eugenicist Thomas Malthus. The Cult doesn't need anything like as many human slaves any longer with AI taking over everything, male-female procreation due to be replaced by Huxley's World State Hatcheries, and synthetic laboratory babies specifically engineered for life-long slavery. Human bodies have been made toxic through food, drink, pollution and microplastics while electromagnetic frequencies have the potential to enormously increase the effect of that toxicity to fatal levels. The authorities could have wired computer systems in schools and universities and instead imposed Wi-Fi as part of the cumulative cull (remember the teacher's blood) and the same with smart meters ([Fig 376](#)). Now you can see why 5G – a military *weapon* – is being rolled-out across the world with no testing. 5G is very much part of the cull agenda. I know that people don't want to face what is happening, but it *is* and we have to deal with it. How could it be any other way with 5G and Wi-Fi when you consider coagulating blood, affecting the molecular structure of oxygen, attacking water molecules, and frequencies that we don't even know about able to be transmitted through a network sold to us for other reasons? What better means do you need for a long-planned mass cull than the ability to absorb enough oxygen as I will come to in the next chapter? 'Humans' in the form we know them are planned to disappear to be replaced by the trans-human, synthetic-human, machine-human, that would not be human at all.

Californian biotech company Epicyte patented the Epicyte gene in 2010 which makes men and women sterile and infertile when ingested. The gene was then genetically-engineered into *corn seeds*. Why the hell would anyone do that if it were not aimed at sterilising people en masse? Cult biotech companies Monsanto and DuPont bought the Epicyte operation to ‘commercialise’ the sterilisation gene. Rima E. Laibow, Medical Director of the US Natural Solutions Foundation, said that you can’t find out if you are consuming the gene because the (Cult-controlled) US Food and Drug Administration (FDA) made it illegal to have that information. Contraceptive drugs are also in the water supply after being peed down the toilet in cumulatively vast quantities while electromagnetic waves are known to influence human reproduction through both male and female systems. We are, of course, drowning in technological waves with now the vastly more destructive 5G. I have already emphasised the falling sperm counts. Professor Olle Johansson from the Department of Neuroscience at Sweden’s Karolinska Institute has predicted mass ‘irreversible sterility within five generations’ due to technological and Wi-Fi radiation and he was speaking before the introduction of 5G. A letter highlighting the serious dangers to male reproduction of the 5G rollout was delivered to UK Prime Minister Boris Johnson in early 2020 along with two petitions. One was signed by 268 doctors and scientists. The letter said:

We are extremely concerned by the vulnerability of our young and very young people to the harmful effects of pulsed RF radiation. Study upon study is showing that this non-ionising radiation is causing oxidative DNA damage in cellular systems and this may be particularly harmful to the reproductive system of young boys, adolescents and young men.

It’s all long-planned and the extinction of humanity *as we know it* is the goal. Dr Richard Day told the paediatricians in 1969 about the coming ‘demise pill’ in which older people would kill themselves when they reached a certain age to make way for the young. The constant efforts to divide young and old is in part related to this plan and so is the Tiptoe to legal euthanasia and ‘care pathways’ in which doctors stop drugs and nutrition for those they claim are close to death. Many who have been taken off the ‘pathway’, only thanks to the efforts of loved ones, have lived for years afterwards. The theme continues with increasing numbers of US states, plus the District of Columbia, legalising medical ‘assisted suicide’. At the time of writing they are California, Colorado, Hawaii, Maine, New Jersey, Oregon, Vermont and Washington with New York authorities talking about doing the same. People may say it is compassionate to allow everyone to free themselves from ‘physical’ suffering, but that is not in the top five reasons of those that apply for legalised suicide in Oregon, for example. Among the leading reasons is fear of being a burden on others and fear of losing autonomy. This by definition means mostly the poor and vulnerable which then brings us into the arena of what I will call perceptual eugenics. You convince people they are a burden and then help them kill themselves. Old people have been psychopathically targeted during the ‘virus’ lockdowns as we shall see. Once you open the door on the basis of ‘compassion’ the Cult batters it off the hinges and takes the wall down. Humans are just a resource to the Cult and when they cease to be commercially productive the plan is to delete them. Paediatrician Lawrence Dunegan described what Richard Day said in 1969 about the demise pill:

Medical care would be connected very closely with one’s work but also would be made very, very high in cost so that it would simply be unavailable to people beyond a certain age. And unless they had a remarkably rich, supporting family, they would just have to do without care.

And the idea was that if everybody says ‘Enough! What a burden it is on the young to try to maintain the old people’ then the young would become agreeable to helping mom and dad along the way, provided this was done humanely and with dignity. And then the example was there could be like a nice farewell party, a real celebration. Mom and dad had done a good job. And after the party’s over they take the ‘demise pill’.

Day described in 1969 how detailed the Cult agenda really is when he said they would use very pale ink on forms that people had to fill out so that older people would not be able to read them and have to ask younger people for help. He listed other ways that old people would be manipulated into believing they were 'past it' and I quote at length what he said so accurately across a range of subjects in my book, *Phantom Self*. In another reference to the population cull he said that most families would be limited to two children. Where have you seen such a child-limit policy? In *China* – the blueprint for the world. We should also note the emerging pressure for later and later legal abortion.

Ruling the waves

Figure 377: The Cult's all-seeing eye symbol in a whole swathe of children's TV *programs* and other sources. It's yet another innocent coincidence, naturally.

The Answer comes from understanding the problem and that means understanding the foundation nature of waves. The Cult is seeking to impose wave control in every area of life. I have highlighted many times over the years how symbols have been placed throughout global society in the form of the pyramid and all-seeing eye and many others. Why would they bother to do this on such a scale? Symbolism is both the hidden language through which Cult operatives communicate in public and a means of transferring the frequencies of the Cult to the human energy field. The number of times you see the pyramid and all-seeing eye or just the eye is absolutely fantastic and often in animated cartoons and movies for children ([Fig 377](#)). Energetically, and in terms of frequency, symbols represent what they symbolise. A symbol representing hate will resonate waves of the frequency of hate and have potential to impact on the human wavefield. You don't even have to consciously acknowledge the symbols for them to have this effect and in fact the Cult doesn't want that. While your conscious mind defences are down through ignorance of what is happening those frequencies are left unchallenged to entangle with the subconscious – the level at which the Cult overwhelmingly operates. The idea is to access human perception at the subconscious level of waves and have that information filter through to the conscious mind as what people believe to be their own thoughts and perceptions. 'I have not been manipulated to believe what I do; they are my own conclusions.'

Wave connection reveals why the Cult is obsessed with ritual. Energy flows where attention goes and the focus during a ritual on their unseen 'gods' instigates a wave entanglement through which information can be exchanged and initiates possessed. Around the world are ancient and modern sites of ritual to Saturn and Orion and rituals in those places would connect initiates to the frequencies of Saturn and Orion which I say are both crucially important to the simulation and so mega-worshipped by the Cult. Waves are everything in the context of human control both as the cause of enslavement and the knowledge that will set us free.

CHAPTER FIFTEEN

How did they pull off the fake ‘pandemic’?

Fear is only as deep as the mind allows – Japanese proverb

Eighty-five percent of this book was written before a ‘pandemic’ called ‘Covid-19’ swept through the collective human mind and gave the Cult almost everything that I have said in this and previous books was planned to transform global society. I have been referring to the ‘Covid-19 hoax’ here and there in earlier chapters and now I’ll explain what I mean in detail: *There is no ‘Covid-19’*.

This will come as a shock to most people and be immediately dismissed as crazy not only by mainstream society, but by swathes of the ‘alternative’ media. I know that is true because it already has been. When, however, people have bothered to look at the evidence and background that I will lay out in the next two chapters, instead of instantly dismissing even the possibility and misrepresenting what I am saying, they have seen the sense it makes of what is otherwise a nonsensical and utterly contradictory ‘pandemic’ narrative. I don’t think significant sections of the ‘alternative media’ have come out of this with much distinction while other parts have been outstanding. We have seen during the events of 2020 a parting of the ways between those ‘alternative’ voices still willing to accept blatantly flawed official stories and those who are not. I will first summarise the official ‘pandemic’ narratives, mainstream and otherwise, and then offer a very different explanation thanks to medical professionals who have seen through the bullshit.

The official story(s)

There have been a few official and semi-official versions, but all encode the same theme: There *is* a virus, natural or emerging from a Chinese bio-lab, labelled SARS-CoV-2 and this caused an infectious respiratory disease called ‘Covid-19’ (I will refer to this alleged virus package as ‘Covid-19’ from hereon to keep it simple). We were told that this ‘coronavirus’ and its effects are so dangerous that whole countries had to be put under house arrest to stop it spreading and causing catastrophic loss of life. We will see that none of these claims is supportable by the evidence, but lockdowns based on those lies and flawed assumptions have been used to destroy the independent incomes and livelihoods of potentially billions and made them dependent on their Cult-controlled states and governments in a massive advancement of the Hunger Games Society. The ‘outbreak’ in China in the closing weeks of 2019 was met with a fierce and draconian lockdown in which what little is left of freedom in China was deleted and vast populations were put under house arrest policed by ‘smart’ face-recognition surveillance technology and the vicious, brain-dead Chinese law enforcement and military (same thing). The Western media reported the frenzy of activity from the Cult-owned Chinese government which included building whole new hospitals in little more than days to meet the demand from ‘teeming numbers of dying people’; but the new hospitals built amid global media hysteria about the ‘deadly virus’ responsible were closed in a ridiculously short time when compared to the apparent human disaster that we were told was unfolding. As the ‘virus’ was said to be circulating in the West the Chinese ‘epidemic’ was already beginning to

dramatically recede and while the Western economy went into meltdown China was reopening business and industry, ending the extremes of the lockdown, and travel was restored. The big point to make here is that *what happened in China set the blueprint for how to respond to the 'virus' – mass lockdown, house arrest and keeping the population apart from each other*. This was the plan from the start with Bill Gates saying that 'basically the whole country (America) has to do what was done in the part of China where they had the infections'. The cover-story promoted by the Cult-created-and-controlled, Gates-funded World Health Organization (WHO) was that China had dealt with the 'health disaster' very effectively and so that's how the rest of the world had to respond when it came their way. Cult and Gates puppet WHO Director-General Tedros Adhanom Ghebreyesus said:

The Chinese government is to be congratulated for the extraordinary measures it has taken to contain the outbreak. China is actually setting a new standard for outbreak response and it is not an exaggeration.

The scene was set. The dye was cast. The Western economy and the lives of billions were about to be devastated.

The opening version of the official story was that the 'outbreak' began in a 'wet market' in Wuhan where bats and other animals are bought and eaten in the most appallingly dirty and unhygienic conditions and when this narrative didn't stand up another theme began which was promoted and advanced by the alternative media. This surrounded the 'BSL-4' laboratory in Wuhan not far from the wet market where lethal agents are studied and manipulated to create bioweapons for military purposes. The Wuhan facility is the only one of its kind in China. BSL-4 refers to biosafety level 4 which is the designation given to laboratories with the highest level of biosafety precautions capable of containing the often instantly fatal agents stored there. Francis Boyle, professor of international law at the University of Illinois College of Law who drafted the US Biological Weapons Anti-Terrorism Act of 1989, went public in February, 2020, to say he was convinced the 'coronavirus' strain said to be involved was an engineered bioweapon released from the Wuhan bio-lab by error or otherwise. He appeared across the alternative media and what he said about the *existence* of offensive biological warfare weapons with genetically-engineered DNA was clearly true. What followed, however, in actual dead people around the world did not in any way support the claim that a lethal bioweapon had been released. Just because a known arsonist lives near the scene of a fire does not mean only by association that he started the blaze, but the person who *did* start it will try to make you think so. No matter – a significant swathe of the alternative media would believe and promote this Wuhan lab scenario and later it would become a mainstream narrative which, of course, focussed attention and fury on China. Some Deep State-connected US politicians like the Israel-owned Tom Cotton suggested the Wuhan laboratory could have been the source and this was more reason for red flags to flutter in the breeze. It was suggested that the 'deadly agent' – by now dubbed a 'virus' – was stolen by the Chinese from a Canadian laboratory in Winnipeg, the country's foremost centre for developing and testing biological warfare weapons, or from a US BSL-4 laboratory of which there are many. Others said the 'virus' could have been sourced to the US military and released under the cover of the 2019 Military World Games held between October 18th and 27th in Wuhan just before the outbreak became public. The Games involved ten thousand military personnel and support staff gathered from more than 100 nations including a team from the United States. Professor Boyle estimated that the US has spent in excess of \$100 billion on biological warfare research since 9/11 rising by \$5 billion a year. This would sync with the Sabbatian-Frankist Project for the New American Century plan for the development of biological weapons that target specific genotypes. Biowarfare research is going on across the world in the United States, China, Israel, the United Kingdom (the infamous Porton Down), France, Russia, and many other locations. Sabbatian-Frankist-controlled Israel has a major chemical and biological weapons programme (hidden behind 'research' facilities) and as always refuses to sign the Biological Weapons Convention or Nuclear Non-Proliferation Treaty to

prevent international inspections because, thanks to the Sabbatian-Frankist networks, it is a law unto itself. The Israel Institute for Biological Research near Tel Aviv which runs the programme is one of the country's most secretive organisations (and think of the competition). The Globalresearch website said of Israel:

The greatest secrecy surrounds research on biological weapons, bacteria and viruses that spread among the enemy and can trigger epidemics. Among them, the bacteria of the bubonic plague (the 'Black Death' of the Middle Ages) and the Ebola virus, contagious and lethal, for which no therapy is available.

So do deadly agents exist at laboratories like Wuhan? They definitely do. The question to be asked is was the 'Covid-19' coronavirus one of them? The data from actual *happenings* and not speculation says 'no' and I will elaborate my case for that in fine detail. For sure the first official story that the virus broke out in an animal food market or 'wet market' in Wuhan has not stood up to scrutiny. Bats were blamed to start with which has been done before in similar situations to hide the truth. There were diversions and false 'leads' flying around all over the place and the more of those you can scatter the more confusing the situation becomes and the truth is lost. I observed the scene from the perspective of tracking what was happening and not making what was happening fit a preconceived belief. As the 'virus' expanded into the West the consequences simply did not match in any way what you would expect from a 'deadly bioweapon' in terms of dead people. So what was going on?

The Web

It is worth re-emphasising how the Cult globally manipulates to put the 'pandemic' hoax into another perspective. The first thing to do is forget borders which do not exist in the Cult networks. Picture a transnational corporation with a headquarters in a particular country (in the case of the Cult that headquarters or central control centre – The Spider – is in the shadows). A corporation has subsidiaries in other countries around the world which take their orders and direction from the headquarters. The Cult system operates in the same way. In every country, especially those that most affect the direction of the world, the Cult has subsidiary networks of secret societies, satanic covens and interbreeding Nephilim hybrid families that are tasked with controlling that country's politics, government administration (Deep State), finance and banking, media, medical structure to benefit the Cult's Big Pharma, and so on. By this means the Spider-directed agenda is imposed on 'different' countries at the same time to instigate global change and coordinated happenings. I have already said that China is a major centre for the Cult along with the United States, Israel, Britain, Italy, France, Germany, and elsewhere. At the Cult level China *is* America *is* Israel *is* Britain *is* Italy *is* France *is* Germany. Through this Cult coordination it is absolutely possible to orchestrate the extraordinary hoax that I am going to describe. Even many researchers in the alternative media do not seem to understand this structure and its manipulative potential judging by their comments during the 'pandemic'.

The structure requires very few people 'in the know' and consciously working for the Cult to dictate events in an entire country and together the entire world. You only have to control the key positions of decision-making and most of these do not even involve politicians. You want the technocrats to have the control and that includes in the case of 'Covid-19' the medical technocrats which have driven 'virus' policy throughout this human catastrophe with elected politicians almost entirely bystanders. We will see as we proceed the coordination of action between China (the Cult) and the West (the Cult). I have already highlighted the connections via the Cult of the Deep State and academia in China and the United States. As the 'Covid-19 virus' was coming to the centre of public attention Harvard University professor Charles Lieber, chair of the Harvard Department of Chemistry and Biology, was charged with lying about his role in a Chinese talent recruitment programme and was ordered to post a \$1 million cash bond by a judge at Boston's federal court. Prosecutors said Lieber agreed to conduct research, publish articles

and apply for patents on behalf of China's Wuhan University of Technology in exchange for \$50,000 per month and some \$150,000 in living expenses. Authorities said he was also given \$1.5 million to establish a research laboratory at a Wuhan university. I have said that a stream of 'former' Pentagon officials end up working after 'retirement' for China either directly or indirectly. It emerged that the United States had handed \$3.7 million to the Wuhan Institute of Virology and Canada had done something similar. The American grant was reported to have been approved by the Bill Gates-connected Anthony Fauci – Trump's advisor on the 'Covid-19' lockdown response. Why would the *United States* and *Canada* give millions to a lab in *China*? It was the American and Canadian 'subsidiaries' of the Cult handing over money to the China 'branch'. This is the borderless world of the Cult through which the pandemic hoax was coordinated. So is the Cult connected to the Wuhan lab? Yes, and this may become significant ongoing; but is it the source of 'Covid-19'? Hardly when 'Covid-19' is a phantom 'virus'. The Wuhan lab story is a diversion from that.

I will be adding the detail, but in summary this is how they pulled it off. The Cult network that controls China triggered global hysteria with an apparent outbreak of a 'deadly virus' which they dealt with through draconian lockdowns and mass house arrest. There was no 'virus' and the numbers of apparent deaths were generated by re-diagnosing people dying of other respiratory disease and pneumonia in the grotesquely toxic air of Wuhan as dying of a non-existent 'virus' dubbed 'Covid-19' which had the same 'flu-like' and respiratory symptoms as a long list of other conditions common in Wuhan thanks to its extreme toxic environment. A 'test' was then introduced that didn't even test for 'Covid-19' and this same test has since been used by the rest of the world to *not* test for 'Covid-19'. The Western media fanned the flames of hysteria by selling the story of mass deaths in China and how its government was hiding the truth about millions of dead. The media and Cult networks in Western and other countries screamed '*Ahhhhh – it's us next!!*' Amazingly the Chinese 'death figures' suddenly began to fall which is easily done when they are based on calculated miss-diagnosis and a fake 'test'. Cult assets controlling the medical hierarchies in other countries ordered doctors and other medical staff to begin diagnosing 'flu-like' symptoms and pneumonia as 'Covid-19' and indeed almost any condition as a 'Covid-19' death with no evidence necessary. If you haven't come across this background before you are going to be shocked when I get into the detail. The narrative was supported by the same fake test and the media screamed some more about hospitals being like 'war-zones' overwhelmed by cases. In fact, hospitals had never been so quiet, but with security staff guarding them, visitors not allowed and the media banned from filming the illusion was perpetuated of a tidal wave of patients with medical staff on their knees. Other operations and treatments were cancelled to ease the burden of 'overworked' medical staff who were largely sitting around with nothing to do. Lockdowns like that in China were instigated to 'protect the people' from a 'virus' that didn't exist urged on by the Cult-owned, Gates-funded World Health Organization which pointed to China's draconian lockdown 'success' as the way to deal with what it declared was a global 'pandemic'. This is the barest framework and the detail is on the way.

Fact-free propaganda

I was quite happy in the early weeks of the hysteria to accept the possibility of a bioweapon of some kind being involved with much *circumstantial* evidence to point in that direction. The word, however, is circumstantial and the only way to assess the validity of that is for real-world events to support the hypothesis. It became clear to me as a few weeks passed that this was not the case at all. Death-rates did not support that scenario, but a good slice of the alternative media still clung to it. The overwhelming majority of those who 'caught the virus' had 'very minor symptoms' or none at all and this number would increase as the weeks passed. You wouldn't know this if you read the daily war-zone headlines and on the basis of this perceptual magic trick the global economy was devastated. Were all the 'journalists' (you're joking) in on the plot? No, of course not. They just repeated unquestioned the official story as they do as a matter of course. As the saying goes and I summarise: 'You cannot bribe or twist the

great British journalist; but seeing what they will do unbribed there's no reason to.' What was alleged to be 'Covid-19' was certainly not a lethal bioweapon. One of the first people in Scotland to be diagnosed with 'the virus' after a trip to Italy told BBC radio he had a mild fever and felt shivery like he had 'a bit of flu coming on'. The worst symptoms were aches and pains especially in his legs. He said:

By the time I went to hospital, I was feeling fine. The mild flu symptoms quickly dissipated, I had no leg pain, no fever, no cough and no shortness of breath ... I felt well. My symptoms seemed to have gone within three or four days.

Ahhhhhhhhhhhhhhh!!!! We're all going to *DIE!!!* Once the hysteria began almost anyone with 'flu-like symptoms' was being diagnosed 'Covid-19' with no supporting proof whatsoever. 'Flu-like' symptoms have a long list of potential causes – *including the bloody flu* which is always around at the same time of year. We will shortly see that even the 'test' for 'Covid-19' is a sick joke that doesn't 'test' for that at all. American journalist Jon Rappoport, who has researched health, drug and related subjects for decades, wrote:

Before the announcement of the coronavirus epidemic, people who showed up at those hospitals, with flu, flu-like symptoms, lung infections, pneumonia would be placed in the general wards and treated, or even sent home with drugs.

But now they would, many of them, be called 'presumptive cases' of coronavirus, without any tests at all, or after tests which don't work ... By labeling these patients 'contagious coronavirus', the hospital doctors are forced to send them to the [intensive care unit] to 'protect others from the infection'.

The manipulation of 'Covid-19' case and death figures had begun and it would reach utterly shocking proportions. Then came news of an extraordinary posting on the UK government website Gov.uk. A freelance journalist friend saw the relevant page while perusing the site for coronavirus information and found a posting from just *days before* Prime Minister Boris Johnson announced a draconian lockdown of the country because 'the virus is so dangerous'. The post was on the page concerning official government guidance for 'high consequence infectious diseases (HCID)'. It said this about Covid-19:

As of 19 March 2020, COVID-19 is ***no longer considered to be a high consequence infectious diseases (HCID) in the UK*** [my emphasis]. The 4 nations public health HCID group made an interim recommendation in January 2020 to classify COVID-19 as an HCID. This was based on consideration of the UK HCID criteria about the virus and the disease with information available during the early stages of the outbreak.

Now that more is known about COVID-19, the public health bodies in the UK have reviewed the most up to date information about COVID-19 against the UK HCID criteria. They have determined that several features have now changed; in particular, more information is available about mortality rates (low overall), and there is now greater clinical awareness and a specific and sensitive laboratory test, the availability of which continues to increase. The Advisory Committee on Dangerous Pathogens (ACDP) is also of the opinion that COVID-19 should no longer be classified as an HCID.

Days after the 'danger' from the 'virus' was downgraded by the government the country was locked down on the excuse that the virus was indeed a 'high consequence infectious disease'. What a scam was being visited upon Britain and the world. Soon after the government had been exposed for downgrading the risk they upgraded it again. The same freelance journalist who alerted me to the downgrade also researched the figures for deaths in the UK from all causes in the 'virus' period of 2020 at that time and compared them with the same weeks in 2019. They were close to the same – 11,661 (2020) and 11,431 (2019). European death rates in general told the same story in the same period. As of April 3rd, 2020, the

total number of deaths in England and Wales was actually around six percent *less* than the same period in 2018. American doctor Andrew Kaufman, who will become very relevant shortly, described how he followed the weekly death rates up to the end of April and beyond – months into the ‘outbreak’ as issued by the US Centers for Disease Control and Prevention (CDC). He found them to be six percent less than the average of the previous three years – ‘If there is no increase, and in fact there is a decrease, then what’s the evidence that there’s a new disease?’ Yes indeed. Where were the additional dead people from ‘Covid-19’? My journalist friend further compared the figures for people attending hospital emergency departments for the same two years in the same period of weeks and they were virtually identical with 2019 slightly *higher*. Where were all the ‘new’ cases of ‘Covid-19’ overwhelming hospitals in need of treatment – the ‘war zones’ that the media was raving on about? German doctor Wolfgang Wodarg, former chair of the Parliamentary Assembly of the Council of Europe Health Committee, made the same point: ‘You can check the total body count monitoring – people are dying less than during the last years.’ He said there were no more ‘flu-like’ diseases than any other winter. With the 2019-2020 death rate comparison continuing to show into April no significant difference to explain the ‘new’ deaths from Covid-19 we suddenly had the UK National Statistics Office counting the figures in a way that had not been done before: ‘A death can be registered with both Covid-19 and influenza or pneumonia mentioned on the death certificate, therefore a death can be counted in both categories.’ The figures would go on to be massively manipulated to make it appear there was a ‘Covid-19 pandemic’ when there wasn’t. Dr Malcolm Kendrick who works for the NHS in England said: ‘I do know that other doctors put down Covid-19 on anyone who died from early March onwards.’ Shocking and it is happening worldwide.

Empty ‘war-zone’ hospitals

Figure 378: Many videos appeared on the Internet of hospitals reported to be ‘like war-zones’ where nothing out of the normal was happening and often had no one to be seen.

Figure 379: Images and footage of empty hospitals that were supposed to be ‘war zones’ appeared from all over the world. The British man who took these pictures was jailed to deter others from exposing the truth.

Next the UK National Health Service announced a change in its publication of data that would no longer include the figures on ‘critical care bed capacity and urgent operations cancelled’. They had to do this to hide from the public the glaring fact that ‘war-zone’ hospitals were near *empty*. Yes, *empty*. This came about for two main reasons: (1) There was no ‘Covid-19’ war-zone pandemic bringing hospitals to their knees; and (2) almost all non-‘Covid-19’ treatment, operations and hospital consultations had been

cancelled to protect medical staff from being ‘overwhelmed’. On that basis how could hospitals be anything except near-empty and the same was happening all over the world. Hospitals were defended and controlled by security staff with the few patients that were in hospital denied visitors ‘because of “Covid-19” rules’ (because they would see that the war-zone hospitals were near-empty). This meant that children were dying in hospital from other conditions without their mum and dad to emphasise to breathtaking extremes the nature of the psychopaths that we are dealing with. A German journalist managed to gain entry to the ‘coronavirus emergency centre’ at Charité – Universitätsmedizin in Berlin, one of Europe’s largest university hospitals, and found that it was *empty* ([Fig 378](#)). It even had two ‘emergency tents’ outside which were also unused and he said that staff were privately very critical of the media for so hyping something that wasn’t happening. Medical staff were banned from officially talking about the situation and all information was channelled to the media through a central press office to ensure control of the narrative. The German journalist’s video also included a list of doctors and specialists spelling out why the virus scare was an outrageous sleight of hand. YouTube deleted the video but we managed to find another version and downloaded that to the no-censorship BitChute video platform which I highly recommend. BitChute hosts the videos deleted by YouTube and anything YouTube bans that challenges the Cult narrative you need to see. Put these words into the search engine at [Davidicke.com](#) to watch the video: ‘New source for banned YouTube video: German journalist goes to hospital ‘teeming with coronavirus patients’ – how can doctors cope? – and finds NO ONE THERE’. Many people began to film at their local hospitals around the world and found them to also be empty with no stampede of ‘virus’ patients. Meanwhile the media was telling us of the said ‘war-zone’ conditions. One British man was jailed for three months for walking around a hospital and posting pictures on Facebook showing it to be empty ([Fig 379](#)). He was sentenced for visiting the hospital ‘with no good reason’ and of course showing it to be empty and the authorities to be lying to the British people was never going to be considered a ‘good reason’. I met a hospital worker who said: ‘You’re right about what is happening’. He said the hospitals have ‘never been so quiet’ with hundreds of empty beds and staff sitting around. A UK whistleblower at Southmead Hospital in Bristol told the media platform Bristol Live that hundreds of hospital staff were laid off. She was a healthcare assistant in accident and emergency who normally worked full-time, but she was now struggling to get one shift a week. She was on a zero-hours contract which means you only get paid when work is available and she had virtually no income. There were ‘easily’ more than 200 in the same situation, including some nurses, where she was located. The whistleblower said:

There were hardly any patients when lockdown hit. The hospital closed seven wards and 150 beds, including the wards for stroke patients, orthopaedic trauma and neurosurgery. The hospital is like a ghost town. You could walk through and hear a pin drop. Pretty much the only patients in the hospital seem to be coronavirus patients.

Hugh Evans, Bristol Council’s director of adult social care, said the city’s hospital bed occupancy was at an ‘all-time, unforeseeable low’ while Jacqui Marshall, director of people and transformation at North Bristol NHS Trust, said without a hint of embarrassment or irony … ‘We have not yet seen the surge in volume of patients that was initially anticipated due to the Covid-19 pandemic.’ You would not have known any of this reading or watching the national and international media.

Happy clappers

Empty hospitals were a constant theme across the world and yet the UK government instigated a weekly mass clapping by the unquestioning, performing-penguin population for health workers who were ‘saving us from the virus’ while most were sat strumming their fingers, being laid off, or making a long stream of dancing videos that appeared on YouTube featuring doctors and nurses prancing around empty hospitals. They seemed to have no problem standing inches from each other or closer despite

social distancing rules imposed on everyone else by police who also universally ignored them. I have emphasised in this book that the global Cult conspiracy is about manipulating perception and never has there been a more blatant example than the fake ‘pandemic’. To that end the usual mindless ‘celebrities’ were wheeled out like Lady Gaga, Paul McCartney, Mick Jagger, Elton John and a long list of others performing from home in the One World: Together At Home ‘event’ organised jointly by the World Health Organization owned by Bill Gates and an organisation called Global Citizen owned by Bill Gates. British singer Rita Ora urged viewers to stay safe and follow WHO recommendations. Gates would have been most grateful for yet another clueless celebrity to advance his agenda while having no idea that this is what she was doing. The ‘event’ was officially to celebrate health workers and at least most of them would have had plenty of time to watch. The psychological undertones however were selling the perception of ‘One World’ (the Cult’s long-time code for world government dictatorship) and ‘global citizen’ (the end of borders and nationalities). This and the mass clapping for health workers were all part of the perceptual illusion that hospitals were overwhelmed.

The fact that comparatively few health workers came out to tell the truth of what was happening is something they will have to carry for the rest of their lives as they survey the catastrophic human consequences of the ‘pandemic’ lie – including for themselves and their kids. The mainstream media which could have easily confirmed and exposed the empty hospitals continued to present the war-zone illusion. The nearest anyone came at the time of writing was London’s *Mail Online* report about *private* hospitals taken over by the UK National Health Service (NHS) being empty and unused. The hospitals seconded by the NHS at a cost of hundreds of millions of pounds because of the ‘crisis’ were described as ‘sinfully empty’ by senior doctors. They said hundreds of the country’s best doctors were left ‘twiddling their thumbs’ during the ‘outbreak’ putting other patients at risk through untreated and undiagnosed other illnesses and cancelled operations. Eight thousand beds in private hospitals were seconded by the NHS in March, 2020, when it was claimed that 20,000 fully qualified staff in the hospitals, including 700 doctors, were needed to ‘battle Covid-19’. They even appealed for thousands of qualified staff to come out of retirement to help. A London-based consultant orthopaedic surgeon said: ‘What we are seeing at the moment is a sinful and shocking mass of empty private hospitals and empty beds.’ The surgeon said that only ‘emergency’ and ‘time-critical’ operations were being allowed at his hospital: ‘I have a waiting list of 25 people who need major operations right now. One with severe arthritis is crying out in pain every night, unable to sleep.’ The *Mail* then spoiled it all by saying that NHS wards were ‘overrun’. Like hell they were. Another phenomenon that made no sense in relation to the numbers was to build special intensive care facilities like the ‘Nightingale’ facility built in nine days at East London’s ExCeL exhibition centre to provide an extra 4,000 intensive care beds while regular hospitals were operating at immense under capacity. The government then explained why ‘Nightingale’ was barely used by claiming a ‘shortage of nurses’ while great numbers sat virtually idle in near-empty hospitals and others made dancing videos in empty wards. The story was the same with other ‘Nightingale hospitals’ around the country. A massive army field hospital built inside a Seattle convention center by hundreds of troops was dismantled before treating a single patient. Then there were the emergency ‘mortuaries’ the size of football pitches and articulated trucks at hospitals said by the media and officialdom to be for dead bodies overflowing from normal mortuaries. People who filmed them with phone cameras showed the trucks to be empty. The British Army came to the Isle of Wight where I live to rearrange the local St Mary’s Hospital to provide 200 extra beds when staff were telling me the hospital had never been so quiet and this was the location of one of the nurse dancing videos confirming how much ‘pressure’ they were under. If you think none of this makes sense – and it doesn’t in terms of health and the official story– then read on.

How the scam works – a doctor explains

It became clear to me as I observed events that there was no ‘Covid-19’ and the puzzle pieces started to

connect. A crucial contribution was provided by the research of Dr Andrew Kaufman, a practicing forensic psychiatrist in New York State, a Doctor of Medicine and former Medical Instructor of Hematology and Oncology at the Medical School of South Carolina. He also studied at the Massachusetts Institute of Technology (MIT). Kaufman provided a pivotal piece in the puzzle for me as I sought to uncover the way the Covid-19 hoax was manipulated. I was sure by the time I saw his video presentation that Covid-19 didn't exist and said so in Internet videos, but Kaufman revealed some vital detail. You can watch his interviews and presentations at Davidicke.com if you put into the search engine: 'Videos of Dr Andrew Kaufman exposing Covid-19 deceit'. His website is AndrewKaufmanMD.com. Kaufman explains how the Chinese authorities immediately concluded that the cause of an illness that broke out among about 200 initial patients was a 'new virus' and he details how they had no grounds for such a conclusion. They were blaming a 'virus' almost from the start for reasons that would become clear to anyone who has researched the global Cult and how it operates in every country and has no borders. Kaufman said Chinese investigators took unpurified genetic material from the lungs of only a handful of the first patients which can be found in large numbers of people all the time from a variety of sources including their own cells, bacteria, fungus and other microorganisms living in their bodies. This therefore proved nothing at all. *A 'viral disease' that would be called 'Covid-19' was never isolated and identified and other possible causes of the illness were barely considered.* The script was being written that would be repeated around the world. They identified a sequence of RNA (ribonucleic acid) which contains genetic material as DNA does although there are differences in their function. This genetic sequence is *what they have been testing for* – not a fantasy 'viral condition' called 'Covid-19'.

They could have isolated a virus if it existed through filtration because viral particles are much smaller than other material. They didn't. Instead they compared the contaminated, impure, RNA sequence with other RNA sequences and declared that because it was just under 80 percent identical to the SARS-CoV-1 'virus' claimed to be the cause of the SARS (severe acute respiratory syndrome) outbreak in 2003 that they must be related. They called the 'new virus' they had not even identified SARS-CoV-2 and claimed it was the cause of what has been termed 'Covid-19'. Kaufman highlights major problems with this claim. First of all the SARS-CoV-1 'virus' was not purified and isolated either (like all recent 'scare' viruses) and so could not possibly be proven to be responsible for 'SARS'; secondly, the 'just under 80 percent identical' is basically meaningless. Kaufman points out the 96 percent correlation between humans and chimpanzees when 'no one would say our genetic material is part of the chimpanzee family, but yet they are using a sequence identity that has a much lower percentage, under 80 percent compared with 96, and saying it's a coronavirus because of that'. He said, quite rightly, that this is extremely weak science. German physician and bacteriologist Robert Koch produced in 1890 the four criteria for proving that a particular bacteria, or 'virus' in this case, is the cause of a given disease. These criteria have been used ever since by mainstream medicine as the 'gold standard' (but not in the case of 'Covid-19' and other recent 'deadly viruses' they want to use to scare the population shitless). These are the so-called Koch Postulates:

1. The bacteria must be present in every case of the disease and all patients must have the same symptoms. It must also not be present in healthy individuals.
2. The microorganism must be isolated from the host with the disease and grown in pure culture (you must isolate only the 'virus' and no other material which is known as 'purification').
3. The specific disease must be reproduced when a pure culture of the infectious agent is inoculated into a healthy susceptible host (the isolated 'virus' must be proved to cause the disease that you claim and healthy people without the 'disease' must not be found to have any of the 'virus' or material that you say is causing the disease).
4. The bacteria must be recoverable from the experimentally infected host and everyone who comes into contact with the 'virus' or bacteria must get the same disease.

With 'Covid-19' none of these criteria – *NONE* – were met. Not ONE. The alleged 'Covid-19' has never been isolated or purified and the whole hoax has been perpetrated by diagnosing from symptoms with a long list of potential causes and by testing for genetic material (*NOT 'Covid-19'*) and this genetic material also has a long list of other potential reasons for being there including lung cancer. In fact, the same test has been employed in attempts to identify lung cancer. Kaufman read the scientific papers describing the 'Covid-19' identification process and found them all to have seriously failed the Koch Postulate criteria and even the much less stringent adaptation of the postulates known as 'Rivers criteria' for viruses developed by American bacteriologist and virologist Thomas Milton Rivers, the 'father of modern virology', when he was director of the Rockefeller Institute for Medical Research in 1937. Papers claiming to have identified other more recent 'viruses' also failed both tests and all the papers failed on the most important criteria – isolating the alleged disease-causing agent from other genetic material that would contaminate and skew any testing method. Dr Kaufman's conclusion was that there is no 'Covid-19' virus: 'This entire pandemic is a completely manufactured crisis. In other words there is no evidence of anyone dying from [this] illness.' Many will be astounded at that statement, but you will see that this is confirmed by evidence across multiple subject areas and happenings.
