*I dedicate this book to all the men around the world that never
had a strong, masculine male role model growing up to teach
them about the cold, hard truth of modern women and the world
we live in.*

CONTENTS

Foreword

My Unplugging

1. The female primary social order
Men, the disposable sex
War brides
Toxic masculinity
The way forward
The cold hard truth
2. Women's rules - How they break them or make them
Enter the Amazonian
The Alpha to Beta conversion process
A thousand concessions
The cold hard truth
3. Why genuine burning desire matters
How to determine her interest
A Score of 9 - 10 shows Genuine Burning Desire
A Score of 7 - 8 shows Indifference
A Score of 1 to 6 shows they're a Detractor
Be attractive, not unattractive
Gauging your SMV
Validation sex versus transactional sex
Conclusion
The cold hard truth
4. 20 Red Flags
Red flag #1 - Daddy issues
Red flag #2 - Feminists
Red flag #3 - The unhappy and unlucky
Red flag #4 - She competes with you
Red flag #5 - Keeps men from her past around
Red flag #6 - Poor with money
Red flag #7 - Violent women
Red flag #8 - Extreme jealousy
Red Flag #9 - Party girls
Red Flag #10 - Heavily tattooed and pierced women

Red Flag #11 - Big notch counts
Red Flag #12 - Single mothers
Red Flag #13 - Women seeking validation
Red Flag #14 - She was a sugar baby
Red Flag #15 - Pathological liars
Red Flag #16 - Baby rabies
Red Flag #17 - Hissy fits
Red Flag #18 - Not being in control of the birth
Red Flag #19 - Drama queens
Red Flag #20 - Addictions
Conclusion
The cold hard truth

5. Single Mothers

Cuckoldry
Responsibility without authority
The victim mindset
Financial issues
Reprioritization
The BIG risk
When dating a single mother - might - make sense
The cold hard truth

6. Hire slowly but fire quickly

My single mommy experience
The business partner experience
The cold hard truth

7. Looks, Money, Status, and Game

Looks
Money
Status
Game
The cold hard truth

8. Manage Your Endocrine System

Optimal versus normal
My TRT protocol
How to boost testosterone naturally
In conclusion
The cold hard truth

9. Manage the fucks you give

Self-control
Mastering self-control
How do you strengthen self-control?

The cold hard truth

10. Getting “Da Girls” Online
The cold hard truth about online dating
How to assess your value
How to get results
Your biography
Messaging
The date aka: “The sniff test”
Getting laid and spinning those plates
Always be in control of birth
The cold hard truth
11. Promiscuous Primates
We are terrible at monogamy
How her sexual strategy constantly changes
Her cycles
Sex at Dawn
Cuckoldry
Men’s proclivity to “Oneitis”
Enter plate theory
Spin those plates
A monogamous Long Term Relationship (LTR).
The tattoo test
Open LTR
Polyamory
Conclusion
The cold hard truth
12. Own a Motorcycle
Masculine therapy
Shared interests
In closing
The cold hard truth
13. Master Violence
A powerful defense is the best offense
The cold hard truth
14. When men go their own way (MGTOW)
The problem as they see it
The dangers of “Red Pill Rage”
Surrender to female nature
Learn to accept it and then navigate it
The “Black Pill” solution
Sex dolls

FOREWORD

I met Rich Cooper in 2016. I'm loathed to call it a meeting, since it seems like no one really meets anyone face-to-face these days. At least not in the online spheres. Rich hit me up via email and asked me to come on his YouTube podcast, *Entrepreneurs in Cars*, for an interview. While the interview is still available on his channel, I *really* wish I still had that first email exchange.

I was two books into the Rational Male series by then and was working on the third. This was when I got a lot of requests for interviews. I guess this sounds conceited, but '*The Rational Male*' was maturing into the "*Bible of the Red Pill*"^w then. '*Preventive Medicine*' was getting traction, and I was consumed with the writing/compiling of '*Positive Masculinity*' that year. I wasn't doing interviews.

Hell, I didn't even show my face until 2017, but something about Rich's email struck me as raw honesty. I've always been very hesitant to talk with guys who I got a grifter vibe from, but I didn't get that from Rich. He was sincere in his

appreciation for what I put in ‘*The Rational Male*’ in a way that made me think: “Arigh, I’ll take an hour to talk with him.”

I’m glad I did. Since that first meeting, Richard Cooper has become a good friend, business associate, and a mind with whom I could bounce ideas off of. He’s a man who’s experienced a lot, has the stripes to prove it, but more so, he was honest in his assessments.

In this crazy *Manosphere* conglomerate of online personalities, there are a lot of damaged men. Physically, or psychologically, guys in this sphere can be insane. Some only mildly, some very intensely, some are well-meaning, while others are just malicious; it’s rare to find the *normal* guy among the autistics. Every man in this sphere is looking for answers, but what they do when they acquire those answers, and who they become after they gain that awareness, is based on where they began when they started looking.

Rich is a guy I would hang out with had I initially met him *in real life*. I didn’t meet Rich face-to-face until September 2017. But, when I did, we just talked like old friends. No pretense, no fawning admiration, just two men who related like men. Although, that might sound stupidly mundane in the foreword of a book by today’s standards in the *TL;DR* generation of the “*sphere*.”

I think he may have mentioned something about my work saving his life, but beyond that, we became fast friends.

Since then, Rich and I have worked on collaborations both good and *unwise*. Even through the worst of decisions, Rich has proven a good and balanced friend. But, at the risk of glossing him up too much, Rich is *honest* with himself – and this is the prime requisite of a true *author*.

So, it is with that where I will leave Richard Cooper, and you the reader, with a note of advice from one *author* to another: Stay honest with yourself and read this book with the intent of internalizing the ideas contained within.

– *Rollo Tomassi, November 2020*

MY UNPLUGGING

“ Learn from the mistakes of others, you can’t live long enough to make them all yourself.

- Eleanor Roosevelt

When it came to making mistakes, 2011 to 2015 were terrible years for me. I'd barely survived a divorce, my award-winning business was almost in ruins, and my heart was in pieces from a terrible experience with a single-mom that I'd dated post-divorce.

I knew I'd hit rock-bottom when I was seriously contemplating suicide. I remember driving my truck on the highway and thinking to myself: "If I just nail it, take off my seat-belt, and slam into an overpass freeway concrete pillar, it'll all be over quickly."

I was living in what psychologists have referred to as a “Safe World Theory.” A belief system that is a place of refuge, and it was completely shattered during these years. Towards the beginning of 2016 I had all the symptoms of Post-Traumatic Stress Disorder (or PTSD).

Something needed to change - and fast. But it wasn't the world, government, or women that needed to change. It was me. I needed to wake up and update my belief system because what I was doing, clearly, wasn't working.

In December 2016, I started my recovery when I was at a prestigious men's retreat. An attendee recommended a book called '*The Rational Male*' by Rollo Tomassi. It kick-started my path to clearer thinking and helped me unplug from comforting lies. I soon saw the uncomfortable truths about the world that we, as men, all-too-often struggle through.

It's a book that opens with the question "Why do my eyes hurt?" And the answer... "You've never used them before." The quote is taken from the movie '*The Matrix*'. During this infamous scene, Morpheus offered two pills to Neo: One blue and another red.

The "Blue Pill" offers a viewpoint that is one of falsehood, security, and the blissful ignorance of illusion. The "Red Pill" perspective offers us men the knowledge, freedom, and the sometimes-painful, truth of reality.

I had subscribed to the notion that good, virtuous, and strong will always prevail over all things bad, painful, and evil. However, severe blows to my belief system forced me to question that notion and adapt accordingly.

At the age of 38, I began the divorce process, two years after my only child was born. I quickly experienced the gut-wrenching reality of how badly family law treats men in today's Western world. How family law, and a female-first

primary social order, encourages women to behave horribly, and without remorse, towards the child's father.

On top of that, during the separation period, I was also forced to defend an attack on the company I founded ten years earlier. This attack by credit card issuers with massive legal teams, threatened to put us out of business by changing legislation that would financially strangle us.

After getting off a phone-call updating my business coach in 2011, I vividly remember closing the door to my office and turning away from the window (so my staff couldn't see me). I then put my face into the palm of my hands and began crying uncontrollably.

Only two years prior, I was on cloud nine. I had built a multi-million-dollar custom home, I was married to a lawyer who I thought was my "soulmate," and I was the father to a healthy child. Within one year I'd paid off my mortgage, and then bought my dream car.

Suddenly, I felt like my world was burning down around me. Before the divorce, my family and close friends always relied on *me* for being their rock, for being unshakable. Feeling this way was *completely* unlike me.

I spent \$60,000 on lobbyists and a year and a half of my life trying to save my business. I was in charge of 23 employees and we had thousands of customers. To make the business viable again, we had to pivot into an almost impractical direction, which put me in a position where I needed to become the lowest paid person in my company.

The final blow that led to my awakening came in 2015, after putting almost three years into a relationship with a single mother and her two young boys. I was betrayed in ways I couldn't fathom by a woman who I believed in and trusted. I put a massive amount of personal equity into a woman and her children. Only to be abused, lied to, and ultimately cheated on by her.

My *entire* world was an illusion, and it completely shattered my beliefs.

After that breakup, and for longer than I care to admit, I was re-experiencing the trauma through intrusive distressing recollections of the events, flashbacks, and nightmares. I routinely woke up at 3am and couldn't fall back asleep as my mind was subconsciously trying to reconcile what happened.

I started experiencing emotional numbness, and began avoiding places, people, and activities that reminded me of the trauma. I also had great difficulty concentrating and getting things done. These were all symptoms of PTSD.

Trauma is a normal reaction to abnormal events that overwhelm a person's ability to adapt to life. Leaving you believing that you were powerless.

One thing that happens when you take the proverbial "Red Pill", is your senses become heightened and more aware. You gain a new sense of clarity; things or events that may have fooled you before, become more obvious and you really begin to understand *why* certain events happened in your past. We call the process "unplugging" and we do it by updating our old belief system.

While some men get angry when they unplug from beliefs that weren't serving them, it calmed me. I became aware. Events in my life that previously didn't add up, *finally* made sense and I wanted to see how far down the metaphorical rabbit hole I could go. I needed an outlet and somewhere to express the lessons I was learning about how to live life in today's world as a man.

Fortunately, as I already had a platform, an audience, and a test bed to get feedback on my theories, I dove right in.

After becoming frustrated with my divorce, and the attacks on my business from competitors, on May 23rd 2014 I created a YouTube channel to marry up my two biggest passions in life: Entrepreneurship and fast cars. I made videos and uploaded them to YouTube and called the channel 'Entrepreneurs in Cars'. It started out showcasing my entrepreneurial friends in their success rides, then giving away business tips and lessons from the trenches as an entrepreneur.

But I soon ran out of friends with cool cars and stories to tell. That was when a regular viewer of my work said: "Do a video on the different types of women to avoid dating."

Well, I had just broken up with my single mother and had plenty of experience on what *not* to do in life, so I began sharing those stories and letting my wounds become my work.

Since I began talking about how men could become better, by adopting a "Red Pilled lens" to viewing the world, I've had over forty million views on my YouTube channel.

Questions soon flooded in from my viewers seeking clarity on areas in life they were stuck on. Mostly dating, divorce, marriage, self-care, business, and money. I also took so many questions from people going through their own unplugging struggles that I started coaching them one-on-one. I began taking copious notes and making videos on the lessons that I learned.

This book is a collection of my own personal experiences, the feedback from my community, and the *thousands* of people I have coached through their personal problems.

Many men have called me “The father they never had.” That I’ve taught them, by navigating this world with the truth that a Red Pill lens offers, how they could live a better, more fulfilling, and happier life that enabled them to fulfil their purpose. I believe that it’s my style of dispensing these experiences and cold hard truth bombs that has helped others connect the dots and see the world as it truly is.

However, I must warn you: Some of these stories and lessons may be inconvenient and many will shock you. Remember, the truth doesn’t care about feelings, or political correctness. Also, comforting lies always sell better than uncomfortable truths.

Ultimately, men live in a difficult time today as we are living in a “feminine first” primary social order. Men must embrace their masculinity and completely surrender to the notion that, by employing masculine virtues, there is a place for men to become the best version of themselves in today's world.

Society, culture, religion, the government, mainstream media, and Hollywood all lied to us. Which is why I believe wholeheartedly that a man's *true* mental health and happiness begins with an ability to navigate through life seeing things as they truly are - not as we've been told they are.

To get the most out of this book, clear your head and then really open your mind. Many of the concepts that I discuss will not be popular and some will be opposed. But, as I always tell my audience: "The truth will first piss you off, then it will set you free - if you let it."

Look, I am not university trained, with fancy pieces of paper with letters after my name, framed in mahogany on my wall. Like you, I'm just an ordinary guy that wanted to work on himself. A guy that can use a lot of key life experiences to point to some facts about life, self-care, women, money, masculinity, and navigating the sexual marketplace.

I truly hope you enjoy this book and the invaluable life lessons contained within.

Peace.

Richard Cooper

THE FEMALE PRIMARY SOCIAL ORDER

One of the most difficult concepts guys struggle with today, is that men live in a ‘female first’ social order. This is why I’m placing this chapter early in the book, because it’s important for men to understand how we, as a society, value the feminine over the masculine, and also why that is.

Until a man accepts this reality, and updates his core beliefs, he will forever struggle with the reality the Red Pill brings.

The average man has been fed a steady diet of silly narratives his entire life, such as: “Women are oppressed,” “The patriarchy is evil,” “Masculinity is toxic,” “All men are rapists,” “Women are victims,” and “Women get paid less than men for the same work.”

In actuality, *none* of these narratives bear any close resemblance to the facts. This outrage is manufactured by a “female first” primary social order, with it originating from a toxic version of feminism that is no longer about equality. But rather, female dominance and male submission.

When you pay attention, you will notice an ongoing narrative that dismisses the plight of men, and even somehow makes women the victim of male disposability.

Hillary Clinton illustrated this eloquently when she said:

“ *Women have always been the primary victims of war. Women lose their husbands, their fathers, their sons in combat.*

So, men die in war, but women are the most affected. As if to say that the, often painful, death of a soldier fighting for freedom is simply insignificant.

Men, the disposable sex

Dr. Warren Farrell is a soft-spoken, educator, activist, and author on gender issues. He was the only man ever to be elected three times to the board of the National Organization for Women, which is a feminist organization, and spent much of his life advocating for feminism.

During his work advocating for women, a switch flipped in his head when he realized that women are, in fact, *not* the oppressed sex. Instead, women are the protected sex.

But, when we change the discussion, and talk about a female primary social order that's not being the victim of men, then it invites anger, disbelief, and ridicule as if to say: “How dare you suggest that women aren't victims and that men are treated with disposability!”

In his book, ‘The Myth of Male Power’, Dr. Farrell spills the beans on everything he learned through his experience as a male feminist, while also pointing to the cold, hard, and indisputable facts about the “female first” primary social order that we live in.

Although he had advocated for women for decades, his peers and critics called his observations of the facts a “Promotion of misogyny.”

One of the cold hard truths that men need to get used to, is that, whenever someone has a problem with facts, the problem *isn’t* with the facts.

The truth is, *any* narrative that doesn’t put the feminine first today **will** be manipulated, so it is therefore seen as misogyny by default.

Some of interesting facts I discovered when consuming his work included:

- Men and women have similar mortality rates with prostate and breast cancer. Yet, six times more money is spent on researching breast cancer.
- 85% of homeless people in the US are men.
- Men get *far* longer prison sentences than women – for exactly the same crime.
- In divorce, men are more often left financially broken, with little – or sometimes no – access to his own children, while family law enriches the mother (at his expense no less).

- Men, by a wide margin, enter more dangerous professions by becoming: Roofers, Fire Fighters, Law Enforcement Officers, Miners, and Soldiers. A whopping 94% of workplace injuries are men. Men also commute further, and work longer hours than women do. So, while men do often earn more, it's because men take on riskier, and therefore higher paying, roles. Often trying to buy their way, like the good little beta bucks they are, to female approval and love.
- 24 of the Fortune 500 companies are led by female CEOs. So, the state of California, in an effort to equalize outcome (but without an equality of effort, or merit), passed a law in 2018 to *force* publicly traded companies to put more women on the boards of directors. Yet, there is no such push to get more women into coal mines, offshore drilling, or on garbage trucks.
- In situations where a parent is required to pay child support to the other parent, men are twice as likely as women to pay child support. Yet, unlike the disparaging term “Deadbeat dad,” there is no similar mainstream female equivalent. Perhaps “Deadbeat mom?”
- More than twice as many men are the victim of violent crimes compared to women (even when including rape), and men are also *three times* more likely to be murdered.
- Boys are taught in a female-centric school system. From the earliest grades, schools do a better

job educating girls. Women now earn a majority of Associate, Bachelor, Masters, and Doctoral degrees, and their share of college degrees increases almost every year.

- In every TV sitcom and commercial, men are portrayed as bumbling beta idiots. Incapable of doing anything right and are the butt of all jokes, while women are praised and celebrated.

These facts show us that society puts *far* greater value, and importance, on the lives of women over men. Society treats men as disposable and women as the protected sex.

That's okay, because we've always valued women over men. Let's just be honest about it, rather than pushing lies about women being the oppressed, while men are the oppressors.

War brides

Even throughout history, men have always been disposable, while women were valued and protected. Go back 20,000 years ago. If a hostile warring empire conquered a neighboring nation, then all men of fighting age that weren't killed during the conflict, were either killed afterwards, or put in chains and enslaved.

Influential young boys were recruited into legions to fight for the conquerors. While women and girls were taken into the conquering army, preserved as war brides, because of their value in childbearing.

To put that dynamic into perspective today, it's one of the reasons why women have a far easier time getting over a breakup than men do. Women, as a function of adaptation, need to be able to adapt quickly and move from man-to-man easily.

It's part of a woman's hypergamous nature to *always* seek the best male that she could get. Warring tribe wins? Then the men in that tribe now become her best option for survival.

Men have always been disposable protectors. Women have always selected the best men for survival. Even if that meant becoming a war bride to a conquering army that killed off, or enslaved, their family.

Toxic masculinity

We live in a time where “Toxic masculinity” means that “All masculinity is toxic.” This is especially true anytime a man commits a violent crime, or mass shooting.

In 2018, 19-year-old Nikolas Cruz took a gun, shot, and killed 17 people at his former high-school. He had his face painted all over the media, with headlines purporting that his actions were the result of “Toxic masculinity.”

The media published the following headlines after the event:

How Gun Violence and Toxic Masculinity are Linked, In 8 Tweets

- The Huffington Post

“ Toxic Masculinity Is Killing Us

- The Boston Globe

“ Guns don’t kill people; men and boys kill people, experts say

- USA TODAY

This was a boy brought into a world by an irresponsible single mother that allegedly drank alcohol during her pregnancy. Lynda and Roger Cruz adopted him as an infant. 17 months later, the Cruz family learned that Nikolas' biological mother gave birth to another baby boy, from a different father, who they also adopted. Roger died when Nikolas was four, leaving Nick and his half-brother to be raised by their now single, widowed mother.

Boys raised in a single-mother household have disproportionately higher crime rates and mental health issues. 73% of adolescent murderers grew up without a father. 85% of adolescents with behavioral issues originate from fatherless homes, while 85% of youths in prisons grew up in fatherless homes.

From reading the articles, you quickly learn that Nikolas was never taught discipline, determination, or resiliency. He was also a product of the ‘participation trophy’ generation where “Everyone’s a winner!” by default. Therefore, never needing to learn how to deal with defeat or rejection by women.

As his belief system lacked any ability to deal with women, or rejection, when he was bullied in school, and then rejected

by a girl he was fond of, it wasn't surprising that he defaulted to the feminine programming he grew up on. Ultimately, resulting in an outburst of anger and resentment, that lead to him going on to kill his school peers that rejected him.

Yet, when I searched the internet, I couldn't find one news article about how boys like Nikolas need a father growing up. Or, how 26 of the last 27 school shooters came from fatherless homes.

With an increasing number of boys being raised by single mothers, the vast majority of teachers being female today, most boys have extraordinarily little influence from strong, virtuous male role models growing up. Toxic masculinity isn't the problem - a lack of masculinity is.

You've got to learn to question societal narratives as a man; constantly ask yourself why men are being demonized and women are praised.

The way forward

The point of this chapter isn't to anger you. Rather, it's intended to expand the scope of your thinking as a man to the realities of the modern world we live in. And accepting the reality of where we stand is the first step in moving forward.

The cold hard truth

Never forget:

- Third-wave feminism isn't even close to being about "equality." Rather, it's about female dominance and male submission.
- Hypergamy is an evolutionary survival technique that ensures the female, and then her kids, are looked after by the strongest, most resourceful man.
- Society often sees men as the disposable sex. For example, the classic "Women and children first" approach on sinking ships (or other disasters).
- Men make up nearly all suicides (with many of them being because of failed past relationships - especially ones that involve his kids that he's no longer "allowed" to see).
- If you can't learn to accept this way of life, then you run the very real risk of taking the "Black Pill" and becoming exceptionally jaded against all women and pursuing any type of relationship with them (whether that is spinning plates, non-exclusive LTRs, or otherwise). You can prevent this from happening by updating your belief system with healthy adaptations and then learning how to maximize your benefits while minimizing the risks.

WOMEN'S RULES - HOW THEY BREAK THEM OR MAKE THEM

There is plenty of debate on what constitutes an alpha male and how to become more like one. Most men have heavy ego investments in what they believe and dictate what is what. So, I think it's pointless to get into those.

Instead, I'd like to defer to women. Which, as we already know, are the sexual selectors and, unlike the advice they give to men about women, their *behavior* won't ever lie to us.

In my life, I've been both the alpha and the beta. And it depended on how effectively my belief system was operating, and also the lens in which I was viewing the world. From my personal experience, and the many men I've coached, women will **always** break the rules for a man she deems to be alpha.

Like the cute "good girl" librarian that made you patiently wait three months for basic missionary sex when you were 20. She'll end up naked in bed with Chad Thundercock 15-minutes after meeting him in Ibiza at the foam cannon party on her 23rd birthday. You can also be certain she'll be doing everything she said she wouldn't do with you - with him.

Never forget: Women break rules for alphas and make them for betas.

If every alpha had a dime for every time a woman said, “I don’t normally do this,” when it comes to first date sex, sex without a condom, swallowing, or some other act she might later regret, men would be rich.

When women say: “I don’t do that,” always add to it in your head: “With you.” Because she’ll do it with a man who *she* deems worthy of such sexual gymnastics.

Women will **always** break the rules for an alpha. It always has been, and always will be, that way. Conversely, women will **MAKE** rules for men who they deem to be a mere beta.

They will make a beta wait eight, likely expensive, dates to sleep with them. They won’t perform oral for a beta and they won’t drive to a bar to meet (because it’s too far for her to bother for a beta male). Women **WILL** always make rules for betas.

Enter the Amazonian

It’s story time. I once had a first date with a thirty-something woman that I met online. She showed up around 30lbs heavier than her pictures suggested, and also quite a bit taller than I expected. But she was cute enough to have one drink with.

Women **will** subconsciously shit test men **all the time** to see if they are alpha or beta. So, a few swigs into my beer, and she proceeded to tell me how, after some bad experiences

with men, she now has an “eight dates” rule before she’ll sleep with them.

Nearly spitting out my beer, I chuckled with amused mastery, and called bullshit. I stated I don’t play games and I certainly don’t negotiate desire, or when sex happens.

I also told her it was childish, and interferes with the natural progression of the sexual dynamics and desire.

Men need to understand. Anytime you negotiate desire, it automatically creates obligated compliance. Which leads to resentment, and *nobody* wants that.

After some back-and-forth banter on the topic of her “eight date rule,” with a dilation of her pupils, and a huff of her giant tits in her push-up bra, she put down her girly cocktail. She looked me dead in the eyes, smirked and said “Okay, let’s fuck *right now.*” And made a gesture towards the bathrooms in the bar.

The same woman who was previously lecturing me about her “Eight date rule,” was ready to bang me in the bathroom. Literally only 20-minutes after I sat down with her.

It was a shit test - and I passed it with flying colors. It was also one of the few times in my life where I’ve passed on an aggressive sexual female advance.

If a woman is placing hoops for you to jump through, and tests to pass, then she is testing you as a beta, a provider. And I promise you, it’ll **not** end in amazing “Fuck me like you own me!” sex.

A woman **will** break all her rules if she views you as an alpha. Every. Single. Time.

She will enter your frame. She will come to you. She will swallow. She will have sex with you on her period. She will enthusiastically say “I want to feel you everywhere,” and put your cock in her ass. She will make you breakfast in the morning, make your bed, do the laundry. And, ultimately, if you can maintain the frame of such a dynamic on a long-term basis, she **will** become a compliment to your life.

However, a woman who's making rules for you views you as a beta. Every. Single. Time.

She'll make you wait for sex. You'll go to her. She won't perform oral. You'll be buying her dinner, be her shoulder to cry on, and she'll be the focus of your life. She will treat you like an emotional tampon. She'll use you to fix her car, hang shelves, and take care of her kids. All while she goes out salsa dancing with her girlfriends where she might meet Chad Thundercock one night and then fuck him in the nightclub's bathroom.

Men that operate in a beta frame end up getting cheated on *far* more than alpha males. They never get her best (in, or out of, the bedroom) and they end up marrying women that will only ever treat them like a plow horse.

As a man that she deems a Beta, you will have little say in family matters, raising the kids, or financial control. You'll go to your job every week while she drops off the kids in her SUV to school or daycare. Before she sits down in a coffee shop, after yoga class, cackling with her friends about how

useless their husbands are. They then complain they had to “give” sex to their Beta husband earlier that week, while they pine for their hot yoga instructor.

That same woman could have been in Ibiza for her birthday, enthusiastically fucking two cute Italian guys like a porn star in a gangbang, just moments after she met them.

The Alpha to Beta conversion process

A woman spends years 'changing' her man, then wonders what happened to the guy she fell in love with.

– Anon.

This process takes years, and can turn an alpha into a weak beta male – it’s often considered to be the process of “Betatization by a thousand concessions”. It is one of the many catalysts that leads to the trauma that men suffer, sending them online to seek answers and the truth.

This is a process I’ve spoken about many times in my videos and it turns men from a pet she loves and admires, to a plow horse that she sees as nothing more than a utility. A utility that she emotionally abuses and doesn’t want to fuck enthusiastically anymore.

If you aren’t aware, and you don’t control the frame of the relationship, then the chances are, this will happen to you. It will make you weak, soft, poor, and undesirable to your woman.

The process of “Betatization by a thousand concessions” is a genuine threat to you as a man, especially if you cohabit, or enter into a marriage, or have children.

Because of women’s innate hypergamous nature, women aim to marry up to a better man, so he generally earns the bulk of the income in the household. Meaning that the Betatization process could end up costing you a **significant** part of your past, and even future, wealth in a divorce.

But that’s not even the worst part. Since women still get primary custody of children around 80% of the time, most men not only lose their wealth, but also their decision-making capacity around their children. Meaning that they also lose their ability to father them properly.

Becoming a weak beta is one of the most dangerous things that happens to men in LTRs and marriages.

It is a process that women unknowingly facilitate. And men allow it to happen because we, as men, have been told our entire lives to put her on a pedestal and to be less - so that she can become more.

A thousand concessions

The timeline looks something like this: She locks down a man that she admired, wanted to fuck, and be with. Over time, he turns into the beaten down beta plow horse that succumbs to her beck and call. He performs chores *hoping* for sex, and is who she ultimately no longer wants to fuck - or even desires.

This phenomenon usually starts with: “Honey, put your dark socks in the dark hamper, and your white socks in the white hamper for whites”. It then progresses to “Let’s go vegan together!” and ends at “I love you, but I’m not in love with you, I want a divorce, so I’m taking the kids to my mothers”.

For a perfect illustration of what these Betatized married plow horses look like, pay attention to your next few trips to the grocery store. Now stroll by the baby diaper isle and look for the family doing their shopping.

You will start to see husbands with an exhausted and beaten down look on their faces. Their kids, aged one, three, and five, plus one bun in the oven, are out of control. His, now rotund, wife with her permanent “resting bitch face” scowls at him about how incompetent he is for putting the wrong diapers in the shopping cart.

Once you see this happen, it can’t ever be unseen. You will notice these types of men more often around you. At the mall, at your kid’s soccer game, and around social gatherings with friends and family.

This husband is the same man that she, many years prior, would look up to and potentially even had enthusiastically rough, monkey sex with. She would proudly present her new “pet” boyfriend for the first time over the holidays before proudly saying to her family, “This is Kevin, the VP of sales I told you all about from work.”

Heck, he was probably the same guy she would get in a quarrel with. He would hang up the phone to control the frame because he was subconsciously alpha enough to know

when a soft next worked. She likely drove over at 3am that same night, after he hung up on her, to let him fuck her in the ass, something she rarely did, just to calm him down and get back into his good books.

Kevin the VP of sales started out as an alpha but, through a thousand concessions to placate her whims during the length of the relationship, Kevin becomes the Beta.

An alpha does as he pleases, he possesses the traits of: Strength, courage, mastery, and honor. Men want to *be him*; women want *to be with him*. When women are with him, they will enthusiastically show it.

A beta on the other hand, is on the other end of the spectrum. He is not her first choice; he is an accessory to her life, a utility, a handyman and, in many cases, she'll also treat him like an ATM.

The worst form of beta is the cuckold. Which is the man that gets involved with a single mother, and then willingly raises the children of another man. Or worse, his wife gets knocked up by another man, and he, unknowingly, raises that child as his own.

Women don't divorce alpha men they admire and look up to. They generally leave beta men that become a plow horse to them. As a man, if you want to take on the risk of marriage and kids, then you **need** to be on your mission, always maintain the frame, and your alpha status.

Remember, in every relationship, one partner enters the others frame. It is therefore incumbent on you, as the man,

to ensure that your woman is in **your** frame. You cannot let the balance of that frame shift to her.

Far too many men, get married and actually *believe* the vows they take: “In sickness, and in health... for richer or for poorer... ‘til death do us part.”

The fact of the matter is, women divorce men *all the time* if the circumstances of the marriage change and she now deems you of lesser value to her. If you get fat, go broke, can’t hold down a job, or are utterly useless around a house, then a woman reserves her right to untie the marriage knot.

It’s why I tell men *all the time* that, taking on a marriage, or LTR, is *far* more work than simply dating, or spinning plates (and they both come with far more risks).

Never forget that, if you are going to get married or have kids, then it is imperative to control the frame, and **do not allow yourself to become a beta male.**

The cold hard truth

Never forget:

- Women break rules for alphas and make them for betas.
- As unfair as it may be, the “Burden of Performance” is always on you. This means that you must always be on your A-game when it comes to frame, Game, and leading the relationship (more so if you’re married or in an LTR).

- If you notice her making rules, or setting conditions, on areas such as when she'll have sex with you (for example: "If you ever want to have sex again, then..."), you now **know** that she definitely sees you as a beta and that the frame has shifted.
- Learn to say "NO." It's a complete sentence that doesn't need any further explanation. If you've been pussy-whipped for years, then she'll likely be surprised. But also intrigued. Expect her to ramp up the shit tests to see if this new, more assertive you, *is* the real deal. So, you had best make sure it is.

WHY GENUINE BURNING DESIRE MATTERS

One of the simplest concepts a man must understand is “genuine desire.” What it is, why it matters, and how to measure it. When you get it right, it’s a superpower. But, when you get it wrong, it leads you to making *terrible* choices, leading to poor results with women.

A man will chase a woman who’s indifferent to him and suddenly wife her up. Only to find out, after two kids and seven years of investing his blood, sweat, and tears into the relationship, she’s leaving him for another man. A man she has more desire for, while simultaneously running him hard through the divorce machine.

In 2018 I recorded a video in my car while heading home from the office, talking about why genuine burning desire matters with women. To find this video, search ‘genuine burning desire’ on my channel.

I’ve created a simple system to make it easier to determine her interest in you.

How to determine her interest

I've been using a measurement system in my business for over 10-years now called the "Net Promoter Score" (or NPS). It's a system which uses a measurement scale of 1 - 10. The system highlights three distinct levels of interest that a potential customer has in your business.

You survey your customers with the question: "On a scale of 1 - 10, how likely are you to recommend our services to a friend or colleague?" When you plug in a formula after conducting your customers' surveys, it tells you how much interest your customers have in your business.

The levels of interest are:

- A score of 9 to 10: These customers are your "Promoters" and they love what you do.
- A score of 7 to 8: These customers are indifferent. They have nothing good, nor bad, to say about you.
- And finally, a score of 1 to 6: These customers are your "Detractors" and they *don't* like you.

You may wonder why I am applying a business measurement tool to a man's life.

It's because the answers to most of the struggles we have already existed elsewhere. We simply need to identify them and then apply what works.

However, we aren't interested in the NPS of you as a man. That would require sampling every woman you've either

dated, or are currently dating, to find out what your NPS would be. It's impractical to survey so many women with such a question and expect an honest reply. But understanding *how* to measure desire is important and you **must** know why genuine burning desire matters.

Let me break down the way desire works for you:

A Score of 9 - 10 shows Genuine Burning Desire

When a woman *truly* desires you, you'll know it. She'll show up on time and call or text you without you making the first attempt. She'll also respond quickly, willingly enter your frame, and complement your life (without wanting to be the focus of it).

She will also ask you questions to get to know you better. She may also buy you random gifts, make you meals, and follow you closely on social media. She will even message you first on a dating app, always responding quickly. She will show up for dates with make-up and nice clothes, she'll enthusiastically fuck your brains out and swallow your load.

She will also often initiate sex with you, unprovoked. When a woman genuinely desires you, it will be as obvious as taking a blow from a frying pan to the forehead.

A Score of 7 - 8 shows Indifference

When women are indifferent, they frequently reschedule/cancel dates, ask for more than they give, become bitchy, and sometimes confrontational. She will shit

test you often, take longer to respond to your texts/calls, not put much effort into her appearance when you see her, and she will rarely ask you questions to get to know you.

If you message her on a dating app, she'll be slow to respond. Her interest in the bedroom will also not be very high either. She'll be far less likely to want to suck your cock and she'll rarely initiate sex with you. When a woman is indifferent to you, it will be obvious.

A Score of 1 to 6 shows they're a Detractor

When women are detractors, they will not respond to your calls or texts and they will not go out on dates with you. They will not follow you on social media, and if you message them on dating apps, they will not respond. When a woman is a detractor, it will be obvious.

Every man, when dealing with a woman on a romantic level, should always gauge her interest in him by watching her behavior. He must respond accordingly by only allocating his valuable time, energy, and resources on the woman who shows him a strong, genuine, burning desire.

Be attractive, not unattractive

Men are natural problem solvers. So, your next logical question is: "How do I create such an enthusiastic desire in her so she signals a clear indicator of interest in me?".

The answer is that you can't manufacture it. It must be natural. You **must** be a man that is desirable. You **must** be a

man that exudes confidence, competence, and strength.

It's unlikely that a woman with only a detractor level of interest in you will ever enthusiastically become a promoter and want to fuck you.

It's not that it can't happen. I've had *plenty* of women over the years, from my past, that may have been passively interested in me back then, only to express a much higher desire later on down the road as my "Sexual Market Value" (or SMV) had greatly improved. This often happens when she deems that her SMV has gone down as "The Wall" does its work. All while watching your SMV go up as you approach your own SMV peak later in life.

For a definition of what "The Wall" is, check out the [Glossary](#) at the back of the book.

However, at the end of the day, you must ask yourself why would you want to get involved with a woman that gave her best to someone else, making you her second choice.

The genuine burning desire you receive from a woman must be organic. You *cannot* manufacture it, or negotiate it. Anytime you negotiate desire, you get obligated compliance in return, which only leads to resentment further down the line.

You can, however, work on yourself. In fact, it is the only part of the universe that you *can* control. If you are fat, fix it. If you are broke, fix it. If you don't understand "Game", learn it. If you are socially insignificant, learn to become influential.

These aspects are truly within your control. Some men will argue that they are short and that their height is out of their control. True, but if you aren't tall, then do the work to be a fit, rich, smooth, short badass.

If you are not a high-value man that commands a high level of attention, then you cannot expect a "10" to want to rip off your clothes enthusiastically and jump your bones.

Your highest "Return on Investment" (or ROI) in life will always be that of being a man of vision, purpose, and who is always chasing excellence.

Gauging your SMV

Ask yourself the question: "On a scale of 1 to 10, with 10 being the absolute best version of myself, and with 1 being the worst, where would I place myself right now?"

It's important to note that you aren't comparing yourself to anyone else - it's only about you.

A perfect 10 would mean that you have already achieved the level of wealth, self-care, success, income, desirability, social recognition, and community, that you couldn't do much better. You live where you want, drive cars you love, take vacations when and where you want. You look masculine and strong, women are constantly seeking your attention, and you never worry about money.

If you are rating yourself a six or lower, then I'd suggest limiting your dating, or perhaps stop dating entirely, and go fix yourself before you go chasing after women.

Your ROI on the time invested with women will be low and you will probably become frustrated with your results.

Because of hypergamy, women always seek men who are a few points higher than them on the SMV scale. So, as a man, you have the burden of performance to do the work on yourself.

Remember: “Men are made; women are born.” You need to do the work on yourself if you want to be successful with women. Never forget that women have always viewed men as success objects, whereas men have always viewed women as sex objects.

Validation sex versus transactional sex

Women with a high level of desire for you will have sex with you for validation. They crave it, and it’s enthusiastic. When women have validation sex, the risk of her claiming either a #MeToo or a false rape claim allegation, after the fact, is almost zero.

I’ve seen women who crave that validation sex from me drive 45-minutes, in the middle of the night, during a work week, and throw down a dark towel to fuck me enthusiastically on their period.

When women fuck a man for validation, her vagina is soaking wet, your bed will be wet, she will do anything to please you, including swallowing your load, or do anal first, and then swallow your load. There is virtually no limit to

what a woman will do with a man that she has an enthusiastic and genuine desire for.

Indifferent women will either have transactional sex with you, or try to use it as a negotiation tool. It's women that have transactional sex that are more likely to claim a #MeToo, or false rape accusation against you. Just because they regretted their choice at a later date.

When women have transactional sex with you, her vagina isn't soaking wet. She won't do much in bed and it will often come with some requirements in exchange for the intimacy she's "giving you." There's a growing trend amongst beta men who are resigned to doing "choreplay".

"Choreplay" is defined as a man who is doing the household chores, that the female would normally do, in exchange for sex.

Simply put, you *cannot* negotiate genuine desire with a woman. Once you start down the path of transactional sex, the clock starts counting down to the end of the relationship.

If a woman won't do something sexual then, in your head, add "with you" to the end of her statement when she declines it. For example, when she says: "I won't do anal." then add "with you" to the end. Make no mistake about it, she *will* enthusiastically do it for validation with a man that she has a genuine, burning desire for.

Conclusion

It's absolutely *vital* that you only invest your limited time in women whose actions show you, beyond any doubt, that she has nothing but a *genuine*, burning desire for you. However, never forget that the "Burden of Performance" *always* rests firmly at your feet. It's up to you, and no-one else, to become the top-tier man that commands that level of genuine desire from a high-value woman.

The cold hard truth

Never forget:

- Your highest ROI in life will **always** be that of being a man of vision, purpose, and who is **always** chasing excellence.
- Negotiated desire only ever leads to resentment, from both parties, down the road.
- Rest assured, once you've experienced the pleasures of a woman who displays a genuine desire and attraction to you, it'll be easy for you to spot anything less from that point on.

20 RED FLAGS

On my YouTube channel, I often reference the phrase “She has more red flags than a Chinese communist parade.” In this chapter, I want to dive a little deeper into the riskiest red flags that men need to be aware of as they navigate their life around women.

I’ve made plenty of these mistakes myself and have counseled hundreds of men who’ve done the same. Therefore, it’s *essential*, for your own wellbeing, that you do not ignore these red flags.

Keep in mind that you *can* pursue a deep relationship with a woman who displays any of these red flags. However, in my estimation, the juice simply isn’t worth the squeeze, and the risks *far* outweigh any reward.

If you are a woman reading this chapter, and you identify with a red flag, then don’t get upset. Instead, like I keep reminding men: work on yourself, take ownership, and seek counseling.

As many men have observed, the wrong woman can ruin your life if you let her in it. Therefore, learning how to spot red flags early is an *essential* skill for men to master. Even though this chapter covers the 20 major ones I've identified, plenty of others exist – so keep your eyes open.

If you choose to involve yourself with any of these types of women, then my advice, unless otherwise stated, is to limit your interaction to a “Friends With Benefits” (or FWB) relationship and to keep spinning plates. As soon as you identify one or more of these red flags, limit her to plate status, or pass on them and make no further emotional investment in either her, or in a relationship with her.

There are women out there that *will* add value to your life – if you keep the wrong ones out.

I'm also approaching this chapter with the assumption that you are a man of purpose that values his own masculinity, strength, and traditional male competency skills.

Beta men constantly make concessions and excuses, while accepting red flags. Whereas a high-value alpha male keeps chasing excellence and his purpose in life. He doesn't let problem women interfere with his life's mission.

Red flag #1 - Daddy issues

If she doesn't have a friendly relationship with her father, or had an acrimonious relationship with him growing up, then she likely has a variety of daddy issues. Whether her mother pushed her dad out of her life, or that he was absent, or

perhaps he was disinterested in being a dad and instead, acted as a piece of furniture in the house.

Either way, any woman that didn't have a solid relationship with a strong, masculine, and virtuous father in her life will not value a masculine, virtuous, alpha man.

If she didn't value her father, what makes you think she will value you? I've counseled far too many men that have tried far too hard to rescue women with daddy issues. It's *never* worth your time.

Another area of concern with daddy issues is that it's often tied into Borderline Personality Disorder (or BPD). Women with BPD frequently originate from fatherless homes, which breeds their fear of abandonment. This fear continues as they become adults, where they will presume that they will, once again, be abandoned. They then act out in such a way that will make abandonment certain.

BPD women are so dangerous because they operate in extremes, they can be freaks in the sheets and then immediately act like a classy lady on the street.

A BPD woman can quickly go from hot to frigid cold. Such BPD women can hook a guy in by pretending to be a caring, loving, and nurturing woman. A BPD woman can create the false sense of perfection that makes you say "Wow, a woman who *finally* loves, respects, *and* appreciates me!"

Asking her "Tell me about your parents growing up" early on helps you to identify, and then filter out, women with daddy issues. Remember that you have two ears and one

mouth. So, use them in that ratio – ask, *then* listen. She will often tell you her story.

I've had my fair share of experiences with women who had daddy issues and they are *never* worth your time, effort, or resources.

A woman's father is her primary role model growing up and provides the foundation that governs her belief system. And includes the lens in which she views both men and women, and how they should interact.

However, the origin of her issues is irrelevant because, if she expresses disdain for her father, she is unlikely to value men.

Single mother households, especially feminist ones, are a petri dish for today's women with daddy issues. A feminist-identifying mother will instill toxic values in her daughter. Instead of valuing you, you'll be deemed as a "privileged male" and will be resented for your masculinity.

After my divorce, I dated a woman who had three older siblings. Her mother became a widow before my ex was born. Instead of being a single mother of three, she optimized her hypergamy and looked for a beta provider. She eventually had a fourth child, my ex-girlfriend, with her second husband.

My ex's mother died of cancer while she was in her early twenties. When I asked about her relationship with her father, she claimed unforgivable indiscretions that her father was responsible for. She painted her mother as a feminist

saint and her father as an abusive, misogynist cheater, and child abuser.

While we were dating, my ex went almost twenty years without contact with her father. She unsurprisingly identified as a feminist, became a single mother of two herself, and subsequently had little regard for men and masculinity - unless it served value to her and her children. She then dismissed them once she capitalized on their value.

While she constantly battled her internal conflict to find a high-value man, she also resented masculine energy and claimed that men didn't subscribe to her solipsistic feminist beliefs.

My ex ran away from Canada after her mother died to teach English in Asia. She then partied through her young adult years with many men there, came back at her epiphany phase, married a beta male that pined for her at 28 to fulfill her biological clock. Before promptly divorcing him at 38 when she deemed that he no longer served any purpose to her.

A popular video on my channel called '*3 Women Men Should Avoid Dating*,' was based on the multiple women that I had dated that had:

1. Daddy issues,
2. Needed saving,
3. Fought with her children's father.

These types of women will never take ownership for their own lives. When I did that video titled “*3 Women Men Should Avoid Dating*” on my channel, women with daddy issues sputtered their insecurities in the comment section.

Red flag #2 - Feminists

I briefly touched on this in the previous “daddy issues” red flag. Many western women today either identify as a feminist, or have welcomed toxic feminist beliefs into their schools of thought. They’re indoctrinated to believe that men are privileged, that men hold women back, and that men succumb to the patriarchy.

Thankfully, the devout lifetime feminists are typically easy to spot. They:

- Avoid traditional feminine cues and instead opt for shorter, unnaturally dyed hair colors (think bright blue, purple, or red),
- Mutilate their body with several tattoos and/or facial piercings,
- Are often overweight and usually dress in ill-fitted clothes.

Compared to keeping themselves fit, well dressed, and groomed to maintain their physical appeal to men.

Feminism preaches radically leftist political views that fight for unlimited free abortion, elevate single mothers on a pedestal, and claim that masculinity is “Toxic.”

Feminists hate it when the State imposes limits on abortion and tries to force them to be mothers. However, they more than happily use State family law to force men to be fathers.

Feminism teaches women to vote for the welfare state, massive government handouts, huge tax rates on top income earners, and social programs that widely benefit a female primary social order.

A feminist will never appreciate you or value you as a man. Feminism teaches women to be victims, and anyone with a victim mindset can't find happiness.

Today's version of feminism is so toxic that it is anti-femininity. It encourages women to hate men, while simultaneously encouraging them to behave like men, and that they should ditch the notion of motherhood to prioritize their careers.

Feminism doesn't seek to make women better, or more feminine. Feminism seeks to make women into terrible versions of men.

Ownership is a concept that most women struggle with. However, feminists are often completely unfamiliar with it, and so everything will be the fault of the patriarchy.

Therefore, avoid *any* woman that identifies as a feminist - at all costs.

Since the #MeToo movement, we have seen several exceptional men fall to the false claims of sexual harassment or rape, and the vast majority of these false charges originated from feminist women.

Sadly, even feminine cues are not enough anymore. There are plenty of women out there that identify with feminist values that remain feminine in appearance, and these are the ones you must be the most careful with. As they are on a transformational path to obesity, collecting cats, and eventually short and brightly colored hair.

If you are getting into an LTR, or are even considering marriage, it is *vital* that you give yourself a good two years to watch both her behavior and her choices in life. Pay close attention to her *before* you do something silly, like marrying a woman that appears feminine, but internally idealizes feminist propaganda.

Red flag #3 - The unhappy and unlucky

Robert Green's tenth law states: "Avoid the unhappy and unlucky." If you haven't read '*The 48 Laws of Power*', do yourself a favor and read it and always avoid the unhappy and unlucky.

And while this doesn't only apply to women, I note it here in this chapter as these types of women are a complete waste of your time. Their perpetual unhappiness will rob you of your joy.

Such women always have some problem going on in their life that attracts the "Captain Save-a-Hoe" type of guys to swoop in and rescue them from their own shitty existence and choices in life.

The unhappy and the unlucky often go from man to man, draining them of their joy and fortune. They are a magnet for drawing drama into their life - and yours. Therefore, only associate with the happy and lucky.

Red flag #4 - She competes with you

A woman that constantly tries to compete with you might seem cute at first, but it's a test of your competency as a man, and it's an underhanded behavior that ultimately aims to reduce your worth to her.

The female primary social order tells women that they are better than men, and it's why we see the rise of the "Boss girl" on social media. I once dated a woman that competed with her brother growing up, and that competitive behavior continued into her relationship with me.

It's a red flag because when women compete against you, she thinks she is better than you. A woman that thinks she is better than you *will not respect you* and will, ultimately, try to undermine you.

For a woman to satisfy her hypergamy, she must feel like she is with a man that, in her eyes, has at *least* 1-2 Sexual Market Value (or SMV) points more than she does.

A woman won't try to compete with you when she believes your value is greater, she will instead admire you. Remember, women want to be with a giant. She wants to look up to you. Hypergamy never seeks its own level; hypergamy can only be satisfied if it does better than itself.

A woman constantly competing with her LTR, or husband, is always a prelude to a train wreck.

Red flag #5 - Keeps men from her past around

Women like to have options. A recent survey showed that almost half of all married women admitted to having a “back-up plan” (aka: another guy). If you are getting into an LTR and she wants you to abandon your sexual strategy of unlimited access to unlimited women, then *she* needs to burn the ship on the shores of her new life with you and cut *all* emotional ties with other men.

Now, some women end up as an “Alpha Widow”. An “Alpha Widow” is a woman who pines for that high value alpha that didn’t commit to her in her earlier years.

She may not be in contact with him anymore. However, if she still sees him as the one that “got away,” and she keeps a place for him in her head, and therefore in her heart, then she *will never* see you as her best option.

It’s imperative that she has a genuine, burning desire for you. You don’t want to be “Good enough.” You want to ensure that you are getting her absolute best.

Trust me when I say that no good ever comes from her having lunch with ex-boyfriends, or other male friends, and you *certainly* do not want to be the guy she “settled” for.

If you are a man that is chasing excellence in his life, then you don’t need distractions like your woman seeking attention from, or still pining for, other men.

Men and women have little in the way of common interests; other than men wanting to have sex with women and women wanting to extract attention or resources from men.

There should be no room for male “friends” in her life if you are in an LTR. Women like this should be a plate, at least until they can prove that they are over their past.

Red flag #6 - Poor with money

Some of you may know this already from my videos, but I’m well versed on financial services from my past businesses, and when women are bad with money, it’s often serious trouble.

If she is an adult and doesn’t have a pot to piss in or a window to throw it out of, then she is not to even be considered for an LTR. I’ve seen *far* too many men trying to play “Captain Save-a-Ho” and bail out women with horrendous debt and terrible spending habits.

Despite the lie feminism has told women that they only earn 75 cents for every dollar a man earns, women have every opportunity to earn a good living today.

Yet, women *still* continue to choose careers that pay *less* than men, while going into deep debt by overspending. Ultimately, if she can’t manage her monthly cash flow and has nothing but a pile of handbags and shoe collection to show for her debt, avoid her for anything more than a FWB, because she will make *her* financial problems *your* problem.

Red flag #7 - Violent women

Women that have violent tendencies are a **massive red flag**. Early signs of violence are as small as a punch, or a shove. However, I've counseled *many* men that have dodged knife attacks or even objects being thrown at them from their angry woman that was having a hissy fit.

Men are physically stronger than women, so when there is a domestic violence call into the police, even if you are the innocent party making the call, or defending yourself, it's likely that they will take you away in handcuffs, rather than her.

In most domestic violence cases, men are automatically presumed guilty and women are protected, even if she was the one starting the physical abuse. I've seen peaceful men, during a divorce, removed from their own home and children, because a violent woman accused her husband of domestic violence that never happened.

Violence from any woman towards you, for any reason, should **never ever** be tolerated, and is grounds for terminating the relationship immediately. To protect themselves, men **must** use their cell phone as a shield, and record a video of her erratic behavior as proof for the authorities.

If I haven't made my point clear enough yet - avoid all violent women **at all costs!** They aren't even worth an FWB arrangement! When it comes to violent women, the juice *truly* isn't worth the squeeze.

Red flag #8 - Extreme jealousy

Women want to be with a man that other women want to fuck. But they don't want their man fucking other women.

This dichotomy of female nature is something that men will always struggle with. A degree of jealousy, also known as competition anxiety, is an excellent thing as it keeps her working hard to keep you. But it becomes undesirable when the women are so insecure in themselves that they always make her problems your problems, distracting you from your purpose.

They will be like a predator drone, always keeping watch on you. She will constantly text, scan through your receipts to see where you've been, what was ordered on the receipt, look for hairs that aren't hers, she'll want to look in your phone, creep on women that follow and like your social posts, and count the number of condoms in your nightstand drawer.

It's exhausting. She will drain you of your sanity, joy, and dignity. Jealous women have work to do on themselves, and it's honestly not your job to be their therapist.

Red Flag #9 - Party girls

Most women under the age of 27 that have never been in an LTR are in their party years. If you met your girl in a nightclub, bar, or other social event, and she claims to be relationship material, but still continues to party several nights a week, you have two options:

1. Tell her that women with boyfriends don't go out partying and if she continues, you walk away.
2. Keep her as a plate only.

The “party years” aren’t exclusive to women under 27 either. Sometimes, she was married young, had kids, and got divorced in her thirties and missed her “party years.” So, it’s not uncommon to see women in other stages of their life trying to re-live that missed party era as an older woman.

You can’t be in an exclusive LTR with a woman if she is going out partying with her friends regularly. The process involves two hours of preparation time in her hair, makeup, and clothes, for the main purpose of marketing herself to other men. If she is going out selling herself to others, she is not your woman.

Men have evolved to require fidelity from the woman they have invested in, as a step in ensuring paternity. This is not jealousy. Most men instinctively want to know that his woman is sexually exclusive with him.

Do not fall for the new age beta male narrative of polyamory. It is a mating strategy for weak beta men that must resign himself to sharing a woman with alpha men.

When there is a conflict between what she is saying and doing, and she is acting single when she goes out to party, then believe the action, never the words. Actions **always** speak louder than words.

I dated a few party girls, and their phones would always be going off at 2am from guys looking to hook up. Avoid party

girls for LTRs and never limit yourself to one woman if you are dating a party girl. Only spin her as a plate.

Red Flag #10 - Heavily tattooed and pierced women

I realize some men prefer women with some ink, and there will be men that will debate me on this. However, my experiences have taught me that their placement and frequency matters. One tattoo hidden in her bikini line isn't much to worry about. However, if she has a tramp stamp, or more than one visible tattoo while wearing normal clothing, then you might want to ask yourself what she is saying to the world.

Tattoos all over a beautiful woman is like putting bumper stickers all over a Lamborghini. You don't do it as it shows a lack of taste. I've never met a woman with several visible tattoos that didn't bring at least three or more red flags to the table.

Heavily pierced women are another red flag. Draw the line at earrings, and if you want to push the limits, a nose ring. But, if that piercing is on her septum, nipple, clitoris, and eyebrow, or she even has multiple ear piercings up one ear, then keep in mind that you are dealing with someone that enjoys mutilating their own body, which is a red flag.

Red Flag #11 - Big notch counts

The most attractive quality in a woman is when you know she hasn't been with everybody and has her own standards.

Setting aside the higher probability of her having an STD, multiple conducted studies have proven that the younger the age a woman loses her virginity at, and the higher the number of men she's slept with (aka: Her notch count), often results in her being far less likely to bond monogamously to a man, in a healthy way, over a long period of time.

For example, a woman that lost her virginity at 14 and has slept with 30 men, is *far* less likely to bond monogamously to you over the long-term. Compare that to a woman who lost her virginity at 23 and has only slept with two men in long-term relationships.

If you want to get into a monogamous LTR, or take on the risk of marriage, then do it with a woman with a low notch count that lost her virginity later on in life.

Research conducted by the Institute for Family Studies revealed that a virgin has a 5% chance of divorce after five years of marriage. Whereas, a woman with two previous partners has a 30% chance of divorce. The data stopped at 10 partners, which showed a 35% chance of divorce.

Promiscuous women that have had many partners and/or have been sexually active from a young age **DO NOT** make good long-term partners. It's not to say they can't, or won't, try to be a girlfriend or wife. But the statistics reveal how undesirable these women are long-term, and that's why they should be treated as an FWB - and nothing more.

Women with a higher notch count are also more likely to report depression, become single mothers, have personality

disorders, and have abortions compared to women with lower notch counts.

Women must preserve their value; men must create their value. It's why, throughout history, women's virginity was so prized. Whereas, a man's value comes from his ability to make something out of himself so he can provide, preside, and protect.

I should note that women will *never* reveal the truth about their notch count to you, so don't bother asking to get an authentic number. Some may volunteer it. Be wary of any number they throw out, as women often fear being slut shamed.

Women only usually factor in relationships as part of their notch count, and they often disregard all the one-night stands, threesomes, lesbian encounters, or FWB relationships that they had in the past.

At a bare minimum, double whatever number she gives you.

The lifestyle, and company a woman keeps, reflects her notch count. A woman that you meet at 30 that claims she was in an LTR from the time she lost her virginity at 23, probably has a low notch count.

But women with an absence of any drama free LTRs in her past, that lived on her own, traveled a lot, and you met her at 35 could have a notch count approaching triple digits, or more. It's not uncommon for women in their party years (20-27) to rack up a notch count of 25 or more men.

Never forget, women become the average of the five people she spends the most time with. If five of her friends are, or were sluts, then she will be the sixth.

Red Flag #12 - Single mothers

Do not be a cuck. Do not raise another man's child.

There is absolutely nothing in it for you as a man. You do not pass on your own DNA; they do not have your last name, and cuckoldry shackles you with 100% of the responsibility as a parent, but you have 0% authority.

Some men choose an FWB arrangement because it's low hanging fruit. However, I've dated single mothers when I was blue pilled and trust me: **DO NOT** date, live with, or marry a single mother. It's not worth it. See my video "Why Men Shouldn't Date Single Mothers" on my YouTube channel.

Look, I've counseled *hundreds* of men that have made the mistake of living with a single mother in such a way that the state views as a marriage. Guess what? They have been on the hook to pay child support for kids they didn't even father.

In one case I counseled, a man was married for less than two years. He paid off over \$100,000 of her debt and she brought two special needs kids to the table with her. She wanted out and was taking him to court for child support... for life.

Do not be a cuck.

Red Flag #13 - Women seeking validation

Social media is a staple in today's world, and almost all women are on it. However, women who use public social media to gain attention from men should be avoided. While there are no "good girls" on social media, the better ones will use private accounts. Meaning that only 'friends and family' can see their posts and they aren't posting provocative pictures, fishing for likes, comments, and direct messages from men providing loads of attention and validation.

Public accounts using social media to sell a product or service and treating it like a business are okay, but understand she will still have men flirting with her.

The women posting daily provocative pictures of themselves on public accounts, with thousands of thirsty beta males following them, are selling something too - their sexual agency. Women like this are openly optimizing their hypergamy.

If she is with you, but is still posting pictures for attention, then she is asking herself if *you* are the best that *she* can get.

Most women can become drunk on social media attention. So, if you consider an LTR with a woman that is constantly seeking attention online, then you need to continue to exercise your sexual strategy, and date her non-exclusively until she abandons her open hypergamy.

A woman's sexual strategy is open hypergamy, and when she is seeking attention online, she is out playing on the ice,

trying to score a goal. Your sexual strategy as a man is unlimited access to unlimited women. Therefore, do not even consider monogamy until she abandons advertising herself. **Do not** take these women seriously. They are to be limited to plate or FWB status only.

Red Flag #14 - She was a sugar baby

In a book by author B Rob titled ‘*Salty*’, the author shares his excursion into sugar dating as a “Salt Daddy”. He also figured out how to identify if a woman has ever been looking for money in exchange for dating as a “sugar baby”.

You will need to search in her email for the term ‘seeking’ and see if there are any emails sent from the site in her past that show up. This will require that you look into her private life. But, if you are looking for LTR material, then you need to take this step to ensure that you aren’t going to make a whore a housewife. If she *was* a sugar baby, limit her to plate status only.

Red Flag #15 - Pathological liars

Everyone, women included, lie. Many women, however, can’t help but to lie pathologically. For some, their entire world is a house of cards, and they can’t even tell when they are speaking the truth or not. These women are not LTR material, because they aren’t trustworthy.

Fortunately, these types of women usually ‘out’ themselves over time because they can’t keep up with their own bullshit.

A girlfriend I had at 19 lied about everything and anything.

I was riding sport bikes, and she told me early on how she had a sport bike at her mom's house an hour away. Although strangely, it was never available for her to ride, or she had it locked up in storage. There was always a story about how she rode, and enjoyed the experience, but always made excuses about where the bike was.

I was becoming suspicious of her stories. Knowing it cost me \$9 to fill up the tank of my bike, I casually asked her how much it cost to top up her bike tank when she rode. She responded with \$25. Right *there* I knew she was a pathological liar, and many of her other stories collapsed shortly after that.

Pathological liars are dangerous, they will tell you they are on birth control, when they aren't. They'll lie about things that will put you, or your health, at risk. If you are attentive and poke at her stories, then these women are simple to spot.

Red Flag #16 - Baby rabies

This is an interesting term I came across after I got divorced and re-entered the dating pool around 39. I had this annoying feeling that most of the childless women in the dating pool were desperate to get married and have children. Some of them were so thirsty to get married and have kids, that they would even ask if that's what I wanted before asking me anything else.

Sometimes it was even in their opening message on a dating application. It felt like they were looking for a dutiful beta with sufficient provisioning ability, and decent genes to settle down with.

Women exhibiting desperation to get married and reproduce are not into you and will not support your mission. They will not complement your life, but will instead want to be the focus of your life.

Any women attempting to rush you into having kids and getting married, without allowing for a two-year vetting period, is a big red flag.

But, if you feel that you are simply an accessory to fulfilling her biological imperative to reproduce, or that she is counting her eggs every month as they dry up? She has baby rabies.

Move on and don't let her problems become your problem.

Many of these women put degrees and careers ahead of their prime child-bearing years. As they approach their mid-thirties, they grow desperate. Remember, men can capably father healthy children well into their forties. For women, their prime childbearing years decrease rapidly after the age of 30.

Red Flag #17 - Hissy fits

Some women never learned the social maturity required to process their emotions, so they resort to hissy fits to deal with their differences in a relationship.

When my daughter was 3, if something didn't go her way, she threw herself on the ground, face down, then kicked and punched with her limbs at the ground while screaming. This is the toddler version, and it's excusable in a child, because they don't know how to process their emotions with maturity when something doesn't work out for them, so they start kicking and screaming.

In an adult woman, hissy fits are an unacceptable red flag and come in many forms.

Rather than approaching the issue head on like an adult, she'll commonly start by passive aggressively going on social media to post something revealing and sexy, behave erratically, or make underhanded posts about you.

One says, "Hey fellas, I'm over here, and my man pissed me off; look at me and shower me with validation and attention." The other is a passive aggressive maneuver to shame or ridicule you, usually with some covert statement or meme.

Hissy fits cover a wide range and include, but aren't limited to, overtly stating something like: "Just leave my shit on the front porch" when things aren't going their way. Or using actions like hiring a male personal trainer you know she was fucking in the past, and posting a picture on social media of themselves together, with some trite caption about how, "This girl will get her body back," in an effort to push your buttons.

These outbursts by women are bad news, and I've noticed that there is often a correlation between her hissy fits and

daddy issues. I've seen fathers set logical, and reasonable boundaries for their daughters to preserve her value as a woman, and she broke them in a rebellious and dangerous way in protest.

For example, a traditional European father will often set limits on when his daughters can date, and in what cultures. A woman with daddy issues that can't respect the boundaries set by a man will go out with, and intentionally have plenty of unprotected sex with, men from cultures that she knows her father would be vehemently opposed to.

Deal with hissy fits head on and treat them as unacceptable behavior. Otherwise, you'll constantly deal with them in your relationship.

Also, **do not** argue with women. They will not let a thing like logic or reason get in the way of their emotional hissy fit. You set the boundary, then cut off all contact (called a soft next) with her for about four to five days to let her think about it.

Remember, attention is the coin of the realm for women, so when you remove it, they lose their mind and will usually automatically fall back in line. She will either comply, or it's "Goodbye."

Most women, because of their own solipsistic nature, will not recognize it as a "hissy fit," even if you spell it out for them. So be resolute. You will get out of life what you tolerate. Do not argue with her about her hissy fit.

Men are deductive, rational thinkers - women aren't. Therefore, a soft next allows you to return to the table with a boundary you set. If she doesn't like it? Show her the door.

A woman that has a genuine, burning desire for you, and is serious about sorting herself out, *will* do the work. A woman that isn't, will resist, make excuses, and will *constantly* test your boundaries as a man.

Red Flag #18 - Not being in control of the birth

In Rollo Tomassi's book, '*The Rational Male*' he outlines his "Iron Rules," and number five was: "Always be in control of the birth." As a man today, once your sperm leaves your balls, women make 100% of the decisions.

If you knock up the wrong woman, you could be on the hook for around 20-years as her personal ATM. NEVER, EVER trust a woman you are not in a properly vetted LTR with when she says, "It's okay, just go inside me, I can't get pregnant." You must have **100% certainty** that there is effective birth control in play. Oh, and for the record, birth control pills are *not* sufficient.

Many men have knocked up women who claimed to be on the birth control pill, only to discover she "accidentally" forgot to take them or wasn't even on them. Condoms (that you flush away afterwards), or an IUD, are your most reliable methods of birth control today. Remember, women lie. It's called birth control for a reason - so always be in control of it.

Red Flag #19 - Drama queens

All women, not just some, periodically crave for some form of drama. If they are bored, and there're no issues in your relationship, they will manufacture indignation to test you and create those “feels”. Drama queens choose random molehills to turn into mountains. This is also another form of a hissy fit.

I guarantee you will encounter drama with a woman at some point. But, if it appears more than once within the first three months of dating, or more than a weekly “thing” during your LTR, then she is flat out telling you that this drama will be a regular occurrence for life.

Buckle up buddy, you’ll be in for a roller coaster ride if you don’t put your foot down and use a “soft next” to maintain boundaries.

Manufactured indignation is really just a shit test, and it’s also about testing your frame as the dominant frame in a relationship. Remember, drama *will* happen with *all* women at some point. So, decide early on what you will, and more importantly what you won’t, tolerate. Alpha men with plenty of options will tolerate little to no drama, lesser men with few options will accept it as it comes.

Red Flag #20 - Addictions

Dependency to things, activities, or substances is a big red flag. Women that rely on alcohol, shopping, drugs, cigarettes, news, or reality TV to name some examples, can

be highly problematic to a man that is chasing excellence in his life.

Unhealthy addictions, if left unchecked, will dominate her life, her choices, and her conversations. Addicts, usually, become self-destructive. If it's affecting your life, then it has become an unhealthy addiction.

A woman who is addicted to a reality TV show will talk about the mindless drama between characters on the show non-stop. Alcoholics are always looking for their next drink, and anyone that's ever dated a woman that's addicted to anti-depressants knows how badly it affects her body weight and sex drive.

Don't let women make her addictive problems, your problems. Smart men do not get into an LTR with women that have addictions, it's **not** your job to save or cure them.

If they have acknowledged their addiction, and are working on their problems with a professional, good, let them. But keep her at arm's length as a plate until she has shown genuine progress for several months. Also, make sure that her addictive personality doesn't replace one addiction with another.

Conclusion

As I stated earlier, you can ignore my warnings about these red flags and get involved with these women. But, at some point, your life *will* become complicated and unnecessarily difficult.

As a man, it is incumbent on you to shoulder the burden of performance, and to chase excellence. In life, women can either become an anchor, or a sail. Look for women that are a complement to your life and that gladly fill your sails with wind and limit your interactions with anchors that hold you back.

The cold hard truth

Never forget:

- It's *your responsibility* to set, and *always enforce*, the boundaries that are meaningful to you.
- Never date, LTR, or wife-up a single mother. Neither the mother, nor the kids, will *ever* genuinely appreciate you for your sacrifices.
- If a woman *ever* becomes physically violent with you, then you **must** get the hell out of that relationship immediately. And if you have kids with her, then see an attorney ASAP.
- If your spidey senses are tingling and your gut is telling you something, then there's a reason why. Listen to it.
- A man who's chasing excellence and making his dent in the universe will have the options and self-respect to drop *any* woman who's complicating his life.

SINGLE MOTHERS

In the red flag chapter, I covered several warning signs that men should be aware of with women. However, this book wouldn't offer a useful roadmap for men unless I cover *why*. I'll explain why a relationship with a single mother often invites both drama, and unnecessary complexity, into a man's life.

I've had well over a thousand coaching calls with men, and the one common denominator that keeps repeatedly showing up, is that men dramatically complicate their lives by allowing single mothers into them.

Now, not *every single* mother is bad news. But, the reality is, they bring a *lot* of problems into men's lives that women without children simply don't.

When I got divorced at 39, after seven years with the same woman, I had shared custody of my four-year-old, and I did what most men typically did in that scenario. I looked around and found that most women in my age range had children in tow.

Most had several kids, and sometimes, each kid came from a different father.

I got involved with a single mother almost immediately. She was also recently divorced, pretty, fit, knew how to cook, she also had the typical post-divorce breast augmentation, and she had two kids in tow that were seven and ten when I met them. If you want to learn more about my personal experience, search YouTube for “entrepreneurs in cars and why men shouldn’t date single mothers.”

Some men would argue from experience that there are *dozens* of problems that come from relationships with single mothers. However, I’m only going to focus on the five I’ve seen most often.

They are, in no particular order:

- Cuckoldry,
- Responsibility without authority,
- The victim mindset,
- Financial issues,
- And re-prioritization.

Cuckoldry

When you take on the financial, parental, and emotional burden of raising another man’s children, you are, by definition, a cuckold. Some men would argue that if she is a widow, or he was a deadbeat father that disappeared from their lives, there is an exception. Well, there isn’t.

Regardless of how you want to rationalize it in your head - you are a cuck.

Society today encourages and celebrates cuckoldry. You'll often see articles titled: "The case for being a cuck." The truth is, it's nothing to celebrate.

They don't take on your last name, and they *definitely* don't possess your genetic legacy to pass down. These two points have historically been the biggest selling points to men for fatherhood. For most men, this is enough to enforce a firm "pass" rule on single mothers. But, many men *still* ignore the obvious problem and it is because they lack better options because of their own limited value.

To add insult to injury, women overwhelmingly get awarded primary parenting of their children the vast majority of the time, while men don't. So, if you are a divorced father, then you might end up spending more time parenting the children of *another man* than your own.

Responsibility without authority

Getting involved with a single mother often means that you will find yourself in a position where you have the same parental responsibilities as a biological father, but with *none* of the authority of a parent.

Shortly after she introduces you to her kids, she *will* expect you to "step up" and take on parenting duties.

It often starts with going out for dinner, and she brings her kids along for the first time. This is when you will be

expected to demonstrate that you can provide for Billy and Bobby too. You'll be on the hook with parental responsibility for birthdays, travel, holidays, ski trips, the beach, the list goes on.

You will fill the shoes of "Daddy" and your financial resources will certainly be warmly welcomed. But, at some point during a grievance, you *will* also eventually hear them say something like: "You are not my father! You can't tell ME what to do!"

They will be "our" kids when she needs you. However, they'll be "her" kids when you need to discipline them or enforce healthy boundaries.

Strangely, if you are a single father you will learn that, when your kids need something, your children are never "ours," but selectively "yours." Yet, most men discover that women want authority over kids, just without the responsibility that goes along with it.

Most men eventually hear her say something that reflects the mindset of: "Not my monkey, not my circus." There is a reason why some kids that grew up with a step-mother call her "Step-monster."

If the fact that you are being cucked as a man isn't enough to make you question your choice to get involved with a single mother, then expect to have responsibility, but with zero authority. Whereas, *she* will often take on little responsibility herself, while still seeking authority.

The victim mindset

Women are naturally solipsistic (after all, it is hard-wired into them). However, single mothers run a special gauntlet of mental gymnastics that they rationalize as normal. But, ultimately, it boils down to them adopting a victim mindset. They often brag on social media about how they are strong, independent, and “don’t need no man.” While simultaneously turning to the government for handouts, and/or their children’s father(s) for financial support.

I dated a lot of single mothers that would complain about the father of their children and often heard her use disparaging terms like: Loser, dumb, deadbeat, beta, or boring. If I would ask them why they married him, or had kids with him, their face would turn to stone as if to say, “How dare you hold me accountable for my own choices.”

Naturally, she didn’t own her choices. She was always pointing and sputtering at her ex-husband, her boss, her father, or the President. With the rare exception, she rarely looked in the mirror to take ownership for her results in life.

While I’ve only ever dated traditionally feminine looking women, I’ve never met a single mother that wasn’t a feminist.

To identify as a feminist, you must have an oppressor and, when it comes to feminist logic, *every woman is oppressed by default and, is therefore, a victim.*

The victim mindset requires her to be unhappy, unlucky, and oppressed. When I started dating these women, I found out

first-hand how hard done by she claimed she and her children were, and it was *always* someone else's fault.

Her children also adopt this mindset (because kids naturally learn their behaviors from their parents). So, if something doesn't go their way, they will emotionally manipulate their mother, and have her side with their bratty behavior. *Even* when you are right, and they require boundary enforcement and discipline.

Most men love playing the role of "Captain Save-a-Hoe." And, since most single mom's *love* being a damsel in distress, men are all too happy to step-up, and swoop in to protect "her honor."

Financial issues

When it comes to money, women choose jobs that pay less than men the vast majority of the time. Even though there are more women in the workforce than ever before, men earn the vast majority of wealth by choosing higher paying professions. Most men discover that single mothers gravitate to professions like: Nursing, Teaching, Dental Hygienist, Daycare Work, and Hairdressing.

Few women take on jobs that pay over six figures. So, when I was dating them, I found it difficult to meet a single mom that earned as much as I did.

For the most part, they aren't driving expensive cars or living in mortgage-free homes.

Most single mothers have debt, and often, also have nothing to their name (except the children in tow with another man's last name attached to them).

You will be called upon to pay for her life and that of her children's. I've had several coaching calls with men where they paid off her debts, bought her kid's cars, and paid for their college tuition. It's common for uninitiated men to make themselves less, so she and her children can become more.

Reprioritization

In general, men are all too happy to abandon their purpose in life to fulfill a woman's. Unfortunately, when you get involved with a single mother, you will *never* be her priority.

Most men find their place in a pecking order behind: Her needs, her kid's needs, her work issues, her wine drinking nights with her "sisters," her salsa nights out, and then her cat. If you get involved with a single mother, you'll never be *anywhere near* the top of her priorities.

You will often be expected to make your hobbies and passions less of a priority, so she can focus on hers. There's an old soundbite that calls women "Dream killers." The truth is, most men that get into relationships with single mothers will be required to shift their priorities around for her and her kids.

The BIG risk

There is an often-overlooked risk with dating a single mother, *especially* if you have a young daughter, and she has one or more boys. The biggest risk to young girls is being physically violated through non-blood related relatives in the household. This is far more common with girls, but it does happen to boys too.

There is hard wiring in our DNA, as a function of survival and for genetic diversity, to avoid sexual activity with blood related relatives. It's why brothers and sisters are sexually repelled by one another.

There are many women that have been raped, or sexually assaulted, by step-brothers or step-fathers during their childhood.

This is a risk that you *need* to be aware of if you are a divorced dad, more-so if your ex-wife isn't particularly good at picking men. If she invites characters into your daughter's life, with step-brothers in tow, then you *must* find a way to have that conversation with your children's mother.

When dating a single mother - might - make sense

I've often been challenged to present a situation where dating a single mother might make sense. I can only think of one.

You've already got a kid, so you've secured your family name and DNA. Her child is about the same age and sex as yours, so they can interact and relate with one another and, most importantly, there is no risk of her being violated.

Your frame also naturally infers 100% authority in the relationship. She isn't a feminist, and takes ownership for her life, and holds her kids accountable to my standards. She is, at a minimum, financially equal to me. She is a complement to my life, and certainly not the focus. She'd also have to be attractive, have a genuine burning desire for me, and also get on well with my child.

To be perfectly honest, I think you'd have much better luck finding a Leprechaun with a pot of gold at the end of a rainbow, than finding someone who can comfortably meet every condition.

The cold hard truth

Never forget:

- You don't want to be a cuck. You might genuinely love her kids "Like they're your own." But, ultimately, they will *never ever* be yours and your bloodline will not continue if you don't already have kids.
- They'll never, ever, *ever* respect you in the way that you want them to. Even if you adopted them. Because, deep down in their core, they'll *always* know that you "Aren't their father."
- While it's a cold truth that a woman's kids will *always* be a higher priority than you, with single mothers, you'll be even *further* down in her list of priorities. Until she wants something from you that is.
- The victim mindset, along with unhealthy doses of shaming and guilt-tripping, is the de-facto method-

of-operation for single mothers. If it's *all* the bio father's fault, and she can't own up to *anything* that she did to screw up the relationship, then you can bet your ass she'd say the same about you to the next guy.

- The vast majority of sexual-violations are perpetrated by close family members. If you have a young daughter, then it's incumbent on *you* to make sure she stays as safe as possible and make sure she feels comfortable enough to tell you *anything*. So lay the groundwork in making her feel comfortable enough to confide in you ASAP.

HIRE SLOWLY BUT FIRE QUICKLY

In 2003, I was working for Canada's largest collection agency where I was well into my fourth year of service as a manager to a team doing \$2 Million in receivables. My staff were well trained and loyal, which meant our recovery rates were incredible.

Earlier that year, I had a new VP assigned to our group, a French-Canadian guy from a very rough background. I remember him telling us stories about his childhood and how his father shot himself in the face.

He clashed with me from the get-go. He would publicly disrespect me in front of my staff, and make me run detailed reports, which he never looked at, for his own personal amusement.

After a few months of putting up with his disrespect, something snapped inside of me, and I let him know what I thought of him. *This* is where I learned the valuable lesson that people get hired for their skills, and resume, but get fired for fit.

Towards the end of the year, only three weeks after I moved into my first house with a big mortgage, a manager's salary needed to come off the books for corporate cost cutting.

Guess who was selected by my loving VP to go home? Me.

The initial burn of being handed that severance package hurt. But, this push inspired me to go create my own business which helped to settle consumer credit card debt, and I will be forever thankful for that.

It was about a decade later when I finally learned the lesson to hire slowly and fire quickly in my own business. You can use this idea with women in your life, employees, business partners, and even friends.

Take your time vetting people. Get to know them and study their behavior. The choices someone makes, and how they behave, should *always* trump what they tell you if there is a conflict between actions and words. I.e. Don't listen to what they say, watch what they do.

If your Spidey senses tingle, listen to your intuition. It knows something is up. Intuition is the little voice whispering in your ear, and it often only becomes a loud shout when it's too late and you are going to experience a train wreck.

My single mommy experience

Shortly after my divorce, I got involved with a single mom of two boys, and for the first few months it was great fun dating her. After a few short months, she started suggesting

that I meet her boys. This was when my intuition started whispering to me, telling me it wasn't a good idea.

But, I ignored it.

Of course, my intuition only became a shout when her older son manufactured indignation. He started throwing a bad hissy fit, yelling at me, and calling me names, because I enforced a boundary with them they didn't like eight months after I met them. Their mother sided with the bratty behavior, completely ignoring the fact that I was right.

In hindsight, I should have limited my time in that relationship to just her and let it run its course. I *never* should have become involved with her kids. I should have also quickly fired her ass and ended the relationship with her at that point and then moved on. But, I let the torture drag on for nearly two more years. I also endured several similar incidents because I, again, ignored my intuition. It ended in a colossal train wreck for me with a severe case of "oneitis," when she cheated on me (after I tried to enforce boundaries with her kids again).

The business partner experience

Shortly after I took my severance package and went home, I partnered with a friend of mine I used to work with to offer debt relief services to consumers. He still had a job that paid him very well, so I was doing almost all of the work and he was taking half the money out of the business account every month.

I was working exceptionally hard to make it work; we were making about \$30,000 a month for a business with only two staff, and no overhead, so it initially felt amazing.

That was until I realized that my partner had a drug problem – and was a control freak.

My intuition was telling me to get out. But, once again, I didn't listen. It wasn't until eight months later when it became a literal shout out in my head. And only when my business partner was screaming at me over my insistence for him to quit his job and join me full time. In a full-blown state of hysteria, he began yelling at me that he "never put me on the corporate books," and that I technically "don't exist" in the business.

Initially, it ended *very* badly. But, I picked myself back up quickly and with my brother, formed what would become Canada's most successful debt settlement company.

Anytime I've gotten into trouble with women, employees, business partners, or anything else, it was because **I didn't listen to my intuition and fire that person from my life quick enough.**

With women, friends, employees, and business associates, **always** hire slowly and fire fast. You *must* be fastidious with your time, and who you allow into your inner circle.

The cold hard truth

Never forget:

- It's incumbent on you to take your time with the vetting period. The "honeymoon phase" can apply in other areas of life – not just in relationships.
- Be vigilant and observe if someone's actions match their words. Ignore what they say and watch what they do as words can be empty, while actions speak the truth.
- If you find that there's an inconsistency between their words and their actions, then you **must** be prepared to cut them out of your life as swiftly as possible. Make sure you've done your legal homework when it comes to business partners (or LTRs/Marriages), then execute that strategy with military precision and speed.
- **And finally, listen to your gut.** It's your brain telling you that things *definitely* aren't adding up.

LOOKS, MONEY, STATUS, AND GAME

Sadly, when it comes to women, men aren't taught the importance of looks, money, status, and Game.

Instead, men are taught that he must become less, so she can become more. To "Just be yourself," and that just being a "Nice Guy" is enough to attract high-quality women into your life.

Unfortunately, women don't work like this. They never have, and they never will.

Women possess an evolved firmware that selects for the best-looking man, who has sufficient resources, and status. Not because they are picky gold diggers, but because they need to ensure that they pass on the best genes and can retain access to sufficient resources for the survival of their offspring. Therefore, men view women as beauty objects; women view men as success objects.

Most men do not understand what drives attraction in women, and the vast majority of men are getting terrible, or no results with women they are attracted to.

This leads to frustration, resentment, and ultimately quitting. Women are born; men must be made.

Women expect men to develop useful skills, be masculine, strong, and acquire resources that a woman and her offspring can benefit from. Her sexual strategy is hypergamy and, as a result, it continuously asks her if you are the best she can do.

By this point, the quitters will protest and scream, “See! All she wants is your money, muscles, and when she is done, she will go fuck another guy and break your heart. This isn’t worth my time!” That’s a loser’s mindset.

There is a lot more to creating and maintaining *genuine, burning* desire from women.

Most men behave like women are a scarce commodity, placing them high up on a pedestal while worshipping them. Yet, nothing could be further from the truth. High value men who are maxed out on their looks, money, status, and Game are *scarce*. Conversely, attractive women are *everywhere*. Don’t believe me? Search the hashtag #fitnessgirl on Instagram, and there are *millions* of results, with the vast majority of them, objectively, being nines and tens.

Looks

Looks matter, there is no way around this. Based on their usage patterns, women’s behavior on dating apps show that they find 80% of men unattractive.

She isn't basing this on what he does for a living, his bio, sense of humor, competency, skills, or even location. It's based almost entirely on one profile picture and, for the most part, men are *horrible* at projecting a strong masculine appearance with professional-grade photography.

When it comes to looks, women overwhelmingly prefer tall men, with high testosterone cues like muscles and a chiseled jawline. Given the choice, almost all women would rather fuck a bald and muscular 6'5" Dwayne Johnson, over a full head of hair 5'4" Michael J. Fox.

However, with that being said, men need to learn how to max out their looks. Because, even with his height deficit, Michael J. Fox *still* had an abundance of women in his life by maxing out in many other areas.

The first step is, apart from not quitting, is to be at peace with yourself with what you can't change and max out what you *can* change

A man that is 5'4" can't do much about his height. But studies show that 70% of a man's attractiveness is based on the appearance of upper body strength, with height and leanness accounting for only 10%.

When women are shown images of men's bodies in studies and asked to rate attractiveness, they subconsciously, but overwhelmingly, seek a 1.62 ratio of shoulder to hip width. Yet, most men in developed Western countries are fat.

You can accomplish a "V taper" along with a thin waist and visible abs, by eating right and build broad shoulders, large

traps, and a muscular back, by lifting right. This is an area that almost all men can max out in that will *significantly* improve their overall look.

Sadly, most men don't track something as basic as their weight, let alone their shoulder to waist ratio.

If you are out of shape and carry belly fat, then you *must* make self-care a priority. There is simply no excuse for being fat and out of shape. If you want an enjoyable experience with women and want to be spoiled for choice, then you must do the work to live in a strong, masculine, and healthy body.

REFINE YOUR STYLE

Style is another area where men can improve looks dramatically. You should wear clothes that fit you well and complement your physique. Most men show they don't understand style by wearing clothes that don't fit properly.

In my early twenties, when I first worked in office spaces, I used to buy cheap off-the-rack dress shirts and suits and I looked terrible in clothes, but great naked. Most cheap clothing is loose and baggy on me because most of the population is fat - and that's how they manufacture it.

It wasn't until a girl suggested that I should get tailored shirts made that I started getting more looks and compliments from women. When I splurged and bought my first tailored suit, it was the icing on the cake and my girlfriend at the time became exceptionally jealous of the attention that I was getting when we went to formal events.

I use this example to impress upon you the importance, and significance of, wearing clothes that fit *properly*. And how dramatically they can improve your looks - *especially* if you've put in the work for a nice physique.

You don't need to buy expensive tailored suits. Instead, keep an eye out for clothes marked "fitted" with a small percentage of the fabric blend from spandex to ensure a good fit. For more on style, read Tanner Guzy's excellent book 'The appearance of power'.

Hair plays a big role with looks, yet I constantly find men with messy hair. Or worse, balding men holding desperately onto their disappearing strands of hair with bad haircuts. If you possess a thick, full head of hair, then take a look. Find a popular Hollywood heartthrob, that has similar features to you, and get a good hair stylist to fix your hair.

HAIR Loss

When it comes to hair loss, you need to understand that the 25% of men with a hereditary predisposition to baldness, start losing their hair by age 21. By age 35, 66% of men start experiencing hair loss, and by age 50, 85% of men display significantly thinner hair on their head.

Men spend *way* too much time and money looking for ways to hide, or slow down, their hair loss. Do *not* be that guy.

If you've a hereditary predisposition to hair loss, surrender to it, because you *are* going to lose it. The gene usually skips a generation; my dad has his hair, his father did too, and so does my younger brother. My grandfather on my mum's

side, however, was bald. So, my middle brother and I are balding.

I started noticing signs of hair loss around the age of 21 when I would take my motorcycle helmet off and notice a half dozen strands of hair in the helmet, but I kept a full head of hair until my early thirties. By my mid-thirties, I was using clippers on level one because there was no hairstyle that could hide it. Once I hit my early forties, I finally started shaving my head.

Throughout my life, I've been losing my hair. Yet, I've *never* had a problem with women. I always had a look that they liked. I've learned that there is a good part of the female population that just *loves* the look of a masculine man with a shaved head. Dwayne Johnson, Vin Diesel, Bruce Willis, and Jason Statham are all balding men in Hollywood that have a look that women are not only drawn to, but in many cases prefer. Because *they own it*.

You will need to make sure you've got a masculine physique if you are balding, or bald. If you look fat or scrawny - and balding - it's a really bad image. No woman pines for characters in Hollywood that remind them of George Costanza.

Surrender to it and adopt an image that suits your stage of hair loss. There is nothing on the market today, that I am aware of, that will truly reverse male pattern baldness. There are band-aid solutions, but they aren't even mildly successful at slowing down hair loss, and some are so pathetic, they aren't fooling anyone.

PICTURE PERFECT

There's a great misconception from quitters that will lead you to believe that you can't do *anything* about your looks, and that women only ever date handsome men. Yet, if you Google "Joe Manganiello transformation," you'll find a picture of a scrawny-looking high-school dork in bad glasses. A dork that transformed himself into a buff, handsome stud that landed a role as a male stripper in the movie 'Magic Mike.'

Lifting weights, eating right, improving your personal hygiene, and having a well-thought-out image can do wonders. It's called "looks maxing," and it's dressed in overalls, and looks like work, so most men avoid it. Therefore, making excuses as to why they can't.

The great equalizer in looks is photography. When it comes to pictures for dating apps or social media, definitely hire a photographer. There is an oversupply of young photographers you can hire for less than \$100 on Craigslist, alongside Air B 'n' B experiences for 2-hrs, to do a professional photo shoot in. Bring along three tailored outfits, ask the photographer to select some suitable locations, dress sharp, and then let them work their magic. Many men significantly improved their results with women on dating apps with superior photography.

Surrender to what you can't control; max out on what you can.

Money

There's a prevailingly lazy notion that money is evil, and that there is only so much money moving around out there, and that it's in the offshore accounts of all the rich and greedy men. Not only is that a lie, it's also a loser's mindset.

Money is, simply put, nothing more than a store of value. If you acquire it, then that's because you've added value to the lives of others. Bill Gates has acquired a massive amount of money because he solved massive global software issues with Microsoft, and also helped bring computing to the masses.

Throughout history, women have *always* preferred men with money. Women love a man that can "Make it rain."

Even with your style and physique locked down, your looks will only get you so far if you haven't got any money. You should aim to be in the top 10% of income earners where you live. As you get older, the significance of wealth increases because, like it or not, your looks will decrease. Even ugly, short, fat, bald men can have sex with really hot women if they have enough status and money. It is the *ultimate* equalizer for unattractive men.

While stable employment is still the primary objective of most men, a basic J.O.B. (Just Over Broke) isn't enough anymore for most men today.

Women are graduating with more degrees and earning more. But men aren't and today there are more women earning more money than *any* other time in history. And because

hypergamy never seeks its own economic level, women *always* want to date up. So, it's men with the wealth that get some of the best results with hot women.

When women ask what you do for a living, she doesn't particularly care about the "what" part. She is merely trying to be polite and curious about your status. More importantly, what she's *really* trying to do is assess how much money you earn.

However, the status component of your source of income does have some relevance. For example, a man that owns his own plumbing company might earn 50% more than a junior lawyer in a law firm. But hypergamy isn't all about money, it's about "the best that she can do." And if her hypergamy thinks a lawyer is more valuable to her than a plumber when introducing her new boyfriend to her family at Thanksgiving, then the lawyer wins.

A rich man can turn a broke woman's life around. But you should understand that a rich woman won't give a broke man the time of day (unless he's seriously hot, and even then it'd only be for sex). To complicate female nature even further, women will overlook a poor man in his twenties with ambition, and a plan (because he has "potential"). However, they have *truly little* patience for a poor man in his forties with ambition and a plan.

To have options in life you need money. Yet, most men live paycheck to paycheck.

"FUCK You" MONEY

Every man in the West should ideally aim to be a millionaire by the time they are 30, or 40 at the latest. This isn't to beg for pussy, or for female validation. It's for you. So, you can do what you want, when you want, and have the confidence to tell people to "Fuck off!" that you don't want to listen to. Which is an *incredibly* powerful position to be in - in *any* area of life.

Money creates freedom and options. Women are merely a by-product and they should *never* be the main reason that you continue to chase excellence.

Entrepreneurship, C-suite jobs (so CEO, CFO, etc.), high-end sales, and professional designations (think Doctors, Lawyers, Pilots, etc.), are the main categories where you can find the top 10% of earners.

My preference is entrepreneurship, because it can be the quickest path to wealth, with the most personal freedom. But, being an entrepreneur isn't for everyone, it can take years to get the role of a CFO, a Doctor, Pilot, or Salesman that sells high-end real estate or yachts.

The ROI on investing in yourself is absolutely *massive*, and in my view at least, is *well* worth the work.

The point I'm making, is that a factory job might have been enough for your grandfather after he returned from the war and then married your grandmother. But in today's world, that's not going to lead to a higher level of self-actualization for most men and, truthfully, it's not enough for today's women.

However, I want to re-emphasize here that while the point of creating wealth *isn't* to get women, you will naturally have access to more and more attractive women by acquiring wealth. As an intelligent man of vision and purpose, you must set boundaries and ultimately decide what kind of access you will permit women to have to *your* money.

Status

For men, status is mostly a by-product of wealth and influence, and we touched upon this aspect briefly when I was discussing money. Women, on the other hand, can achieve status with a decent physique, one million thirsty beta Instagram followers, and *still* be broke.

Part of the evaluation process women go through, when their hypergamous hindbrain is evaluating if you are the best that she can do, is assessing your status and influence.

Throughout history, men of high status have always had abundant access to high-quality women. In many cases, influential men of high status had harems of women.

Men of status are so desirable and in demand, that most women would rather share such a man with other women, compared to being saddled with a faithful loser.

When women get with a 5'9" Dan Bilzerian, they are happy to share him, because he is a successful, wealthy alpha, with a thirty million plus following on Instagram. The man has status and so has an unlimited supply of smoking hot women who are much younger than him, who are willingly

waiting in line for a chance to fuck him and be in one of his Instagram posts.

Status will get doors opened for you, meetings with important people, preferential treatment, and yes, access to attractive women.

Even ugly men of status do well with women. Mick Jagger, the lead singer of the Rolling Stones, was as ugly as they come. Yet, as a lead singer of a high status band, women didn't care about his looks because of his status. As legend has it, he once left a date with Angelina Jolie no less, to have a one-night stand with Farrah Fawcett.

I use these extreme examples to impress upon you the importance of status, and Instagram is just one way of hundreds where high status can be signaled.

An average looking 21-year-old man, who has just started promoting fitness courses from his business, can signal high status by having a good Instagram following of 20,000. This allows him to garner the attention and praise of 2,000 people with every Instagram post as he goes about the business of promoting his products.

However, when it comes to signaling higher status, that won't work for a 45-year-old man. For him to have the same measure of status in a woman's hindbrain, he must show that he has acquired wealth and has a more seasoned reach and status.

STATUS CAN'T BE FADED, IT MUST BE EARNED

When I'm with my girlfriend and a random guy approaches me that profusely thanks me for saving his life with my videos, it reminds her she is with a man of status.

I also show status with the Japanese chef that runs the small, high-end, sushi boutique restaurant that I frequent. When I call on the speakerphone to pick up an order, he always recognizes my voice before I mention my name, he calls me Mr. Cooper, and is very respectful. It's even more obvious when I visit the restaurant in person when I'm on a date to eat in, because I always get treated like a VIP.

When I'm at the gas station, with my girl in the passenger seat, filling up my R8 Spyder, and people approach me to ask about or compliment my car, I signal status.

Listen, you don't need to be a Rockstar or a billionaire to have status. All you need to do is make money and have people show respect and admiration for you. You get to decide how you want to signal status, but the more status you have, the more doors that will open up for you and, ultimately, the better you will do with women.

Game

Game is defined as you confidently using your attributes, characteristics, and overall personality to win the affection of women. It's about playing, and optimizing the cards you're dealt, and winning with women. It's also about turning your positives into swagger and your negatives into charm.

Game, when distilled, is about knowing what women respond positively to.

Pick Up Artists (or PUAs) will tell you that Game is the great equalizer when it comes to attracting women. If you haven't read the 2005 edition of '*The Game*' by Neil Strauss, then I strongly suggest you do. Neil isn't particularly good looking, and wasn't rich at the time of writing the book, but the techniques he uses *clearly* proves that Game works.

Game matters, but if you haven't got looks, money, or status to go with Game, then you will only ever get so far with it. Even the legendary "Mystery" in Strauss' book ended up with a debilitating case of "oneitis" for a woman because all he had was high-level Game.

You can use Game to get some success when cold approaching pretty women, while getting a number to set up a date. But, to be *truly* effective at Game, then you must also be Red Pill aware. Most PUAs have Game, but not all PUAs are Red Pill aware. Game without any Red Pill awareness is like owning a Ferrari, but without an engine.

To properly cover Game, with a Red Pill lens applied, requires several books. Beyond Neil Strauss' book above, notable reads are:

1. '*The Rational Male*' book series by Rollo Tomassi, which covers the mindset and psychology behind Game.
2. '*The Mystery Method*', by Mystery.
3. '*The Art of Seduction*', by Robert Greene.

When it comes to looks, money, status, and Game, some will try to convince you there is an order of importance to these but, in my view, there isn't.

A man should do his best to max himself out in every area. One area is no more important than the other.

They are synergistic and create a compounding effect as you improve in all areas. At the end of the day, the pursuit of excellence in these areas, should be for yourself, *not* for the goal of getting women.

Women should only ever be a by-product of looks, money, status, and Game. Remember, women should *never* be the focus of your life, only a complement to it.

The cold hard truth

Never forget:

- Men that do the work to put themselves into the most desirable top 20% of men have, by far, the greatest chances of sleeping with the vast majority of women. So, put a conscious effort into improving your physique, your style, and how you carry yourself. It'll pay dividends down the line.
- Are you losing your hair? Who gives a fuck? Own that shit and make it work *for you*. Guess what? It's only a problem if you let it be one.
- Being wealthy affords you the financial security in life to tell people, or other opportunities, that aren't offering any value to you, to "Fuck Off". Money has

an inherent value that allows you to pursue different options or enjoy experiences that you previously could only have dreamed about before.

- Go make your own recognizable dent in the universe and positively elevate your status to “world class-level” in whatever field you specialize in.
- While you don’t *have* to be an extrovert to be good at Game, although that certainly doesn’t hurt, you do need to build up a solid frame of genuine confidence that women can, quite literally, see you exude from across a crowded room. Are you being playful with women? Are you playfully teasing them and busting their, metaphorical, balls? Are you being your unapologetically authentic self around them? Are you only rewarding them with the value that your undivided attention brings because they’ve *earned it*? If not, then go and **Do. The. Work.**

MANAGE YOUR ENDOCRINE SYSTEM

Disclaimer: This book is not intended as a substitute for the medical advice of a licensed physician. The reader should regularly consult a licensed physician in matters relating to their health, particularly with respect to any symptoms that may require diagnosis or medical attention.

The male endocrine system is an extraordinarily complex collection of hormone-producing glands that regulate metabolism, growth, development, tissue function, sexual function, reproduction, sleep, mood, and many other functions.

The primary hormone men should be aware of tracking as they age is their testosterone levels. Because, even in a healthy male, your levels **will** drop somewhere between 1-2% per year from the age of 30 onwards (and this is in a best-case scenario).

This process in men is known as “andropause.” Unlike a woman’s menopause, which is an immediate decline in her optimal hormones. The process in men takes *decades* and, for many men, is hardly noticeable.

Declining testosterone levels is a genuine issue for men for a bunch of reasons. These include:

- Your lean muscle mass decreases,
- Body fat levels increases,
- Mental clarity decreases,
- Sexual function decreases,
- Bone density decreases,
- Energy decreases,
- And the risk of some diseases increases.

Optimal testosterone levels in men are directly connected to living an optimal life. And note the word “optimal”, which *isn’t* the same as “normal.”

It’s my belief that men should track their levels starting at the age of 25, and then every subsequent year, until the blood panels show the need for exogenous testosterone supplementation.

Some men will try to shame you for using Testosterone Replacement Therapy (or TRT), but understand that they are just jealous because **you** will do better in life. Hate *never* comes from above, only from people beneath you. People never get jealous of losers.

Once you start treatment, you'll track it about 2-3 times a year under the supervision of a TRT doctor.

For me, it was around the age of 43 that I noticed the following symptoms:

- Low energy,
- Moodiness,
- An inability to focus,
- A lack of morning wood,
- A lower libido,
- Less strength,
- Muscle wasting,
- More body fat,
- And far less motivation.

I knew something was up, saw how TRT improved the lives of several of my friends, and then found a local doctor that specialized in TRT. When I ran my full blood panel, my levels, according to government tables, were within the “normal” ranges for my age. Thankfully, my doctor didn’t treat numbers. Instead, he treated the symptoms I described above.

Optimal versus normal

Nobody wants to be “normal.” As a man chasing excellence, you want to optimize every area of your life. A good TRT doctor will treat your *symptoms* to optimize you to the levels you had around the age of 30.

It's important to note that I am not talking about reaching the super physiological levels that a competitive bodybuilder aims for. Their exogenous testosterone dosages will be 4-10 times higher than what a TRT doctor will prescribe; abusing testosterone **will** eventually lead to health problems down the road.

Again, you are aiming for the optimal levels you had around the age of 30. Most TRT doctors will prescribe between 80 to 200 mg of testosterone per week and then adjust your dosage based on the results of your blood work.

A full blood panel, in most places in the world, will cost you around \$150 and is *well* worth the investment in your long-term health. A full blood panel will give you a factual baseline from which to begin your health optimization strategy from.

My TRT protocol

I'm currently prescribed 100mg of testosterone cypionate per week and 1000 IU of Human Chorionic Gonadotropin (or HCG) weekly.

My blood panels also revealed that I needed to attend to a few other minor areas, which my TRT doctor has been extremely helpful with. He recommended supplements that have had a noticeable impact on my overall health.

I **strongly** suggest doing this under the supervision of a licensed medical doctor that specializes in optimizing male hormones. Some men will try to save money, and do this

themselves, and get their testosterone from an underground lab in Asia, or their “bro” from the gym. But you never really know what you are getting, it’s potency, and you won’t have a licensed doctor guiding you. To me, the cost savings simply aren’t worth the risk.

I’ve already explained the merits of optimal testosterone. However, one downside of introducing exogenous testosterone into your body is that your own natural production shuts down once your body detects healthy levels again. That means your testicles will stop, or reduce, producing testosterone, sperm, and some other master hormones (like Pregnenolone, etc.).

Some men do fine with just testosterone supplementation. But I found that within four weeks of starting TRT treatment, I didn’t like the contraction (or aching) of my testicles. Some brain fog returned, and my orgasms weren’t quite as enjoyable since sperm production was reduced. So, my doctor added HCG to my protocol, and I felt like myself again after a couple of weeks.

Some men seem to do better with HCG in their protocol, as we have Luteinizing Hormone receptors throughout our body. It keeps your testes full and functioning, pumping out your standard explosive loads. HCG is also useful if you want to maintain fertility to father children.

How to boost testosterone naturally

There are a lot of products on the market that claim to boost testosterone, and always seem to cost a fortune, yet do little

to nothing. Save your money when it comes to testosterone boosters.

There are two ways to optimize testosterone naturally. The first is to remove certain habits or compounds from your life. The second way is with some vitamins and supplements that help your body produce testosterone.

REDUCE STRESS

Stress increases cortisol, and cortisol has a heavy negative impact on your body's ability to optimize its endocrine system naturally. For most men, it's either stressful jobs, or the women in their lives creating the stress. Therefore, find ways to reduce, or remove, stress where possible.

REDUCE SCREEN TIME AND BLUE LIGHT

Screens emit a blue light which disrupts our circadian rhythm and sleep patterns. Either wear blue light blocking glasses at night, or cut out screen time three hours before bed. Now use that time to read or do something else away from any screens so you can get a full night's sleep. Get 6-8 hours of restful sleep as your body repairs itself when sleeping - which includes testosterone production and other growth hormones. Your body *needs* to rest and recover more than you realize.

REMOVE PROCESSED FOODS

If the 2.4 million years of human history were broken down into 24-hrs on a clock, we've been eating meat for almost 24-hrs, wheat for six minutes, and processed foods for four seconds. Get your nutrition from a variety of greens and

animal proteins. Studies have shown processed foods to disrupt your endocrine system, so avoid them wherever possible and stay away from extreme diets that restrict variety.

REDUCE BODY FAT

Men today are fatter than ever, and excess body fat negatively affects testosterone production, and compounds the problem further because excess fat supports the aromatase function in the body. That is, the natural conversion of testosterone to estrogen increases. The more body fat you have, the more testosterone you will convert into estrogen, and it's why you see so many obese men with visible breasts today.

ADD VITAMIN D3

People living north or south of the tropics cannot manufacture enough vitamin D from sunlight, and the problem worsens in the winter months with less sunlight. The government recommends 1000 IU a day of vitamin D, but that's too low for most people; I need about 5,000 to 7,000 IU a day to even get my blood labs to show optimal levels. Vitamin D is critical in many bodily functions, including testosterone production.

Vitamin D needs the help of fats or oils to be absorbed into the bloodstream, so any vitamin D spray that is oil-based works best. However, if you only have access to tablet forms of D3, take it *after* you have a meal. The oils from the food will help aid the breakdown of the D3 tablets into the bloodstream.

It's important to note that it's possible to take too much D3, leading to a state of toxicity. While this may require sustained dosages as high as 40,000iu per day for some people, for others, it may require considerably less. This is why I *strongly* recommend that you get your blood panel done so you have an accurate baseline level to work from.

One of the by-products of higher D3 levels in the blood is calcium. This excess calcium has a tendency to be deposited in the arteries, where it can build up and calcify. In turn, ultimately risking a blockage in the affected artery if left long enough, which could be fatal.

Therefore, if you plan on taking 5,000iu a day (or more), then you **must** have a look at taking 200 **micrograms** of Vitamin K2 MK7 for every 5,000iu of D3. The MK7 variant of K2 is the most effective at working alongside D3. K2-MK7 directs the additional calcium into your bones (where it's needed most), and away from your arteries. A dosage of around 100 micrograms of K2-MK7 per 2,000iu of D3 is a sensible start.

Editor's note: Based on where I live, I take 16,000iu of D3 alongside 600 micrograms of K2 MK7 every day. And I get my blood panels done every 6-months so I can track how well I'm optimizing my levels. Suffice to say that, for me at least, there's been a *direct* correlation between my D3 levels and my Testosterone levels in *every* blood panel for the last two years.

It's so important, I also give my young kids some apple flavored D3+K2 MK7 spray every morning. One spray

totaling 800iu for spring and summer, and two sprays totaling 1,600iu during autumn and wintertime.

In short: Don't underestimate the importance of Vitamin D3 in naturally improving your T-levels.

AVOID ELECTROMAGNETIC FIELDS (EMF)

Electromagnetic frequencies have been shown to disrupt the endocrine system, and mitochondria. These are emitted all around us, all day from our cell phone, tablets, and laptops. Try to minimize your exposure to microwave (cell signals), Wi-Fi, and Bluetooth as much as possible.

Put a timer on your Wi-Fi router power outlet to shut it off while you sleep and keep all electronics or screens out of your bedroom. If you use a laptop, it's often sitting right on top of your testes, so get an EMF blocking pad to eliminate exposure. Also keep your cell phone out of your pant pockets, or away from the body at all times.

ADD THE FOLLOWING SUPPLEMENTS

The following vitamins are useful in helping the body optimize its own testosterone production: A, B, C, E, Zinc, and Boron. Studies have also proven that ginger extract and Ashwagandha naturally help improve your sleep.

In conclusion

Testosterone is what makes us a man. It's why a healthy male has three times the upper body strength as a female, it's what makes us aggressive, and rise to life's challenges.

We have seen a dramatic decline in testosterone levels in men over the last 50-years, and the subsequent rise of weaker, softer, and more agreeable men in society.

Environmental estrogens in food, toiletries, drinks, and beers are being consumed in record numbers. Compound into that, the constant bombardment of EMF on your body in large cities everywhere you go, terrible diets, inactivity, and people's addictions to their blue light screens. Combined together, it explains why we've seen the general weakening of the Western male.

Simply put, without healthy testosterone levels you will never operate at an optimal level as a man. Make monitoring your levels habitual. It will be a competitive advantage when navigating a world that is slowly making most men weaker, slower, and dumber.

The cold hard truth

Never forget:

- Testosterone doesn't just fuel your sex drive. It also governs many vital functions within your body. So, increasing it is **vital** to your own physical, mental, and emotional well-being.
- Do absolutely *everything* you can to optimize your testosterone levels naturally first. It might surprise you just how much you can raise them using just consistency and self-discipline.

- Your T-levels might come back within the “normal” range. But that range might only be normal if you’re 60+ years of age. Remember, get a competent doctor to treat your *symptoms* (not your number).
- Therefore, not all doctors are created equal in this area. Do your homework and shop around for a doctor who has real experience in this field.
- Going onto TRT is a *lifelong* commitment as your body will stop making testosterone naturally as your T-levels increase.
- Check your medical insurance (if applicable to where you live) to see if it covers TRT. If not, you must factor in the ongoing cost of private TRT treatment.

MANAGE THE FCKS YOU GIVE

When I was young, we played a lot of player-versus-player video games. There was a popular one called Mortal Kombat, and they all operated on the same concept. You started with 100% on your life bar and as you battle, each hit you took reduced your life until it was 0% and you'd die by some outrageous fatality resulting in massive carnage.

Life isn't much different. Essentially, it's about us taking hits all day long, draining our energy, attention, and resources until we hit zero. Unfortunately, most people don't value the energy they give away and they freely dispense it like it's an unlimited resource, and this is a **big** mistake.

Many people today see the barrage of hate I get for the truth I reveal in my videos, and they ask me how I handle it. Often my response is: "You need to learn to give zero fucks."

We all, by design, have a limited amount of energy that we can allocate to our daily lives. Everything we do takes time and resources. Our job, kids, friends, events, partners, and even the small things, like when my child wants me to kill a spider in the bathroom.

I refer to the energy that you can spend as the "fucks" you can give. Therefore, it's incumbent upon you, as a man of vision and purpose, to manage every fuck wisely.

We are the masters of our lives, so we have the privilege of deciding where we want to dispense those limited amounts of fucks on. Only we get to choose what is *truly* fuckworthy in our lives.

When you drive to work and the asshole in the BMW cuts you off, you often choose to allocate those fucks to being frustrated. Rather than accepting it and saving those fucks for something else.

When a co-worker makes a disparaging comment because you won't donate \$10 to "Donna in accounting's" fundraiser, you can dispense those fucks, and comment back with your feelings. Or, you can go about your business in a "zero fucks given" kind of way and ignore her underhanded comment.

To truly manage your fucks, you must first master self-control.

Self-control

You know that asshole in a BMW who doesn't signal and cuts you off? You have two choices:

1. Throw a tantrum in your car, wave your middle finger about, and flash your high beams, before accelerating

up to his bumper - giving away some of your limited fucks in the process.

2. Utilize self-control, reserve your fucks for something more fuck worthy, and do nothing.

Option one burns up some of your limited fucks for the day and also applies stress to your body. Cortisol, a stress hormone, is released into your body when something gets under your skin, making it catabolic. Whereas option two does nothing. Ultimately, mastering self-control, and your emotions matters.

Those who are world class at their craft, and pursue excellence, are *incredibly careful* about managing their time, energy, and resources. Ultimately, you can't become the best version of yourself if you're constantly re-allocating your energy to things which don't deserve that energy and don't bring you closer to your goals, passions, and dreams.

“

Where awareness goes, energy flows.

- Dandapani

While this may seem like a simple notion, this idea was profound for me. I met Dandapani, a monk, at an entrepreneur's dinner event in Toronto where he was booked as the keynote speaker.

He sat there before us, legs crossed, on the floor, in full monk garb, with beads, and three white lines painted on his forehead.

He was an unlikely character to speak to entrepreneurs running successful multimillion-dollar businesses. They presented him to us as a Hindu priest with an Australian accent who had just finished 10-years in a monastery in Hawaii.

Entrepreneurs are notoriously prone to distractions, and many have varying degrees of Attention Deficit Disorder (or ADD). They are like herding cats. This monk was there to help entrepreneurs understand the notion of what “Energy Vampires” are, and how to manage their awareness to be more effective in their businesses.

Awareness, he explained, is like a glowing ball of light which moves around in your head, and when it goes to a particular area of the mind, then that area is lit up, which is where your energy flows.

So, if awareness goes to a happy area of the mind, then that is where your energy is flowing. And, if energy is flowing to the happy area of the mind, then it is also strengthening this area of the mind.

In order to manage your fucks, you must understand that the biggest threat comes from people, places, or things which are “Energy Vampires.” These are usually people that will take up your time, drain your energy, and leave you feeling exhausted from your encounter with them.

The keyword here is “exhausted” after your encounter. For more on that, search for ‘How to deal with Energy Vampires’ on my channel.

Mastering self-control

So how do you master self-control? Self-control is perhaps the most powerful skill you can develop that will help you master a better life.

When you learn how to manage your fucks and walk away from Energy Vampires, you exercise self-control, and start preserving your fucks for truly fuckworthy things that make you happy in life.

How do you know if something is fuckworthy? Simple. If the dispensing of the fuck helps make you, or your loved one's lives better, then it's usually worth dispensing precious fucks on.

Some might argue that this is a selfish or unkind way to navigate life. I propose that you re-evaluate how serious you are about managing your energy if this belief is violated by my statement above.

If the dispensing of said fuck drains you, or your loved ones, then it is probably better if you use self-control and preserve those fucks.

Let me give you a perfect example. I dated a single mother once, and one of her core passions was dinner parties. She would invite guests that were exhausting to be around.

My date had one friend that would berate, criticize, and judge everyone - including her husband. Her friend was a typical stay-at-home soccer mum, with teenage kids, who also had an exceedingly high opinion of herself.

However, she was nothing more than an obese middle-aged woman expecting people to agree with her worldview. She was, in fact, an Energy Vampire. Meaning that being around her was an emotionally draining experience.

Simply put, there was no benefit to being in the same room as her. I knew that she set a terrible example of what an adult woman should be, I knew I didn't want to have *my* daughter around that energy.

After I received a second invite to attend another dinner party. I declined and, as you'd expect, declining the offer offended my girlfriend and she tried to create an argument out of it.

I simply didn't take part, thanked her for the invite, and ended the call. We didn't talk for a few days, and she called me after the dinner event to apologize and agreed that her friend was an Energy Vampire.

You see, when you exercise self-control, you manage your fucks better. When you become aware of who is an Energy Vampire in your life, you will be forced to make choices that may offend some people. Guess what? That's okay. A man that is on his purpose in life will inevitably rub some people the wrong way.

Remember, if you value your fucks as a limited resource, you will only dispense them for things that are *truly* fuckworthy.

How do you strengthen self-control?

It's my belief that self-control is like a muscle, the more you work it, the stronger it gets.

One of the simplest ways to strengthen that self-control muscle is to do things that are physically difficult or that challenge you. If you are looking for a task to improve your self-control, then taking a cold shower for most people is hard. Especially if you've had access to hot water all your life. Hot water is a modern luxury, but for millions of years we have been bathing in icy lakes and rivers.

To take a cold shower requires self-control. But, most people don't even have the ability to do something basic like stand in uncomfortably cold water in a shower. I urge you to start taking cold showers for the following reasons:

- It strengthens your self-control.
- It also offers the following health benefits:
- Reduced brain fog and improved focus.
- Improves circulation.
- Keeps skin & hair healthy.
- Strengthens immunity.
- Improves energy and wellbeing.
- Improves metabolism and fat burning abilities.

Do you want to improve your self-control and learn how to manage your fucks better? Then start by doing something as simple as taking cold showers. It's easy to understand, simple to execute on, but takes discipline and willpower to build.

I was speaking at a conference and closed off my talk speaking about managing your fucks, and someone asked me in the audience about how they felt anxiety over dispensing their fucks, and how to reserve them better.

The bottom line is this: If you value your fucks as a resource that has a limit to it, then you will only allocate your limited fucks towards matters that *truly deserve* your fucks.

The cold hard truth

Never forget:

- The energy that you begin every day with is *extremely limited*. So, stop wasting it on things that don't help drive you, your mission, or your family forwards in life.
- Giving a shit about every little thing that happens will only go to raise your Cortisol levels. In turn, you get worked up over nothing important, while you simultaneously tank your Testosterone levels. Be sure you've read my chapter 'Manage Your Endocrine System' for more information on this vital area of your well-being.
- There's also a good chance that if you go to bed with lower Cortisol levels, then there's a much higher chance of having a far better night's sleep.

GETTING “DA GIRLS” ONLINE

It's exceptionally important for me to open this chapter by stating that women should *never* be the focus of a man's life. Chasing excellence, finding purpose, making bank, and self-care need to trump chasing tail. Every. Single. Time.

Remember, beautiful women are not a scarce resource. High-value men that have their lives sorted out are the scarce resource on the sexual marketplace, not beautiful women.

The cold hard truth about online dating

Now that we've gotten that out of the way, understand that when you use online dating apps, the deck is *always* stacked up against you if you aren't in the top 20% of men.

Several dating sites have released data over the years on how men and women use online dating sites. And some startling results have emerged confirming what the red pill has been saying for decades.

The top 78% of women are competing for the attention of the top 20% of men. While the bottom 80% of men are competing for the bottom 22% of women.

Confirming the reality of women's hypergamous nature on dating apps.

What that means is, if you are a high-value man (so an 8/10 or better), you are spoiled for choice with women on dating apps. It's absurd to say this, but a 3/10 female is shooting for the 8/10 male or better - and she'll genuinely think she's in with a chance of landing one.

If you are a 7/10 male or lower, you are basically competing for scraps. So, again, this is why it's vital for men to understand that chasing excellence, and not women, will always be your best ROI in life.

Dating sites and apps are filled with overly entitled and bratty women. Who possess an over-inflated sense of self-worth and, to top it all off, many of them are single mothers too.

How to assess your value

I'm a big fan of getting an ROI on every area of life. So knowing now how women use dating apps, we can approach it from an informed angle, giving us better results. This is a two-step process.

The first step is a brutally honest self-assessment. Take a good, hard, look at yourself and your life, and rate yourself on a scale of 1 to 10. With 10 being the absolute best version

of yourself, and 1 being the worst. **Do not** compare yourself to a Hollywood actor, or a billionaire. You are asking yourself: “Am I the best version of myself?”

Factor in the following for your age: Your job, wealth, self-care, your physique, look, style, your network, your hobbies, if you have kids, your car, and your home. The “Looks, Money, Status, and Game” chapter covers most of this.

These areas matter to women, so be completely honest with yourself.

Now that you’ve rated yourself, go onto your dating application of choice, and set yourself up to see what the female experience is like in your age range and location, but set it to “Female seeking Male.”

You are now looking at your competition. This will help you understand what you are up against. Now use this newfound knowledge of your competition to make a correction of your sexual market value assessment – if you require it.

If you are a 6/10 or lower, then I’d discourage you from using dating apps. Instead, I’d encourage you to double-down on yourself and do the work needed to increase your value on the sexual marketplace.

If you are a 7/10, you’re going to have a harder time. But, good photography can be an equalizer to improve the optics of your value one point higher. However, don’t rely on trick photography, you still have work to do.

If you are an 8/10 or higher, then congratulations, you’ve done the work. Continue to keep working on yourself and

enjoy being one of the 20% of men that are spoilt for choice on dating apps.

How to get results

There's three parts to doing well with online game (after that, everything happens in real-life):

1. Photography.
2. Bio.
3. Messaging.

PHOTOGRAPHY

Photography is arguably the most important part. On matching apps like Tinder or Bumble, it's the primary driver that dictates in which direction she will swipe. It's also the area where you can create the illusion of a SMV that's one to two points higher if you do it right.

It's essential that you hire a photographer to take pictures for dating apps or social proof.

At the time of writing in mid-2020, there is an oversupply of young photographers that you can hire for around \$100 on Craigslist, or even Air B 'n B experiences, for two hours to do a photo shoot.

To get the most out of it, bring three different, but well-fitted, outfits, and ask the photographer to select some suitable locations that they are familiar with. Make sure you show up looking sharp with a fresh haircut and let them

work their magic. Many men have *significantly* improved their results with women on dating apps with the correct use of superior quality photography.

Once you've got your collection of eye-catching photos, the next step is to use a site where women rate your pictures for dating purposes.

At the time of writing this book, Photofeeler is the best platform available to get genuine feedback from real women.

HOW TO LEVEL UP YOUR PHOTOS

Once you've narrowed down your top three professional photographs (based on the top three ratings from Photofeeler), you can stop there if you like. However, it often helps to include the following three additional compositions into your profile. These are: The “group of friends” picture, the “mystery” picture, and the “Aww!” picture.

The “group of friends” picture is straightforward and is designed to immediately establish high-value through social proof. You'll get bonus points if your circle of friends looks successful, established, and they look like the type of people and social circle that she wants to be around.

You are basically telling her, “Hey sexy, if you date me, you'll get to know these legends and hang around my people.” For example, a group photograph on a yacht will *always* do better for you than a group picture in a trailer park, surrounded by lower-value men. So be intentional when selecting a “group of friends” picture.

The mystery picture is one of my favorites, because it caffeinates the hamster in her head, and runs her imagination wild. This is always a solo picture and it's best taken at sunrise or sunset with the light behind you, and your image as a back-lit silhouette.

The following photo of me is a solid example and was taken at sunrise at a resort in Mexico. It works well because you can clearly see my physique, the 'V taper' and because I was enjoying a natural moment in the pool. That I am also half naked will get her mind racing to manufacture ideas.

Giver her something mysterious to think about.

The “Aww!” picture is something that will pull on her heartstrings a bit, and should ideally be a picture of you with

a pet. It doesn't need to be your pet, but cute puppies are, by far, the best accessory for this picture.

Stay away from cats, or a kid (even if they aren't your kids). The only time I would suggest kids for this type of picture is if you are building a school on a Caribbean island after a hurricane (and you're surrounded by kids that obviously aren't yours).

Even if you are a single father, I'd still discourage you from posting pictures of you with your kids. Like it or not, women are inherently solipsistic, and are self-interested in what they can benefit from being with you. If you signal in a photo to potential women that you are a father with kids in tow, it's highly unlikely to benefit you.

Your biography

The biography (or, bio) section is far less important than the pictures. But it's still worth covering from the perspective of what *not* to do.

Do not drone on and use the full character allowance. Truthfully, she doesn't even care that much, and she has already made 95% of her decision about matching with you based on the pictures she has seen. The point of the bio is to caffeinate the hamster in her mind that bit further and get her really curious about you.

We know women are hypergamous and solipsistic. So, all your bio needs to convey is that you are her best option (of

the many available to her), and that there's something in it for her.

My typical bio would read:

“ 6'2”, successful entrepreneur putting a dent in the universe. Great social circle of friends and adventurer, looking for a feminine beauty to join me.

That's it, that's all you need. It says I'm tall, make bank, have an impressive network, and that I am not boring. The bit about “putting a dent in the universe” should get her asking questions if she has a strong interest in you. The “join me” bit lets her know right off the bat; she's entering my frame.

With women, you can do almost anything you want to them – but do not bore them.

Some guys will use clever lines like: “Like my shirt, it's made out of boyfriend material.” And while that may seem smart, truthfully, it comes off a bit desperate. Make women qualify for your time, not the other way around.

Messaging

So, you've got matches; now let's talk messaging. The vast majority of men get messaging totally wrong. The **entire** point of communicating back and forth on a dating application is to weed out the manipulative time wasters and then get her number to set up a date.

That's it. The biggest mistake men make is in wasting time 'getting to know her.' That's not what she wants. Nor, do you want to waste your time chatting up someone that looks nothing like their pictures, only to be disappointed in person.

Keep in mind, *many* women will use dating apps just to get fleeting social validation from men. They will ignore, or ghost, any guy they have low desire for, even if they previously matched with you.

Your first message to her should be something playful like: "You look like you could be trouble."

Ask this question to establish her interest level. A woman with a high level of interest will respond, and engage with you, preferably with a question about why you said that, or about your awesome pictures.

If she isn't asking questions, uses noticeably brief responses, or takes a long time to respond, she isn't that into you.

If she asks questions, be somewhat vague in your response. Remember, you want her qualifying herself to you, so be curious. Women *love* exciting and mysterious men, so don't show up and verbally throw up all your most interesting information before you even meet her.

For me, women try to establish what kind of entrepreneur I am, or businesses I run. Not because she is interested in the business, but to establish how much I earn running it. She might ask about my business, or what dent I am putting in the universe. To which I would often reply with: "I'm a board advisor in a national financial services business, real

estate investor, and do my own private equity investing.” All true, but most women won’t understand what any of that means, aside from I’m important, and again, that I make bank.

After I drop that bomb, I’d often follow up with: “So what do you do?” Not because I particularly care, but to subconsciously establish that my SMV is higher than hers.

Once you’ve exchanged a few messages back and forth, message her with: “I’m busy today, and I’m not on here often, but what’s your number? Let’s set up a date to meet this week.”

If she is into you, she will give you her number. If not, she will give you an excuse. It’s always one or the other. The medium is the message, gentlemen.

Also, *do not* take her social media, Instagram, or Snapchat as a replacement for a phone number. GET. HER. PHONE NUMBER! Women *want* a man that can take control and set up the date and you need a number to do that.

If she offers you to follow her on social media, immediately decline the offer. She wants you to be one of her hundreds of thirsty betas orbiting around her there, giving social validation and free attention to her.

If she says she barely knows you and wants to chat more on the application, tell her you are busy, and only on there to date in real life. You’re not there to accumulate pen pals. Women that say this do not have genuine burning desire for

you, she only sees you as an alternative if her line of other, more preferable, options don't work out.

Again, if she has a genuine desire for you, then she will give you her number. When she does, text her within a day, and set up a date. Otherwise, unmatched her and move right on.

The date aka: “The sniff test”

Your first date with her should be an hour or less, and nothing more than a drink or coffee. The whole point of the sniff test is to:

1. See if she is worth your time.
2. Determine if she has a genuine interest in you.

The total cost should be less than \$20. You always pay and do not split the bill for a drink - you will look like a loser. My preferred first date would be to grab a coffee and then go for a stroll in some public space like a park or hiking trail.

You want her to feel comfortable. But, you also want to get a good look at her since most women today use older photography, or even touch up their pictures, so they rarely look better in person.

If it's during the day, meet her at a coffee shop, grab your drinks, and then find your way to an outdoor trail. If it's at night, make plans after eight for a drink so she isn't expecting a free dinner, and then chat her up on a patio or bar.

If she is unfamiliar with the area for a date, send her a Google map link for the location so she can find it with no trouble.

Unless you are in her area on business, always have her meet you halfway. The more she has to travel, and the less you need to, is preferable for you for two reasons:

1. It saves you time.
2. It tests her for genuine burning desire.

A woman with a strong desire for you will drive two hours to your house on a first date. She'll then gladly drop to her knees at the door without saying a word (on your instructions) and give you the best blow job of your life.

Trust me. **Do not** go running to her front door for dates. If she insists that you travel to her, then she is telling you *right off the bat* that she doesn't have that genuine burning desire for you.

Each new meeting should start by standing up with a big smile, including a brief handshake, or if you're so inclined and comfortable, pull her in for a brief hug. Then, gesture to either sit, if it's a night venue, or stand in the ordering line if you are getting coffee and going out.

Some men like to go for a same day lay. And, while you may be successful sometimes, my preference is to just do a "sniff test" on her. Just to see if she is even worth seeing again and to check if there is a genuine connection there or not.

When the hour is up, walk her to her car, Uber or transit and, if you have a connection, bring her in for a hug, and/or brief kiss and let her know you'll be in touch. If there is no connection, just say your farewells and leave it at that.

Getting laid and spinning those plates

Sexual intimacy should happen by the second to third date for three reasons:

1. You make it clear that you have a genuine interest in her sexual attention and will not be friend-zoned.
2. You want to ensure there is a good sexual connection.
3. Sex is awesome.

Some guys might argue that it's too soon, or they will wait "for the right girl". I'm here to tell you that this is the wrong way to approach it. Never forget: Women break rules for alphas and make them for betas.

If a woman is happy to have sex with the hot dude from the foam cannon party in Ibiza 15-minutes after she meets him, why should you wait eight dates?

Unless you are Amish, all of today's modern women on dating apps have hooked up with *many* guys prior, so don't think for a minute she is the Virgin Mary.

Some people like to argue that there are "good girls" you should wait to be intimate with. The truth is, the only difference between good girls and bad girls is: Good girls just haven't been caught yet.

The best way to facilitate sexual intimacy is to begin with your messages leading up to the next date. Make it clear you are interested in her sexual attention. It's men that play the 'nice guy' that get 'friend-zoned' by women, earning them nothing but non-sexual attention.

Some women will send you provocative pictures without request. Other times you will need to request them. Other women may not send naughty photos at all, but will openly engage in some naughty talk with you. Either way, it should be crystal clear to her after the first date, aka: "The sniff test," that you are interested in her *sexual* attention, and it should be mutual.

If it's not, and she wants to "get to know you first" because she has rules, remember that women break rules for alpha men, and make them for betas. You will *never* get her "best" if she sees you as a beta, but she will give her best to Chad Thundercock on the first date. My view is *never* date a woman if she treats you as a beta as she will always hold out on you.

Ideally, set your sex date for an evening, and host her at your place. If she drinks, have a selection of wine or vodka at your house. If you don't have your own place, you will need to go to her place. Or, if you're a younger man and still with your parents, having a car with tinted windows is always useful.

To get to sex, you need to get comfortable and confident with escalation. Music is great for setting the mood, I use whatever sexy playlist off my Google music application is trending. You can escalate the sexual tension by inviting her

for a hot tub or sauna if you have one, or you can simply start by touching, and kissing. If she reciprocates warmly, then escalate, and move to heavier petting, which should lead to sex.

Always be in control of birth

As a man, you must **always** be in control of the birth. Once your sperm leaves your body, **you no longer have any decision-making ability to terminate a pregnancy**. The government will force you to pay child support - even if you don't want the child.

All control is with the woman. So **always** have condoms on hand; do not 'raw dawg' a woman, no matter how horny you are. You cannot rely on her promise of being disease free, or on reliable birth control. Women lie, and they lie *often*.

You should also have a "Plan B" on hand in the event a condom breaks. "Plan B", more commonly known as the morning after pill, is effective. It's an oral tablet she takes, which very quickly triggers her period, removing the risk of your sperm fertilizing her egg.

If you have an accident, make sure she takes the morning after pill in front of you, and you **know** for sure that she swallowed it. Women have been known to take them in the bathroom with the door shut, and just spit it into the toilet or garbage if they want your seed bad enough.

Again, I **cannot** put enough emphasis on this; **always** be in control of birth, **do not** rely on a woman's word. As the old

saying goes, an ounce of prevention is worth a pound of the cure.

If you get involved on a longer-term basis with her, and are getting fed up with condoms, then you may want to consider other forms of birth control, like an IUD. However, I **strongly** discourage you from ever trusting her to take a birth control pill - or any other oral contraceptive.

“Surprise” pregnancies often come out of her forgetting, or intentionally not taking her birth control. IUDs are generally considered more than 99% effective.

There are male birth control pills going through clinical trials at the time of writing this book, and the studies reveal that they work by lowering your testosterone levels to make your sperm ineffective. **NEVER** use this form of male contraception! You will become weak, unattractive, and feminized. It's a pill that basically turns you into an old man. Either have her on an IUD, use condoms, or get a vasectomy.

The cold hard truth

Never forget:

- 78% of women are only interested in the top 20% of men online. The other 80% of men who are invisible to them are left fighting for the bottom 20% of the super-low SMV women.
- Be completely honest with your own personal value and mark it accordingly. Put your focus into

developing these areas *before* you re-enter the sexual marketplace.

- Stand out from the crowd by investing in some professional photography. Seriously. It'll pay dividends - trust me on this one.
- Texting is mostly for logistics. By all means, open up with something fun and flirty for her to bounce off of. Once she's asking questions, get her agreeing to a date ASAP.
- Don't be single-minded in trying to get laid on the first date. It's more important to vet her for potentially serious red flags (such as seeing how she responds if you tell her "No." with a smile on your face). Never stick your dick in crazy.
- Finally, **ALWAYS** be in control of the birth. **Without exception.** Far, *far*, too many men have been already duped by women with "baby rabies". **Do not** let yourself become one of them.

PROMISCUOUS PRIMATES

Most men idealize a single type of relationship with women. The version that Walt Disney sold us as kids. One man, his wife, their children, and a love that lasts forever.

Society has conditioned us to believe that a relationship is going to be nice, romantic, caring, and respectful. That we'll find that "one good girl" that will only date and love you. That you'll both get engaged, then get married, have kids and live "happily ever after." That she will be a faithful, loving wife and mother "In richer or poorer, in sickness or in health. 'til death do us part."

This is a social contract that very rarely fulfills its promise of a blissful life. Instead, marriage comes with significant risks to men.

While the next chapter talks about marriage in more depth, it is important to note that this social contract is *exceedingly difficult* to manage over the long term.

Our highly promiscuous ancestors lived as non-monogamous hunter/gatherers, in small nomadic tribes, and

preceded us for six million years. We've lived as modern humans for 200,000 years, and civilization, as we know it, began around 6,000 years ago. Monogamy and marriage have only been around for less than 2,000 years.

Men and women are, by nature, highly promiscuous. There's also a *massive* conflict between how we've all been told to behave, versus our instinctual hard-wiring. Which has been built up over millions of years of evolution.

In this chapter, I want to expose some myths about humans and enlighten you to the true nature of our sexual strategies.

We are terrible at monogamy

In fact, as a species, we are highly promiscuous. When it comes to mammals, monogamy isn't common at all. In fact, as a sexual strategy, monogamy is an *outlier* amongst mammals.

I always catch heat from traditional conservatives for talking about how badly we fail at monogamy. But, as the saying goes, a bomber only gets flak when it's over the target.

It's universally accepted by those that study the dynamics between men and women, that the male sexual strategy is unlimited access to unlimited women. Whereas the female sexual strategy is open hypergamy.

What that means is men want to scatter their seed far and wide. As men produce millions of sperm every month, those seeds are both ridiculously cheap and readily available.

Women, however, are more complicated. They look for the best genetic investment in their offspring and the best provisioning male, because their eggs are a limited resource.

You should note that the best genetic investment, and best provisioning male, isn't always the same man. It's sometimes one high value alpha with great genetics that provides the seed, and another, more beta, reliable male that provides for the need of raising the offspring.

Hence the popular soundbite distilling the female sexual of open hypergamy as: "Alpha fucks; beta bucks."

A women's sexual strategy is dualistic and quite frustrating for most men to comprehend. It's also why men often raise grievances about women crying over wanting "Mr. Dependable," while she goes off and fucks "Mr. Exciting" instead.

How her sexual strategy constantly changes

A woman's sexual strategy changes over time. Under the age of 27, women are generally in their party years, and are happy to explore, and sleep with, as many high value alpha men as possible. By the time she is in her late twenties, she has reached the 'Epiphany Phase' of her life. This is where millions of years of evolution in her DNA yell at her, "Hey lady, where are the babies!?"

The 'Epiphany Phase' is often when women will start seeking out a suitable man to have children with. Ideally, they want a strong alpha seed, and a tender beta protector.

But these traits rarely exist in the same man, and high value alphas aren't that easy for her to lock down. So, women will typically compromise and settle for a more beta male that they deemed as "good enough."

It's why you'll often see many mid-thirties divorced women on the dating market with kids in tow after initiating her divorce. I encountered many of these women on the dating market after my own divorce. I also noticed a trend of some version of the soundbite: "I loved him, but I wasn't IN love with him anymore."

Somehow, today he is a loser. But, at some point in time, he was good enough for her.

This *completely* violates the marriage vows of "To have and to hold, from this day forward, for better, for worse, for richer, for poorer, in sickness and in health, to love and to cherish, 'til death do us part..."

I've coached many men who have taken this hook, line, and sinker. But, you need to understand that marriage is no buffer from hypergamy. If a woman feels like she hasn't done the best that she can do, and her Sexual Market Value (or SMV) has increased over her partner's significantly, then the marriage is at risk. Women can, and often do, leave the *perfectly* good men that they took those vows with, so they can "Go and explore their options."

This is often around the time when she'll get her breast augmentation, start hitting the gym and yoga studio, and why wouldn't she? She's had kids, so family law ensures she'll be well looked after financially. There's also plenty of

people telling her: “You go girl, you don’t need a man, and you can do better.”

Her cycles

When women ovulate, they dress more provocatively, wear more make-up, and expose more skin. It’s when they prefer men with signals of higher testosterone, more facial symmetry, a deeper voice, who’s taller, who has bigger muscles and, of course, a real alpha presence. Basically, the “Alpha Fucks” part of the hypergamy equation. But, when women are on their period, their preference for men shifts more towards comfort, provisioning, and safety. Essentially, the “Beta Bucks” part of hypergamy.

The problem is society, religion, government, school, media, culture, and family have programmed us as men to look for “the one” and then *only* be with her. But, when you observe the behavior of human’s sexual strategy, it’s more or less “monogomish.” We rarely pair bond to one partner for life.

Instead, we try to declare monogamy to one partner at a time, while acting clandestine in our adulterous adventures. But we usually have multiple sexual partners and relationships throughout our lives.

At some point, you’ll learn the hard way that women are not particularly good at being monogamous over the long term. Although, neither are men.

Women can, and do, move *very* quickly from partner to partner. In several cases, I’ve known women who’ve slept

with multiple partners in a 24-hr period as they felt that it advanced their sexual strategy. All without giving your feelings a second thought.

I'm personally aware of women doing this at least twice in my life.

Sex at Dawn

In Chris Ryan's pivotal 2011 book '*Sex at Dawn*', he examines human promiscuity throughout history on a deep level. All evolutionary evidence, and the terrible success record of marriage today, points to both men *and* women being incredibly poor at long term monogamous pair bonding.

Here are some shocking evolutionary truths about humans and our primate cousins we share 98% of our DNA with:

MALE AND FEMALE SIZE DIFFERENTIALS

Only non-monogamous primates universally have males that are 15-20% larger than females. In harem-based primates (like Gorillas), the size differential is even more pronounced, with the male being twice the size of the female. In monogamous based primates, like Gibbons, there's no size differential between males and females.

PENIS & TESTICULAR SIZE

Only non-monogamous and promiscuous primates have large testicles and a highly specialized penis to facilitate sperm competition in the reproductive tract of the female. Harem-based primates, like Gorillas, have tiny testicles the

size of kidney beans, and unspecialized penises smaller than your pinky finger. This is because the silverback owns the reproductive rights to his harem of females through sheer physical strength and size.

There is no need for the sperm to “fight it out” in the reproductive tract for the rights to fertilize the egg. The fighting is finished long before any other male can get anywhere near the reproductive tracts of his harem females.

FEMALE COPULATORY VOCALIZATION

Of the hundreds of primate species (including humans), female copulatory vocalization (aka loud moaning during sex) universally exists through non-monogamous primates only. In monogamous based primates, like the Gibbons for example, there is no moaning from the females during sex.

Remember that the next time you are having sex, because millions of years of evolution are making her moan as a calling to other males to mate with her. This reduces the chances of infanticide, since it is impossible for the males to know who the father is. It also ensures that the female obtains the highest quality sperm to compete for her single available egg in her reproductive tract.

SEX THAT DOESN'T LEAD TO PREGNANCY

On average, non-monogamous promiscuous primates have sex 750 times, or more, for every pregnancy. In humans, it's approximately 1,000 times for every pregnancy. Sex for the purpose of pleasure and socializing is very unusual in the animal world. Yet, it's quite common in non-monogamous

primates. For most animals they have sex, on average, 10-15 times for every pregnancy that occurs.

Humans rarely have sex just to reproduce. If you factor in all the ways humans have sex that can't possibly lead to pregnancy (for example, oral and anal), then over 99% of the sex humans have will never lead to a pregnancy. Sex for non-monogamous promiscuous primates is all about social interaction, pleasure, validation, or transactions.

Cuckoldry

Cuckoldry, or “cuck”, is a term that is often used online to be disparaging. It's where a man raises another man's child (his genetic investment). Note, that 43% of North American children are being raised by a single mother. So, it needs to be stated that most of these children are the result of a woman taking on the alpha seed for the best genetic material.

She then pivots her sexual strategy, either by choice, or involuntarily, to beta need. Therefore, finding a willing male to adopt her offspring, either knowingly or unknowingly.

There are millions of these women on dating sites today looking for beta cucks to take over the responsibility of raising another man's child. In fact, some are even brazen enough to go shopping for their cuckold, while pregnant with another man's seed.

There is another, less obvious, form of cuckoldry today, and it is beta men unknowingly experiencing paternity fraud

from raising children he thought were his. However, the kids are in fact the alpha male's seed.

Marriage is no buffer from paternity fraud. It's impossible to determine the actual statistics because fraud, by definition, requires deceit, something women are highly evolved at. However, it's estimated that anywhere from 10-30% of children that are born are not biologically the child of the man that is acting as the "father" to that child.

The female primary social order is so vested in burying paternity fraud by women, that feminist groups have called it "the demonization of women." In fact, paternity testing in some countries has been outlawed by the feminine imperative.

Men's proclivity to "Oneitis"

Of the hundreds of men that I've coached, one of the most common reasons for booking a call was to deal with a condition known as "Oneitis." We loosely define Oneitis as when a guy falls hard for a girl, to the point of obsessing over her.

It is often characterized by the guy making a statement such as: "She's the only one for me."

“ Oneitis is an unhealthy psychological dependency that is the direct result of the continuous socialization of the soulmate myth in pop culture.

- Rollo Tomassi

One shortcoming of the male belief system is that there is only one perfect woman for us. Women will argue that they feel oneitis too. But, it's *never* anywhere near close to the debilitating degree of 'Oneitis' that I've seen men suffer from.

It's a scarcity mindset and is something I've personally experienced in the past.

I've pined for at least two women that I believed were "the one." Men suffering from 'Oneitis' can't sleep properly or focus on tasks. They lose weight because of a lack of appetite and are distracted from chasing excellence. The sulking they do can last for weeks, months, or in some cases, for well over a year.

I've done it myself and I can honestly say it's one of the most pathetic things I've done and see men do.

There's a lot of theories floating around about why men suffer so badly from it. But, as there are over four billion women on the Earth, it's incredibly arrogant to think there is just *one* perfect woman for you.

But you can't tell that to the guy who's curled up in a ball crying himself to sleep, because he got dumped by his "Oneitis," and that he needs to let it go and move on. He genuinely *cannot* fathom a world without her.

So, how *does* a man reduce his tendency for 'Oneitis'? By creating abundance and options in his life. In short, he spins plates, and makes himself his own mental point of origin.

Enter plate theory

We've all seen the circus act of the man spinning multiple plates on several sticks. If not, it works like this: The circus performer randomly makes some spinning inputs to each plate. He then gives each plate some attention as they need it, enabling them to spin simultaneously, but independently.

A “plate” is any woman you are dating non-monogamously while also seeing other women.

When spinning plates, you are not obligated to be intimate with more than one woman, but if you are so inclined, you may. This dating strategy is especially ideal because:

- It creates plenty of contrast in female nature, and helps men looking for an LTR, or a mother for children, to assess the best possible candidate.
- It creates an abundance mindset and greatly reduces the chances of Oneitis from occurring.
- It helps men optimize their sexual strategy of unlimited access to unlimited women.
- You remain your own mental point of origin.
- You can quickly eliminate the women with a lower interest in you, because they won't tolerate being an option to a man that is dating other women.
- It helps quickly solidify women with a strong interest in you, because they will tolerate other women in your life.

A lot of men think that women won't tolerate being treated as a plate. But, we know by watching what women do, that they are happier to share a high value alpha than to be saddled with a faithful beta loser.

Men already in a monogamous relationship, or marriage, cannot spin plates. But for men, especially under the age of 30, this is *ideal* to help them more rapidly understand the sexual marketplace, and what drives arousal and desire between the sexes.

Men post-divorce, recently single or otherwise, should also consider this dating strategy. Because any immediate commitment to one woman after you've been through the divorce machine usually ends in a train wreck.

I've seen plenty of men not give themselves enough time to understand female nature, only to rush straight into another LTR or marriage without updating their belief system. These men often get into several marriages and then wonder why women keep taking them to the cleaners.

Taking some time to date casually and spin plates will help recalibrate your awareness on the sexual marketplace.

A man should *never* openly declare that he is spinning plates. Rather he should, through his actions, covertly convey that he is a man of status. That he has options by the choices he makes, and the availability in his schedule.

For example, if you normally see a plate on Wednesday nights, and she wants to add a Friday night (but you have plans with another date), then you simply respond with "I

have plans, but I'll see you next Wednesday." You don't need to explain what you are doing, why, or with whom.

In fact, what this will do is induce competition anxiety in her head. Which, if she's hot for you, will increase her desire for you as she'll see you as a man of higher value who has his time in demand by others.

One of the greatest aphrodisiacs for women is the unknown, and letting her marinate on rationalizing your whereabouts often increases desire in women.

Remember, women would rather share a high value alpha than be saddled with a faithful loser. **You are the prize**, so act like it.

Spin those plates

A man up to his late twenties should never limit his options to just one woman, or get into a LTR. Most men have *no* idea what women are about, or understand their nature, and are incapable of staying focused on building their purpose in life. Far too many men in their twenties are too quick to abandon their purpose in life. Instead, they want to fulfill that narrative of having a girlfriend, or worse a wife, for definition. Women should **never** define you.

If you do allow a woman to enter your frame, and be a part of your life, then you should only ever allow it if she compliments your life. She must not be the focus of it.

I've noticed, during coaching, that there are many men that had moved across the country in their twenties, changed

their majors, and knocked up their girlfriend. All because they thought it was a good idea. Only to get divorced at thirty-five, get forced through the family law meat grinder, and end up with no access to his kids. It's at this point where they book a coaching call with me to guide them out the other end with the least amount of damage.

So slow things down and stop acting like women are a scarce resource (because they're not).

High value men that are competent, resourceful, and know how to make *serious* money are a scarce resource. Beautiful women aren't.

The ROI on chasing excellence is **far** greater than chasing women, more so when you know nothing about female nature.

Spinning plates will lead to some Friends With Benefits (or FWB). An FWB arrangement is loosely defined as a non-monogamous friendship with sexual intimacy, but with no dates, sleep overs, or introduction to family or friends.

Ideally, you want a FWB arrangement to last over a prolonged period of time, and you can have more than one FWB. However, they rarely last long and if they do, a FWB can come in, and out, of your life like the seasons. Therefore, don't be surprised if an old fling contacts you well into the future.

There are women you will automatically categorize as a FWB when you identify red flags from that chapter of this book. **DO NOT** allow a woman with red flags to be more than a

FWB, it is incumbent on you to assess and filter through women that display red flags.

Don't give a FWB priority in your schedule - she is only an option when your time permits.

A monogamous Long Term Relationship (LTR)

You should only consider a conventional relationship with a woman *after* you have spun enough plates, and the cream has risen to the top. She must also exhibit none of the warning signs described in the '20 Red Flags' chapter. Or, if she does, then she is pro-actively working on fixing that area of her life herself.

Women don't like to admit it, but they are natural plate spinners because of their hypergamous nature.

They are always asking themselves, "Is this the best I can do?". If you are dating a woman, then assume that she is seeing other men, until she initiates the "Where do we stand?" talk and wants to open dialogue about a deeper commitment. Women, not men, should start the "talk" about a long-term relationship.

Never, **ever**, initiate a "Where do we stand?" talk. It's weak and signals scarcity in your life. Let her bring it up. Remember, women are the gatekeepers to sex, while men are the gatekeepers to relationships. Which means women get to decide when you will fuck her; you get to decide if you want to become more serious with a woman (and whether or not it's on an exclusive basis).

You should only consider an LTR after about six months of plate spinning. If she demands an LTR after only a month of dating, move on, and let her go.

Remember, men are the gatekeepers to relationships, and women are the gatekeepers to sex. So act like it. You, as the man, gets to decide when a woman gets your exclusive sexual, and non-sexual, attention.

If you do this and get into a monogamous LTR, you end up abandoning your male sexual strategy of unlimited access to unlimited women.

You should also note that if you choose to abandon your sexual strategy, she must also abandon her sexual strategy of open hypergamy.

That means: No male friends, no more seeking attention on social media with provocative pictures and posts. Oh, and no overnight girl's trips to places where she can proclaim to her friends "What happens in Vegas stays in Vegas."

Some other conditions that should exist for an LTR to work well for you:

- You should be one to two points higher than her on the SMV scale, so she feels that she's optimizing her hypergamy. Remember, a woman can only be content if she feels like her man is of higher value than her.
- Your frame must be the dominant frame of the relationship, meaning that she is a complement to your life, not the focus. A woman that's fully in your frame will defer to you in major choices.

- She must understand, through your covert actions and words, that everyone is replaceable - including her. There is no “one”. You, on the other hand, must understand that you never own her, *it's just your turn*. She may be in your life for a year, or she may be with you until “death do you part.”
- On a scale of one to 10, with 10 being the highest level of interest, her interest level in you **must** be an obvious nine (but preferably a 10). Women with an interest level lower than that will be an exceptional amount of work, and the chances of her love wandering will be higher.
- You must have done some recon work on her family and friends and decided if they are people you enjoy being around. This is because she will *always*, regardless of her feelings for you, choose them over the relationship. So, make sure her family and friends are good people and that you like being around them. Most importantly, if you are planning on marriage and kids, then look at her mother. She will eventually look like, and behave like, her.
- Also, do **not** live with an LTR, as doing so causes her competition anxiety to relax, making it tougher for you to manage the frame of the relationship. The *only* exception to this is if you are planning on getting married and having children, and you need to vet her as a wife by living together first.

A long-term relationship with a woman brings considerably more work to a man’s life when it comes to managing the

frame of the relationship. However, an excellent woman can add substantial value to your life.

At the time of writing this book, I'm in a non-cohabiting LTR. My woman is almost 10 years my junior. She's tidy, non-materialistic, loves to cook healthy meals, is positive, very sexual, fun loving, and has a great relationship with her father and my child. If she didn't add any value to my life, I wouldn't have bothered to enter into an LTR with her.

A woman **must** always be a complement to *my* life, not the focus. This should be *every* man's non-negotiable.

I'll warn you now that, if you ignore my advice and live with your LTR, you will expose yourself and your wealth, to the risks of family law.

In most Western countries, the state deems you to be in a common law marriage after one to two years. And, even if you aren't legally married, she may have rights to half of your assets. Therefore, it's *essential* that you consult with a family lawyer in your state or province *before* you live with any woman. If you have more assets than her, then see if you can protect them with a cohabitation agreement.

The tattoo test

If you really want to test my theories on the "soulmate myth" that men subscribe to, and how willing she is to enter your frame in an LTR, then the tattoo test is brilliant. It really forces her to show, via her actions, that she is serious about an LTR with you over the long haul.

If she starts “the talk”, it usually encompasses some version of the soundbites: “I’ll love you forever, and ever” or, “We were made for one another.”

Tell her, “Good, prove it. Tattoo my name on your body.”

It doesn’t need to be visible, or huge. Most of the time, she will make the tattoo discrete, so it’s hidden in her bikini or bra line. Don’t force it on her or march her into a tattoo studio. Instead, just drop the hint, but be serious about it, and then see what she does.

This is not a two-way street either. You are not tattooing her name on you. She is the one that is asking for your exclusive sexual, and non-sexual, attention. A woman who’s in your frame that sees you as a high value alpha, and that has a genuine, burning desire for you shouldn’t protest and would love to have your name on her body.

A woman that doesn’t see you as her best option, and her “forever” man, will make up excuses.

Regardless of what they are, whatever excuses she makes, she is telling you she doesn’t really believe that you are her best option. You’re not satisfying her hypergamous needs, and she doesn’t see you two together forever.

Remember, whenever there is a conflict between her actions, and words, always, **always** believe what she does. As the old saying goes: “Actions speak louder than words”.

Open LTR

The LTR can either be open or closed. So, you can either be exclusive with your LTR, or keep the relationship open where you continue to have one or two other women that you see periodically. But she should understand that you are doing this. Covertly spinning plates while in an LTR always catches up to you somewhere down the line. You'll end up dealing with a lot of unnecessary drama in your life.

There is nothing wrong with an open LTR, aside from societal conditioning telling you to be monogamous. In fact, it is the natural state of our non-monogamous nature.

She can also be in an open LTR with you, but now you are leaning into Polyamory (Poly), and a more beta frame of a relationship.

The highest value alpha males will be in an open LTR on their end, but she can't do the same. More feminized men will gawk at this statement and protest. But, throughout history, truly high value alpha men had a harem of women that were sexually exclusive with him.

Polyamory

The “Poly Lifestyle” is being pushed by the media, and even some academics seem to like to push the narrative since they are in a poly marriage. If you are unfamiliar with the “Poly Lifestyle”, you let your wife or girlfriend have sex with whoever they want, while you also do what you want. It's basically an open LTR for both of you.

This dating strategy is becoming the standard for many beta males because they would rather share a woman versus not having one at all.

On the surface, it may look appealing. However, men and women *aren't* equal. More often than not, it's two beta males fighting over one girl. All while she goes out on the weekends fucking the alphas for fun (leaving the poly men to raise the kid(s)).

Conclusion

When it comes to the types of relationships you can have with women, I **strongly** encourage you to always make yourself your own mental point of origin. This means you do what is right - for **YOU**. Men should always set the frame of the relationship at the beginning, because it's the exit that women most often control.

If monogamy is your path, then make sure you chose it and it hasn't been forced on you by your woman or society. Natural monogamy *can* work, but only if it is organic, and you both truly want to be sexually exclusive. I would strongly encourage all men to use the tattoo test if you are going to start an LTR. This test will assure you that her actions truly do align with her words.

Chris Ryan once said: "Monogamy is like going vegan. You can choose a plant-based diet, but that doesn't mean bacon will stop smelling good."

The cold hard truth

Never forget:

- Women may be the gatekeeper of who they have sex with, but **you** are the gatekeeper of who you have a relationship with. And, as a man of increasingly high value, that's the *strongest*, and most valuable, bargaining chip of the two.
- When a woman has a genuine desire for you, and appreciates your value, then she will have no problems sharing you with other women as you are satisfying her hypergamous nature.
- Track the menstrual cycle of any potential LTRs. Watch how differently they behave when they are ovulating, versus when they are menstruating.
- I've said it before, and I'll say it again, **always** believe a woman's actions over her words. Her actions will tell you what her *true* priority is and tells you the truth about how she truly feels.
- As noted by my good friend Dr. Shaun T. Smith in his book 'The Tactical Guide to Women', spend as much time as possible vetting and setting healthy boundaries with a woman before committing. It's from month 18-onwards when a woman's *true* personality comes through.

OWN A MOTORCYCLE

It is my firm belief that, as a rite of passage, every man should own a motorcycle at one point in their life. As Jon Bon Jovi famously sang, “I’m a cowboy. On a steel horse, I ride. I’m wanted. Dead or alive.”

Whether you’re a hero or an outlaw (or, like the best among us, a bit of both), the motorcycle is the modern-day equivalent of the stallion. It is a rite of passage for every man to own one in his life.

During a bitterly cold and rainy spring day in early April, I got my motorcycle license at 18 on a single cylinder 125cc bike. Despite the miserable weather, it was one of the best days of my life. I remember being so cold and wet, we’d put our hands on the scalding hot air-cooled fins of the motor to keep our fingers from getting frostbite.

However, getting my motorcycle license was one of the best things I did as a teen. And, as a rite of passage, as I was transitioned from a teen to a man.

The most important skill you learn from riding a motorcycle is situational awareness. You learn to keep your head on a swivel, and you are *constantly* scanning around you for potential threats. Just about everything else on the road is bigger than you - and can kill you. Being aware of your surroundings *at all times* is a skill that men need to apply to all areas of their life.

Let me explain. The first office I rented for one of my early businesses was on the top floor of an old century home in suburban Toronto. On the main floor there was a psychotherapist. She was a lumpy, old, fat, stuck up woman. Who would come up, stomp around, and complain once a week we were “making too much noise” for her practice located below us.

My office window looked out into the parking lot. And she always had a steady flow of patients coming in to treat whatever disaster was going on in their lives. I did, however, notice two glaringly obvious things:

1. Most of her patients were thirty-five-plus year-old women, showing up in expensive SUVs with permanent scowls on their faces. They had a look of emptiness, anger, and resentment as they marched into her office.
2. When men came, there wasn’t a single arrival on a motorcycle. Not one.

With hundreds of visits per month, and over our three-year lease, I saw close to a thousand of her patient arrivals.

However, I never once saw a *single* guy ride in on a motorcycle. Let that sink in for a moment.

Masculine therapy

A motorcycle is many things to a man: It's often a friend, a statement, an adrenaline rush, a toy, a place to fuck and, of course, transportation. Most importantly, there were many times as a young man that my bike was my therapist.

Shit day at work? Ride the bike.

Girlfriend fucks my best friend for redemption because she resented a threesome we had with her girlfriend a year ago? Ride the bike.

Didn't get the promotion I wanted? Ride the bike.

Roommates driving me nuts? Ride the bike.

You fire it up, go out, and reconcile whatever your issues are on the road.

Motorcycles require balance, strength, and dexterity. Cars don't. When you go around corners, you lean into the turn, and hang off the bike while your knee hangs mere millimeters from the asphalt. The toll you pay if you make a mistake is often much higher than that of a car. After all, a car is effectively surrounded by a metal cage - and bikes aren't.

Even with all of that, I bet if you hopped into a time machine and went back to a time when horseback was the main form of transport and asked a young man what he thought of his

horse, he'd likely describe a fond attachment to it in a similar manner.

Men need masculine pursuits. Throughout history, sitting on a living, breathing, beast capable of *incredible* feats of power was something that men have wanted to tame. While a motorcycle isn't alive, most sport bikes have F1-like power to weight ratios, and it has an internal combustion engine, so it does breathe. After all, an engine is nothing more than an air pump.

Shared interests

Brotherhood is another perk of owning a motorcycle. The only form of transportation I've always got a head nod, or a hand wave from others, was when on a bike. Regardless of make, model, or style. *Everyone* is friendly to you when you're on a bike. There were plenty of places peppered throughout the city where motorcyclists would meet up for a coffee, have a chat, and then go for a rip together into the night.

I had been riding bikes for 12-years when a friend, I would ride with often, suddenly announced that his brother had died in a motorcycle accident when a car hit him on the highway. I noticed that others got hurt too, mostly because of careless drivers not paying close enough attention to motorcycles.

After four different sport bikes, two Katana 600s, a GSX-R750, and a ZX-7R, I decided that no matter how careful I

was, my number would come up at some point, and so I took a sabbatical when I hit thirty.

I'd be lying however if I said that I didn't miss my bike, leaving me with a hole in my heart that needed to be filled.

So, I moved into fast convertibles, a 2003 BMW M3 in Imola Red, lowered on BBS LMs which, at face value, may seem like a 180-degree pivot. But, it was close enough to satisfy the open-air feeling while moving at speed.

It not only had the added safety of airbags, and a metal cage around me, but I could drive with like I was outside without a helmet, whilst listening to music. I can still remember the first day I got the car, I dropped the top, cranked up Mötley Crüe's '*Kickstart My Heart*', and left for a rip.

In closing

Motorcycles are incredible value to a young man. For less than \$10,000 you can buy something that will out-accelerate, and often brake better than, any exotic car costing 20x as much. While *still* getting incredible fuel economy because of its small engine size.

The only things a car can do better than a bike are: Carry more cornering speeds (since there are larger contact patches on the tires), transport more people, and protect you better in an accident.

Women also *love* a man on a bike. I was constantly giving women rides on the back of my bike. Often, while at parties, my friend's girlfriends would harass me to take them for a

spin right in front of their boyfriends. By the very nature of how you ride motorcycles, it forces intimacy.

Bikes attracted women like a moth to a flame. These women would press their breasts into my back, while grabbing tightly to my lower waist, and sometimes grabbed my manhood when they got comfortable on the bike.

Trust me when I say, women *crave* adventure, variety, and fun. Dollar-for-dollar, *nothing* gets a woman more excited than to grab onto you tightly as you accelerate your bike into a wheelie. Remember, women in their teens or twenties are in their party years, they are looking for excitement. They *aren't* looking for men driving big SUVs.

Therefore, I strongly believe that every young man should own a bike at some point in their youth. Or, at the very least, a fast convertible.

However, I'm not done with motorcycles yet, I've merely just taken a break. Mid-engine exotic cars are my bikes - for now.

The cold hard truth

Never forget:

- Bikes offer you an unrivaled sense of freedom and escape from the trappings of everyday life.
- When you take a woman on a bike with you, *every single* receptor in her body is in hyper-drive as the addictive, and heady, cocktail of adrenaline and

dopamine surges through her body. And she'll be associating *that* feeling - with you.

- If bikes *really* aren't your thing, then make sure you emulate the experience with a fast convertible that screams FUN! from every inch of it.

MASTER VIOLENCE

Throughout our lives we've been lied to and have been told things like "Nothing good ever comes from violence," or that "Violence is the last refuge of the incompetent." These statements aren't particularly truthful, nor do they embrace the value of the capacity for violence.

Violence isn't always the answer. But it *is* a legitimate response in certain situations. Men have an obligation for the capacity to be violent and, if exercised, should be decisive and lethal.

Most men today can't be violent, or even understand why it's a skill that men should master. The narrative we've had crammed down our throats is "Be kind, be humble, and that love is the answer."

But, the truth is, is that society, and *especially* women, don't want meek and incompetent men. What women *want* is a **dangerous man that is civilized**.

Women's darkest fantasies were discovered when Google engineers studied the use of search engines and

pornography. The top five searches were stories about Vampires, Werewolves, Billionaires, Surgeons, and Pirates. Films often show such characters walking quietly, while carrying a big stick.

Therefore, when search engine choices trump her social narrative, believe her choices.

A powerful defense is the best offense

I believe that you need to learn how to defend yourself, and your loved ones, should the need ever arise. It's an essential part of becoming the best version of yourself as a man.

Learn combat. There are plenty of facilities within 10-minutes of most urban areas that will teach different forms of Mixed Martial Arts (so MMA). These forms include: Boxing, Krav Maga, Brazilian Ju Jitsu, Muay Tai, Kickboxing, Karate, and much more.

Memberships are around \$150 per month, and most classes are 90-minutes in total. Half of the time is spent on cardio drills designed to simulate improved endurance in combat. The other half of the time being spent on core skills.

Joining a Dojo offers four major benefits:

1. The cardio drills are some of the most intense workouts you can do, and great for your body and conditioning.
2. You learn how to use violence in a focused and productive manner.

3. Your network is your net worth and people that train in combat, for the most part, are not losers, so your social circle will also improve.
4. You'll have your ass repeatedly handed to you by more experienced members. *This is a good thing.* It'll teach you how to pull yourself up and how to get your head back in the game. Both metaphorically *and* physically.

My dojo offers plenty of MMA classes, but my favorites are boxing for the skills needed to be an effective striker, and Krav Maga for its effectiveness in self-defense. Krav is known for its lethality and efficiency of the responses to attacks, minimizing the damage to yourself while keeping you on your feet.

Krav Maga is so lethal, it's not used in MMA fights because many of the responses to attacks are illegal. It's also the gold standard in training for close combat for many Special Forces units around the world. If it's good enough for the Special Forces, then it's good enough for me.

Also, one of Krav's greatest assets is that it heavily encourages 'situational awareness'. The ability to 'read a room' is a life-skill that can get you out of trouble before it even begins. Or, at the very least, give you sufficient warning that an attack is coming your way, giving you ample time to dodge or prepare a counter-maneuver.

If I am ever jumped by someone with a gun or a knife, or by multiple attackers, I want the ability to respond with a highly trained, and proportionate, level of violence.

You may never need to use violence. But, if the need arises, it's a tool that you *definitely* want in your tool chest.

The cold hard truth

Never forget:

- It's incumbent on you to know how to protect yourself effectively. Doubly so if you have a family.
- You need to try several forms of MMAs to see which one resonates with you best.
- You **must** stick with whatever self-defense MMA that works for you. Be sure to put in the hours and watch as your skills and overall confidence grows.

WHEN MEN GO THEIR OWN WAY (MGTOW)

There is a growing movement of men choosing to check out from the sexual marketplace completely. This movement of Men Going Their Own Way is better known by its acronym “MGTOW.”

While I may agree with many of the grievances MGTOWs have with women and the world we live in, I don’t agree with their response.

Some MGTOWs limit their female interactions strictly to casual dating (even if she is someone who genuinely compliments them and adds real value to their life).

In other cases, men cannot compete in the sexual marketplace and seem to be involuntarily “Sent their own way.” Such men become what’s known as an involuntary celibate, or an “Incel.”

The problem as they see it

Truthfully, I’ve lost track of the list of grievances MGTOWs have raised about women. However, here’s a collection of the

soundbites I've heard most often:

- “Hostile divorce laws towards men that strip men of their wealth and access to their children, while simultaneously enriching the mother.”
- “Women have become overly entitled and bratty.”
- “If a guy like Brad Pitt can be taken to the cleaners in divorce law, what chance do I have?”
- “Women are constantly seeking validation and attention on social media.”
- “Women are Machiavellian opportunists with the power of the state behind them, while simultaneously being incompetent children who are run by their emotions.”
- “If marriage was a business contract, you’d tell the other guy to go fuck himself.”
- “Women make bad voting choices, repeal the 19th, and take women’s voting rights away.”
- “Feminism is a supremacy and hatred movement against men.”
- “Women can file a false domestic violence claim with no proof.”
- “Women get to be promiscuous with impunity today.”
- “Fear of paternity fraud and cuckoldry.”
- “Fear of Sexually Transmitted Diseases (or STDs).”
- “Gynocentric laws in most Western countries favor women.”
- “Fear of a lack of any loyalty to ‘a good man’.”
- “False ‘#metoo’ allegations.”

These are all part of the struggle of men today, and these grievances have legitimacy.

The dangers of “Red Pill Rage”

“Red Pill Rage” (aka: The anger phase), is one of the initial, and most dangerous, phases of “unplugging” there is as a man. Now, anger is a natural, and very legitimate, response to something that you believe to be an injustice. Therefore, it’s perfectly acceptable to feel angry about something. In fact, anger can be a *great* motivational tool to get you to refocus your energy in the right places.

However, if you become stuck in this phase of being angry all the time, you start to run the real risk of becoming overly bitter at both women and the world around you. This bitterness will continue to eat away at you as you let your brain go down to those deep, dark, places in your mind that you didn’t even realize existed.

Look, the world as you know it isn’t based on the idealism of “fairness”. It *never* has been, and it *never* will be. Society continues to feed you your “participation trophy,” pat you on the back for coming in last, and will tell you that if you’re just “nice” to everyone (especially to women), that it will “all work out in the end.”

Granted, most MGTOWs understand this reality. However, they prefer to play the victim card and keep themselves to themselves. And that’s their choice. But, it’s also a quitter’s mindset. And, by definition, quitters never win.

If you're coming out of a shitty divorce, or similar, and you need to hit the reset button on your life. Then sure. By all means, take the time to recenter yourself and truly learn how to become your own mental point of origin. But, this should only ever be a very temporary step before you use your newfound knowledge of the world, and the sexual marketplace, to elevate your life to new untold heights of excellence and happiness.

Surrender to female nature

Do you get annoyed at the sea for being wet? Do you get irritated at the sun for being warm? Then why do you get so angry at women for doing what's been in their biological programming since homo sapiens began roaming the Earth?

Like it or not, females developed hypergamy as a means of survival. If a woman picked the wrong man to pair and breed with, then it would spell certain doom for both her and her child. So, making sure that she was getting the "best that she could get," literally meant the difference between life and death for her and her kids.

And because hypergamy has been hard-wired into them, *nothing* has changed as the years have gone on.

Learn to accept it and then navigate it

When you finally get to the "acceptance" stage of how the world and the sexual marketplace works, you'll be in the

perfect position to “flip the script” and use this knowledge to your advantage as you navigate your way through life.

It’s almost like having a superpower where you can “see the code in the matrix” in real-time.

The “Black Pill” solution

The standard MGTOW “Black Pill” solution is: Just go your own way and avoid women completely. Or, at the very least, if you *do* allow women into your life, *never* live with a woman in a way where the state would automatically, and legally, view such cohabitation as a marriage.

There also seems to be an underlying belief by some MGTOWs that, if they convince enough men to “Go MGTOW,” women will be magically forced to fall back in line and start to love all men for who they are.

Throughout history, women have always dismissed men they personally deemed weak or incompetent.

Women simply do not get involved with men they see as quitters. Women don’t care about your struggles, they wait at the finish line and fuck the winners.

A popular comment I’ve read in my videos is “DDD” or “Dudes, Dogs, and Dolls.” Dudes, or men, are used for friendship, dogs for companionship (and affection), while sex dolls are to be used for sexual release.

This sounds an *awful* lot like the toxic narrative feminists sell women. That: “All they need is their girlfriends, cats,

and vibrators.”

Sex dolls

The “doll” solution amongst some MGTOW is to have sex with an inanimate doll. Do a quick Google search for “sex doll” and you’ll see what I mean.

I found a post on Twitter from user @Masumi with a pinned tweet of a sex doll looking like a “perfect 10.” It reads:

“

You know she doesn't love you, so stop pretending, dump her and buy a doll today. Always loyal, always there for you, 0% chance of a false rape allegation, STDs, divorce rape, pregnancy, she will never ask you for more. Credit options are available.

As a marketer myself, I’m impressed by the copy; I’m not convinced, however, that it’s the best solution.

If you Google “MGTOW” there are over 3.5 million results. There are *hundreds* of YouTube channels dedicated to men talking about why women are not worth your time. Yet, many sex doll companies sponsor these channels and often end their arguments about how you should “Go MGTOW and get a doll”.

Yes, feminism has destroyed the nuclear family. Women are more masculine these days, less agreeable, more interested in seeking attention and validation on social media, and in pursuing careers. Divorce rape is a *real* problem if you get married. A woman can allege rape with *no* proof (ruining a

man's career), and this is possible because the world is built around a female primary social order.

The risks women pose to men is fairly high. But, the MGTOW narrative sounds like: "You are a victim; down with the gynocracy."

Which sounds an *awful* lot like the toxic feminist narrative used by women which seems to be: "You are a victim; down with the patriarchy."

The biggest distinction between MGTOWs and feminists is that MGTOWs say you should quit a game which is rigged against you. Whereas, feminists screech loudly and organize protests to march on policy makers just to bend even more laws in their favor.

Both toxic feminists and MGTOWs appear to have the same end in mind - the isolation and segregation of the sexes.

Look, life has *always* been rigged against men. This isn't some golden era of the cards being stacked up against men which we've never seen before.

Did the 300 Spartans say it was a rigged game when the Persians invaded and quit? Did the British give up when Hitler began a massive air assault on the British Isles during the battle of Britain?

Last time I checked, nobody won *anything* by quitting.

You win by figuring out what you are up against, adapting, and then mastering the game. At the end of the day, every

struggle a man must face in life comes with some risk attached.

Be careful of anyone selling you fear, or a victim mindset. A victim mindset is a loser's mindset.

The real MGTOWs

In my opinion, the real MGTOWs, are the men that quietly go about their life, without constantly pointing and sputtering at women, society, or at anyone else who lives their life differently to them. This was what I originally understood this movement to be about.

Rise of the Incel

There is a sub-group of men that call themselves MGTOW. Truthfully though, it's not by choice. Rather, they feel that they can't attract women and haven't done well with them in the past, so they are now an involuntarily celibate man.

The soundbites used by Incels online, usually sound something like this:

“ Why don't girls like me? I mean, I'm literally a great guy, just because I'm not attractive, or don't have money doesn't mean I'm not a great catch.

If you are short and skinny, be short with muscles and rich. If you are ugly, be ugly, muscular, and rich. Napoleon was only 5 foot 5 inches tall. And Mick Jagger is as ugly as they

come. Yet, neither of these men had much trouble with women, or success in life, because they worked their asses off.

The saddest thing of all, is that at least 27 mass murders in North America alone have been attributed to men that have openly identified themselves as an Incel.

These men never learned how to handle rejection, learn from their experiences, or accept that they had some work to do on themselves. It was *always* the fault of others or society for their results in life. Sound familiar?

Self-professed Incel Alek Minassian, posted the following to Facebook shortly before he rented a van and went on a killing spree in Toronto:

“Private (recruit) Minassian Infantry 00010, wishing to speak to Sergeant 4chan please C23249161. The Incel rebellion has already begun! We will overthrow all of the Chads and Stacy’s! All hail the supreme gentleman Elliot Rodger.

Minassian drove his rented van over the curb onto sidewalks, killing 10 people and injured 16 more. His reference to “‘Chads’ and ‘Stacy’s” is relevant because the frustration was that, as Incels, they can’t compete with stronger, more alpha, males (Chads), or the women (Stacy’s) that pine for the Chads.

You’d think men “Going their own way,” would just unplug from society and live their own peaceful life. But, the Incel

uprising has shown us that there is a dangerous subculture to MGTOW.

Better safe than sorry

MGTOWs will say that feminism has destroyed the social contract between men and women. It's hard to disagree with that observation.

But, if you search for channels on YouTube about MGTOW, you'll find pages upon pages of videos with narratives backing these claims up with, very well thought out, analytical breakdowns taking it further into a passive aggressive hate movement.

Ultimately, persuadable, and frustrated men are the target of these recruitment videos.

I happened across a video once by a MGTOW explaining that avoiding marriage isn't enough anymore, that feminism had infiltrated civil law to the point that vindictive women could file domestic violence restraining orders in the US against a man they weren't living with. And, even though they weren't married, she could divorce rape him, all without proof, without his knowledge, and without a shred of evidence.

All women need to do is claim that you are violent, and the law will immediately side with them. Scary stuff, right?

By the end of such well-presented lectures, they'll have many men, incorrectly, believing that all women are demons.

While I don't disagree with the threat, it's the significance of the threat that I question.

Let's dig into the math used...

MGTOWs are great with stats. The content creator in this recruitment video provided numbers that suggested there are 900,000 domestic violence restraining orders filed every year in the USA. Asking how would you, as a man, like to be removed from your house, have your car taken away, and half your stuff gone based on allegations, not evidence?

Now, what if women filed those 900,000 restraining orders? While this is unlikely to be the case, for the sake of argument, let's assume all of them were.

There are now 325,000,000 people in the US. Of which men account for half.

That leaves us with 162,500,000 men and we know that about 40,000,000 of those men are under the age of 20.

So, we can assume that there are 122,500,000 men that might have been exposed to this potential threat with a woman. Remember, in this recruitment video, the man isn't living with anyone else and is only dating women on an exclusive basis.

That's .7% of the male population. Statistically insignificant. Let's put that into perspective.

According to data from the Centers for Disease Control and Prevention, the individual American driver's odds of dying as a result of an injury sustained in an automobile crash (which

includes pedestrians, bicyclists, and motorcyclists involved in car crashes), comes out to around 1 in 77.

That works out to 1.29%. The vast majority of the population can go through life without dying in a car accident. However, MGTOWs are telling men the threat is so great, that all men should now completely avoid half the population or, “just get a doll.”

Conclusion

Personally, I don’t care what you do with your time, or where you stick your dick. A prostitute, doll, your hand, or a hot woman. I’m not the Penis Police. What I do have a problem with though, is other men in need of help being misled by people so they can sell snake oil to them. Weaponizing them to hate how society is, before selling them silicone dolls to have sex with for \$3,000.

Granted, men have the burden of performance; women just need to show up and look pretty. But, MGTOWs appear to want men to stop playing a game that, truthfully, no man can ever fully check out of.

Unless you live in a cabin in the woods, with no connection to society, you will always be a cog in the wheels of the female primary social order.

Even MGTOWs that scratch their itch by using a sex doll are part of the feminine imperative. They likely work with women and probably also buy products and services

facilitated by women. Hell, even their sex doll that “Looks like a perfect 10,” keeps them tied to the feminine social.

The only proper solution is to:

- Do the work in life, so you become high value,
- Make yourself your own mental point of origin,
- Learn how to handle rejection like an adult,
- Always be the one responsible for the birth control,
- Learn how to spot dangerous personalities,
- And, finally, understand what drives attraction, Game, and how to limit your risk in a hostile sexual marketplace.

If you allow a woman into your life, then it's *imperative* that she is a complement to that life, not the focus. It's incumbent on you to stay on your purpose in life. Constantly chasing excellence with a genuine belief of outcome independence.

Look, disconnecting from women *might* be an interesting place to visit for a short while *if* you get divorced or have had your heart broken. But it's hardly a solution to living in a world where half of the population are women.

The cold hard truth

Never forget:

- Temporarily stepping out of the sexual marketplace is only valuable if you've just gotten out of a shitty

divorce or relationship. Taking some time out to chase excellence and to “Level up in multiple areas in your life,” will *definitely* pay off for you. Just make sure you’re receptive to the increase in higher-quality women that make themselves known to you now you’re a man of higher value.

- Remember, 70% of women want the time and attention of the top 20% of men. Chasing excellence will easily put you in the top 20%. What you do with your options when you get there... Well, that’s entirely up to you. Have fun.
- “Black Pill” MGTOW thinking is very nihilistic and unhealthy for your mental and emotional state. Men and women can certainly complement each other in life. Not *all* women are men-hating third-wave feminists. But, you *do* need to know how to “Find the diamonds in the rough.”
- Finally, hypergamy simply “is”. Accept it, embrace it, flip the script, and start using hypergamy to your advantage.

WHY SMART MEN AVOID MARRIAGE

Let me start by stating I'm not opposed to marriage or having a family. We are just a slightly higher form of primate, and make no mistake - as men, we're designed to scatter and pass down our seed. It is in our biological imperative.

I am, however, against allowing the state to decide what happens to your wealth, your freedom, and your access to your children if a marriage doesn't work out.

The divorce statistics vary slightly around the world. But, on a balance of probabilities, about half of all marriages end in divorce within seven years. Remember, this statistic ignores the *other* half of the men who are either living in an unhappy, or sexless, marriage.

In a study by Acevedo and Aron on both romantic love and long-term relationships¹, they discovered that only 13% of their participants, in an average of an 8.39 year relationship, felt "romantic love". And only 2% felt "obsession" for each other.

Meaning the chances of living in a state of bliss for eternity aren't particularly good and, in a marriage, it's the male and not the female who is often left in ruins. With him picking up the pieces after the couple goes through the relentless grind of the divorce machine, before being spit out the other side.

Throughout history, men have always been the disposable sex, and women the protected sex. So, it would make sense that everything in family law today favors the woman, while being hostile towards men.

It's time to drop some cold hard truth bombs about the reality of marriage in today's Western world:

“Marriage is a high reward/low risk choice for women, but a low reward/high risk choice for men.

- Richard Cooper

I should clarify in this chapter that, when I say, "Western family law," I am including all First World, modern countries indoctrinated by today's version of feminism.

Throughout most of history, men were at the head of the household. They were legally responsible for the actions of their spouse and children and could keep order in their home by more or less whatever means they saw fit. If a man's home was his castle, then everyone within was his vassals.

No one knows exactly when and where the tables began to turn. But things started changing in the late 1800s when the state passed new laws. For example, in 1895 London passed a bylaw prohibiting wife beating past 9pm. However, this

wasn't designed to protect women. It was primarily a noise pollution issue in the densely populated city.

In Stephanie Coontz book, '*A History of Marriage*', she concluded that, for tens of thousands of years, people married not for love, but for the acquisition of in-laws, assets, and influence. Church records, personal diaries, and public court records showed love wasn't even part of the equation.

Men had 100% authority, and 100% responsibility to the family unit. Family and their in-laws took care of medical care, law enforcement, the elderly, schooling, and so on. Men were the head of the household, and there was little to no state involvement in how a man ran his family.

This was a time when masculine virtues were both respected - and valued. But, in the last one-hundred-and-fifty-years, a toxic version of progressive feminism has changed it all. Toxic feminism has reversed the roles so both women and the state are now at the head of the household.

Today's men no longer have authority in their house, yet they still have 100% of the responsibility. Almost all authority has been taken away from men and has been given to both the government and women, while men maintain *all* the financial responsibility.

What is even more troubling is that, with the recent #metoo era, something as fundamental as establishing the facts first is no longer required. Instead, we are to believe all women when they accuse men by default, no questions asked.

Family law

When I was getting divorced in Canada, I thought I knew what the process would look like. But, truthfully, I had *no* idea what I was up against. I approached divorce with a naive eye, viewing it as a simple process with a fair exit for everyone. *Every expectation I had was way off.*

In fact, I was **dead wrong.**

Within the first hour I talked to my family lawyer, he had dropped so many truth bombs on me that I walked away from the call with a feeling of complete hopelessness. I actually believed I'd be lucky to see my daughter ever again. That I'd spend the rest of my life bending at the knee to the state and my ex-wife. While I simply watched as my wealth left me, and I became alienated from my child.

I'll never forget my lawyer's words "If you have the penis, and go to court, you are going to lose - and badly." I was shocked.

Hadn't feminism leveled the playing field for women?

Aren't women *equal* to men?

If so, then why am I being told that, because I was born with a penis, I would lose *by default* in family court?

They say the original intent of progressive changes to family law was to deal with deadbeat dads who didn't look after their kids, right? Well it did, and then it kept going on, becoming a supremacist movement against men which hasn't ever stopped.

In today's world, women are the supreme rulers in both the household and in family law. Western governments designed every part of legislation to preserve and improve the mother's interests, while simultaneously destroying the fathers. In Western family law, for one gender (the female) to advance its cause, it comes at the expense of the other gender (the male).

If you are considering marriage, then the best thing you can do is buy one hour of a local family lawyers time. Sit down, listen well, and learn how the law handles men in your state or province. Because there's a 50% or more chance your marriage will end in divorce.

Remember, this divorce statistic doesn't take into account the people who remain married because they are too unattractive, broke, and lack the option to leave. Or, simply because they are cowards.

It is nearly impossible to calculate the number of unhappy marriages that persist.

Domestic violence charges - A woman's trump card

Domestic violence charges, alleged by the mother against the father, is a trump card which has been built into Western family law. Men can be forcibly removed from their own homes by the police for false or exaggerated claims of domestic violence. It also includes being alienated from their children, while the courts enforce unreasonable payments to the mother from the father. In turn, restraining you from

entering the house you paid for, or accessing the children you fathered.

I had a coaching call once with a man who was cheated on by his wife several times. So, he decided he'd had enough, and that it was time to divorce her. During the acrimonious separation period, he became upset with her one day and pointed a finger at her face and angrily proclaimed, "You are a fucking liar."

The finger-pointing was enough for her to call the police, make a claim of domestic violence, and have the authorities involved. There was no violence, no physical contact, nothing. Just an angry finger being pointed while saying five words.

It's absolutely *vital* that you always keep in mind the following phrase: The woman you marry is **never** the same woman you divorce.

Remember, Western family law is written in such a way that it assumes women are the weaker sex. Men are the privileged sex and are also the abusive sex by default.

How women behave during divorce

Men need to understand that through a combination of family law and female nature, women are motivated to behave incredibly poorly to the father of their children during the divorce.

There are *significant* female-centric financial rewards that have been written into family law encouraging women to be

the sole custodial parent of the children. By becoming the parent that has primary custody of the children, money, and all decision-making capacity, goes to the parent awarded custody. Which, eight times out of 10, is the woman.

Let's be clear about something. Women are opportunistic *by nature*, it's hard-wired into them, and it's part of the reason why sapiens are such a successful species. Without opportunism, her children were less likely to survive. You can't blame women for this; opportunism is an evolved survival mechanism.

Women needed this skill to find the best provisioning mate, and to optimize their hypergamy. If you give someone, that's naturally opportunistic, incentive to benefit at another's expense then, guess what, they will do it.

It's only in recent history that female opportunism has had the full backing of the state behind it as family law. Interestingly, prior to the last 150-years or so, if there was a divorce, then the father would most often get custody of the children and retain all family assets - including what she brought to the table.

Once a parent has custodial rights, they can make unilateral decisions without the other parents' consent. Even if that decision is not agreed upon by both parents.

Depending on where the law governs your divorce, that could include choices about school, extra-curricular programs, religion, medical procedures, and even where the custodial parent chooses to live.

The financial rewards are not exactly small either. There are three major financial drains from the parent that isn't the custodial parent:

ALIMONY

Also known as maintenance, this is the first level of responsibility that a man must pay to his ex-wife if he was the breadwinner in the home, and she didn't work, or earns significantly less. For some men, that was because she was a stay-at-home mom. For others, she just never worked after the marriage, and there were no kids.

Either way, you are responsible to upkeep her standard of living after the marriage ends. The monthly cost, and duration of the payments, depends on where you live, and how long you were married. In some places, like California for example, if you are married for 10-years or more, then its lifelong alimony.

CHILD SUPPORT

Child support is paid to the custodial parent to cover the cost of raising the children. Contrary to popular belief, the payment amount is not based on what the children actually need to survive. Rather, it's based on state issued tables. I had a friend who had calculated that, during his marriage, the monthly cost to look after his child for things like food and clothing were around \$500 per month.

The state issued child support tables, however, compelled him to make a legally enforceable payment of \$4,367 every

month. Child support, for the most part, goes to the mother, not the kids.

MATRIMONIAL ASSETS

Matrimonial assets are divided after the knot is untied, usually 50/50 in most cases. Although, there are places like Australia where *more than half* of the assets can be awarded to the mother. So, every asset you acquired, before, or after, your nuptials goes into a pile, and you split it down the middle, regardless of who paid for it.

In some cases, a prenuptial agreement may protect assets that were acquired before the wedding. But, if circumstances changed during the time you were married, or a considerable length of time has passed since the prenup was signed, then a judge will most likely throw out your prenup and it won't be worth the paper it's written on.

Since men rarely stay home to raise children, and women are hypergamous in their mate selection strategies, then you can begin to see how unlikely it is for the mother to pay the toll of family law. For the vast majority of cases, it's the men that are left in financial ruin. With little to no access to his children, watching helplessly as his money flow to his ex-wife, while she alienates him from his kids.

Hypergamy doesn't care if she vows to love and be with you "In richer or poorer, in sickness or in health... 'til death do us part."

Divorce, and not career or entrepreneurship is, statistically, still the number one-way women acquire their wealth today.

For a clear example of this, as I write this chapter in a Starbucks, a woman at the next table said to her girlfriend, complaining about her husband. She said: “I can divorce him, take half his shit, the kids, the house, and not need to put up with his dumb ass anymore.”

That, gentlemen, is the world that this toxic version of feminism has created.

How the state encourages women to become single mothers

In the spring of 2019, angry single mother journalists from around the world attacked me for warning men on Twitter about the dangers of getting into relationships with single mothers. They manufactured about a dozen hit pieces, all from a three-minute clip of a 50-minute speech that I gave an audience of men.

You can watch my video response by searching “The truth sounds like hate, to single moms that hate the truth” on my channel for more perspective.

An overwhelming show of support came from men, and some women, praising me for shining a light on this unflattering subject. But, a golden nugget appeared from commenter “Kim Brown” in the comment section of the video, she said:

“ The thing that infuriates me is my hubby makes about \$50,000 per year, I make about half that. But when you are talking to people about taking responsibility for themselves, you do realize that if

I were to leave my hubby and become a single mother with government benefits, I'd have way more money. What we pay in taxes as a couple, opposed to what the government would give me if I was on my own isn't even close. So, when women leave there [sic] husbands they are improving their situation until that changes nothing else will. It's sickening when society rewards those who make bad choices!

She went on to expand on that with the following:

“ My friend who is a single mother, does the same job and makes the same money as me. We sat down and compared our finances and, with all the subsidies and tax breaks she receives from the government, she has about \$1,000 a month more than my family in disposable income. To me, that's not just rewarding single mothers, it is actively punishing middle to low income women for staying with the father of their children.

If there is a more damning piece of evidence that the state is encouraging women to leave their marriage and become a single mother... Well, I'm not sure where to find it.

Arguments for marriage

Some men might argue that their girlfriend is a “God fearing religious woman.” Or that his beautiful fiancée comes from a

home with conservative values where both of her parents remained happily married for twenty-years.

That isn't enough, for two simple reasons:

1. A woman *always* reserves the right to change her mind at any time.
2. Even conservative, God loving religious women will leverage the corrupt family legal system to benefit from family law.

I had a coaching consultation once where a man spent a good part of the call framing what was to become the “evolution” of “her” during his marriage. She went from a church going religious woman, from an unbroken home, to someone he didn’t even recognize during the divorce process.

It shocked him that she had performed a 180-degree pivot during the divorce. She filed a false domestic violence charge to get him out of the house. Allowing her to control the sale of the home, obtain primary custodial caregiving, and earn maximum benefits from the child support tables.

I simply cannot endorse marriage in its current state today.

But Rich, don’t men have an obligation to find a “good girl” and settle down?

No, you don’t. However, men do have an obligation to become the best possible version of themselves. If a woman enters your frame, is a complement to your life (but not the focus), and you want children, then - and only then - should

you consider having children (after a proper two-year vetting period).

But you must always remember... Women *always* reserve the right to change her mind.

All you need to do is browse the divorce discussion forums for 10-minutes to see loads of women who think that, just because the child came out of their body, that they are the sole *owner* of that child. Therefore, they are entitled to be the primary caregiver by default.

Better yet, spend an afternoon sitting in on divorce hearings at your local family court, and see with your own eyes how fathers get treated.

Societal conditioning, media, feminism, and the law all reinforce that men are inept clowns, incapable of being a useful parent to a child. Fathers are, however, useful as tax cattle, so the state can milk and then transfer those assets to a mother.

Society celebrates single mothers so much that, during Father's Day, you will see memes being passed around that are praising single mothers for doing the job of both parents. However, single fathers receive no praise on Mother's Day.

For more on this topic of the feminization of society, search for a video on my channel titled 'Why are today's men so feminized?'.

Throughout history, men were valued. However, with the state at the head of the household, we have slowly been reduced to that of the disposable parent and are treated like

tax cattle. Fathers are no longer the head of the household, the state is. The state ensures that women are well looked after. Even if it comes at the father's expense.

It's absolutely essential to understand: "The woman you marry is *not* the same woman you divorce." Mark my words - a woman's *true* colors will come to light in a divorce.

For one side to advance its agenda it will come at the cost of the other. Win-win scenarios in divorce are rare because of female hypergamy and only sometimes happens if a woman marries a man of lower value than her (which is even rarer).

Understand that women are not natural risk takers, men are. Now, wrap your head around the fact that women initiate about 80% of all divorces, and often plan them months, or sometimes years, in advance. They do this because they are confident that they will do well - because the state makes sure of it.

Remember that taking unnecessary risks is not inherent in female nature because women play not to lose. It's men that play to win.

Also, men, if you were caught fucking around on her, always understand that hell hath no fury like a woman scorned. Female nature is not on your side. Yet, it expects you to forgive her, look past her indiscretions and, in many cases, it expects you to take ownership for the reason why she fucked around on you.

Divorce and suicide

It was a warm spring day as I drove along the freeway. I was six months into my separation, and still living in the matrimonial home trying to hash out the details of my divorce. I was driving into the office in my truck, feeling utterly depressed about how things were going for me.

This was when overwhelming thoughts of suicide entered my mind. I felt powerless, and the notion of taking off my seatbelt, flooring the truck, and quickly slamming into a concrete pillar entered my mind. I figured it would be over fast.

It was *easily* the lowest point in my life. My life was out of control, and I had no idea if I was going to survive financially, or even see my daughter grow up.

Throughout history, men have been conditioned to be tough and to “man up.” We fight in horrible wars and do incredibly dangerous jobs that women aren’t typically willing to do, like work in mines, or on oil rigs. But when it comes to the emotional and economic toll of divorce, simply put, men can’t cope very well. Divorced men are also more than twice as likely to commit suicide as married men, and divorced men are almost 10 times more likely to kill themselves than divorced women.

But, this is something that the mainstream media won’t shine a spotlight on. Remember, men are disposable; women are protected.

Children and divorce

Even in today's modern world where women are working, and have income equality, mothers are *still* awarded a "primary caregiver" custody order about 80% of the time. That usually means that the father sees his child(ren) every other weekend and a Wednesday night - for dinner only.

My family lawyer said this is par for the course, and it's often called the "Screw over daddy deal."

Women often argue, "Children need their mothers," and family law still sides with that notion. Which, of course, is utter nonsense. Children need access to *both* of their parents if they are going to be an effective member of society as an adult.

Approximately 43% of children in North America are raised by the mother. Here's some more statistics that men should know when relying on the mother to raise their children:

Fatherless boys and girls are:

- Twice as likely to drop out of high school, twice as likely to end up in jail, and are four times more likely to need help for emotional or behavioral problems.²
- 85% of youths in prisons grew up in a fatherless home.³
- 85% of children who exhibit behavioral disorders come from fatherless homes.⁴
- 71% of pregnant teenagers lack a father.⁵
- 63% of youth suicides are from fatherless homes (five times the average).⁶

Mothers, by an overwhelming margin, are doing most of child rearing post-divorce. And, despite how single mothers are praised in the media for being strong and independent, they're often doing a terrible job at it.

How marriage changes men

A lot of men I've coached through divorce entered the marriage with some beliefs they came to learn weren't true. And most of those men were downright shocked by what happened to them.

Men's testosterone levels decrease

It's been proven that when a man lives with a woman, and has children, his testosterone levels drop. Some would argue that this process is just andropause, and natural. But unmarried men of the same age usually have higher testosterone levels than their married counterparts.

PATERNITY FRAUD

While it's difficult to get reliable statistics on this (because of gynocentric laws in some Western countries that lean towards no paternity testing), it's estimated that somewhere between 10 and 30% of married men are raising children that aren't biologically theirs.

This is a big issue because - one of the bigger selling points of marriage to most men - is the ability to pass down his seed. Marriage is, in theory anyway, supposed to *protect* paternity.

BETATIZATION BY A THOUSAND CONCESSIONS

Women will constantly test a man's frame. The vast majority of men will go through the slow process of agreeing to his wife's endless requests and demands. It often starts with "Honey, put your dark clothes in the dark hamper, and your white clothes in the light hamper." Before progressing on to "Let's go vegan together," and may eventually escalate to "Let's have a poly relationship." Which inevitably ends in a speech about how she "Loves you, but isn't in love with you."

Throughout your marriage, the question isn't if you *will* be betatized. It's more of *by how much* and will it be to the point that you become so unattractive to her; she leaves. It's important to note that **women don't do this intentionally**, it's just a natural part of female nature alongside the societal conditioning of the sexes.

REDUCED SEX DRIVE

Men often marry under the impression their wife will reward them with the reliable, consistent, and wild sex that they had before they got married. Yet, one of the biggest search queries from married men is: "How do I get my wife to fuck me?"

Sexless marriages are extremely common today. Introducing kids into the relationship *will* dramatically change the dynamic between both of you, her sexual availability, and her enthusiasm for you. Another, often overlooked reason for this, is that her competition anxiety drops considerably

when she lives with you. She also subconsciously knows family law has her back.

She knows where you are at all times and where you live. Therefore, the competition anxiety that she had when you were both living under separate roofs would keep the hamster between her ears caffeinated. With her constantly wondering what you might be up to.

For more information on competition anxiety search “Entrepreneurs in cars what is competition anxiety.”

How to minimize the risks of marriage

I've had men propose all kinds of ways to eliminate the risk of divorce rape, from importing foreign brides, to surrogacy. Look, there is no way to remove *all* risk. But, from my research, I've discovered a few things that you can do to minimize it:

LIVE WHERE SHARED CUSTODY IS THE DEFAULT ARRANGEMENT IN DIVORCE

There are a few places around the world where, upon divorce, *both* parents share custody 50/50 by default. Unless one parent can prove that the other parent is a risk to the children's safety. So, if one parent is a heroin addict, with a history of violence, or criminal activity, then there may be an argument for a sole custody hearing. However, be sure to ask a family lawyer in your country about this.

HAVE BOTH A PRENUPTIAL AND A POSTNUPTIAL AGREEMENT

A prenuptial isn't enough, and many people will tell you they really aren't worth the paper they're written on during a divorce. This is especially true if 10 years have passed since you got married and she stayed home to raise three kids while you worked. They just have less value over time.

However, there *are* cases where judges have enforced a prenuptial, because a postnuptial was signed *after* the marriage, thereby confirming the original terms. You must remember, any nuptial agreement loses value over time. As circumstances change again, be sure to ask a family lawyer in your country about the best way to handle this. **You** must protect **your** assets.

DON'T MARRY DOWN (Too FAR)

Men typically marry down. It's not uncommon for the VP of Accounting, who's making \$360,000 a year, to marry a hairdresser that's earning just above the poverty line. When you marry down, she doesn't return to her hairdresser lifestyle upon divorce. It is *you* who'll be expected to maintain the lifestyle she became accustomed to in the marriage.

Family law doesn't allow women to return to the poverty line, *especially* if there are children in the equation. Therefore, if you choose to marry in a Western country, then find someone that brings similar assets to the table. Or ideally someone who earns as much, or more, than you (although even that brings its own unique set of problems in a divorce).

DON'T MARRY A FEMINIST

Feminism teaches women they don't need men, that we men are disposable. How men have oppressed women, why men are the privileged sex, and that women are better than men. You simply cannot expect a woman to stick around when they subscribe to a belief system that indoctrinates women into simultaneously being a victim and a supremacist, all while hating the opposite sex.

SEEK THE BRIGHT TRIAD TRAITS

They are:

1. Clarity,
2. Stability,
3. Maturity.

My friend Dr. Shawn T. Smith, author of the book '*The Tactical Guide to Women*,' would consider a woman who displayed these traits as being a high-quality woman. Read this book, then read it again, and seek out these traits.

AVOID THE DARK TRIAD TRAITS

They are:

1. Narcissism,
2. Machiavellianism,
3. Psychopathy.

Narcissists are easy to spot today; she is the woman that is constantly seeking attention on social media throughout the day.

Machiavellianism is when a person is so focused on their own interests that they will manipulate, deceive, and exploit others to achieve their goals.

Psychopathy is traditionally a personality disorder that is characterized by persistent antisocial behavior, impaired empathy and remorse, and bold, dis-inhibited, and egotistical traits. It is sometimes considered synonymous with sociopathy.

Although it's not specified in the dark triad, I would add Borderline Personality Disorder (or BPD) to this list of traits to avoid.

WAIT TWO YEARS BEFORE YOU MARRY

In his book, clinical psychologist Dr. Shawn T. Smith pointed out that women can put on an act, *especially* if they are post-wall and in a rush to get married due to “baby rabies.”

Therefore, be sure to “Hire slow and fire fast.” Do your due diligence and take your time vetting a woman. One of the *biggest* complaints that men, who marry too quickly have, is they learn that they were merely dating a *representative* of the woman. And that the nice representative leaves after she says, “I do.” If, by the two-year mark, it’s not a “Hell Yeah!” then it’s definitely a “Fuck no!”

LIVE TOGETHER

You’ll only see someone’s true colors when you live with them. Live with them for at least six months to see if you still like them on the seventh month. Also, don’t listen to people that tell you that marriages have a higher chance of

failure if you live together before you marry. This is true in North America by a tiny percentage point. But, in Europe, most marriages fair better where a couple lives together first.

SEE HOW SHE HANDLES STRESS

Flight got cancelled? Her baggage was lost? Sandra at the office is a royal bitch every day? See how she handles stressful situations, and if she can make the best of them. Stress happens in marriage, so dealing with stress maturely is a skill needed for a successful marriage. Avoid a woman that can't handle stress, or one that makes mountains out of molehills.

SHE HAS A GOOD RELATIONSHIP WITH HER FATHER

I'm assuming you are a masculine man, or one seeking that level of excellence. How can you expect a woman to admire, and look up to you, if she didn't have a positive masculine male role model in her life growing up? See my chapter '20 Red Flags to Avoid' in this book, as I cover "Daddy Issues" extensively there.

SHE TAKES YOUR NAME

We live in a world today where some women, usually feminists, won't take on your last name. Sometimes, I've heard of weak beta men taking on their wife's last name. In an environment where the burden of all risks are on the man's shoulders, your wife should take on *your* last name. And, no, hyphenation *isn't* acceptable either.

It shows that she is in it for the long haul and is willingly entering your frame. There are some cases where women with a professional designation, for example, a Lawyer or a Doctor, can't change their surnames without a substantial amount of hassle. But, as far as the marriage license, passport, driver's license, etc., then her last name should change to yours.

DON'T COMPLICATE THE WEDDING

Do not get involved in the long, drawn out process that is wedding planning. Photographers, videographers, band, DJ, limo, venue, meal plan, invitations, and so on. If you let yourself get carried away in the planning, then you will overspend on something that already has a 50% chance of failure.

Therefore, keep it simple, have a justice of the peace perform it or, even better, make it fun and have a destination wedding. Statistics also show that more expensive weddings have a higher probability of divorce. A woman that is in your frame and admires you will not insist on a giant party that's all about her.

Conclusion

Marriage is utterly unnecessary in today's day and age. It is **all risk for men, and all reward for women**. If you want to have children, then my advice is to leave any Western country, state, or province, that is hostile towards men. Instead, live somewhere where there's ideally no alimony, division of assets, and child support to worry about.

There are still feminine women that frown upon feminism and value masculinity. Find one of these women and live where the law isn't going to destroy you.

The cold hard truth

Never forget:

- The woman you marry, **will not** be the same woman that you divorce. A woman's *true* character *will* be revealed during a divorce. So, don't be surprised if she makes up loads of crazy stories to get family law, and potentially even the police, to do her dirty work for her.
- If you have kids with her, then be ready for her to weaponize them during the divorce. She'll do absolutely *everything* in her power to turn them against you and alienate them from you. Rest assured, that this *will* test your personal resolve and frame to the absolute limit. Being alienated from their kids is one of the biggest reasons why so many men either commit suicide, or at the very least, contemplate it.
- If you've been betatized by a thousand concessions, and you begin to take back your life and frame, then you can be *absolutely certain* that your wife *will* fight you tooth and nail to prevent this. Expect the shit tests to escalate to never-before-seen epic-levels as she pokes and prods at this "new you," to see if you *truly are* taking your balls back out of her handbag. Or if you're just faking it.

- Before getting married, go see a divorce lawyer together and **do not** be guilt-tripped or shamed by your LTR for doing this (that, in and of itself, is a major red flag). Invest the money needed for a one-hour consultation with a local divorce lawyer to find out how a divorce would pan out where you live. Just think, if a skydiving instructor informed you that, not only did your parachute only have a 50% chance, or less, of opening. But, that you would also immediately lose legal access to everything that you had worked hard for the minute you jumped (including access to your kids), would you *still* want to jump out of that plane?

IN CONCLUSION...

So, there you have it. Several of society's most comforting lies crushed by a series of cold, hard, truths. Allowing your eyes to open up to these truths is the basis of the ultimate playbook to understanding how to get better results in life and with women. Ultimately, transforming you into that unplugged Alpha you want to be.

This book is just a no-bullshit introduction to the harsh realities that men around the world face today. There's much more to unpack, which I may release in a future book. The red flag chapter for example, could contain significantly more red flags. But, for the sake of simplicity, I had to distill that chapter down to the basics.

Throughout this book, I've referenced several other books that I strongly suggest you read. Consider those books next if you'd like to dive even deeper into the rabbit hole of becoming more alpha and masculine.

When you take the Red Pill, it's like being parched and then taking your first drink from a firehose. You're thirsty for the

information, but the sheer volume of information comes at you with a shocking intensity and speed.

With that in mind, I'd suggest reading this book a few times over. *Especially* if my cold, hard, truth bombs make that Beta inside you feel deeply uncomfortable.

If you are new to my work, I invite you to browse my YouTube channel called 'entrepreneurs in cars.' At the time of writing this book, there I've uploaded almost 1,000 free videos for you to watch and learn from. They're the perfect compliment to the information in this book.

Similarly, if you are looking to connect with like-minded men from around the world that are actively working on becoming a top 1% man, then consider joining my private men's community. I offer my members many exclusive benefits, including discounted 1-on-1 coaching with me. Continue your journey by watching the introduction video here: <https://entrepreneursincars.com/community/>

Finally, it's **essential** to remember: The point of unplugging from the comforting lies you've been told by society *isn't* to hate women, or to even leave a nasty taste in your mouth. It's about accepting, and then fully embracing, the realities of life as a strong, driven, masculine man. Which includes the requirement of being truly at peace with women and not hating them for what they can never be to you.

Peace,

Rich Cooper

GLOSSARY

Oneitis

An unhealthy attachment to one woman where a man desperately pines for her love, attention, and intimacy. The woman in question often couldn't care less about his existence. Men who get “oneitis” often subscribe to the notion of her being his “one true love”, only to see her move on to another man. All while he suffers and sulks in misery hoping she will, one day, return.

Spinning plates

This is a term used to describe simultaneously dating multiple women in a non-monogamous fashion (aka: casual dating), and is a tactic that's often used by men who are disinterested in a conventional monogamous relationship. Or, by someone who knows that he's prone to developing “oneitis,” or prefers vetting women for an LTR/wife by allowing contrast and comparison. Which allows “the cream” (his best “plate”) to rise to the top.

It's important to note that you *never* overtly state you are spinning plates. You just do it, and let your actions signal, by the lack of your availability, that you are spinning plates. Women are, unknowingly by nature, master plate spinners, and often date multiple men at once. Unless, of course, they feel that they've found their best hypergamous option.

SMV (Sexual Marketplace Value)

An individual's own value in the sexual marketplace. For example, your physique, style, Game, frame, confidence levels, etc. all have an individually perceived "value" to women. The more you chase excellence, the higher your natural SMV becomes as you optimize every area of your life.

The Wall

There comes a time in a woman's life when she can no longer really compete on the sexual marketplace with younger, more virile women, and they have therefore "hit the wall." Women are beauty objects to men and her SMP peak is around 23-years old. After that, her looks are on a steady decline.

While you'll never hear a woman admitting to the existence of "the wall" in public. If you ever hear divorced women talk between each other, they'll often refer to giving their "best years" and often ask their friends "who wants a 30-year-old with two kids in tow?" Like it, or not, they *know* that their prime asset to a high-value man, their looks, is on a very steady decline.

A woman can will hit the wall much sooner with destructive lifestyle habits like: smoking, drinking, drugs, or by becoming a single mother. Conversely, a woman can also delay hitting the wall by a few years, by mastering self-care. Either way, a hot 23-year-old will *always* be more attractive to high-value men than a relatively hot 43-year-old (as the latter now has a lower SMV).

Men also hit the wall, but a man's decline doesn't begin until he's in his mid-late thirties (or *much* later if he's a high-value man). For more, search: "What is (SMV) Sexual Marketplace Value and The Wall" on my YouTube channel.

Soft Next

A soft next is where you cut all contact with a girl for a few days if she displays any terrible behavior (maybe longer, depending on how often you see her, or how bad the behavior was in your eyes). This means you do not respond to her texts, calls, or attempts to visit you. Think of it as short-term ghosting.

The soft next works because it anchors negative consequences/emotions to bad behavior. For women, attention is the coin of the realm, and removing your attention powerfully resets your frame as the dominate one in the relationship.

However, it's *critical* that, at the end of the soft next, you continue the relationship normally and act as if nothing had ever happened. If she took the hint that you're more than

prepared to hold your boundaries firm, she'll be more than happy to meet up with you again.

Frame

Regardless of the relationship (or even with life in general), **frame is everything**. Frame is the rock-solid, congruent, outward representation of your core beliefs and your own personal boundaries. The term frame is most often used when talking about managing the frame of a relationship. In every relationship, regardless of the type, one person always “enters the others frame.”

What this means is that the person who's defining the frame of the relationship, is the one who is in control (as the other person willingly “submits” to the stronger frame).

When a man is in control of the frame of the relationship, then that means she is a complement to his life, not the focus. She rarely finds the need to shit test him, create drama, or challenge his choices or authority in the relationship. Women today subconsciously, but desperately, want to enter the frame of a strong, masculine alpha male. A frame that's been built upon the solid foundations of competency, success, and purpose.

Shit Test

Also more accurately known as a competency test. Women often shit test men to check if he's their best option. The competency test can be in the form of a question, or a

behavior she exhibits to test the frame of the relationship, where she's watching closely how he responds (is he cool, calm, and collected? Or does he let his emotions get the better of him?).

An example of a shit test might be: "Hold my purse for me while I go into this clothes store." But, what she's *really* testing you for, is to find out if you are a good little compliant beta male that will do as he's told, and stand there holding her purse like an obedient little puppy.

A simple "No. I don't carry female accessories" with a slight sneer would let her know that you're not falling for her test. Hypergamy means that women will *always* competency test men (whether that's at a conscious or subconscious level), but the frequency and severity of these tests will reduce close to zero when she trusts your leadership and competency skills and is willingly 100% in your frame.

Hypergamy

Women's primary sexual strategy for millions of years has been to form a sexual relationship with a superior man on the socioeconomic scale. It's often said that hypergamy doesn't seek its own level. Rather, hypergamy always seeks *better* than itself.

This is an evolved survival technique for her and her children to always find the best male she can secure for provisioning and protection. When a woman leaves a man, for another that she deems to be of higher value, it's because of hypergamy.

Many men are furious at women for being hypergamous. However, there's no value in being angry at a woman for wanting the best that she, rightly or wrongly, believes that she can get. Therefore, understand hypergamy and make it work *for* you. To dive deeper into hypergamy, search for: “what is hypergamy” on my YouTube channel.

PROLOGUE

The Secret City

This book is a work of nonfiction. The stories I tell in this narrative are real. None of the people are invented. Of the seventy-four individuals interviewed for this book with rare firsthand knowledge of the secret base, thirty-two of them lived and worked at Area 51.

Area 51 is the nation's most secret domestic military facility. It is located in the high desert of southern Nevada, seventy-five miles north of Las Vegas. Its facilities have been constructed over the past sixty years around a flat, dry lake bed called Groom Lake. The U.S. government has never admitted it exists.

Key to understanding Area 51 is knowing that it sits inside the largest government-controlled land parcel in the United States, the [Nevada Test and Training Range](#). Encompassing 4,687 square miles, this area is just a little smaller than the state of Connecticut—three times the size of Rhode Island, and more than twice as big as Delaware. Set inside this enormous expanse is a smaller parcel of land, 1,350 square miles, called the [Nevada Test Site](#), the only facility like it in the continental United States. Beginning in 1951, on the orders of President Harry Truman, [105 nuclear weapons](#) were exploded aboveground at the site and another 828 were exploded underground in tunnel chambers and deep, vertical shafts. The last nuclear weapons test on American soil occurred at the Nevada Test Site on September 23, 1992. The facility contains the largest amount of [weapons-grade plutonium and uranium](#) in the United States not secured inside a nuclear laboratory.

Area 51 sits just outside the Nevada Test Site, approximately five miles to the northeast of the northernmost corner, which places it inside the Nevada Test and Training Range. Because everything that goes on at Area 51, and most of what goes on at the Nevada Test and Training Range, is classified when it is happening, this is a book about secrets. Two early projects at Groom Lake have been declassified by the Central Intelligence Agency: the U-2 spy plane, declassified in 1998, and the A-12 Oxcart spy plane, declassified in 2007. And yet in thousands of pages of declassified memos and reports, the name Area 51 is always redacted, or blacked out. There are only [two known exceptions](#), most likely mistakes.

This is a book about government projects and operations that have been hidden for decades, some for good reasons, others for arguably terrible ones, and one that should never have happened at all. These operations took place in the name of national security

and they all involved cutting-edge science. The last published words of Robert Oppenheimer, father of the atomic bomb, were "Science is not everything. But science is very beautiful." After reading this book, readers can decide what they think about what Oppenheimer said.

This is a book about black operations, government projects that are secret from Congress and secret from the people who make up the United States. To understand how black projects began, and how they continue to function today, one must start with the creation of the atomic bomb. The men who ran the Manhattan Project wrote the rules about black operations. The atomic bomb was the mother of all black projects and it is the parent from which all black operations have sprung.

Building the bomb was the single most expensive engineering project in the history of the United States. It began in 1942, and by the time the bomb was tested, inside the White Sands Proving Ground in the New Mexico high desert on July 16, 1945, the [bomb's price tag](#), adjusted for inflation, was \$28,000,000,000. The degree of secrecy maintained while building the bomb is almost inconceivable. When the world learned that America had dropped an atomic weapon on Hiroshima, no one was more surprised than the U.S. Congress, none of whose members had had any idea it was being developed. Vice President Harry Truman had been equally stunned to learn about the bomb when he became president of the United States, on April 12, 1945. Truman had been the chairman of the Senate Special Committee to Investigate the National Defense Program when he was vice president, meaning he was in charge of watching how money was spent during the war, yet he'd had no idea about the atomic bomb until he became president and the information [was relayed to him by two men](#): Vannevar Bush, the president's science adviser, and Henry L. Stimson, the nation's secretary of war. Bush was in charge of the Manhattan Project, and Stimson was in charge of the war.

The Manhattan Project employed two hundred thousand people. It had eighty offices and dozens of production plants spread out all over the country, including a sixty-thousand-acre facility in rural Tennessee that pulled more power off the nation's electrical grid than New York City did on any given night. And [no one knew the Manhattan Project was there](#). That is how powerful a black operation can be.

After the war ended, Congress—the legislators who had been so easily kept in the dark for two and a half years—was given stewardship of the bomb. It was now up to Congress to decide [who would control its "unimaginable destructive power."](#) With the passing of the Atomic Energy Act of 1946, a terrifying and unprecedented new system of secret-keeping emerged. The presidential system was governed by presidential executive orders regarding national security information. But the newly created Atomic Energy Commission, formerly known as the Manhattan Project, was now in charge of regulating the classification of all nuclear weapons information in a system that was totally separate from the president's system. In other words, for the first time in American history, a federal agency run by civilians, the Atomic Energy Commission, would maintain a body of secrets classified based on factors other than presidential executive orders. It is from the Atomic Energy Act of 1946 that [the concept "born classified" came to be](#), and it was the Atomic Energy Commission that would oversee the building of [seventy thousand nuclear bombs](#).

in sixty-five different sizes and styles. [Atomic Energy was the first entity to control Area 51](#)—a fact previously undisclosed—and it did so with terrifying and unprecedented power. One simply cannot consider Area 51's uncensored history without addressing this cold, hard, and ultimately devastating truth.

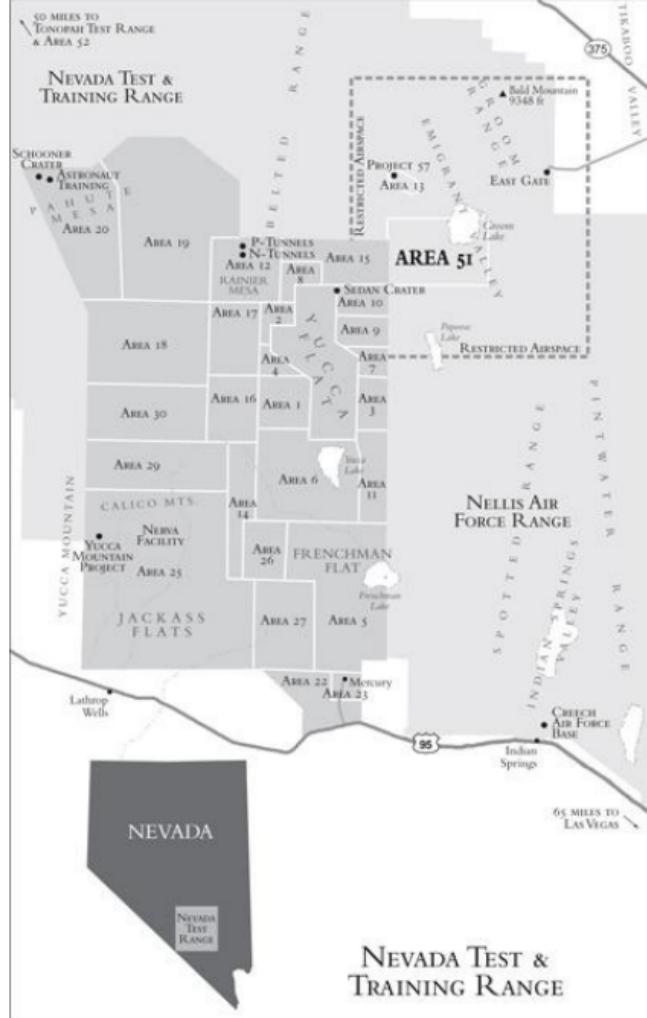

The Atomic Energy Commission's Restricted Data classification was an even more terrifying anomaly, something that could originate outside the government through the “thinking and research of private parties.” In other words, the Atomic Energy Commission could hire a private company to conduct research for the commission knowing that the company's thinking and research would be born classified and that even the president of the United States would not necessarily have a need-to-know about it. In 1994, for instance, [when President Clinton](#) created by executive order the Advisory Committee on Human Radiation Experiments to look into secrets kept by the Atomic Energy Commission, certain records involving certain programs inside and around Area 51 were kept from the president on the grounds that [he did not have a need-to-know](#). Two of these programs, still classified, are revealed publicly for the first time in this book.

One of the Atomic Energy Commission's former classifications officers, Donald Woodbridge, characterized the term *born classified* as something that [“give\[s\] the professional classificationist unanswerable authority.”](#) Area 51 lives on as an example. Of the Atomic Energy Commission's many facilities across the nation—it is now called the Department of Energy—the single [largest facility is, and always has been, the Nevada Test Site](#). Other parts of the Nevada Test and Training Range would be controlled by the Department of Defense. But there were gray areas, like Area 51—craggy mountain ranges and flat, dry lake beds sitting just outside the official borders of the Nevada Test Site and [not controlled by the Department of Defense](#). These areas are where the most secret projects were set up. No one had a need-to-know about them.

And for decades, until this book was published, no one would.

NEVADA TEST & TRAINING RANGE

The Riddle of Area 51

Area 51 is a riddle. Very few people comprehend what goes on there, and millions want to know. To many, Area 51 represents the Shangri-la of advanced espionage and war fighting systems. To others it is the underworld of aliens and captured UFOs. The truth is that America's most famous secret federal facility was set up in order to advance military science and technology faster and further than any other foreign power's in the world. Why it is hidden from the world in southern Nevada's high desert within a ring of mountain ranges is the nexus of the riddle of Area 51.

To enter Area 51 requires a top secret security clearance and an invitation from the uppermost echelons of U.S. military or intelligence-agency elite. The secrecy oath that is taken by every individual who visits the base before arriving there is both sacred and legally binding. For those without an invitation, to get even the slimmest glimpse of Area 51 requires extraordinary commitment, including a ten-hour block of time, a four-wheel-drive vehicle, and a pair of good hiking boots. Through binoculars, from the top of a mountain called Tikaboo Peak, located twenty-six miles east of Area 51, one can, on occasion, see a flicker of activity. Daylight hours are bad for viewing because there is too much atmospheric heat distortion coming off the desert floor to differentiate airplane hangars from sand. [Nighttime is the best time](#) to witness the advanced technology that defines Area 51. Historically, it has been under the cover of darkness that secret airplanes and drones are flight-tested before they are sent off on missions around the world. If you stand on Tikaboo Peak in the dead of night and look out across the darkened valley for hours, suddenly, the Area 51 runway lights may flash on. An aircraft slides out from inside a hangar and rolls up to its temporarily illuminated runway. After a brief moment, it takes off, but by the time the wheels leave the ground, the lights have cut out and the valley has been plunged back into darkness. This is the black world.

According to most members of the black world who are familiar with the history of Area 51, the base opened its doors in 1955 after two CIA officers, Richard Bissell and Herbert Miller, chose the place to be the test facility for the Agency's first spy plane, the U-2. Part of Area 51's secret history is that the so-called Area 51 zone had been in existence for four years by the time the CIA identified it as a perfect clandestine test facility. Never before disclosed is the fact that Area 51's first customer was not the CIA but the Atomic Energy Commission. Beginning in 1951, the Atomic Energy Commission used its parallel system of secret-keeping to conduct radical and controversial research, development, and engineering not just on aircraft but also on pilot-related projects—entirely without oversight or ethical controls.

That the Atomic Energy Commission was not an agency that characteristically had any

manner of jurisdiction over aircraft and pilot projects (their business was nuclear bombs and atomic energy) speaks to the shadowy, shell-game aspect of black-world operations at Area 51. If you move a clandestine, highly controversial project into a classified agency that does not logically have anything to do with such a program, the chances of anyone looking for it there are slim. For more than sixty years, no one has thought of looking at the Atomic Energy Commission to solve the riddle of Area 51.

In 1955, when the Central Intelligence Agency arrived at Area 51, its men brought with them the U.S. Air Force as a partner in the nation's first peacetime aerial espionage program. Several other key organizations had a vested interest in the spy plane project and were therefore briefed on Area 51's existence and knew that the CIA and Air Force were working in partnership there. Agencies included NACA—the National Advisory Committee for Aeronautics (NASA's forerunner)—and the Navy, both of which provided cover stories to explain airplanes flying in and out of a military base that didn't officially exist. The National Photographic Interpretation Center (NPIC), the agency that would interpret the photographs the U-2 collected on spy missions abroad, was also informed about the area. From 1955 until the late 1980s, these federal agencies as well as several other clandestine government organizations born in the interim—including the National Reconnaissance Office (NRO), the National Security Agency (NSA), and the Defense Intelligence Agency (DIA)—all worked together behind a barrier of secrecy on Area 51 programs. But very few individuals outside of an elite group of federal employees and black-world contractors with top secret clearances had confirmation that the secret base really was there until November of 1989. That is when a soft-spoken, bespectacled, thirty-year-old native Floridian named [Robert Scott Lazar appeared on Eyewitness News](#) in Las Vegas with an investigative reporter named George Knapp and revealed Area 51 to the world. Out of the tens of thousands of people who had worked at Area 51 over the years, Lazar was the only individual who broke the oath of silence in such a public way. Whether one worked as a scientist or a security guard, an engineer or an engine cleaner, serving at Area 51 was both an honor and a privilege. The secrecy oath was sacred, and the [veiled threats of incarceration](#) no doubt helped people keep it. With Bob Lazar, more than four decades of Area 51's secrecy came to a dramatic end.

That Bob Lazar wound up at Area 51 owing to a job referral by the Hungarian-born nuclear physicist [Dr. Edward Teller](#) is perfectly ironic. Teller coinveted the world's most powerful weapon of mass destruction, the thermonuclear bomb, and tested many incarnations of his diabolical creation just a few miles over the hill from Area 51, in the numbered sectors that make up the Nevada Test Site. The test site is America's only domestic atomic-bomb range and is Area 51's working partner. Area 12, Area 19, and Area 20, inside the test site's legal boundaries, are just some of the parcels of land that bear Dr. Teller's handprint: charred earth, atomic craters, underground tunnels contaminated with plutonium.* Area 51 sits just outside.

Bob Lazar first met Edward Teller in Los Alamos, New Mexico, in June of 1982, when Lazar only twenty-three years old. Lazar was working at the Los Alamos Nuclear Laboratory in radioactive-particle detection as a contractor for the Kirk-Mayer Corporation when he arrived early [for a lecture Teller was giving](#) in the lab's auditorium. Before the

lecture, Lazar spotted Teller reading the *Los Alamos Monitor*, where, as coincidence would have it, there was [a page-1 story featuring Bob Lazar](#) and his new invention, the jet car. Lazar seized the opportunity. "That's me you're reading about," he famously told Teller as a means of engaging him in conversation. Here was an ambitious young scientist reaching out to the jaded, gluttonous grandfather of mass destruction. In hindsight it makes perfect sense that the ultimate consequences of this moment were not beneficent for Lazar.

Six years later, [Lazar's life had reached an unexpected low](#). He'd been fired from his job at Los Alamos. Terrible financial problems set in. He and his wife, Carol Strong, who was thirteen years his senior, moved to Las Vegas and opened up a photo-processing shop. The marriage fell apart. Lazar remarried a woman named [Tracy Murk](#), who'd worked as a clerk for the Lazars. Two days after Bob Lazar's wedding to Tracy, his first wife, Carol, [committed suicide by inhaling carbon monoxide](#) in a shuttered garage. Lazar declared bankruptcy and sought advanced engineering work. He reached out to everyone he could think of, including Dr. Edward Teller, who was now spearheading President Reagan's Strategic Defense Initiative, or Star Wars. In 1988, Teller found Lazar a job.

This job was far from any old advanced engineering job. Edward Teller had recommended Bob Lazar to the most powerful defense-industry contractor at Area 51, a company called EG&G. Among the thousands of top secret and Q-cleared contractors who have worked on classified and black projects at the Nevada Test Site and Area 51, none has had as much power and access, or as little oversight, as EG&G. On Teller's instruction, Lazar called a telephone number. A person at the other end of the line told him to go to McCarran Airport, in downtown Las Vegas, on a specific date in December—to the EG&G building there. Lazar was told he would be flown by private aircraft to Groom Lake. He was excited and followed orders. Inside the EG&G building, he was introduced to a man called Dennis Mariani who would soon become his supervisor. The two men went to the south end of the airport and into a secure hangar ringed by security fences and guarded by men with guns. There, EG&G ran a fleet of 737 airplanes that flew back and forth to Groom Lake—and still do. Because they flew with the call sign Janet, this private Area 51 commuter fleet had become known as Janet Airlines. Lazar and his supervisor passed through security and boarded a white aircraft with no markings or logo, just a long red stripe running the length of the airplane.

[Fly to Area 51](#) on a northerly course from Las Vegas and you'll see a Nevada landscape that is classic American Southwest: snowcapped mountains, rolling hills, and desert valley floors. Bob Lazar would not have seen any of this on his approach to Groom Lake because the window curtains on his Janet Airlines flight would have been drawn—they always are when newcomers arrive. The airspace directly over Area 51 has been restricted since the mid-1950s, which means no one peers down onto Area 51 without authorization except satellites circling the globe in outer space. By the time Lazar arrived, the 575-square-mile airspace had long been nicknamed the Box, and Air Force pilots at nearby Nellis Air Force Base know never to enter it. Distinctly visible at the very center of Area 51's Box sits a near-perfect six-mile-diameter endorheic basin, also known as a dry lake. It was the lake bed itself that originally appealed to the CIA; for decades it had

doubled as a natural runway for Area 51's secret spy planes.

Almost everything visible on approach to Area 51 from the air is restricted government land. There are no public highways, no shopping malls, no twentieth-century urban sprawl. Where the land is hilly, Joshua trees and yucca plants grow, their long spiky leaves extended skyward like swords. Where the land is flat, it is barren and bald. Except for creosote bushes and tumbleweed, very little grows out here on the desert floor. The physical base—its hangars, runways, dormitories, and towers—begins at the southernmost tip of Groom's dry lake. The structures spread out in rows, heading south down the Emigrant Valley floor. The hangars' metal rooftops catch the sunlight and reflect up as the Janet airplane enters the Box. A huge antenna tower rises up from the desert floor. The power plant's cooling tower comes into view, as do the antennas on the radio-shop roof, located at the end of one of the two, perpendicular taxiways. Radar antennas spin. One dish is sixty feet in diameter and always faces the sky; its beams are so powerful they would instantly cook the internal organs of any living thing. The Quick Kill system, [designed by Raytheon to detect incoming missile signals](#), sits at the edge of the dry lake bed not far from the famous pylon featured in Lockheed publicity photos but never officially identified as located at Area 51. Insiders call the pylon "the pole"—it's where the radar cross section on prototype stealth aircraft is measured. State-of-the-art, million-dollar black aircraft are turned upside down and hoisted aloft on this pole, making each one look tiny and insignificant in the massive Groom Lake expanse, like a bug on a pin in a viewing case.

As a passenger on the Janet 737 gets closer, it becomes easier for the eye to judge distance. Groom Mountain reveals itself as a massive summit that reaches 9,348 feet. It towers over the base at its northernmost end and is rife with Area 51 history and lore. Countless Area 51 commanding officers have spent weekends on the mountain hunting deer. Hidden inside its craggy lower peaks are two old lead and silver mines named Black Metal and Sheehan Mine. In the 1950s, one ancient miner hung on to his federal mining rights with such ferocity that the government ended up giving him a security clearance and briefing him on Area 51 activities rather than continuing to fight to remove him. [The miner kept the secrecy oath](#) and took Area 51's early secrets with him to the grave.

At the southernmost end of the base sits a gravel pit and concrete-mixing facilities that are used to construct temporary buildings that need to go up quick. Against the sloping hills to the west sit the old fuel-storage tanks that once housed JP-7 jet fuel, specially designed for CIA spy planes that needed to withstand temperature fluctuations from -90 degrees to 285 degrees Fahrenheit. To the south, on a plateau of its own, is the weapons assembly and storage facility. This is recognizable from the air by a tall ring of mounded dirt meant to deflect blasts in the event of an accident. Behind the weapons depot, a single-lane dirt road runs up over the top of the hill and dumps back down into the Nevada Test Site next door, at Gate 800 (sometimes called Gate 700). Old-timers from the U-2 spy plane days called this [access point Gate 385](#), originally the only way in to Area 51 if you were not arriving by air. On the Area 51 side of the gate, the shipping and receiving building can be found. In the height of the nuclear testing days, the 1950s and 1960s,

[trucks from the Atomic Energy Commission motor pool](#) spent hours in the parking lot here while their appropriately cleared drivers enjoyed Area 51's legendary gourmet chow.

In December of 1988, had Lazar been looking out the Janet 737 aircraft window just before landing, off to the northwest he would have seen EG&G radar sites dotting the valley floor in a diagonal line. Part of the Air Force's foreign technology division, which began in 1968, these radar sites include coveted Soviet radar systems acquired from Eastern-bloc countries and captured during Middle East wars. Also to the north lies Slater Lake, named after Commander Slater and dug by contractors during the Vietnam War. Around the lake's sloped banks are trees unusual for the area: tall and leafy, looking as if they belong in Europe or on the East Coast. This is the only nonindigenous plant life in all of Area 51. Move ahead to December of 1998, and five miles beyond Slater Lake, across the flat, dry valley floor, an airplane passenger would have seen a crew of [men dressed in HAZMAT suits](#) busily removing the top six inches of soil from a 269-acre parcel contaminated with plutonium. Set inside Area 51's airspace but in a quadrant of its own, this sector was designated Area 13. What the men did was known to only a select few. Like all things at Area 51, if a person didn't have a need-to-know, he knew not to ask.

The airplane carrying Lazar would likely have landed on the easternmost runway and then taxied up to the Janet terminal, near the security building. Lazar and his supervisor, Dennis Mariani, [would have gone through security there](#). According to Lazar, he was taken to a cafeteria on the base. When a bus pulled up, he and Mariani climbed aboard. Lazar said he could not see exactly where he was taken because the curtains on the bus windows were drawn. If Lazar had been able to look outside he would have seen the green grass of the Area 51 baseball field, where, beginning in the mid-1960s, during the bonanza of underground nuclear testing, Area 51 workers battled Nevada Test Site workers at weekly softball games. Lazar's bus would have also driven past the outdoor tennis courts, where Dr. Albert Wheelon, the former Mayor of Area 51, loved to play [tennis matches](#) at midnight. Lazar would have passed the swimming pool where CIA project pilots trained for ocean bailouts by [jumping into the pool](#) wearing their high-altitude flight suits. Lazar would have passed the [Area 51 bar, called Sam's Place](#), built by and named after the great Area 51 navigator Sam Pizzo and in which a photograph of a nearly naked Sophia Loren used to drive men wild.

In December of 1988, Lazar had no idea that he was stepping into a deep, textured, and totally secret history. He couldn't have known it because the men described above wouldn't tell their stories for another twenty years, not until their CIA project was declassified and they spoke on the record for this book. But Lazar's arrival at Area 51 made its own kind of history, albeit in a radical and controversial way. In making Area 51 public, as he subsequently did, Lazar transformed the place from a clandestine research, development, and test-flight facility into a national enigma. From the moment Lazar appeared on *Eyewitness News* in Las Vegas making utterly shocking allegations, the public's fascination with Area 51, already percolating for decades, took on a life of its own. Movies, television shows, record albums, and video games would spring forth, all paying homage to a secret base that no outsider could ever visit.

[According to Lazar](#), that first day he was at Area 51 he was driven on a bumpy dirt

road for approximately twenty or thirty minutes before arriving at a mysterious complex of hangars built into the side of a mountain somewhere on the outskirts of Groom Lake. There, at an outpost facility Lazar says was called S-4, he was processed through a security system far more intense than the one he'd been subjected to just a little earlier, at Area 51's primary base. He signed one document allowing his home telephone to be monitored and another that waived his constitutional rights. Then he was shown a flying saucer and told it would be his job to reverse engineer its antigravity propulsion system. All told, there were nine saucers at S-4, Lazar says. He says he was given a manual that explained that the flying saucers had come from another planet. Lazar also said he was shown drawings of beings that looked like aliens—the pilots, he inferred, of these outer-space crafts.

According to Lazar, over the following winter, he worked at S-4, mostly during the night, for a total of approximately ten days. The work was intense but sporadic, which frustrated him. Sometimes he worked only one night a week. He longed for more. He never told anyone about what he was doing at S-4, not even his wife, Tracy, or his best friend, Gene Huff. One night in early March of 1989, Lazar was being escorted down a hallway inside S-4 by two armed guards when he was ordered to keep his eyes forward. Instead, curiosity seized Bob Lazar. He glanced sideways, through a small, nine-by-nine-inch window, and for a brief moment, he says, he saw inside an unmarked room. He thought he saw a small, gray alien with a large head standing between two men dressed in white coats. When he tried to get a better look, he was pushed by a guard who told him to keep his eyes forward and down.

For Lazar, it was a turning point. Something shifted in him and he felt he could no longer bear the secret of the flying saucers or what was maybe an alien but "could have been a million things." Like the tragic literary figure Faust, Lazar had yearned for secret knowledge, information that other men did not possess. He got that at S-4. But unlike Faust, Bob Lazar did not hold up his end of the bargain. Instead, Lazar felt compelled to share what he had learned with his wife and his friend, meaning he broke his Area 51 secrecy oath. Lazar knew the schedule for the flying saucer test flights being conducted out at Groom Lake and he suggested to his wife, Tracy, his friend Gene Huff, and another friend named John Lear—a committed ufologist and the son of the man who invented the Learjet—that they come along with him and see for themselves.

The group made a trip down Highway 375 into the mountains behind Groom Lake. With them they brought high-powered binoculars and a video camera. They waited. Sure enough, they said, the activity began. Lazar's wife and friends saw what appeared to be a brightly lit saucer rise up from above the mountains that hid the Area 51 base from view. They watched it hover and land. The following Wednesday they returned to the site. Then they made a third visit, on April 5, 1989—this time down a long road leading into the base called Groom Lake Road—which ended in fiasco. The trespassers were discovered by Area 51 security guards, detained, and required to show ID. They answered questions for the Lincoln County Sheriff's Department and were let go.

The following day, Lazar reported to work at the EG&G building at McCarran Airport. He was met by Dennis Mariani, who informed Lazar that he would not be going out to

Groom Lake as planned. Instead, Lazar was driven to Indian Springs Air Force Base. The guard who had caught him the night before was helicoptered in from the Area 51 perimeter to confirm that Bob Lazar was one of the four people found snooping in the woods the night before. Lazar was told that he was no longer an employee of EG&G and if he ever went anywhere near Groom Lake again, alone or with friends, he would be arrested for espionage.

During his questioning at Indian Springs, he was allegedly given [transcripts of his wife's telephone conversations](#), which made clear to Lazar that his wife was having an affair. Lazar became convinced he was being followed by government agents. Someone shot out his tire when he was driving to the airport, he said. Fearing for his life, he decided to go public with his story and contacted *Eyewitness News* anchor George Knapp. Lazar's TV appearance in November of 1989 broke the station's record for viewers, but the original audience was limited to locals. It took some months for Lazar's story to go global. The man responsible for that happening was a Japanese American mortician living in Los Angeles named [Norio Hayakawa](#).

Decades later, Norio Hayakawa still recalls the moment he first heard Lazar on the radio. "It was late at night," Hayakawa explains. "I was working in the mortuary and listening to talk radio. KVEG out of Las Vegas, 'The Happening Show,' with host Billy Goodman. Remember, this was in early 1990, long before Art Bell and George Noory were doing 'Coast to Coast,'" Hayakawa recalls. "I heard Bob Lazar telling his story about S-Four and I became intrigued." As Hayakawa toiled away at the Fukui Mortuary in Little Tokyo, he listened to Bob Lazar talk about flying saucers. Having no television experience, Hayakawa contacted a Japanese magazine called *Mu*, renowned for its popular stories about UFOs. "*Mu* got in touch with me right away and said they were interested. And that Nippon TV was interested too." In a matter of weeks, Japan's leading TV station had dispatched an eight-man crew from Tokyo to Los Angeles. Hayakawa took them out to Las Vegas, where he'd arranged for an interview with Bob Lazar. That was in February of 1990.

"We went on a Wednesday because that was the day we'd heard on the radio they did flying saucer tests," Hayakawa recalls. "We interviewed Lazar for three or four hours. He was a strange person. [He had bodyguards](#) with him in his house who followed him around everywhere he went. But we were satisfied with the interview. We decided to try and film some of the saucer activity at Area 51." Hayakawa asked Lazar if he would take them to the lookout point on Tikaboo Mountain off Highway 375. Lazar declined but told them exactly where to go and at what time. "We went to the place and set up our equipment. Lo and behold, just after sundown, a bright orangeish light came rising up off the land near Groom Lake. We were filming. It came up and made a fast directional change. This happened three times. We couldn't believe it," Hayakawa says. At the time, he was convinced that what he saw was a flying saucer—just like Lazar had said.

Hayakawa showed the footage to the magazine's bosses in Japan, who were thrilled. The TV station had paid Lazar a little over five thousand dollars for a two-hour segment about his experience at Area 51. Part of the deal was that Lazar was going to fly to Tokyo with Norio Hayakawa to do a fifteen-minute interview there. Instead, just a few days before

the show, Lazar called the director of Nippon TV and said federal agents were preventing him from leaving the country. Lazar agreed to appear on the show via telephone and answered questions from telephone callers instead. "The program aired in Japan's golden hour," Hayakawa says, "prime time." Thirty million Japanese viewers tuned in. "The program introduced Japan to Area 51."

As Lazar's Area 51 story became known around the world, Bob Lazar the person was scrutinized by a voracious press. Every detail of his flawed background was aired as dirty laundry for the public to dissect. It appeared he'd lied about where he went to school. Lazar said he had a degree from MIT, but the university says it had no record of him. In Las Vegas, Lazar was arrested on a pandering charge. It didn't take long for him to disappear from the public eye. But Bob Lazar never changed his story about what he saw at Area 51's S-4. Had Lazar witnessed evidence of aliens and alien technology? Was his discrediting part of a government plot to silence him? Or was he a fabricator, a loose cannon who perceived what he saw as an opportunity for money and fame? He sold the film rights to his story, to New Line Cinema, in 1993. Lazar took two [lie detector tests](#), and both gave inconclusive results. The person administrating the test said it appeared that Lazar believed what he was saying was true.

"The odd part," says Norio Hayakawa, "is how in the years after Lazar, the story of Area 51 merged with the story of Roswell. If you stop anyone on the street and you ask them what they know about Area 51 they say aliens."

Or they say Roswell.

To the tens of millions of Americans who believe UFOs come from other planets, Roswell is the holy grail. But Roswell has not always been considered the pinnacle of UFO events. It too had a hidden history for many years.

"What you need to remember is that in 1978, the Roswell crash registered a point-zero-one on the scale in terms of important UFO crashes," explains [Stanton Friedman](#), a septuagenarian nuclear-physicist-turned-ufologist often referred to by Larry King and others as America's leading expert on UFOs. "Until the 1980s, the most important book about UFOs was called *Flying Saucers—Serious Business*, written by newsman Frank Edwards," Friedman says. "In the book, thousands of UFO sightings are discussed and yet Roswell is mentioned for maybe half a paragraph. That is not very much compared to now."

Until [Stanton Friedman's exposé on the Roswell incident](#), which he began in 1978, the story was limited to a few publicly known facts. During the first week of July 1947, in the middle of a powerful lightning storm, something crashed onto a rancher's property outside Roswell, New Mexico. The rancher, named W. W. Brazel, had been a famous cowboy in his earlier days. Brazel loaded the strange pieces of debris that had come down from the sky into his pickup truck and drove them to the local sheriff's office in Roswell. From there, Sheriff George Wilcox reported Brazel's findings to the Roswell Army Air Field down the road. The commander of the 509th Bomb Group at the base assigned two individuals to the W. W. Brazel case: an intelligence officer named Major Jesse Marcel and a press officer named Walter Haut.

Later that same day, Frank Joyce, a young stringer for United Press International and a

radio announcer at KGFL in Roswell, received a telephone call from the Roswell Army Air Field. It was press officer Walter Haut saying that he was bringing over a very important press release to be read on the air. Haut arrived at KGFL and handed Frank Joyce the original Roswell statement, which was printed in the paper later that afternoon, July 8, 1947, and in the *San Francisco Chronicle* the following day.

The many rumors regarding the flying disc became a reality yesterday when the intelligence office of the 509th Bomb Group of the Eighth Air Force, Roswell Army Air Field, was fortunate enough to gain possession of a disc through the cooperation of one of the local ranchers and the Sheriff's Office of Chaves County.

The flying object landed on a ranch near Roswell sometime last week. Not having phone facilities, the rancher stored the disc until such time as he was able to contact the Sheriff's office, who in turn notified Major Jesse A. Marcel, of the 509th Bomb Group Intelligence Office.

Action was immediately taken and the disc was picked up at the rancher's home. It was inspected at the Roswell Army Air Field and subsequently loaned by Major Marcel to higher headquarters.

Three hours after Haut dropped off the statement, the commander of the Roswell Army Air Field sent Walter Haut back to KGFL with a second press release stating that the first press release had been incorrect. What had crashed on W. W. Brazel's ranch outside Roswell was nothing more than a weather balloon. Photographs showing intelligence officer Major Jesse Marcel posing with the weather balloon were offered as proof. The story faded. No one in the town of Roswell, New Mexico, spoke of it publicly for more than thirty years. Then, in 1978, Stan Friedman and his UFO research partner, a man named Bill Moore, showed up in Roswell and began asking questions. "Bill and I went after the story the hard way," says Friedman. "There was no Internet back then. We went to libraries, dug through telephone records, made call after call." After two years of research, Friedman and Moore had interviewed more than sixty-two original witnesses to the Roswell incident. Those interviewed included intelligence officer Major Jesse Marcel and press officer Walter Haut.

It turned out that a lot more had happened in Roswell, New Mexico, in the first and second weeks of July 1947 than just a weather-balloon crash. For starters, large numbers of the military had descended upon the town. W. W. Brazel was jailed for almost a week. Some witnesses saw military police loading large boxes and crates onto military trucks. Other witnesses saw large boxes being loaded onto military aircraft. The local coroner received a mysterious call requesting several child-size coffins that could be hermetically sealed. Townsfolk were threatened with federal prison time if they spoke about what they saw. The majority of the stories relayed by the sixty-two witnesses to UFO researchers Friedman and Moore all had two factors in common. The first was that the crash, which included more than one crash site, involved a flying saucer, or round disc. The second assertion was jaw-dropping. Witnesses said they saw bodies. Not just any old bodies but

child-size, humanoid-type beings that had apparently been inside the flying saucer. These aviators had big heads, large oval eyes, and no noses. The conclusion that the majority of the witnesses drew for the UFO researchers was that these child-size aviators were not from this world.

In 1980, [a book based on Friedman and Moore's research was published](#). It was called *The Roswell Incident*. The lid was off Roswell, and the floodgates opened. "By 1986 a total of ninety-two people had come forward with eyewitness accounts of what really had happened back in 1947," Friedman asserts. Ufologists elevated the Roswell incident to sacred status; that is how it became the holy grail of UFOs.

When Bob Lazar went public with his story about flying saucers and a small, alien-looking being at S-4, just outside the base at Area 51, it would seem to follow that Stanton Friedman and his colleagues would champion Bob Lazar's story. Instead, the opposite happened. "Bob Lazar is a total fraud," Friedman contends. "He has no credibility as a scientist. He said he went to MIT. He did not. He called himself a nuclear physicist and he is not. I resent that. I got in to MIT and could not afford to go there. You can't make something like that up and expect to be taken seriously." Friedman says he does not care what Lazar says he saw. He can't get past the false statements Lazar made about himself. It was not like Friedman didn't try to have a face-to-face with Lazar. "I spoke with Lazar on the telephone in 1990. We arranged to have lunch [in Nevada] but he never showed up," Friedman explains. "Scientists normally have diplomas. They write papers, they appear in directories. I wanted to ask him why none of that applies to Bob Lazar. I tried to believe him. I was not antithetic to his story. He's obviously a very smart guy and not just because he could put a jet engine on the back of a car. But my conclusion about him is that he's a total fraud."

It is unfortunate the two men never had lunch. In talking, they might have realized how close to the truth—something far more earthly and shocking than anyone could have imagined—they both were. The true and uncensored story of Area 51 spans more than seven decades. The Roswell crash is but a thread, and Area 51 itself—the secret spot in the desert—has its origins in places and events far outside the fifty square miles of restricted airspace now known as the Box.

It all began in 1938, with an imaginary war of the worlds.

Imagine a War of the Worlds

On Halloween eve in 1938, mass hysteria descended upon New Jersey as CBS Radio broadcast a narrative adaptation of Victorian-era science fiction novel *The War of the Worlds*. Listening to the live radio play, many people became convinced that Martians were attacking Earth, in New Jersey, and killing huge numbers of Americans. "Ladies and gentlemen," the show's narrator began, "we interrupt our program of dance music to bring you a special bulletin." A huge, flaming meteorite had crashed into farmland at Grover's Mill, twenty-two miles north of Trenton, listeners were told.

Frank Readick, playing Carl Phillips, a CBS reporter claiming to be physically on scene, delivered a breaking report: "The object doesn't look very much like a meteor," Phillips said, his voice shaky. "It looks more like a huge cylinder. The metal casing is definitely extraterrestrial!" Things quickly moved from harmless to malevolent and Phillips began to scream: "Ladies and gentlemen, this is the most terrifying thing I have ever witnessed! Someone's crawling out of the hollow top!" Phillips explained that extraterrestrial beings had begun wriggling their way out of the crashed craft, revealing bodies as large as bears' but with snakelike tentacles instead of limbs. The woods were ablaze, Phillips screamed. Barns were burning down, and the gas tanks of parked automobiles had been targeted to explode. Radio listeners heard wailing and then silence, indicating the newsman was now dead. Next, a man solemnly identified himself as the secretary of the interior and interrupted the report. "Citizens of the nation," he declared, "I shall not try to conceal the gravity of the situation that confronts the country." Scores were dead, including members of the New Jersey police force. The U.S. Army had been mobilized. New York City was under evacuation orders. Interplanetary warfare had begun.

Although the 8:00 p.m. broadcast had opened with a brief announcement that the story was science fiction and based on the novel by H. G. Wells, huge numbers of people across America believed it was real. Those who turned their radio dials for confirmation learned that other radio stations had interrupted their own broadcasts to follow the exclusive, live CBS Radio coverage about the Mars attack. Thousands called the station and thousands more called the police. Switchboards jammed. Hospitals began admitting people for hysteria and shock. Families in New Jersey rushed out of their homes to inform anyone not in the know that the world was experiencing a Martian attack. The state police sent a Teletype over their communications system noting the broadcast drama was "an imaginary affair," but the hysteria was already well beyond local law enforcement's control. Across New York and New Jersey, people loaded up their cars and fled. To many, it was the beginning of the end of the world.

The following morning, the *New York Times* carried a page-1, above-the-fold story headlined "Radio Listeners in a Panic Taking War Drama as Fact." Across the nation, there had been reports of "disrupted households, interrupted religious services, traffic jams and clogged communications systems." All through the night, in churches from Harlem to San Diego, people prayed for salvation. In the month that followed, more than 12,500 news stories discussed the *War of the Worlds* broadcast. The Federal Communications Commission (FCC) opened an investigation but in the end decided not to penalize CBS, largely on the grounds of freedom of speech. It was not [the FCC's role](#) to "censor what shall or shall not be said over the radio," Commissioner T. A. M. Craven said. "The public does not want a spineless radio."

The 1938 *War of the Worlds* broadcast tapped into the nation's growing fears. Just two weeks before, Adolf Hitler's troops had invaded Czechoslovakia, leaving the security of Europe unclear. Rapid advances in science and technology, which included radar, jet engines, and microwaves, left many Depression-era Americans overwhelmed by how science might affect a coming war. Death rays and murderous Martians may have been pure science fiction in 1938 but the concepts played on people's fears of invasion and annihilation. Man has always been afraid of the sneak attack, which is exactly what Hitler had just done in Czechoslovakia and what Japan would soon accomplish at Pearl Harbor. The weapons introduced in World War II included rockets, drones, and the atomic bombs —were all foreshadowed in Wells's story. Advances in science were about to fundamentally change the face of war and make science fiction not as fictional as it had once been. World War II would leave fifty million dead.

From the moment it hit the airwaves, the *War of the Worlds* radio broadcast had a profound effect on the American military. The following month, a handful of "military listeners" relayed their sanitized thoughts on the subject to reporters with the Associated Press. "What struck the military listeners most about the radio play was its immediate emotional effect," the officials told the AP. "Thousands of persons believed a real invasion had been unleashed. They exhibited all the symptoms of fear, panic, determination to resist, desperation, bravery, excitement or fatalism that real war would have produced," which in turn "shows the government will have to insist on the close co-operation of radio in any future war." What these military men were not saying was that there was serious concern among strategists and policy makers that entire segments of the population could be so easily manipulated into thinking that something false was something true. Americans had taken very real, physical actions based on something entirely made up. Pandemonium had ensued. Totalitarian nations were able to manipulate their citizens like this, but in America? This kind of mass control had never been seen so clearly and definitively before.

America was not the only place where government officials were impressed by how easily people could be influenced by a radio broadcast. [Adolf Hitler took note as well](#). He referred to the Americans' hysterical reaction to the *War of the Worlds* broadcast in a Berlin speech, calling it "evidence of the decadence and corrupt condition of democracy." It was later revealed that in the Soviet Union, [Joseph Stalin had also been](#) paying attention. And President Roosevelt's top science adviser, [Vannevar Bush, observed the](#)

[effects](#) of the fictional radio broadcast with a discerning eye. The public's tendency to panic alarmed him, he would later tell W. Cameron Forbes, his colleague at the Carnegie Institution. Three months later, alarming news again hit the airwaves, but this time it was pure science, not science fiction.

On January 26, 1939, the Carnegie Institution sponsored a press conference to announce the discovery of nuclear fission to the world. When the declaration was made that two German-born scientists had succeeded in splitting the atom, a number of physicists who were present literally ran from the room. The realization was as profound as it was devastating. If scientists could split one atom then surely they would be able to create a chain reaction of splitting atoms—the result of which would be an enormous release of energy. Three months later, the *New York Times* reported that scientists at a follow-up conference were heard arguing “over the probability of some scientist blowing up a sizable portion of the Earth with a tiny bit of uranium.” This was the terrifying prospect now facing the world. [“Science Discovers Real Frankenstein”](#) headlined an article in the *Boston Herald* that went on to explain that now “an unscrupulous dictator, lustng for conquest, [could] wipe Boston, Worcester and Providence out of existence.” Vannevar Bush disagreed with the popular press. The “real danger” in the discovery of fission, he told Forbes, was not atomic energy itself but the public’s tendency to panic over things they did not understand. To make his point, Bush used the [War of the Worlds radio broadcast as an example](#).

Atomic energy, it turned out, was far more powerful than anything previously made by man. Six years and seven months after the announcement of the discovery of fission, America dropped atomic bombs on Hiroshima and Nagasaki, essentially wiping out both of those cities and a quarter of a million people living there. [President Roosevelt had appointed](#) Vannevar Bush to lead the group that made the bomb. Bush was the director of the Manhattan Project, the nation’s first true black operation, and he ran it with totalitarian-like control.

When the Japanese Empire surrendered, Vannevar Bush did not rejoice so much as ponder [his next move](#). For eighteen days he watched as Joseph Stalin marched Soviet troops into eastern Asia, positioning his Red Army forces in China, Manchuria, Sakhalin Island, and North Korea. When the fighting finally stopped, Bush’s response had become clear. He would convince President Truman that the Soviet Union could not be trusted. In facing down America’s new enemy, the nation needed even more advanced technologies to fight future wars. The most recent war might have ended, but science needed to stay on the forward march.

[As Americans celebrated peace](#) (after the atomic bombs were dropped on Hiroshima and Nagasaki, public opinion polls showed that more than 85 percent of Americans approved of the bombings), Vannevar Bush and members of the War Department began planning to use the atomic bomb again in a live test—a kind of mock nuclear naval battle, which they hoped could take place the following summer in the Marshall Islands in the Pacific. There, in a deep lagoon at Bikini Atoll, dozens of captured Japanese and German warships would be blown up using live nuclear bombs. The operation would illustrate to the world just how formidable America’s new weapons were. It would be called Operation

Crossroads. As its name implied, the event marked a critical juncture. America was signaling to Russia it was ready to do battle with nuclear bombs.

In less than a year, [Operation Crossroads was in full swing](#) on Bikini Atoll, a twenty-five-mile ring of red coral islands encircling a clear, blue lagoon. A July 1946 memo, one of many marked Secret, instructed the men not to swim in the lagoon wearing red bathing trunks. [There were barracuda everywhere](#). Word was that the fanged-tooth fish would attack swimmers without warning.

The natives of Bikini, all 167 of them, were [led by a king named Juda](#), but in July of 1946, none of them were on Bikini Atoll anymore. [The U.S. Navy had evacuated the natives to Rongerik Atoll](#), 125 miles to the east. The upcoming [three-bomb atomic test series](#) would make their homeland unsafe for a while, the natives were told. But it was going to help ensure world peace.

On the shores of the atoll, [a young man named Alfred O'Donnell](#) lay in his Quonset hut listening to the wind blow and the rain pound against the reinforced sheet-metal roof above him. He was unable to sleep. "The reason was because I had too much to worry about," O'Donnell explains, remembering Crossroads after more than sixty years. "Is everything all right? Is the bomb going to go off, like planned?" What the twenty-four-year-old weapons engineer was worrying about were the sea creatures in the lagoon. "Let's say an octopus came into contact with one of the bomb's wires. What would happen? What if something got knocked out of place?" The wires O'Donnell referred to ran from a concrete bunker on Bikini called the control point and out into the ocean, where they connected to a twenty-three-kiloton atomic bomb code-named Baker. The men in the U.S. Navy's Task Force One gave the bomb a more colorful name: they called it Helen of Bikini, after the legendary femme fatale for whom so many ancient warriors laid down their lives. A nuclear weapon was both destructive and seductive, the sailors said, just like Helen of Troy had been.

As a leading member of the arming party that would wire and fire the atomic bombs during Operation Crossroads, O'Donnell had a tremendous responsibility, especially for someone so young. "Five years earlier I was just a kid from Boston with a normal life. All I was thinking about for my future was a baseball career," O'Donnell recalls. In 1941, when O'Donnell was in high school, he'd been recruited by the Boston Braves, thanks to his exceptional .423 batting average. Then came the war, and everything changed. He married Ruth. He joined the Navy, where he learned radio and electronics. In both subjects he quickly excelled. Back in Boston after the war, O'Donnell was mysteriously recruited for a job with Raytheon Production Corporation, a defense contract company cofounded by Vannevar Bush. What exactly the job entailed, O'Donnell did not know when he signed on. The recruiters told him he would find out more details once he was granted a security clearance. "I didn't know what a security clearance was back then," O'Donnell recalls. After a month, he learned that he was now part of the Manhattan Project. He was transferred to a small engineering company named for the three MIT professors who ran it: Edgerton, Germeshausen, and Grier. Later, the company shortened its name to EG&G. There, O'Donnell was trained to wire a nuclear bomb by Herbert Grier, the man who had invented the firing systems for the bombs dropped on Japan.

"The next thing I knew I was asked to go to Bikini in the summer of 1946," says O'Donnell. "I did not want to go. I'd fought on those atolls during the war. I'd seen bodies of young soldiers floating dead in the water and I swore I'd never go back. But Ruth and I had a baby on the way and she said go, and I did." He went on, "I missed Ruth. She was pregnant, thank God, but I wondered what she was doing back in Boston where we lived. Was she able to take out the garbage all right?" Forty-two thousand people had gathered on Bikini Atoll to witness Operation Crossroads, and O'Donnell could not sleep because he felt all of those eyes were on him. Thinking about Ruth was how O'Donnell stopped worrying about how well he had wired the bomb.

Elsewhere on Bikini Atoll, Colonel Richard Sully Leghorn cut the figure of a war hero. Handsome and mustached, Leghorn looked just like Clark Gable in *It Happened One Night*. Commanding officer of Task Force 1.5.2, Leghorn was one of the pilots leading the mission to photograph the nuclear bombs from the air. Leghorn spent afternoons with Navy navigators rehearsing flight paths that, come shot day, would take him within viewing distance of the atomic cloud. At twenty-seven years old, Richard Leghorn was already a public figure. He'd been the young reconnaissance officer who'd taken photographs of the beaches of Normandy on D-day. "[In the face of intense fire](#) from some of the strongest anti-aircraft installations in western Europe, Richard Leghorn photographed bridges, rail junctions, airfields and other targets," the U.S. Army Air Forces was proud to say. Leghorn, a physicist, had a degree from the Massachusetts Institute of Technology. He loved the scientific concept of photography, which was why he went to work for Eastman Kodak after the war. Then, in early 1946, the Navy called him back for temporary duty on Operation Crossroads. He trained at the Roswell Army Air Field in New Mexico and flew the military's best photographic equipment across the Pacific. Now here he was on Bikini. Soon, Leghorn would be soaring over the mushroom cloud taking pictures of what happens to warships when they are targeted by a nuclear bomb.

At central command, Curtis Emerson LeMay stood chomping on a cigar. LeMay was going over procedures and protocols for the Crossroads event. Just thirty-nine years old, LeMay had already graced the cover of *Time* magazine and was known around the world as the man who'd helped end World War II. By the time he was forty-five, Curtis LeMay would become the youngest four-star general in the U.S. military since Ulysses S. Grant. Dark, brooding, and of legendary self-will, LeMay had led the incendiary bombing campaigns against Japanese cities, including Tokyo. When the napalm bombs didn't end war in the Pacific, President Truman authorized LeMay to lead the 509th Operations Group, based on Tinian Island, to drop the Hiroshima and Nagasaki atomic bombs.

[Curtis LeMay rarely smiled](#). When he spoke, it was described as "not much more than a snarl." Critics called him a coldhearted military strategist and attributed his calculated vision to a troubled upbringing. His father was a violent drunk, and LeMay was forced to help support the family when he was a child. At the age of seven, he was shooting sparrows for an old-lady neighbor who paid [five cents per bird](#). Though journalist I. F. Stone called LeMay a "[Caveman in a Jet Bomber](#)," his men adored him, often noting that he was not someone who sent his men into battle but one who led them there. During the war in the Pacific, LeMay often flew lead on bombing raids. But now the war was over and

LeMay was thinking about a military strategy for the future. Beginning at Crossroads, he would shape the U.S. Air Force in a way no other individual has since. As deputy chief of air staff for research and development of the U.S. Army Air Forces, [LeMay was at Bikini to determine](#) how effective the bomb could be in nuclear naval battles against the Soviet Union.

[Operation Crossroads was a huge event](#), described as "the apocalypse with fireworks." To someone who didn't know World War II was over, the scene on the lagoon at Bikini that day might have seemed surreal. An armada of captured German and Japanese warships had been lined up alongside retired American cruisers and destroyers. These were massive, football-field-size warships whose individual might was dwarfed only by the combined power of them all. Eight submarines had been tethered to anchors on the ocean floor. There were over [one million tons of battle-weary steel](#) floating on the ocean without a single human on board. Instead, thousands of pigs, sheep, and rats had been set out in the South Pacific sunshine, in cages or in leg irons, and they would face the coming atomic blast. Some of the animals had metal tags around their necks; others had Geiger counters clipped to their ears. The Navy wanted to determine how living things fared against nuclear bombs.

Forty miles west of the lagoon, [Alfred O'Donnell stood below deck](#) in the control room of an observation ship watching the control bay. Above him, on deck, Los Alamos scientists, generals, admirals, and dignitaries waited in great anticipation for the bomb. Shielding their eyes were dark, 4.5-density goggles, necessary measures to prevent anyone from being blinded by the nuclear flash. O'Donnell worked the instrument panel in front of him. There were sixty seconds to go. He watched the auto sequence timer perform its function. With less than a minute remaining, the firing system moved into automation. The bars on the oscilloscopes moved from left to right as the signals passed down through [the DN-11 relay system](#). There were ten seconds left. Then five seconds. The light for the arming signal blinked on. Two seconds. The firing signal flashed.

It was zero time.

O'Donnell kept his eyes on the control panel down to the last second, as was his job. In the event of a malfunction, it would be up to him to let the commander know. But the signal had been sent without a problem, and now it was moving down the underwater wires, racing toward the Baker bomb. If O'Donnell moved fast, he could make it onto the ship's deck in time to see the nuclear blast. Racing out of the control room, he pulled his goggles over his eyes. Up on the ship's deck he took a deep breath of sea air. There was nothing to see. The world in front of him was pitch-black viewed through the goggles. He stared into the blackness; it was quiet and still. He could have heard a pin drop. He listened to people breathing in the silence. Facing the lagoon, O'Donnell let go of the ship's railing and walked out farther on the deck. He knew the distance from the button to the bomb and the time it took for the signal to get there. In a matter of seconds, the signal would reach its destination.

There was a blinding flash and things were not black anymore. Then there was a white-orange light that seemed brighter than the sun as the world in front of O'Donnell transformed again, this time to a fiery red. He watched a massive, megaton column of

water rise up out of the lagoon. The mushroom cloud began to form. "Monstrous! Terrifying! It kept getting bigger and bigger," O'Donnell recalls. "It was huge. The cloud. The mushroom cap. Like watching huge petals unfold on a giant flower. Up and out, the petals curled around and came back down under the bottom of the cap of the mushroom cloud." Next came the wind. O'Donnell says, "I watched the column as it started to bend. My eyes went back to the top of the mushroom cloud where ice was starting to form. The ice fell off and started to float down. Then it all disappeared into the fireball. Watching your first nuclear bomb go off is not something you ever forget."

Mesmerized by the Baker bomb's power, O'Donnell stood staring out over the sea from the ship's deck. He was so overwhelmed by what he'd witnessed, he forgot all about the shock blast that would come his way next. The wave of a nuclear bomb travels at approximately one hundred miles per hour, which means it would reach the ship four minutes after the initial blast. "I forgot to hold on to the rail," O'Donnell explains. "When the shock wave came it picked me up and threw me ten feet back against the bulkhead." Lying on the ship's deck, his body badly bruised, O'Donnell thought to himself: You damn fool! You had been forewarned.

High above the lagoon, Colonel Richard Leghorn piloted his airplane through the bright blue sky. To the south, in the distance, cumulus clouds formed. The U.S. Army Air Forces navigators had sent Leghorn close enough to ground zero to assess what had happened down below on the lagoon, but far enough away so as not to be irradiated by the mushroom cloud. [What Leghorn witnessed horrified him](#). He watched Baker's underwater fireball produce a hollow column, or chimney, of radioactive water six thousand feet tall, two thousand feet wide, and with walls three hundred feet thick. The warships below were [tossed up into the air like bathtub](#) toys. The Japanese battleship *Nagato*, formerly the flagship of Admiral Isoroku Yamamoto, the man responsible for planning the attack on Pearl Harbor, was thrown four hundred yards. The retired USS *Arkansas*, all twenty-seven thousand tons of it, was upended against the water column on its nose. Eight mighty battleships disappeared in the nuclear inferno. Had the armada floating in the lagoon been crewed to capacity, thirty-five thousand sailors would have been vaporized.

From up in the air Colonel Leghorn considered what he was witnessing in the exact moment that the bomb went off. It was not as if Leghorn were a stranger to the violence of war. He had flown more than eighty reconnaissance missions over enemy-controlled territory in Europe, from 1943 to 1945. On D-day, at Normandy, Leghorn made three individual passes over the beachheads in a single-seat airplane without any guns. But like O'Donnell, Leghorn was able to recollect Operation Crossroads with precise detail after more than sixty years. For Colonel Leghorn, this is because he remembered exactly how it made him feel. "I knew in that life-defining moment the world could not ever afford to have a nuclear war," Leghorn says. The only sane path to military superiority in an atomic age was to spy on the enemy so that you always had more information about the enemy than the enemy had about you. Leghorn says, "That was the way to prevent war and that is how I formulated the original idea of overhead."

At the time, in 1946, America's intelligence services had virtually no idea about what was going on in Russia [west of the Volga River](#) and absolutely no idea what was

happening west of the Ural Mountains. Leghorn believed that if the United States could fly secret reconnaissance missions over Russia's enormous landmass and photograph its military installations, the nation could stay ahead of the Russians. By spying on the enemy, America could learn what atomic capabilities the Russians had, what plutonium- or uranium-processing facilities existed, what shipyards or missile-launch facilities the Soviets were constructing. And because Leghorn was a scientist, he could imagine precisely the way the military could accomplish this. His idea was to create a state-of-the-art spy plane that could fly higher than the enemy's fighter jets could climb or than their antiaircraft missiles could travel. In that moment during Operation Crossroads, Leghorn committed himself to developing this new philosophy of spying on the enemy from above, a concept that would come to be known as overhead, or aerial, espionage. Leghorn's efforts would take him from the halls of Congress to the corridors of the U.S. Air Force Strategic Air Command. There, he would be at odds with a third set of eyes watching the twenty-three-kiloton Baker bomb at Crossroads. The eyes of Curtis LeMay.

LeMay's perspective could not have been more diametrically opposed to Leghorn's spy plane idea. LeMay believed that atomic bombs, not conventional explosives, won wars. Japan did not surrender after the firebombing of Tokyo. The empire surrendered only after America dropped its second nuclear bomb. During the atomic tests at Bikini, LeMay knew what only a few others knew, and that was that the Joint Chiefs of Staff had recently reversed America's long-standing national policy of only going to war if attacked first. The JCS's new and top secret first-strike policy, code-named Pincher, now allowed the American military to "strike a first blow if necessary." A single effort could include as many as thirty atomic bombs dropped at once. The new and unprecedented policy had begun as a planning document less than one month after the Japanese surrendered, on August 15, 1945. Ten months later, on June 18, 1946, the policy legally took effect. No doubt this influenced LeMay's perspective at Crossroads.

When it came time for LeMay to present his observations on the test series to the Joint Chiefs of Staff, he narrowed them down to three succinct points. "Atomic bombs in numbers conceded to be available in the foreseeable future can nullify any nation's military effort and demolish its social and economic structures." In other words, LeMay would argue, America needed lots and lots of these bombs. LeMay's second point was even more extreme: "In conjunction with other mass destruction weapons, it is possible to depopulate vast areas of the Earth's surface, leaving only vestigial remnants of man's material works." But it was LeMay's third point that would fundamentally shape the future U.S. Air Force, which would come into existence the following year: "The atomic bomb emphasizes the requirement for the most effective means of delivery in being; there must be the most effective atomic bomb striking force possible." What LeMay was arguing for was a massive fleet of bombers to drop these nuclear bombs.

LeMay got all three wishes. Three years later, after he was promoted to commander of Strategic Air Command, the Joint Chiefs of Staff would raise the number of bombs that could be used in a first strike against the Soviets from 30 to 133. LeMay was also one of the most powerful advocates of the creation of a new and thousand-times-bigger nuclear bomb, called the hydrogen bomb, the plans of which were being spearheaded by Dr.

Edward Teller. Over the next forty-four years, seventy thousand nuclear weapons would be produced by the United States. LeMay was definitely not interested in spy planes or overhead. Spy planes didn't have guns and they couldn't carry weapons. Military might was the way to keep ahead of the enemy in the atomic age. That was the way to win wars.

[Halfway across the world](#), in Moscow, in a military fortress called the Kremlin, Joseph Stalin saw what was going on at Operation Crossroads but with an altogether different set of eyes. First excluded from but then invited to the Navy's nuclear tests at Bikini Atoll, the Soviet Union had two representatives observing, one physicist and one spy. The physicist was with the Radium Institute, and the spy was a member of the MBD, the Ministry of State Security, which was the precursor to the KGB. The cover story for the spy was that he was a correspondent for the newspaper *Pravda*.

To Joseph Stalin, the atomic tests at Bikini were America's way of signaling to the rest of the world that the nation was not done using nuclear bombs. It also confirmed for the already paranoid Stalin that the Americans were ready to deceive him, just as Adolf Hitler had four years earlier when Stalin agreed to a nonaggression treaty with Nazi Germany and then was double-crossed in a deadly sneak attack. Unknown to the Americans, as Stalin watched Crossroads he did so with confidence, knowing that his own nuclear program was well advanced. In just five months, the Soviet Union's first [chain-reacting atomic pile would go critical](#), paving the way for Russia's first atomic bomb. But what has never before been disclosed is that [Joseph Stalin was developing another secret weapon](#) for his arsenal, separate from the atomic bomb. It was almost straight from the radio hoax *War of the Worlds*—something that could sow terror in the hearts of the fearful imperialists and send panic-stricken Americans running into the streets.

Ten months passed. It was nighttime on the Rio Grande, May 29, 1947, and Army scientists, engineers, and technicians at the White Sands Proving Ground in New Mexico were anxiously putting the final touches on their own American [secret weapon, called Hermes](#). The twenty-five-foot-long, three-thousand-pound rocket had originally been named V-2, or Vergeltungswaffe 2, which means "vengeance" in German. But Hermes sounded less spiteful—Hermes being the ancient Greek messenger of the gods.

The actual rocket that now stood on Test Stand 33 had [belonged to Adolf Hitler](#) just a little more than two years before. It had come off the same German slave-labor production lines as the rockets that the Third Reich had used to terrorize the people of London, Antwerp, and Paris during the war. The U.S. Army had confiscated nearly two hundred V-2s from inside Peenemünde, Germany's rocket manufacturing plant, and shipped them to White Sands beginning the first month after the war. Under a parallel, even more [secret project called Operation Paperclip](#)—the complete details of which remain classified as of 2011—118 captured German rocket scientists were given new lives and careers and brought to the missile range. Hundreds of others would follow.

Two of these German scientists were now readying Hermes for its test launch. One, [Wernher Von Braun](#), had invented this rocket, which was the world's first ballistic missile, or flying bomb. And the second scientist, [Dr. Ernst Steinhoff](#), had designed the V-2 rocket's brain. That spring night in 1947, the V-2 lifted up off the pad, rising slowly at first, with Von Braun and Steinhoff watching intently. Hermes consumed more than a thousand

pounds of rocket fuel in its first 2.5 seconds as it elevated to fifty feet. The next fifty feet were much easier, as were the hundred feet after that. The rocket gained speed, and the laws of physics kicked in: anything can fly if you make it move fast enough. Hermes was now fully aloft, climbing quickly into the night sky and headed for the upper atmosphere. At least that was the plan. Just a few moments later, the winged missile suddenly and unexpectedly reversed course. Instead of heading north to the uninhabited terrain [inside the two-million-square-acre](#) White Sands Proving Ground, the rocket began heading south toward downtown El Paso, Texas.

Dr. Steinhoff was watching the missile's trajectory through a telescope from an observation post one mile south of the launchpad, and having personally designed the V-2 rocket-guidance controls back when he worked for Adolf Hitler, Dr. Steinhoff was the one best equipped to recognize errors in the test. In the event that Steinhoff detected an errant launch, he would notify Army engineers, who would immediately cut the fuel to the rocket's motors via remote control, allowing it to crash safely inside the missile range. But [Dr. Steinhoff said nothing](#) as the misguided V-2 arced over El Paso and headed for Mexico. Minutes later, the rocket crash-landed into the Tepeyac Cemetery, three miles south of Juárez, a heavily populated city of 120,000. The violent blast shook virtually every building in El Paso and Juárez, [terrifying citizens](#) of both cities, who "swamped newspaper offices, police headquarters and radio stations with anxious telephone inquiries." The missile left a crater that was fifty feet wide and twenty-four feet deep. It was a miracle no one was killed.

Army officials rushed to Juárez to smooth over the event while Mexican soldiers were dispatched to guard the crater's rim. The mission, the men, and the rocket were all classified top secret; no one could know specific details about any of this. Investigators silenced Mexican officials by cleaning up the large, bowl-shaped cavity and paying for damages. But back at White Sands, reparations were not so easily made. [Allegations of sabotage](#) by the German scientists who were in charge of the top secret project overwhelmed the workload of the intelligence officers at White Sands. Attitudes toward the former Third Reich scientists who were now working for the United States tended to fall into two distinct categories at the time. There was the let-bygones-be-bygones approach, an attitude summed up by the Army officer in charge of Operation Paperclip, Bosquet Wev, who stated that to preoccupy oneself with "picayune details" about German scientists' past actions was ["beating a dead Nazi horse."](#) The logic behind this thinking was that a disbanded Third Reich presented no future harm to America but a burgeoning Soviet military certainly did—and if the Germans were working for us, they couldn't be working for them.

Others disagreed—including Albert Einstein. Five months before the Juárez crash, Einstein and the newly formed Federation of American Scientists appealed to President Truman: "We hold these individuals to be potentially dangerous... Their former eminence as Nazi party members and supporters raises the issue of their fitness to become American citizens and hold key positions in American industrial, scientific and educational institutions." For Einstein, making deals with war criminals was undemocratic as well as dangerous.

While the public debate went on, internal investigations began. And the rocket work at

White Sands continued. The German scientists had been testing V-2s there for fourteen months, and while investigations of the Juárez rocket crash were under way, three more missiles fired from Test Stand 33 crash-landed outside the restricted facility: one near Alamogordo, New Mexico, and another near Las Cruces, New Mexico. A third went down outside Juárez, Mexico, again. The German scientists blamed the near tragedies on old V-2 components. Seawater had corroded some of the parts during the original boat trip from Germany. But in top secret written reports, Army intelligence officers were building a case that would lay blame on the German scientists. The War Department intelligence unit that kept tabs on the German scientists had designated some of the Germans at the base as "under suspicion of being potential security risks." When not working, the men were confined to a six-acre section of the base. The officers' club was off-limits to all the Germans, including the rocket team's leaders, Steinhoff and Von Braun. It was in this atmosphere of failed tests and mistrust that an extraordinary event happened—one that, at first glance, seemed totally unrelated to the missile launches.

During the first week of July 1947, U.S. Signal Corps engineers began tracking two objects with remarkable flying capabilities moving across the southwestern United States. [What made the aircraft extraordinary](#) was that, although they flew in a traditional, forward-moving motion, the craft—whatever they were—began to hover sporadically before continuing to fly on. This kind of technology was beyond any aerodynamic capabilities the U.S. Air Force had in development in the summer of 1947. When multiple sources began reporting the same data, it became clear that the radar wasn't showing phantom returns, or electronic ghosts, but something real. Kirtland Army Air Force Base, just north of the White Sands Proving Ground, tracked the flying craft into its near vicinity. The commanding officer there ordered a decorated World War II pilot named Kenny Chandler into a fighter jet to locate and chase the unidentified flying craft. This fact has never before been disclosed.

Chandler never visually spotted what he'd been sent to look for. But within hours of Chandler's sweep of the skies, one of the flying objects crashed near Roswell, New Mexico. Immediately, the office of the Joint Chiefs of Staff, or JCS, took command and control and recovered the airframe and some propulsion equipment, including the crashed craft's power plant, or energy source. [The recovered craft looked nothing like a conventional aircraft](#). The vehicle had no tail and it had no wings. The fuselage was round, and there was a dome mounted on the top. In secret Army intelligence memos declassified in 1994, it would be referred to as a "flying disc." Most alarming was a fact kept secret until now—inside the disc, there was a very earthly hallmark: Russian writing. Block letters from the [Cyrillic alphabet had been stamped](#), or embossed, in a ring running around the inside of the craft.

In a critical moment, the American military had its worst fears realized. The Russian army must have gotten its hands on German aerospace engineers more capable than Ernst Steinhoff and Wernher Von Braun—engineers who must have developed this flying craft years before for the German air force, or Luftwaffe. The Russians simply could not have developed this kind of advanced technology on their own. Russia's stockpile of weapons and its body of scientists had been decimated during the war; the nation had lost

more than twenty million people. Most Russian scientists still alive had spent the war in the gulag. But the Russians, like the Americans, the British, and the French, had pillaged Hitler's best and brightest scientists as war booty, each country taking advantage of them to move forward in the new world. And now, in July of 1947, shockingly, the Soviet supreme leader had somehow managed not only to penetrate U.S. airspace [near the Alaskan border](#), but to fly over several of the most sensitive military installations in the western United States. Stalin had done this with foreign technology that the U.S. Army Air Forces knew nothing about. It was an incursion so brazen—so antithetical to the perception of America's strong national security, which included the military's ability to defend itself against air attack—that upper-echelon Army intelligence officers swept in and took control of the entire situation. The first thing they did was initiate the withdrawal of the original Roswell Army Air Field press release, the one that stated that a "flying disc... landed on a ranch near Roswell," and then they replaced it with the second press release, the one that said that a weather balloon had crashed—nothing more. The weather balloon story has remained the official cover story ever since.

The fears were legitimate: fears that the Russians had hover-and-fly technology, that their flying craft could outfox U.S. radar, and that it could deliver to America a devastating blow. The single most worrisome question facing the Joint Chiefs of Staff at the time was: [What if atomic energy propelled the Russian craft?](#) Or worse, what if it dispersed radioactive particles, like a modern-day dirty bomb? In 1947, the United States believed it still had a monopoly on the atomic bomb as a deliverable weapon. But as early as June 1942, Hermann Göring, commander in chief of the Luftwaffe, had been overseeing the Third Reich's research council on nuclear physics as a weapon in its development of an airplane called the [Amerika Bomber](#), designed to drop a dirty bomb on New York City. Any number of those scientists could be working for the Russians. The Central Intelligence Group, the CIA's institutional predecessor, did not yet know that a spy at Los Alamos National Laboratory, a man named Klaus Fuchs, had stolen bomb blueprints and given them to Stalin. Or that Russia was two years away from testing its own atomic bomb. In the immediate aftermath of the crash, all the Joint Chiefs of Staff had to go on from the Central Intelligence Group was speculation about what atomic technology Russia might have.

For the military, the very fact that New Mexico's airspace had been violated was shocking. This region of the country was the single most sensitive weapons-related domain in all of America. The White Sands Missile Range was home to the nation's classified weapons-delivery systems. The nuclear laboratory up the road, the Los Alamos Laboratory, was where scientists had developed the atomic bomb and where they were now working on nuclear packages with a thousand times the yield. Outside Albuquerque, at a production facility called Sandia Base, assembly-line workers were forging Los Alamos nuclear packages into smaller and smaller bombs. Forty-five miles to the southwest, at the Roswell Army Air Field, the 509th Bomb Wing was the only wing of long-range bombers equipped to carry and drop nuclear bombs.

Things went from complicated to critical at the revelation that there was a second crash site. [Paperclip scientists Wernher Von Braun and Ernst Steinhoff, still under review over the Juárez rocket](#) crash, were called on for their expertise. Several other Paperclip

scientists specializing in aviation medicine were brought in. The evidence of whatever had crashed at and around Roswell, New Mexico, in the first week of July in 1947 was gathered together by a Joint Chiefs of Staff technical services unit and [secreted away in a manner so clandestine](#), it followed security protocols established for transporting uranium in the early days of the Manhattan Project.

The first order of business was to determine where the technology had come from. The Joint Chiefs of Staff tasked an elite group working under the direct orders of G-2 Army intelligence to initiate a [top secret project called Operation Harass](#). Based on the [testimony of America's Paperclip scientists](#), Army intelligence officers believed that the flying disc was the brainchild of two former Third Reich airplane engineers, named Walter and Reimar Horten— now working for the Russian military. Orders were drawn up. [The manhunt was on.](#)

[Walter and Reimar Horten](#) were two aerospace engineers whose importance in seminal aircraft projects had somehow been overlooked when America and the Soviet Union were fighting over scientists at the end of the war. The brothers were the inventors of several of Hitler's flying-wing aircraft, including one called the Horten 229 or Horten IX, a wing-shaped, tailless airplane that had been developed at a secret facility in Baden-Baden during the war. From the Paperclip scientists at Wright Field, the Army intelligence investigators learned that Hitler was rumored to have been developing a faster-flying aircraft that had been designed by the brothers and was shaped like a saucer. Maybe, the Paperclips said, there had [been a later-model Horten in the works](#) before Germany surrendered, meaning that even if Stalin didn't have the Horten brothers themselves, he could very likely have gotten control of their blueprints and plans.

The flying disc that crashed at Roswell had technology more advanced than anything the U.S. Army Air Forces had ever seen. Its propulsion techniques were particularly confounding. What made the craft go so fast? How was it so stealthy and how did it trick radar? The disc had appeared on Army radar screens briefly and then suddenly disappeared. The incident at Roswell happened just weeks before the National Security Act, which meant there was no true Central Intelligence Agency to handle the investigation. Instead, hundreds of Counter Intelligence Corps (CIC) officers from the U.S. Army's European command were dispatched across Germany in search of anyone who knew anything about Walter and Reimar Horten. Officers tracked down and interviewed the brothers' relatives, colleagues, professors, and acquaintances with an urgency not seen since Operation Alsos, in which Allied Forces sought information about Hitler's atomic scientists and nuclear programs during the war.

A records group of more than three hundred pages of Army intelligence documents reveals many of the details of Operation Harass. They were declassified in 1994, after a researcher named [Timothy Cooper filed a request for documents](#) under the Freedom of Information Act. One memo, called "Air Intelligence Guide for Alleged 'Flying Saucer' Type Aircraft," detailed for CIC officers the parameters of the flying saucer technology the military was looking for, features which were evidenced in the craft that crashed at Roswell.

Extreme maneuverability and apparent ability to almost hover; A plan form approximating that of an oval or disc with dome shape on the surface; The ability to quickly disappear by high speed or by complete disintegration; The ability to group together very quickly in a tight formation when more than one aircraft are together; Evasive motion ability indicating possibility of being manually operated, or possibly, by electronic or remote control.

The Counter Intelligence Corps' official 1947–1948 manhunt for the Horten brothers reads at times like a spy novel and at times like a wild-goose chase. The first real lead in the hunt came from Dr. Adolf Smekal of Frankfurt, who provided CIC with a list of possible informants' names. Agents were told a dizzying array of alleged facts: Reimar was living in secret in East Prussia; Reimar was living in Göttingen, in what had been the British zone; Reimar had been kidnapped "presumably by the Russians" in the latter part of 1946. If you want to know where Reimar is, one informant said, you must first locate Hannah Reitsch, the famous aviatrix who was living in Bad Hauheim. As for Walter, he was working as a consultant for the French; he was last seen in Frankfurt trying to find work with a university there; he was in Dessau; actually, he was in Russia; he was in Luxembourg, or maybe it was France. One German scientist turned informant chided CIC agents. If they really wanted to know where the Horten brothers were, he said, and what they were capable of, then go ask the American Paperclip scientists living at Wright Field.

Neatly typed and intricately detailed summaries of hundreds of interviews with the Horten brothers' colleagues and relatives flooded the CIC. Army intelligence officers spent months chasing leads, but most information led them back to square one. In the fall of 1947, prospects of locating the brothers seemed grim until November, when CIC agents caught a break. A former Messerschmitt test pilot named Fritz Wendel offered up some firsthand testimony that seemed real. The Horten brothers had indeed been working on a flying saucer-like craft in Heiligenbeil, East Prussia, right after the war, Wendel said. The airplane was ten meters long and shaped like a half-moon. It had no tail. The prototype was designed to be flown by one man lying down flat on his stomach. It reached a ceiling of twelve thousand feet. Wendel drew diagrams of this saucerlike aircraft, as did a second German informant named Professor George, who described a later-model Horten as being "very much like a round cake with a large sector cut out" and that had been developed to carry more than one crew member. The later-model Horten could travel higher and faster—up to 1,200 mph—because it was propelled by rockets rather than jet engines. Its cabin was allegedly pressurized for high-altitude flights.

The Americans pressed Fritz Wendel for more. Could it hover? Not that Wendel knew. Did he know if groups could fly tightly together? Wendel said he had no idea. Were "high speed escapement methods" designed into the craft? Wendel wasn't sure. Could the flying disc be remotely controlled? Yes, Wendel said he knew of radio-control experiments being conducted by Siemens and Halske at their electrical factory in Berlin. Army officers asked Wendel if he had heard of any hovering or near-hovering technologies. No. Did Wendel have any idea about the tactical purposes for such an aircraft? Wendel said he

had no idea.

The next batch of solid information came from [a rocket engineer named Walter Ziegler](#). During the war, Ziegler had worked at the car manufacturer Bayerische Motoren Werke, or BMW, which served as a front for advanced rocket-science research. There, Ziegler had been on a team tasked with developing advanced [fighter jets](#) powered by rockets. Ziegler relayed a chilling tale that gave investigators an important clue. One night, about a year after the war, in September of 1946, [four hundred men from his former rocket group](#) at BMW had been invited by Russian military officers to a fancy dinner. The rocket scientists were wined and dined and, after a few hours, taken home. Most were drunk. Several hours later, all four hundred of the men were woken up in the middle of the night by their Russian hosts and told they were going to be taking a trip. Why Ziegler wasn't among them was not made clear. The Germans were told to bring their wives, their children, and whatever else they needed for a long trip. Mistresses and livestock were also fine. This was not a situation to which you could say no, Ziegler explained. The scientists and their families were transported by rail to a small town outside Moscow where they had remained ever since, forced to work on secret military projects in terrible conditions. According to Ziegler, it was at this top secret Russian facility, exact whereabouts unknown, that the German scientists were developing rockets and other advanced technologies under Russian supervision. These were Russia's version of the American Paperclip scientists. It was very possible, Ziegler said, that the Horten brothers had been working for the Russians at the secret facility there.

For nine long months, CIC agents typed up memo after memo relating various theories about where the Horten brothers were, what their flying saucers might have been designed for, and what leads should or should not be pursued. And then, six months into the investigation, on March 12, 1948, along came abrupt news. [The Horten brothers had been found](#). In a memo to the European command of the 970th CIC, Major Earl S. Browning Jr. explained. "The Horten Brothers have been located and interrogated by American Agencies," Browning said. The Russians had likely found the blueprints of the flying wing after all. "It is Walter Horten's opinion that the blueprints of the Horten IX may have been found by Russian troops at the Gotha Railroad Car Factory," the memo read. But a second memo, entitled "Extracts on Horten, Walter," explained a little more. Former Messerschmitt test pilot Fritz Wendel's information about the Horten brothers' wingless, tailless, saucerlike craft that had room for more than one crew member was confirmed. "Walter Horten's opinion is that sufficient German types of flying wings existed in the developing or designing stages when the Russians occupied Germany, and these types may have enabled the Russians to produce the flying saucer."

There is no mention of Reimar Horten, the second brother, in any of the hundreds of pages of documents released to Timothy Cooper as part of his Freedom of Information Act request—despite the fact that both brothers had been confirmed as located and interrogated. Nor is there any mention of what Reimar Horten did or did not say about the later-model Horten flying discs. But one memo mentioned "the Horten X" and another referred to "[the Horten 13.](#)" No further details have been provided, and a 2011 Freedom of Information Act request by the author met a dead end.

On May 12, 1948, the headquarters of European command sent the director of intelligence at the United States Forces in Austria a puzzling memo. "[Walter Horten has admitted his contacts with the Russians.](#)" it said. That was the last mention of the Horten brothers in the Army intelligence's declassified record for Operation Harass.

Whatever else officially exists on the Horten brothers and their advanced flying saucer continues to be classified as of 2011, and the crash remains from Roswell quickly fell into the blackest regions of government. They would [stay at Wright-Patterson Air Force Base for approximately four years](#). From there, they would quietly be shipped out west to become intertwined with a secret facility out in the middle of the Nevada desert. No one but a handful of people would have any idea they were there.

The Secret Base

It was a foggy evening in 1951 and Richard Mervin Bissell [was sitting in his parlor](#) in Washington, DC, when there was an unexpected knock at the door. There stood a man by the name of Frank Wisner. The two gentlemen had never met before but according to Bissell, Wisner was "very much part of our inner circle of people," which included diplomats, statesmen, and spies. At the time, Bissell held the position of the executor of finance of the Marshall Plan, America's landmark economic recovery plan to infuse postwar Europe with thirteen billion dollars in cash that began in 1948. Being executor of finance meant Bissell was the program's top moneymen. All Bissell knew about Frank Wisner at the time was that he was a top-level civil servant with the new Central Intelligence Agency.

Wisner, a former Olympic competitor, had once been considered handsome. An Office of Strategic Services spy during the war, Wisner was rumored to be the [paramour of Princess Caradja](#) of Romania. Now, although not yet forty years old, Wisner had lost his hair, his physique, and his good looks to what would later be revealed as mental illness and alcoholism—but the true signs of his downfall were not yet clear. During the fireside chat in Richard Bissell's Washington parlor, Bissell quickly learned that Frank Wisner was the man in charge of a division of the CIA called the Office of Policy Coordination, or OPC. At the time, not much was known about America's intelligence agency because the CIA was only three and a half years old. [As for the mysterious office called OPC](#), only a handful of people knew its true purpose. Bissell had heard in cocktail conversation that OPC was "engaged in the battle against Communism through covert means." In reality, the bland-sounding Office of Policy Coordination was the power center for all of the Agency's covert operations. All black and paramilitary operations ran through OPC. The office had been set up by the former secretary of the Navy James Forrestal, who was also the nation's first secretary of defense.

Seated beside the fire in the parlor that foggy evening in 1951, Wisner told Bissell that the OPC needed money. "He asked me to help finance the OPC's covert operations by releasing a modest amount of [funds generated by the Marshall Plan](#)," Bissell later explained. Mindful of the gray-area nature of Wisner's request, Bissell asked for more details. Wisner declined, saying that he'd already said what he was allowed to say. But Wisner assured Bissell that Averell Harriman, the powerful statesman, financier, former ambassador to Moscow, and, most important, Bissell's superior at the Marshall Plan, had approved the money request. "I could have confirmed Wisner's story with [Harriman] if I had any doubts," Bissell recalled. But he had no such doubts. And so, without hesitation, Richard Bissell agreed to siphon money from the Marshall Plan and divert it to the CIA's

Office of Policy Coordination. Largely unknown until now, this was how a significant portion of the CIA's earliest covert black budgets came to be. Richard Bissell was the hidden hand.

Equally concerned about the nation's needs in gathering intelligence was Colonel Richard Leghorn. For Leghorn, the mock nuclear naval battle called Operation Crossroads in 1946 had spurred him to action. Leghorn presented papers to the Joint Chiefs of Staff arguing that overflying the Soviet Union to learn about its military might was urgent business and not just something to consider down the line. He walked the halls of the Pentagon with his papers immediately after Crossroads in 1946, and again in 1948, but with no results. Then along came another war. The Korean War has often been called the forgotten war. In its simplest terms, it was a war between North Korea and South Korea, but it was also the first trial of technical strength and scientific prowess between two opposing teams of German-born scientists specializing in aviation. One group of Germans worked for America now, as Paperclip scientists, and the other group worked for the Soviet Union, and the jet-versus-jet dogfights in the skies above Korea were fights between American-made F-86 Sabres and Soviet-made MiG-15s, both of which had been designed by Germans who once worked for Adolf Hitler.

When war was declared against Korea, Colonel Leghorn was called back into active duty. As commander of the reconnaissance systems branch of the Wright Air Development Center in Dayton, Ohio, Leghorn was now in charge of planning missions for American pilots flying over denied territory in North Korea and Manchuria to photograph weapons depots and missile sites. American spy planes were accompanied by fighter jets for protection, but still the enemy managed to shoot down an undisclosed number of American spy planes with their MiG fighter jets. In these tragic losses, Leghorn saw a further opportunity to strengthen his argument for overhead. Those MiGs could reach a maximum altitude of only 45,000 feet, meaning that if the United States created a spy plane that could get above 60,000 feet, the airplane would be untouchable. After the armistice was signed, in 1953, [Leghorn went back to Washington](#) to present his overhead espionage idea to Air Force officials again.

One man in a position to be interested was Lieutenant General Donald L. Putt, the Army commander whose men had captured Hermann Göring's Volkenrode aircraft facility in Germany just before the end of the war [as part of Operation Lust](#). Putt had smuggled one of the earliest groups of German scientists, including V-2 rocket scientists Wernher Von Braun and Ernst Steinhoff, out of the country and into America. Now, Putt was overseeing the fruits of the scientists' labor from inside his office at the Pentagon. Putt had been promoted to deputy chief of staff for research and development at the Pentagon, and the three stars on his chest afforded him great power and persuasion about America's military future involving airplanes. But [Putt listened](#) to a presentation of Leghorn's spy plane idea and immediately said that he was not interested. The Air Force was not in the business of making dual-purpose aircraft, airplanes that carried cameras in addition to weapons. Besides, Air Force airplanes came with armor, Putt said, which made them heavy. Any flier in the early 1950s knew heavy airplanes could not fly anywhere near sixty thousand feet.

Richard Leghorn was undeterred. He went around Putt by going above him, to the commander of the Strategic Air Command, or SAC, his old antagonist from Operation Crossroads General Curtis LeMay. In the winter of 1954, LeMay was presented with the first actual drawings of Leghorn's high-flying spy plane, conceptualized by the Lockheed Corporation. [Whereas Putt was uninterested](#) in Leghorn's ideas, LeMay was offended by them. He walked out of the meeting declaring that the whole overhead thing was a waste of his time.

But there was another group of men who had President Eisenhower's ear, and those men made up the select group of scientists who sat on the president's scientific advisory board, friends and colleagues of Colonel Richard Leghorn from MIT. They included James R. Killian Jr., president of the Massachusetts Institute of Technology, as well as Edwin H. Land, the eccentric millionaire who had just invented the Polaroid camera and its remarkable instant film. The president's science advisers had an idea. Never mind the Air Force. Generals tended to be uncreative thinkers, bureaucrats who lived inside a mental box. Why not approach the Central Intelligence Agency? The Agency was made up of men whose sole purpose was to conduct espionage. Surely they would be interested in spying from the air. Unlike the Air Force, [Killian and Land reasoned](#), the CIA had access to the president's secret financial reserves. All the overhead espionage program really needed was a team captain or a patron saint. As it turned out, they had someone in mind. It was February of 1954. A brilliant economist who had formerly been running the financial office over at the Marshall Plan had just joined the CIA as Director Allen Dulles's special assistant. His name was Richard Bissell. He was a perfect candidate for the overhead job.

At least one of Richard Bissell's ancestors was a spy. Sergeant Daniel Bissell conducted espionage missions for General George Washington during the Revolutionary War. Generations later, on September 18, 1910, Richard Mervin Bissell Jr. was born into a family of Connecticut aristocrats. Severely cross-eyed from birth, it was only after a risky surgery at the age of eight that Richard Bissell could see clearly enough to read anything. Before that, his mother had read to him. As a child, Bissell was obsessed with history and with war. His parents took him on a visit to the battlefields of northern France when he was ten years old, and it was there, staring out over barren fields ravaged by firebombs, that Bissell developed what he would later describe as an overwhelming ["impression of World War I as a cataclysm."](#)

Despite great privilege, Bissell struggled through his formative years with intense feelings of inadequacy, first at Groton boarding school, then later at Yale University. But behind his low self-esteem was a great willfulness and burgeoning self-confidence that would emerge shortly after he turned twenty-one. On a weekend trip with family friends at a Connecticut beachhead called Pinnacle Rock, Bissell fell off a seventy-foot cliff. When he woke up in the hospital, he was suffering from a mild case of amnesia. But as soon as he was well enough to move around on his own, which took months, he secretly ventured back to the site of the fall. There he made the same climb again. "My hands were shaking," Bissell explained in describing the second climb, but "I was glad to have done it and to know that I didn't have to do it again." He had gone from unsure to self-assured,

thanks to a death-defying fall. Immediately after college, in 1932, Bissell headed to England, where he received a master's degree from the London School of Economics. Then it was back to Yale for a PhD, where he wrote complex financial treatises at the astonishingly prolific rate of twenty pages a day. Bissell's colleagues began to admire him, calling him a "human computer." His mind, they said, functioned "like a machine." Soon the classes he taught were filled to capacity.

Eventually, his talents as an economist caught the eye of MIT president [James Killian](#), who recruited Bissell to join the MIT staff. Now, in 1954, here was James Killian recruiting Richard Bissell again, which was how just a few short years after the fireside chat with Frank Wisner, Richard Bissell found himself in charge of one of the most ambitious, most secret programs in CIA history, the U-2 spy plane program. Its code name was Project Aquatone.

The following winter, in 1955, Richard Bissell and his fellow CIA officer Herbert Miller, the Agency's leading expert on Soviet nuclear weapons, flew across the American West in an unmarked Beechcraft V-35 Bonanza in search of a location where they could build [a secret CIA test facility](#), the only one of its kind on American soil. Only a handful of CIA officers and an Air Force colonel named Osmond "Ozzie" Ritland had any idea what the men were up to, flying around out there. Bissell's orders, which had come directly from President Eisenhower himself, were to find a secret location to build a test facility for the Agency's bold, new spy plane—the aircraft that would keep watch over the Soviet Union's burgeoning nuclear weapons program. Accompanying the CIA officers was the nation's leading aerodynamicist, Lockheed Corporation's Clarence "Kelly" Johnson, the man tasked with designing and building this new plane.

Johnson sat in the back of the Beechcraft with geological survey maps spread out across his lap as the men flew from Burbank, California, across the Mojave Desert, and into Nevada. They were searching for a dry lake bed called Groom Lake just outside the Nevada Test Site, which had had its boundaries configured by Holmes and Narver in July of 1950 during the top secret Project Nutmeg that resulted in Nevada's being chosen as America's continental atomic bombing range. Legendary air racer and experimental test pilot Tony LeVier was flying the small airplane. LeVier had a vague idea of where he was going because his fellow Lockheed test pilot Ray Goudey had taken him to Groom Lake on a prescouting mission just a few weeks before. On occasion, [Goudey had shuttled atomic scientists](#) from California to the test site and once he had even set down his aircraft on Groom Lake to eat his bag lunch.

"Descending for a closer look, we saw evidence of a temporary landing strip," Bissell later recalled, "the kind of runway that had been built in various locations across the United States during World War Two for the benefit of pilots in training who might have to make an emergency landing." The large, hardened salt pan was a perfect natural runway, and LeVier effortlessly landed the plane. The men got out and walked around, discussing how level the terrain was and kicking the old shell casings lying about like stones. To the north, Bald Mountain towered over the valley, offering cover, and to the southwest, there was equal shelter from a mountain range called Papoose. According to Bissell, "Groom Lake would prove perfect for our needs."

Bissell was acutely aware that Groom Lake was just over the hill from the government's atomic bomb testing facility, which meant that as far as secrecy was concerned, there was no better place in the continental United States for the CIA to set up its new spy plane program and begin clandestine work. "[I recommended to Eisenhower](#)" that he add a piece of adjacent land, including Groom Lake, to the Nevada Test Site of the Atomic Energy Commission," Bissell related in his memoir, written in the last year of his life. Four months after Richard Bissell, Herbert Miller, Kelly Johnson, and Tony LeVier touched down on Groom Lake, Area 51 had its first residents. It was a small group of four Lockheed test pilots, two dozen Lockheed mechanics and engineers, a handful of CIA officers who doubled as security guards, and a small group of Lieutenant Colonel Ritland's Air Force staff. There was a cowboy feel to the base that first summer, with temperatures so hot the mechanics used to crack eggs on metal surfaces just to see how long it would take for them to fry.

Originally the base consisted of one airplane hangar and a handful of tents, called hooches, constructed out of wooden platforms and covered in canvas tops. Sometimes when the winds got rough, [the tents would blow away](#). Thunderstorms were frequent and would render the dry lake bed unusable, temporarily covered by an inch of rain. As soon as the sun returned, the water would quickly evaporate, and the test pilots could fly again. Power came from a diesel generator. There was one cook and a makeshift mess hall. It took another month for halfway-decent showers to be built on the base. The men could have been at an army outpost in Egypt or India as far as amenities were concerned.

Residents were issued work boots, [to defend against rattlesnakes](#), and hats with lights, to wear at night. When the sun dropped behind the mountains in the evenings, the sky turned purple, then gray. In no time everything was pitch-black. The sounds at night were cricket song and coyote howl, and there was barely anything more than static on the radio and definitely no TV. The nearest town, Las Vegas, had only thirty-five thousand residents, and it was seventy-five miles away. At night, the skies at Area 51 glittered with stars.

But as rustic as the base was as far as appearance, behind the scenes Area 51 was as much Washington, DC, as it was Wild West. The U-2 was a top secret airplane built on the covert orders of the president of the United States. Its 1955 budget was \$22 million, which would be \$180 million in 2011.

Each U-2 aircraft arrived at Area 51 from Lockheed's facility in Burbank in pieces, hidden inside the belly of a C-124 transport plane. The pointy fuselage and long, thin wings were draped in white sheets so no one could get even a glimpse. "In the very beginning, we put Ship One and Ship Two together inside the hangar so nobody saw it before it flew," recalls Bob Murphy, one of the first Lockheed mechanics on the base. From the moment the CIA began operating their Groom Lake facility, they did so with very strict protocols regarding who had a need-to-know and about what. All elements of the program were divided into sensitive compartmented information, or SCI. "I had no clue what the airplane looked like until it flew directly over my head," recalls security guard Richard Mingus.

Getting the U-2 operations ready was a dream job for the daring experimental test pilot

Ray Goudey. "I learned to fly an airplane before I could drive a car," Goudey explains. As a teenager, Goudey joined the flying circus and flew with Sammy Mason's famed Flying Brigade. After the war, he became part of a daredevil flying team called the Hollywood Hawks, where his centrifugal-force-defying outside snap made him a legend. In 1955 he was thirty-three years old and ready to settle down, in relative terms.

Getting Lockheed's tricky new spy plane ready for the CIA was not a terribly daunting task for a flier like Goudey. Still, the U-2 was an unusual airplane, with wings so long their ends sagged when it sat parked on the tarmac at Groom. To keep its fuel-filled wings from tipping side to side on takeoff, mechanics had to run alongside the airplane as it taxied, sending huge dust clouds up from the lake bed and covering everything in fine sand. The aircraft's aluminum skin was paper-thin, just 0.02 inches thick, which meant the aircraft was both fragile on the ground and extremely delicate to fly. If a pilot flew the U-2 too slow, the airplane could stall. If he flew too fast, the wings could literally come off. Complicating matters was the fact that what was too slow at one altitude was too fast at another height. [The same variable occurred](#) when the weight of the plane changed as it burned up hours of fuel. For these reasons, the original flights made by the test pilots were restricted to a two-hundred-mile radius from the center of Groom Lake. The likelihood of a crash was high, and the CIA needed to be able to keep secure any U-2 wreckage.

"In the beginning, all we did was fly all day long," Goudey recalls. At Area 51 "we'd sleep, wake up, eat, and fly." Soon, the base expanded and one hundred more people arrived. Navy Quonset huts were brought in and two additional water wells were dug. Commander Bob Yancey located a pool table and a 16-millimeter film projector in Las Vegas; now the men had entertainment other than stargazing. By September, there were two hundred men on base from three organizational groups: one-third were CIA, one-third were Air Force, and one-third were Lockheed. Everyone had the same goal in mind, which was to get the U-2 to sustain flight at seventy thousand feet. This was a tall order and something no air force in the world had been able to accomplish.

Every Monday Ray Goudey would fly from Burbank to Groom Lake with Lockheed's gung-ho young mechanic Bob Murphy beside him in the passenger seat. All week, Murphy worked on the U-2's engine while Goudey worked with the other test pilots to achieve height. The pilots wore specially designed partial-pressure suits, tight like wet suits, with most of the tubing on the outside; it took two flight surgeons to get a pilot into his suit. Pre-breathing pure oxygen was mandatory and took two full hours, which made for [a lot of time in a recliner](#). The process removed nitrogen from the pilot's bloodstream and reduced the risk of decompression sickness at high altitude.

In those early days at Area 51, history was being laid down and records were being set. "I was the first guy to go up above sixty-five thousand feet, but I wasn't supposed to be," Goudey recalls. "Bob Mayte was scheduled to do the first high-altitude flight but he had a problem with his ears. So I went instead." Which is how Goudey ended up becoming the first pilot to ever reach that altitude and fly there for a sustained amount of time—a remarkable fact noted in the Lockheed record books and yet kept from the rest of the world until 1998, when the U-2 program was finally declassified. Goudey explains what the view was like at sixty-five thousand feet: "From where I was up above Nevada I could

see the Pacific Ocean, which was three hundred miles away."

Ray Goudey was also the world's first test pilot to experience engine failure at sixty-four thousand feet, a potentially catastrophic event because the delicate U-2 is a single-engine airplane: if a U-2 loses one engine, it has lost all of them. In Goudey's case, he glided down four thousand feet and got the engine to restart by using a tactic called windmilling. "Then it quit again," Goudey explains. He let the plane fall another thirty thousand feet, more than five miles. Down in lower air, Goudey was able to get the engine to restart—and to stay started. Once Goudey was on the ground, it was [Bob Murphy's job](#) to troubleshoot what had happened on the engine. Of course, in 1955, no mechanic in the world had any experience solving a combustion problem on an engine that had quit unexpectedly at sixty-four thousand feet.

Bob Murphy was a twenty-five-year-old flight-test mechanic whose can-do attitude and ability to troubleshoot just about any problem on an aircraft engine meant he was promoted to engine mechanic supervisor the following winter, in 1956. "The romance of the job was the hands-on element of things," Murphy recalls of those early days at Groom Lake. "There was absolutely no government meddling, which enabled us to get the job done." There was only one man with any kind of serious oversight at Area 51 and that was Richard Bissell, or [Mr. B., as he was known to the men](#). Most of Bissell's work involved getting Area 51 to run like an organization or, as he put it, "dealing with the policy matters involved in producing this radically new aircraft." Shutting back and forth between Washington and Area 51, Bissell seemed to enjoy the base he ruled over. "He moved around the facility somewhat mysteriously," Bob Murphy recalls. "He would appear briefly out on the dry lake bed to say hi to the pilots and mechanics and watch the U-2 fly," Murphy remembers. "Mr. B. always expressed enthusiasm for what we were doing and then he'd disappear again in some unmarked airplane." But for Murphy, the concern was rarely the Customer, which was Lockheed's code name for the CIA. Murphy was too busy working with test pilots, often finding himself in charge of overseeing two or three U-2 flights in a single day. "My job was to help the pilots to get the aircraft instruments checked out, get the plane to fly to seventy thousand feet, get it to fly for nine and ten hours straight, and then get it to start taking pictures. There was no shortage of work. We loved it and it's what we did day after day."

The job of the Lockheed test pilots was to get the U-2 ready as fast as possible so they could turn it over to the CIA's instructor pilot [Hank Meierdierck](#), who would then teach the CIA mission pilots, recruited from Air Force bases around the country, how to fly the airplane. Bissell's ambitious plan was to overfly the Soviet Union inside of a year. The Communist advances in hydrogen bombs and long-range missiles had the CIA seriously concerned, as did the hastily hushed Soviet overflight of—and crash in—the West. Human intelligence, or HUMINT, behind the Iron Curtain was at an all-time low. The great news for the Agency was that there was no such thing as an Iron Ceiling. Overhead was what was going to keep America safe. The U-2 was the Agency's best chance to get hard intelligence on the Soviet Union, considering that one photograph could provide the Agency with as much information as approximately ten thousand spies on the ground.

President Eisenhower put the CIA in charge of the overhead reconnaissance because,

as he later wrote, the aerial reconnaissance program needed to be handled in an ["unconventional way."](#) What that meant was that President Eisenhower wanted the program to be black, or [hidden from Congress](#) and from everyone but a select few who needed to know about it. He also wanted the U-2 to be piloted by a man who didn't wear a uniform. Before the U-2, there was no precedent for one nation to regularly spy on another nation from overhead during peacetime. The president's fear was that if a U-2 mission was exposed, it would be interpreted by the Soviets, and perhaps by the whole world, as an overtly hostile act. At least if the plane had a CIA pilot, the president could deny the U.S. military was involved.

Despite his apparent elusiveness, Mr. B. maintained absolute control of all things that were going on at Area 51. Remarkably, he had been able to set up the remote desert facility as a [stand-alone organization](#); he did this by persuading President Eisenhower to remove the U-2 program from the CIA's own organizational chart. "The entire project became the most compartmented and self-contained activity within the agency," Bissell wrote of his sovereign territory at Groom Lake. "I worked behind a barrier of secrecy that protected my decision making from interference." The Development Project Staff, which was the bland-sounding code name for the secret U-2 operation, was the only division of the CIA that had its own communications office. Bissell saw government overseers as unnecessary meddlers and told colleagues that Congress and its committees simply got in the way of getting done what needed to be done. In this way, Bissell was remarkably effective with his program at Area 51. Each month he summed up activities on the secret base in a [five-page brief](#) for the president. But Bissell's long leash, and the extreme power he wielded over the nation's first spy plane program, earned him enmity from a top general whose wrath was historically a dangerous thing to incur. That was General Curtis LeMay.

While the CIA was in charge of Project Aquatone as a whole, U-2 operations were to be a collaborative effort among the CIA, the Air Force, and Lockheed Corporation. Lockheed built the airplane and provided the first test pilots as well as the program mechanics. The Air Force was in charge of support operations. It was there to provide everything the CIA needed, from chase planes to tire changers. But Richard Bissell exercised his power early on, making Lockheed, not the Air Force, his original Project Aquatone partner. Bissell worked hand in hand with Lockheed's Kelly Johnson to get the U-2 aloft with as little Air Force involvement as possible. In fact, [the Air Force was almost entirely left out](#) of the early planning stages. The first U-2 was built by Lockheed and flight-tested at Groom Lake by Lockheed test pilots before the commander of the Air Force research and development office had ever heard of an airplane called the U-2 or a test-flight facility called Area 51. This overt slight ticked off many top generals, a number of whom developed grudges against the CIA. And yet, by the end of 1955, dozens of active-duty Air Force personnel had been assigned to the U-2 operation. Air Force air expertise was absolutely necessary now that pilot training had begun and multiple U-2s were flying multiple practice missions every day, as the CIA readied Project Aquatone for assignments overseas. Richard Bissell, not Curtis LeMay, was now the de facto base commander of a whole lot of Air Force officers and enlisted men. [LeMay was](#)

understandably enraged.

In early autumn of 1955, a conflict erupted between the two men, and President Eisenhower was forced to intervene. LeMay had been raising questions about why he wasn't in charge of the program. It was now up to the president to decide who was officially in charge of Area 51 and the U-2. Bissell desperately wanted to reign over the prestigious program. "It was a glamorous and high-priority endeavor endorsed not only by the president but by a lot of very important scientific people," Bissell wrote in his memoirs decades later. LeMay argued that the Air Force should be in charge of all programs involving airplanes, which was ironic, given the fact that LeMay had disliked the U-2 program from the get-go. In hindsight it seems as if LeMay wanted the U-2 program simply because he wanted the control.

Ultimately, [the president's decision](#) came to rest on one significant quality that the CIA possessed and the Air Force did not: plausible deniability. With the CIA in charge, if a U-2 were to get shot down, the government could claim the spy plane program didn't exist. Air Force fliers flew in uniform, but U-2 pilots working for the CIA would wear civilian garb. The cover story for such a mission would be weather-related research; at least, that was the plan. And so, in late October of 1955, the dispute was settled by President Eisenhower. He directed Air Force chief of staff Nathan Twining to give the CIA control over the spy plane program and Area 51. The job of the Air Force, Eisenhower said, was to offer all necessary operational support to keep the program aloft.

One of the Air Force's designated jobs was to handle flights to and from Area 51. Because the project was so secret, Bissell did not want personnel driving in and out of the base or living in Las Vegas. As far as Bissell was concerned, men cleared on the project were far more likely to draw attention to themselves driving to and from Sin City than they would be if they lived out of town and came in and out by airplane. Locals had friends in the area, whereas out-of-towners did not. This meant that each day, a C-54 transport plane shuttled workers from Lockheed's airport facility in Burbank, California, to Area 51 and back. Ray Goudey and Bob Murphy had enjoyed four months of Goudey's flying the pair back and forth between Burbank and the Ranch. Now they would have to commute on the Air Force's C-54 like everyone else.

Bob Murphy was well versed in the mechanics of the C-54 aircraft. He'd been an engineer on that aircraft in Germany during the Berlin airlift of 1948–1949, the first major international crisis of the Cold War. From a military base in Wiesbaden, Murphy serviced the C-54s that ferried coal and other supplies into Berlin. Flying back and forth between Burbank and the Ranch, [Bob Murphy would often chat with George Pappas](#), the experienced Air Force classified-missions pilot who flew the shuttle service. Pappas and Murphy spent hours talking about what an interesting aircraft the C-54 was.

On the night of November 16, 1955, Pappas flew Murphy, Ray Goudey, and another Lockheed pilot named Robert Sieker from the Ranch to Burbank so the men could attend a Lockheed party at the Big Oaks Lodge in Bouquet Canyon. For Bob Murphy, it would be a one-night stay; he was scheduled for the early-morning flight back with Pappas's C-54 Air Force shuttle the following day. But Murphy drank too much at the party and overslept. As Bob Murphy was sleeping through his alarm clock, eleven men assigned to Richard

Bissell's Project Aquatone walked across the tarmac at the Burbank airport and boarded the C-54 transport plane where Pappas, his copilot Paul E. Winham, and a flight attendant named Guy R. Fasolas prepared to shuttle everyone back to Area 51. The manifest listed their destination as "Watertown airstrip." A little over an hour after takeoff, Pappas broke his required radio silence and called out for assistance with his position in the air. It was snowing heavily where he was, somewhere north of Las Vegas, and Pappas worried he had strayed off course. Nearby, at Nellis Air Force Base, a staff sergeant by the name of Alfred Arneho overheard the bewildering transmission. There was no record of any flight, military or civilian, scheduled to be in his area this time of day. Arneho listened for a follow-up transmission but none came. Puzzled, Arneho made a note in a logbook. Just a few minutes later the airplane Pappas was flying crashed into the granite peak of Mount Charleston, killing everyone on board. Had Pappas been just thirty feet higher, he would have cleared the mountaintop.

Back in California, Bob Murphy awoke in a panic. He checked his alarm clock and realized that he had missed the flight back to Area 51 by three hours. Murphy was furious with himself. Getting drunk and oversleeping was completely out of character for him. He had never missed a single day of work in his four-year career at Lockheed. He'd never even been late. Murphy knew there was no sense going to the airport; the airplane would have long since departed. He got himself together and went out to find some breakfast. Bob Murphy was sitting in a restaurant listening to the radio playing behind the counter when the music was interrupted with breaking news. A C-54 transport plane had just crashed into Mount Charleston, north of Las Vegas. The newscaster said that reports were sketchy but most likely everyone on board had been killed. Murphy knew immediately that the aircraft that had crashed into Mount Charleston was the C-54 he would have been on had he not overslept.

Overwhelmed with grief and in a state of disbelief, Murphy went back to his apartment. He paced around for some time. Then he decided to locate a bar and have a drink. "As I opened the front door to my apartment, this guy from Lockheed was raising his hand to knock on it," Murphy explains fifty-four years later. "I looked at him and he looked at me and then he turned white as a ghost. I had been listed on the CIA flight manifest as having been on that airplane. The security officer on the tarmac had marked me off as having checked in for the flight. This man from Lockheed had come to inform my next of kin that I was dead. Instead, there I was."

Two hundred and fifty miles to the east, on top of Mount Charleston, the wreckage of the airplane still burned. Smoke from the crash was visible as far away as Henderson, ten miles south of Las Vegas. That afternoon, a CBS news team was halfway up Highway 158, headed to the crash site, when the newsmen met a military blockade. Armed officers told the news crew that a military plane had crashed on a routine mission heading to the base at Indian Springs. The road into Kyle Canyon was closed. Meanwhile, Bissell had U-2s dispatched from Area 51 to help pinpoint the exact location of the Air Force airplane—an impromptu and unorthodox first "mission" for the spy plane, triggered by tragic circumstances. But there were briefcases full of secret papers that needed to be retrieved, and the U-2's search-and-locate capabilities from high above were accurate and

available. It was Hank Meierdierck, the man in charge of training CIA pilots to fly the U-2, who ultimately located the remains of the airplane.

The crash was the first of a series of Area 51-related airplane tragedies that would occur over the next decade. Airplane crashes, sensational by nature, risk operational exposure, and between crash investigators and local media, there are countless opportunities for leaks. That first airplane crash, into Mount Charleston, set a precedent for the CIA in an unexpected way. The Agency did what it always does: secured the crash site immediately and produced a cover story for the press. But an interesting turn of events unfolded, ones that were entirely beyond the CIA's control. Hungry for a story and lacking any facts, the press put together its own, inaccurate version of events. One of the city's leading papers, the *Las Vegas Review Journal*, reported that the crash was being kept secret because the men on board were most likely nuclear scientists working on a top secret new weapons project at the Nevada Test Site. Reporters stopped asking questions and the speculative story quickly became accepted as fact. The CIA would learn from this experience: it could use the public's preconceptions as well as the media's desire to tell a story to its own benefit. Civilians could unwittingly propagate significant disinformation on the CIA's behalf.

In Central Intelligence Agency parlance, there are two kinds of strategic deception: cover and disinformation. Cover induces the belief that something true is something false; disinformation aims to produce the belief that something false is in fact true. In other words, cover conceals the truth while disinformation conveys false information. When the CIA disseminates false information, it is always intended to mislead. When the press disseminates false information that helps keep classified information a secret, the CIA sits back and smiles. The truth about the crash at Mount Charleston, the single biggest loss of life for the U-2 program, would remain hidden from the public until [the CIA acknowledged the plane crash in 2002](#). Until then, even the families of the men in the airplane had no idea that their loved ones had been working on a top secret CIA program when they died.

As a result of the crash, the Air Force lost its job as the air carrier for Area 51. For the next seventeen years, commuter flights in and out of the base would be operated by Lockheed. Starting sometime around 1972, the CIA began turning control of Area 51 over to the Air Force, and the Department of Defense took charge of commuter flights. But rather than running military aircraft to and from the clandestine facility, the DOD hired the engineering company EG&G to do it. It made sense. By 1972, EG&G had gotten so powerful and so trusted in the uppermost echelons of the government, it was even in charge of some of the [security systems for Air Force One](#).

The Seeds of a Conspiracy

As soon as the U-2s started flying out of [Area 51, reports of UFO sightings](#) by commercial airline pilots and air traffic controllers began to inundate CIA headquarters. Later painted black to blend in with the sky, the U-2s at that time were silver, which meant their long, shiny wings reflected light down from the upper atmosphere in a way that led citizens all over California, Nevada, and Utah to think the planes were UFOs. The altitude of the U-2 alone was enough to bewilder people. Commercial airplanes flew at between ten thousand and twenty thousand feet in the mid-1950s, whereas the U-2 flew at around seventy thousand feet. Then there was the radical shape of the airplane to consider. Its wings were nearly twice as long as the fuselage, which made the [U-2 look like a fiery flying cross](#).

In 1955 the UFO phenomenon sweeping America was seven years old. The modern-day UFO craze officially began on June 24, 1947, when a search-and-rescue pilot named Kenneth Arnold spotted nine flying discs speeding over Washington State while he was out searching for a downed airplane. Approximately two weeks later, [the crash at Roswell occurred](#). By the end of the month, more than 850 UFO sightings had been reported in the news media. Rumors of flying saucers were sweeping the nation, and public anxiety was mounting; Americans demanded answers from the military.

According to a CIA study on UFOs, declassified in 1997, the Air Force had originally been running two programs. One was covert, initially called Project Saucer and later called [Project Sign](#); another was an overt Air Force public relations campaign called [Project Grudge](#). The point of Project Grudge was to "persuade the public that UFOs constituted nothing unusual or extraordinary," and to do this, Air Force officials went on TV and radio dismissing UFO reports. Sightings were attributed to planets, meteors, even "large hailstones," Air Force officials said, categorically denying that UFOs were anything nefarious or out of this world. But their efforts did very little to appease the public. With the nuclear arms race in full swing, the idea that the world could come to an end in nuclear holocaust had tipped the psychological scales for many Americans, giving way to public discussion about Armageddon and the End of Times. In 1951, Hollywood released the film *The Day the Earth Stood Still*, about aliens preparing to destroy Earth. Two years later, *The War of the Worlds* was made into a movie and won an Academy Award. Even the famous psychiatrist Carl Jung got into the act, publishing a book that said UFOs were individual mirrors of a collective anxiety the world was having about nuclear annihilation. Sightings continued and so did intense interest by both the Air Force and the CIA.

At Area 51, the reality that the U-2 was repeatedly being mistaken for a UFO was not something analysts welcomed, but it was something they were forced to address. The

general feeling at the Agency was that CIA officers had more important things to do than handle the public hysteria about strange objects in the sky. Dealing with UFO reports, the CIA felt, was more appropriately suited for pencil pushers over at the Air Force. According to declassified documents, the CIA did open up a clandestine UFO data-collecting department, albeit begrudgingly. Seeing as the CIA could easily clear its own analysts to handle information on the U-2, this made sense. This attitude, that CIA officers were above plebeian affairs such as UFO sightings, was endemic at the Agency and trickled down from the top. CIA director Allen Dulles was an elitist at heart, an old-school spy brought up in the Office of Strategic Services, the World War II espionage division of the Army. Dulles preferred gentlemen spy craft and [disliked technology in general](#), which was why he'd delegated control of the U-2 spy plane to Richard Bissell in the first place. As for the UFO problems, Dulles assigned that job to a former OSS colleague named Todos M. Odarenko. [The UFO division was placed](#) inside the physics office, which Odarenko ran. Almost immediately Odarenko "sought to have his division relieved of the responsibility for monitoring UFO reports," according to a CIA monograph declassified in 1997. And yet the significance of UFOs to the CIA could not have had a higher national security concern.

The case file regarding unidentified flying objects that Allen Dulles had inherited from the Agency's previous director, General [Walter Bedell Smith](#), was, and remains, one of the most top secret files in CIA history. Because it has yet to be declassified, there is no way of knowing how much information Bedell Smith shared with his successor. But Bedell Smith himself would more likely than not have had a need-to-know about the Army intelligence's blackest programs, and that would have [included the flying disc retrieved at Roswell](#). When the crash occurred, in July of 1947, [Bedell Smith was the ambassador to the Soviet Union](#). During the search for the Horten brothers under the program known as Operation Harass, Bedell Smith was serving as commander of the First Army at [Governors Island, New York](#)—a locale from which Project Paperclip scientists were monitored, evaluated, and assigned research and engineering jobs. And when the crash remains left Wright-Patterson Air Force Base in Ohio to be shipped out to the desert in Nevada, Bedell Smith was the director of the CIA. The degree of need-to-know access he had regarding secret parallel programs set up there remains one of the great riddles of Area 51.

Walter Bedell Smith served as director of Central Intelligence from 1950 to 1953, and there were few men more trusted by President Harry Truman and five-star general of the Army Dwight D. Eisenhower. Years earlier, when General Eisenhower had been serving as Supreme Allied Commander of Europe during World War II, Bedell Smith was his chief of staff. A handful of Smith's closest colleagues affectionately called him Beetle, but most men were intimidated by the person privately referred to as Eisenhower's "hatchet man." So forceful was Bedell Smith that when George S. Patton needed discipline, the task fell on Bedell Smith's shoulders. When the Nazis surrendered to the Allied Forces, it was Bedell Smith who was in charge of writing up acceptable terms.

From the earliest days of the Cold War, General Walter Bedell Smith fought the Russians from America's innermost circle of power. He had served as President Truman's ambassador to the Soviet Union from 1946 to 1948, a position that uniquely

qualified him to be the second director of the CIA. Intelligence on the Soviet Union was the CIA's primary concern in the early days of the Cold War, and there was nothing the U.S. government knew regarding what the Russians were up to that Bedell Smith did not have access to. The conundrum for Smith when he took over the role of director of Central Intelligence on August 21, 1950, was that very few people at the CIA had a need-to-know what the general now knew regarding unidentified flying objects. The record that has been declassified thus far suggests that Bedell Smith demanded that all his employees accept what his personal experiences with the Russians and "UFOs" had taught him: the Communists were evil, and this idea that UFOs were coming from other planets was nothing but the fantasy of panicked, paranoid minds. General Smith summarily rejected the idea that UFOs were anything out of this world and he spearheaded CIA policy accordingly. "Preposterous," he wrote in a memo in 1952. Unlike Dulles, Bedell Smith personally oversaw the national security implications regarding UFOs at the CIA.

To a rationalist like General Smith, "Strange things in the sky [have] been recorded for hundreds of years," which is true—unidentified flying objects are at least as old as the Bible. In certain translations of the Old Testament, a reference to "Ezekiel's wheel" describes a saucerlike vehicle streaking across the skies. During the Middle Ages, flying discs appeared in many different forms of art, such as in paintings and mosaics. In British ink prints from 1783, favored examples among ufologists, two of the king's men stand on the terrace of Windsor Castle in London observing small saucers flying in the background; researchers have not been able to identify what they might have referenced. Smith could offer no "obvious... single explanation for a majority of the things seen" in the sky and cited foo fighters as an example, the "unexplained phenomena sighted by aircraft pilots during World War II." These, Smith explained, were "balls of light... similar to St. Elmo's fire."

Like the president's science adviser Vannevar Bush, CIA director Walter Bedell Smith was primarily concerned about the government's ability to maintain control. Toward this end, he saw the CIA as having to take decisive action regarding citizen hysteria over UFOs. During Bedell Smith's tenure, and according to declassified documents, it was the position of the CIA that a nefarious plan was in the Soviet pipeline. It had happened once already, at Roswell. Fortunately, in that instance the Joint Chiefs had been able to cover up the truth with a weather balloon story. But a black propaganda attack could happen again, a grand UFO hoax aimed at paralyzing the nation's early air-defense warning system, which would then make the United States vulnerable to an actual Soviet air attack. "Mass receipt of low-grade reports which tend to overload channels of communication quite irrelevant to hostile objects might some day appear" as real, Smith ominously warned the National Security Council. The unending UFO sightings preoccupying the nation were becoming like the boy who cried wolf, the CIA director cautioned.

To work on the problem of UFO hysteria, in 1952 Bedell Smith convened a CIA group called the Psychological Strategy Board and gave them the job of putting together recommendations about "problems connected with unidentified flying objects" for the National Security Council—the highest-ranking national security policy makers in the United States. Bedell Smith's Psychological Strategy Board panel determined that the American public was far too sensitive to "hysterical mass behavior" for the good of the

nation. Furthermore, the board said, the public's susceptibility to UFO belief was a national security threat, one that was increasing by the year. From a psychological standpoint, the public's gullibility would likely prove "harmful to constituted authority," meaning the central government might not hold. Any forthcoming UFO hoax by Stalin could engender the same kind of pandemonium that followed the radio broadcast of *The War of the Worlds*.

Bedell Smith's CIA told the National Security Council that for this reason, the flying saucer scare needed to be discredited. According to CIA documents declassified in 1993, the Agency proposed a vast "debunking" campaign to reduce the public's interest in flying saucers. The only way of countering what Bedell Smith was certain was the Russians' "clever hostile propaganda" was for the CIA to take covert action of its own. The Agency suggested that an educational campaign be put in place, one that would co-opt elements of the American "mass media such as television, motion pictures, and popular articles." The CIA also suggested getting advertising executives, business clubs, and "even the Disney Corporation [involved] to get the message across." One plan was to present actual UFO case histories on television and then prove them wrong. "As in the case of conjuring tricks," members of the panel suggested, "the debunking would result in reduction in public interest in flying saucers," in the same way that those who believe in magic become disillusioned when the magician's trick is revealed.

What action was actually taken by the CIA remains classified as of 2011, but one unforeseen problem that Bedell Smith's CIA encountered was an American press wholly uninterested in going along with the wishes of the CIA. The media had an agenda of its own. UFO stories sold papers, and in the spring of 1952, [the publishers of Life magazine](#) were getting ready to go to press with a major scoop about UFOs. Reporters for the magazine had learned that the Air Force had been keeping top secret files on flying saucers while insisting to the public it was doing no such thing. It was a big story, likely to sell out copies of the magazine. One week before press time, the Air Force got wind of *Life*'s story. In a move meant to deflate the magnitude of the magazine's revelation, the Air Force decided to reverse its five-year position of denying that it had been actively investigating flying discs and to attend, of all things, a UFO convention in Los Angeles, California.

To understand what a radical about-face this was for the Air Force requires an understanding of what the Air Force had been doing for the past five years since it had begun the simultaneous and contradictory campaigns Project Sign (to investigate Air Force UFO concerns) and Project Grudge (the public relations campaign intended to convey to the nation that the Air Force had no UFO concerns). Of the 850 UFO sightings reported in the news media the first month of the UFO craze, in July of 1947, at least 150 of the sightings had concerned military intelligence officials to such a degree that they were written up and sent for analysis to officers with the Technical Intelligence Division of the Air Force at Wright Field. Six months later, in January of 1948, General Nathan Twining, head of the Air Force Technical Service Command, established Project Sign; [originally called Project Saucer](#), it was the first in a number of covert UFO research groups created inside the Air Force. For Project Sign, the Air Force assigned hundreds of its staff

to the job of collecting, going over, and analyzing details from thousands of UFO sightings, all the while denying they were doing any such thing.

In Air Force circles, behind the scenes, officials were acutely aware that "the very existence of Air Force official interest" fanned the flames of UFO hysteria, and so the public relations program Project Grudge needed to officially end. On December 27, 1949, the Air Force publicly announced that it saw no reason to continue its UFO investigations and was terminating the project. Meanwhile, the covert UFO study programs steamed ahead. In 1952, the Air Force opened up yet another, even more secret UFO organization, this one called Project Blue Book. That the Air Force clearly kept from the public what it was actually doing with UFO study would later become a major point of contention for ufologists who believed UFOs were from out of this world.

The UFOs being reported seemed to have no end. In addition to the flying disc sightings, bright, greenish-colored lights in the sky were also reported by a growing number of citizens. This was particularly concerning for the Air Force because many of these sightings were in New Mexico near sensitive military facilities such as Los Alamos, Sandia, and White Sands. Witnesses to these "green balls of light," which had been reported since the late 1940s, included credible scientists and astronomers. These sightings were put into an Air Force category known as [Green Fireballs](#). In 1949, the Geophysics Research Division of the Air Force initiated Project Twinkle specifically to investigate these various light-related phenomena. Observation posts were set up at Air Force bases around the country where physicists made electromagnetic-frequency measurements using Signal Corps engineering laboratory equipment. In secret, air traffic control operators across the nation were given 35-millimeter cameras called videoons and asked by the Air Force to photograph anything unusual. All work was performed under top secret security protocols with the caveat that under no circumstances was the public to know that the Air Force was investigating UFOs. As the files for Project Twinkle and Project Blue Book got fatter by the month, Air Force officials repeatedly told [curious members of Congress](#) that no such files existed.

For Air Force investigators, the UFO explanations trickled in. One group of scientists assigned to Holloman Air Force Base, located on the White Sands Missile Range and home to the Paperclip scientists, determined many of the sightings were observations of V-2 rocket contrails. Other sightings were determined to be shooting stars, cosmic rays, and planets visible in the sky. Another study group concluded that some responsibility fell on birds, most commonly "flocks of seagulls or geese." But the numbers of sightings were overwhelming. By 1951, the Air Force had secretly investigated between 800 and 1,000 UFO sightings across the nation, according to a CIA *Studies in Intelligence* report on UFOs declassified in 1997. By 1952, that number rose to 1,900. The efforts were stunning. Data-collection officers met with hundreds of citizens, all of whom were told not to disclose that the Air Force had met with them and asked to sign inadvertent nondisclosure forms. Classified for decades, these investigations have resulted in over thirty-seven cubic feet of case files—approximately 74,000 pages. But for every one or two hundred sightings that could be explained, there were always a few that could not be explained—certainly not by Air Force data-collection supervisors who had a very limited

need-to-know. Seeds of suspicion were being sown among these Air Force investigators and in some cases among their superiors, a number of whom would later famously leave government service to go join the efforts of the ufologists on the other side of the aisle.

Ultimately, the [Air Force concluded for the National Security Council](#) that "almost all sightings stemmed from one or more of three causes: mass hysteria and hallucination; misinterpretation of known objects; or hoax." The sightings that couldn't be explained this way went up the chain of command, where they were interpreted by a few individuals who had been cleared with a need-to-know. In the mid-1950s, this included the elite group over at the CIA working under Todos Odarenko, analysts responsible for matching the CIA's U-2 flights with Air Force unknowns. But no matter how many sightings were explained as benign, there was still the unexplained mother of all unidentified flying objects—the nefarious crashed craft from Roswell. Everything about that flying disc had to remain hidden from absolutely everyone but a select few. If Americans found out about it, or about what the government had been doing in response, there would be outrage.

For CIA analysts and Air Force personnel working together on the UFO problem, one concern was made clear: the public was not to learn about the government's obsession with UFOs. These orders came from the top. Why exactly this was the case, the rank and file did not have a need-to-know. Underlings simply followed orders, which was why two Air Force officials from Project Blue Book, Colonel Kirkland and Lieutenant E. J. Ruppelt, were sent to sit on a panel at a UFO convention in California, side by side with men who were convinced UFOs were from outer space. These men, some of the nation's leading ufologists, were part of a group called the Civilian Saucer Investigations Organization of Los Angeles.

On April 2, 1952, just one week before the *Life* magazine UFO story hit the newsstands, Kirkland and Ruppelt sat in a conference hall at the Mayfair Hotel with the leading UFO hunters of the day. It was a huge media event, with people from *Time*, *Life*, the *Los Angeles Mirror*, and Columbia Pictures in attendance. The Air Force officials placated the ufologists by saying that they too were concerned about UFOs and offering to "bring them into the loop." In return, the Air Force said, they would "throw" Civilian Saucer Investigations certain "cases that might be of interest" to the organization for their review. When the scientists pressed for security clearances so they could access top secret data, the Air Force began to squirm. "I see no reason at all why we can't work together," Colonel Kirkland said, deflecting the question. "I think it would be very foolish if we didn't." Ruppelt offered up an Air Force perk: CSI members could call the military collect.

On April 7, 1952, *Life* magazine published its cover story titled "There Is a Case for Interplanetary Saucers." The sixteen-page feature article began with the exclusive Air Force reveal. Above the byline, it read "The Air Force is now ready to concede that many saucer and fireball sightings still defy explanation; here LIFE offers some scientific evidence that there is a real case for interplanetary saucers." The article made its case well, with the takeaway being that UFOs really could be from out of this world. But there was a second reason the Air Force participated in the UFO convention. The CIA's Psychological Strategy Board had urged the National Security Council to "monitor private UFO groups [such] as the Civilian Flying Saucer Investigators in Los Angeles," and

because of this, the Air Force officers had been placed at the [UFO convention in Los Angeles](#) through backdoor recommendations at the CIA.

The CIA was particularly interested in one specific individual on the Civilian Saucer Investigations panel, and that was a German Paperclip scientist named Dr. Walther Riedel. Seated front and center at the UFO conference at the Mayfair Hotel, Dr. Riedel was a study in contradiction. When Riedel smiled, a close look revealed that he had fake front teeth—his own had been knocked out in 1945 at the Stettin Gestapo prison in Germany. Riedel had been a prisoner there for several weeks with fellow Peenemünde rocket scientist Wernher Von Braun, and during the war, Riedel had served as the chief of Hitler's V-2 missile-design office. The American soldiers guarding Riedel at the Stettin Gestapo prison roughed him up after Army intelligence agents passed along information stating that in addition to designing the V-2, [Dr. Riedel had been working on Hitler's bacteria bomb](#). It was in the harsh interrogation that followed that Riedel lost his front teeth.

At the end of the war, Riedel, like Wernher Von Braun, desperately wanted to be hired by the U.S. military so he could work on rocket programs in the United States. Germany no longer had a military, let alone a rocket research program, which meant Riedel was out of a job. The Russians were known to hate the Germans; they treated their pillaged scientists like slave laborers. An offer from the Americans was the best game in town, even if their soldiers had broken your teeth first.

In January of 1947, Dr. Riedel became a Paperclip. His past work in chemical rockets and bacteria bombs was whitewashed in the name of science. The caveat for Riedel's prosperous new life, as opposed to his possible prosecution at Nuremberg, was that he would comply with what the U.S. military asked of him. But Riedel's rogue UFO-promoting behavior only a few years later illustrates that in certain situations, the Paperclips had the upper hand. Here was Riedel at the saucer convention, stirring up UFO hysteria. He participated in the *Life* magazine article and was quoted saying that he was "completely convinced that [UFOs] have an out-of-world basis." If that did not engender what CIA director Bedell Smith called hysterical thinking, what would? Riedel was not just any old rocket scientist going on the record with America's most popular magazine. When asked about his profession, he told *Life* magazine that he was "engaged in secret work for the U.S."

What is publicly known about Dr. Riedel's American career is that he had begun at Fort Bliss, in Texas, as part of the V-2 rocket team, but after only a few years he was mysteriously traded by the government to work as an engineer for North American Aviation. [There were rumors of "problems"](#) with other Paperclip scientists at White Sands Missile Range. Once Riedel was in the private sector, he had a considerably longer leash, given that the government was not signing his paycheck anymore. Clearly he was valuable to North American Aviation: the company made him director of rocket-engine research. But from the moment he left government service, Riedel was a serious thorn in the CIA's side. A year after the UFO conference, the CIA was still keeping close tabs on Dr. Riedel. In early 1953, the Agency trailed Riedel to one of his lectures in Los Angeles. There, they were shocked to learn that the Paperclip scientist and his UFO-minded colleagues were ["going to execute a planned 'hoax"](#) over the Los Angeles area in order to test the reaction

and reliability of the public in general to unusual aerial phenomena." Mention of a planned hoax went up the chain of command at the CIA and [set off alarms in its upper echelons](#). In a secret memo dated February 9, 1953, declassified in 1993, the CIA's director of the Office of Scientific Intelligence expressed outrage over the company Riedel now kept. But because he was no longer a Paperclip, there was little the CIA could do except follow his moves and those of the men he associated with.

The CIA had also been [trailing a colleague of Riedel named George P. Sutton](#), a fellow North American Aviation rocket scientist and ufologist. When Sutton gave a lecture entitled "Rockets Behind the Iron Curtain," the CIA was shocked to learn that the flying saucer group seemed to know more about UFO sightings inside the Soviet Union than the entire team of CIA agents who had been tasked with monitoring that same information.

Ever since Bedell Smith had taken office in 1950, he'd expressed frustration over how little information the CIA was able to get on UFO reports inside Russia. Joseph Stalin, it appeared, kept all information about UFOs out of the press. Between 1947 and 1952, CIA analysts monitoring the Soviet press found only one single mention of UFOs, in an editorial column that briefly referred to UFOs in the United States. So how did Riedel's group know more about Soviet UFO reports than the CIA knew?

Sufficiently concerned, the CIA instructed Riedel's Paperclip handlers to get him in line. His handler "suggested politely and perhaps indirectly to Dr. Riedel that he disassociate himself from official membership on CSI." But the obstinate scientist refused to cease and desist. What the consequences were for Riedel remains unclear. Whether or not Riedel and his fellow ufologist pulled off their hoax and how he and his colleagues were able to so freely gather information about Soviet UFOs and Soviet rockets behind the Iron Curtain is secreted away in Riedel's Project Paperclip file, most of which remains classified, even after more than fifty years.

By 1957, according to the CIA monograph "CIA's Role in the Study of UFOs," the U-2s accounted for more than half of all UFO sightings reported in the continental United States. Odarenko had been unsuccessful in his bid to be "relieved" of his UFO responsibilities and instead got to work creating CIA policy regarding UFOs. He sent a secret memo to the director of the Office of Scientific Intelligence outlining how he believed the [Agency should handle reports of UFOs](#):

- Keep current files on UFOs: "maintain current knowledge of sightings of unidentified flying objects."
- Deny that the CIA kept current files about UFOs by stating that "the project [was] inactive."
- Divide the explainable UFOs, meaning the U-2 flights, from the inexplicable UFOs: "segregate references to recognizable and explainable phenomena from those which come under the definition of 'unidentified flying objects.'"

The Agency's concerted effort to conceal from Congress and the public its interest in UFOs would, in coming decades, open up a Pandora's box and cause credibility issues

for the CIA. "The concealment of CIA interest [in UFOs] contributed greatly to later charges of a CIA conspiracy and cover-up," wrote Gerald K. Haines, the historian for the National Reconnaissance Office and someone who is often introduced as the CIA's expert on the matter. But to get the UFO monkey off his back, Allen Dulles began a "psychological warfare" campaign of his own. When letters came in from concerned citizens about the sightings, the CIA's policy was to ignore them. When letters came in from UFO groups, the CIA's policy was to monitor the individuals in the group. When letters came in from congressmen or senators, such as the one from Ohio congressman Gordon Scherer in September of 1955, the CIA's policy was to have Director Dulles write a polite note explaining that UFOs were a law enforcement problem and the CIA was specifically barred from enforcing the law. The notes certainly portray [Allen Dulles as an arrogant public servant](#), but they are prized by UFO collectors, who say they prove the CIA's sinister cover-up of extraterrestrial UFOs. Regardless of alleged CIA policy, the public's fascination with UFOs proved more formidable than the CIA had ever bargained for; average citizens simply could not get enough information about mysterious objects streaking across the skies. And the more information they were given, the more they wanted to know and the more questions they asked. It didn't take long for the public to become convinced that the CIA was covering *something* up, which, of course, it was.

The Need-to-Know

Everything that happens at Area 51, when it is happening, is classified as TS/SCI, or top secret/sensitive compartmented information—an enigmatic security policy with [protocols that are also top secret](#). “TS/SCI classification guides are also classified,” says Cargill Hall, historian emeritus for the National Reconnaissance Office; this government espionage agency is so secret that even its name was classified top secret from the time it was founded, in 1958, to its declassification, in 1992. In 2011, most Americans still don’t know what the NRO is or what it does, or that it is a partner organization routinely involved with Area 51, because that is classified information.

Information classified TS/SCI ensures that outsiders don’t know what they don’t know and insiders know only what they have a need-to-know. Winston Churchill famously said of Russia, “It is a riddle, wrapped in a mystery, inside an enigma.” The same can be said about Area 51. In the lesser-known second part of Churchill’s phrase, he said, “But perhaps there is a key. That key is Russian national interest.” Facing a totalitarian government like the Soviet Union’s, where secrets are easily kept, Area 51 had to mirror Soviet secrecy techniques in order to safeguard the U-2. It was in America’s national interest to do so because human intelligence was failing. “We obtain little significant information from classical covert operations inside Russia,” [bemoaned the president’s science advisers](#) in a secret 1954 national security report in which they gunned for “science and technology to improve our intelligence take.”

They got what they wanted at Area 51. By using Soviet-style secrecy protocols for its own operation, and putting these tactics in place out in the Nevada desert, the CIA felt it could give its archenemy a run for its money regarding the element of surprise. Even Air Force transport crews had no idea where they were going when they went to the base. A classified-missions pilot would fly to a set of coordinates over the Mojave Desert and contact a certain UHF frequency called [Sage Control](#). There, a voice at the other end of the radio would deliver increasingly more specific coordinates, ending with a go-ahead to land at a spot nestled inside a circle of mountains where no airstrip was supposed to exist. Only when the aircraft was a few hundred feet off the ground would runway lights flash on.

CIA pilots were kept equally in the dark. Carefully culled from Strategic Air Command bases at Turner Air Force Base, in Georgia, and Bergstrom Air Force Base, in Texas, the men had no idea who they were going to be working for when they signed on. In retrospect it seems easy to recognize the hand of the CIA, but this was not the case in late 1955 when the Agency was just seven years old. [“It was like something out of fiction.”](#) Hervey Stockman recalls. “I was given a date and told to be at Room 215 at the Austin Hotel and

knock on that door at exactly 3:15. So I went down there at the appointed time and knocked on the door. An extremely good-looking guy in a beautiful tweed opened it and said, 'Come on in, Hervey...' That was my first introduction to the Agency."

Hervey Stockman was one of America's most accomplished pilots. He was as fearless as he was gentle, a man who fell in love with airplanes the first time he flew one for the Army Air Corps, shortly after leaving the comforts of Princeton University to fight the Nazis in the Second World War. By the time he arrived at Area 51 for training, part of the first group of seven U-2 fliers called Detachment A, he had already flown 168 combat missions in two wars, World War II and Korea.

Area 51 "was the boonies," Stockman says. "We lived in trailers, three to a trailer as I recall. We couldn't write or call home from out there at Groom Lake." When Stockman's group arrived in January of 1956, there were "probably fifty or so people on the site." The trailers were in walking distance from the hangars, and "there was a training building, which was also a trailer," right next door, which was where Stockman spent most of his time. He remembers the mess hall as being one of the only permanent structures besides the hangars on base. "It was just all desert out there," Stockman remembers. On occasion, wild horses roamed onto the lake bed looking for water or food. "To get to civilization you were pretty dependent on aircraft. There was some road traffic but it was very carefully watched. Security people everywhere."

The identities of the pilots were equally concealed. "We all had pseudonyms. Mine was Sampson... I hated the name Sampson so I asked, Can I use the name Sterritt? I said, 'Sterritt fits me better. I'm a little guy and Sterritt is more my speed.' They said, 'Feel free. If you want to be Sterritt, you're Sterritt.' But for their record keeping I was Sampson. The records are still there... in the basement. And they're under the name Sampson. The Agency was very smart about all of that." The pilots were watched during their time off, not so much to see what the men might be up to as to make sure KGB agents were not watching them. Detachment A pilots were given apartments in Hollywood, California, where they officially lived. During weekends they socialized at the Brown Derby Restaurant. "It was a gathering spot and the security people could keep an eye on us there," Stockman explains. Come Monday morning, when it was time to return to Area 51, the Derby was the rendezvous spot because "it was one of the few places that was always open at five a.m." The majority of the Derby clientele had been up all night; the six very physically fit, clear-eyed pilots with their Air Force haircuts, accompanied by two CIA handlers in sport jackets and bow ties, must have been a sight to behold. From there, the group drove the Cahuenga Pass through the Hollywood Hills to the Burbank airport, where they boarded a Lockheed airplane headed for the secret base. "At the time, we did not know of Lockheed's involvement in the program," Stockman explains. "Even that was concealed from us. We were called 'drivers.' There were a lot of reasons for it. At the time, I don't think any of us really understood why, but that's essentially what we were. We were just, by God, drivers. We were not glory boys." The drivers did not have a need-to-know about anything except how to fly the airplane. Stockman once asked his superiors what the policy would be if he were shot down and captured. "Effectively, we were told that if we were captured and we were pressed by our captors, we could tell them anything and

everything. Because of our lowly position as ‘drivers’ we didn’t know very much.” He said that during training even the name “Groom Lake was not part of our lexicon.”

Across the world, the Russians were busy working on their own form of espionage. If Area 51 had a Communist doppelgänger, it was a remote top secret facility forty miles northeast of Moscow called [NII-88](#). There, a rocket scientist named Sergei Korolev—the Soviet Union’s own Wernher Von Braun—was working on a project that would soon shame American military science and propel the arms and space race into a sprint. Fearing the CIA would assassinate Russia’s key rocket scientist, [Stalin declared Sergei Korolev’s name a state secret](#), which it remained until his death, in 1966. Sergei Korolev was only referred to as Chief Designer, not unlike the way Richard Bissell was known to employees outside the CIA only as Mr. B. Just as insiders called Area 51 the Ranch, NII-88 was known to its scientists as the Bureau. Like Area 51, NII-88 did not exist on the map. Before the Communist Revolution, NII-88 had been a small village called Podlipki, same as the Groom Lake area had once been a little mining enclave called Groom Mine. Both facilities began as outcroppings of tents and warehouses, accessible only to a short list of government elite. Both facilities would develop into multimillion-dollar establishments where [multibillion-dollar espionage platforms](#) would be built and tested, each having the singular purpose of outperforming what was being built on the other side.

In 1956, all the CIA knew of NII-88 was that it was the place where Russia kept dozens of its captured German scientists toiling away on secret science projects. These men were [Russia’s version of America’s Paperclip scientists](#), and they included the four hundred German rocket scientists who’d been plied with alcohol and then seized in the middle of the night—just as former Messerschmitt pilot Fritz Wendel had said.

The CIA first learned about NII-88’s existence in late 1955, when the Soviets decided they had milked their former Third Reich scientists for all they were worth and began sending them back home. When the CIA learned of Russia’s repatriation program, the Agency leaped at the intelligence opportunity and initiated a program called [Operation Dragon Return](#). CIA officers were dispatched to Germany to hunt down the scientists who had been working in Russia, and the information gleaned from the returnees was considerable. It included technical data on Russian advances in radio technology, electronics, and armaments design. But to the CIA’s great frustration, when it came to NII-88, the repatriated German scientists claimed to have no clear idea about what was really going on there. It seemed that NII-88, like Area 51, worked with strict need-to-know protocols, and the German scientists hadn’t been cleared with a need-to-know. All the Germans could tell the CIA agents debriefing them was that Moscow’s top scientists and engineers were developing something there that was highly classified. Unlike in America, where German rocket scientists were put in charge of America’s most classified missile program at White Sands Missile Range, German scientists in Russia had been relegated to the second tier. With no hard facts about the extraordinary technological enterprise that was under way at NII-88, the CIA was left guessing. The speculation was that the Russians were developing intercontinental ballistic missiles, or ICBMs, that could reach the United States by traveling over the top of the world.

The missile threat needed to be addressed, and fast. By 1956 Americans were

constantly being reminded about this foreboding Red menace by the media. A January 1956 issue of *Time* magazine made Soviet missile technology its big story. The cover featured a drawing of an anthropomorphic rocket, complete with eyeballs and a brain, carrying a nuclear bomb and bearing down on a major U.S. city. The magazine's analysts declared that in a little more than five years, Russians would be winning the arms race. The editors went so far as to prophesize a nuclear strike on the Pacific Ocean that would send a "cloud of radioactive death drift[ing] downwind" over America. Making the threat seem worse was the fact that there was no end to the confidence and bravado projected by the Soviet premier. "We're making missiles like sausages," Nikita Khrushchev declared on TV. If Russia succeeded in making these ICBMs, as was feared, then Russia really could place a nuclear warhead in the missile's nose and strike anywhere in the United States. "I am quite sure that we shall have very soon a guided missile with a hydrogen-bomb warhead which would hit any point in the world," Khrushchev boasted shortly after the *Time* magazine article appeared.

While the Soviets were concentrating efforts on advancing missile technology, the powerful General LeMay had convinced the Joint Chiefs of Staff that long-range bombers were a far better way for America to go to war. LeMay was not shy about expressing his disdain for missiles; he brazenly opposed them. LeMay's top research-and-development commander, General Thomas S. Power, told Pentagon officials that missiles "cannot cope with contingencies" the way bomber pilots could. Another one of LeMay's generals, Clarence S. Irvine, stated, "I don't know how you show... teeth with a missile." While the Joint Chiefs were deciding whether it was better to build up America's arsenal with missiles or bombers, the nuclear warheads continued to roll off the production lines at Sandia, in New Mexico, with astonishing speed. Ten years earlier, in 1946, the U.S. nuclear stockpile had totaled two. In 1955, that stockpile had risen to 2,280 nuclear bombs. The reason for LeMay's opposition to the missile programs was obvious: if the Pentagon started pumping more money into missiles that could carry nuclear warheads, LeMay's bombers would lose importance. As it was, he was already losing money and men to the overhead reconnaissance nonsense being spearheaded by the CIA's Richard Bissell over at Area 51.

In early 1956, the Air Force retaliated against Khrushchev's war of words with the kind of response General Curtis LeMay knew best: threat, intimidation, and force. LeMay scrambled nearly a thousand B-47 bombers in a simulated attack on Russia using bomber planes that were capable of carrying nuclear bombs. Air Force pilots took off from air bases in Alaska and Greenland, charged over the Arctic, and flew to the very edge of Soviet borders before U-turning and racing home. This must have been a terrifying experience for the Soviets, who had no idea that LeMay's bombers were planning on turning around. Further provoking them, on March 21, 1956, LeMay's bomber pilots began flying top secret missions as part of Operation Home Run, classified until 2001. From Thule Air Force Base in Greenland, LeMay sent modified versions of America's fastest bomber, the B-47, over the Arctic Circle and into Russia's Siberian tundra to spy. The purpose was to probe for electronic intelligence, or ELINT, seeing how Soviet radar worked by forcing Soviet radars to turn on. Once the Soviets started tracking LeMay's

bombers, technicians gathered the ELINT to decipher back home. Asked later about these dangerous provocations, LeMay remarked, "With a bit more luck, we could have started World War III."

Sam Pizzo worked as a navigator during the SAC espionage operation, planning flights over nuclear facilities, missile sites, naval installations, and radar sites. The 156 missions took place from March 21 to May 10, 1956, where the Russian landscape meets the Arctic Ocean, which made for total darkness twenty-four hours a day. The temperature outside varied between -35 degrees and -70 degrees Fahrenheit. Sam Pizzo recalls those Cold War missions: "Ambarchik, Tiksi, Novaya Zemlya, these were the territories we covered. This was the real deal. Our missions were not twelve miles off the coastline, to study electromagnetic wave propagation [as was reported]. We went in." An undetermined number of pilots were shot down. Several were believed to have survived their bailouts, only to be taken prisoner and thrown into the Russian gulags. Everyone knew that suffering a gulag imprisonment was a fate worse than death. The missions were so top secret, Pizzo explained, that very few people at Thule had any idea where the pilots were flying. As a navigator, Pizzo was among the elite group who charted the pilots' paths. Flying over the Arctic required a very specific expertise in navigation, a different skill set than was used anywhere else on the globe. At the top of the world, the magnetic field fluctuates radically, which means compasses simply do not work. Instead, navigators like Sam Pizzo used celestial shots of the North Star and drew maps accordingly. This was a skill that Pizzo would later use when he was recruited for work at Area 51.

As Operation Home Run continued, the CIA worried that General LeMay's aggressive missions were a national security threat. "[Soviet leaders may have become convinced](#) that the U.S. actually has intentions of military aggression in the near future," a nervous CIA panel warned the president in the winter of 1956. And President Eisenhower's science advisers told him that flying U-2s over Russia could not wait. The Agency's Russian nuclear weapons expert Herbert Miller, the man who accompanied Bissell on that first scouting trip to Area 51, explained that no other program "can so quickly bring so much vital information at so little risk and so little cost."

The CIA planned to have the first U-2 flights photograph the facilities where the Agency believed Russia was building its bombers, missiles, nuclear warheads, and surface-to-air missiles. And the U-2 pilots would seek out the location of the elusive facility called NII-88. Having completed pilot training at Area 51, four pilot detachments were ready to go, fully prepared to penetrate deep into denied Soviet territory. There, they would be able to photograph half of the Soviet Union's 6.5-million-square-mile landmass. But it had to happen fast.

[President Eisenhower was gravely concerned](#). "I fear if one of these planes gets shot down [we run] the risk of starting a nuclear war," he wrote in his White House journal. [Richard Bissell promised the president](#) that there was no chance of shooting down the U-2 and very little chance of tracking it. Besides, if the U-2 did get shot down, Bissell said, it would most likely disintegrate on impact with the ground, killing the pilot and destroying the airplane.

The Moscow air show on June 24, 1956, foreshadowed the breaking of promises

made to the president. In a show of ceremony, Soviet premier Nikita Khrushchev invited air force generals from twenty-eight foreign delegations, including General Nathan Twining, the U.S. Air Force chief of staff. For all the fanfare and bravado of the bombers and fighter jets swooping across the skies, the more significant event occurred a few hours later, at a wooden picnic table in Gorky Park. There, General Twining and the leaders of the British and French delegations sat and listened to Khrushchev deliver a long-winded speech. Partway through, the Soviet premier raised his vodka glass and made a toast "in defense of peace." Years later, retired Russian colonel [Alexander Orlov](#) [related](#) what happened next: "In the midst of his toast [Khrushchev] turned to General Twining and said, 'Today we showed you our aircraft. But would you like a look at our missiles?'" Shocked by the offer, General Twining said, "Yes." Khrushchev shot back, "First show us your aircraft and stop sending intruders into our airspace." Khrushchev was referring to the bombers sent over the Arctic Circle by General LeMay. "[We will shoot down uninvited guests](#). We will get all of your [airplanes]. They are flying coffins!"

It was a terribly awkward moment underscored by the mercurial Soviet leader's abrupt shift in tone, from applauding peace to talking about shooting down American airplanes. General Twining had been set up for a confrontation. Things got worse when Khrushchev looked around the picnic table for reactions and saw a U.S. military attaché pouring his drink under a bush. "Here I am speaking about peace and friendship, but what does your military attaché do?" Khrushchev shouted at Ambassador Charles Bohlen, then demanded that the attaché drink a penalty toast. Once the man had swallowed his vodka, he got up and quickly left the picnic. If Khrushchev thought the Americans were trying to insult him in the park, [he would be even more enraged](#) two weeks later when he learned the CIA had sent a U-2 directly over the Kremlin to take photographs of the house in which Nikita Khrushchev slept.

Area 51 had a Washington, DC, complement for the U-2 program, an office on the fifth floor of an unmarked CIA facility at 1717 H Street. This served as the command center for Project Aquatone's first, secret missions over the Soviet Union. It was from this clandestine facility that, shortly before midnight on July 3, 1956, Richard Bissell made a historic telephone call over a secure line. He reached the U-2's secret base in Wiesbaden, West Germany, and gave the commander the authorization to proceed. There, in a nearby room, Hervey Stockman sat breathing pure oxygen from a ventilator as a flight surgeon monitored the levels of nitrogen in his blood. Outside the door, [CIA men armed with machine guns](#) stood guard. Given the time difference, where Stockman was sitting it was already the following morning, making it the anniversary of America's independence. The nation was 180 years old. If all went well, Stockman was about to become the first pilot to penetrate the Iron Curtain's airspace. He would fly all the way to Leningrad, around the coast, and back down, putting him forever in the record books as the first man to fly over the Soviet Union in a U-2.

Stockman and his U-2 took off from Wiesbaden a little after 6:00 a.m., the pilot and his airplane moving skyward in a dramatic incline. The U-2 rose at a remarkable fifteen thousand feet a minute, so steep a gradient that for airmen on the ground who were unfamiliar with the airplane, it must have looked like Stockman was about to pitch back

and stall. Halfway to altitude, Stockman briefly let the fuselage even out, allowing his body fluids and the fluids in the fuel tanks to expand and adjust. Once, a U-2 pilot had ascended too quickly, and his fuel tanks exploded. The pilot was killed. After a few additional minutes of ascent, Stockman arrived at cruising altitude. The sky above him was black and he could see stars. Below him, the Earth curved. It would be an eight-and-a-half-hour journey without a sip of water or a bite of food. In the U-2's camera bay, Stockman transported a five-hundred-pound Hycon camera fitted with the most advanced photo lenses ever devised in America. To prove how accurate the camera was, Bissell had sent a U-2 from Groom Lake on a flight over President Eisenhower's Pennsylvania farm. From thirteen and a half miles up, the U-2's cameras were able to take clear photographs of [Eisenhower's cows](#) as they drank water from troughs.

After several hours, [Stockman approached Russia's submarine city](#). "I was supposed to turn the cameras on when I reached Leningrad," Stockman recalls. "I was to fly along photographing the naval installations there as well as a couple of airfields that were all part of what we had been led to believe might hold long-range Soviet bombers." But there were no long-range bombers to be found. The famous bomber gap, it turned out, was false. What Stockman filmed on the first overflight into Russia provided the CIA with critical facts on an issue that had previously been the subject of contentious debate. Russian weapons expert [Herbert Miller wrote a triumphant memo](#) to Eisenhower after the film in Stockman's camera was interpreted, explaining just how many "new discoveries have come to light." Stockman's flight provided the Agency with four hundred thousand square miles of coverage. "Many new airfields previously unknown, industrial complexes of a size heretofore unsuspected were revealed... Fighter aircraft at the five most important bases covered were drawn up in orderly rows as if for formal inspection on parade." What astonished Miller was just how current the information was. "We know that the guns in the anti-aircraft batteries sighted were in a horizontal position rather than pointed upwards and 'on the ready.' We know that some harvests were being brought in, and that the small truck gardens were being worked." They denoted "real intentions, objectives and qualities of the Soviet Union." Hervey Stockman explains it this way: "What it portrayed was that as a people they were not all geared up to go to war. They were leading a normal Russian life, so that behind this 'Iron Curtain' there wasn't all this beating of drums and movement of tanks and everything that was envisioned. They were going about their way over there."

Stockman's photos made the CIA ecstatic and justified the entire U-2 program, as a flurry of top secret memos dated July 17, 1956, revealed. "For the first time we are really able to say that we have an understanding of what was going on in the Soviet Union, on July 4, 1956," Miller wrote. But as beneficial as Stockman's flight was for the CIA, the results proved disastrous for President Eisenhower's relationship with Nikita Khrushchev. Despite Bissell's assurances to the contrary, the U-2s were tracked by the Soviets' air-defense warning systems from the moment they hit the radar screens. Once the film from Stockman's flight was developed, CIA photo interpreters determined that the Soviets had attempted more than twenty interceptions of Stockman's mission. "MiG-17 and MiG-19 fighters were photographed desperately trying to reach the U-2, only to have to fall back to an altitude where the air was dense enough for them to restart their flamed-out, oxygen-

starved engines," photo interpreter Dino Brugioni told *Air and Space* magazine after the U-2 program was declassified, in 1998.

When Khrushchev learned the Americans had betrayed him, he was furious. After the picnic at Gorky Park, Khrushchev had agreed to spend the Fourth of July at Spaso House, the official residence of Ambassador Charles Bohlen, located just down the street from the Kremlin. When Khrushchev learned that while he had been celebrating the American Independence Day with the country's ambassador, a U-2 had been soaring over Russia, he was humiliated. "The Americans [are] chortling over our impotence," [Khrushchev told his son, Sergei](#), a twenty-one-year-old aspiring missile designer. But in addition to the personal affront they caused Khrushchev, the U-2 overflights greatly embarrassed the Soviet Union's military machine. Soviet MiG fighter jets couldn't get a shot anywhere near Hervey Stockman's U-2, which flew miles above the MiG performance ceiling, just as Colonel Leghorn had predicted. In 1956, the land-based Soviet surface-to-air missiles could not get a shot up high enough to knock the airplane out of the sky. America's spy plane had flown over Russia with impunity. And if that fact became known, the Soviet Union would look weak.

Weighing the options—embarrass his own military, embarrass the American president, or say nothing—Khrushchev chose to remain silent, at least as far as the international press was concerned. As a result, the first U-2 overflights were kept secret between the two governments. But they seriously strained already tenuous relations. Eisenhower ordered the CIA to stop all overflights inside the Soviet Union until further notice. Even worse, the president told Richard Bissell that he had "[lost enthusiasm for the CIA's aerial espionage program](#).

Back at Area 51, Bissell had a lot to worry about. Concerned that his U-2 program was going to be canceled by the president, [he hired a team to analyze](#) the probability of a Soviet shoot-down of the U-2. The news was grim: the Soviets were advancing their surface-to-air missile technology so rapidly that in all likelihood, within eighteen months they would be able to get their SA-2 missile up to seventy thousand feet. Bissell decided that the only way to keep his program aloft was to hide the U-2 from Soviet radar by inventing some kind of radar-absorbing paint. Bissell shared his idea with Lockheed's Kelly Johnson, who told him that [painting the U-2 was a bad idea](#). Paint was heavy, and the U-2 flew so high because of how light it was, Johnson explained. The weight that paint would add to the aircraft would result in a loss of fifteen hundred feet of altitude. Bissell didn't want to hear that. So he went to the president's scientific adviser James Killian and asked him to put together a group of scientists who could make the CIA some radar-absorbing paint. These scientists, who worked out of Harvard University and MIT's Lincoln Laboratory and were called the Boston Group, told Bissell they could get him what he wanted. It was a radical idea that had never been tested before. The scientists and engineers at MIT prided themselves on meeting challenges that other scientists believed were impossible.

There was a second serious problem facing Richard Bissell in the summer of 1956 and that was General LeMay. Impressed with the spy plane's performance, LeMay was now angling for control of the airplane. Under a program called Project Dragon Lady,

LeMay ordered a fleet of thirty-one U-2s specifically for the Air Force. To keep the program secret from Congress, the [Air Force transferred money over to the CIA](#), which meant that while working to head off LeMay's usurpation, Bissell simultaneously had to act as the go-between between the Air Force and Lockheed for the slightly modified U-2s. With these new Air Force airplanes came a demand for more "drivers," which meant the arrival of two new groups of pilots at Area 51—those picked for CIA missions and others chosen for Air Force ones. [Among those selected](#) for Air Force missions was Anthony "Tony" Bevacqua.

"I may have been the only U-2 pilot at Area 51 who never made a model airplane as a kid," Bevacqua recalls. Instead, he had spent all his time devouring books. His obsessive reading of paperbacks, usually those by Zane Grey or Erle Gardner, helped offset his fear that he be unable to read English, like his father. The son of Sicilian immigrants, Bevacqua was the youngest pilot to fly the U-2 at Groom Lake, which he did in the winter of 1957 at the age of twenty-four. But before the handsome, vibrant Bevacqua wound up at the CIA's secret base, he was the roommate of another dashing young pilot whose name would soon become known around the world.

Before the two fighter pilots arrived at Area 51 to fly the U-2, Bevacqua and Francis Gary Powers were a couple of type A pilots with the 508th Strategic Fighter Wing at Turner Air Force Base in Georgia. They lived in a rented four-bedroom house situated two miles from the main gate. Both had been flying F-84 fighter jets for almost two years when one day Powers, whom everybody called Frank, just up and disappeared. "There were rumors that Frank had gone off on some kind of secret program," Bevacqua says, "but this was just talk, not something you could really sink your teeth into." A few months later Bevacqua was approached by a squadron leader and asked if he wanted to volunteer for "an interesting flight program."

"About what?" Bevacqua asked. The recruiter said he could not say, only that it would involve flying and that Bevacqua would have to leave the Air Force but could later return. The program, he was told, needed "a volunteer." It was important, the recruiter said, a mysterious edge to his voice. Bevacqua signed on.

He was flown to the Berger Brothers Company, located in a nondescript building in New Haven, Connecticut, not far from Yale University, that was filled with seamstresses making girdles and bras. What was he doing in there? he wondered. He was led through the workstations and into a back room. The unlikely supplier had a perfect cover for CIA-contract work: making ladies' underwear. In reality, the company, later renamed the David Clark Company, had already proven itself thousands of times over. During World War II, it made parachutes for U.S. Army Air Forces and Navy pilots.

In a clandestine back room, behind the brassiere assembly lines, Tony Bevacqua was fitted for a high-altitude flight suit specifically tailored for his physique. For the duration of his contract, Bevacqua would be required to maintain his weight within ounces. An ill-fitting suit could mean death for a pilot and the inevitable loss of an airplane. Bevacqua understood the concept of need-to-know and was aware that it prohibited him from asking any questions about what the suit was for. But he knew enough about partial-pressure suits to realize that whatever aircraft he was going to be piloting was going to be flying

very high indeed.

His next stop was Wright-Patterson Air Force Base for a battery of physical and psychological procedures. There, Bevacqua underwent a series of endurance tests. Some were familiar but others he found thought-provokingly strange. All U-2 pilots were put into the high-altitude chamber to simulate the experience of sitting in a cockpit in a flight suit that your life depended on. At 63,000 feet, blood boils because there is not enough pressure to sustain oxygen in the bloodstream. There was another test called the Furnace in which U-2 pilots were left in a room that was significantly hotter than a hot sauna. Bevacqua was spared that one but he did have liquids pumped into his every orifice, first water and then some kind of mineral oil. Many U-2 pilots were hooked up to odd machines and others were given electroshock. Bevacqua got what he called the dreaded corpse test instead. He recalled how he "was put in a small space, my arms crossed over my chest like I was in a casket at a morgue. It was absolutely impossible for me to move my extremities. I was told to hyperventilate for as long as I could."

Bevacqua surmised that he would be chosen for the prestigious, top secret assignment only if he was able to pass every test. He wanted the job badly and was entirely willing to push himself physically to the edge. "I came within a breath of passing out during the corpse test," he explains. "After they said I could breathe, the attendants then pulled at my arms and legs but there was no way they could move or bend my extremities. As I breathed oxygen back into my body my cheeks loosened and then the rest of my body gradually returned to normal." After a few minutes Bevacqua's vital signs stabilized. "Apparently, this test was to see if I would have a seizure," he explains.

The next test was a freezing experiment. "I was asked to put my arms in a bucket of ice for as long as I could stand it. I don't remember what happened exactly. Probably good that I don't. I remember that I felt like a guinea pig." Unknown to Bevacqua or the rest of America, the division of the [aviation medicine school at Wright-Patterson](#) that was responsible for testing the U-2 pilots was run by Project Paperclip doctors, doctors with controversial histories. The Air Force had been willing to turn a blind eye to the scientists' past work in order to get where it wanted to go in the future, which was the upper atmosphere and outer space. The work that these Paperclip doctors had done during the war would later become a shameful stain on the Air Force record.

In 1980, journalist Linda Hunt published an article in the *Bulletin of the Atomic Scientists* revealing publicly for the first time that several of the nation's leading German American aerospace doctors had [previously worked at Nazi concentration camps](#). There, they had obtained aviation medicine data by [conducting barbaric experiments](#) on thousands of Jews, Poles, Gypsies, and other people considered disposable. Many newspaper articles and medical papers followed, documenting how Project Paperclip came to be and raising important questions about how much the government had known about the scientists' sordid pasts. The issues were well reported but often ignored by the public because of the heinous subject matter involved. The idea that the American military and its intelligence agents would overlook war crimes and crimes against humanity in the name of advancing American science was, and continues to be, an odious one. It is likely that this is the reason why the federal government has never fully declassified the

Operation Paperclip files. In 1999, a government panel released 126,000 pages of previously classified documents on former German Paperclips, but the panel also revealed that there were over [six hundred million still-classified](#) pages waiting "for review." No significant release has occurred since.

In March of 1957, Bevacqua finally passed his tests and arrived at Area 51, where the living conditions had improved. The canvas tents had been upgraded to Quonset huts. There were working showers. The mess hall had been expanded, and someone had built a makeshift bar. But the protocols for flying were as undeveloped as they'd been when Ray Goudey and others were first figuring out how to get the U-2 to fly high. The training that Tony Bevacqua experienced at Area 51 was unlike anything he had ever seen on an Air Force base. The CIA method to train pilots on the [U-2 was as radical and as unorthodox](#) as an Air Force pilot could imagine. At Turner Air Force Base, Bevacqua had learned to fly F-84s the Air Force way. That meant first diligently studying the aircraft manuals, then practicing in a flight simulator, then practicing in a trainer, and finally going up in the airplane with an instructor. At Area 51, there was no manual for the U-2, no flight simulator, no trainer, and no instructor. "The original U-2s had only one seat and one engine, which meant the CIA instructor pilot gave you a lesson with your feet on the ground," Bevacqua explains. Flying this strange and secret spy plane came without a morsel of bureaucracy, never mind basic rules, making the overall experience profound. "You were basically given a talk by an instructor pilot. Then you were given a piece of cardboard with a checklist on the front side, and fuel and oxygen graphs on the back. Then it was time to fly. And that was that."

Coupled with the secrecy protocols, the experience for pilots at Area 51 verged on sublime. No one but his old roommate from Turner AFB, Francis Gary Powers, knew who Tony Bevacqua really was. At Area 51 he went by only a pilot number and his first name. His family members had no idea where he was, nor would they find out about his secret missions for decades to come. As for future assignments, very few people were told where Air Force pilots were headed in the U-2—including the pilots themselves. What everyone knew was that pilots who got shot down over enemy territory were almost always tortured for information. This meant that the less you knew as a pilot, the better it was for everyone involved.

Bevacqua couldn't wait for an assignment. For this small group of pilots—only 25 percent of candidates passed the physical tests—a U-2 mission carried with it a sacred sense of national pride. Tony Bevacqua was living the American dream and protecting it at the same time. He was not someone who ever forgot for a moment how lucky he was. "Always make the most of your opportunities," Bevacqua's Italian-speaking father had told him as a child. Tony Bevacqua had done just that. He couldn't have asked for a better opportunity. He was one of America's most important spy plane pilots. He was helping to save the free world.

By the winter of 1957, the Boston Group had completed what Richard Bissell wanted in radar-absorbing paint. Bissell received the paint and gave it to Lockheed engineers at Area 51. He asked them to coat the fuselage of several U-2s with it, which they did. Bissell understood that Kelly Johnson disapproved of the radar-absorbing-paint program, which

he said made his U-2s "dirty birds." But Bissell was under too much presidential pressure to deal with the watchful eye of Kelly Johnson at this point. To measure how the dirty birds performed against radar, Bissell hired a different company to measure the radar returns, the defense contractor EG&G.

EG&G is an enigma in its own right. Beginning in 1947, EG&G was the most powerful defense contractor in the nation that no one had ever heard of. In many ways, this still remains the case in 2011. The early anonymity was intended. It was cultivated to help make secret-keeping easier. Originally called Edgerton, Germeshausen, and Grier, EG&G had once been a small engineering company run by three MIT professors. In 1927, Dr. Harold "Doc" Edgerton invented stop-motion photography, which utilized another of his patented inventions, the strobe light. [Edgerton's famous stop-motion photographs](#) include one of a bullet passing through an apple, a drop of water splashing on a countertop, and a hummingbird frozen in flight. Edgerton was fond of saying that his career began because he wanted to make time stand still. EG&G got its first known set of defense contracts during World War II, when Doc Edgerton's strobe lights and photographer's flashbulb were used to light up the ground during nighttime aerial reconnaissance missions, rendering the age-old flare obsolete. Thanks to Doc Edgerton, fliers like Colonel Richard Leghorn were able to photograph Normandy before D-day.

[Kenneth J. Germeshausen](#) worked in high-energy pulse theory at MIT. He held more than fifty patents, including a number in radar. Together with the company's third partner, Herbert Grier, Germeshausen developed the firing system for the Hiroshima and Nagasaki nuclear bombs. The Manhattan Project contracts came to the three professors because of their affiliation with Vannevar Bush, the former dean of engineering at MIT and later the man in charge of the Manhattan Project.

In addition to the firing systems on the nuclear bombs, which were based on a simple signal-switching relay system called the DN-11 relay, EG&G handled the defense contract to take millions of stop-motion photographs of nuclear bomb explosions in the Pacific and at the Nevada Test Site. It was from these photographs, and from these photographs only, that EG&G scientists could determine for the Atomic Energy Commission and the Department of Defense the exact yield, or power, of an exploded nuclear bomb. For decades a great majority of [the most highly classified engineering jobs](#) related to nuclear weapons testing went to EG&G. In the 1960s, when special engineering teams were needed to clean up deadly radioactive waste that was the result of these nuclear tests, the contracts went to EG&G as well. They were trusted implicitly, and EG&G's operations were quintessential black. They also had other businesses, such as radar testing. In the early 1950s, EG&G ran a radar-testing facility approximately thirty miles south of Area 51, at Indian Springs. Very little information is known about that period or about what EG&G was working on, as the data remains classified in EG&G's unique Restricted Data files. At Bissell's behest, in 1957 [EG&G agreed to set up a radar range](#) on the outskirts of Area 51 to measure radar returns for the dirty-bird project. In a CIA monograph about the U-2, declassified in 1998, the EG&G tracking station just outside Groom Lake is alleged to be "little more than a series of radar sets and a trailer containing instrumentation" where engineers could record data and analyze results. And yet the exact location of this "small

testing facility" has been redacted from the otherwise declassified U-2 record. Why? The key term is EG&G. Giving away too much information about EG&G could inadvertently open a can of worms. No one but an elite has a need-to-know where any exterior EG&G facilities are located at Area 51—specifically, whether they are located outside the blueprint of the base.

And so, in April of 1957, with EG&G radar specialists tracking his aircraft's radar returns, [Lockheed test pilot Robert Sieker](#) took one of the newly painted U-2s to the skies over Groom Lake. His orders were to see how high he could get the dirty bird to climb. Sieker took off from Area 51 and flew for almost ninety miles without incident when suddenly, in a valley near Pioche, the Boston Group's paint caused the airplane to overheat, spin out of control, and crash. Sieker was able to eject but was killed when a piece of the spinning aircraft hit him in the head. Kelly Johnson was right. It was a bad idea to try to retrofit the U-2. CIA search teams took four days to locate Sieker's body and the wreckage of the plane. The crash had attracted the watchful eye of the press, and the U-2's cover story, that it was a weather research plane, wore thin. Halfway across the country, a headline at the *Chicago Daily Tribune* read "Secrecy Veils High-Altitude Research Jet; Lockheed U-2 Called Super Snooper."

A pilot was dead, and the camouflage paint had made the U-2 more dangerous, not more stealthy. Bissell knew he needed to act fast. He was losing control of the U-2 spy plane program and everything he had created at Area 51. His next idea, part genius and part hubris, was to petition the president for an entirely new spy plane. The CIA needed a better, faster, more technologically advanced aircraft that would break scientific barriers and trick Soviet radars into thinking it wasn't there. This new spy plane Bissell had in mind would fly higher than ninety thousand feet and have stealth features built in from pencil to plane. Bissell was taking a major gamble with his billion-dollar request. Bringing an entirely new black budget spy plane program to the president's attention at a time when the president was upset with the results of the previous work done at Area 51 was either madness or brilliance, depending on one's point of view. But just as Richard Bissell began presenting plans for his radical and ambitious new project to the president, a national security crisis overwhelmed the country. On October 4, 1957, the Soviets launched the world's first satellite, a 184-pound silver orb called Sputnik 1. This was the secret that Sergei Korolev had been working on at Area 51's Communist doppelgänger, NII-88.

At first, the White House tried to downplay the fact that the Soviets had beat the Americans into space. Eisenhower, at his country home in Pennsylvania for the weekend, didn't immediately comment on the event. But the following morning, the *New York Times* ran a headline of half-inch-high capital letters across all six columns, a spot historically reserved for the declarations of war.

SOMET FIRES EARTH SATELLITE INTO SPACE; IT IS CIRCLING THE GLOBE AT 18,000 MPH;
SPHERE TRACKED IN 4 CROSSINGS OVER U.S.

A satellite launch meant the Russians now had a rocket with enough propulsion and

guidance to hit a target anywhere in the world. So much for the Paperclips Wernher Von Braun and Ernst Steinhoff being the most competent rocket scientists in the world. “[As it beeped in the sky](#), Sputnik 1 created a crisis of confidence that swept the country like a windblown forest fire,” Eisenhower’s science adviser James Killian later recalled. British reporters at the *Guardian* warned, “We must be prepared to be told [by Russia] what the other side of the moon looks like.” French journalists homed in on America’s “disillusion and bitter[ness]” at the crushing space-race defeat. The French underscored America’s scientific shame. “The Americans have little experience with humiliation in the technical domain,” read the article in *Le Figaro*. Because members of the public had no idea about the CIA’s U-2 spy plane program, they believed that with Sputnik, the Russians could now learn all of America’s secrets, while America remained in the dark about theirs. For twenty-one days, Sputnik circled the Earth at a speed of 18,000 mph until its radio signal finally faded and died.

In deciding the best course of action, the president turned back to his science advisers. In the month following Sputnik, a new position was created for James Killian—special assistant to the president for science and technology—and for the next two years Killian would meet with the president almost every day. This became a defining moment for Richard Bissell. For as depressing as his Area 51 prospects had seemed only a month before, the news of Sputnik was, ironically for the CIA, a harbinger of good news. James Killian adored Richard Bissell; they’d been friends for over a decade. Immediately after the Russians launched Sputnik, [Killian and Bissell found themselves](#) working closely together again. Only this time, they weren’t teaching economics to university students. The two men would work hand in glove to launch America’s most [formidable top secret billion-dollar spy plane](#), to be built and test-flown at Area 51. [Advancing science and technology for military purposes](#) was now at the very top of the president’s list of priorities. With James Killian on his side, Bissell inadvertently found himself in the extraordinary position of getting almost whatever he wanted from the president of the United States. And as long as what Richard Bissell built at Area 51 could humiliate the Russians and show them who was boss, this included a bottomless budget, infinite manpower, total secrecy, and ultimate control.

Atomic Accidents

Richard Bissell once said that setting up Area 51 inside a nuclear testing facility kept the curiosity-seekers at bay. With Operation Plumbbob, a 1957 atomic test series that involved thirty consecutive nuclear explosions, he got more than he bargained for. With the arms race in full swing, the Department of Defense had decided it was just a matter of time before an airplane transporting an atomic bomb would crash on American soil, unleashing a radioactive disaster the likes of which the world had never seen. In the twenty-first century, this kind of weapon would be referred to as a dirty bomb.

The dirty bomb menace posed a growing threat to the internal security of the country, one the Pentagon wanted to make less severe by testing the nightmare scenario first. The organization needed to do this in a controlled environment, away from the urban masses, in total secrecy. No one outside the project, absolutely no one, could know. Officials from the Armed Forces Special Weapons Project decided that the perfect place to do this was Area 51, inside the Dreamland airspace, about four or five miles northwest of Groom Lake. If the dirty bomb was set off outside the legal perimeter of the Nevada Test Site, secrecy was all but guaranteed. As far as specifics were concerned, there was an apocalyptic prerequisite the likes of which no government had ever dealt with before. Weapons testers needed "a site that could be relinquished for 20,000 years."

Code-named the 57 Project, and later Project 57, the Atomic Energy Commission, the U.S. Air Force, and EG&G would work together to simulate an Air Force airplane crash involving an XW-25 nuclear warhead—a crash in which radioactive particles would "accidentally" be dispersed on the ground. The land around the mock crash site would be contaminated by plutonium, which, according to scientists, would take 24,100 years to decay by half. At the time, scientists had no idea what accidental plutonium dispersal in open air would do to beings and things in the element's path. The 57 Project was a test that would provide critical data to that end. There were further prerequisites, ones that had initially narrowed the possibilities of usable land to that within the Nevada Test Site. The place needed to contain "no preexisting contamination," to be reasonably flat, and to cover approximately fifty square miles. Ideally, it would be a dry lake valley, "preferably a site where mountain-valley drainage currents would induce large amount of shear," or flow. It had to be as far away as possible from prying eyes, but most important, it had to be a place where there was no possibility that the public could learn that officials were even considering such a catastrophic scenario, let alone preparing for one. It was decided that in press releases the 57 Project would only be referred to as "a safety test," nothing more. With a doctor named James Shreve Jr. in charge of things, the project had an almost wholesome ring to it.

One dry lake bed originally considered was Papoose Lake, located six miles due south of Groom Lake, also just outside the test site. But soil samples taken by weapons planners revealed the earth there already had trace amounts of plutonium, owing to previous nuclear explosions conducted inside the test site in 1951, 1952, and 1953, five miles to the west at another dry lake bed called Frenchman Flat. Further complicating matters, Papoose Lake was the subject of contention between the Atomic Energy Commission and two local farmers, the Stewart brothers. The [dispute was over eight dead cows](#) that had been grazing at Papoose Lake in March of 1953 when a twenty-four-kiloton nuclear bomb called Nancy was detonated nearby. Nancy sent radioactive fallout on livestock across the region, including those grazing at Papoose Lake. Sixteen of the Stewart brothers' horses died from acute radiation poisoning, along with their cows. [The commission had paid the Stewarts](#) three hundred dollars for each dead horse but stubbornly refused to pay the men for the dead cows. Instead, a lieutenant colonel from the Army's Veterinary Corps, Bernard F. Trum, wrote a long, jargon-filled letter to the farmers stating there was "nothing to indicate that [the blast] was the actual cause of the [cows'] deaths." Instead, the commission insisted the cows' deaths were "text book cases... of vitamin-A deficiency."

Shamelessly, the commission had a second doctor, a bovine specialist with Los Alamos, to certify in writing that "Grass Tetany" or "general lack of good forage" had killed the cows, not the atomic explosion over the hill. To add insult to injury, the Atomic Energy Commission told the Stewart brothers that its Los Alamos scientists had subjected their own cows to atomic blasts in New Mexico during the original Trinity bomb test in 1945. Those cows, the commission stated, were "burnt by the radioactivity over their entire dorsum and yet have remained in excellent health for years." In essence, the commission was saying, Our nuked cows are alive; yours should be too.

The Stewart brothers remained unconvinced and requested a note of explanation they could understand. In 1957, as weapons planners were determining where to hold Project 57, the dispute remained unresolved. Fearing that any attention brought to Papoose Lake might ignite the unresolved Stewart brothers' controversy, officials crossed the Papoose Lake land parcel off the location list.

The focus narrowed to a large, flat expanse in the Groom Lake valley, the same valley where the CIA was running its U-2 program. There, to the northwest of Area 51, lay a perfect sixteen-square-mile flat parcel of land—relatively virgin territory that no one was using. A record search determined that all grazing rights to the area had been "extinguished," meaning that local farmers and ranchers were already prohibited from allowing their livestock to roam there. Then weapons-test planners made an [aerial inspection of Groom Lake](#). Colonel E. A. Blue joined the project's director, Dr. Shreve, in an overhead scout. In a classified memo, the two men joked about how they spotted a herd of cows roaming around the chosen site, "[60 to 80 cattle who hadn't gotten the word.](#)" and that "somehow information must be gotten to them and their masters." Gallows humor for cows.

A land-use deal between the Department of Defense, which controlled the area for the Air Force, and the Atomic Energy Commission, the civilian organization that controlled the

test site, was struck. As it was with the rest of the loosely defined Area 51, this desired land parcel lay conveniently just outside the legal boundaries of the Nevada Test Site, to the northeast. This allowed the 57 Project to fall under the rubric of a military operation, which could assist in shielding it from official Atomic Energy Commission disclosures, the same way calling it a safety test did. Anyone with oversight regarding unsafe nuclear tests simply didn't know where to look. In the end, the land designation even allowed Project 57 to be [excluded from official Nevada Test Site maps](#). As of 2011, it still is.

In March of 1957, workers cordoned off the area in preparation for Project 57. The [nuclear warhead was flown](#) from Sandia Laboratories in New Mexico to the Yucca Lake airstrip at the test site and transferred to Building 11, where it would remain in storage until explosion day. Since it needed its own name for record-keeping purposes, officials decided to designate it Area 13.

[Richard Mingus was tired](#). The twenty-four-year-old Ohio native had been working double shifts at the Sands hotel for three years and four months, ever since he returned home from the front lines of the Korean War. Newly married, Mingus and his wife, Gloria, had their first baby on the way. The Sands was the most popular spot on the Las Vegas Strip. It was the place where high rollers and partygoers went for entertainment, where they could hear the Rat Packers sing in the Copa Room. The restaurant at the Sands was a first-class operation, with silver service delivered from over-the-shoulder trays. Richard Mingus was proud to work there. Once he even got to wait on Elizabeth Taylor and Eddie Fisher. But by the summer of 1956, the novelty of hearing celebrity singers like Frank Sinatra, Dean Martin, and Sammy Davis Jr. perform had taken a backseat to the financial uncertainty that comes with a waiter's life. When he'd learned Gloria, the light of his life, was pregnant, Mingus became elated. Then economic insecurity settled in. In addition to having a little one on the way, Mingus supported his widowed mother back east.

Looking back, Mingus reflects on that time in his life. "You can never guess what the future holds," he says. That summer, life dealt Richard and Gloria Mingus a cruel blow. Gloria delivered prematurely, and their baby died in the hospital. They were without health insurance, and the bills accompanying the tragedy left Richard Mingus overwhelmed. Gloria became despondent. "I needed a solid job. And one that came with hospital benefits," Mingus explains. "It was time for me to find a profession. So I asked one of the waiters at the Sands if he knew about anything." Mingus learned the federal government was hiring security guards. The following morning he drove over to Second Avenue and Bonanza Street to apply.

There, Mingus stood in a long line of about a hundred other applicants for what seemed like hours. The Nevada Test Site, which was a sixty-five-mile commute to the northwest, had jobs. Rumors were those jobs paid well. The atomic tests, which had begun five years earlier, in 1951, had brought tens of millions of dollars in business to the Las Vegas economy. For the most part, Las Vegas as a city had endorsed the tests because they were such an economic boon. And yet it had been more than a year since the last atomic test series, which was called Operation Teapot and which was made up of twelve nuclear bomb explosions, including one that was dropped from an airplane. Controversies about fallout, particularly debates involving strontium-90, the deadly by-

product of uranium and plutonium fission, had made their way into the public domain. For a while, there was even talk among locals that the test site could get shut down. Standing in line, Mingus got the sense that closing down the test site was far from reality. And he was right—weapons planners were gearing up for the largest atomic bomb test series ever to take place in the continental United States.

Mingus stood in line for a long time. Finally, a sergeant took his fingerprints and asked him if he had any military background. When Mingus said he'd served in Korea, the sergeant nodded with approval and sent him into a separate room. Las Vegas in the 1950s was a town made up largely of gamblers, swindlers, and fortune seekers. The fact that Mingus was a former soldier with an honorable discharge made him an ideal candidate for what the government was after: good men who could qualify for a Q clearance, which was required for a job involving nuclear weapons. Mingus filled out paperwork and answered a battery of questions. In just a few hours, Mingus was, tentatively, offered a job. Exactly what the job entailed, the recruiter could not say, but it paid more than twice what the best local waiters made during a stellar night at the Sands. Most important to Mingus, the job came with health insurance—Gloria's dream. He could begin work as soon as his security clearance came in. That process could take as long as five months.

Richard Mingus had no idea that he was about to become one of the first Federal Services security guards assigned to Area 51. Or that the very first nuclear test he would be asked to stand guard over would be Project 57—[America's first dirty bomb](#).

From the first atomic explosions of Operation Crossroads, in 1946, until the Nevada Test Site opened its doors, in 1951, America tested its nuclear weapons on atolls and islands in the Pacific Ocean. There, in a vast open area roughly twice the size of the state of Texas, the Pentagon enjoyed privacy. The Marshall Islands were a million miles away from the American psyche, which made secret-keeping easy. But the [Pacific Proving Ground](#) was a long haul for the Pentagon in terms of moving more than ten thousand people and millions of tons of equipment back and forth from the United States for each test series. Guarding these military assets en route to the Pacific required a near-war footing. The ship carrying the nuclear material also carried the lion's share of the nation's nuclear physicists, scientists, and weapons engineers. The precious cargo required constant air cover and an escort by destroyer battleships while it [made its zigzag course](#) across the ocean. When Dr. Edward Teller, the Hungarian émigré and father of the hydrogen bomb, began [arguing for an atomic bombing range](#) in America to make things easier on everyone, there was hardly a voice of dissent from Washington. Officials at the Pentagon, the [Armed Forces Special Weapons Project](#), and the Atomic Energy Commission all agreed with Teller and began encouraging the president to authorize a continental test site.

Science requires trial and error, Dr. Teller explained. As nuclear bombs grew more powerful, as weapons went from kilotons to megatons, scientists at the Los Alamos National Laboratory were struggling with discrepancies between theoretical calculations—equations made on paper—and the actual results the weapons produced. If the Pacific Proving Ground was the Olympic stadium for nuclear bombs, the scientists needed a local

gym, a place to keep in shape and try out new ideas. Nevada would be perfect, everyone agreed. It was only a two-hour plane ride away from Los Alamos in New Mexico, as compared to the weeklong journey it took to get people to the Pacific Proving Ground.

In 1950, a top secret feasibility study [code-named Project Nutmeg](#) determined for President Truman that a huge area in southern Nevada, one of the least populated areas in the nation not situated on a coastline, was the most ideal place in the continental United States to test nuclear weapons. The Nevada Test and Training Range quickly became 4,687 square miles of government-controlled land. "[The optimum conditions](#) as to meteorological, remote available land and logistics" can be found there, the study explained. Even more convenient, there was an airstrip located just seven miles from the entrance of the test site, at a government-owned airfield called Indian Springs.

Before the Nevada Test Site was a nuclear bombing range it had been an animal sanctuary. In the 1930s, the Department of the Interior made the region a wildlife reservation. Herds of antelope and wild horses roamed the high-desert landscape with mountain lions and bighorn sheep. Kit fox and sidewinder rattlesnakes were more prevalent there than anywhere else in the country. Centuries earlier, Native Americans lived in the caves in the mountains. They left behind magnificent paintings and ornate petroglyphs on the caves' rock walls. In the mid-1800s, settlers built silver- and copper-mining camps, giving the local geography colorful names such as Skull Mountain, Indian Springs, and Jackass Flats. But by 1942, America had entered World War II, and the entire region was withdrawn from public access for War Department use. The Army set up a conventional bombing range across what would later include the Nevada Test Site, Area 51, and the Nellis Air Force Base. It was an ideal place to train aerial gunners, far from people and resplendent with flat, dry lake beds, which were perfect for target practice and for landing airplanes. After the war ended, the bombing range was closed and its buildings were allowed to deteriorate. But the Army hung on to the land rights for possible future use. That future use became clear when 1,350 acres, or about one quarter of the restricted area, was parceled off and called the Nevada Test Site. On January 27, 1951, at 5:45 a.m., an Air Force B-50D bomber dropped the first atomic bomb on U.S. soil, onto a dry lake bed called Frenchman Flat, inside the Nevada Test Site.

Edward Teller loved the closeness of Nevada and referred to the bombs being set off there as "quickie" tests. Almost immediately, a second nuclear laboratory, called the Lawrence Radiation Laboratory at Livermore, was created by the Atomic Energy Commission [with the goal of fostering competition](#) with the Los Alamos nuclear lab. Shortly before the creation of Livermore, scientists at Los Alamos had started to challenge the military establishment regarding what the future of the nuclear bomb should or should not be. Uninterested in what the creators of the atomic bomb had to say, the Department of Defense pushed back by developing Livermore. Competition fosters productivity; the greater the rivalry, the more intense the competition will be. Indeed, it did not take long for a fierce competition to develop between the two outfits, with Los Alamos and Livermore fighting for weapons contracts and feasibility-study awards. Dreaming up prototypes for new weapons was how contracts were won. Dr. Teller argued for the need to experiment with certain "boosters," like the radioactive isotope of hydrogen tritium, which could further

enhance yield. If a scientist or his lab could make a strong enough case for the necessity of testing such a thing, the Armed Forces Special Weapons Project and the Atomic Energy Commission could easily allocate money for it. The goal was singular: get the highest-yield bombs to fit inside the smallest packages, ideally ones that could be put into the nose cone of a missile designed by Wernher Von Braun.

In five short years, from January 1951 to January 1956, a total of forty-nine nuclear bombs were exploded at the Nevada Test Site, bringing the worldwide total for atmospheric nuclear explosions by the United States to eighty-five. Which is when Richard Mingus joined the security force at the Nevada Test Site and Area 51, just in time for Operation Plumbbob, the largest, [most ambitious series](#) of nuclear weapons tests in the United States so far. The first test scheduled in the thirty-test Plumbbob series was Project 57.

In the flat Nevada desert, Richard Mingus took to work in top secret nuclear security like a fish to water. He loved the formal protocols and the way everything was ordered. "I developed a reputation for being tough," Mingus recalls. From the checklists to the radio codes, everything at the Nevada Test Site and at Area 51 worked with a military precision that Mingus thrived on. What others may have found monotonous, spending long hours guarding nuclear weapons in a vast desert-landscape setting, Mingus found challenging. He passed the pistol training with flying colors. He studied the manuals with such intensity, he ended up scoring in the top 90 percent of all the trainees. His excellence earned Mingus a position as one of only five men chosen to guard the top secret base over the hill from Yucca Flat. For employees of Federal Services, Incorporated, the first thing learned was that the facility was to be referred to only as Delta site. The radio channel on which Mingus and his colleagues spoke could be heard by guards all over the test site. The code was important; it was [Delta, nothing more](#). Mingus remembered how everything at Area 51 worked with top secret/sensitive compartmented information protocols. "Even my sergeant wasn't cleared to go over the hill to Delta. He was my superior but he didn't have a need-to-know what I was doing over there," Mingus explains. "So I was very curious the first time driving out there, looking out the window... wondering what's ahead. When we got there, it was not very fancy at all. Just an airstrip in the desert. Later, we were told the place was also called Watertown but never to use that word. Over the radio we always referred to our position at Delta, never anything else." That first day at Delta, aka Area 51, Richard Mingus and his four colleagues were met by a CIA security representative at the west-facing perimeter gate. "He drove us into the area. We went straight to the admin building, which was just a little wooden structure with a patch cord telephone system sitting there on a desk. The sergeant looked at me, pointed to a chair, and said, 'Dick, that's your post.'" A surge of intimidation swept over Mingus. "A country boy like me, I looked at the phone system and I thought, This is the hottest spot on the post, the place where all the communication from the CIA comes in. I had never used a switchboard before and I knew if I wanted to keep my job I'd have to learn real fast. As it turns out, there was plenty more time to learn. The phone almost never rang. 'Thirty-two thirty-two,' that's how I answered the telephone. There were not many calls. And when someone did call, they would almost always ask for the same person, a [generic] name like Joe Smith, the code name for the

commander at the base."

At Area 51, Mingus and his colleagues rotated through four sentry posts: the administration building, the top of a seventy-five-foot water tower, and the east and west gates. The gate positions were used to control access to Area 51 by land. On more than one occasion, Mingus turned away what he calls "overly curious Air Force," individuals who "just because they had rank, they thought they should be able to come on in." Mingus denied access to anyone not badged for Area 51. "A few times things got real tense. We worked on strict orders and it was my job to keep people out." The water-tower post at the facility was used by guards to keep an eye on the sky. "We were on the lookout for a rogue helicopter or small aircraft, that type of thing," Mingus recalls. During this time, the security guards got to know many of the U-2 pilots. "They'd fly low enough over me so I could see their faces in the cockpit. They got a kick out of flying over our security posts. They'd buzz over us and after they landed they'd always make a joke about not wanting us sleeping on the job."

Richard Mingus had been guarding Area 51 for a little over a month when the Los Alamos scientists and the EG&G engineers began their final preparations for Project 57 at Area 13. A supervisor at the Nevada Test Site asked Mingus if he was willing to work some considerable overtime for the next few weeks. He had been requested to serve as the guard to keep both Area 51 and Area 13 secure. Considerable overtime meant double-time pay, and Mingus agreed. Finally, a shot date of April 3 was chosen. *Shot*, Mingus quickly learned, was commission-speak for "nuclear detonation." As was required by an agreement between the Atomic Energy Commission and the State of Nevada, the Department of Defense prepared a simple statement for the press. "A highly classified safety test [is] being conducted by Dr. James Shreve Jr., in April 1957," read the *Las Vegas Sun*. The public had no idea the Department of Defense and the Atomic Energy Commission would be simulating an airplane crash involving an XW-25 nuclear warhead by initiating a one-point detonation with high explosives at Area 13. Neither did any of the U-2 program participants living in Quonset huts just a few miles to the east. Scientists predicted the warhead would release radioactive plutonium particles, but because a test like Project 57 had never been conducted before, [scientists really had no clear idea](#) of what would happen.

[Workers set up](#) four thousand fallout collectors around a ten-by-sixteen-square-mile block of land. These galvanized steel pans, called sticky pans, had been sprayed with tacky resin and were meant to capture samples of plutonium particles released into the air. Sixty-eight air-sampler stations equipped with millipore filter paper were spread over seventy square miles. An accidental detonation of a nuclear weapon in an urban area would be far more catastrophic than one in a remote desert area such as Groom Lake, and the Department of Defense wanted to test how city surfaces would respond to plutonium contamination, so mock-ups of sidewalks, curbs, and pavement pieces were set out in the desert landscape. Some fourteen hundred blocks of highway asphalt and wood float finish concrete were fabricated and set around on the ground. To see how automobiles would contaminate when exposed to plutonium, cars and trucks were parked among the juniper bushes and Joshua trees. As zero day got closer, Mingus saw

preparations pick up. Giant air-sampling balloons were tethered to the earth and floated over Area 13 at various elevations; some were five feet off the ground and others a thousand feet up, giving things a circus feel. Nine burros, 109 beagles, 10 sheep, and 31 albino rats were put in cages and set to face the dirty bomb. EG&G's rapatronic photographic equipment would record the radioactive cloud within the first few microseconds of detonation. A wooden decontamination building was erected just a few hundred yards down from Mingus's post. It was nothing fancy, just a wooden shack "[stocked with radiation equipment and protective clothing](#), shower stalls... with a three-hundred-fifty-gallon hot-water supply and a dressing room with benches and hangers for clothes." Shortly before shot day, workers installed a "two-foot-wide wooden approach walk" and covered it with kraft paper.

Shot day came and went without the test. All nuclear detonations are subject to the weather; Mother Nature, not the Pentagon's Armed Forces Special Weapons Project officers, had final say regarding zero hour. [Mother Nature's emissary](#) at the test site was Harold "Hal" Mueller, a meteorologist from UCLA. In the case of Project 57, there was one weather problem after the next. It was April in the high desert, which meant heavy winds, too much rain, and thick clouds. For several days, snow threatened the skies. In the second week of April, the winds were so intense that a blimp moored twelve miles south, at Yucca Flat, crashed and deflated. On April 19, one of the [Project 57 balloons broke loose](#), forcing General Starbird to issue a telegram notifying Washington, DC, of a potential public relations nightmare. The balloon had sailed away from Area 13 and was headed in the direction of downtown Las Vegas. "A twenty-three foot balloon towing two hundred feet one eighth inch steel aircraft cable escaped Area 13 at 2255 hours April 19 PD," read Starbird's terse memo. His "best estimate is that balloon will self-rupture and fall within boundaries of the Las Vegas bombing and gunnery range," and thereby go unnoticed. But General Starbird and everyone else involved knew if the balloon were to escape the test site's boundaries, the entire Plumbbob series was at risk of cancellation. Lucky for Starbird, the balloon crash-landed inside the Nevada Test and Training Range.

The concept of using balloons in nuclear tests was first used in this series. In thirteen of the thirty Plumbbob explosions scheduled to take place in spring and summer of 1957, a balloon would be carrying the nuclear device off the ground. Before balloons were used, expensive metal towers had been constructed to hold the bomb, towers that guards like Richard Mingus spent hours tossing paper airplanes from. "You needed something to keep your mind off the fact that the bomb you were standing next to was live and could flatten a city," Mingus says. To get weapons test engineers like Al O'Donnell up that high—the towers were usually three hundred, five hundred, or seven hundred feet tall—in order to wire the bomb, rudimentary elevators had to be built next to the bomb towers; these were also very expensive. A balloon shot was far more cost-effective and also produced a lot less radioactivity than vaporizing metal did. For the public, however, the safety and security of hanging nuclear bombs from balloons raised an obvious question: What if one of the balloons were to get away?

Finally, during the early-morning hours of April 24, the weather cleared and the go-ahead was given for Project 57. At 6:27 a.m., local time, the nuclear warhead in Area 13

was [hand-fired by an employee from EG&G](#), simulating the plane crash without actually crashing a plane. Mingus remembers the day because "it was just a few days after Easter, as I recall. Finally a good weather day. I don't remember snow but I do remember I had to get muddy to get to my post. Area 13 was way out in the boondocks. Barely any people around because it was a military test, not AEC. There wasn't much traffic and from where I was parked in my truck, I could see a mile down the road. I remember it was cold and I had my winter coat on. No radiation-protection gear." The predicted pattern of [fallout was to the north](#). When the dust from the small radioactive cloud settled, plutonium had spread out over 895 square acres adjacent to Groom Lake. Mingus says, "It wasn't spectacular. It didn't have a big fireball. But it involved an extreme amount of radiation, which made it nasty. I remember how dirty it was."

[The bomb was indeed dirty](#). Plutonium, if inhaled, is one of the most deadly elements known to man. Unlike other radiation that the body can handle in low dosages, such as an X-ray, one-millionth of a gram of plutonium will kill a person if it gets in his or her lungs. According to a 1982 Defense Nuclear Agency request for an unclassified "[extract of the original report](#)", most of which remains Secret/Restricted Data, Project 57 tests confirmed for the scientists that if a person inhales plutonium "it gets distributed principally in bone and remains there indefinitely as far as human life is concerned. One cannot outlive the influence because [the alpha half-life of plutonium-239](#) is of the order of 20,000 years." These findings came as a result of many tests performed on the dead burros, beagles, sheep, and albino rats that had been exposed to the dirty bomb. So why wasn't Richard Mingus dead?

The same report revealed that "air samplers indicated high airborne concentrations of [respirable plutonium remarkably far downwind](#)." Plutonium is a poison of paradox. It can be touched without lethal effects. Because it emits alpha particles, the weakest form of radiation, plutonium can be blocked from entering the body by a layer of paper or a layer of skin. Equally incongruous is the fact that plutonium is not *necessarily* lethal if ingested. "Once in the stomach, its stay in the body is short, for [particles] are excreted as an inert material with virtually no body assimilation," read another report. In other words, plutonium is deadly for humans and animals only if particles reach the lower respiratory tract.

Mingus never breathed any particles into his lungs as he kept watch for ten to twelve hours at a time on a desolate stretch of land between Area 13 and Area 51, guarding two of the most classified projects in post-World War II American history: Projects 57 and Aquatone, the U-2. As the weeks wore on and Project 57's plutonium particles settled onto the desert floor, Mingus watched men from Sandia, Reynolds Electric and Engineering Company, and EG&G go in and out of the contamination site. They'd put on face masks and seal areas on their bodies where their clothing met their skin by using household tape. They passed by a small metal sign that read DO NOT ENTER, CONTAMINATED AREA so they could swap out trays, feed the animals that were still alive, and remove the dead and dying ones. They replaced spent millipore paper with fresh strips and then headed back down to the laboratory and the animal morgue inside the Nevada Test Site. Meanwhile, Mingus watched overhead as the U-2 pilots made their final test flights, putting in as many flight hours as they could before their missions became real. Soon these pilots

would be dispatched overseas, where they would be stationed on secret bases and fly dangerous missions that technically did not exist and that the public would not learn about for decades.

Data obtained as a result of Project 57 confirmed for the Department of Defense what it already knew. "Plutonium has a 24,000 year half-life. It does not decay." Once plutonium embeds in soil, it tends not to move. "There are few instances of plutonium depletion with time. There is little tendency for the plutonium to change position (depth) in soil with time." Provided a person doesn't inhale plutonium particles, and provided the plutonium doesn't get into the bloodstream or the bones, a person can pass through an environment laden with plutonium and live into his eighties; Richard Mingus is a case in point.

Within a year of the detonation of the dirty bomb, the scientists were satisfied with their preliminary data, and Project 57 wound down. The acreage at Area 13 was fenced off with simple barbed wire. Stickers that read contaminated materials were attached to the bumpers and hoods of Atomic Energy Commission vehicles before they were buried deep underground. Clothing contaminated with "alpha-emitting material was sealed in plastic bags and buried in the contaminated waste area." And yet, by the summer of 1958, Project 57's director, Dr. James Shreve, authored a very troubling report—one that was marked Secret-Restricted Data—noting that the measurements research group had made a potentially deadly observation. "Charles Darwin studied an acre of garden in which he claimed 53,000 hard working earthworms moved 18 tons of soil," wrote Dr. Shreve. "Translocation of soil, earthworms' ingestion of plutonium, could turn out to be a significant influence, intentional or unintentional, in the rehabilitation of weapon-accident environment." In other words, plutonium-carrying earthworms that had passed through Area 13, or birds that ate those earthworms, could at some point in the future get to a garden down the road or trees in another field. "The idea of an entirely separate program on ecology in Area 13 had occurred to [names unclear] in the summer of 1957," wrote Shreve, "but the AEP/UCLA logical group to undertake the investigation was too committed on Operation Plumbbob to consider the responsibility." The twenty-nine nuclear bombs about to blow in the rest of the Plumbbob series would take precedent over any kind of effort to contain future harm done by the first test in the series, the Project 57 dirty bomb. Out in the desert, men with extraordinary power and punishing schedules worked without any effective oversight. As one EG&G weapons engineer remarked, "Things at the test site rolled fast and loose." Not until as late as 1998 was the top layer of earth from Area 13 scraped up and removed. By then, earthworms in the area, and birds eating those earthworms, had been moving plutonium-laden soil who knows how far for more than forty years.

With the plutonium-contamination test out of the way, the Armed Forces Special Weapons Project began moving forward with the rest of the 1957 open-air nuclear-test series. It was a boon to the Las Vegas economy, supplying millions of dollars in resources and in jobs. Each test was reported to cost about three million dollars—approximately seventy-six million in 2011 dollars—although it is impossible to learn what that figure did or did not include.

Nearly seven thousand civilians were badged to work at the test site during Operation

Plumbbob. Another fourteen to eighteen thousand employees of the Department of Defense also participated; official figures vary. But despite all the money being pumped into Las Vegas, the debate over fallout threatened to cancel the tests. Just two weeks before Project 57 contaminated 895 acres adjacent to Groom Lake with plutonium, Nobel Prize winner Linus Pauling made a statement that spooked the public and threatened the tests. [Pauling said](#) that as a result of nuclear tests, 1 percent of children born the following year would have serious birth defects. The Atomic Energy Commission responded by positioning their own doctors' opinions prominently in the news. Dr. C. W. Shilling, deputy director of biology and medicine for the Atomic Energy Commission, ridiculed Linus Pauling, saying that "excessively hot baths can be as damaging to the human sex glands as radioactive fallout in the amount received in the last five years from the testing of atomic weapons." In hindsight, this is astonishingly erroneous, but at the time it was what Americans were willing to believe.

Almost every newspaper in the country carried stories about the debate, often presenting diametrically opposed views on the subject in columns side by side. "Children are smaller on island sprinkled with nuclear fallout," read the *Santa Fe New Mexican*; "Study Finds Kids Born to Marshall Islanders Are Perfectly Normal," headlined another; "2000 Scientists Ask President to Ban Bomb Tests," the *Los Angeles Mirror* declared. Editorials, such as the one published on June 7 in the *Los Angeles Times*, suggested that a recent influx of seagull and pelican deaths along the California coast was proof that the biblical End of Times was at hand.

All across Europe there were protests. Japan tried to get the tests canceled. When it became clear that the tests would go forward, one hundred enraged Japanese students protested at the U.S. embassy in Tokyo. When things turned violent, heavy police reinforcements were called in. Prime minister of India Jawaharlal Nehru called the tests a "menace" and, in a personal appeal to President Eisenhower, proclaimed that unless all nuclear tests were stopped, the Earth would be hurled into a "pit of disaster." Soviet scientist Professor Federov publicly accused the United States of developing a weapon that was meant to cause worldwide drought and flood. To counter the campaign aimed at putting an end to nuclear testing, the Atomic Energy Commission kept the propaganda rolling out. Colorful characters such as Willard Frank Libby, one of the Agency's leading scientists and known as Wild Bill of the Atom Bomb, insisted that "science is like an art. You have to work at it or you will go stale. Testing is a small risk." In the end the weaponeers won. When it was finally announced that the Plumbbob series had received presidential approval, the press release described the twenty-four nuclear tests (the other six were called safety tests) as "low yield tests," promising none would be more than "30 kilotons." The six "safety tests" were generally excluded from mention. The magnitude of the megaton bombs set off in the Pacific had fundamentally warped the notion of atomic destruction. The Hiroshima bomb, which killed seventy thousand people instantly and another thirty to fifty thousand by radiation poisoning over the next few days, was less than half the size of what the U.S. government was now calling "low yield."

The tests were important, the president promised the public. The government needed to build up its "encyclopedia of nuclear information." The Army needed its troops to

practice "maneuvers" on a nuclear battlefield and to record how soldiers would perform in the event of a nuclear battle. The government had to know: At what distance could a military jeep drive through a nuclear shock wave? How did a blast wave affect a hill versus a dale? What effect would weapons have on helicopters, blimps, and airplanes when they flew close by a mushroom cloud? [The Pentagon wondered](#) and said it needed to find out. And so, in the sparsely populated desert of southern Nevada, the Plumbbob nuclear weapons tests went ahead as planned.

Following Project 57, the first nuclear explosion in the series to form a mushroom cloud was called Boltzmann, detonated on May 28, 1957. At twelve kilotons, it was approximately the same size as the Hiroshima bomb and [caused Area 51 personnel](#) located eleven miles over the hill to be temporarily evacuated from the base. The bomb was described in a press release simply as a "Los Alamos Scientific Laboratory device." On June 9, 1957, the *New York Times* printed the Atomic Energy Commission's "partial schedule" of the Operation Plumbbob atomic tests so that summer tourists wanting to see a mushroom cloud could plan their itineraries accordingly. "This is the best time in history for the non-ancient but none the less honorable pastime of atom-bomb watching," the *New York Times* said. According to Richard Mingus, it seemed that higher-ranking CIA officers at Area 51 did not agree with the Gray Lady's assessment. "After one blast really shook the place, a group of them jumped in someone's private aircraft and took off pretty fast." One report, declassified in 1993, noted the damage: "The blast buckled aircraft hangar doors, shattered windows in the mess hall and broke a ventilator panel on a dormitory." Area 51 employees were once again evacuated. Neither Richard Bissell nor his team was prepared for such drastic effects and certainly not as a matter of course. Whether the Agency protested or complied remains classified, but the U-2s were quickly flown to a remote area of the north base at Edwards Air Force Base in California and hidden in hangars there. Nothing was going to stop the Atomic Energy Commission and its tests. Operation Plumbbob was in full swing.

Then came the Hood bomb.

It was the middle of the night on July 5, 1957. Richard Mingus was getting ready to head to the test site for work. Gloria was finally pregnant again, and it had been a celebratory Fourth of July. Now Mingus prepared himself for what he knew was going to be an exceedingly long day. The shot was going to be big; so big, the commission had already evacuated every last person from Area 51. Only the caretakers were left. Richard Mingus kissed Gloria good-bye and climbed into his new 1957 DeSoto. How Mingus loved his car, with its four doors and long fins, a luxury made affordable by long overtime hours at the test site. The morning of the Hood bomb, Mingus drove the sixty-five miles to the main gate at Camp Mercury, located at the southernmost end of the test site, off Highway 95. It was somewhere around 1:30 a.m. Hood was scheduled for detonation early that morning, in Area 9. On the seat beside him, Mingus carried his lunch, always lovingly packed by Gloria in a small, wooden lunch box. Inside there was a sandwich, a can opener, and a can of Mingus's favorite: Dinty Moore stew. Once inside the gates of the test site, Mingus parked his DeSoto and transferred his belongings into an Atomic Energy Commission truck. Then he drove the familiar route from Camp Mercury to the

control point. First he made sure to stop by the ice house, where he could fill up a five-gallon can with water, making sure to put a big block of ice inside. "The size of the Hood bomb was classified but everyone knew it was going to be really big," Mingus explains.

Three miles to the north, at Area 9, the Army would be conducting hundreds of tests during and immediately after the explosion. Seventy Chester White pigs wearing military uniforms were enclosed in cages facing the bomb and placed a short distance from ground zero. The pigs had been anesthetized to counter the pain of the beta radiation burns they were certain to receive. Using the pigs, the Army wanted to determine which fabrics best withstood an atomic bomb blast. Farther back, lying in trenches, were one hundred soldiers, all of whom were participating in twenty-four scientific experiments. In classified papers obtained by the author, scientists called this [the Indoctrination Project](#). A committee called the [Committee on Human Resources](#) was conducting these secret tests on soldiers to determine how they would react psychologically when nuclear bombs started going off. The Committee on Human Resources wanted to study the "psychology of panic" and thereby develop "emotional engineering programs" for soldiers for future use.

A second battalion of 2,100 troops was stationed farther back, in Area 4 and Area 7, troops whose job was to simulate a "[mythical attack by an aggressor force](#) against Las Vegas, conducted over four days." A mile to the south, twenty-five hundred Marines would be working on combined air-ground exercises during Hood, using an amphibian tractor called the LVTP5, the ship-to-shore vehicle that was used in the Pacific during World War II, an "armored monster capable of bringing Marines ashore with dry feet." Dozens of helicopters performed maneuvers as well. Medical divisions were present, tasked with studying "blast biology," to determine the primary and secondary effects of flying bricks, timber, and glass. Different types of wood houses had been built to see what could withstand a nuclear blast best: wood or wallboard; masonry or metal; asbestos-shingle or tar-paper roof. The Federal Civilian Defense Administration was testing different types of bomb shelters and underground domes. One structure was ninety feet by ninety feet across and had a reinforced door weighing a hundred tons that was mounted on a monorail. The Mosler Safe Company sponsored and paid for a \$500,000 nuclear-bombproof steel vault, ideal for insurance companies and banks seeking ways to mitigate loss after a nuclear attack.

Richard Mingus was at the control point when the Hood bomb went off, all seventy-four kilotons of it. Almost immediately after the bomb detonated, a call came in from Mingus's boss, a man by the name of Sergeant May. There was a major security problem, May was told. The Atomic Energy Commission had forgotten to secure Area 51. May needed to send Mingus over to the evacuated CIA facility immediately. "Once Sergeant May got off the phone he turned to me quick and said, 'Go to rad safe, check out a Geiger counter and get over to Building 23 fast.'" Mingus followed orders. He jumped into his Atomic Energy Commission truck and raced toward Building 23.

Not only the yield size of Hood was classified; so was the fact that despite the Atomic Energy Commission's assurance that it was not testing thermonuclear bombs, Hood was a thermonuclear bomb test. At seventy-four kilotons, it was six times bigger than the bomb

dropped on Hiroshima and remains in 2011 the largest bomb ever exploded over the continental United States. The flash from the Hood bomb was visible from Canada to Mexico and from eight hundred miles out at sea. "So powerful was the blast that it was felt and seen over most of the Western United States as it lighted up the pre-dawn darkness," reported the United Press International. It took twenty-five minutes for the nuclear blast wave to reach Los Angeles, 350 miles to the west. "LA Awakened. Flash Seen, Shock Felt Here. Calls Flood Police Switch Board," headlined the *Los Angeles Times*. Right around the time the blast reached Los Angeles, Richard Mingus reached Building 23, a solid concrete bunker where radiation safety officers stayed during the explosions. In the distance, [Mingus saw that a large swath of the desert was on fire.](#)

"You know about Delta?" the security officer inside Building 23 asked Mingus.

"I've worked there many times," Mingus said.

"Grab another fella and get out there," the man said. "Find a place with the least amount of radiation and set up a roadblock between the test site and Delta." The Atomic Energy Commission may have moved Area 51 workers off the test site for the nuclear test, but entire buildings full of classified information remained behind. That the facility was not being physically secured by a guard had been an oversight. Now Richard Mingus was being asked to plug that security hole.

Mingus drove quickly up through the test site, heading north toward Area 51. "The whole of Bandit Mountain was on fire," Mingus explains, referring to the low hills between Papoose Lake and Yucca Flat. "You could see individual Joshua trees on fire." Mingus kept on driving, moving as fast as he could while avoiding an accident. But to get to where he needed to go, Mingus had to drive straight through ground zero. "There were huge rocks and boulders in the road sent there by the blast," Mingus explains. "I had my windows rolled up tight and I was driving like hell and my Geiger was screaming. I was worried if I drove too fast and had a wreck in that area, that wouldn't have been good. At guard post three eighty-five, my Geiger counter was chirping like hell. I remember distinctly it was reading eight point five Rs [never considered a safe amount]. We'd already deactivated that post because of the bomb and now it was way too hot to stay there so I drove on over the hill to Area 51."

When Mingus arrived at Groom Lake, his Geiger counter finally settled down. It had been approximately fifty minutes since the bomb had gone off. Having reached forty-eight thousand feet, the mushroom cloud would have already floated over Area 13 and Area 51 by that time. Most likely, it was somewhere over Utah now. "When I pulled into Area 51, it was like a ghost town," Mingus recalls. "I set up a west-facing post. I could see far. Pretty soon, the other guard arrived. He took up the post at the control tower and I stayed in the truck, parked there on the road facing west." Mingus was fewer than ten miles from ground zero, where the Hood bomb had exploded just an hour before. The blast wave had hit Area 51 with such force, it buckled the metal doors on several of the west-facing buildings, including a maintenance hangar and the supply warehouse. Radioactive ash floated down from the sky. And yet, despite the near-constant rain of nuclear fallout, the requirement for security took precedent. Mingus drank water from his five-gallon jug and waited for the smoke from the nuclear bomb to clear. He ate the sandwich that Gloria had made for him

and watched the hills burn. After several hours, he took the can of Dinty Moore stew from his lunchbox and opened it with the can opener that Gloria always made sure to pack. Mingus got out of the AEC truck and opened the hood. He set the soup can on the control block and stirred it with a spoon. It didn't take long for the liquid to heat up. Mingus got back in the car and checked to see if his radio was working. "Delta is secure," Mingus said before kicking back to enjoy his stew. For the rest of the day and well into the night, every half hour a voice came over the radio from the control point asking if everything was "okay." Each time, Mingus let his boss know that Groom Lake was secure. He didn't see another soul out there in the desert for the rest of the day. By nightfall, all that was left of the fire were the Joshua trees smoldering on the hills. The land at the test site had been appropriately chosen; mostly it was just creosote bush and sand. The bushes had burned, and the sand, after being subjected to 5,400 degrees Fahrenheit, had fused into little pieces of glass. Between the fallout and the structural damage, [Area 51 had become uninhabitable](#). After Hood, the once-bustling classified facility transformed into a ghost town overnight—not unlike the mining towns that had preceded it a century before. The future of the secret base was, almost literally, up in the air.

From Ghost Town to Boomtown

After the Plumbbob atomic tests rocked Area 51, the CIA base sat like a ghost town. Very little is known about what happened there from the summer of 1957 through the summer of 1959. According to Richard Mingus, a pair of caretakers lived at the Groom Lake facility, a man and his wife. No record of their names has been found. What is known is that after the Plumbbob series effectively shut down operations at Area 51, workers from the Atomic Energy Commission roamed the hills and valleys [measuring fallout with Geiger counters in hand](#). As impossible as it is to imagine in the twenty-first century, in the early days of atomic testing there was no such thing as HAZMAT suits for workers performing tasks in environments laden with WMD. Instead, workers combed the desert floor [dressed in white lab coats and work boots](#), looking for particles of nuclear fallout. According to Atomic Energy Commission documents made public in 1993, this radioactive debris varied in size, [from pinhead particles to pencil-size pieces of steel](#).

Much to the [surprise of the nuclear scientists](#), the atomic weapons tests revealed that sometimes, in the first milliseconds of destruction, the atomic energy actually jettisoned splintered pieces of the bomb tower away from the intense heat, intact, before vaporization could occur. These highly radioactive pieces were then carried aloft in the clouds and deposited down on places like Groom Lake, and Atomic Energy Commission workers [could then locate them with magnets](#). But while workers measured fallout patterns, [weapons planners moved ahead](#) with preparations for the next atomic test series, which would take place the following fall. The Operation Hardtack II nuclear test series would prove even bigger than Plumbbob, in terms of the number of tests. From September 12 to October 30, 1958, an astonishing thirty-seven nuclear bombs were exploded—from tops of tall towers, in tunnels and shafts, on the surface of the earth, and hanging from balloons. Areas 3, 5, 7, 8, 9, 12, and 15 served as ground zero for the detonations, all within eighteen miles of Area 51.

All but abandoned by the CIA and left to the elements, the once-bustling Area 51 facility took on a spooky, postapocalyptic feel. Guards from the test site did occasional spot tests, but the classified material had all been moved. While the barren landscape weathered the fallout, [the animals observed](#) around Groom Lake suffered terribly. Wild horses, deer, and rabbits roamed around the abandoned hangars and vacant airfields covered with beta radiation burns—the skin lesions caused by radiation poisoning that had plagued so many people and animals in Hiroshima and Nagasaki after the war. It was also during this period that a rare breach of security over Area 51 airspace occurred. On July 28, 1957, a Douglas Aircraft Company employee named Edward K. Current made what he said was an [emergency landing on the former U-2 airstrip](#) at Groom Lake. Mr.

Current told Atomic Energy Commission security officers who questioned him that he had been on a cross-country training flight when he became lost and ran low on fuel. He was held overnight and released. The following day, the Nevada Test Organization uncharacteristically issued a press release stating that a private pilot had mistakenly landed on the "Watertown landing strip." Mr. Current never made a public statement about his curious visit and remains the only civilian who ever landed at Area 51 uninvited in a private airplane, got out, and roamed around.

Meanwhile, in Washington, DC, Richard Bissell waited for presidential approval to plan more overflights using U-2s stationed at secret CIA facilities overseas. And on the West Coast, in Burbank, California, Lockheed's Kelly Johnson was busy drawing up plans for the secret new spy plane. If Johnson was able to secure the new CIA contract he was working on with Bissell, it would likely mean Lockheed would spend the next decade fulfilling contract work out at Area 51. But what Kelly Johnson needed at this point was a radar cross-section wizard.

It was September of 1957, and [Edward Lovick was standing on](#) Lockheed's antenna pattern range tinkering with echo returns when Kelly Johnson approached him for a chat. Lovick, then a thirty-eight-year-old physicist, was known among colleagues as Lockheed's radar man. Radar was still a relatively new science but Lovick knew more about the subject than anyone else at Lockheed at the time.

"Would you like to come work on an interesting project?" the boss asked Lovick. In his eight-and-a-half-year tenure at the company, Lovick had never seen Kelly Johnson before. But standing beside Johnson were William Martin and L. D. MacDonald, two scientists Lovick considered to be brilliant. Martin was Lovick's former boss, and the three men used to work together in the antenna lab. Martin and MacDonald had since disappeared to work on projects inside Building 82, a large, nondescript hangar at the north end of the facility where Lockheed's black operations went on. As for the project that Kelly Johnson was asking Lovick to join, Johnson said it might finish in six weeks. Instead, it lasted thirty-two years. Although Lovick had no idea at the time, he was being invited into Lockheed's classified group, officially called Advanced Development Projects but nicknamed the Skunk Works. In 1957, its primary customer was the CIA.

Lovick was granted his top secret security clearance and briefed on the U-2 aircraft. He learned about the death of test pilot Robert Sieker at Area 51, just four months before. "My first assignment at Lockheed came as a direct result of this tragedy," Lovick recalls. Sieker's death had inadvertently played a role in the invention of the most significant military application of the twentieth century, and it led Ed Lovick to become known as the [grandfather of stealth](#). What the Boston Group at MIT had attempted to do—add stealth features via paint to an existing airplane—had proved futile. But what Lovick and his team would soon discover was that stealth could be achieved if it was designed as a feature in the early drawing boards.

"The purpose of stealth, or antiradar technology," Lovick explains, "is to keep the enemy from sensing or detecting an aircraft, from tracking it, and therefore from shooting it down. The goal is to trick the enemy's air defenses though camouflage or concealment." Camouflage has been one of the most basic foundations of military strength since man

first made spears. In ancient warfare, soldiers concealed themselves from the enemy using tree branches as disguise. Millennia later, American independence was gained partly because the British ignored this fundamental; their bright red coats made them easy targets for a band of revolutionaries in drab, ragtag dress. In the animal kingdom, all species depend on antipredator adaptation for survival, from the chameleon, which defines the idea, to the arctic fox, which turns from brown in summer months to white in winter. Lockheed's U-2s were being tracked over the Soviet Union because they had no camouflage or antiradar technologies, so the Soviets could not only detect the U-2s but also accurately track the spy planes' precise flight paths.

To stay ahead of the Russians, Richard Bissell envisioned a new spy plane that would outfox Soviet radar. The CIA wanted an airplane with a radar cross section so low it would be close to invisible, the theory being that the Russians couldn't object to what they didn't know was there.

The [aircraft would be radically different](#), unlike anything the world had ever seen, or rather, not seen, before. It would beat Soviet advances in radar technology in three fields: height, speed, and stealth. The airplane needed to fly at ninety thousand feet and at a remarkably unprecedented speed of twenty-three hundred miles per hour, or Mach 3. In the late 1950s, for an aircraft to leave the tarmac on its own power and sustain even Mach 2 flight was unheard-of. Speed offered cover. In the event that a Mach 3 aircraft was tracked by radar, that kind of speed would make it extremely difficult to shoot down. By comparison, a U-2, which flew around five hundred miles per hour, would be seen by a Soviet SA-2 missile system approximately ten minutes before it was in shoot-down range, where it would remain for a full five minutes. An aircraft traveling at Mach 3 would be seen by Soviet radar for fewer than a hundred and twenty seconds before it could be fired upon, and it would remain in target range for fewer than twenty seconds. After that [twenty-second window](#) closed, the airplane would be too close for a Soviet missile to fire on it. The missile couldn't chase the airplane because, even though the top speed for a missile at the time was Mach 3.5, once a missile gets that far into the upper atmosphere, [it loses precision and speed](#). Shooting down an airplane flying at three times the speed of sound at ninety thousand feet was equivalent to hitting a bullet whizzing by seventeen miles away with another bullet.

Lockheed was confident the speed element was possible, but it wasn't in charge of building the jet engines; the Pratt and Whitney corporation was. Height was achievable; Lockheed had mastered flying at seventy thousand feet with the U-2. Stealth was the feature that would be the most challenging, and it was also the single most important feature of the spy plane to the CIA. To create stealth, Lovick and his team had to master [minutiae involving radar returns](#). Eventually, they'd need a wide-open space and a full-size airplane, which is how Ed Lovick and the Lockheed radar cross-section team became the first group of men after the atomic blast to set up shop at Area 51. But first, they did this inside a room within a hangar at Lockheed.

"Radar works analogous to a bat," Lovick explains. "The bat squeaks and the sound hits a bug. The squeak gets sent back to the bat and the bat measures time and distance to the bug through the echo it receives." So how does one get the bug to *absorb* the

squeak? "The way in which to solve the radar problem for us at Lockheed was to create a surface that would redirect radar returns. We needed to send them off in a direction other than back at the Soviet radars. We could also do this by absorbing radar returns, like a diaper absorbs liquid. In theory it was simple. But it turned out to be quite a complicated problem to solve."

Lovick had been solving problems ever since he was a child growing up in Falls City, Nebraska, during the Depression—for instance, the time he wanted to learn to play the piano but did not want to disturb his family while he practiced. "I took the piano apart and reconfigured its parts to suppress the sound. Then I sent the vibrations from the strings electronically through a small amplifier to a headset I wore." This was hardly something most [fourteen-year-old children were doing in 1933](#). Four years later, at the age of eighteen, Lovick published his first article on radar, for *Radio-Craft* magazine. Inspired to think he might have a career in radar technology, he wrote to Lockheed Corporation in faraway California asking for a job. Lockheed turned him down. So he took a minimum-wage job as a radio repairman at a local Montgomery Ward, something that, at the age of ninety-one, he still considers a serendipitous career move. "What I learned at Montgomery Ward, in an employment capacity that today some might perceive as a dead-end job, would later play an important role in my future spy plane career." Namely, that there is as much to learn from what doesn't work as from what does.

To learn how to outfox radar, Lovick returned to the trial-and-error principles he'd first cultivated as a child. He set about designing and overseeing the building of Lockheed's first anechoic chamber to test scale models of Skunk Works' proposed new spy plane. "An anechoic chamber is an enclosed space covered in energy-absorbing materials, the by-product of which is noiselessness," Lovick explains. It is so quiet inside the chamber that if a person stands alone inside its four walls, he can hear the blood flowing inside his body. "Particularly loud is the blood in one's head," Lovick notes. Only in such a strictly controlled environment could the physicist and his team accurately test how a one-twentieth-scale model would react to radar beams aimed at it. Lockheed's wood shop built tiny airplane models for the physicists, not unlike the models kids play with. Lovick and the team painstakingly applied radar-absorbing material to the models then strung them up in the anechoic chamber to test. Based on the radar echo results, the shape and design of the spy plane would change. So would its name. Over the next several months, the design numbers for [the Archangel-1](#) went up incrementally, through eleven major changes. This is why the final and official Agency designation for the airplane was Archangel-12, or A-12 for short.

While imaging and then designing Lockheed's new spy plane, Edward Lovick accompanied Kelly Johnson on trips to Washington, DC. There, the men met with Richard Bissell and President Eisenhower's science advisers to deliver progress reports and attend briefings on the aircraft. President Eisenhower called it "the Big One." On these trips to DC, Bissell, whom Lovick knew only as Mr. B., would pepper Kelly Johnson with technical questions about stealth, or "low observables," which Lovick was responsible for answering. "We shared test data from the chamber work, which was going along fine," Lovick recalls. "But the Customer always wanted better. No matter how low we felt our

observables were, the Customer always wanted them to be lower." This meant more work. In a final design stage, Skunk Works aerodynamicists and the radar team added downward slopes, called chines, on either side of the body of the aircraft, making the airplane look like a cobra with wings. With the plane's underbelly now flat, its radar cross section was reduced by an astonishing 90 percent. Still, Richard Bissell wanted a spy plane closer to invisible. Lovick needed a full-scale laboratory. Johnson got an idea: return to Area 51.

Johnson had met privately with an unnamed official to try to convince the CIA to allow a small cadre of Lockheed scientists and engineers to return to Area 51 for proof-of-concept tests. There and only there, Johnson argued, could his group do what needed to be done to meet the CIA's grueling radar-evasion demands. During this intense design phase, and despite the secrecy of the project, Lockheed was not the only contractor bidding on the job. Who exactly would land the CIA's contract to build the U-2's replacement airplane was still up in the air. The federal government liked to foster competition between defense contractors, which meant aerospace contractor Convair was also in play, hoping to secure the CIA's hundred-million-dollar contract for itself. Johnson knew reducing the aircraft's observables was his best shot at getting the contract. Permission was granted, and in the late summer of 1959, [fifty Skunk Works employees returned to Area 51](#).

The days of measuring child-size airplane models in a tiny chamber in Burbank were over. The time had come to put a full-scale model of the world's first stealth airplane to the test. "On 31 March we started to [build a full scale mockup](#) and elevation device to raise the mockup 50 feet in the air for radar tests," Johnson wrote in documents declassified in July 2007. What Johnson was imagining in this "elevation device" would eventually become the legendary Area 51 pylon, or radar test pole.

Lockheed engineers brought with them a mock-up of the aircraft so detailed that it could easily be mistaken for the real thing. For accurate radar results, the model had to represent everything the real aircraft would be, from the size of the rivets to the slope on the chines. It had taken more than four months to build. When it was done, the wooden airplane, with its 102-foot-long fuselage and 55-foot-long wooden wings, was packed up in a wooden crate in preparation for its journey out to Area 51. Getting it there was a daunting task, and the road from Burbank to Area 51 needed to be prepared in advance. The transport crate had been disguised to look like a generic wide load, but the size made it considerably wider than wide. Crews were dispatched before the trip to remove obstructing road signs and to trim overhanging trees. In a few places along the highway, the road had to be made level.

What kind of cleanup went on at Area 51 before the arrival of Lockheed's radar cross-section crew remains unknown. Twelve months had passed since the last atomic bomb had been exploded next door; it was [code-named Titania](#), like the mischievous queen of the fairies from Shakespeare's *A Midsummer Night's Dream*. If there was a formal decontamination of Area 51 or a summation of what the radiation levels were and whether it was safe to return, those details remain classified. As it was, the radar test system Lockheed set up was only temporary. The CIA did not yet have presidential approval to

proceed with the A-12. "I had no more than 50 people on the project," Johnson wrote in a document called *History of the Oxcart by the Builder*, declassified in 2007. The small group of Skunk Workers bunked down in the Quonset huts where the U-2 pilots and engineers had once lived.

Beginning in the fall of 1959, a Lockheed C-47 shuttled engineers and mechanics from Burbank to Area 51 on Monday mornings and returned them home to their families late Friday afternoons. It was Ed Lovick's first experience working at what he'd been told was Paradise Ranch. Because of Lovick's key role in this phase of the project, he was transported in a Lockheed twin-engine Cessna, usually alone with the pilot. He disliked the commute because the fumes from the Cessna made him queasy. But once he arrived and deplaned he would lose himself in the intensity of the radar work going on. In Burbank, in the silence of the anechoic chamber, Lovick had been testing airplane models the size of his shoe. This full-size mock-up would reveal the results of two years' worth of chamber work. "The only way to get accurate information of how a full-size aircraft would perform in radar testing was to subject the full size mock-up of the A-12 to radar beams," Lovick explains.

At the edge of the dry lake bed, scientists mounted the airplane on the fifty-five-foot-high pole, centered in a concrete pad that would rise up and down from an underground chamber in the desert floor. "A control room was located underground to one side of the pad. An anemometer and a wind-direction weather vane were located near the edge of the pad, away from the line of sight," Lovick recalls. The radar antennas, manned and monitored by EG&G, were located a mile away from the pole. "The nose of the mock-up would be tipped down so the radar would see the airplane's belly, the same way that Soviet radar would see it. It was an elaborate and time-consuming process," Lovick recalls. "The mock-up that was tested on the pole had to be housed in a hangar on the base at least a mile away. It was carried out and back on special carts."

In late 1959, the CIA did not know how far the Soviets had advanced their satellite technology—whether they were capable of taking photographs from space yet. The CIA's espionage concerns further complicated the radar work at Area 51. Each member of Lovick's crew carried in his pocket a small chart indicating Soviet satellite schedules. This often meant working odd hours, including at night. "It also made for a lot of technicians running around," Lovick explains. "Satellites passed overhead often. Getting an aircraft up on the radar test pole took eighteen minutes. It took another eighteen minutes to get it back down. That left only a set amount of time to shoot radar at it and take data recordings." As soon as technicians were done, they took the aircraft down and whisked it away into its hangar.

What Lovick remembered most about life on the Ranch during this period, besides the work going on around the pole, was how intense the weather was. At night, workers needed to bundle up in heavy coats and wool hats. But during the day, temperatures could reach 120 degrees. "Once, I saw a coyote chasing a rabbit and they were both walking," Lovick recalls.

In December of 1959, the president was briefed on the status of the A-12. Eager to move ahead, Eisenhower was also aware of the hundred-million-dollar check he would be

writing to Lockheed from his discretionary funds for a fleet of twelve spy planes. Eisenhower told Bissell he had decided to request that Lockheed deliver results on a last proof-of-concept test, one that focused specifically on radar-evasion technology. Bissell had been informed that Lockheed's A-12 would appear on enemy radar as bigger than a bird but smaller than a man. But he had not yet been told about a problem in the aircraft's low observables that Lovick and the team had been unable to remedy while testing the mock-up out at Area 51. Lovick explains: "The exhaust ducts from the two huge jet engines that powered the aircraft were proving impossible to make stealthy. Obviously, we couldn't cover the openings with camouflage coating. During testing, the radar waves would go into the spaces where the engines would be, echo around, and come out like water being sprayed into a can. We'd tried screens and metallic grating. Nothing worked." Kelly Johnson believed the CIA would accept this design weakness. "[Ike wants an airplane from Mandrake the magician.](#)" Johnson told the team and added that the president would settle for something less. Johnson was wrong.

With the president's final request on the table, settling for something less was no longer an option. On a final trip to Washington, DC, Kelly Johnson was going to have to explain to Bissell the exact nature of the design problem. "The meeting took place at an old ramshackle building in Washington, DC, inside a conference room with a mirrored wall," Lovick remembers. "Killian and [Edwin] Din Land were there, so was 'Mr. B.'" Kelly Johnson told the CIA about the problem with camouflaging the A-12's engine exhaust, how it was a weakness in the airplane's overall concept of stealth. "Bissell became furious. Throughout the process, I felt so comfortable working for Kelly, I don't think I realized how serious the situation was until that meeting. Bissell threatened to cancel the entire contract if someone didn't come up with a solution." It was a tense moment. "I knew that more than a hundred men had been lost trying to look over the fence. Shot down over Russia, killed, or listed as missing in training missions. I became aware there was a serious problem of information gathering. Before that, most of my concerns were as a scientist in a lab. [In that moment] I realized how poorly things were going in the world outside the lab. How important this airplane was, and that problem with the engine exhaust needed to be solved."

There in the conference room, Edward Lovick decided to speak up about an idea he had been considering for decades, "and that was how to ionize gas," he says, referring to the scientific process by which the electrical charge of an atom is fundamentally changed. "[I suggested that by adding the chemical compound cesium](#) to the fuel, the exhaust would be ionized, likely masking it from radar. I had suggested cesium would be the best source of free electrons because, in the gaseous state, it would be the easiest to ionize." If this complicated ionization worked—and Lovick believed it would—the results would be like putting a sponge in a can and running a hose into it. Instead of being bounced back, the radar return from the engines would be absorbed. "Bissell loved the idea," says Lovick, adding that the suggestion was endorsed heartily by several of the customer's consultants. An enthusiastic discussion ensued among the president's science advisers, whom Lovick sensed had very little understanding of what it was he was proposing. In the end, the results would be up to Lovick to determine; later, his theory indeed proved correct. Those

results remain a key component of stealth and are still classified as of 2011.

Lockheed kept the contract. Lovick got a huge Christmas bonus, and the A-12 got a code name, Oxcart. It was ironic, an oxcart being one of the slowest vehicles on Earth and the [Oxcart being the fastest](#). On January 26, 1960, Bissell notified Johnson that the CIA was authorizing the delivery of twelve airplanes. The specs were laid out: Mach, 3.2 (2,064 knots, or .57 miles per second); range, 4,120 nautical miles; altitude, 84,500–97,600 feet. The aircraft was going to be five times faster than the U-2 and would fly a full three miles higher than the U-2. Skunk Works would move into production, and a facility needed to be readied for flight tests. There was only one place equipped to handle a spy plane that needed to be hidden from the world, including members of Congress, and that was Area 51.

It was January of 1960, and for the first time since the atomic bombs had shuttered the place, in the summer of 1957, [Area 51 was back in business](#). Only this time, the CIA and the Air Force were comanaging an aircraft that was bigger, faster, and budgeted at nearly five times the cost of the U-2. The program would involve more than ten times as many people, and, as it had with the U-2, [the CIA hired work crews from next door](#) at the Nevada Test Site, men with top secret security clearances already in place. There were two immediate requirements for the new airplane: a much longer runway and a 1.32-million-gallon fuel farm. [The construction of a new runway and the fuel farm](#) began first. Millions of gallons of cement had to be hauled in, along with enough building materials to construct a small city. Trucking this kind of volume through the test site would draw too much attention to the project, so a new road was built, allowing access to Groom Lake from the north. Contractors worked under cover of night, resurfacing eighteen miles of highway through the tiny town of Rachel, Nevada, so fuel trucks carrying five hundred thousand gallons of specially modified fuel each month would not crack the roadbed with their heavy loads.

[The A-12 Oxcart was a flying fuel tank](#). It held eleven thousand gallons, which made the tanks the largest portion of the airplane. The fuel had requirements the likes of which were previously unknown. During the refueling process, which would happen in the air, at lower altitudes and lower airspeeds, the temperature of the fuel would drop to -90 degrees Fahrenheit. At Mach 3, it would heat up to 285 degrees Fahrenheit, a temperature at which conventional fuels boil and explode. To allow for this kind of fluctuation, JP-7 was designed to maintain such a low vapor pressure that a person could not light it with a match. This made for many practical jokes, with those in the know dropping lit matches into a barrel of JP-7 to make those not in the know duck and run for cover. It also required extreme precision of the man who was chosen to be in charge of the fuels team, Air Force sergeant Harry Martin.

This meant Martin was one of the first men to return to the nearly deserted secret base. "Winters were freezing on Groom Lake," Martin recalls, with temperatures dropping into the low teens. "I lived in a dilapidated trailer heated with kerosene. I've never worked so hard in my life as I did that first winter at Area 51." Martin had no idea what he was working on but gathered it was important when he was woken up in the middle of the night by a two-star general. "He said we had an important task. I thought to myself, 'If a general is up working at this hour, then I'm up too.' Working at Area 51 was the highlight of my career."

The A-12 was original in every way, meaning it had unforeseen needs that came up at every turn. The eighty-five-hundred-foot runway had to be created piece by piece because the standard Air Force runways would not work when it came to Oxcart. The longitudinal sections had to be made much larger, and the joints holding them together needed to run parallel to the aircraft's roll, not horizontal, as was standard with Air Force planes. Large, new aircraft hangars went into construction, ready to conceal what would become known as the [CIA's "own little air force."](#) Getting the Oxcart to fly would involve its own small fleet of aircraft: F-104 chase planes, proficiency-training airplanes, transport planes, and a helicopter for search and rescue.

Because the Oxcart would fly five times as fast as the U-2, the Agency needed a lot more restricted airspace at Area 51. Flying at speeds of 2,200 miles per hour, an Oxcart pilot would need a [186-mile swath just to make a U-turn](#). This meant an additional 38,400 acres of land around the base were withdrawn from public access, allowing the Federal Aviation Administration to extend the restricted airspace from a 50-square-mile box to 440 square miles. FAA employees were instructed not to ask questions about anything flying above forty thousand feet. The [same was true at NORAD](#), the North American Aerospace Defense Command.

While the base was being readied for delivery of the twelve aircraft, pole testing continued on the lake bed at Area 51. All the while, the CIA feared the Russians were watching from space. Across the world, at NII-88, Sergei Korolev had designed a Soviet spy satellite called Object D, but the CIA did not know what exactly it was capable of. Also under way was a follow-on espionage platform called Zenit, a modified version of the Vostok spacecraft that had been equipped with cameras to photograph American military installations from space. The Russians took great delight in rubbing what they learned in the face of the State Department. Once, using diplomatic channels, [they passed a simple sketch](#) of the exact shape of Lockheed's top secret airplane to the CIA, whose employees were baffled as to how the enemy could have known such a thing, in view of the fact that operations personnel had been very careful to avoid the orbiting Soviet snoops. Was there a double agent among them? The CIA, ever paranoid about KGB infiltration, worried in private that there could be a spy inside Area 51. Lovick finally figured it out: the Russians were using infrared satellites. In the desert heat, which could reach 125 degrees Fahrenheit in the summer, the mock-up of the aircraft left a heat signature as it sat on the tarmac while technicians were waiting to hoist it up on the test pole. The sketch reflected that.

While the Russians watched from space, the CIA continued to monitor and translate the Soviets' reaction to its aerial reconnaissance program. Memos from Soviet chief marshal of artillery [S. Varentsov](#) revealed the Russians' growing furor over the speed at which the United States was advancing its spy planes. Varentsov lamented that the Russians' own program had barely moved beyond technology from World War II. On the one hand, this was positive news for the CIA. In the world of overhead espionage, the Russians had been forced into a defensive posture. But it was also a double-edged sword. The Soviets couldn't advance their aerial reconnaissance program because so much of their efforts went into [advancing surface-to-air missile technology](#). If the capitalist

foes were going to continue to fly over Mother Russia, Nikita Khrushchev was hell-bent on shooting them down.

Cat and Mouse Becomes Downfall

Francis Gary Powers never slept well the night before a mission flight. When his 2:00 a.m. wake-up call came on May 1, 1960, Powers felt particularly anxious. His flight had already been postponed twice. It was sweltering hot in the ancient city of Peshawar, Pakistan, and Powers had spent the night on a cot in an aircraft hangar inside the CIA's secret facility there. Between the intense heat and the noise, sleep had been sporadic. The false starts had added a layer of uncertainty into the mix. Gary Powers got out of bed and took a shower. May was the hottest month in Pakistan. It was before 5:00 a.m. and yet the sun was already up, cooking the air. After only a few minutes, Powers would be drenched in sweat again. He dressed and ate his breakfast, all the while thinking about the radical mission that lay ahead. The Agency had never attempted to fly all the way across the Soviet Union before, from the southern border near Pakistan to the northern border near the Arctic Circle. From there, Powers would fly his U-2 to a secret CIA base in Norway and land. No Agency pilot had ever taken off and landed at two different bases in a U-2.

This overflight was particularly important to the CIA. Powers would gather valuable photographic information on two key sites. The first was the Tyuratam Cosmodrome, the Soviets' busiest missile launch base. Tyuratam was Russia's Cape Canaveral, the place from where Sputnik had been launched. For years the CIA was aware of only one launchpad at Tyuratam. Now there were rumored to be two, and a U-2 overflight in April revealed preparations for an upcoming launch—of what exactly, the CIA wanted to know. After Tyuratam, Powers would fly across Siberia and head up to a facility at Plesetsk, 186 miles south of the city of Archangelsk, in the Arctic Circle. Plesetsk was alleged to be the Soviet's newest missile-launch facility and was dangerously close to Alaska. Powers's flight would cover a record 3,800 miles, 2,900 of which would be inside the Soviet Union. He would spend nine nerve-racking hours over enemy territory. That would be a lot of time for the Soviets to try to shoot him down. The reverse would have been unthinkable. Imagine a Russian spy plane flying unmolested over the entire United States, from the East Coast to the West, snapping photographs that could provide details at two-and-a-half-foot increments from seventy thousand feet up.

After breakfast, Powers sat in the hangar waiting for a final weather check. He had already sweated through his long johns. Mother Nature always had the final say. For Powers, a slight wind change meant the schedule for his mission flight that morning was disrupted yet again. Not enough to cancel the mission, but enough so that his navigational maps had to be quickly corrected. The waiting was agonizing. It was also necessary. If his photographic targets were covered in clouds, images from the U-2's camera would be

useless. The navigators needed to calculate when and if the weather would clear. As Powers sat waiting it out, his commanding officer, Colonel Shelton, crossed the cement floor and [indicated he wanted to speak with him](#).

Colonel Shelton extended his hand and opened his palm. At the center was a large silver coin. "Do you want the silver dollar?" the colonel asked Powers. What Shelton was offering was no ordinary American coin. It was a CIA suicide gadget, designed to conceal a tiny poison pin hidden inside. The pin, which the pilot could find in his pocket by rubbing a finger gently around the coin's edge, was coated with a sticky brown substance called curare, the paralytic poison found in lethal Amazonian blowpipes. One prick of the poison pin and a pilot would be dead in seconds.

Gary Powers was one of the Agency's most accomplished U-2 pilots. He had flown a total of twenty-seven missions, including ones over China. He had once suffered a potentially fatal flameout over the Soviet Union and managed to survive. On many occasions he had been offered the suicide pill, and on each previous mission he had said no. But on May 1, 1960, Powers unexpectedly accepted the pin from Colonel Shelton, then slid it into the pocket of his flight suit. Later, Powers would wonder if he'd [had a premonition](#) of what was to come.

At 5:20 a.m., it was go time. The personnel equipment sergeant strapped Powers into the cockpit of the U-2. Two men held a shirt over Powers's head to protect him from the blaring sun and the heat while he went over radio codes with the Agency officer. Pilots knew never to use their radio while flying over denied territory, but they listened carefully for click codes being sent to them. A single click meant proceed. Three clicks meant turn around and head back to base. From under his heavy helmet, sweat poured down Powers's face, making him feel helpless. Finally Colonel Shelton came out for a briefing. Powers's overflight was now awaiting final approval by President Eisenhower himself. A last-minute delay like this had never happened before and Powers became convinced the flight would again be canceled for another day. Instead, at 6:20 a.m. a signal came from an intelligence officer. The two men who had been holding the shirt over Powers's head climbed down off the ladders; the personnel equipment sergeant closed the canopy, sealing him into the airplane; and Gary Powers was cleared for takeoff.

Up he went. After the U-2's extraordinarily steep and fast climb, Powers within minutes reached an altitude where it was 60 degrees below zero outside. No longer sweating, Powers switched on the U-2 autopilot mechanism so he could make notes in his flight log. Waiting was always a drag, offset immediately by the excitement of being up in the air. Using a pen, Powers wrote: "Aircraft #360, Sortie Number 4154, 0126 Greenwich Mean Time." He listened for the one-click signal over the radio, which would let him know he was good to proceed. The click came. Powers settled in for what was supposed to be a total of thirteen hours of flying time. His overflight would be the Agency's deepest penetration into the Soviet Union so far.

In Moscow, two thousand miles to the east, it was still dark outside when Soviet premier Nikita Khrushchev sat upright in bed, [awakened by a ringing telephone](#). Defense minister Marshal Malinovsky was on the line. A high-flying aircraft had crossed the border over Afghanistan and was headed toward central Russia, Malinovsky said. Khrushchev

became enraged. Today of all days. May 1 was Russia's national holiday. The streets were festooned with banners and ribbons for the May Day parade. This could mean only one thing, Khrushchev later told his son, Sergei. Eisenhower was ridiculing him again. The Soviet premier's Achilles' heel was his lack of formal education; he'd dropped out of school to work in the coal mines after the fourth grade. With his poor reading and writing skills, Khrushchev hated feeling that a more educated world leader was trying to make him appear the fool.

The Americans were especially duplicitous regarding holidays, Khrushchev believed. Four years earlier, on the Fourth of July, the Americans had double-crossed him with their first overflight of the U-2. If that overflight was a kick in the ribs, today's overflight was a sharp poke in the eye. "An uncomfortable situation was shaping up." Russian colonel Alexander Orlov explained in a historical review of the incident written for the CIA in 1998. Orlov, who spent most of his forty-six-year military career with Russia's air defense force, had been an eyewitness to the event; he was seated at the command post in Moscow when Gary Powers was shot down. "The May Day parade was scheduled to get underway at mid-morning and leaders of the party, the government and the Armed Forces were to be present as usual," Orlov explained. "In other words, at a time when a major parade aimed at demonstrating Soviet military prowess was about to begin, a not-yet-identified foreign aircraft was flying over the heart of the country and Soviet air defenses appeared unable to shoot it down."

Not if Khrushchev had his way. "Shoot down the plane by whatever means," he shouted back at his defense minister. All across the country, the Soviet Air Force went on alert. Generals scrambled their fighter jets to go after Powers. In Siberia, officers from Soviet Air Defense Forces were summoned to their command posts with orders to shoot down the American spy. It was a matter of national pride. The orders came from Nikita Khrushchev himself.

Tucked snugly into the tiny cockpit of his U-2, Gary Powers sailed along. He was one and a half hours into his flight. The weather was proving to be worse than expected but clicks on the radio system indicated that he was to proceed. Over the majestic Hindu Kush mountain range, clouds rose all the way up to the top of the twenty-five-thousand-foot peaks, and the cloud cover made it difficult for Powers to determine exactly where he was on the map. Flying at seventy thousand feet meant the sky above him was pitch-black. Under normal circumstances he would have used the stars to determine where on the globe he was, but today his celestial navigation computations were unreliable—they'd been laid out for a 6:00 a.m. departure, not a 6:26 a.m. one. And so, with only a compass and sextant to keep him on track, Powers flew on. Spotting a break in the clouds, he determined his location to be just southeast of the Aral Sea, high above present-day Uzbekistan. Thirty miles to the north lay Powers's first target: the Tyuratam Cosmodrome.

Realizing he was slightly off course, Powers was correcting back when suddenly he spotted the condensation trail of a jet aircraft below him. "It was moving fast, at supersonic speed, paralleling my course, though in the opposite direction," Powers explained in his memoir *Operation Overflight*, published in 1970. Five minutes passed and now he knew at least one MiG was on his tail. Then he spotted another aircraft flying in the same

direction as he was. "I was sure now they were tracking me on radar, vectoring in and relaying my headings to the aircraft" below him. But the MiG was so far below his U-2, it did not pose a real threat. Protected by height, Powers flew on. He felt confident he was out of harm's way. First he passed over the Ural Mountains, once considered the natural boundary between the East and the West. He headed on toward Sverdlovsk, which was situated thirteen hundred miles inside Russia. Before the Communists took over, Sverdlovsk was called Yekaterinburg. It was there in 1918 that Czar Nicholas II and his family were lined up against a kitchen wall and shot, setting off the Communist Revolution that had made the Cold War a reality. To the Communists, the city of Sverdlovsk played an important role in the Soviet military-industrial complex, a place where tanks and rockets were built. It was also home to the [Soviets' secret bioweapons program](#), which on the date of Powers's flight was not yet known to the CIA.

Nearing Sverdlovsk, Powers made a ninety-degree turn. He headed toward what appeared to be an airfield not marked on his map. Suddenly, large thunderclouds appeared, obscuring his view. He switched his cameras on. Powers had no idea that he was about to photograph a secret facility called Kyshtym 40, which produced nuclear material and also assembled weapons. [Kyshtym 40 was as valuable](#) to Russia as Los Alamos and Sandia combined were to the Americans.

On the ground, a surface-to-air missile battalion tasked with guarding Kyshtym 40 had been tracking Powers's flight. At exactly 8:53 local time, the air defense battalion commander there gave the official word. "[Destroy target](#)," the commander said. A missile from an SA-2 fired into the air at Mach 3. Inside his airplane, Gary Powers was making notes for the official record—altitude, time, instrument readings—when he suddenly felt a dull thump. All around him, his plane became engulfed in a bright orange flash of light. "A violent movement shook the plane, flinging me all over the cockpit," Powers later wrote. "I assumed both wings had come off. What was left of the plane began spinning, only upside down, the nose pointing upward toward the sky." As the U-2 spun out of control, Powers's pressure suit inflated, wedging him into the nose of the airplane. The U-2 was crashing. He needed to get out. Thrown forward as he was, if he pushed the button to engage the ejection seat, both of his legs would be severed. Powers struggled, impossibly, against gravity. He needed to get out of the airplane and he needed to hit the button that would trigger an explosion to destroy the airplane once he was gone, but he was acutely aware that he couldn't get out of the airplane without cutting off his own legs. For a man who rarely felt fear, Gary Powers was on the edge of panic.

Suddenly, out of the chaos, three words came to him: [Stop and think](#). An old pilot friend had once said that if he ever got in a jam, all he had to remember was to "stop and think." His thoughts traveled back to his old training days at Area 51, back when the U-2 didn't have an ejection seat. Back when escaping from the U-2 was the pilot's job, not a mechanical one. Reaching up, Powers unlocked the airplane canopy. It flew off and sailed into the darkness. Instantly, the centrifugal force of the spinning airplane sucked him out into the atmosphere. He was free at last; all he needed to do was deploy his parachute. Then, to his horror, he realized that he was still attached to the airplane by his oxygen hoses. Powers tried to think through his options, but the g-forces were too great. There

was nothing he could do anymore. His fate was out of his hands. He blacked out.

Nearly two thousand miles away, at a National Security Agency listening post in Turkey, NSA operators eavesdropped on Soviet radar operators at Kyshtym 40 as operators there tried to shoot Gary Powers's U-2 out of the sky. The NSA had participated in many U-2 missions before. It was their job to equip CIA planes with listening systems, special recorders that gathered electronic intelligence, or ELINT. The NSA operators knew something was wrong the moment they heard a Soviet MiG pilot, the one who was chasing Powers from below, talking to the missile operators at Kyshtym 40. "[He's turning left.](#)" the MiG pilot said, helping the missile operator to target Powers's exact location. Just a few moments later, [NSA operators heard](#) Kyshtym 40 say that Powers's U-2 had disappeared from their radar screens.

NSA immediately sent a message to the White House marked CRITIC. Meanwhile, in the Soviet command post in Moscow, Russian colonel Alexander Orlov received an urgent report from Siberia: the American spy plane had been shot down. A missile had been fired and the target had disappeared from radar screen. The news was phoned to Khrushchev, who demanded physical proof. The White House sent a message to the CIA that was received by Bissell's special assistant, Bob King. "[Bill Bailey did not come home](#)" was how Richard Bissell learned of the incident, in code.

Over Sverdlovsk, Francis Gary Powers was free-falling through the atmosphere. Somehow, he had detached from the spinning airplane. "My body [was] just falling perfectly free. It was a pleasant, exhilarating feeling," Powers would later recall. It felt "even better than floating in a swimming pool." His parachute deployed, and Powers floated into a wide, grassy field. His thoughts during the last ten thousand feet before the ground were sharp and clear. "Everything was cold, quiet, serene. There was no sensation of falling. It was as if I were hanging in the sky." A large section of the aircraft floated by, "twisting and fluttering like a leaf." Below him, the countryside looked beautiful. There were forests, lakes, roads, and small villages. The landscape reminded him of Virginia in the spring. As Powers floated down toward Earth, he noticed a small car driving down a dirt road alongside him, as if following his course. Finally, he made contact with the ground. The car stopped and men were helping him. One assisted with his chute. Another man helped him to his feet. A third man reached over to Powers's survival pack and took his pistol. A crowd of approximately fifty people had gathered around. The men motioned for Powers to follow them. They loaded him into the front seat of a truck and began driving.

The men seemed friendly. One of them offered Powers a cigarette. The emblem on the cigarette pack was that of a dog. Taking it, Powers realized the incredible irony of it all. [The brand was Laika](#), and its emblem was the world's first space dog. Laika had flown inside Sputnik 2, the second Russian satellite to be launched from the Tyuratam Cosmodrome, the CIA target that Powers had photographed a little over an hour before. Gary Powers sat back and smoked the cigarette, noting how remarkably like an American cigarette it was.

With the U-2 spy plane and the SA-2 missile system, the Americans and the Soviets had been playing a game of cat and mouse: constant pursuit, near captures, and repeated escapes. Now that game was over. Powers, like the mouse, had been caught. But there

was a second, even greater catastrophe in the works. When the White House staff learned Powers's U-2 had been shot down, they assumed he was dead. This was an assumption based on CIA "facts." Richard Bissell had personally assured the president that in the unlikely event that an SA-2 missile was able to reach a U-2 and shoot it down, the pilot would not survive. "We believed that if a U-2 was shot down over Soviet territory, all the Russians would have was the wreckage of an aircraft," Bissell later explained. And so, believing Gary Powers was dead, the White House denied that the airplane was on any kind of espionage mission, in opposition to Khrushchev's very public accusation. For five days, the White House claimed that Gary Powers had been gathering high-altitude weather data for the National Advisory Committee for Aeronautics, or NACA.

But Khrushchev had evidence, which he would soon make public. With great bravado, on May 5, he gathered all thirteen hundred members of the Soviet parliament inside the Great Kremlin Palace speaking hall and addressed them from the stage. The United States has been making a fool of Mother Russia, Khrushchev declared. The Americans had been sending spy planes over the Soviet Union for nearly four years. To underscore the significance of what had happened, Khrushchev gave a bold analogy. "Just imagine what would have happened had a Soviet aircraft appeared over New York, Chicago or Detroit? That would mean the outbreak of war!" Amid gasps of horror, Khrushchev explained how the Soviet Union had first used diplomatic channels to protest the spy flights. That he had called upon the U.N. Security Council to take action, but nothing was done. Just four days earlier, Khrushchev explained, on May 1, yet another illegal espionage mission had occurred. Only this time the Soviets had succeeded in shooting down the spy plane. The audience broke into wild cheers. Then came the heart of the matter in the form of a question. It was also Khrushchev's bait. "Who sent this aircraft across the Soviet frontier?" he asked. "Was it the American Commander-in-Chief who, as everyone knows, is the president? Or was this aggressive act performed by Pentagon militarists without the president's knowledge? If American military men can take such action on their own, the world should be greatly concerned." By now, Khrushchev's audience members were stomping their feet.

Halfway across the world, President Eisenhower continued to have no idea that Gary Powers was alive and had been talking to his captors. All the White House and the CIA knew was that the Soviets had a wrecked U-2 in their possession. Khrushchev had laid a dangerous trap, one in which President Eisenhower got caught. The White House sent its press officer Walter Bonney to the press room to greet journalists and to tell the nation a lie. Gary Powers's weather-sampling airplane was supposed to be flying over Turkey. Instead, it had gone astray. Two days later, on May 7, Khrushchev sprung his trap. "Comrades," he told the parliament, who'd been gathered for a second revelatory speech. "I must let you in on a secret." He smiled. "When I made my report two days ago I deliberately refrained from mentioning that we have the remains of the plane and we also have the pilot who is quite alive and kicking," Khrushchev said. For the United States, it was a diplomatic disaster of the worst order.

The president was trapped. Were he to deny knowing what his "militarists" were up to, he would appear uninformed by his own military. Were he to admit that he had in fact

personally authorized Powers's flight, it would become clear he'd lied earlier when he claimed the downed airplane had been conducting weather research, not espionage. So despondent was the commander in chief about his untenable position that when he walked into the Oval Office two days later, he told his secretary Ann Whitman, "[I would like to resign.](#)" Spying on Russia and defying Soviet airspace was one thing; lying about it after being caught red-handed made the president look like a liar in the eyes of the world. In 1960, American presidents were expected to be truth tellers; there was no public precedent for lying.

Khrushchev demanded an apology from his nemesis. [Eisenhower wouldn't bow.](#) Apologizing would only open Pandora's box. There were too many overflights to make them transparent. There had been at least twenty-four U-2 flights over Russia and hundreds more bomber overflights by General LeMay. To reveal the dangerous game of cat and mouse that had been going on in secret—at a time when thermonuclear weapons on both sides were ready to fly—would likely shock and frighten people more than having a president who lied. A national poll revealed that more than half of adult Americans believed they were more likely to die in a thermonuclear war with the Russians than of old age. So Eisenhower made the decision to keep the focus on Gary Powers's flight only and admit that he personally had authorized it. This was "[the first time any nation had publicly admitted](#) it was engaged in espionage," noted Eisenhower's lead U-2 photo interpreter at the time, Dino Brugioni.

Khrushchev could play the game too. And he did so by making a dangerous, offensive move. By the summer of 1960, he had [authorized a Soviet military base](#) to be set up in Cuba. The island, just ninety miles off the coast of Florida, was in America's backyard. Khrushchev's plan was to put nuclear warheads in striking distance of Washington, DC. In this way, Soviet missiles could be launched from Havana and obliterate the nation's capital in just [twenty-five minutes' time](#). Khrushchev was showing Eisenhower that he could play cat and mouse too.

Immediately after Gary Powers had been shot down in his U-2 and picked up by the Soviets, he was flown from Sverdlovsk to Moscow, where he was put in a cell inside Lubyanka Prison, which doubled as headquarters for the KGB. There, his interrogation began. Powers had already decided on a tactic. He'd tell the Russians the truth, but "with definite limitation." The KGB wanted to know about Area 51. Where had he trained to fly the U-2? Powers was asked. According to Powers's memoir, he told the KGB that training took place at a base on the West Coast called Watertown. Powers wrote that the Soviets believed Watertown was located in Arizona and that they produced a map of the state, asking him to mark Watertown's exact location. Whether the Soviets were playing a game with Powers or whether he was telling his readers the truth but "with definite limitation" remains unclear. Either way, trial transcripts from August of 1960, declassified by the CIA in 1985, revealed that the Soviets knew exactly where Watertown was and that it was located inside the Nevada Test Site. [During Powers's trial](#), Soviet procurator-general Rudenko asked his comrade judges if they were familiar with "the deposition of the accused Powers which he gave in the preliminary investigations and here in court on the preparations for flights in the U-2 aircraft at the [Las Vegas firing range \(poligon\) in the](#)

[Nevada desert](#)," and then he fingered the base as being used by the CIA for "the training in the use of special reconnaissance aircraft." Not before the publication of this book has it been understood that the KGB clearly knew about Area 51 during the Powers trial.

Further, the trial revealed that the Soviets also had a much clearer picture of the inner workings of the American military-industrial complex and its defense-contracting system than the CIA had previously known. Rudenko was able to name "Lockheed company" as the manufacturer of the U-2. He argued that the existence of the "Las Vegas firing range," aka Area 51, and the Lockheed spy plane exemplified what he called a "[criminal conspiracy](#)" between "a major American capitalist company, an espionage and reconnaissance center, and the military of America." In his speech to the USSR International Affairs Committee, Rudenko had correctly identified the three players in the triangle of Area 51: defense contractors, the intelligence community, and the Pentagon.

After a three-day trial, the Soviets determined that Gary Powers, having been caught spying on Russia, exposed the United States for what it really was: "an enemy of the peace." Powers was sentenced to ten years in prison. President Eisenhower was judged to be a "[follower of Hitler](#)," the lowest insult in the Russian lexicon. Hitler had double-crossed Khrushchev's predecessor, Joseph Stalin, in 1941, and the result of that double cross was twenty million Russians dead. In comparing Eisenhower to Hitler, Khrushchev was sending a clear message: diplomacy was off the table. The upcoming east-west summit in Paris was canceled. How bad could things get?

The National Advisory Committee for Aeronautics issued a press release identifying [Watertown as the U-2 training facility](#) but stating falsely that it was no longer used as a training base. The Russians knew that statement was meant to mislead the American public and not Russia's intelligence service, the KGB—and the CIA knew the Soviets had first-person information about Area 51 in the form of Gary Powers, not just photographic images of the facility from the satellites they'd been sending overhead.

With the White House absorbing the fallout from the Gary Powers affair, the CIA and the Air Force were deeply involved in the Mach 3 replacement for the U-2 [out at the Ranch](#). The 8,500-foot-long runway, designated 14/32 and believed to be the longest in the world, had been finished, complete with a two-mile semicircular extension called the Hook, which would allow an A-12 pilot extra room for maneuvering were he to overshoot the runway. Four new aircraft hangars were built, designated 4, 5, 6, and 7. The former U-2 hangars whose metal doors had buckled in the atomic blast were converted into maintenance facilities and machine shops. Navy housing units, 140 in all, were transported to the base and laid out in neat rows. The commissary was expanded, as was the movie house and fire station. [Richard Bissell had a tennis court put in](#), and plans for an Olympic-size swimming pool were drawn. The airspace over the entire region was given its own designation, R-4808N, separate from what had previously been designated [Prohibited Area P-275](#); it included the Nevada Test Site, Area 13, and Area 51. All the CIA was waiting for was Lockheed's delivery of the A-12 airplanes.

At Lockheed, each Mach 3 aircraft was literally being hand forged, part by part, one airplane at a time. The production of the aircraft, according to Richard Bissell, "spawned its own industrial base. Special tools had to be developed, along with new paints,

chemicals, wires, oils, engines, fuel, even special titanium screws. By the time Lockheed finished building the A-12, they themselves had developed and manufactured [thirteen million different parts](#)." It was [the titanium that first held everything up](#). Titanium was the only metal strong enough to handle the kind of heat the Mach 3 aircraft would have to endure: 500- to 600-degree temperatures on the fuselage's skin and nearly 1,000 degrees in places close to the engines. This meant the titanium alloy had to be pure; [nearly 95 percent of what Lockheed initially received](#) had to be rejected. Titanium was also critically sensitive to the chemical chlorine, a fact Lockheed engineers did not realize at first. During the summer, when chlorine levels in the Burbank water system were elevated to fight algae, inside the Skunk Works, airplane pieces started to mysteriously corrode. Eventually, the problem was discovered, and the entire Skunk Works crew had to switch over to distilled water. Next it was discovered that titanium was also sensitive to cadmium, which was what most of Lockheed's tools were plated with. Hundreds of toolboxes had to be reconfigured, thousands of tools tossed out. The next problem was power related. Wind-tunnel testing in Burbank was draining too much electricity off the local grid. If a reporter found out about the electricity drain, it could lead to unwanted questions. NASA offered Kelly Johnson an alternative wind-tunnel test facility up in Northern California, near the Mojave, which was where Lockheed engineers ended up—performing their tests late at night under cover of darkness. The complicated nature of all things Oxcart pushed the new spy plane further and further behind the schedule.

At Area 51, the concern continued to be stealth. The radar results from the pole tests were promising, but as the Oxcart advanced, so did Soviet countermeasures to shoot it down. [Russia was spending billions of rubles](#) on surface-to-air missile technology and the CIA soon learned that the Oxcart's new nemesis was a system called Tall King. Getting hard data on Tall King's exact capabilities before the Oxcart went anywhere near it was now a top priority for the CIA.

To understand countermeasures, the CIA initiated an esoteric research-and-development program called Project Palladium. The program would get its legs over Cuba and eventually move to Area 51. It would involve ELINT. In 1960, "there were many CIA officers [who thought ELINT was a dirty word](#)," recalls Gene Poteat, the engineer in charge of Project Palladium, which originated with the CIA's Office of Scientific Intelligence. Poteat was one of the early pioneers who helped change that perception inside the CIA. "We needed to know the sensitivity of Soviet radar receivers and the proficiency of its operators," Poteat explains. With Khrushchev using Cuba as a military base in the Western Hemisphere, the CIA saw an opportunity. "When the Soviets moved into Cuba with their missiles and associated radar, we were presented with a golden opportunity to measure the system sensitivity of the SA-2 aircraft missile radar," says Poteat. To do this, the CIA needed a brigade of missile wizards. This included men like T. D. Barnes.

Thornton "T.D." Barnes was a CIA asset at an age when most men hadn't graduated from college yet. Married at seventeen to his high-school sweetheart, Doris, Barnes became a self-taught electronics wizard, buying broken television sets, fixing them up, and reselling them for five times the amount. In doing so, he went from bitter poverty—raised

on a Texas Panhandle ranch with no electricity or running water—to buying his new bride a dream home before he was old enough to vote. Barnes credited his mother for his becoming one of the CIA's most important radar countermeasure experts. "My mom saw an article on radar in *Life* magazine when I was no more than nine or ten. She said I should write a school report on the subject and so I did. That's when I got bit with the radar bug."

At age seventeen, Barnes lied about his age to join the National Guard so he could go fight in Korea. He dreamed of one day being an Army officer. Two years later he was deployed to the 38th Parallel to defend the region alongside a British and a Turkish infantry company. It was in Korea that Barnes began his intelligence career at the bottom of the chain of command. "I was the guy who sat on the top of the hill and looked for enemy soldiers. If I saw 'em coming, it was my job to radio the information back to base," Barnes recalls. He loved the Army. The things he learned there stayed with him all his life: "Never waste a moment. Shine your boots when you're sitting on the pot. Always go to funerals. Look out for your men." Once, in Korea, a wounded soldier was rushed onto the base. Barnes overheard that the man needed to be driven to the hospital, but because gas was scarce, all vehicles had to be signed out by a superior. With no superior around, Barnes worried the man might die if he didn't get help fast, so he signed his superior's name on the order. "I was willing to take the demerit," Barnes explains. His actions caught the attention of the highest-ranking officer on the base, Major General Carl Jark, and later earned him a meritorious award. When the war was over General Jark pointed Barnes in the direction of radar and electronics. "He suggested I go to Fort Bliss and get myself an education there," Barnes explains. So T.D. and Doris Barnes headed to Texas. There, Barnes's whole world would change. And it didn't take long for his exceptional talents to come to the attention of the CIA.

Barnes loved learning. At Fort Bliss, he attended classes for Nike Ajax and Nike Hercules missile school by day and classes at Texas Western University by night for the next fifty-four months. These were the missiles that had been developed a decade earlier by the Paperclip scientists, born originally of the German V-2 rocket. At Fort Bliss, Barnes read technical papers authored by former Nazi scientists. Sometimes the Paperclip scientists taught class. "No one really thought of them as former Nazis," says Barnes. "They were the experts. They worked for us now and we learned from them." By early 1960, Barnes was a bona fide missile expert. Sometimes, when a missile misfired over at the White Sands Missile Range, it was T.D. Barnes who was dispatched to disarm the missile sitting on the test stand. "I'd march up to the missile, take off the panel, and disconnect the wires from the igniter," Barnes recalls. "When you are young, it doesn't occur to you how dangerous something is." Between the academics and the hands-on experience, Barnes developed an unusual aptitude in an esoteric field that the CIA was just getting involved in: ELINT. Which was how at the age of twenty-three, T. D. Barnes was recruited by the CIA to participate in a top secret game of chicken with the Russians that was part of Project Palladium. Although Barnes didn't know it then, the work he was doing was for the electronic countermeasure systems that would later be installed on the A-12 Oxcart and on the ground at Area 51.

American military aviation began at the Fort Bliss airfield in 1916, when the First Aero

Squadron used it as a staging base while hunting Pancho Villa in nearby Mexico. Now, almost half a century later, the airfield, called Biggs, was part of the Strategic Air Command and served as home base for heavy bombers like the B-52 Stratofortress. Beginning in 1960, the facility was also a staging area for secret CIA missions that were part of Project Palladium, and that same year, T. D. Barnes found himself standing on the tarmac at Biggs Airfield watching a group of airmen as they delicately loaded a Hawk missile into the cargo bay of an airplane. Weapons are supposed to go in the weapons bay, Barnes thought to himself. But the project Barnes was participating in was unusual, dangerous, and top secret. Barnes did not have a need-to-know what the big picture involved and he knew better than to ask. Instead, he climbed into the cargo bay and sat down beside the missile. "We had the nose cone off and part of the skin off too. The missile was loaded on a stand inside the plane. It was my job to watch the electronics respond," Barnes explains. The airplane and its crew took off from the airbase and headed for Cuba. The plan was for the airplane to fly right up to the edge of Cuban airspace but not into it. Moments before the airplane crossed into Cuban airspace, the pilot would quickly turn around and head home. By then, the Russian radar experts working the Cuban radar sites would have turned on their systems to track the U.S. airplane. Russian MiG fighter jets would be sent aloft to respond. The job of Project Palladium was to gather the electronic intelligence being sent out by the radar stations and the MiGs. That was the first step in figuring out how to create a jamming system for the A-12 at Area 51.

The Cubans and their Russian patrons could not have had any idea whether the Americans were playing another game of chicken or if this act meant war. "Soviet MiGs would scramble toward us," Barnes recalls. "At the time, ECM [electronic countermeasure] and ECCM [electronic counter-countermeasure] technology were still new to both the plane and the missile. We'd transmit a Doppler signal from a radar simulator which told their MiG pilots that a missile had locked on them. When the Soviet pilots engaged their ECM against us, my job was to sit there and watch how our missile's ECCM responded. If the Soviet signal jammed our missile and made it drift off target, I'd tweak my missile's ECCM electronics to determine what would override a Soviet ECM signal." Though primitive by today's standards, what Barnes and the NSA agents with him inside the aircraft did laid the early groundwork for electronic warfare today. "Inside the airplane, we'd record the frequencies to be replayed back at Fort Bliss for training and design. Once we got what we wanted we hauled ass out of the area to avoid actual contact with Soviet planes."

The info that Barnes and his colleagues were getting over Cuba was filling in gaps that had previously been unknown. Back at Fort Bliss, Barnes and the others would interpret what NSA had captured from the Soviet/Cuban ECM transmissions that they had recorded during the flight. In listening to the decrypted Soviet responses to the antagonistic moves, the CIA learned what the Soviets could and could not see on their radars. This technology became a major component in further developing stealth technology and electronic countermeasures and was why Barnes was later placed by the CIA to work at Area 51. For the U.S. Air Force, this marked the beginning of a new age of

information warfare.

Even though the U.S. military airplane with a team of engineers, NSA agents, and a Hawk missile hidden inside would U-turn and fly away at the last moment, just before violating Cuban airspace, "there were repercussions," according to Barnes. "It scared the living daylights out of them and it escalated things." In January of 1961, Khrushchev gathered a group of Cuban diplomats at their embassy in Moscow. "Alarming news is coming from Cuba at present, news that the most aggressive American monopolists are preparing a direct attack on Cuba," Khrushchev told the group. Barnes believes Khrushchev "may have been referring to our messing with them with our Hawk missiles homing in on their planes." Were that the case, Khrushchev had a valid point. But the mercurial dictator had his own difficulties in sticking to the facts. Disinformation was a hallmark of the Soviet propaganda machine.

To a roomful of Cuban diplomats, many of whom knew otherwise, Khrushchev falsely claimed, "What is more, [the Americans] are trying to present the case as though rocket bases of the Soviet Union are being set up or are already established in Cuba. It is well known that this is foul slander. There is no Soviet military base in Cuba." Actually, this is exactly what the Soviets were doing. "Of course we knew better, and on January 3, 1961, severed all diplomatic ties with Cuba," Barnes explains.

Ten days later, the CIA convened its Special Group, a secret committee inside the National Security Council that had oversight regarding CIA covert activities. A formal decision was made that [Castro's regime "must be overthrown."](#) The man in charge of making sure this happened was Richard Bissell. In addition to being the highest-ranking CIA officer in the Special Operations Group, Bissell was also the most trusted CIA officer in the eyes of John F. Kennedy, the dashing new president. Before taking office, a member of the White House transition team asked Kennedy who he trusted most in the intelligence community. ["Richard Bissell," Kennedy said](#) without missing a beat.

Bissell's official title was now deputy director of plans. As innocuous as it sounded, DDP was in fact a euphemism for chief of covert operations for the CIA. This meant Bissell was in charge of the Agency's clandestine service, its paramilitary operations. The office had previously been known as the Office of Policy Coordination, or OPC. As deputy director of plans, Richard Bissell would be doing a lot more than playing a gentleman's spy game from the air. The CIA's paramilitary operations spilled blood. During these covert anti-Communist operations, men were dying in droves from Hungary to Greece to Iran, and all of these operations had to be planned, staged, and approved by the deputy director of plans.

In such a position there was writing on the wall, script that Richard Bissell did not, or chose not to, see. The man he was replacing was Frank Wisner, his old friend and the man who first introduced Bissell to the CIA. It was Frank Wisner who'd knocked on Bissell's door unannounced and then spent a fireside evening in Bissell's Washington, DC, parlor eleven years before. It was Wisner who had originally asked Bissell to siphon off funds from the Marshall Plan and hand them over to the CIA, no questions asked. Wisner had served the Agency as deputy director of plans from August 1951 to January 1959, but by the end of the summer of 1958, the job proved too psychologically

challenging for him—Frank Wisner had begun displaying the first signs of madness. The diagnosis was psychotic mania, according to author Tim Weiner. Doctors and drugs did not help. Next came the electroshock treatment: “For six months, his head was clamped into a vise and shot through with a current sufficient to fire a hundred-watt light bulb.” Frank Wisner emerged from the insane asylum zombielike and went on to serve as the CIA’s London station chief. A broken man, Wisner did not last long overseas. He shuffled in and out of mad-houses for years until finally forced to retire in 1962: “He’d been raving about Adolf Hitler, seeing things, hearing voices. He knew he would never be well.” Tragically, on October 29, 1965, Wisner was getting ready to go hunting with his old CIA friend Joe Bryan at his country estate when he took a shotgun out of his gun cabinet and put a bullet in his own head.

The pressure that came with being the deputy director of plans for the CIA was, for some, as treacherous as a loaded gun.

As workers toiled away at Area 51 getting ready for the arrival of the Oxcart spy plane, Richard Bissell focused on his orders to rid Cuba of Fidel Castro. By 1961, the Agency decided that Bahía de Cochinos, or the Bay of Pigs, was the perfect place to launch its “paramilitary plan.” The little sliver of coastline on the south shore of the island was barely inhabited. A few summer cottages were scattered among little bays, used mostly for fishing and swimming, and there was a valuable asset nearby in “an airstrip not far from the beach.”

Surely, the U-2 spy plane could help in gathering intel, Bissell decided. After Gary Powers was shot down, President Eisenhower had promised the world there would be no spy missions over Russia, but that promise did not include dangerous Soviet proxies like Cuba. In his new position as deputy director of plans, Bissell had used the U-2 to gather intelligence before. Its photographs had been helpful in planning paramilitary operations in Laos and the Dominican Republic. And in Cuba, overhead photographs taken by the Agency’s U-2s revealed important details regarding the terrain just up the beach from the Bay of Pigs beach. Photo interpreters determined that the swampland in the area would be hard to run in unless the commandos familiarized themselves with preexisting trails. As for the water landing itself, from seventy thousand feet in the air, the beachhead at the Bay of Pigs looked flat and lovely. But because cameras could not photograph what lay underwater, Bissell had no idea that just beneath the surface of the sea there was a deadly coral reef that would later greatly impede the water landing by commandos.

Hundreds of pages, declassified after thirty years, reveal the hand of economics wizard Richard Bissell in the design of the paramilitary operation. Bissell painstakingly outlined: “Contingency Plans... Probabilities... Likelihood, chance of success... Plans for Operation ‘T’... Operation ‘Z’... Phase 1, Phase 2, and Phase 3... Pre-Day Day plans... D-Day plans... Post D-Day plans... Unattributable actions by the Navy... Post-Recognition Plans... Arguments for maximum sabotage... Arguments for simultaneous defection... Feasibility of declaration of war by certain Central American states... Disclosures... Non-Disclosures... Continuation of Psychological Warfare Plans... How to deal, and how not to deal with the press.” For all the organization and preplanning, the operation might have been successful. But there are many reasons why it failed so

tragically. When the Bay of Pigs operation was over, hundreds of CIA-trained, anti-Castro Cuban exiles were killed on approach or left to die on the beachhead at the Bay of Pigs. Those that lived to surrender were imprisoned and later ransomed back to the United States. When the story became public, so did brigade commander Pepe San Roman's last words before his capture: "Must have air support in the next few hours or we will be wiped out. Under heavy attacks by MiG jets and heavy tanks." Pepe San Roman begged Richard Bissell for help. "All groups demoralized... They consider themselves deceived." By the end of the day, Richard Bissell's world had begun to fall irreparably apart. The Bay of Pigs would be his downfall.

There was plenty of blame to go around but almost all of it fell at the feet of the CIA. In the years since, it has become clear that equal blame should be imputed to the Department of Defense, the Department of State, and President Kennedy. Shortly before he died, Richard [Bissell blamed the mission's failure on his old rival General Curtis LeMay](#). Bissell lamented that [if LeMay had provided adequate air cover](#) as he had promised, the mission would most likely have been a success. The Pentagon has historically attributed LeMay's failure to send B-26 bombers to the Bay of Pigs to a "[time zone confusion](#)." Bissell saw the mix-up as personal, believing that LeMay had been motivated by revenge. That he'd harbored a grudge against Bissell for the U-2 and Area 51. Whatever the reason, more than three hundred people were dead and 1,189 anti-Castro guerrillas, left high and dry, had been imprisoned. The rivalry between Bissell and LeMay was over, and the Bay of Pigs would force Richard Bissell to leave government service in February of 1962. There were many government backlashes as a result of the fiasco. One has been kept secret until now, namely that President Kennedy sent the CIA's inspector general at the time, [Lyman B. Kirkpatrick Jr.](#), out to Area 51 to write up a report on the base. More specifically, the president wanted to assess what other Richard Bissell disasters in the making might be coming down the pipeline at Area 51.

Adding friction to an already charged situation was the fact that by some accounts, Kirkpatrick held a grudge. Before the Bay of Pigs, Richard Bissell was in line to succeed Allen Dulles as director of the CIA, and eight years earlier, Lyman Kirkpatrick had worn those coveted shoes. But like Bissell, Kirkpatrick was cut down in his prime. Kirkpatrick's loss came not by his own actions but by a tragic blow beyond his control. On an Agency mission to Asia in 1952, [Lyman Kirkpatrick contracted polio](#) and became paralyzed from the waist down. Confined to a wheelchair for the rest of his life, Kirkpatrick was [relegated to the role of second-tier bureaucrat](#).

In a world of gentlemen spy craft and high-technology espionage, bureaucracy was considered glorified janitorial work. But when Kirkpatrick was dispatched to Area 51 by JFK, the fate and future of the secret base Richard Bissell had built in the Nevada desert lay in Lyman Kirkpatrick's hands.

The Base Builds Back Up

As the man in charge of property control at Area 51, Jim Freedman was a taskmaster. "It was my job to provide services for all the different groups at the area," Freedman explains. "This included the CIA, the Air Force, EG&G, REECO [Reynolds Electric and Engineering], and even Howard Hughes—an individual who very few people had any idea had his own hangar out at the Ranch." What exactly Hughes was doing at Area 51 remains classified as of 2011, but Freedman explains the dynamic that was at play. "The CIA liked to foster competition between groups. It was why we had Kodak and Polaroid, Lockheed and North American, EG&G and Hughes. They were all no-bid contracts for security reasons. But competition keeps people on their toes." Jim Freedman acted as the gofer among the groups from 1960 until 1974. If a scientist needed a widget, if an engineer needed an oscilloscope, or if a radar expert needed a piece of magnetic tape, it was Freedman's job to get it, fast. As a prerequisite for the job, Freedman knew how to keep secrets. He carried a top secret and a Q clearance and had worked for EG&G since 1953. "We worked under a code that said, 'What you learn here, leave here.' That was pretty simple to follow," says Freedman. "You couldn't afford to talk. You'd lose your job and you'd be blackballed. So instead, my wife and family thought I fixed TVs. 'How was your day, Dad?' my kids would ask when I got home. 'Great!' I'd say. 'I fixed twenty-four TVs.'"

As they had been with the Manhattan Project, the various jobs going on at Area 51 were compartmentalized for Oxcart, so that every person worked within very strict need-to-know protocols. The radar people had no idea about the ELINT people, who had no idea what any of the search-and-rescue teams were up to. Each group worked on its part of the puzzle. Each man was familiar with his single piece. Only a few individuals, officers working in managerial capacities, understood a corner of the puzzle—at most. But someone had to act as a go-between among these disparate groups, and in this way, Freedman became an individual who knew a lot more than most about the inner workings of Area 51.

He also knew the layout of the base. Most Area 51 workers were confined to the building, or buildings, they worked in, the building they slept in, and the mess hall, where everybody dined together. As the Area 51 runner, Freedman "went to places out there that I don't think other people even knew were out there." For example, Freedman says, there was "the faraway runway where people who were not supposed to be seen by others were brought into the base." Freedman tells a story of one such group, the exact date of which he can't recall but that was during the Vietnam War. "One day I was out there delivering something to someone, it was three in the morning, and I watched an airplane land. Then I

watched forty-one Vietnamese men get off the plane. I never saw the men again, but a few days later I was sent on an errand. My supervisor said, 'Jim, can you go to Las Vegas and get me x number of pounds of a special kind of rice?' I'd say it was fairly obvious who that rice was being requested for." Freedman elaborates: "These [foreign nationals] were being trained to use state-of-the-art Agency equipment out at the Area, which they probably took with them when they left and went and put behind enemy lines."

Freedman's first job at the test site had been installing radios in EG&G vehicles used during weapons tests. Next, he was trained as an engineer in the art of wiring nuclear bombs. In the 1950s, Freedman participated in dozens of nuclear tests on the arming and firing party alongside Al O'Donnell at the test site and also at the Pacific Proving Ground. "I even managed to survive a helicopter crash in the Marshall Islands," Freedman adds. In 1957, EG&G learned that Freedman had studied photography after high school and assigned him to a team photographing nuclear explosions. But by 1960, the nuclear-test-ban treaty was in effect, testing had moved underground, and Freedman's life had taken what he called "a dull turn."

One afternoon, he was sitting inside an EG&G warehouse in Las Vegas, cleaning camera equipment. "I was thinking about how fast office work gets boring when my boss walked up to me and said, 'Hey, Jim, do you want to go work on a secret project?'" Freedman didn't hesitate. "I said yes, because it sounded interesting, and I wound up at Area 51. I'd never heard of the place before I went there. I never knew it existed just over the hill from the Nevada Test Site where I'd worked for so many years. Neither did anyone else who didn't have a need-to-know." When Freedman arrived at Area 51, it felt to him "like I was arriving on the far side of the moon. You know about the bright side of the moon; well, in relative terms, that was what the test site was like. Area 51 was the dark side." What began as a short-term contract in December of 1960 would last for Jim Freedman for the next fourteen years.

One day, in the late summer of 1961, just two months after the Bay of Pigs became public, Jim Freedman was walking around the base with a checklist of tasks. His priority job that week struck him as a very odd, very low-tech request. In a world of cutting-edge science and technological gadgets relating to espionage, the supervisor wanted Freeman to help Area 51 carpenters locate more plywood. "The workers were transforming a set of steps into a ramp," he explains. "This was happening all over the base. Lots of doorsills were becoming lots of ramps and I remember thinking, There's a lot of money going into getting something low and on wheels to be able to move around this base." Freedman knew not to ask questions. "But when a small airplane landed, and out came a man in the wheelchair, I watched my boss, Werner Weiss of the CIA, meet the man out on the tarmac. And I knew from watching their interaction just how important this man was to the CIA. He had white-silvery hair. A very memorable figure in a wheelchair. For years, I looked for him on TV." Freedman never saw the man on TV, but the man was Lyman Kirkpatrick, inspector general for the CIA. Working on presidential orders to assess Area 51, Kirkpatrick is the only CIA inspector general known to have visited the base. Despite being confined to a wheelchair, Kirkpatrick managed to meticulously cover the rugged high-desert terrain. After Kirkpatrick examined the various buildings he asked to be driven

around the outer edges of the base. There, he found what he considered to be a security flaw. "[The high and rugged northeast perimeter](#) of the immediate operating area, which I visited in order to see for myself, is not under government ownership," Kirkpatrick wrote in his report, which was declassified in 2004 but has since been removed from the CIA library archives. "It is subject to a score or more of mineral claims, at least one of which is visited periodically by its owner," Kirkpatrick wrote, referring to the Black Metal and Groom mines. "Several claims are sites of unoccupied buildings or cellars which together with the terrain in general afford excellent opportunity for successful penetration by a skilled and determined opposition," Kirkpatrick warned. As inspector general for the CIA, Kirkpatrick was concerned that the base was not "rigorously protected against sabotage," most notably by "air violations." In the game of cat and mouse between the Soviet Union and the United States, tensions were at an all-time high. First there had been the Gary Powers incident, in May of 1960. Less than a year later came the CIA's failed commando operation at the Bay of Pigs. The president had been advised that the Soviets could be preparing their own operation as payback for either of those events. Former president Eisenhower told Kennedy that "the failure of the [Bay of Pigs will embolden the Soviets](#) to do something that they would otherwise not do," and Lyman Kirkpatrick warned that one type of sabotage operation the Soviets could be considering might involve hitting Area 51. It would be a strike between the eyes, meant to harm the office of the president in the view of the people. After Gary Powers, the White House had promised that the Watertown facility had been closed down. After the Bay of Pigs fiasco, the president promised to rein in covert activity by the CIA. Any public revelation that Area 51 existed would expose the fact that the CIA, the Air Force, and defense contractors were all working together on a black project to overfly Russia again—despite presidential assurances that they would do no such thing. If the nation were to discover the Mach 3 spy plane project moving forward at Area 51, what would they think about the president's promises? [Area 51 was a target](#) in exposure alone, the inspector general said.

Jim Freedman was one of the men assigned to photograph and assess the mines in the mountains—the terrain that Kirkpatrick had said would "afford excellent opportunity for successful penetration." Freedman's superior, Hank Meierdierck, [decided to make a hunting trip](#) out of the task. Meierdierck was a living legend at Area 51. In 1956 he had worked as the CIA's instructor pilot on base, teaching the Project Aquatone pilots how to fly the U-2. Now, during Oxcart, Hank Meierdierck had an office at the Pentagon but most of his time was spent out at Area 51. "One day Hank asked me if I liked to hunt," recalls Jim Freedman. "I said yes. Well, Hank smiled and said, 'Good. Bring your rifle out next time.'"

Weapons were not allowed on Lockheed transport planes flying in and out of Area 51 from McCarran Airport. But Freedman's level of clearance was such that security did not examine the things he carried with him. "The next trip to Area 51, I put my rifle in a box with an oscilloscope," Freedman explains, "and that's how I got my hunting rifle out there."

Meierdierck found a helicopter pilot to fly the men into the mountains north of Area 51 to photograph the old mines there. Then he dropped the two men and their hunting rifles off at a favored spot on Groom Mountain where Area 51 officials liked to surreptitiously

hunt deer. Meierdierck told the helicopter pilot to return the next day.

From on top of Groom Mountain, the view down over Area 51 was spectacular. It was, as Kirkpatrick had speculated, a perfect place for a Soviet spy to disguise himself as a deer hunter and take notes. During the day, you could see the buildings down at Area 51 spread out in an H formation to the west of the runways. Jeeps and vans could be seen ferrying workers around. If you had binoculars, you could get a clear look at what was going on. At night, the whole place went dark; most of the buildings that had windows kept the curtains drawn. If an aircraft needed to land at night, the lights would quickly flash on, illuminating the runway. The airplane would land and the lights would quickly go off, bathing the valley in darkness once again.

For Freedman, the hunting trip dragged on a little long. "Hank was stubborn," Freedman explains. "He said he wasn't leaving until he got a deer. And he preferred to hunt on his own, so he suggested we split up and meet back at the campsite for dinner." Which is what they did. "There was very little for us to talk about," Freedman says. "We both knew we were on top secret projects. You couldn't afford to talk. Everyone had a wife and a family. No one could afford to lose their job." One subject the men could discuss was hunting. Only three years had passed since the last aboveground atomic tests had detonated across the valley down below. Freedman wondered if anyone who caught a deer up on Groom Mountain should even consider eating it because "the deer ate the foliage which was contaminated from alpha particles from all the tests." As it turned out, the men did not catch any deer anyway.

Come Monday, the helicopter pilot returned, and by the end of the next day, Freedman was sitting in his dining room in Las Vegas, eating dinner with his wife and kids. He was able to get his hunting rifle out of Area 51 the same way he got it in: "Inside the oscilloscope case."

Not long after Lyman Kirkpatrick filed his final inspector general's report on Area 51, [Richard Bissell resigned](#). This was not before he had been offered a lesser job at CIA, as the director of the Office of Science and Technology. But in that new capacity Bissell's need-to-know would have been drastically reduced. In CIA parlance, having one's access curbed was an insult. Instead, he chose to leave the Agency.

Without Richard Bissell in charge of the secret CIA facility, what would become of Area 51? And who would run the Oxcart reconnaissance program? The decision about Bissell's replacement went up the chain of command to President Kennedy. He had been in office for less than a year and already he was up to his elbows in CIA backlash. President Kennedy's new secretary of defense was a man named Robert McNamara, an intellectually minded Harvard Business School graduate who had won the Legion of Merit during World War II for performing firebomb analysis from behind a desk. Now, as secretary of defense, after the Bay of Pigs, McNamara called for the Pentagon to assume control of all spy plane programs. McNamara was at the top of the chain of command of all the armed services and believed his Air Force should be in charge of all U.S. assets with wings. The public had lost confidence in the CIA, McNamara told the president.

But James Killian and his colleague Edwin Land, now both part of Kennedy's presidential foreign intelligence advisory board, told the president that the best move

forward for national security was to [keep the CIA in the spy plane business](#) at Area 51. What happened with Bissell was unfortunate, they said, suggesting that Richard Bissell, and [Richard Bissell alone, had gone rogue](#). They argued that the CIA was still the agency best equipped to deliver overhead intelligence to the president. If that wasn't possible, Killian and Land said, then the idea of who controls overhead reconnaissance should be restructured. One plan was that the [CIA might work in better partnership](#) with the Air Force. President Kennedy liked that. On September 6, 1961, he created a protocol that required the CIA deputy director and the undersecretary of the Air Force to comanage all space reconnaissance and aerial espionage programs together as the National Reconnaissance Office, a classified agency within Robert McNamara's Department of Defense. A central headquarters for NRO was established in Washington, a small office with a limited staff but with a number of empire-size egos vying for power and control. The organization maintained a public face, an overt identity at the Pentagon called the Office of Space Systems, but no one outside a select few knew of NRO's existence until 1992.

Jim Freedman remembers the transition in the chain of command and how it affected his work at Area 51. "Because I was the person with a list of every employee at the area, it was my job to know not just who was who, but who was the boss of somebody's boss. An individual person didn't necessarily know much more about the person they worked for than their code name. And they almost certainly didn't know who was working on the other side of the wall or in the next trailer over. [Wayne Pendleton was the head of the radar group](#) for a while. He was my go-to person for a lot of different groups. One day, Pendleton suddenly says, 'I'm going to Washington, Jim.' So I said, 'What if I need you, what number should I call?' And Pendleton laughed. He said, 'You won't need me because where I'm going doesn't exist.' Decades later I would learn that the place where Wayne was going when he left the Ranch was to a little office in Washington called NRO."

After the Bay of Pigs and his resignation, Richard Bissell drifted away from Washington's power center like a man scorned. Quickly, his longtime, biggest supporters became his greatest detractors. Most notable among them was James Killian. The president's powerful science adviser, Killian had headhunted Bissell twice before, the first time in 1946 to work in the economics department at MIT, and then again in 1954 to manage the U-2 aerial espionage program for the CIA. For nearly twenty years, Killian had considered Richard Bissell not just a colleague but a friend. After the Bay of Pigs, Killian turned his back on his friend. In a clear case of the pot calling the kettle black, Killian told the CIA's historian Donald E. Welzenbach that he was terribly upset when he learned of Bissell's role in covert CIA operations. In a *Studies in Intelligence* report for the CIA, Welzenbach wrote, "Killian looked upon science and technology almost as a religion, something sacred to be kept from contamination by those who would misuse it for unwholesome ends. Into this category fit the covert operations [and 'dirty tricks' of Dick Bissell's Directorate of Plans.](#)"

It was hypocrisy of the highest order. James Killian had been up to his own dirty tricks, the true, perilous facts of which have remained buried until now. Unlike Richard Bissell, because of Killian's powerful role as President Eisenhower's chief science adviser, Killian did not get caught. But what Killian spearheaded in the name of so-called sacred science

in retrospect hardly seems like science at all. In late 1958, Killian organized, oversaw, and then tried to cover up the facts regarding two of the most dangerous weapons tests in the history of the nuclear bomb. Two thermonuclear devices, called Teak and Orange, each an astonishingly powerful 3.8 megatons, were exploded in the Earth's upper atmosphere at Johnston Atoll, 750 miles west of Hawaii. Teak went off at 252,000 feet, or 50 miles, and Orange went off at 141,000 feet, 28 miles, which is exactly where the ozone layer lies. In hindsight, it was a ludicrous idea. "The impetus for these tests was derived from the uncertainty in U.S. capability to discern Soviet high-altitude nuclear detonation," read one classified report. Killian was in charge of the tests, and his rationale for authorizing them was that if sometime in the future the Soviets were to detonate a high-altitude nuclear bomb, our scientists would need to know what to look for.

Instead of being difficult to detect, a nuclear bomb exploding in the ozone layer was instantly obvious in horrific and catastrophic ways. The fireballs produced by both Teak and Orange burned the retinas of any living thing that had been looking up at the sky without goggles within a 225-mile radius of the blast, including hundreds of monkeys and rabbits that Killian authorized to be flown in airplanes nearby. The animals' heads had been locked in gadgets that forced them to witness the megaton blast. From Guam to Wake Island to Maui, the natural blue sky changed to a red, white, and gray, creating an aurora 2,100 miles along the geomagnetic meridian. Radio communication throughout a swath of the Pacific region went dead.

"We almost blew a hole in the ozone layer," explains Al O'Donnell, the EG&G weapons test engineer who in the twelve years since Crossroads had wired over one hundred nuclear bombs, including Teak and Orange. O'Donnell was standing on Johnston Island, 720 miles southwest of Honolulu, on August 1, 1958, when the Teak bomb went off. Due to a "program failure" on the Redstone missile system (which carried the warhead to its target), the rocket went straight up and detonated directly above where O'Donnell and the rest of the arming and firing party were working. The bomb was supposed to have detonated twenty-six miles to the south. In a sanitized film record of the event, men in flip-flops and shorts can be seen ducking for cover as a phenomenal fireball consumes the sky overhead. "It was scary," O'Donnell sighs, remembering the catastrophic event as an old man, half a century later. There is a hint of resignation in his voice when he says, "But we were all used to it by then. The bombs had become too big." In Teak's first ten milliseconds, its fireball grew ten miles wide—enough yield to obliterate Manhattan. At H + 1 second, the fireball was more than forty miles wide, which could have taken out all five boroughs of New York City. It was not as if Killian, who was in charge of the project, hadn't realized the potential for part of the ozone layer to be destroyed. "In late 1957 and early 1958, the question was raised as to whether or not the ultraviolet emissions from the Teak and Orange events would 'burn a hole' into the natural ozone layer," states a 1976 review of the event authored by Los Alamos National Laboratory. But "the pre-event discussions were inconclusive" and the tests barreled ahead anyway. Why? "It was argued that even in case of complete destruction of the ozone layer over an area with radius 50 km, the ozone loss would amount to only 2×10^{-5} of the global inventory. The 'hole' would be closed promptly by bomb-produced turbulence and ambient motions in the atmosphere." As

astonishing and reckless as this was, the follow-up becomes even more unbelievable. "After the events, little attention was paid to this particular problem, evidently because no spectacular or unusual observations were made (because of lack of evidence one way or the other)." Apparently, no one thought to ask the dignitary on hand that day on Johnston Island, Wernher Von Braun.

In government archival film footage, [Von Braun can be seen observing the Redstone rocket](#) he had designed to get the nuclear weapon up to the ozone where it would explode. Wearing aviator sunglasses and a loose-fitting Hawaiian shirt and sporting an island tan, Von Braun appears more playboy than rocket scientist. But Von Braun was so spooked by the Teak blast that he [left the island before the second test](#) took place. Von Braun was not one to scare easily. When he worked for Adolf Hitler, he and his colleague Ernst Steinhoff were known [to dash up to Hitler's lair](#), Wolfsschanze, in Steinhoff's personal airplane to brief the dictator on how the V-2 was coming along. But the power of the Teak bomb sent Von Braun running. Immediately after the deadened communications systems were restored, Von Braun fled. He never publicly said why.

Killian's high-altitude nuclear tests did not stop there. Two weeks later, another ultrasecret nuclear weapons [project called Operation Argus commenced](#). Killian's nuclear bomb tests had now expanded to include outer space. "Argus was an unusual operation," a Defense Nuclear Agency summary from 1993 recalls. "It was completed in less than six months after Presidential approval, and it was completed in complete secrecy. Nuclear-tipped missiles were fired from ships for the first time." Oblique words used to conceal another one of the most radical, covert science experiments conducted by man. On August 27, August 30, and September 6, 1958, three nuclear warheads were launched from X-17 rockets from the deck of the *USS Norton Sound* as the warship floated off the coast of South Africa in the South Atlantic Ocean. Up went the missiles and the warheads until they exploded approximately three hundred miles into space. This "scientific experiment" was the brainchild of a Greek elevator operator turned physicist, Nicholas Christofilos. [Christofilos convinced Killian](#) that a nuclear explosion occurring above the Earth's atmosphere—but within the Earth's magnetic field—might produce an electronic pulse that could hypothetically damage the arming devices on Soviet ICBM warheads trying to make their way into the United States. While the phenomenon did occur in minutiae, meaning the arming devices registered "feeling" the pulse from the nuclear blast, Christofilos was wrong about the possibility that this would actually *stop* incoming enemy nuclear missiles in their tracks. In other words, the tests failed.

To cover his tracks as to the sheer waste and recklessness of the experiment, in the month following the nuclear detonation in space, Killian wrote a memo to President Eisenhower attempting to put a congratulatory spin on how quickly the project occurred and how terrific it was that secrecy was maintained. Dated November 3, 1958, Killian's letter began by describing Argus as "[probably the most spectacular event ever conducted.](#)" More egregious self-congratulation came next: "The experiment was in itself an extraordinary accomplishment. Especially notable was the successful launching of a large, solid-fuel rocket carrying a nuclear payload from the heaving deck of a ship in the squally South Atlantic. Scarcely less so is the fact that the whole experiment was planned

and carried out in less than five months... Impressive, too, is the fact that no leaks have occurred."

When the *New York Times*'s senior science writer [Walter Sullivan hand-delivered a letter to Killian](#) letting him know the *New York Times* was in possession of leaked information about these secret tests, the White House went into denial mode. "[Neither confirm nor deny such leaks.](#)" the president's special assistant Karl G. Harr Jr. wrote in a secret memo to Killian. "If the *New York Times*, or anyone else, breaks a substantial part of the story," one possible response would be to say the White House had disclosed "all that we may safely say from a national security point of view." In regards to brazenly violating the White House policy of announcing every nuclear test, Killian's position was to be that "it was a scientific experiment utilizing a nuclear detonation to discharge electrons into the Earth's magnetic field." It was semantics that gave Killian the authority, or cover, to declare that a nuclear test was not a nuclear test. Adding one last ironic touch of deception, the president's special assistant told Killian that were the *New York Times* to make the Argus test public, a panel of scientists "should meet with the press in the Great Hall of the National Academy of Science in order to emphasize the scientific aspects of this experiment."

Were the president's top science advisers really making America safer? Or were they abusing their power with the president? Couple their power with the total lack of oversight they enjoyed, and it was the president's scientists who paved the road for the U.S. militarization of space. "[It was agreed that I would be protected from congressional inquisition.](#)" Killian wrote in his memoirs, adding, "I think now this was the wrong decision. It would have been of help to Congress to have been more fully informed about the work of PSAC [President's Science Advisory Committee], and help me to have a better feeling for congressional opinion."

Beginning with Argus, the president's science advisers were using space as their laboratory, conducting tests that a Defense Nuclear Agency review board would later call "poorly instrumented and hastily executed." They did so with total disregard for potentially catastrophic effects on the planet, not to mention the effect it would have decades later on the arms race in space. According to the same report, Killian was aware of the risk and took a gamble. There had been discussions regarding the possibility that the Teak and Orange shots really could burn holes in the ozone. But those "pre-event discussions were inconclusive," the report said. And so the scientists went forward on the assumption that if a hole happened, it would later be closed.

In reality, Killian and others had no idea what would or would not happen when the megaton bomb exploded in the upper atmosphere. "And they didn't factor in to their equations what could have happened if they failed," recalls Al O'Donnell. "We were lucky. When the Teak bomb exploded right over our heads on Johnston Island, we thought we might be goners. It was an enormous bright white-light blast." The men did not have radio communications for eight hours. "All the birds on the island that had been pestering us during the setup, these big fearless birds we called Gooney birds, after the bomb went off, they just disappeared. Or maybe they died." When Admiral Parker of the Armed Forces Special Weapons Project finally reached O'Donnell and the rest of the EG&G crew by

radio from his office in the Pentagon, his words were: "[Are you still there?](#)"

If American citizens were in the dark about the megaton thermonuclear weapons tests being conducted by the American military in space, the Russians certainly were not. They forged ahead with an unprecedented weapons test of their own. On October 30, 1961, the Soviet Union detonated the largest, most powerful nuclear weapon the world had ever known. Called the Tsar Bomba, the hydrogen bomb had an unbelievable yield of fifty megatons, roughly ten times the amount of all the explosives used in seven years of war during World War II, including both nuclear bombs dropped on Hiroshima and Nagasaki. Tsar Bomba, detonated over northern Russia, flattened entire villages in surrounding areas and broke windows a thousand miles away in Finland. Anyone within a four-hundred-mile radius who was staring at the blast would have gone blind. Soviet leader Nikita Khrushchev told the United Nations Assembly that the purpose of the test was to "show somebody Kuzka's mother"—to show somebody who's boss. The world was racing toward catastrophe. Would the A-12 spy planes heading to Area 51 really help, or would overhead espionage prove to be nothing more than a drop in the bucket?

Wizards of Science, Technology, and Diplomacy

Harry Martin stood on the tarmac mesmerized by the beauty of the Oxcart. With its long, shiny fuselage, the airplane resembled a cobra with wings. As the master fuels sergeant, Martin had been at Area 51 since the very first days of the Oxcart program, back when the tarmac he was standing on was being poured as cement. Now, something big was happening at Area 51. The Oxcart had arrived and it was getting ready to fly. For more than a week, Martin had watched dignitaries come and go, touching down and taking off in Air Force jets. The generals would inevitably show up in the hangar where Martin worked because it was the place where the airplane stayed. Martin's job was to prep the aircraft with fuel, which for weeks had been leaking as if through a sieve.

Martin had caught glimpses of General LeMay, shorter than he'd expected but chomping on his signature cigar like he did on the cover of magazines. Martin had also seen General Doolittle, of the harrowing World War II Doolittle Raid. Harry Martin never shook hands with any of the generals; they were busy and way above his pay grade. Besides, Martin's left hand was wrapped in a bandage, which made work slightly challenging, although he was most grateful to still have a thumb. Martin had been working with a saw and a pipe the week before when his tool slipped and nearly severed his most important finger. Fortunately, a flight surgeon was working with a project pilot in the hangar next door and Martin got his thumb sewn together fast.

It was April 25, 1962. Just a few buildings down from where Martin worked, Lockheed test pilot Louis Schalk sat in a recliner inside a Quonset hut taking a nap when a man from the Agency put a hand on his shoulder and said, "Lou, wake up!" The Oxcart was ready and it was time for Lou Schalk to fly. Two physiological support division officers helped Schalk into a flight suit, which looked like a coverall. There was no need for a pressure suit because today Schalk was only going to make a taxi test. Out on the tarmac, an engineer rolled up a metal set of stairs and Schalk climbed up into the strange-looking aircraft. There were no observers other than the crew. John Parangosky, who authored a secret interagency monograph called "The Oxcart History," declassified in 2007, noted that if anyone had been watching he would have been unable to process what he was looking at. "A casual observer would have been startled by the appearance of this vehicle; he would have perhaps noticed especially its extremely long, slim shape, its two enormous jet engines, its long, sharp projecting nose, and its swept-back wings which appeared far too short to support the fuselage in flight." It was a revolutionary airplane, Parangosky wrote, able to fly at three times the speed of sound for more than three thousand miles without refueling—all the way from Nevada to DC in less than an hour. "Toward the end of its flight, when fuel began to run low, it could cruise at over 90,000 feet."

But of course there were no casual observers present at Area 51. On that sunny day at Area 51 in April of 1962, this was the only A-12 Oxcart that Lockheed had completed for the CIA so far.

As for all the remarkable things the aircraft had been meticulously designed to do, it wasn't able to do any of them yet. Sitting on the tarmac, the aircraft was 160,000 pounds of titanium outfitted with millions of dollars' worth of expensive equipment that no one yet knew how to work, certainly not above seventy thousand feet. Like its predecessor the U-2, the Oxcart was an aircraft without a manual. Unlike the U-2, this aircraft was technologically forty years ahead of its time. Some of the records the Oxcart would soon set would hold all the way into the new millennium.

Lou Schalk fired up the engines and began rolling down the runway for the taxi test. To everyone's surprise, including Lou Schalk's, the aircraft unexpectedly got lift. Given the enormous engine power, the aircraft suddenly started flying—lifting up just twenty feet off the ground. Stunned and horrified, Kelly Johnson watched from the control tower. ["The aircraft began wobbling."](#) Johnson wrote in his notes, which "set up lateral oscillations which were horrible to see." Johnson feared the airplane might crash before its first official flight. Schalk was equally surprised and decided not to try to circle around. Instead he set the plane down as quickly as he could. This meant landing in the dry lake bed, nearly two miles beyond where the runway ended. When it hit the earth, the aircraft sent up a huge cloud of dust, obscuring it from view. Schalk turned the plane around and drove back toward the control towers, still engulfed in a cloud of dust and dirt. When he got back, the Lockheed engineers ran up to the airplane on the metal rack of stairs. Kelly Johnson had only four words for Schalk: ["What in Hell, Lou?"](#) For about fifteen very tense minutes, Johnson had thought Lou Schalk had wrecked the CIA's only Oxcart spy plane.

The following day, Schalk flew again, this time with Kelly Johnson's blessings but still not as an official first flight. Harry Martin was standing on the tarmac when the aircraft took off. "It was beautiful. Remarkable. Just watching it took your breath away," Martin recalls. "I remember thinking, This is cool. And then, all of a sudden, as Schalk rose up in the air, pieces of the airplane started to fall off!" The engineers standing next to Martin panicked. Harry [Martin thought for sure the airplane was going to](#) crash. But Lou Schalk kept flying. The pieces of the airplane were thin slices of the titanium fuselage, called fillets. Their sudden absence did not affect low-altitude flight. Schalk flew for forty minutes and returned to Area 51. It was mission accomplished for Schalk but not for the engineers. They spent the next four days roaming around Groom Lake attempting to locate and reattach the pieces of the plane. Still, it was a milestone for the CIA. Three years, ten months, and seven days had passed since Kelly Johnson first presented his plans for a Mach 3 spy plane to Richard Bissell, and here was the Oxcart, finally ready for its first official flight.

Agency officials were flown in from Washington to watch and to celebrate. Jim Freedman coordinated pickups and deliveries between McCarran Airport and the Ranch. It was a grand, congratulatory affair with lots of drinking in the newly constructed bar, called House-Six. [Rare film footage of the historic event](#), shot by the CIA, shows men in suits milling around the tarmac slapping one another on the back over this incredible flying machine. They watch the aircraft take off and disappear from view. Schalk traveled up to

thirty thousand feet, flew around in the restricted airspace for fifty-nine minutes, and came back down. His top speed was four hundred miles per hour. Watching from the tarmac was Richard Bissell, tall and gangly, wearing a dark suit and a porkpie hat. Bissell had been invited to attend the groundbreaking event as a guest of Kelly Johnson. It was a significant gesture; the two men had become friends, and Kelly Johnson was notably making a point. "Part of what made Kelly Johnson such a good man was that he was extremely loyal to the people he considered his friends," Ed Lovick explains. For Bissell, the visit to Area 51 had to have been bittersweet. It would be the last time he would ever set foot at the facility he had overseen for the CIA since it was nothing but a desert floor. Richard Bissell would never be invited back again.

And Area 51 would soon have a new mayor.

It was late at night in the summer of 1962 and [Bud Wheelon](#) sat in the library in the Washington, DC, home of [Howard and Jane](#) Roman, two clandestine officers with CIA. It was only Wheelon's second month employed by the Agency, and because he was not a career spy, he had had a lot of catching up to do. Almost every night, he worked until ten, having just accepted the job that made him the Agency's first head of the Directorate of Science and Technology, or DS&T. Only thirty-three years old, Wheelon was a brilliant ballistic-missile scientist and signals intelligence analyst. He was also a graduate of MIT and had played rugby with James Killian when Killian was the president there. Now he had been [hand-picked by President Kennedy's science advisers](#), including James Killian, to replace Richard Bissell on all overhead reconnaissance projects for the CIA. This included satellites, U-2 operations, and the Oxcart spy plane. It was the job Bissell had declined, but "[in this way, I became the new 'Mayor of Area 51.'](#)" Wheelon explains.

"I did not have much to do at night so I started reading clandestine reports, which I'd never seen before," Wheelon says. Although he found many uninteresting, one in particular caught his eye. "It made me concerned. At the time, there was a very serious National Intelligence Estimate under way for President Kennedy, one that would address the question: Will the Russians put nuclear missiles in Cuba? I had been briefed that the estimate was coming down on the side that the Russians would not do such a thing. The Pentagon had decided that putting missiles in Cuba was too reckless a move for the Russians and that they would not do such a reckless thing."

The Pentagon was dead wrong. As Wheelon read dozens of intelligence reports, one rose up like a red flag. "One thing you have to worry about with anyone informing against a person or a state is fabrication," Wheelon explains. "There were a lot of Cubans in Miami [at the time] whose sugar plantations had been taken away from them by Castro and they wanted action taken. But there was one report that caught my eye. The informant said that he'd seen very long trailers, big trucks, led by jeeps with Soviet security people inside. As these trucks made their way through certain villages, Cubans were directing traffic so the long trailers could get by. In South America, often on the street corners, you will find post-office boxes. They are not squat boxes with a level opening like you find in the States. Instead, they are more of a traditional letterbox attached at the top of a long pole. The informant witnessed one of these very long trailer trucks coming up to an intersection and not being able to make the curb. There was a letterbox blocking the way. Some of the

Soviet security people got out of the truck. They grabbed an acetylene torch from the back and cut the letterbox right down. They didn't waste any time or give it a second thought. When I read that, I thought, Whoever reported this is no fabricator. This is not a detail you could make up. Whatever was in those trailers was too important to let a letterbox stand in the way."

Wheelon believed there were missiles inside the trailers. Missiles with nuclear warheads. Unknown to Wheelon at the time, his new boss, CIA director John McCone, also believed this was true. Except McCone wasn't around Washington, DC; he was in Paris, on his honeymoon. This left Wheelon in charge of more than was usual for a newcomer to the CIA. Concerned by the intelligence report, Wheelon asked to meet with the head of the board of the National Intelligence Council, Sherman Kent. "I went to him and I said, 'Sherm, I am new around here so you should discount a lot of what I say. I am not a professional intelligence person, but it looks to me like the evidence is overwhelming that they have missiles down there.'" Sherman Kent thanked Wheelon for his advice but explained that the board was going to present President Kennedy with the opposite conclusion—that there were no Soviet missiles in Cuba.

The Cuban missile crisis is a story of conflict between the United States and the Soviet Union, and the drama that culminated in a ten-day standoff between two superpowers on the brink of thermonuclear war. But it is also the story of two powerful rivals within the American services, the CIA and the U.S. Air Force, and how they set aside historical differences to work together to save the world from near nuclear annihilation. Like so many international crises of the Cold War, the Cuban missile crisis had its link to Area 51—through the U-2.

During the crisis, the CIA and the Air Force worked together to conduct the U-2 spy mission that caused the Soviet Union to back down. How this was accomplished not only involved two key Area 51 players but also set a precedent for the power-sharing arrangement at Area 51 that worked well for a while, until it didn't work anymore. The diplomatic efforts of one Army Air Force old-timer and one CIA newcomer helped set the stage for success. The old-timer was General Jack Ledford, and the newcomer was Bud Wheelon.

On the afternoon of August 29, 1962, a U-2 spy plane flying over Cuba spotted eight surface-to-air missile sites in the western part of Cuba, the same SA-2 missile systems that had shot down Gary Powers two years before. The following week, three more missile sites were discovered on the island, as well as a Soviet MiG-21 parked on the Santa Clara airfield nearby. For two months, the [Agency had been analyzing reports](#) that said between 4,000 and 6,000 individuals from the Soviet bloc had arrived in Cuba, [including 1,700 Soviet military technicians](#). Cuban citizens were being kept from entering port areas where the Soviet-bloc ships were unloading unusually large crates, ones big enough to "contain airplane fuselage or missile components." The implications were threefold: that Russia was building up the Cuban armed forces, that they were establishing multiple missile sites, and that they were establishing electronic [jamming facilities against Cape Canaveral](#) in Florida as well as other important U.S. installations. The director of the CIA, John McCone, had already told the president's military advisers that he believed the

Soviets were laying a deadly trap involving nuclear missiles. But there was no hard evidence of the missiles themselves, the military argued, and their position on that fact was firm. (The Pentagon did not doubt that the Soviets wanted to put nuclear missiles on Cuba; officials just didn't think they'd accomplished that yet.) [McCone left for his honeymoon in Paris.](#)

In the following month, September, bad weather got in the way of good photographic intelligence. Day after day it rained over Cuba or the island was shrouded in heavy cloud cover. Finally, on September 29, a CIA U-2 mission over the Isle of Pines and the Bay of Pigs revealed yet another previously unknown missile site. President Kennedy's top advisers were convened. The CIA warned the advisers of more unknown dangers in Cuba and pushed for additional overflights so as to gain better intelligence on military installations there. Secretary of Defense Robert McNamara and Secretary of State Dean Rusk were opposed to the idea. [Not another Gary Powers incident](#), they said. But on October 5 and 7, [the CIA got presidential approval](#) to run two additional missions of its own. The resultant news was hard to ignore: there were now a total of nineteen surface-to-air missile sites on the island of Cuba, meaning there was something very important that the Soviets were intent on defending there. The Pentagon held firm. There was still no hard data revealing actual missiles, McNamara and Rusk said. Making matters even more complicated, JFK's Air Force chief of staff, General Curtis LeMay, was [pushing for preemptive strikes](#) against Cuba. It was a volatile and incredibly dangerous situation. If the CIA was correct and there already were nuclear missiles in Cuba, then LeMay's so-called preemptive strikes would actually initiate a nuclear war, not prevent one.

What the Agency needed desperately was a wizard of diplomacy, someone who could help the rival agencies see eye to eye so they could all work together to get the Soviets to back down. The Agency and the Air Force had decidedly different ideas on imminent missions; the CIA wanted to gather more intelligence with the U-2; the Air Force wanted to prepare for war. An individual who could wear both hats with relative objectivity was needed, someone who could see both sides of the debate. In a rare moment of accord, both sides agreed that the man for the job was Brigadier General Jack Ledford. Just a few weeks earlier, [Ledford had been asked by McCone](#) to serve as the director of the Office of Special Activities at the Pentagon, meaning he would be the Pentagon liaison to the CIA at Area 51. Ledford had just graduated from the Industrial College of the Armed Forces and was looking forward to moving out west when his old World War II commander [General LeMay encouraged him to take the new CIA liaison job.](#)

LeMay had known Ledford since the war in the Pacific when Ledford flew under his command. A former Olympic diver, Ledford was tall, charismatic, and handsome. According to Wheelon, "He was someone whose charisma was contagious. Ledford was impossible not to like to be around." There was, of course, the legendary story of [Ledford's plane crash, involving heroics](#) in the Pacific theater during World War II. As a captain in the Air Force, Ledford was making a bombing run over Kyushu Island, Japan, when he was attacked by Japanese fighter jets, his airplane and his own body hit with fire. Ledford's flight engineer, Master Sergeant Harry C. Miller, was hit in the head. The medic on board treated Miller and [tried to treat Ledford with opiates](#), who declined so he could

keep his head clear. With the aircraft crashing, Ledford and the medic opened a parachute, cut the shroud lines, and attached the chute to the unconscious flight engineer. They dropped the man through the nose of the wheel well; Captain Ledford followed, delaying opening his own parachute so he could be next to Sergeant Miller when he landed. Miller would be unconscious when he hit the earth, and without Ledford's help he would likely have broken his back. The medic, not far behind, later recounted how amazing it was that Ledford's daring and dangerous plan had actually worked.

Now, two decades later, at the Cuban missile crisis round table, Ledford showed the same foresight in preempting a potentially deadly situation. The first thing General Ledford did was present the CIA and the Air Force with a shoot-down analysis, detailing the odds for losing a U-2 on another overflight. [The chances were one in six, Ledford said.](#) He pushed for the U-2 mission, arguing that it was better to know now if there really were nuclear missiles in Cuba than to wish you knew later on, when it could be too late. Once these cold hard facts were on the table, the heart of the debate became clear. The point of contention was not whether or not to fly the mission. Rather, it was *who* would fly the mission—the Air Force or the CIA. As it turned out, each organization wanted the job. President Kennedy felt the mission needed to involve a pilot wearing a blue U.S. Air Force pilot suit. [Kennedy felt that if a CIA spy plane](#) were to get shot down over Cuba, there would be too much baggage attached to the event, that it would rekindle hostilities over the Gary Powers shoot-down. But General Ledford knew what the president did not: that the CIA had higher-quality U-2 airplanes, ones far less likely to end up getting shot down. Agency U-2s flew five thousand feet higher than their heavier Air Force U-2 counterparts, which were weighed down by additional reconnaissance gear. The CIA airplanes also had better electronic countermeasure packages, meaning they had more sophisticated means of jamming SA-2 missiles coming at them. So Ledford performed diplomatic wizardry by convincing the CIA to actually loan the Air Force its prized U-2 airplanes. With the fate of the free world at stake, the CIA and the Air Force agreed to work together to solve the crisis.

On October 14, an [Air Force pilot flying a CIA U-2](#) brought home film footage of Cuba that the White House needed to see. [Photographs showing nuclear missiles](#) supplied by the Soviet Union and set up on missile stands in Cuba. Those eight canisters of film brought back by the CIA's U-2 set in motion the Cuban missile crisis, bringing the world closer than it had ever come to all-out nuclear war. They would also give the work going on at Area 51 a shot in the arm. The Pentagon told the CIA they wanted the Oxcart operations ready immediately so the aircraft could be used to overfly Cuba. A CIA review of Oxcart, declassified in 2007, said it flatly: "The Oxcart program suddenly assumed greater significance than ever, and its achievement of operational status became one of the highest national priorities."

What Airplane?

Gardening helped CIA pilot Kenneth Collins relax. He had over a hundred rosebushes in his garden, which he and his wife, Jane, pruned together on weekends after Collins returned home from a long, mysterious week at the Ranch. At Area 51, where he worked as a project pilot, [Collins went by the code name Ken Colmar](#). "Same first name because you will instantly respond to it when called," Collins explains. "Colmar for the C, in case you had something monogrammed." His call sign was Dutch 21 but most men on base called him the Iceman. The pressure-suit officers came up with the nickname. "I was known to show no emotion or irritation even after a particularly dangerous flight," Collins recalls. The pressure-suit officers could gauge how tough a flight was by how sweaty a pilot's underwear was when they helped pilots undress. Collins's underwear was always remarkably dry.

Flying Oxcart was, to an Air Force pilot, the single most elite job in the nation at the time. Ken Collins "commuted" to Area 51 each week, flying in from sunny Southern California, where he and other pilots who now worked for the CIA pretended to live normal lives with their pretty wives and, ideally, a few children. Having a stable marriage and family had become a CIA-pilot mandate during Oxcart, something that was not in place during the U-2. It was Gary Powers's alcoholic wife who'd triggered the change. Some in the Agency believed she put the secrecy of the entire U-2 program at risk with behavior that even they could not control. Once, Barbara Powers got it into her head to visit her husband at his clandestine post in Turkey. [She made it as far as Athens](#) before the officer assigned to watch her notified Powers that he would be out of a job if he couldn't keep his impetuous wife in line. Ken Collins was told this story during his first interview at the Pentagon. Loose lips didn't just sink ships, he was reminded; loose lips could trigger nuclear war. Collins also learned that his wife, Jane, would be subject to psychological screening were he to be accepted into a top secret program rumored to involve "space travel."

Collins and his family were moved from their home in South Carolina to a Los Angeles suburb called Northridge and into a four-bedroom raised ranch with a two-car garage and an avocado tree out front. He was thirty-six years old. Jane attended church and collected antique china. All four of Jane and Ken Collins's children, two boys and two girls, maintained good grades in school. The neighbors were told Mr. Collins worked for Hughes Aircraft Company. Collins was told to report nosy neighbors to the CIA, and if any foreign-borns tried to befriend the Collinsees, they were to notify the Agency, who would look into the matter.

Each Monday morning, Collins left his home and drove to Burbank Airport, nine miles

to the southwest. There, he and the other Oxcart pilots climbed aboard Constellation propeller planes and headed to Area 51, never with more than two pilots per airplane—a guideline put into place after the Mount Charleston crash eight years earlier. The deaths of those top Agency and Air Force managers and scientists had set progress on the U-2 program back several months. Now, in 1963, Oxcart was already more than a year behind schedule. The Agency could not afford to lose any pilots. The vetting process alone took eighteen months and getting familiar with the aircraft took another year.

After leaving Burbank, Collins and his fellow pilots were flown, two by two, up over the Mojave Desert to the northeast, past China Lake, and into the Tikaboo Valley. Flying into the restricted airspace above the Nevada Test Site, Collins would look out the window and make a mental note of the ever-growing landscape of giant craters. The appearance of a new, moonlike subsidence crater was often a weekly occurrence now that nuclear testing had moved underground. When seen from above, the landscape at the Nevada Test Site looked like a battlefield after the apocalypse. For Collins, the destruction was a solid visual reminder of what scorched earth would look like after a nuclear war.

The Agency couldn't have chosen a more dedicated pilot. Collecting intelligence on dangerous reconnaissance flights was Ken Collins's life mission; it was what he did best. He seemed to be propelled by a natural talent and kept alive by an unknown force Collins called fate. "Fate is a hunter," Collins believes. "When it comes for you, it comes," and for whatever reason it was not time for death to come to him yet. This was a notion Collins formulated during the Korean War while flying reconnaissance missions and watching so many talented and brave fellow pilots die. How else but by fate did he survive all 113 combat missions he had flown? On those classified missions, the young Collins was armed with only a camera in the nose of his airplane as [he flew deep into North Korea](#), sometimes all the way over the Yalu River, being [fired at by MiG fighter jets](#). During the war, he was awarded a [Distinguished Flying Cross](#) and also the [coveted Silver Star for valor](#), the third-highest military decoration a member of the armed services can receive. Both medals were pinned on Collins's chest before he turned twenty-four.

But now, as an Oxcart pilot, Collins kept his medals tucked away in a drawer, never mentioning that he had received them. As with many servicemen, glory was a difficult distinction to contemplate when so many of your fellows had died. Accepting fate as the hunter made things easier for Collins, which is how he dealt with the memory of his closest friend and former wingman from the Fifteenth Tactical Reconnaissance Squadron, Charles R. "Chuck" Parkerson. The two men had flown on many missions together, but there was one from which Parkerson never came home. "We had flown into North Korea and back out side by side," Collins recalls. "We were almost home when Parkerson radioed me. He said the engine on his RF-80 had flamed out and he was unable to restart it. I saw he was losing altitude quickly and he knew that soon he would crash." Parachuting into enemy territory meant certain death. "Over the radio, Parkerson asked me, 'What should I do?'" Collins explains. "I said, 'Fly out over the Yellow Sea and I'll fly with you.' I told him to bail out in the water and I'd send his coordinates back to base for a rescue team." It seemed like a good idea, and Collins flew alongside his wingman as they headed toward the Yellow Sea. Parkerson prepared for a bailout. "But there was a

problem," Collins recalls. "The canopy on Parkerson's RF-80 was stuck. Jammed. It wouldn't open, which meant he was trapped inside the airplane. There was nothing I could do for my friend except to fly alongside him all the way until the end." Collins watched Parkerson land his airplane on the sea. With Parkerson unable to get out of the sinking aircraft, Collins waited, watching from the air as his friend drowned. "When your time is up, it is up," Collins recalls.

Ten years later, it was 1963, the Korean War was history, and there was an airplane to get ready at Area 51. After the twin-prop passed over the last set of hills on the Nevada Test Site's eastern edge, the airstrip at Groom Lake came into view, and Collins thought about how no one but his fellow CIA pilots had any idea who he really was. During training missions, the papers in Collins's flight pouch identified him only as a NASA weather pilot. His space-age-looking aircraft was registered to an airfield called Watertown Strip, Nevada. He was never to carry any personal effects with him in the airplane. When the Lockheed Constellation landed on the tarmac at Area 51, security guards took his ID and papers and locked them away in a metal box. Each Friday, before the afternoon flight home, Collins's identity was returned to him.

His mission flight that day, May 24, 1963, should have been like any other flight. By now, there were [a total of five Oxcarts being flight-tested at Area 51](#), and Collins breezed through his prebriefing with the Lockheed engineers, making mental notes about the different tasks he was to perform during the flight. The engineers wanted to know how certain engine controls worked during acceleration and slow cruise. Today's test would be subsonic with the high-performance aircraft traveling somewhere around 450 miles per hour, like a racehorse out for a trot. It was to be a short mission up over Utah, into Wyoming, and back to Area 51. Air Force chase pilot [Captain Donald Donohue would start out following Collins](#) in an F-101 Voodoo. [Later, Jack Weeks](#), also an Oxcart project pilot, would pick up the task.

For a little over an hour, everything appeared to be normal. Heading into Wendover, Utah, Collins made note of a large cumulus cloud that lay ahead. As Collins slowed down, Jack Weeks signaled that he was going to head back to Area 51. The F-101 could not handle flying as slow as Collins needed to fly that day. Besides, from Weeks's perspective, everything on the Oxcart looked fine. Collins gave Weeks the okay signal with one hand in the cockpit window and headed into the cloud.

[Suddenly, the altimeter was rapidly unwinding](#), indicating a rapid loss of speed," Collins recalls. In heavy clouds, Collins had no visual references to determine where he was. "I advanced the throttles to counter the loss of airspeed. But instead of responding, and without any warning, the aircraft pitched up and flipped over with me trapped underneath. Then it went into an inverted flat spin." The Agency's million-dollar A-12 Oxcart was unrecoverable and crashing. Collins needed to bail out.

Collins had no idea how close he was to the Earth's surface because he was in the middle of a cloud and couldn't see out of it. He also did not know if he was over a mountain range, which would mean he had even less time to eject. Collins closed his visor and grabbed the ejection ring that was positioned between his legs. He pushed his head firmly against the headrest and pulled. This kind of radical ejection from a prized top

secret aircraft is not easy to forget, and Collins recalls dramatic details. "The canopy of the aircraft flew off and disappeared but I was still upside down, with the aircraft on top of me," he explains. "Having pulled the D-ring, my boot stirrups snapped back. The explosive system in the seat rocket engaged, shooting me downward and away from the aircraft." First Collins separated from the Oxcart. Next he separated from his seat. After that, he was a body falling through the air until a small parachute called a drogue snapped open, slowing his body down. In his long history of flying airplanes, this was the first time Collins had ever had to bail out. Falling to Earth, he tried to get a sense of what state he might be over. Was he in Nevada or Utah? The ground below him appeared to be high-desert terrain, low hills but no mountains that he could see. He was still too high up to discern if there were roads. As he floated down, in the distance he spotted the heavy black aircraft tumbling through the air until it disappeared from sight. "I remember seeing a large, black column of smoke rise up from the desert floor and thinking, That's my airplane." Only now there was nothing left of it but an incinerated hunk of titanium smoldering on the ground. Fate was a hunter, all right.

Suddenly, Collins felt his parachute break away and he began to free-fall once again. Had his luck run out? he wondered. Was today the day he was going to die? But then, as suddenly as the one parachute had broken away, he felt another tug at his shoulders, and a second parachute blossomed above him. This one was more than twice the size of the drogue. He began to float gently toward Earth. Collins hadn't been told that the A-12 Oxcart ejection system had two separate parachutes. The first parachute, or drogue, was small enough to slow the pilot down and get him to an altitude of fifteen thousand feet. Then the drogue chute would jettison away in advance of the main parachute deploying. This large, thirty-five-foot-diameter landing aid was the one most pilots were familiar with.

With the ground below him quickly getting closer, Collins could see roads and sagebrush. He wondered how long it might take for anyone to locate him. When fellow pilot Jack Weeks had left him, just minutes before the crash, everything on Collins's aircraft had seemed fine, but because of secrecy protocols, Collins had not made radio contact with the command post before he bailed out. He could see that he was most likely somewhere north of the Salt Lake salt flats. Collins tucked his legs up and assumed the landing position. When he hit the ground, he rolled. His mind went through the checklist of what to do next.

Collins unclipped himself from the parachute and began collecting everything around him. Flight-protocol pages and filmstrips of navigational maps fluttered across the desert. As he hurried to collect the top secret papers, he was surprised to hear a car motor in the distance. Looking up, he saw a pickup truck bouncing toward him along a dirt desert road. "As it got closer, I could see there were three men in the front cab," Collins recalls. "The truck pulled alongside me and came to a stop. I could see they had my aircraft canopy in the back of their pickup."

The men, who appeared to be local ranchers, sized up Collins. Because the flight had been subsonic, Collins was wearing a standard flight suit and not a high-altitude pressure suit, which would have made him look like an astronaut or an alien and likely prompted a lot more questions. Instead, the ranchers asked Collins if he wanted a ride. They said they

knew exactly where his airplane had crashed, and if he hopped in, they'd give him a ride back to his plane. Until that moment, no civilian without a top secret security clearance had ever laid eyes on the Oxcart, and Collins had strict orders to keep it that way. He'd been briefed on what to do in a security breach such as this one, given a cover story by the Agency that fit perfectly with the proximity to the Nevada Test Site—and with the times. Collins told the ranchers that his aircraft was an F-105 fighter jet and that it had a nuclear weapon on board. The men's expressions changed from helpful to fearful. "They got very nervous and said if I wanted a ride, I better jump in quick because they were not staying around Wendover for long," Collins recalls.

The ranchers drove Collins to the nearest highway patrol office. There, he jumped out, took his airplane canopy from the back of the truck, and watched the men speed off. Collins reached into the pocket of his flight suit. Inside, he found the note that read *call this number*, followed by a telephone number. Also in his pocket was a dime. Inside the highway patrol office, Collins asked the officer on duty where he could find the nearest pay phone. The man pointed around to the side of the building, and using the Agency's dime, Collins made the phone call that no Agency pilot ever wants to make. A little less than an hour later, Kelly Johnson's private airplane landed in Wendover, Utah, along with several men from the CIA. After a brief exchange of words so Kelly Johnson could confirm that Collins was physically okay, Collins boarded the airplane. During the two-hour flight to the Lovelace Clinic in New Mexico, no one said a word. "There would be plenty of talking to do during the debriefing," Collins says, "and with the Agency's tape recorders taking everything down." A crash of a CIA spy plane meant someone had some explaining to do.

Back in the control room at Groom Lake, navigator [Sam Pizzo had a monumental amount of work](#) on his hands. News of Collins's crash had just hit the command post, and it was up to Colonel Holbury, the air commander of Detachment 1 of the 1129th U.S. Air Force Special Activities Squadron, to put together a search team for the crash site. "Maintenance guys, security guys, navigators, we all took off in trucks and airplanes and headed to Utah," Pizzo explains. With Collins confirmed alive, the goal now was to locate every single piece of the wrecked airplane, "every nut, bolt, and sliver of fuselage." The efforts would be staged from an old, abandoned airfield northwest of the dry lakes. These were the same facilities where World War II bombers had practiced for the Hiroshima and Nagasaki atomic bomb runs. The quarters there, long since deserted, were rudimentary. There was no running water or heat. This meant the men from Groom Lake brought their own cooks, cots, and gear as part of their crash-recovery team.

Once they found the site, the work crew had a lot of digging to do. The aircraft, Article #123, hadn't broken apart in flight, but given the speed at which it had hit the earth, huge sections of the airplane had become buried. Critically important was locating every loose piece of the titanium fuselage. The metal was rare and expensive, and the fact that the Agency's spy plane was hand-forged from titanium was a closely held secret. If a news reporter or a local got a hold of even the smallest piece of the aircraft, its unusual composition would raise questions that might threaten the cover of the entire Oxcart program. Equally critical to national security was making sure the radar-absorbing materials, known as composite and that covered the entire airplane, remained in

government control. If a piece of the plane got into the wrong hands, the results could be disastrous: the Russians could learn the secret of stealth.

Along with a crew of more than one hundred men, the Agency brought its own horses to the crash site. Men from Groom Lake [took to the desert terrain on horseback](#) and began their search. For two days they scoured the ground, looking for stray pieces of airplane as well as for flight papers and maps that had been in the cockpit with Collins. "By the time we were done, we'd combed over every single square inch of ground," Pizzo recalls. A massive C-124 transport plane hauled the pieces of the airplane back to Area 51. In a heavily guarded hangar there, what was left of the airplane was spread out, piece by piece, in an effort to re-create its shape.

Richard Bissell's departure from Area 51 a year earlier had left a huge power vacuum at the base. There was a general feeling among the men working there now that the vacuum was being [filled by Air Force brass](#). This made perfect sense. Whereas the U-2 was, in essence, a motorized glider, the A-12 Oxcart was the highest, fastest, most state-of-the-art piloted aircraft in the world. For men who prided themselves on airpower—as did everyone involved in the U.S. Air Force—the supersonic Oxcart was the top dog. The Area 51 facility was now one of the Air Force's most prestigious billets, a place where officers got to be in charge of their "own little air force," as Major General Paul Bacalis had once said. What this meant was that Pentagon favorites, usually World War II heroes who had survived dangerous, death-defying missions, were rewarded with key positions at Area 51. Men like Colonel Robert Holbury.

At Area 51, Holbury's official title was air commander of the U.S. Air Force Special Activities Squadron at Las Vegas, the nonclassified reference name for Oxcart. A former fighter pilot during World War II, [Holbury had been given a commendation by General Patton](#) for a dangerous low-flying reconnaissance mission over the Saar River, in western Germany, which he survived despite coming under heavy enemy fire. This meant Holbury was the official wing commander at the base when Ken Collins crashed the first Oxcart spy plane. In Air Force culture, when an airplane crashes, someone has to take the blame. Collins explains: "In the SAC [Strategic Air Command] mind-set, if there's an accident, the wing commander suffers the consequences." Instead, Collins believes, Holbury tried to get Collins to be the fall guy. "Holbury didn't want blame; he wanted a star. He wanted to become a general, so he tried to put the blame on me. After the crash, even before the investigation, he requested that I be fired."

Collins was unwilling to accept that. Fortunately for Collins's career, Kelly Johnson, the builder of the aircraft, didn't care about blame as much as he wanted to find out what had gone wrong with his airplane. Listening to Collins describe what had happened during the debriefing, Johnson couldn't figure out what caused the aircraft to crash. He wondered if there was something Collins had forgotten, or was maybe leaving out. "I was clear in my mind that the crash was a mechanical error and not a pilot error," Collins explains. "So when Kelly Johnson asked would I try unconventional methods like hypnosis and truth serum, I said yes. I was willing to do anything I could to get to the truth." While the Pentagon's accident board conducted a traditional investigation, Collins submitted to a far less conventional way of seeking out the truth of the cause of the crash.

Inside the flight surgeon's office at Lockheed, Collins sat with a CIA-contracted hypnotist from Boston, "a small, rotund man dressed in a fancy suit," as Collins recalls. "He tried very hard to put me in a trance, only it didn't work. I don't think he realized that hypnotizing a fighter pilot was not as easy as he thought it might be." Next, Collins was injected with sodium thiopental, also known as truth serum. Collins remembers the day well. "I told my wife, Jane, I was going to work for a few hours, which was unusual to begin with because it was a Sunday. The point of the treatment was to see if I could remember details other than those I relayed in the original debrief with the CIA. But yes, even with the sodium pentothal in my system, everything I said was exactly the same. The treatment takes a lot out of you and after it was over, I was very unsteady on my feet. Three CIA agents brought me home late that Sunday evening. One drove my car, the other two carried me inside and laid me down on the couch. I was still loopy from the drugs. They handed Jane the car keys and left without saying a word."

When Collins woke up the next morning, he figured the only conclusion his wife could have drawn was that her husband had gone out on a Sunday and gotten drunk. Feeling bad, he confided in her that he'd been given truth serum and could not say anything more. Jane told her husband a story of her own. She said that he didn't have to explain further because she had a pretty good idea what had happened to him on the job. Earlier in the week, Jane explained, immediately after Collins's crash, family friend and fellow Oxcart pilot Walt Ray had broken protocol and called Jane from Area 51 to tell her that Ken had bailed out of an airplane but that he was all right. "Where is he?" Jane had asked. Walt Ray said he didn't know. Jane then asked, "How can you know if Ken is okay if you don't even know where he is?" At the time Walt Ray didn't have an answer for that. So now, hangover or no hangover, Jane Collins was happy to have her husband home alive. After a lengthy investigation it was determined that a tiny, pencil-size part called [a pitot tube had in fact caused the crash](#). The pitot tube measured the air coming into the aircraft and thereby controlled the airspeed indicator. Unlike in a car, where the driver can feel relative speed, in a plane, without a proper reading from an airspeed indicator, a pilot has no awareness of how fast he is going, and without correct airspeed information a pilot cannot land. When Collins flew into the cloud, the pitot tube reacted adversely to the moisture inside and froze. The false airspeed indicator caused the aircraft to stall. As a result of the stall, the Oxcart flipped upside down and crashed.

Ken Collins's crash in Utah caused the CIA to redouble its secrecy efforts regarding operations at Area 51. The press was told an F-105 crashed, and as of 2011, the Air Force still has it listed that way. Worried its cover was about to be blown, the Agency decided to shore up an accounting of who knew what about Oxcart. An analyst was assigned the task of combing through all the files the CIA had been keeping on journalists, civilians, and even retired Air Force personnel—anyone who showed a curiosity about what might be going on at Area 51. Beginning in the spring of 1963, the noted instances of what the CIA called "Project Oxcart Awareness Outside Cleared Community" drastically increased. Declassified in 2007 and never before made public, the CIA had been [monitoring phone conversations](#) of journalists who seemed interested in the Oxcart program. "Mr. Marvin Miles, Aviation Editor, Los Angeles Times, telephonically contacted

Westinghouse Corp., Pittsburgh, attempting to confirm if employees of that firm were traveling covertly to 'the desert' each week in connection with top secret Project which he suspects may have 'CIA' association," read one memo. Another stated that "Mr. Robert Hotz, Editor Aviation Week, indicated his awareness of developments at Burbank." Of particular concern to the Agency was an article in the *Hartford Courant* that referred to the "secret development" of the J-58 engine. Another article in the Fontana, California, paper the *Herald News* speculated about the existence of Area 51, calling it a "super secret Project site." An [increasingly suspicious CIA](#) worked overtime to monitor journalists, and they also monitored regular citizens, including a Los Angeles-based taxi driver who was described in a memo marked "classified" as once having asked a Pratt and Whitney employee if he was "en route to Nevada."

With the Air Force steadily gaining a foothold in day-to-day operations at Area 51, it was the Air Force that the CIA should have been watching more closely in terms of the future of the spy plane program as a whole. It was not as if there weren't writing on the wall. In the year before Collins's crash, the Air Force had decided it wanted a Mach 3 Oxcart-type program of its own. Just as it had with the U-2, the Pentagon moved in on the CIA's spy plane territory. Only with the Oxcart, [the Air Force ordered not one but three Air Force variants](#) for its stable. One version, the YF-12A, would be used as an attack aircraft, its camera bay retrofitted to hold two 250-kiloton nuclear bombs. The second Oxcart variant the Air Force ordered could carry a drone on its back. The third was a two-seater version of the CIA's stealth spy plane, only instead of being designed to conduct high-speed, high-altitude reconnaissance missions over enemy territory during peacetime, the Air Force supersonic spy plane was meant to go in and take pictures of enemy territory immediately after a nuclear strike by U.S. bomber planes—to see if any strategic targets had been missed. Designated the RS-71 Blackbird, this now-famous aircraft had its letter designation accidentally inverted by President Lyndon B. Johnson in a public speech. Since the president is rarely ever "corrected," the Air Force changed its letter designation, which is how the SR-71 Blackbird got its name. (Originally, the [letters stood for "Reconnaissance/Strike."](#))

There was no end to the irony in all of this. The Air Force's Mach 3 airplanes were a far cry from President Eisenhower's original idea to let the CIA create a spy plane with which to conduct espionage missions designed to prevent nuclear war. This new Air Force direction underscored the difference in the two services: the CIA was in the business of spying, and the Air Force was in the business of war.

There were other motives in play, including the ego of General Curtis LeMay. The Air Force had already spent [eight hundred million](#) dollars developing the B-70 bomber airplane—a massive, triangle-shaped, Mach 3, eight-engined bomber that had been General LeMay's passion project since its inception in 1959. When a fleet of eighty-five of these giant supersonic bombers was first proposed to Congress, LeMay, then head of the Strategic Air Command, had his proposition met with cheers. But the Gary Powers shoot-down in May of 1960 had exposed the vulnerability of LeMay's B-70 bombers, which would fly at the same height as the U-2. In 1963 LeMay was no longer head of the Strategic Air Command—instead, he was President Kennedy's Air Force chief of staff.

Despite evidence showing the B-70 bomber was not a practical airplane, LeMay was not about to give up his beloved bomber without a fight.

When the CIA first briefed President Kennedy on how high and how fast the A-12 Oxcart would fly, [the president was astonished](#). His first question, according to CIA officer Norman Nelson, was "Could it be converted into a long-range bomber to replace the B-70?" LeMay was in the room when Kennedy asked the question. The thought of losing his pet program to the Agency drove General LeMay wild. He lobbied the Pentagon to move forward with the B-70, and he stepped up his public relations campaign, personally promoting the B-70 bomber program in magazine interviews from *Aviation Week* to *Reader's Digest*. He was committed to appealing to as many Americans as possible, from aviation buffs to housewives. But by 1963, Kennedy was leaning toward canceling the B-70. In a budget message, he called it "[unnecessary and economically unjustifiable](#)." [Congress cut back its B-70 order even further](#). The original order for eighty-five had already been cut down to ten, and now Congress cut that to four.

LeMay was furious. He flew from Washington, DC, to Burbank, California, to see Kelly Johnson at the Skunk Works. Longtime rivals, Kelly Johnson greeted LeMay with skepticism when LeMay asked for a briefing about the A-12. After Johnson was finished, LeMay gave Johnson a quid pro quo. "[Johnson, I want a promise out of you that you](#) won't lobby anymore against the B-70," LeMay said. Provided Kelly Johnson complied, [LeMay promised to send Lockheed](#) an Air Force purchase order for an interceptor version of Lockheed's A-12 Oxcart, in addition to the preexisting order. For Lockheed, this would mean a big new invoice to send to the Air Force. At first, Kelly Johnson was suspicious of LeMay's sincerity. That changed just a few weeks later when Secretary of Defense Robert McNamara showed up at the Skunk Works with the secretary of the Air Force and the assistant secretary of defense in tow. Now McNamara asked for a briefing on the A-12, during which he took "copious notes." Within a matter of months, the Pentagon ordered twenty-five more A-12 variants. The Pentagon already had a catchy name for its versions of the Oxcart. They would call them Blackbirds. *Black* because they had been developed in the dark by the CIA, and *birds* because they could fly. The meeting touched off the long-running battle between the two agencies over control of Area 51 and control of any U.S. government asset with wings. But this is exactly what had happened with the U-2. The CIA did all of the heavy lifting to get the aircraft aloft, only to have the program eventually taken over by the Pentagon for the Air Force.

[At the Ranch, it was business as usual](#). No one but the generals had any idea that the CIA's spy plane program now officially had in the Pentagon a formidable rival that threatened its very existence. Instead, pilots, engineers, operators, scientists, and Air Force enlisted men worked triple shifts, around the clock, to get the A-12 Oxcart mission ready. These were the men who made up and supported the 1129th Special Activities Squadron at Groom Lake.

The J-58 jet engines built by Pratt and Whitney had taken forever to finish but now they were ready to fly. In January of 1963 they were [finally delivered to the Ranch](#). A host of new problems occurred when the engines were first powered up. In one instance, engineers suspected a foreign object was stuck in an engine's heart, called the power plant, and was

damaging internal parts. [An X-ray](#) showed the outline of a pen that had fallen into the engine's cover, called a nacelle, during final assembly in Burbank. From then on, Lockheed workers got coveralls without breast pockets. There were other problems. The engines worked like giant vacuums. Once powered up on the tarmac, they sucked in every loose object lying around, including rocks and metal screws. As a solution, Area 51 workers took to sweeping and then vacuuming the runway before each flight. It was a tedious but necessary job.

The next goal was to get the airplane to cruise at Mach 3. Nearly five times as fast as any commercial airplane, this was an aerodynamic feat that had never been accomplished before. Pushing through the lower Mach numbers was a laborious and dangerous task. Performance margins were met gradually, with a [new set of challenges](#) cropping up each day. As the airplane reached higher speeds, the 500-plus-degree temperatures began melting electrical components, many of which had to be redesigned and rewired. Chuck Yeager is credited with breaking the sound barrier in 1947, but every time a new aircraft moves through the speed of sound, which is 768 miles per hour, complications can arise. In the case of the Oxcart, the sonic shock unexpectedly caused the fuselage to flex in such a way that many structural parts became dangerously compromised. These parts had to be redesigned and replaced.

Some performance benchmarks came surprisingly quickly. In July of 1963, Lou Schalk flew briefly at Mach 3, much to the Agency's delight. But sustaining flight for ten minutes at Mach 3 took another seven months to achieve. Every flight was like an operational mission, with navigators plotting a course and making maps days before as they worked to test the Oxcart's internal navigation system, or INS. "When you're flying at that altitude and that speed, you need big checkpoints to validate information from the INS," recalls navigator Sam Pizzo. "Any old geographical landmark, like a mountain or a river, would not do. The Oxcart traveled too fast. Pilots would have to look for landmarks on the scale of the Grand Canyon or the Great Lakes," says the veteran navigator. "You can't imagine what new territory this was for a navigator. No amount of experience can prepare you when you work on an airplane that goes two or three times as fast as anything you navigated for before."

The essence of Area 51 was that everything that happened there happened big. Because all efforts were being made on orders of the president, and given the colossal scale of secrecy surrounding the project, there was a deeply patriotic sense that the free world depended on the work being performed at Area 51. The men worked tirelessly and with phenomenal ingenuity to overcome challenges that would have stymied countless others. And yet the strange paradox underlying all efforts at the Ranch was that Project Oxcart was also subject to unforeseeable world events. It could be given the ax at a moment's notice—which is what almost happened on November 22, 1963.

It was late in the day after a rainstorm and Captain Donald Donohue was working with a crew out on the dry lake bed. An [F-101 chase plane had run off the airstrip](#) and sunk into a layer of gypsum that was several inches deep. Working with a group of engineers and mechanics, Donohue led the efforts to lay down several long planks of steel that could then be used to tow the airplane out of where it had become stuck in the soggy lake bed.

"Pizzo came out," Donohue remembers. "He looked kinda pale. Then he said, 'Clean up and go home.' Well, something was not right. Sam Pizzo was a lot more talkative than that. Then he said something to the effect of 'We'll call you if we need you to come back.'"

"What the hell is going on?" Donohue remembers asking.

"President Kennedy has just been assassinated, in Dallas," Pizzo said solemnly.

It was a terrible shock, Donohue remembers. "Our commander in chief. Dead? I recall it like it was yesterday. Pizzo was right. We had to go home and wait this thing out. When [Lyndon] Johnson was vice president, he was entirely unaware about the existence of the A-12 program. And he didn't have a clue about Area 51." The future of Oxcart was contingent on the new president's call.

With President Kennedy dead, [Lyndon Johnson would be briefed](#) on the CIA's secret domestic base by CIA director John McCone on his eighth day as commander in chief. Until then, what Johnson would decide about the CIA's supersonic spy plane program was anybody's guess. The relationship between a new president and the CIA is always tenuous starting out. What happened to President Kennedy with the CIA and the Bay of Pigs raised the bar in terms of jeopardy for all future presidents of the United States. Only time would tell if Lyndon Johnson would authorize the completion of the Agency's Mach 3 spy plane out at Area 51.

Covering Up the Cover-Up

Jim Freedman remembers the first time he brought up the subject of UFOs with his EG&G supervisor at Area 51. It was sometime in the middle of the 1960s and "UFOs were a pretty big thing," Freedman explains. Flying saucer sightings had made their way into the news with a fervor not seen since the late 1940s. "I heard through the rumor mill that one of the UFOs had gone to Wright-Patt and was then brought to a remote area of the test site," Freedman says. "[I heard it was in Area 22](#). I was driving with my supervisor through the test site one day and I told him what I had heard and I asked him what he thought about that. Well, he just kept looking at the road. And then he turned to me and he said, 'Jim, I don't want to hear you mention anything like that, ever again, if you want to keep your job.'" Freedman made sure never to bring the subject of UFOs up again when he was at work.

In the mid-1960s, sightings of unidentified flying objects around Area 51 reached unprecedented heights as the A-12 Oxcart flying from Groom Lake was repeatedly mistaken for a UFO. Not since the U-2 had been flying from there were so many UFO reports being dumped on CIA analysts' desks. The first instance happened only four days after Oxcart's first official flight, on April 30, 1962. It was a little before 10:00 a.m., and a NASA X-15 rocket plane was making a test flight in the air corridor that ran from Dryden Flight Research Center, in California, to Ely, Nevada, during the same period of time when an A-12 was making a test flight in the vicinity at a different altitude. From inside the X-15 rocket plane, test pilot Joe Walker snapped photographs, a task that was part of his mission flight. The X-15 was not a classified program and NASA often released publicity photographs taken during flights, as they did with Walker's photographs that day. But NASA had not scrutinized the photos closely before their public release, and officials missed the fact that a tiny "UFO" appeared in the corner of one of Walker's pictures. In reality, it was the Oxcart, but the press identified it as a UFO. A popular theory among ufologists about why aliens would want to visit Earth in the first place has to do with Earthlings' sudden advance of technologies beginning with the atomic bomb. For this group, it follows that the X-15—the first manned vehicle to get to the edge of space (the highest X-15 flight was [354,200 feet—almost 67 miles above sea level](#)) would be particularly interesting to beings from outer space.

Two weeks after the incident, the CIA's new director, John McCone, received a secret, priority Teletype on the matter stating that "[on 30 April, A-12 was in air](#) at altitude of 30,000 feet from 0948-106 local with concurrent X-15 Test" and that "publicity releases mention unidentified objects on film taken on X-15 flight." This message, which was not declassified until 2007, illustrates the kind of UFO-related reports that inundated the CIA

at this time. In total, 2,850 Oxcart flights would be flown out of Area 51 over a period of six years. Exactly how many of these flights generated UFO reports is not known, but the ones that prompted UFO sightings created the same kinds of problems for the CIA as they had in the previous decade with the U-2, only with elements that were seemingly more inexplicable. With Oxcart, commercial airline pilots flying over Nevada or California would look up and see the shiny, reflective bottom of the Oxcart whizzing by high overhead at triple-sonic speeds and think, UFO. How could they not? When the Oxcart flew at 2,300 miles per hour, it was going approximately five times faster than a commercial airplane—aircraft speeds that were unheard-of in those days. Most Oxcart sightings came right after sunset, when the lower atmosphere was shadowed in dusk. Seventeen miles higher up, the sun was still shining brightly on the Oxcart. The spy plane's broad titanium wings coupled with its triangle-shaped rear fuselage—reflecting the sun's rays higher in the sky than aircraft were known to fly—could understandably cause alarm.

The way the CIA dealt with this new crop of sightings was similar to how it handled the U-2s'. Colonel Hugh "Slip" Slater, Area 51's base commander during this time, explains "[commercial pilots would report sightings](#)" to the FAA. The flights would be met in California, or wherever they landed, by FBI agents who would make passengers sign inadvertent disclosure forms." End of story, or so the CIA hoped. Instead, interest in UFOs only continued to grow. The public again put pressure on Congress to find out if the federal government was involved in covering up UFOs. When individual congressmen asked the CIA if it was involved in UFOs, the Agency would always say no.

On May 10, 1966, the most trusted man in America, [Walter Cronkite, hosted a CBS news special report](#) called *UFO: Friend, Foe or Fantasy?* To an audience of millions of Americans, Cronkite announced that the CIA was part of a government cover-up regarding UFOs. The CIA had been actively analyzing UFO data despite repeatedly denying to Congress that it was doing so, Cronkite said. He was absolutely correct. The Agency had been tracking UFO sightings around the world since the 1950s and actively lying about its interest in them. The CIA could not reveal the classified details of the U-2 program—the existence of which had been outed by the Gary Powers shoot-down but the greater extent of which would remain classified until 1998—nor could it reveal anything related to the Oxcart program and those sightings. That remained top secret until 2007. In Cronkite's exposé, the CIA looked like liars.

It got worse for the Agency. The Cronkite program also reopened a twelve-year-old can of UFO worms known as the Robertson Panel report of 1953. [Dr. Robertson appeared on a CBS Reports](#) program and disclosed that the UFO inquiry bearing his name had in fact been sponsored by the CIA beginning in 1952, despite repeated denials by officials. The [House Armed Services Committee held hearings on UFOs](#) in July of 1966, which resulted in the [Air Force laying blame for the cover-up on the CIA](#). "The Air Force... approached the Agency for declassification," testified secretary of the Air Force Harold Brown. Brown stated that while there was no evidence that "strangers from outer space" had been visiting Earth, it was time for the CIA to come clean on its secret studies regarding UFOs.

[According to CIA historian Gerald Haines](#), "The Agency again refused to budge. Karl

H. Weber, Deputy Director of OSI [Office of Scientific Intelligence], wrote the Air Force that 'we are most anxious that further publicity not be given to the information that the panel was sponsored by the CIA.'" Weber's words, said Haines, were "shortsighted and ill considered" because the Air Force in turn gave that information to a [journalist named John Lear](#), the science editor of the *Saturday Review* Lear's September 1966 article "The Disputed CIA Document on UFO's" put yet another spotlight on the CIA's ongoing cover-up of UFOs. Lear, unsympathetic to the idea of extraterrestrials, demanded the release of the report. The CIA held firm that its information was classified, and the full, unsanitized facts regarding the Agency's role in unidentified flying objects remains classified as of 2011.

The public was outraged by the layers of obfuscation. The year 1966 was the height of the Vietnam War, and the federal government's ability to tell the truth was under fire. Pressure on Congress to make more information known did not let up. And so once again, as it had been in the late 1940s, the Air Force was officially "put in charge" of investigating individual UFO claims. The point of having the Air Force in charge, said Congress, was to oversee the untrustworthy CIA. One of the great ironies at work in this was that only a handful of Air Force generals were cleared for knowledge about Oxcart flights blazing in and out of Area 51, which meant that to most Air Force investigators, Oxcart sightings were in fact unidentified flying objects. Further feeding public discord, several key Air Force officials who had previously been involved in investigating UFOs now believed the Air Force was also engaged in covering up UFOs. Several of these men left government service to write books about UFOs and help the public persuade Congress to do more.

For more than two hundred years, since the invention of the hot-air balloon, people all over the world have been terrified of unidentified flying objects because their very existence makes man feel vulnerable from an attack from above. The *War of the Worlds* radio-broadcast phenomenon was far from the first such incident. The first pictorially recorded panic over a UFO event occurred in August of 1783, shortly after two French brothers named Joseph and Etienne Montgolfier secured patronage from the king of France to design and fly a hot-air balloon—the eighteenth-century version of a modern-day defense contract. During one of the Montgolfiers' early flight tests, a balloon got caught in a thunderstorm and crashed in a small French village called Gonesse. The peasants that inhabited the town thought the balloon was a monster attacking them from the sky. A pen-and-ink drawing from that time shows men with pitchforks and scythes ripping the crashed balloon to shreds. Townsfolk in the background can be seen running away, flailing their arms above their heads in fear. From this story, it is easy to see that with any new form of flight comes the archetypal fear of an attack from above. In the more than two hundred years since, these fears have taken dramatic twists and turns.

Twenty years into the American jet age, in the mid-1960s, fears of unidentified flying objects continued to shape cultural thinking and spawn industries. By then, millions of Americans correctly believed that various factions inside the U.S. government were actively engaged in a cover-up regarding UFOs. Many citizens believed the government was trying to cover up the existence of extraterrestrial beings; people did not consider the

fact that by overfocusing on Martians, they would pay less attention to other UFO realities, namely, that these were sightings of radical aircraft made by men. By the late 1960s, the two government agencies at the forefront of citizens' wrath—the CIA and the Air Force—had been using cover and deception as tools to keep classified programs out of the public eye. Cover conceals the truth, and deception conveys false information. From cover stories about airplane crashes to deception campaigns about covert UFO study programs, both organizations had created complex webs of lies. How exactly a deception campaign works on ordinary people is best exemplified by this factual, dawn-of-the-jet-age U.S. Army Air Corps tale.

In 1942, when the jet engine was first being developed, the Army Air Corps desired to keep the radical new form of flight a secret until the military was ready to unveil the technology on its own terms. Before the jet engine, airplanes flew by propellers, and before 1942, for most people it was a totally foreign concept for an airplane to fly without the blades of a propeller spinning around. With the jet engine, in order to maintain silence on this technological breakthrough, the Army Air Corps entered into a rather benign strategic deception campaign involving a group of its pilots. Every time a test pilot took a Bell XP-59A jet aircraft out on a flight test over the Muroc dry lake bed in California's Mojave Desert, the crew attached a dummy propeller to the airplane's nose first. The Bell pilots had a swath of airspace in which to perform flight tests but every now and then a pilot training on a P-38 Lightning would cruise into the adjacent vicinity to try to get a look at the airplane. The airplane was seen trailing smoke, and eventually, rumors started to circulate at local pilot bars. Pilots wanted to know what was being hidden from them.

According to Edwards Air Force Base historian Dr. James Young, the chief XP-59A Bell test pilot, a man by the name of Jack Woolams, got an idea. He ordered a gorilla mask from a Hollywood prop house. On his next flight, Woolams removed the mock-up propeller from the nose of his jet airplane and put on the gorilla mask. When a P-38 Lightning came flying nearby for a look, Woolams maneuvered his airplane close enough so that the P-38 pilot could look inside the cockpit of the jet plane. The Lightning pilot was astonished. Instead of seeing Woolams, the pilot saw a gorilla flying an airplane—an airplane that had no propeller. The stunned pilot landed and went straight to the local bar, where he sat down and ordered a stiff drink. There, he began telling other pilots what he had definitely seen with his own eyes. His colleagues told him he was drunk, that what he was saying was an embarrassment, and that he should go home. Meanwhile, the concept of the gorilla mask caught on among other Bell XP-59A test pilots and soon Woolams's colleagues joined the act. Over the course of the next few months, other P-38 Lightning pilots spotted the gorilla flying the propellerless airplane. Some versions of the historical record have the psychiatrist for the U.S. Army Air Corps getting involved, helping the Lightning pilots to understand how a clear-thinking fighter pilot could become disoriented at altitude and believe he had seen something that clearly was not really there. Everyone knows that a gorilla can't fly an airplane. Whether or not the psychiatrist really did get involved—and if he did, whether he was aware of the gorilla masks—remains ambiguous to Dr. Craig Luther, a contemporary historian at Edwards Air Force Base. But for the purposes of a strategic deception campaign, the point is clear: no one wants to be

mistaken for a fool.

Ockham's razor is an idea attributed to a fourteenth-century English friar named William of Ockham. It asks when trying to explain a phenomenon, does the alternative story explain more evidence than the principal story, or is it just a more complicated and therefore a less useful explanation of the same evidence? In other words, according to Ockham, when man is presented with a riddle, the answer to the riddle should be simpler, not more complicated, than the riddle itself. Ockham's razor is often applied to the phenomenon of unidentified flying objects, or UFOs. In the case of the flying-gorilla story, the true explanation—that the gorilla was actually a pilot with a gorilla mask on—offered the simplest answer to what appeared to be an inexplicable phenomenon. The same can be said about the truth regarding the Roswell crash. But it would take decades for more to be revealed.

One of the more enigmatic figures involved in the Roswell mystery was Rear Admiral Roscoe H. Hillenkoetter, the first man to run the CIA. Hillenkoetter was the director of Central Intelligence from May 1, 1947, until October 7, 1950. After his retirement from the CIA, Hillenkoetter returned to a career in the navy. Curiously, after he retired from the Navy, in the late 1950s, he served on the board of governors of a group of UFO researchers called the National Investigations Committee on Aerial Phenomena. Hillenkoetter's placement on the board was a paradox. He was there, in part, to learn what the UFO researchers knew about unidentified flying crafts. But he also empathized with their work. While Hillenkoetter did not believe UFOs were from outer space, he knew unidentified flying objects were a serious national security concern. In his position as CIA director Hillenkoetter knew that the flying disc at Roswell had been sent by Joseph Stalin. And he knew of the Joint Chiefs of Staff's fear that what had been achieved once could happen again. Which makes it peculiar that, in February of 1960, in a rare reveal by a former cabinet-level official, Hillenkoetter testified to Congress that he was dismayed at how the Air Force was handling UFOs. To the Senate Science and Astronautics Committee he stated that "behind the scenes, high-ranking Air Force officers are soberly concerned about UFOs. But through official secrecy and ridicule, many citizens are led to believe the unknown flying objects are nonsense." He also claimed that "to hide the facts, the Air Force has silenced its personnel."

Hillenkoetter remained a ranking member of the National Investigations Committee on Aerial Phenomena until 1962, when he mysteriously resigned. Equally puzzling was that the man who later replaced Hillenkoetter and became the head of the board of the National Investigations Committee on Aerial Phenomena in 1969 was Joseph Bryan III—the CIA's first chief of political and psychological warfare. Not much is known about Bryan's true role with the ufologists because his work at the CIA remains classified as of 2011. If his name sounds familiar, it is because Joe Bryan was the man scheduled for a hunting trip with Frank Wisner, Richard Bissell's friend and predecessor at the CIA. But before Bryan arrived that day, on October 29, 1965, Wisner shot himself in the head.

At the CIA, during the mid-1960s, the thinking regarding UFOs began to move in a different direction. Since the birth of the modern UFO phenomenon, in June of 1947, the CIA had maintained three lines of thought on UFOs. They were (a) experimental aircraft,

(b) the delusions of a paranoid person's mind, or (c) part of a psychological warfare campaign by the Soviet Union to create panic among the people and sow seeds of governmental mistrust. But by 1966, a faction within the CIA added a fourth line of thought to its concerns: maybe UFOs were real. [This new postulation came from the Agency's monitoring](#) of circumstances in the Soviet Union, which was also in the midst of a UFO sea change.

In the 1940s and until Stalin's death in 1953, CIA analysts of Soviet publications had found only one known mention of UFOs, in an editorial published in a Moscow newspaper in 1951. Khrushchev appeared to have continued the policy. The analysts at CIA assigned to monitor the Soviet press during his tenure found no stories about UFOs. But curiously, in 1964, after Khrushchev's colleagues removed him from power and installed Leonid Brezhnev in his place, articles on UFOs began to emerge. In 1966, a series of articles about UFOs were published by Novosti, Moscow's official news agency. Two leading scientists from the Moscow Aviation Institute not only were writing about UFOs but were split on their opinions about them, which was highly unusual for Soviet state-funded scientists. One of the scientists, [Vilen Lyustiberg](#), promoted the idea that UFOs were the creation of the American government and that "[the U.S. publicizes them to divert people from its failures](#) and aggressions." A second leading scientist, Dr. Felix Zigel, [had come to believe](#) that UFOs were in fact real.

Declassified CIA memos written during this time reveal a concern that if the leading scientists and astronomers in the Soviet Union believed UFOs were real, maybe UFOs truly were real after all. In 1968, the CIA learned that a Soviet air force general named Porfiri Stolyarov had been named the chairman of a new "[UFO Section of the All-Union Cosmonautics Committee](#)" in Moscow. After learning that Russia had an official UFO committee, the CIA went scrambling for its own science on UFOs. For the first time in its history, America's spy agency internally allowed for the fact that UFOs might in fact be coming from outer space. "[The hypothesis that UFOs originate in other worlds](#), that they are flying craft from other planets other than Earth, merits the most serious examination," read one secret memo that was circulated among CIA analysts.

Had the original UFO cover-up—the crash of the Horten brothers' flying disc at Roswell—created this Hydra-like monster? Had maintaining secrecy around the follow-up program, which had been clandestinely set up in the Nevada desert just outside Area 51, resulted in such endemic paranoia among analysts at the CIA that these individuals sensed they were being lied to? That the dark secret the government was hiding was that UFOs really were from outer space? Or was an elite group with a need-to-know allowing—perhaps even fostering—exactly this kind of conjecture among analysts because it was better to have insiders on a wild-goose chase than to have them on the trail leading to the original enigma of Area 51?

Dull, Dirty, and Dangerous Requires Drones

Starting in 1963, preparing for Oxcart missions involved punishing survival-training operations for the pilots, many of which occurred in the barren outer reaches of Area 51. For Ken Collins, a mock nighttime escape from an aircraft downed over the desert was meant to simulate hell. Collins knew the kind of challenge he would be up against as he stood on the tarmac at Groom Lake watching the sun disappear behind the mountains to the west. Soon, it would be dark and very cold. Collins climbed into a C-47 aircraft and noticed that the windows were blacked out. Neither he nor any of the other Oxcart pilots he was with had any idea where they were headed. "We got inside and flew for a little while," Collins recalls, "until we landed in another desert airfield, somewhere remote." The men were unloaded from the aircraft and put into a van, also with the windows blacked out. They were driven for miles, Collins thought going in circles, until the doors of the van opened into what appeared to be thick, rough, high-desert terrain. "We were told that we were in Chinese enemy territory. To escape and survive the best that you can. There were electronic alarms, trip wires, and explosive charges on the ground."

Collins ran and took cover under a bush. In the darkness, he lay on his belly and gathered his thoughts. He had been through a series of survival trials during Oxcart training already. Once, he and another pilot were taken to the Superstition Mountains in Arizona for a mountain-survival trial. "On that exercise we had minimal food, sleeping bags, and a very small tent. We walked and camped in the mountains for five days. The first three days were comfortable; the third night a weather front moved in with cold rain," making things a little more challenging. A second exercise took place in Kings Canyon, in the Sierra Mountains. During that trip, Collins and another pilot had to live in snow for three days. They dug a snow cave and made beds of pine boughs. A third trip, to Florida, simulated jungle survival. "I was taken out to a swamp, given a knife, and told to survive on my own for four days." What Collins remembers vividly was the food. "I caught some turtles to eat, but found them difficult to open, so my staple became the heart of palm. I'd cut the new palm buds out from the center. It was thin fare, but sustainable," Collins says. But the high-desert survival training at Area 51 felt different. Unlike the other sessions, this one would involve psychological warfare by the mock enemy Chinese.

Collins crawled along the desert floor through the darkness, feeling for the trip wires and considering his next move. He pulled his small compass from his survival pack so he could chart a path. "I crawled slowly through the brambles, bugs, and mud for about thirty minutes when, suddenly, I hit a trip wire and alarms went off. A glaring spotlight came on and ten Chinese men in uniform grabbed me and dragged me to one of their jeeps." Collins was handcuffed, driven for a while, put into a second vehicle, and taken to so-

called Chinese interrogation headquarters. There, he was stripped naked and searched. "A doctor proceeded to examine every orifice the human body has, from top to bottom—literally," which, Collins believes, "was more to humiliate and break down my moral defenses than anything else." Naked, he was led down a dimly lit hallway and pushed into a concrete cell furnished with a short, thin bed made of wood planks. "I had no blanket, I was naked, and it was very cold. They gave me a bucket to be used only when I was told."

For days, Collins went through simulated torture that included sleep deprivation, humiliation, extreme temperature fluctuation, and hunger, all the while naked, cold, and under surveillance by his captors. "The cell had one thick wooded door with a hole for viewing. This opening had a metal window that would clank open and shut. A single bright light was on and when I was about to doze off, the light would flash off, which would immediately snap me out of sleep." For food, he was given watery soup, two thin pepper pods, and two bits of mysterious meat. "I had no water to drink and I was always watched. I didn't know day from night so there was no sense of time. The temperature varied from hot to very cold. The voice through the viewing window shouted demands."

Soon Collins began to hallucinate. Now it was interrogation time. Naked, he was led to a small room by two armed guards. He stood in front of his Chinese interrogators, who sat behind a small desk. They grilled him about his name, rank, and why he was spying on China. The torturous routine continued for what Collins guessed was several more days. Then one day, instead of being taken to his interrogators, he was told that he was free to go.

But halfway across the world, on November 1, 1963, Ken Collins's experience was being mirrored for real. A [CIA pilot named Yeh Changti](#) had been flying a U-2 spy mission over a nuclear facility in China when he was shot down, captured by the Chinese Communist government, and tortured. Yeh Changti was a member of the Thirty-Fifth Black Cat U-2 Squadron, a group of Taiwanese Chinese Nationalist pilots (as opposed to the Communist Chinese, who inhabited the mainland) who worked covert espionage missions for the CIA. In the 1960s, [the Black Cats flew](#) what would prove to be the deadliest missions in the U-2's fifty-five-year history, all of which were flown out of a secret base called Taoyuan on the island of Taiwan. When the CIA declassified most of the U-2 program, in 1998, "[no information was released about Yeh Changti](#) or the Black Cats," says former Black Cat pilot Hsichun Hua. The program, in entirety, remains classified as of 2011.

Colonel Hugh "Slip" Slater, the man who would later become the commander of Area 51, remembers Yeh Changti before he got shot down. "[His code name was Terry Lee](#) and he and I played tennis on the base at Taoyuan all the time. He was a great guy and an amazing acrobat, which helped him on the court. Sometimes we drank scotch while we played. Both the sport and the scotch helped morale." Slater says that the reason morale was low was that "the U-2 had become so vulnerable to the SA-2 missiles that nobody wanted to fly." One Black Cat pilot had already been shot down. But that didn't stop the dangerous missions from going forward for the CIA.

Unlike what had happened with the Gary Powers shoot-down, the American press remained in the dark about these missions. For the CIA, [getting hard intelligence on](#)

[China's nuclear facilities](#) was a top national security priority. On the day Yeh Changti was shot down, he was returning home from a nine-hour mission over the mainland when a surface-to-air missile guidance system locked on to his U-2. Colonel Slater was on the radio with Yeh Changti when it happened. "I was talking to him when I heard him say, 'System 12 on!' We never heard another word." The missile hit Yeh Changti's aircraft and tore off the right wing. Yeh Changti ejected from the airplane, his body riddled in fifty-nine places with missile fragments. He landed safely with his parachute and passed out. When he woke up, he was in a military facility run by Mao Tse-tung.

This was no training exercise. [Yeh Changti was tortured and held prisoner](#) for nineteen years until he was quietly released by his captors, in 1982. He has been living outside Houston, Texas, ever since. The CIA did not know that Yeh Changti had survived his bailout and apparently did not make any kind of effort to locate him. A [second Black Cat pilot named Major Jack Chang](#) would also get shot down in a U-2, in 1965, and was imprisoned alongside Yeh Changti. After their release, the two pilots shared their arduous stories with fellow Black Cat pilot, Hsichun Hua, who had become a general in the Taiwanese air force while the men were in captivity. Neither Yeh Changti nor Major Jack Chang was ever given a medal by the CIA. The shoot-down of the Black Cat U-2 pilots, however, had a major impact on what the CIA and the Air Force would do next at Area 51. Suddenly, the development of drones had become a national security priority, drones being pilotless aircraft that could be flown by remote control.

Drones could accomplish what the U-2 could in terms of bringing home photographic intelligence, but a drone could do it without getting pilots captured or killed. Ideally, drones could perform missions that fell into three distinct categories: [dull, dirty, and dangerous](#). *Dull* meant long flights during which pilots faced fatigue flying to remote areas of the globe. *Dirty* included situations where nuclear weapons or biological weapons might be involved. *Dangerous* meant missions over denied territories such as the Soviet Union, North Korea, and China, where shoot-downs were a political risk. Lockheed secured a contract to develop such an unmanned vehicle in late 1962. After Yeh Changti's shoot-down, the program got a big boost. Flight-testing of the drone code-named Tagboard would take place at Area 51 and, ironically, getting the Lockheed drone to fly properly was among the first duties assigned to Colonel Slater after he left Taoyuan and was given a new assignment at Area 51.

"Lockheed's D-21 wasn't just any old drone, it was the world's first Mach 3 stealth drone," says Lockheed physicist Ed Lovick, who worked on the program. "The idea of this drone was a radical one because it would fly at least as fast, if not faster, than the A-12. It had a ram jet engine, which meant it was powered by forced air. The drone could only be launched off an aircraft that was already moving faster than the speed of sound." The A-12 mother ship was designated M-21, *M* as in *mother*, and was modified to include a second seat for the drone launch operator, a flight engineer. The D-21 was the name for the drone, the *D* standing for *daughter*. But launching one aircraft from the back of another aircraft at speeds of more than 2,300 mph had its own set of challenges, beginning with how not to have the two aircraft crash into each other during launch. The recovery process of the drone also needed to be fine-tuned. Lovick explains, "The drone, designed to overfly

China, would travel on its own flight path taking reconnaissance photographs [and then head back out to sea](#)." The idea was to have the drone drop its photo package, which included the camera, the film, and the radio sensors, by parachute so it could be retrieved by a second aircraft nearby. Once the pallet was secure, the drone would crash into the sea and sink to the ocean floor.

Practicing this process at Area 51 translated into a lot of lost drones. Colonel Slater directed the test missions, which took place in what was called the special operating area, or [Yuletide](#), just north of Groom Lake airspace. Colonel Slater and Frank Murray would follow the M-21/D-21 in chase planes and oversee the subsonic launches of the drone. "They'd launch, and then disappear," Colonel Slater recalls. Helicopter pilot Charlie Trapp was sent to find them, along with a crew of search-and-rescue parajumpers, called PJs. "First, we'd locate the lost drones. Then I'd lower my parajumpers down on ropes. They'd hook the lost pods to a cargo hook and we'd pull the drones off the mountain that way," Trapp explains. "Sometimes it got tricky, especially if the drone crash-landed on the top of a mountain ridge. We had some tense times [with PJs nearly falling off cliffs](#)." When Colonel Slater felt the Oxcart and its drone were ready for a Mach 3 test, it was time to add ocean-survival training to the mix. For public safety reasons, the plan was to launch the triplesonic drone off the coast of California in March of 1966 for the first test, and to prepare his pilots, Colonel Slater had them swim laps each day in the Area 51 pool, first in bathing suits and then with their pressure suits on. "We'd hoist the guys up over the water in a pulley and then drop them in the pool. As soon as they hit the water the first time, the pressure suit inflated, so we had to have that fixed," Slater recalls. When it came time to practice an actual landing in a large body of water, the Agency's highest-ranking officer on base, Werner Weiss, got the Coast Guard to seal off a large section of Lake Mead, the largest reservoir of water in the United States, located just east of Las Vegas.

Slater remembers the pilot training well. "We were out there in this little Boston Whaler and the plan was to get the project pilots hoisted up into a parasail and then let them drop down in the water in their full pressure suits. First [Agency pilot Mele] Vojvodich went. His test went fine. By the time we got [Agency pilot Jack] Layton up, the wind had picked up. When Layton went down in the water, the Whaler started dragging him, and the water in his parachute started pulling him underneath. I called it off. 'Stop!' I said. 'We're gonna lose somebody out here!'"

They were prescient words. On the night of July 30, 1966, the 1129th Special Activities Squadron at Groom Lake prepared to make the first official nighttime drone launch off the coast of California. From the tarmac at Area 51, Lockheed's chief flight test pilot, Bill Park, was about to close the canopy on the M-21 Oxcart when Colonel Slater approached him with some final words. "I said, 'Bill, it's a dangerous mission,'" Slater remembers. "There were only a few feet between the drone and the tail of the A-12. Park knew that. We all did. In back was the [flight engineer, Ray Torick](#); he knew that too. The canopy closed and I got into another Mach 3 aircraft we had flying alongside during the test." Both aircraft flew west until they were a hundred and fifty miles off the coast of California. There, the M-21, piloted by Bill Park, prepared for the D-21 launch. A camera in Slater's airplane would capture the launch on 16-millimeter film. Down below, on the dark ocean surface, a rescue

boat waited. Park hit Ignite, and the drone launched up and off the M-21. But during separation, the drone pitched down instead of up and instantly split the mother aircraft in half. Miraculously, the drone hit neither Park nor Torick, who were both trapped inside.

The crippled aircraft began to tumble through the sky, falling for nearly ten thousand feet. Somehow, both men managed to eject. Alive and now outside the crashing, burning airplane, both men were safely tethered to their parachutes. Remarkably, neither of the men was hit by the burning debris falling through the air. Both men made successful water landings. But, as Slater recalls, an unforeseen tragedy occurred. "Our rescue boat located Bill Park, who was fine. But by the time the boat got to Ray Torick, he was tied up in his lanyard and had drowned."

Kelly Johnson was devastated. "[He impulsively and emotionally decided](#) to cancel the entire program and give back the development funding to the Air Force and the Agency," Johnson's deputy Ben Rich recalled in his 1994 memoir about the Lockheed Skunk Works. Rich asked Johnson why. "I will not risk any more test pilots or Blackbirds. I don't have either to spare," Johnson said. But the Air Force did not let the Mach 3 drone program go away so quickly. They created a new program to launch the drone from underneath a B-52 bomber, which was part of Strategic Air Command. President Johnson's deputy secretary of defense, Cyrus Vance, told Kelly Johnson, "We need this program to work because our government will [never again allow a Francis Gary Powers situation](#) develop. All our overflights over denied territory will either be with satellites or drones."

Three years later, in 1969, the D-21 drone finally made its first reconnaissance mission, over China, launched off a B-52. The drone flew into China and over the Lop Nur nuclear facility but had then somehow strayed off course into Soviet Siberia, run out of fuel, and crashed. The suggestion was that the drone's guidance system had failed on the way home, and it was never seen or heard from again. At least, not for more than twenty years. In the early 1990s, a CIA officer showed up in Ben Rich's office at Skunk Works with a mysterious present for him. "[Ben, do you recognize this?](#)" the man asked Rich as he handed him a hunk of titanium. "Sure I do," Rich said. What Ben Rich was holding in his hand was a piece of composite material loaded with the radar-absorbing coating that Lovick and his team had first developed for Lockheed four decades before. Asked where he got it, the CIA officer explained that it had been a gift to the CIA from a KGB agent in Moscow. The agent had gotten it from a shepherd in Siberia, who'd found it in the Siberian tundra while herding his sheep. According to Rich, "The Russians mistakenly believed that this generation-old panel signified our current stealth technology. It was, in a way, a very nice tribute to our work on Tagboard."

The use of drones in warfare has its origins in World War II. Joseph Kennedy Jr., President Kennedy's older brother, died in a secret U.S. Navy drone operation against the Germans. The covert mission, [dubbed Operation Aphrodite](#), targeted a highly fortified Nazi missile site inside Germany. The plan was for the older Kennedy to pilot a modified B-24 bomber from England and over the English Channel while his crew armed 22,000 pounds of explosives piled high in the cargo hold. Once the explosives were wired, the crew and pilot needed to quickly bail out. Flying not far away, a mother ship would begin

remotely controlling the unmanned aircraft as soon as the crew bailed out. Inside the bomber's nose cone were two cameras that would help guide the drone into its Nazi target.

The explosive being used was called Torpex, a relatively new and extremely volatile chemical compound. Just moments before Joseph Kennedy Jr. and his crew bailed out, the Torpex caught fire, and the aircraft exploded midair, killing everyone on board. The Navy ended its drone program, but the idea of a pilotless aircraft caught the eye of general of the Army Henry "Hap" Arnold. On Victory over Japan Day, General Arnold made a bold assertion. "The next war may be fought by airplanes with no men in them at all," he said. He was off by four wars, but otherwise he was right.

The idea behind using remotely piloted vehicles in warfare is a simple one—keep the human out of harm's way—but the drone's first application was for pleasure. Nikola Tesla mastered wireless communication in 1893, years before any of his fellow scientists were even considering such a thing. At the Electrical Exhibition in Madison Square Garden in 1898, Tesla gave a demonstration in which he directed a four-foot-long steel boat using radio remote control. Audiences were flabbergasted. [Tesla's pilotless boat](#) seemed to many to be more a magic act than the scientific breakthrough it was. Ever a visionary, Tesla also foresaw a military application for his invention. "I called an official in Washington with a view of offering him the information to the government and he burst out laughing upon telling him what I had accomplished," Tesla wrote. This made unfortunate sense—the military was still using horses for transport at the time. Tesla's friend writer Mark Twain also envisioned a military future in remote control and offered to act as Tesla's agent in peddling the "destructive terror which you have been inventing." Twain suggested the Germans might be good clients, considering that, at the time, they were the most scientifically advanced country in the world. In the end, no government bought Tesla's invention or paid for his patents. The great inventor died penniless in a New York hotel room in 1943, and by then, the Germans had developed remote control on their own and were wreaking havoc on ground forces across Europe. The Germans' first war robot was a remote-controlled minitank called Goliath, and it was about the size of a bobsled. [Goliath carried 132 pounds of explosives](#), which the Nazis drove into enemy bunkers and tanks using remote control. Eight thousand Goliaths were built and used in battle by the Germans, mostly on the Eastern Front, where Russian soldiers outnumbered German soldiers nearly three to one. With no soldiers to spare, the Germans needed to keep the ones they had out of harm's way.

In America, the Army Air Forces developed its first official drone wing after the war, for use during Operation Crossroads at Bikini Atoll in 1946. There, drones were sent through the mushroom cloud, their operators flying them by remote control from an airborne [mother ship called Marmalade](#) flying nearby. To collect radioactive samples, the drones had been equipped with air-collection bags and boxlike filter-paper holders. Controlling the drones in such conditions was difficult. Inside the mushroom cloud, one drone, code-named [Fox was blasted "sixty feet higher](#) than its flight path," according to declassified memos about the drone wing's performance there. Fox's "bomb doors warped, all the cushions inside the aircraft burst and its inspection plates and escape hatch blew off." Remarkably, the

drone pilot maintained control from several miles away. Had he witnessed such a thing, Nikola Tesla might have smiled.

During the second set of atomic tests, called [Operation Sandstone](#), in April of 1948, the drones were again used in a job deemed too dangerous for airmen. During an eighteen-kiloton atomic blast called Zebra, however, a manned aircraft accidentally flew through a mushroom cloud, and after this, the Air Force made the decision that because the pilot and crew inside the aircraft had "suffered no ill effects," pilots should be flying atomic-sampling missions, not drones. Whether or not pilots were exposed to lethal amounts of radiation during the Zebra bomb or hundreds of other atomic tests has never been accurately determined. The majority of the records regarding how much radiation pilots were exposed to in these early years and who died of radiation-related diseases have allegedly been destroyed or lost. But when the Air Force pilot [accidentally flew through the Zebra bomb's mushroom cloud](#), the incident "commenced a chain of events that resulted in manned samplers."

"Manned samplers were simply more efficient," wrote officer Colonel Paul H. Fackler in a 1963 classified historical review of atomic cloud sampling made for the Air Force systems command, declassified in 1986. As the official radiation safety officer assigned to Operation Sandstone, Fackler held sway. Fackler's colleague Colonel Cody also argued in favor of man over drone. Cody said the drone samples were obtained haphazardly by "potluck." A human pilot would be able to maneuver around a cloud during penetration so that the "most likely parts of the cloud could be sampled." It was a case of dangerous semantics; *most likely* was a euphemism for "most radioactive." For future tests, Air Force officials decided to pursue both manned and unmanned atomic-sampling wings.

Both kinds of aircraft would be needed for an ultrasecret test that was pending in the Pacific in 1951. Operation Greenhouse would involve a new kind of nuclear weapon that was being hailed as the "Super bomb." It was a thermonuclear weapon, or hydrogen bomb, the core of which would explode with the same energy found at the center of the sun. Los Alamos scientists explained to weapons planners that the destructive power of this new kind of science, called nuclear fusion, was entirely unknown. Fusion involves exploding a nuclear bomb inside a nuclear bomb, and privately the scientists expressed [fear that the entire world's atmosphere could catch on fire](#) during this process. Scientists became deeply divided over the issue and whether or not to go forward. The push to create the Super was spearheaded by the indomitable Dr. Edward Teller and cosigned by weapons planners with the Department of Defense. The opposition to the Super was spearheaded by Robert Oppenheimer, the father of the atomic bomb and now Teller's rival. Oppenheimer, who felt that developing a weapon capable of ending civilization was immoral, would lose his security clearance over his opposition to the Super bomb. According to Al O'Donnell, the EG&G weapons test engineer who wired many of Dr. Teller's Super bombs in the Marshall Islands, [what happened to Oppenheimer sent a strong message](#) to everyone involved: "If you want to keep your job, don't oppose decisions" on moral grounds. In the end, the weapons planners won, and the world's first thermonuclear bomb moved forward as planned.

Drones were needed to take blast and gust measurements inside the thermonuclear clouds, and to take samples of radioactive debris inside. During the Greenhouse test series, which did not wind up setting the world on fire, the first drone in went out of control and crashed into the sea before it ever reached the stem of the mushroom cloud. Two other drone missions were aborted after not responding to controls, and a fourth sustained such heavy damage in the shock wave, it lost control and [crash-landed on a deserted island called Bogallua](#), where it caught fire and exploded. When the test series was over, the Air Force ultimately concluded that the unmanned samplers were unreliable. "Following Operation Greenhouse, the Air Force and the Atomic Energy Commission looked more favorably upon manned samplers," wrote a Defense Nuclear Agency historian in 1963. "Greenhouse became the last atomic test series during which drone aircraft were used for this purpose." So when it came time to detonate the world's first full-scale thermonuclear device—an unimaginably monstrous 10.4 megaton bomb code-named Mike—in the next test series, called Operation Ivy in the fall of 1952, it was decided that six human pilots, all volunteers, would fly straight into the center of the radioactive stem and mushroom cloud. Another group of pilots was assigned to fly along the outer edges of the predicted fallout zones. [That group included Hervey Stockman](#), who, four years later, would become the first CIA pilot to fly over the Soviet Union in a U-2.

In anticipation of the Mike bomb's manned sampling mission, the pilots practiced at the airfield at Indian Springs, thirty miles due south of Area 51. These pilots, including [Stockman, then flew sampling missions](#) through the kiloton-size atomic bombs being exploded at the Nevada Test Site as part of a spring 1952 test series called Operation Tumbler-Snapper. "Up to this time," Stockman explains, "the [scientists had put monkeys in the cockpits](#) of remotely controlled drone aircraft [at the test site]. They would fly these things through the [atomic] clouds. Then they began to be interested in the effects of radiation on humanoids. They realized that with care and cunning they could put people in there."

The Air Force worked hard to change the pilots' perception of themselves as guinea pigs, at least for the historical record. According to a history of the atomic cloud sampling program, declassified in 1985, by the time Stockman and his fellow pilots left Indian Springs for the Marshall Islands to fly missions through megaton-size thermonuclear bomb clouds, the men accepted that they "were doing something useful...[not serving as guinea pigs](#) as they seriously believed when first called upon to do the sampling."

Stockman offers another perspective. "[In those days](#), I didn't think much about the moral questions. I was young. The visual picture when these things go off is absolutely stunning. I was very much in awe of it," Stockman recalls. "The [atomic bombs] that were going on in the proving grounds in Nevada were minute in comparison to these [thermonuclear bomb] monsters out there in the Pacific. Those were big brutes. When they went off they would punch right through the Earth's atmosphere and head out into space."

After finally arriving in the Pacific, pilots flew "familiarization flights and rehearsals" in the days leading up to the Mike bomb. But nothing could prepare an airman for the actual test. Stockman's colleague Air Force pilot [Jimmy P. Robinson was one of the six pilots](#) who "volunteered" to fly through the Ivy Mike mushroom cloud. Because the physical bomb

was the size of a large airplane hangar, it couldn't be called a weapon per se. The bomb was so large that it was built from the ground up, on an island on the north side of the atoll called Elugelab. Given the extraordinary magnitude of the thermonuclear bomb, it is utterly remarkable to consider that shortly after Robinson flew his F-84G straight through its mushroom stem, he was able to radio back clear thoughts to his commanding officer, who was located twenty-five miles to the south, on Eniwetok. "The glow was red, like the inside of a red hot furnace," the record states Robinson said. He then described how his radio instrument meters were spinning around in circles, "like the sweep second hand on a watch." After going inside the cloud a second time, Robinson reported that his "airplane stalled out and gone [sic] into a spin." His autopilot disengaged and his radio cut out, but the courageous pilot flew on as instructed. He flew around in circles and finally he flew back into and out of the mushroom stem and the lower part of its cloud—for nearly four more hours. Only when it was time for Robinson to refuel did he realize that the electromagnetic pulse from the thermonuclear bomb had ruined his control beacon. This meant that it was impossible for him to locate the fuel tanker.

Robinson radioed the control tower on Eniwetok for help. He was told to head back to the island immediately. "Approximately ninety-six miles north of the island, [Robinson] reported that he'd picked up a signal on Eniwetok," according to the official record, declassified in 1986 but with Robinson's name redacted. At that point, he was down to six hundred pounds of fuel. Bad weather kicked in; "rain squalls obstructed his views." Robinson's fuel gauge registered empty and then his engine flamed out. "When he was at 10,000 feet, Eniwetok tower thought he would make the runway, he had the island in sight," wrote an Air Force investigator assigned to the case. But he couldn't glide in because his aircraft was lined with lead to shield him from radiation. At five thousand feet and falling fast, Robinson reported he wasn't going to make it and that he would have to bail out. Now Robinson faced the ultimate challenge. [Atomic-sampling pilots wore lead-lined vests](#). How to land safely and get out fast? Fewer than three and a half miles from the tarmac at Eniwetok, at an altitude of between five hundred and eight hundred feet, Robinson's aircraft flipped over and crashed into the sea. "Approximately one minute later [a] helicopter was over the spot," the Air Force investigator wrote. But it was too late. All the helicopter pilot could find was "an oil slick, one glove, and several maps." Robinson's body and his airplane sank to the bottom of the sea like a stone. His body was never recovered, and his family would learn of his fate only in 2008, after repeated Freedom of Information Act requests were finally granted by the Air Force.

Back on Elugelab Island, the dust was settling after the airplane-hangar-size Mike bomb had exploded with an unfathomable yield of 10.4 megatons—nearly twice that of its predicted size. Elugelab was not an island anymore. The thermonuclear bomb had vaporized the entire landmass, sending eighty million tons of pulverized coral into the upper atmosphere to float around and rain down. One man observing the bomb with high-density goggles was EG&G weapons test engineer Al O'Donnell. He'd wired, armed, and fired the Ivy bomb from the control room on the USS *Estes*, which was parked forty miles out at sea. O'Donnell says that watching the Mike bomb explode was a terrifying experience. ["It was one of the ones that was too big."](#) says the man who colleagues called

the Triggerman for having wired 186 nuclear bombs. The nuclear fireball of the Ivy Mike bomb was three miles wide. [In contrast, the bomb dropped on Hiroshima](#) had a fireball that was a tenth of a mile wide. When the manned airplanes flew over ground zero after the Ivy Mike bomb went off, they were horrified to see the island was gone. Satellite photographs in 2011 show a black crater filled with lagoon water where the island of Elugelab once existed.

Drama in the Desert

Before he became president of the United States, Lyndon Baines Johnson liked to ride through rural Texas in his convertible Lincoln Continental with the top down. According to his biographer Randall B. Woods, Johnson also liked to keep a loaded shotgun in the seat next to him, which allowed him to pull over and shoot deer easily. On the night of October 4, 1957, the then senator was entertaining a group of fellow hunting enthusiasts at his rural retreat, in the dining room of his forty-foot-tall, glass-enclosed, [air-conditioned hunting blind](#) that Johnson called his "deer tower." All around the edge of the lair were powerful spotlights that could be turned on with the flip of a switch, blinding unsuspecting deer that had come to graze and making it easier to kill them.

It was an important night for Johnson, one that would set the rest of his life on a certain path. October 4, 1957, was the night the Russians launched Sputnik, and the senator began an exuberant anti-Communist crusade. That very night, once the guests had gone home and the staff of black waiters had cleaned up, Johnson retired to his bedroom with newfound conviction. "[I'll be damned](#) if I sleep by the light of a Red Moon," he told his wife, Lady Bird.

At the time, Lyndon Johnson was not just any senator. He was the Democratic majority leader, which made him the most powerful legislator in the United States. Within hours of Sputnik's launch, Johnson seized on the Red Moon moment for political gain. The Russians were a threat to America's existence, he declared: "[Soon they will be dropping](#) bombs on us from space like kids dropping rocks onto cars from Freeway overpasses."

For many Americans, Johnson's reaction was easier to comprehend than President Eisenhower's seemingly muted response. Before he was president, Eisenhower had spent his career as a soldier. He was a five-star general. As former commander of the Allied Forces in Europe during World War II, Eisenhower had faced many a deadly threat. He had led the invasion at Normandy and commanded the Allied Forces in the last great German offensive, the Battle of the Bulge, which meant he and his men shot at a lot more than blinded deer. In October of 1957, he believed that the 184-pound Russian satellite called Sputnik was [not a cause for panic](#) or alarm.

The nation felt quite different. The public consensus was that Sputnik gave reason for serious concern. The orb was seen as ominous and foreboding, a visual portent of more bad things to come from the skies, with 4 percent of Americans claiming to have seen Sputnik with their own eyes. In reality, explained historian Matthew Brzezinski, "[What most actually saw](#) was the one-hundred-foot-long R-7 rocket casing that [Sputnik's designer Sergei] Korolev had craftily outfitted with reflective prisms. It trailed some 600 miles behind the twenty-two-inch satellite," which in reality could only be seen by a person using

a high-powered optical device. Motivated by the public's alarm, Senator Lyndon Johnson provided a foil to Eisenhower's nonconfrontation, demanding a "full and exhaustive inquiry" from Congress to learn how the Russians had beaten the Americans into space. In doing so, Johnson cemented his persona as being tough on Communists. In turn, this made him an inadvertent advocate for missile defense and the military-industrial complex. Ultimately, it forced him to be a proponent for the Vietnam War.

Now, six years and one month after Sputnik, Lyndon Johnson was president. Seven days after Kennedy was shot dead, [Johnson sat in the Oval Office with CIA director](#) John McCone being briefed on Oxcart and Area 51. Johnson loved the idea of the Agency's secret spy plane, but not for the reasons anyone expected. Johnson seized on one detail in particular: the aircraft's speed. At the time, the world was under the impression that the Russians held the record for airspeed, which was 1,665 miles per hour. When Johnson learned the men at Area 51 had repeatedly beaten that record, he wanted to make that fact publicly known. What better way to begin a presidency than by one-upping the Russians?

In reality, outing the most expensive secret spy plane program ever undertaken in order to win a competition with the Russians did not make the best national security sense. Surfacing Oxcart would compromise the Agency's technological pole position in the overhead espionage field. Oxcart was singularly capable of flying "any place in the world," McCone explained. It was almost "invisible" to Soviet radar, with a "radar cross section in the order of 1/1000 of [a] normal aircraft." If McCone had had a crystal ball, he could have told the president that the Oxcart was so far ahead of its time, [it would hold aviation records](#) for sustained height and speed through the end of the century. Also in the room were Secretary of Defense Robert McNamara, Secretary of State Dean Rusk, and national security adviser McGeorge Bundy, the administration's most powerful trio. Conveniently for the Pentagon, all three men agreed with President Johnson that [outing the Oxcart was a terrific idea](#).

The reason for the trio's desire for transparency was that the Air Force had clear designs on cutting the CIA loose from the business of spy planes once and for all. Outing a program made the need for cover obsolete. Before Kennedy's assassination, the Air Force high command had been writing secret proposals arguing for ways in which [they could take over Oxcart](#). Four months earlier, Air Force commander General Schriever wrote a memo to Eugene Zuckert, secretary of the Air Force, suggesting that "an incident during the flight test program could force a disclosure." The CIA had gotten lucky with Ken Collins's Oxcart crash, General Schriever said, but if another one of the Agency's secret spy planes were to crash "it would be extremely difficult to avoid some public release." The subtext being that maybe there was a way that the Air Force could help facilitate this public disclosure. There was a final option, one that involved getting "the President on board." A few weeks before Kennedy's death, the Air Force had gone to him with a proposal to make Oxcart public; Kennedy had said to sit tight. Now it appeared that President Johnson was going to be much easier to manipulate.

To counter Air Force demands [McCone tried a different approach](#), one that involved money. He told the president that more than half of Oxcart's budget had already been

spent producing fifteen airplanes. To expose Oxcart now was a terrible idea, McCone said, not just in terms of national security but because it would be a colossal waste of money. Johnson agreed. But the president still wanted to one-up the Russians, so he settled on a slightly different plan. Through a veil of half-truths, he would out the Air Force's attack version of the Oxcart, the YF-12, as the speed-breaker. The YF-12 would be given a false cover, [the fictitious name A-11](#). Respecting McCone's national security concerns, the actual A-12 Oxcart program—its true speed, operational ceiling, and near invisibility to radar—would remain classified top secret until the CIA declassified the Oxcart program, in 2007.

Three months later, on February 29, 1964, Johnson held a press conference in the International Treaty Room at the State Department. "[The world record for aircraft speed](#), currently held by the Soviets, has been repeatedly broken in secrecy by the... A-11," President Johnson declared from the podium, thrilled to give the Russians a poke in the ribs. At Area 51, caught off guard by the requirement to do a presidential dog-and-pony show, the 1129th Special Activities Squadron scrambled to get an airplane to Edwards Air Force Base in California for a press junket, which was called for immediately after the president's grand announcement. Two YF-12s belonging to the Air Force but being tested at Area 51 were quickly flown in from Groom Lake and driven into a special hangar at Edwards. The airplanes' titanium surfaces were so hot they set off the hangar's sprinkler system, which mistook the high-temperature metal for a fire. When the press junket began, [the aircraft were still dripping wet](#). Never mind; no one noticed. Like the president, the reporters were enamored by the notion of Mach 3 speed. Of much more significance was what the event meant to the CIA. The rivalry between the Agency and the Air Force for control over Oxcart was hotter than ever.

With the two departments' gloves off, the fate of Oxcart now hung precariously in the balance. Secretary of Defense Robert McNamara snidely told CIA director John McCone that he doubted the Oxcart would ever be used. If it was used, McNamara said, it would "probably have to be done [without the specific knowledge of the President](#)," alluding to the Gary Powers shoot-down. Never again could a president be linked to a CIA aerial espionage mission. John McCone shot back that he had "every intention of using Oxcart and had so advised the President." McNamara may have won the battle by getting President Johnson to surface part of the Oxcart program, but McCone was letting him know on behalf of the Agency that the Pentagon hadn't yet won the war.

A second Air Force–Agency debate that involved the fate of the Oxcart, which in turn involved the fate of Area 51, centered on improvements in satellite and drone technology. McNamara told McCone that these two platforms would eventually eliminate the need for the Agency's expensive, cumbersome Oxcart program. And yet both men knew that for the time being, Oxcart could deliver what satellites could not, and on two separate but equally important counts. In the six years since Sputnik, satellites had advanced to the degree that their spy images were good, though not great. But satellites had an inherent limitation in the world of espionage: they worked on fixed schedules. This would forever negate any element of surprise. The average satellite took ninety minutes to circle the world, and overflight schedules were easily determined by analysts at NORAD. The ironically named

Oxcart was an attack espionage vehicle: quick and versatile, nimble and shrewd, with overpasses that would be totally unpredictable to any enemy. But most of all, in terms of clear photographic intelligence, nothing could compete with what Oxcart was about to be able to deliver to the president: two-and-a-half-foot blocks of detail made clear by film frames shot from seventeen miles up.

While McNamara and McCone fought, a presidential election loomed for Johnson. Nikita Khrushchev, ever the antagonist, decided to make things difficult for the saber-rattling Texan. During the campaign summer of 1964, the increasingly bellicose Khrushchev declared that any U-2s flying over Cuba would be shot down. The CIA saw the threat by the Soviet dictator as an opportunity to let Oxcart show its stuff, and McCone pushed President Johnson for an official mission. Finally, the president [approved the Oxcart for Operation Skylark](#), a plan to fly missions over Cuba if Khrushchev showed signs of putting missiles in Cuba again. Skylark provided a terrific opportunity for the CIA to flex its overhead muscle and gain an edge on the Air Force. The only problem was that out at Area 51, the Oxcart wasn't quite ready.

Kenneth Collins sat in the cockpit of the world's fastest aircraft as it climbed through sixty thousand feet. On this particular flight, navigators had him flying north to the border of Canada, where he was to turn around and head back. Flight-testing the Oxcart was the best job in the world, [according to Ken Collins](#). Most jobs came with a daily routine, and for Collins each day of work at Area 51 meant another performance field to tackle—anything but routine.

For months, the pilots had been testing the hydraulics, navigation system, and flight controls on the aircraft. After each flight, the data from flight recorders was analyzed by a team of Lockheed engineers. Changes were made daily at Groom Lake. The wiring continued to be problematic until replacement materials that could withstand 800 degrees were finally located. Another problem that took forever to solve involved the buildup of the liquid chemical triethylborane (TEB) that had been preventing the engine afterburners from starting. Finally, that too was solved. But one dangerous problem remained, and that was the dreaded un-starts.

Moving through seventy-five thousand feet now, Collins watched the gauges in front of him. It was -70 degrees Fahrenheit outside with exhaust gas coming out of both engines at 3,400 degrees Fahrenheit. Each one of a pair of [specially designed J-58 turbojet engines](#) behind him generated as much power as all four of the turbines on the 81,000-ton ocean liner the *Queen Mary*. It was those insanely powerful engines that enabled the aircraft to fly so high and so fast. But the *Queen Mary* carried more than three thousand people; the Oxcart just one. Collins counted on those engines. If anything went wrong with either of them it could mean catastrophe. Carefully, he moved the aircraft through the dangerous window between Mach 2.5 and Mach 2.8, which translates to something around 2,000 mph—as fast as a rifle bullet goes. Getting up to and through that speed asked more of the aircraft than anything else. It was also the place where an un-start was most likely to occur, and why Collins was counting on the aircraft engines to perform.

To the pilots, there was nothing scarier than an engine un-start. To the engineers, there was nothing to explain the cause of it. Flying at a certain pitch, one of the two J-58 engines

could inexplicably experience an airflow cutoff and go dead. At that speed, the inlets were swallowing ten thousand cubic feet of air each second. One engineer likened this to the equivalent of two million people inhaling at once; an un-start was like all those people suddenly cut short of air. During the ten seconds it took to correct the airflow problem—one engine dead, the other generating enough power to propel an ocean liner—a violent yawing would occur as the aircraft twisted on a vertical axis. This caused a pilot to get slammed across the cockpit while desperately trying to restart the dead engine. The fear was that the pilot could get knocked unconscious, which would mean the end of the pilot, and the end of the airplane.

As Collins moved through Mach 2.7, the Earth below him hurtled by at an astonishing rate of more than half a mile each second. The aircraft's preset flight path kept it away from urban centers, bridges, and dams for safety reasons, and from Indian burial grounds for political reasons. Once, a pilot flying over semirural West Virginia had to restart an engine at thirty thousand feet. The resulting sonic boom shattered a chimney inside a factory on the ground, and [two men working there were crushed to death](#). And if a pilot had to bail out, as Collins had in 1963, the aircraft needed significant amounts of remote land on which to crash. At 123,000 pounds, this airplane had about as much glide in it as a tire iron falling from the sky.

Collins pushed the aircraft through Mach 2.8. In another forty-five seconds he would be out of the danger zone. Nearing eighty-five thousand feet, the inevitable [tiny black dots began to appear](#) on the aircraft windshield, sporadic at first, like the first drops of summer rain. Only a few months earlier, scientists at Area 51 had been baffled by those black dots. They worried it was some kind of high-atmosphere corrosion until the mystery was solved in the lab. It turned out the black spots were dead bugs that were cycling around in the upper atmosphere, blasted into the jet stream by the world's two superpowers' rally of thermonuclear bombs. The bugs were killed in the bombs' blasts and sent aloft to ninety thousand feet in the ensuing mushroom clouds where they gained orbit.

Collins was just seconds away from Mach 3, which meant cruising altitude at last. If there was a brief moment where he might allow himself to relax, maybe even glance outside at the round Earth below and enjoy the cruise, that moment would come soon. But then the un-start happened. In a critical instant, the airplane banged and yawed so dramatically it was as if the airplane's tail were trying to catch its nose. Collins's body was flung forward in his harness. His plastic flight helmet crashed against the cockpit glass, denting the helmet and [nearly knocking him unconscious](#). As the airplane slid across the atmosphere, Collins steeled himself and restarted the engine. The aircraft's second engine kicked back into motion almost as quickly as it had stopped.

Things in the cockpit returned to normal. Inside his pressure suit, Collins felt his heart beating like a jackhammer in his chest. Fate really is a hunter, he thought. It lurks behind you in constant pursuit. When it will catch up to you and take you is anybody's guess.

Death didn't get him this time, and for that he was grateful. But somebody needed to fix this un-start problem, fast. With his feet firmly planted on the earth again, Collins discussed the issue of the un-starts with Bill Park during his debrief. Park was Lockheed's chief flight-test pilot and [he always sat patiently with the project pilots](#) after their flights,

listening intently about what went on during the flight and what needed work. No detail was too small. Park agreed with Collins; the un-start problem was major and had to be fixed before somebody died. Park was the liaison between the project pilots and Kelly Johnson, and Park was directed to Lockheed's thermodynamicist Ben Rich to get the un-start problem solved. Park had experienced his own share of un-starts, and giving Ben Rich an ultimatum was not something he had any problem with.

Rich's office was sparsely decorated with a few trophies and some plaques on the walls. There were papers everywhere, and pencils with the erasers gone. A hand-cranked calculator and a metal slide rule sat on Rich's desk. Park set his flight helmet down—it had its own crack, similar to Collins's—and pointed to it. "[Fix it,](#)" Park said. "And I mean the un-start problem, not my helmet. Time to suit up, Ben. Time for you to see how it feels." The pilots figured that the only way to get Ben Rich to understand just how unacceptable this un-start business was would be to have Rich experience the nightmare scenario himself, and there just happened to be a two-seater version of the Oxcart on base. The Air Force was currently testing its drone-carrying version of the Oxcart, the M-21/D-21, in the skies over Groom Lake, and the pilots had seen the two-seater going in and out of the hangar all week. Park told Ben Rich the time had come for him to take a Mach 3 ride.

In a burst of what he would later describe as "a crazy moment of weakness," Ben Rich agreed. Rich was a self-described Jewish nerd. Totally unathletic, he was a kid who never made the high school baseball team. Before joining Skunk Works, Ben Rich had only one claim to fame: being awarded a patent for designing a nickel-chromium heating system that prevented a pilot's penis from freezing to his urine elimination pipe. He was a design wizard, not an airplane cowboy. He'd never come close to flying supersonic before, and he had absolutely no desire to go that fast. But he was chief engineer for Skunk Works, so fixing the un-start problem was his job. "I'll do it," Ben Rich said.

Before Ben Rich could get into the world's fastest aircraft, he had to go through a battery of physical tests. You can't just climb into an aircraft that gets up to ninety thousand feet without being checked out in a pressure suit in an altitude chamber first. The flight surgeons on base prepped Rich for tests, the way they usually did pilots. Rich passed the physical and a few early stress tests but when he got to the pressure-chamber test—the one that simulated ejection at fifty thousand feet—things did not go as the engineer had planned. The moment the chamber door closed behind Ben Rich, he panicked. "I was sucking oxygen like a marathon runner and screaming, '[Get me out of here!](#)'" Rich later recalled. Without ever getting close to simulating what it was like to fly at Mach 3, let alone experiencing an un-start at that speed, Ben Rich admitted in his memoir that he had still nearly dropped dead from fright.

But the point was made. Rich dedicated all his efforts to fixing the un-start problem. Like so many engineering challenges facing the scientists at Area 51, fixing it involved great ingenuity. In this case, Rich and his team didn't exactly fix the problem. Instead, they created a go-around that made things not so life-threatening for the pilots. Rich invented an electronic control that made sure that when one engine experienced an un-start, the second engine dropped its power as well. The control switch would then restart both engines at the same time. After the new fix, pilots were notified of the un-start by a loud

buzzing noise in the cockpit. And as far as nearly getting knocked unconscious at 2,000 miles per hour, Oxcart pilots could cross that off their lists of concerns.

In addition to the problems the pilots were having getting the airplane up to speed, there were problems with the electronic countermeasures, or ECMs. The reports being analyzed back at Langley said if Operation Skylark was to happen over Cuba, cruise speed would have to be at a minimum Mach 2.8, because there was a real chance that the Soviet radar systems in Cuba would be able to detect Oxcart flights and possibly even shoot them down. While Project Palladium officers continue to work on jamming methods, the Office of Special Activities at the Pentagon decided that the solution lay in working to enhance stealth. The phenomenally low radar cross section on the Oxcart had to be lowered even further. This meant that Lockheed physicist Edward Lovick and the radar cross-section team were summoned back to Area 51.

In a hangar not far from the radar range, Edward Lovick got to work on a one-eighth-scale model of the Oxcart. In what became known as [Project Kempster-Lacroix](#), Lovick designed a system straight out of Star Trek or James Bond. "Two giant electron guns were to be mounted on either side of the aircraft," Lovick recalls. Remarkably, the purpose of the guns would be "to shoot out a twenty-five-foot-wide ion cloud of highly charged particles in front of the plane as it flew over denied territory." That gaseous cloud, Lovick determined, would further absorb radar waves coming up from radar tracking stations on the ground.

Using the small-scale model, the scientists were able to prove the scheme worked, which meant it was time to build a full-scale mock-up of Kempster-Lacroix. Testing the system out on a full-size aircraft, the scientists discovered that the radiation emitted by the electron guns would be too dangerous for the pilots. So a separate team of engineers designed an X-ray shield that the pilots could wear over their pressure suits while flying an Oxcart outfitted with Kempster-Lacroix. When one of the pilots made a test run, he determined that the thickness of the shield was far too cumbersome to wear while trying to fly an airplane at Mach 3. Then, while Lovick was working on a solution, the Air Force changed its mind. The Oxcart's low observables were low enough, the Pentagon said. Project Kempster-Lacroix was abandoned.

It was ironic, to say the least. Not the flip-flopping by the Air Force but the concerns about radiation. By 1964, [the government had exploded 286 nuclear bombs](#) within shouting distance of Area 51. One year earlier, the United States and the Soviet Union had signed the Limited Test Ban Treaty prohibiting nuclear testing in the air, space, or sea. The initiative had been in the works for years but negotiations had repeatedly failed. Now that it was finally signed, testing had moved underground. Neither superpower trusted the other to honor the commitment for very long, and the number of tests per month actually accelerated after the treaty; the idea was to stay weapons-ready in the event one side broke the treaty. Between September 1961 and December 1964, a record-breaking 162 bombs were exploded at the Nevada Test Site inside underground tunnels and shafts. Nearly half of these explosions resulted in the "accidental release of radioactivity" into the atmosphere.

In addition to weapons tests, the nuclear laboratories were racing to find ways to use

nuclear bombs for “peaceful applications.” This included ideas like widening the Panama Canal or blowing up America’s natural geography to make room for future highways and homes. These proposed earthmoving projects fell under the rubric of Project Plowshares, a name chosen from a verse in the Old Testament, Micah 4:3:

And they shall beat their swords into plowshares and their spears into pruning hooks: nations shall not lift up sword against nation, neither shall they learn war anymore.

But that was just semantics. Test ban treaty or not, the Department of Defense had no intention of putting down its swords. The men were fully committed to the long haul that was the Cold War.

Finally satisfied with the radar cross section, the CIA decided to set up its own electronic countermeasures office at Area 51. In 1963, the first group consisted of two men from Sylvania, a company better known for making lightbulbs than for its top secret work for the CIA. [“The first jamming system was called Red Dog; later it became Blue Dog,”](#) explains Ken Swanson, the first official ECM officer at Area 51. The Red Dog system was designed to detect Russian surface-to-air missiles coming after Oxcart and then jam those missiles with an electronic pulse. The work was exciting when the airplanes were flying and there was actual data to collect, but if the Red Dog system failed and needed fixing, it meant a lot of waiting around.

These were the early days of electronic warfare, and there were not a lot of Red Dog spare parts lying around. As a result, Ken Swanson worked many long weekends at Area 51. Swanson says that sometimes he and his Sylvania colleague felt like they were the only ones on the base. One weekend the men took the Area 51 motor pool’s four-wheel-drive vehicle up to Bald Mountain, the tallest peak on the Groom Range, to have a look around. “We found a bunch of old Model Ts and had no idea what they were doing there,” Swanson recalls. Another time he went solo to investigate the old mines. “I was wearing tennis shoes and Bermuda shorts and I bumped into a bunch of rattlers sunning themselves. Next time I went back, I wore snake boots,” he says. During winter weekends, there were even fewer people at Area 51, and for entertainment, after a long day performing high-tech electronic-countermeasures work, Swanson would go joyriding around the dry lake bed. He’d borrow an Econoline van from the motor pool, take it out on the frozen tarmac, and do spins. “But I stopped after I had the van on two wheels once,” Swanson says.

With Red Dog, the CIA wanted to see how the Oxcart would show up on Soviet radar, and so, at the southern tip of Groom Lake, on EG&G Road, Sylvania built two ECM systems, one to simulate Russian SA-2 radar and a second to simulate the Fan Song surface-to-air missile system that was showing up in North Vietnam. The goal was to see what Oxcart looked like, or hopefully did not look like, on these radars. An equally important part of the radar testing system was the radar pole that had to be installed on the top of Bald Mountain. For that, the CIA recruited one of the best rescue helicopter

pilots in the country, Charlie Trapp.

"I was minding my own business in South Carolina," Trapp recalls, "when these guys from the Air Force called me up and asked if I want to come fly a two-airplane helo unit in Nevada, one hundred miles from the nearest town. They said it was important and that I'd have to be able to hover and land at nine thousand feet." [Trapp thought it sounded interesting](#) as well as challenging and he signed on. "We flew in from Nellis in the H-43 [helicopter] and before we even landed at Area 51, they said, 'Let's go see how you land on top of the mountain first,' that's how important the mountain project was to the beginning of my Area 51 assignment." For months, Trapp hauled cement in thousand-pound buckets from the Area 51 operations center up to the top of Bald Mountain. "I'd hover over the top and lower the equipment down," Trapp explains. "There were high winds and serious dust storms." Finally, Trapp helicoptered in the one-hundred-foot-long radar pole, which a team of workers cemented into place. Mission accomplished. "We did such a good job, the CIA gave us air medals," Trapp says. On his way back down to Area 51 in the helicopter, Trapp would fly around the different mountain peaks. "Once, I came across an old graveyard. In a helicopter you can hover and look. The graves were made of piles of rocks. I remember two of them were really small. They must have been kids' graves." The mountain had a psychological pull with many of the men at Area 51 during the Oxcart years. It was also the only place the men were allowed to go that was technically "off base."

Down on the tarmac, every time an A-12 Oxcart took off, it was Trapp's job to hang out airborne, two hundred feet above the runway and off to one side, "in case the aircraft crashed," Trapp explains. "My helicopter contained firefighting equipment, and I always had two PJs with me, para-rescue jumpers, [who perform] like a Navy SEAL. It was a lot of work having us airborne and I told the boss, Colonel Holbury, that I could be airborne in less than two minutes' time. So the policy changed." Instead, Trapp was on standby in the event of an accident, "which meant I got to drive the only golf cart around the Area 51 base." The golf cart came in handy at night. "We played a lot of poker in the House-Six bar," Trapp explains. "The loser had to do the late-night cheeseburger run over to the mess hall. With the golf cart, you could get there and back in five minutes."

For all the technology that was around at Area 51, entertainment was decidedly old-school. "We did a lot of arm wrestling," Trapp says. "Some guys played racquetball and other guys played three-hole golf." When Trapp gained ten pounds eating so many late-night cheeseburgers, he was ordered to lose the weight or risk losing his job. To assist in the effort, Colonel Holbury challenged Trapp to weekly rounds of squash. Once, someone brought a sailboard out to Area 51, and the pilots pulled rank and got the men in the machine shop to affix wheels to the bottom of the board. "We took the thing out to Groom Lake when the wind was blowing really hard," Trapp recalls. "It didn't go that fast but we didn't care."

Of all the pastimes, the unanimous favorite was flying model airplanes using remote control. "We had two areas for flying model planes," Trapp recalls. "Out on the grass by the golf course, and on the tarmac out on the dry lake. Sometimes the airplanes would go so far and so high they'd get lost. A guy would come up to me and say, 'Hey, Charlie, when

you're out in the helicopter, can you keep your eye out for my model plane? It's got a five-foot wing span and yellow wings.' We found ways to entertain ourselves at Area 51. We had to; there weren't any girls."

The man who took the model airplane flying most seriously was Frank Murray. He was also the chase pilot with the most flying time during Project Oxcart. "You could always find Frank sitting in his room gluing model airplanes together," Colonel Slater recalls. "That was his idea of fun. Or maybe he was the only guy at 51 who wasn't half-drunk at eleven o'clock at night." Which is how Murray accumulated the most flying time. "If somebody's kid got hurt in the middle of the night, which happened more than you think, and I need a pilot to get someone off base fast, I'd round up Frank," Colonel Slater explains. When master fuels sergeant Harry Martin's grandfather died, it was Frank Murray who flew him back east so he could get to the funeral in time. "Frank was always willing to do the job," Colonel Slater explains. "Most people require time off from flying. Not Frank."

Murray flew model airplanes to keep his head clear for flying real airplanes. "Everyone had their different thing," Colonel Slater says. "Bud Wheelon from CIA used to want to play tennis at midnight when he was on base. Some liked to go hunting up in the mountains by the old Sheehan mine. Holbury used to like to make the guard dogs run. Some guys threw rocks at rattlesnakes. I liked to drive around in the jeep and find petrified wood."

As an Oxcart chase pilot, Murray spent his days and nights chasing the Mach 3 airplane in the F-101. The Voodoo was a two-seat, supersonic jet fighter the Air Force used to accompany the Oxcart on takeoffs and landings. "We flew it with Oxcart up through the special operating area, or Yuletide, which was the airspace just north of the base," Murray explains. "The Agency had us fly alongside the Oxcart in the Voodoo until we couldn't keep up with the Oxcart anymore." Flying chase meant Murray got assigned most of the grunt work and enjoyed little of the glamour. "I was a little jealous of the Oxcart pilots," he admits. "How can a pilot not be? But I was happy as a pig in the Voodoo. For a farm boy from San Diego, flying chase for the 1129th was a good time."

Murray flew the F-101 doing just about everything that needed to be done in support of Oxcart operations. This included flying against the Red Dog simulators, observing tanker refuels, overseeing takeoffs and landings, and flying Lockheed photographers around on CIA photo shoots. But Murray's path in life took a significant redirection when [General Ledford, the head of the Office of Special Activities](#) at the Pentagon, decided he wanted to learn how to fly the F-101 while he was overseeing activities at Area 51. Murray recalls: "The general had been a bomber pilot in World War Two but he hadn't ever flown anything as fast as the Voodoo could go, which was around twelve hundred or thirteen hundred miles per hour. So he decided that he wanted to learn how to fly it and when it came to choosing an IP, an instructor pilot, the general chose me."

Murray now had to teach a legendary war hero, someone who also happened to be the highest-ranking military officer on the Oxcart program, how to fly supersonic. It might have been a daunting task. Except that [it was not in Frank Murray's character](#) to be apprehensive. To Murray, it sounded like fun. "Out at the Ranch we had eight 101s that ran chase and one of them was a two-holer, with two cockpits and two sticks. 'Come on, Frankie,' the general said. He got in the back and up we went."

General Ledford began to spend more and more time at the Ranch, where, in addition to the serious work being done, operations had taken on a boys' club atmosphere. After a day of intense flying, nights were spent eating, socializing, and having drinks. "Sometimes, on the late side of things after dinner, Ledford would get a hair in his hat that he wanted to get back to Washington to see his wife, Polly," Murray says. "He'd slap me on the back. That was my cue to take him home." Home, in Washington, DC, was 2,500 miles away, and with supersonic aircraft at one's disposal, this could actually happen this late at night. "Ledford was my student but he was also the general so on these trips home, I started letting him sit in the front of the plane; I'd sit in back. Well, all those hours flying back and forth from Area 51 to Washington, that cemented it. He was my boss but he also became my friend." Ledford had other friends as well, several in high places at the Air Force, which made getting back to the East Coast from Nevada in the middle of the night a relatively easier trip. "Ledford had a buddy who was still in SAC, an air division commander at Blytheville Air Force Base in northeast Arkansas, just about halfway between 51 and Washington. Ledford would radio him when we were up in the air approaching the next state over and he'd say, 'Have you got a tanker in the area?' If he did or didn't you could bet your fifty there'd be a tanker lining up next to you somewhere over Arkansas," Murray says. What this meant was that when Murray and the general were traveling from Area 51 to the East Coast late at night, they never even had to stop for gas.

After a little more than two hours in the air, the men would land at Andrews Air Force Base and taxi up to the generals' quarters—similar to a luxury hotel suite on the base—and enjoy a postflight scotch. "Ledford had a fancy setup on base quarters that had a fully equipped bar," Murray explains. "We'd have a pop and chat a little before his wife, Polly, arrived to pick him up and take him home. I'd spend the night in the generals' quarters. Get some sleep and in the morning head home to 51."

It was an exciting time for Frank Murray. He couldn't have imagined living this life. Only a few years earlier, he'd been flying Voodoos at Otis Air Force Base as part of the Air Defense Command when he had seen an interesting sign tacked on a bulletin board that read *NASA is looking for F-101 chase pilots*. He thought working for NASA sounded like fun. He had no idea that was just a cover story and that the Air Force, not NASA, was really looking for chase pilots for the Oxcart program at Area 51. Murray applied and got in. He moved the family to Nevada and swore an oath not to tell anyone what he did, not even Stella, his wife. But he knew his family would be super proud of him. For a farm boy from San Diego, he was at the top of his game.

While Project Oxcart worked to get mission-ready, back in Washington the widening of the conflict in Vietnam by the Communists in the north was becoming a nightmare for President Johnson. He had won the favor of the people back in 1957 by declaring Communism to be the world's greatest threat. In comparison to the thermonuclear-armed Soviet Union, Vietnam was to Johnson a sideshow. But it was also a piece in the widely held domino theory: if Vietnam fell to Communism, the whole region would ultimately fall. President Johnson had inherited Vietnam from President Kennedy when it was a political crisis and not yet a war. That changed in the second summer Johnson held office, in August of 1964, with the Gulf of Tonkin. The Pentagon declared that the U.S. Navy had

suffered an unprovoked attack by North Vietnam against the USS *Maddox*, and the National Security Agency had evidence, McNamara said. This event allowed Johnson to push the Gulf of Tonkin resolution through Congress, which authorized war. ([In 2005 NSA released](#) a detailed confession admitting that its intelligence had been "deliberately skewed to support the notion that there had been an attack.") To avenge the USS *Maddox* attack, Johnson ordered air attacks against the North Vietnamese, sending Navy pilots on bombing missions over North Vietnam. When a number of U.S. pilots were shot down, the North Vietnamese took them as prisoners of war.

The war's escalation led Secretary of Defense [Robert McNamara to perform an about-face regarding Oxcart](#). The Agency's spy plane could be vitally useful after all, McNamara now said, certainly when it came to gathering intelligence in North Vietnam. The Agency knew the Russians had begun [supplying surface-to-air missile systems](#) to the Communists in North Vietnam, and now they were shooting down American boys. Both the Air Force and the Agency sent U-2s on reconnaissance missions, and these overflights revealed that missile sites were being [set up around Hanoi](#). But the Pentagon needed far more specific target information. In June, McNamara sat down with the CIA and began drawing up plans to get the Oxcart ready for its first mission at last.

The Ultimate Boys' Club

At Groom Lake throughout the 1960s, at least once a month and always before dawn, base personnel would be [shaken from their beds](#) by a violent explosion. When the rumbling first started happening, Ken Collins would leap from bed as a sensation that felt like a massive earthquake rolled by. A nuclear bomb was being exploded next door, underground, just a few miles west of Oxcart pilots' quarters. Next, the blast wave would hit Collins's Quonset hut and then roll on, heading across the Emigrant Mountain Range with a surreal and unnatural force that made the coyotes wail.

In the years that Collins had been test-flying the Oxcart at Area 51, the Department of Defense had been testing nuclear bombs with bravado. After a while, being awoken before dawn meant little to Collins, and he'd roll over and go back to sleep. But on this one particular morning something felt different. It was a banging he was hearing, not a boom. Collins opened his eyes. Someone was indeed banging on his Quonset hut door. Next came a loud voice that sounded a lot like Colonel Slater's. Collins leaped out of bed and opened his door. Colonel Slater had an unusual look of concern, and without explanation, he ordered Collins to get into his flight suit as fast as he could. This was a highly unusual request, Collins thought. It was definitely before dawn. Behind where Slater stood on the Quonset hut stoop, Collins could see it was still dark outside. For a brief moment, he feared the worst. Had America gone to war with the Soviets? What could possibly force an unplanned Oxcart mission flight? Rushing to put on his clothes, Collins heard Colonel Slater waking up the flight surgeon who lived in the apartment quarters next door.

Collins followed Slater in a run toward the hangar where the Oxcart lived. There he was quickly briefed on the situation: the Pentagon had called to say that a Russian reconnaissance balloon was flying across the United States, floating with the prevailing winds in a westerly direction. Collins was to find the Soviet balloon—fast. Normally, the flight surgeon would have spent two hours just getting Collins into his pressure suit. That morning Collins was suited up and sitting in the cockpit of the Oxcart in a little over thirty minutes. Up he went, blasting off the tarmac, north then east, on direct orders by the Pentagon to "hunt and find" the Soviet weather balloon visually and using radar.

Up in the air it dawned on Collins what a wild-goose chase he was on. What would a Russian reconnaissance balloon look like? What were the chances of making visual contact with such a thing? At speeds of more than 2,200 mph, he was traveling more than half a mile each second. Even if he saw the balloon, in just a fraction of a second it would be behind him. Even worse, what if he actually did get that close to the flying object? If the Oxcart hit anything while moving at Mach 3, the plane would break apart instantly and he'd be toast.

Flying somewhere over the middle of the continent, Collins briefly identified an object on radar about 350 miles away. As instructed, he flew around the object in the tightest circle he could perform at Mach 3, which meant his circle had a radius of about 400 miles. He never saw the balloon with his own eyes.

After Collins returned to base, engineers scrambled to read the information on the data recorder. [The incident has never been declassified](#). Admitting that the Soviets invaded U.S. airspace—whether in a craft or by balloon—is not something any U.S. official has ever done. Collins never asked any follow-up questions. That's how it was to be a pilot: [the less you knew, the better](#). He knew too many fellow pilots from Korea who had come home from POW camps missing fingernails—if they came home at all. Now, ten years later, pilots shot down over North Vietnam were experiencing the same kinds of torture, maybe worse. The less you knew, the better. That was the pilots' creed.

As deputy director of the CIA, Richard Helms was a huge fan of Oxcart. He worked closely on the program with Bud Wheelon, whose efforts earned him the title of first director of science and technology for the CIA. Now that Richard Bissell was gone, there were few men in the Agency as devoted to the Area 51 spy plane program as Wheelon and Helms. Whereas Wheelon saw his position at the CIA as a temporary one—he signed on for a four-year contract, fulfilled it, and left the CIA—Helms was a career Agency man. He'd worked closely with Bissell on the U-2 from its inception and he knew what important intelligence could come from overhead photographs. The United States learned more about the Soviets' weapons capabilities from its first U-2 overflight than it had in the previous ten years from its spies on the ground. Off McNamara's inquiry about possibly using the Oxcart on spy missions over North Vietnam, Helms made a personal trip out to Area 51 to sign off on Oxcart design specifications himself. Helms was also acutely aware of the Air Force's plans to push Oxcart out of the way in favor of their own reconnaissance spy plane, the SR-71 Blackbird. If Helms could get a mission for Oxcart, the chances of the CIA maintaining its supersonic espionage program greatly increased.

Almost everyone who visited Area 51 became enamored with the desert facility, and Helms was no exception. It was impossible not to be fascinated by the power and prestige the secret facility embodied. It was the quintessential boys' club, both exotic and elite. Most of all, it gave visitors the sense of being a million miles away from the hustle and bustle of Washington, DC. There were no cars to drive—instead, Agency shuttles moved men around the base. [No radio, almost no TV](#). As a visitor to Area 51, Helms was particularly careful not to step on any powerful Air Force toes. The base was, operations-wise, Air Force turf now. The CIA was in charge of missions, but there were no missions, which only underscored a growing sense of Agency impotence. The Air Force controlled most of the day-to-day operations on the base, including proficiency flights and air-to-air refuelings, which were practiced regularly so everyone in the 1129th Special Activities Squadron stayed in shape.

During his visit, Helms kept a relatively low profile, making sure to spend more of his time in the field—on the airstrip with the pilots and in the aircraft hangars with the engineers—than drinking White Horse Scotch with Air Force brass in the House-Six bar. During test flights, Helms liked to roll up his sleeves and stand on the tarmac when the

Oxcart took off. He likened the experience to standing on the epicenter of an 8.0 earthquake and described the great orange fireballs that spewed out of the Oxcart's engines as "hammers from hell." Helms, an upper-middle-class intellectual from Philadelphia, loved colorful language. He'd once told a room of military men that the Vietnam War was "like an incubus." a nightmarish male demon that creeps up on sleeping women and has intercourse with them. Helms's grandiose language, most likely intentional, separated him from straight-talking military men.

Despite playing a key role in planning and executing covert operations in Vietnam, Richard Helms did not believe the United States could win the war there. This posture kept him out of step with Pentagon brass. Helms believed Vietnam was fracturing consensus about America's need to win the Cold War, which he saw as the more important battle at hand. He was an advocate of using technology to beat the Russians by way of overhead reconnaissance from satellites and spy planes, which was why he liked Oxcart so much. And unlike Pentagon and State Department officials, who, for the most part, cautioned the president against ever sending spy planes over the Soviet Union again, Helms, like McCone, felt the president should do just that. "The only sin in espionage is getting caught." Helms once said. He believed the best intelligence was "objective intelligence." Photographs didn't have an opinion and couldn't lie. Helms attributed his respect for objectivity to his working as a journalist for the wire service United Press International. In 1936, a then twenty-four-year-old Richard Helms got his first big scoop: covering the Berlin Olympics as a reporter, he was invited to interview Adolf Hitler. Six years later, Helms would be recruited by the Office of Strategic Services, the precursor organization to the CIA, to spy on Hitler's men.

With Richard Helms at Area 51 in December of 1965, the Oxcart was finally declared operational. Celebrations were in order. One of the pilots offered to fly a C-130 Hercules on a seafood run to Westover Air Force Base in Massachusetts, where Werner Weiss had coolers full of lobsters, oysters, and crab legs ready to be taken to Area 51. Big-budget black operations had stomach-size perks too. After such feasts, the kitchen staff buried the shells in compost piles along the base perimeter, and the joke among Air Force support staff was that future archaeologists digging in the area would think Groom Lake had been an ocean as late as the 1960s.

As secret and compartmentalized as the base was, the mess hall was the one place where the men gathered together to break bread. Technical assistants would rub elbows with three- and four-star generals visiting there. Ernie Williams, who had helped find Area 51's first well in 1955 and now helped coordinate meals, loved it when Werner Weiss invited him into the mess hall to eat steaks with generals who wore stars on their chests. And after the meal was over, the men would again go their separate ways. The Special Projects program managers and the engineering nerds usually retired to their quarters to play poker and drink bottled beer. The scientists were known to return to their respective hangars, where they'd stay up until all hours of the night engrossed in various problems they needed to solve. The Air Force guys went to the House-Six bar to roll dice, have a drink, and share war stories.

When on base, Richard Helms was known to stop in for a drink. He was a great

conversationalist but almost always refrained from telling stories about himself. And as far as World War II was concerned, Helms rarely discussed the subject. In 1945, as a young OSS officer, Helms had worked in postwar Berlin. He was one of the key players in Operation Paperclip; Helms had been tasked with finding a group of Hitler's former scientists and offering them positions on classified programs back in the United States. Jobs involving biological weapons, rockets, and stealth. Years later, Helms justified his recruitment of former Nazis by saying that if the scientists hadn't come to work for us, they'd have gone to work for "them." Helms knew things other men did not know. At the Agency he was the man who kept the secrets.

In 1975, Helms would unwittingly become an internationally recognized figure famous for destroying CIA documents to avoid having their secrets revealed. After allegations surfaced that the CIA had been running a human-research program called MKULTRA—which involved mind-control experiments using drugs such as LSD—Helms as director of the CIA was asked to take the stand. While testifying to Congress, Helms stated that he had ordered all the [MKULTRA files destroyed](#) two years earlier, in 1973.

In the labyrinthine organizational chart that kept men at Area 51 in their respective places, no one was more important to the spy plane project's overall progress than the commander of the base, a position granted to an Air Force officer whose salary came from the CIA. In 1965, the position was filled by Colonel Slater. Slater was the ideal commander. He was astute, practical, and an excellent listener, which put him in direct contrast to the more elitist Colonel Holbury, who'd held the position before. What the pilots appreciated most about Slater was that he was funny. Not sarcastic funny, but the kind of funny that reminded pilots not to take their jobs so seriously all the time. One of the first things Colonel Slater did after taking command of the base was to hang a sign over the House-Six bar that listed Slip Slater's Basic Rules of Flying at Groom Lake. There were only three rules.

- Try to stay in the middle of the air.
- Do not go near the edges of it.
- The edges of the air can be recognized by the appearance of ground, buildings, sea, trees and interstellar space. It is much more difficult to fly there.

Like all the pilots at Area 51, Slater flew every chance he got. Now, as commander of the base, he began each day by making the first run. Around five thirty each morning, coffee mug in hand, Slater was driven by one of the enlisted men to the end of a runway, where he'd jump in an F-101 and fly around the Box on what he called "the weather run." Because Area 51 had a large box of restricted airspace, Slater could fly in a manner not seen at other Air Force bases. Colonel Roger Andersen, who had been recruited to Area 51 to work in the command post, remembers the first time he flew with Slater in a two-seater T-33 to Groom Lake. "We were doing proficiency flying. I'd been getting teased by the other pilots because my background was flying tankers for the Air Force, not jets," Andersen explains. "Up in the air, Slater says to me, 'You need to loosen up, Andersen,

Let's rack it around.' At which point Slater does a loop, a roll, and a spin... in a row. You could do that kind of thing up at Area 51."

Everyone knew stories about Slater's flying career: flying against the Germans in World War II, flying as the detachment commander for the Black Cats, and of course the remarkable story of his flying an airplane with a dead engine for a hundred miles on a glide—through a hurricane—in 1946. As a young hero just back from the war, Slater had been chosen by the Army Air Forces to fly a brand-new P-80 Shooting Star on a training mission from March Air Force Base to Jamaica. The P-80 was the first jet fighter used by the Army Air Forces at a time when jets in America were relatively new. As Slater remembers it, he was "one hundred miles out at sea off of Key West when the engine quit. I was just north of Cuba, which was under hurricane. There was turbine failure and a flameout so I turned around and glided back to the Keys." Jet airplanes do not normally glide without engine thrust, at least not without a skilled pilot at the controls. When a jet engine loses all power, it usually crashes. Slater rode the jet stream for a hundred miles over the Atlantic Ocean until he found an abandoned airstrip at Marathon Key, in Florida, on which to land. The amazing story made its way to the pages of the *New York Times*.

Richard Helms was a fan of Slater, and before leaving Area 51 to get back to Washington, Helms made sure to congratulate Colonel Slater on all the fine work that had been achieved to get Oxcart operational. Now Slater had to be prepared to fly himself to Washington on a moment's notice on Oxcart's behalf. Over the next several months, [Slater and General Ledford would be asked](#) to participate in the top secret covert-action review board the 303 Committee, which would be assigning Oxcart its mission. (The 303 Committee was a successor to the Special Operations Group, which Bissell had been in charge of during his tenure at the CIA.)

Slater flew himself to Washington in an F-101 more times than he could count. There, however eloquently the Agency advocated on the Oxcart squadron's behalf, the Pentagon put up roadblocks. Slater's input had little effect on the naysayers. He was looked upon as the man in charge of a billion-dollar black operations program, a golden goose that the Air Force desperately wanted to wrest from the CIA. Every time the Agency proposed a mission, the review board denied the CIA's request.

That the groundbreaking spy plane was trapped in a stalemate between the CIA and the Air Force was, at first, unbelievable to Colonel Slater. Throughout his career, Slater had moved effortlessly between different armed services and intelligence worlds, applying his talents wherever they were needed most. As a twenty-two-year-old fighter pilot, Slater flew eighty-four missions over France and Germany in a P-47 Thunderbolt. When the Army desperately needed support from airmen during the Battle of the Bulge, Slater fought side by side with soldiers on the ground at the bloody Siege of Bastogne. Later, as commander of the Black Cat Squadron flying dangerous missions over mainland China, Slater wore both CIA and Air Force hats with ease. The common goal was gathering intelligence. Colonel Slater saw no rivalry among the men.

During that winter of 1966, flying back and forth between Area 51 and the Pentagon, Slater had a front-row seat for the power struggle between the Air Force and the CIA. Secretary of Defense Robert McNamara had changed his mind again on the usefulness of

Oxcart in Vietnam. He decided to wait until the Air Force SR-71 program came online. Bud Wheeler believes that "[McNamara was delaying finding a mission](#)" for the Oxcart on purpose. He was an empire builder. Oxcart did not fit into his empire because it was never his." With each month that passed, the Air Force's SR-71 Blackbird was that much closer to being operations-ready, and the men in charge of Blackbird were in McNamara's chain of command. As soon as the Air Force's spy plane was ready, the CIA's almost identical spy plane would be out of a job.

In June of 1966, Richard Helms was made director of the CIA. Now one of the most powerful men in Washington, Helms lobbied hard on Oxcart's behalf, and in July, the Joint Chiefs of Staff voted in favor of sending Oxcart over North Vietnam to gather intelligence on missile sites there. McNamara and Secretary of State Dean Rusk dug in their heels and again offered dissent. Both men argued that putting CIA planes on the ground at the U.S. Air Force base in Okinawa, Japan, posed too great a political risk. McNamara was playing the same card he had played with John McCone when McCone was running the CIA, namely, that [if a CIA spy plane were to get shot down](#) on an espionage mission, the president would face the same backlash that Eisenhower had after the Gary Powers incident.

In August, a vote for or against Oxcart deployment was tallied in the presence of President Johnson. [The majority voted against deployment](#), and the president upheld that decision. The ice around the Oxcart program was getting thin. Colonel Slater responded as best he knew how: when the going gets tough, the tough keep flying. Back at Area 51, he was determined to keep his men mission-ready. There was no point in letting his men know that the program was on the verge of collapse. Who could have imagined that the seminal Oxcart was in danger of being mothballed before it ever got a job? Instead, Slater gave his men a new goal. He wanted them to shave six days off the time it took the squadron to go from mission notification to deployment overseas. It had been a twenty-one-day response time; [Slater now wanted it reduced by nearly 30 percent](#).

Area 51 became like a Boy Scout camp on steroids, a stomping ground for the world's fastest and now most expensive airplane. The six aircraft that would be used for deployment were put through a whole new battery of flight-simulation tests. Commander Slater kept pilot morale high and Pentagon dissent at bay. A bowling alley was built. The pilots kept in shape playing water sports in the Olympic-size swimming pool. They kept their minds clear flying model airplanes and hitting golf balls off the dry lake bed up into the hills. Even the contractors were encouraged to pick up the pace. Slater challenged a lazy work crew to dig a lake. Five decades later, Groom Lake's artificial body of water would still be referred to as Slater Lake. With the aircraft now flying at full speed and maximum height, it was time to break performance records. In December of 1966, one of the pilots set a speed record that would last into the twenty-first century. Bill Park flew 10,195 miles in a little over six hours at an average speed of 1,660 miles per hour. [Park had flown over all four corners of America](#) and back to the base in less time than most men spend at the office on any given day. To the project pilots itching for missions, it seemed like they could be deployed any day. And then, in January of 1967, tragedy struck.

Project pilot [Walt Ray was, by all accounts, a terrific pilot](#). He and his new wife, Diane,

also made for good company with Ken Collins and his wife, Jane. Diane and Jane did not have to keep up any pretenses; they both accepted that they had no idea what their husbands really did besides fly airplanes. The Rays and the Collinsses lived close to each other in the San Fernando Valley, and they would often go on holidays together. "Once we took a small prop plane and [flew down to Cabo San Lucas](#), Mexico, and spent a couple days down there playing tennis, swimming, and flying around," Collins recalls. "There were so few runways in Mexico in the early sixties, mostly we landed in big fields. The goats would see us coming, or hear us coming; they'd run away, and we'd land. Walt Ray loved to fly as much as I did. We'd take turns flying the airplane." Quiet and unassuming, Walt Ray also liked to hunt. "Right after New Year, Walt took me with him on a RON [remain overnight] in Montana. We did some hunting, spent the night in a motel, and flew home," Roger Andersen remembers. The following day, on the afternoon of January 5, 1967, Walt Ray was flying an Oxcart on a short test flight. At the Ranch, it had been snowing. Walt Ray was passing over the tiny town of Farmington, New Mexico, at exactly 3:22 p.m. when he looked down and saw the black line on his [fuel gauge move suddenly](#), dramatically, and dangerously to the left.

"I have a loss of fuel and I do not know where it is going," [Walt Ray told Colonel Slater through his headset](#), breaking radio silence to communicate on a radio frequency reserved for emergencies. The transcript would remain classified until 2007. "I think I can make it," Walt Ray said. He was 130 miles from the tarmac at Area 51, flying subsonic to conserve fuel. But twenty minutes later, over Hanksville, Utah, Ray declared an emergency. He'd gotten the aircraft down to thirty thousand feet when one of its engines flamed out. The sixty-seven-million-dollar spy plane had run out of fuel.

["I'm ejecting"](#) was the last thing Walt Ray said to Colonel Slater.

When Walt Ray ejected, the seat he was strapped into was propelled away from the airplane by a small rocket. The strings of his parachute became tangled in his seat's headrest, which meant he was [unable to separate from his seat](#). Walt Ray fell thirty thousand feet without a parachute and crashed into the side of a mountain near Leith, Nevada. Within seconds of the pilot's last transmission, Commander Slater gave the order to dispatch three aircraft from Area 51 to go find Walt Ray and whatever was left of his airplane. No one had any idea that the thirty-year-old pilot was already dead. In addition to the fleet of search-and-rescue that took off from Groom Lake, the Air Force dispatched four aircraft and two helicopters from Nellis Air Force Base. The crash site needed to be secured quickly before any civilians arrived on the scene.

Twenty-three hours passed. No pilot, no airplane. A U-2 was sent aloft to photograph the general area where Walt Ray was believed to have gone down. While the U-2 pilots flew high, [Roger Andersen flew in low, in a T-33](#). The terrain was challenging, and it was difficult to see the ground. "There was cactus and vegetation everywhere; we had to conserve fuel and fly as low as we could," Andersen explains. Helicopter pilot [Charlie Trapp found the aircraft first](#). "I saw these large film pieces rolling across the top of a ridge," Trapp recalls. "I landed where I could and let my parajumpers jump out. They ran over to the Oxcart, what was left of it, and when they came back they said, 'Walt's not in there and neither is his ejection seat.'" The Oxcart had crashed in the remote high desert

on a mountain slope dotted with chaparral. Trapp and his crew went back to Area 51 and, with the navigators' help, mapped out on the board in the command post all the places where Walt Ray might have landed after ejection. Then they went back out and continued the search.

Charlie Trapp found Walt Ray uphill from the crash site, three miles away. "I caught a glimpse of light reflecting from his helmet," Trapp recalls. "He was still in his seat, under a large cedar tree." A perimeter was set up and the dirt roads leading up to the crash site were barricaded and secured by armed guards. Herds of wild horses watched as trucks rolled in and workers carted up the jet wreckage to take back to Groom Lake. The entire process took nine days. After an investigation, officials determined that a faulty fuel gauge was all that was wrong with the triple-sonic spy plane. At first, the gauge had erroneously indicated to Walt Ray he had enough fuel to get back to the Ranch. Minutes later the gauge told him he was about to run out of fuel.

One man's tragedy can become another man's opportunity, which is what happened to Frank Murray after Walt Ray was killed. After the accident, General Ledford came out to the area to participate in the ensuing investigation. When Ledford was ready to return to Washington, he asked Frank Murray to fly him home. "Up in the air," Murray recalls, "Ledford said to me over the radio, '[How'd you like to fly the plane?](#)' I said, 'Throw me in that puddle, boss' and that was about the extent of the pilot-selection process for me.'" Murray was given Walt Ray's call sign of Dutch 20. No longer a chase pilot, Murray was now part of the CIA's elite team of overhead espionage pilots.

Defense Department officials used the tragic death of Walt Ray and the loss of another CIA aircraft to their advantage. The Office of the Budget and the Office of the Secretary of Defense met alone, in secret, without representation from the CIA. There, they highlighted the fact that the CIA's several-hundred-million-dollar black budget operation had produced fifteen airplanes, five of which had already crashed. They presented their findings to President Johnson with the recommendation that the Oxcart program be "phased out."

Richard Helms was furious. In an [eight-page letter to the president](#), he told Johnson that to mothball the Oxcart would be [a scandalous waste of an asset](#). The CIA had successfully and meticulously managed 435 spy plane overflights by the U-2 in thirty hostile countries, and only one, the Gary Powers crash, had produced an international incident, Helms said. But the [Gary Powers incident had actually strengthened](#) the argument as to why the CIA, not the Air Force, should run the spy plane program, Helms explained. It was because Powers was an intelligence officer, and not a military man, that the Soviets hadn't taken retaliatory action against the United States. Ultimately Powers had been released in a Soviet spy exchange. Helms further strengthened his argument by stating that, unlike the military, [the CIA "controls no nuclear weapons](#), which rules out any propaganda suggestion that an irrational act by some subordinate commander might precipitate a nuclear war." Helms had a point. [But would the president see things his way?](#)

The following month, in February of 1967, Colonel Slater was again summoned to Washington. It was his fifth trip in six months. In a roomful of 303 Committee members, Slater was told the Oxcart would be terminated effective January 1, 1968. There was no room for debate. The Oxcart's fate had been decided. The case was closed. [Slater was](#)

[instructed to return to Area 51](#) and keep his squadron operations ready while the Air Force's SR-71 Blackbird passed its final flight tests. Even though Colonel Slater was Air Force to his core he was very much for the CIA's Oxcart program. Slater was the program's commander, and at that moment, the Oxcart was undeniably the most remarkable aircraft in the world.

Colonel Slater had flown himself to Washington in an F-101 and now he had to fly himself home. He was uncharacteristically disheartened by it all. Stopping at Wright-Patterson Air Force Base to refuel, Slater showed his identification documents, which pushed him to the front of the refueling line, [ahead of a two-star general](#) who had been waiting there. With everyone staring at him and wondering who this officer was, Slater considered the irony of it all. In justifying why Oxcart was being terminated, the 303 Committee claimed that the Oxcart exemplified CIA black budget excess. From Slater's perspective, save for a few line-cutting perks, the Oxcart was worth every Agency dime. The scientific barriers broken by the Oxcart program would likely impress scientists and engineers in another thirty years. It was the incredible sense of achievement shared by everyone involved that Slater would miss most. But so it goes, thought Slater. Oxcart would never get a mission, and the American public would probably never know what the CIA had been able to accomplish, in total secrecy, at Groom Lake—at least not for a long time.

Colonel Slater waited for his airplane to be refueled and thought about the journey home, likely his last from DC to Area 51. It was a mistake to cancel Oxcart, Slater thought. But he also knew that his opinion didn't matter. His skills as a commander were what he was counted on for. He would return to Area 51 and, like all good military men, follow orders.

Three months later, on a balmy spring day in May of 1967, Colonel Slater decided he was going to take the Oxcart for a last ride. Some of the pilots had four hundred hours in the air in the Oxcart. Walt Ray had had 358 when he died. Colonel Slater had only ten. Why not take the world's most scientifically advanced aircraft out for a ride while he still had the chance? Soon, the Oxcart would disappear into the experimental-test-plane graveyard. There, it would collect dust in some secret military hangar way out in Palmdale, California, where no one would ever fly it again. [Slater went to visit Werner Weiss](#) to see if Weiss could arrange for Slater to take one last Mach 3 ride.

"Consider it done," Werner Weiss said to Colonel Slater's request.

Up in the air, Slater quickly took the Oxcart to seventy thousand feet. Slater had forgotten how light the Oxcart was. It had an airframe like a butterfly, which allowed pilots to get it up so high. Flying at Mach 2.5 made things hot inside the cockpit. It was like an oven set on warm. If Slater were to take off his glove and touch the window, he'd get a second-degree burn. He moved up to Mach 3 cruising speed at ninety thousand feet, traveling the seven hundred miles to Billings, Montana, in about twenty-three minutes.

The fallacy was that at this height and speed, a pilot could look out the window and take in the view. You couldn't. Even when you reached cruising height, you had to keep your eyes on every gauge, oscillator, and scope in front of you. There were too many things to pay attention to. Too many things that could go wrong.

Colonel Slater headed toward the Canadian border, where he took a left turn and flew along the U.S. perimeter until he reached Washington State. There, he took another left turn and flew down over Oregon and into California. Finally, he took the aircraft down to twenty-five thousand feet and prepared for a scheduled refuel. Minutes later, Slater met up with the KC-135 that had been dispatched from the Air Force's 903rd Air Refueling Squadron out of Beale Air Force Base in Yuba County, California.

The process of taking on fuel was one of the more dangerous things an Oxcart pilot could do. In order to connect its fuel line to the tanker, the aircraft had to slow down to between 350 and 450 mph, so slow it could barely keep its grip on the sky. The issue of speed was equally taxing on the flying fuel tank. The KC-135 tanker had to travel at its top speed just to keep up with the slowed-down triple-sonic airplane. This was always a slightly nerve-racking process, complicated for Colonel Slater by the fact that a call came in over the emergency radio at exactly that time. Whatever was going on back at Area 51 that merited this emergency call was most likely not a welcome event.

Slater answered. It was Colonel Paul Bacalis, the man who'd taken over Ledford's job as director of the Office of Special Activities for the CIA. Bacalis told Slater that an urgent call had come in for him from the Pentagon and he should get back to Area 51 immediately.

"I'm refueling," Colonel Slater said.

"Finish and dump it," Bacalis said.

"Can't it wait?" Colonel Slater asked.

"No," Bacalis said. "Where are you?"

"I'm over California," Colonel Slater said.

"Head out to sea, dump the fuel, and come home" was Colonel Bacalis's command.

Slater let loose forty thousand pounds of fuel and watched it evaporate into the atmosphere. It was critical that he save ten thousand gallons of fuel to get home, not much more and definitely not less. Too little fuel and you wound up like Walt Ray. Too much fuel meant the aircraft could blow out its brakes on landing and overshoot the runway. Now, Slater needed to make a quick U-turn to head home. When traveling three times the speed of sound, the Oxcart needed 186 miles of space just to make the hook. This meant Slater's U-turn took him from off the coast of Big Sur to high above Santa Barbara on a tight curve.

When Slater got back to base, Werner Weiss and Colonel Bacalis were waiting in his office. Both men wore grins. Colonel Bacalis dialed the Pentagon and handed Slater the telephone. As the phone rang, Bacalis told Slater what was happening so as to prepare him for the call.

Colonel Slater couldn't believe his ears.

"The president has given Oxcart a go," Slater recalls Bacalis saying, and that "orders are en route." Then came the ultimate challenge—one for which he was prepared. Bacalis asked Slater if he could deploy his men for Oxcart missions starting in fifteen days.

Operation Black Shield and the Secret History of the USS Pueblo

The new director of the CIA, Richard M. Helms, had to work hard to become a member of President Johnson's inner coterie. The president had once told his CIA director that he "[never found much use for intelligence](#)." But eventually Helms managed to acquire a coveted seat at the president's Tuesday lunch table. There, President Johnson and his closest advisers discussed foreign policy each week. Outsiders called the luncheons Target Tuesdays because so much of what was discussed involved which North Vietnamese city to bomb. In 1967, air battles were raging in the skies over Hanoi and Haiphong with so many more American pilots getting shot down than enemy pilots that the ratio became nine to one. The Pentagon had been unable to locate the surface-to-air missile sites in North Vietnam responsible for so many of the shoot-downs although they'd been looking for them all year. Thirty-seven U-2 missions had been flown since January, as had hundreds of low-flying Air Force drones. Still, the Pentagon had no clear sense of where exactly the Communist missile sites were located. There were other fears. The Russians were rumored to be supplying the North Vietnamese with surface-to-surface missiles, ones with enough range to reach American troops stationed in the south.

Which is how the Oxcart, already scheduled for cancellation, serendipitously got its mission—during a [Target Tuesday lunch](#). On May 16, 1967, Helms made one last play on behalf of the CIA's beloved spy plane, nine years in the making but just a few days away from being mothballed for good. [Helms told the president](#) that by deploying the Oxcart on missions over North Vietnam, war planners could get those high-resolution photographs of the missile sites they had been looking for. "Sharp point photographs, not smudged circles," Helms promised the president. Secretary of Defense Robert McNamara, angling hard for Air Force control of aerial reconnaissance, had promised the president that the SR-71 Blackbird, the Air Force version of the Oxcart, was almost operations-ready. But the mission had to happen now, CIA director Helms told the president. It was already May. Come June, Southeast Asia would be inundated with monsoons. Weather was critical for good photographs, Helms said. Cameras can't photograph through clouds. President Johnson was convinced. Before the dessert arrived, Johnson authorized the CIA's Oxcart to deploy to Kadena Air Base on Okinawa, Japan.

It was a coup for the CIA. By the following morning, the airlift to Kadena from Area 51 had begun. The 1129th Special Activities Squadron was being deployed for Operation Black Shield. [A million pounds of matériel, 260 support crew](#), six pilots, and three airplanes were en route to the East China Sea. Nine years after Kelly Johnson presented physicist Edward Lovick with his drawing of the first Oxcart, Johnson would write in his log notes: "[the bird should leave the nest.](#)"

Kadena Air Base was located on the island of Okinawa just north of the Tropic of Cancer in the East China Sea. It was an island scarred by a violent backstory, haunted by hundreds of thousands of war dead. Okinawa had been home to the single largest land-sea-air battle in the history of the world. This was the same plot of land where, twenty-two years earlier, the Allied Forces fought the Japanese. Okinawa was the last island before mainland Japan. Over the course of eighty-two days in the spring of 1945, the battle for the Pacific reached its zenith. At Okinawa, American casualties would total 38,000 wounded and 12,000 killed or missing. Japan's losses were inconceivable in today's wars: 107,000 soldiers dead and as many as 100,000 civilians killed. When Lieutenant General Ushijima Mitsuru finally capitulated, giving the island over to U.S. forces on June 21, 1945, he did so with so much shame in his heart that he committed suicide the following day. Thousands of Okinawans felt the same way and leaped off the island's high coral walls. After the smoke settled and the blood soaked into the earth, Okinawa belonged to the U.S. military. Two decades later, it still did.

By the time Ken Collins stepped foot on Okinawa, the Kadena Air Base occupied more than 10 percent of the island and accounted for [nearly 40 percent of all islanders' income](#). The 1129th Special Activities Squadron was stationed at a secluded part of the base, the place from where Operation Black Shield would launch. No one was supposed to know the squadron was there. The project pilots were [to keep an extremely low profile](#), living in a simple arrangement of Quonset huts almost identical to those at Area 51. Instead of on the sand-and-sagebrush landscape at Area 51, the facilities on Kadena sat in fields of green grass. Leafy ficus trees grew along little pathways. It was spring when the pilots arrived, which meant tropical flowers were in full bloom. The pilots' residence was called Morgan Manor. An American cook kept the pilots fed, serving up high-protein diets on request. On days off the pilots drank bottled beer. Sometimes the men ventured out to have a drink or eat a meal at the officers' club, where a full Filipino orchestra always played American dance tunes.

The Oxcart mission was covert and classified, and there would be ["no plausible cover story"](#) as to why an oddly shaped, triple-sonic aircraft would be flying in and out of the air base with regularity for the next year. For this reason, the Joint Chiefs of Staff suggested that Commander Slater "focus on security, not cover." One idea was to "create the illusion of some sort of environmental or technical testing involved." But no one believed that cover story would hold. Within a week of the first Oxcart landing on the tarmac at Kadena, an ominous-looking Russian trawler sailed into port and anchored within viewing distance of the extralong runway. "The Russians knew we were there and we knew they knew we were there," Colonel Slater recalls.

Impossible as it seemed, [the first Oxcart mission](#) over the demilitarized zone in North Vietnam occurred as promised, just fifteen days after Helms made history for the CIA at that Target Tuesday lunch in May. CIA pilot Mele Vojvodich was assigned the first mission. He took off at 11:00 a.m. local time in a torrential downpour—the Oxcart's first real ride in the rain. In the little more than nine minutes Vojvodich spent over North Vietnam, at a speed of Mach 3.1 and an altitude of 80,000 feet, the Oxcart photographed 70 of the 190 suspected surface-to-air missile sites. The mission went totally undetected by the Chinese

and the North Vietnamese.

After the first mission was completed, the film was sent to a special processing center inside the Eastman Kodak plant in Rochester, New York. But [by the time the photographic intelligence got back](#) to field commanders in Vietnam, the intelligence was already several days old. The North Vietnamese were moving missile sites and mock-ups of missile sites around faster than anyone could keep track of them. The CIA realized it needed a dramatically faster turn-around time, which resulted in a photo center being quickly set up on the mainland in Japan. Soon, field commanders had intel in their hands just twenty-four hours from the completion of an Oxcart mission over North Vietnam.

Still, that did not stop the North Vietnamese from moving their missiles around and avoiding bombing raids. They had help from the Soviet Union. "That was the reason for the Russian trawler parked at the end of the Kadena runway. Someone was watching and taking notes every time we flew," recalls Roger Andersen, who was stationed in the command post on Kadena, which he'd been in charge of setting up. "It was almost identical to the command post at Area 51, except it was smaller," Andersen says.

On Kadena, the operations officers tried to trick the Russian spies in the trawler by flying at night, and yet of the first seven Black Shield missions flown, [four were "detected and tracked."](#) The North Vietnamese were able to predict Oxcart's overhead pass based on the time the aircraft left the base. With this information relayed by the Russians, the Communists' Fan Song guidance radar was able to lock on the A-12's beacon. The [first attempted shoot-down](#) happened during Operation Black Shield's sixteenth mission. In photographs taken by the Oxcart, contrails of surface-to-air missiles can be seen below. Fortunately for the pilots, the missiles could not get up as high as the Oxcart. In this newest round of cat and mouse, Oxcart was resulting in a draw. Oxcart was fast, high, and stealthy. The aircraft could not be shot down. But the enemy knew the plane was there, meaning it was a long way from being invisible as Richard Bissell and President Eisenhower had originally planned.

For American pilots flying over North Vietnam, the real danger remained down low, halfway between Oxcart and the earth, at around forty-five thousand feet. That was where the surface-to-air missiles and the MiG fighter jets were shooting down U.S. pilots at the horrifying nine-to-one rate. Ken Collins recalled what this felt like at the time: "During Black Shield, we, as pilots, were relatively safe at eighty-five thousand feet. It was the pilots who were flying lower than us who were really the ones in harm's way. These were guys most of us had been in the Air Force with, before we got sheep-dipped and began flying for the CIA."

Extraordinary pilots like Hervey Stockman. Stockman had been the first man to fly over the Soviet Union in a U-2, on July 4, 1956. Eleven years later, on June 11, 1967, Stockman was flying over North Vietnam, searching for information about North Vietnam weapons depots, [when he was involved in a midair crash.](#) A pilot of exceptional skill and remarkable courage, Stockman was on his 310th mission in a career that had covered three wars when his F-4 C Phantom fighter jet collided with another airplane in his wing. He and Ronald Webb both survived the bailout. Upon landing, they were captured by North Vietnamese soldiers, beaten, and taken prisoner. Stockman would spend the next five

years and 268 days as a prisoner of war in a seven-by-seven-foot cell. First he was housed in the notoriously brutal Hanoi Hilton. Later, he was moved to other, equally grim prisons over the course of his incarceration. During Black Shield, the CIA tasked Oxcart pilots with search missions [to find U.S. airmen who'd gone down](#) over North Vietnam. The cameras on the Oxcarts took miles of photographs, seeking information on the prison complexes where American heroes like Hervey Stockman and hundreds of other POWs were being held, but to no avail. The North Vietnamese moved captured POWs around almost as often as they moved missile sites around.

The captured pilots became a purposeful part of Communist propaganda campaigns against the West. The POWs were beaten, tortured, chained, and dragged out in front of cameras, often forced to denounce the United States. If the Communists wanted to create unrest at home, which they did, they succeeded by using captured pilots for their own propaganda gains. All across America, opposition to the war was on the rise. The White House and the Pentagon fought back with propaganda and erroneous facts. "We are beginning to win this struggle," Vice President Hubert Humphrey boasted on NBC's *Today* show in November of 1967. While closed-door hearings for the Senate Armed Services Committee revealed that U.S. bombing campaigns were having little to no effect on winning the war, Humphrey told America that more Communists were laying down arms than picking them up. That our anti-Communist "purification" programs in Vietnam were going well. Later that same month, America's top commander, General Westmoreland, dug his own grave. He told the National Press Club that the Communists were "unable to mount a major offensive." That America might have been losing the war in 1965, but now America was winning in Vietnam. In an interview with *Time* magazine, Westmoreland taunted the Communists by calling them weak. "[I hope they try something because we are looking for a fight.](#)" he declared. Which is exactly what he got. At the end of January, the Communists pretended to agree to a three-day cease-fire to celebrate the new year, which in Vietnamese is called Tet Nguyen Dan. Instead, it was a double-cross. On January 31, 1968, the Communists launched a surprise attack on the U.S. military and the forces of South Vietnam. The notorious Tet Offensive stunned the Pentagon. It also resulted in violent antiwar protests. The Tet Offensive was a major turning point in America's losing the Vietnam War.

It was at this same time that another major crisis occurred, one in which Oxcart played a secret role, the precise details of which were only made public in 2007. On the foggy morning of January 23, 1968, approximately two thousand miles to the northeast of Vietnam, the U.S. Navy ship USS *Pueblo* sailed into icy waters off the coast of North Korea and dropped anchor. The *Pueblo*'s cover story was that it was conducting scientific research; really, [it was on an espionage mission](#), a joint NSA-Navy operation with the goal of gathering signals intelligence, or SIGINT. In addition to the regular crew, there were twenty-eight signals intelligence specialists working behind locked doors in a separate and restricted part of the vessel. Parked 15.8 miles off North Korea's Ung-do Island, technically the *Pueblo* was floating in international waters.

North Korea's Communist regime did not see it that way. The ship was close enough to be eavesdropping on Wonson harbor, which made it an open target for the North

Korean People's Army, the KPA. After one of the *Pueblo*'s crew members picked up on radar that a KPA ship was approaching fast, *Pueblo*'s captain, Lloyd M. Bucher, went up to the bridge to have a look around. Through his binoculars, Bucher saw not just a military ship but one with its rocket launchers aimed directly at the *Pueblo*. Bucher ordered certain flags to be raised, ones that indicated the USS *Pueblo* was on a surveying mission, something the North Koreans obviously already did not buy. Within minutes, Chief Warrant Officer Gene Lacy spotted several small vessels on the horizon: torpedo boats coming from Wonson. Next, [two MiG-21 fighter jets appeared on the scene](#).

Captain Bucher now had a national security nightmare on his hands. His boat was filled with thousands of classified papers, cryptographic manuals, and encryption machines. Most significantly, the *Pueblo* carried a KW-7 cipher machine, which was the veritable Rosetta stone of naval encryption. [The captain considered sinking his ship](#), which would take forty-seven minutes, but later explained that he knew if he had done so a gun battle was certain to ensue. Most of the *Pueblo*'s life rafts would be shot at and destroyed. Without life rafts, the men would die in the icy waters in a matter of minutes, Bucher was certain. He made the decision to flee.

The North Korean ship raised a flag that signaled "Heave to or I will open fire on you." Captain Bucher raised a signal flag in response: "Thank you for your consideration. I am departing the area." But the North Koreans opened fire. Bucher himself was hit, taking shrapnel in his foot and backside. As the *Pueblo* took off, the North Koreans continued to fire, killing a U.S. sailor named Duane Hodges. Meanwhile, behind the secret door, SIGINT specialists smashed cipher equipment with axes and shoved documents into a small incinerator there. Despite the speed at which the analysts worked to burn the secret papers, [90 percent of the documents survived](#). Sixty-one minutes after being shot, Captain Bucher was no longer in control of his ship. The North Korean People's Army stormed the *Pueblo* and took the captain and his eighty-two crew members hostage. For the first time in 160 years, an American vessel had been seized by a foreign nation. The timing could not have been worse. America was already losing one war.

President Johnson was outraged. Within hours of the *Pueblo*'s capture, the [Pentagon began secretly preparing for war](#) against North Korea. The following day, McNamara summoned the war council to lay out plans for a ground attack. "Our primary objective is to get the men of the *Pueblo* back," McNamara said, emphasizing just how secret his plan was to remain: "No word of the discussion in this meeting should go beyond this room." A stunning air attack over North Korea was laid out. An estimated fifteen thousand tons of bombs would be dropped from the air to complement the ground assault. Given the huge numbers of soldiers and airmen fighting in Vietnam, the war with North Korea would require a call-up of the reserves. A massive U.S. strategic airlift was set in motion, designated Operation Combat Fox. That the North Vietnamese were just six days from launching the sneak attack called the Tet Offensive was not yet known. A war with North Korea over the USS *Pueblo* would have been a war America could ill afford.

Richard Helms suggested an Oxcart be dispatched from nearby Kadena to photograph North Korea's coast and try to locate the USS *Pueblo* before anyone even considered making a next move. As it stood, immediately after the *Pueblo*'s capture,

there was no intelligence indicating exactly where the sailors were or where the ship was being held. Richard Helms counseled the president that if the goal was to get the eighty-two American sailors back, a ground attack or air attack couldn't possibly achieve that end if no one knew where the USS *Pueblo* was. A reconnaissance mission would also enable the Pentagon to see if Pyongyang was mobilizing its troops for war over the event. Most important of all, it would give the crisis a necessary diplomatic pause.

Three days after the *Pueblo*'s capture, on January 26, Oxcart pilot Jack Weeks was dispatched on a sortie from Kadena to locate the missing ship. From the photographs Weeks took on that overflight, the United States [pinpointed the *Pueblo*'s exact location](#) as it floated in the dark-watered harbor in Changjahan Bay. Before completing his mission but after taking the necessary photographs, Jack Weeks experienced aircraft problems. When he got back to base, [he told his fellow pilots about the problems](#) he'd had on the flight but not about his photographic success; detailed information regarding the USS *Pueblo* was so highly classified, [very few individuals had any idea](#) that Weeks's mission had delivered photographs that had prevented war with North Korea.

"The [Oxcart] quickly located the captured *Pueblo* at anchor in Wonson harbor," President Johnson's national security adviser Walt Rostow revealed in 1994. "[So we had to abandon any plans to hit them with airpower](#). All that would accomplish would be to kill a lot of people including our own. But the [Oxcart's] photo take provided proof that our ship and our men were being held. The Koreans couldn't lie about that." The Pentagon's secret war plan against North Korea was called off. Instead, negotiations for the sailors' return began. But the ever-suspicious administration, now deeply embroiled in political fallout from the Tet Offensive, worried the *Pueblo* incident could very well be another Communist double cross. What if North Korea was secretly mobilizing its troops for war? Three and a half weeks later, on February 19, 1968, Frank [Murray was assigned to fly Oxcart's second mission over North Korea](#). Murray's photographs indicated that North Korea's army was still not mobilizing for battle. But by then, the *Pueblo* was on its way to Pyongyang, where it remains today—the only American naval vessel held in captivity by a foreign power. Captain Bucher and his men were prisoners of North Korea for eleven months, tortured, put through mock executions, and made to confess espionage before finally being released. In 2008, [a U.S. federal judge determined](#) that North Korea should pay sixty-five million dollars in damages to several of the *Pueblo*'s crew, but North Korea has yet to respond.

A year had passed since Black Shield began. It was springtime on Kadena again. On days off Ken Collins and fellow pilot Jack Weeks would slip into their canvas shoes and swimming trunks and head out to the beach. The drive into the countryside was beautiful and relaxing, with its tropical bamboo forests and small ponds. Camellias and Japanese apricot trees were in bloom. [There were beautiful sunsets to watch](#) over the East China Sea. "We had a different rapport, Jack and I, than the other pilots, I think. We did more than just get along. Jack Weeks and I became friends," Collins says.

When the two pilots weren't at the beach, Collins and Weeks would take the 1129th Special Activities Squadron staff car, "an old clunker of a station wagon," and head into Kozu, a sprawling little city of cement-block high-rises and crooked telephone poles. "Jack

and I had kids who were about the same age. We'd head into Kozu and buy these little plastic airplanes and remote-control tank models which we intended to bring home to our kids. But sometimes we'd get bored back in Morgan Manor and open up the toy packages and end up making the little tank models for ourselves," Collins recalls. "We had a lot of fun doing that." Life's simple pleasures during the Vietnam War.

The Agency's six Oxcart pilots—Mele Vojvodich Jr., Jack W. Weeks, J. "Frank" Murray, Ronald J. "Jack" Layton, Dennis B. Sullivan, and Kenneth B. Collins—had [collectively flown twenty-nine missions](#): twenty-four over North Vietnam, three over North Korea, and two over Cambodia and Laos. Countless surface-to-air missile sites had been located and destroyed as a result. Despite Pentagon fears, the photographs never located a single surface-to-surface missile able to reach American forces on the ground. "We also flew overhead during Air Force bombing raids, [using our jamming systems on the bird](#) to mess with the Communists' antiaircraft systems," Murray recalls. But for all the success of the CIA's Oxcart program, the reality was that the Air Force's Blackbird, the SR-71, was finally ready to deploy. The CIA could no longer compete with the Pentagon for Mach 3 missions, and the Oxcart program reached its inevitable end. "Even if you didn't have a 'need-to-know,' it was obvious when the SR-71 Blackbirds started showing up," Collins recalls. [The Blackbirds were arriving on Kadena to take Oxcart's place](#). The Air Force version of the Oxcart, with its two seats and reconnaissance/strike modifications, had officially won the battle between the CIA and the Air Force over anything with wings.

Back in Washington, behind closed doors, Secretary of Defense Robert McNamara told President Johnson he no longer believed the war in Vietnam could be won. This did not sit well with the president, and in February of 1968, Robert McNamara stepped down. In his place came a new secretary of defense named Clark Clifford who "[reaffirmed the original decision to end the A-12 program](#) and mothball the aircraft." The men from the 1129th began packing up to head home to Area 51. The missions were over. The drawdown phase had begun.

Jack Weeks and Denny Sullivan were each given the assignment of flying an A-12 Oxcart back to Area 51; Collins was scheduled to do final engine tests from Kadena. But during the last weeks of the program, [Jack Weeks became ill](#), so Collins stepped in, completing back-to-back rotations in Weeks's place. With the schedule change, it would now be Collins and Sullivan who would fly the A-12s home, with Weeks doing the final engine check, on June 4, 1968, and not Collins, as originally planned.

Collins and Sullivan returned to Area 51 to keep up on proficiency flying in preparation for their final transcontinental flights. When it was time to return to Kadena, they flew from Groom Lake to Burbank in a Lockheed propeller plane and then took a commercial flight from the West Coast all the way to Tokyo. "That night, we had dinner in the Tokyo Hilton," Collins remembers. "We finished up dinner and were heading back up to the rooms when we heard on the radio that Bobby Kennedy had been assassinated in Los Angeles." Stunned, Collins went downstairs to buy a newspaper, the English-language version of the *Tokyo Times*. "There, in the lower right-hand corner of the paper, a small article caught my eye. The headline read something like 'High-Altitude Crash of a U.S. Air Force Airplane.'

Well, that was enough to get my attention. I had a terrible feeling I knew what 'high-altitude' meant."

The following day, Collins and Sullivan flew to the island of Kadena. An Agency driver picked them up at the airport. As soon as the door shut and the men were alone, the driver turned around and said solemnly, "We lost an airplane."

"We lost a pilot," Collins said.

It was former U-2 pilot Tony Bevacqua who was assigned to fly the search mission for Jack Weeks and his missing airplane. [After Bevacqua had left Groom Lake](#), in 1957, he'd spent the next eight years flying dangerous U-2 reconnaissance missions and atomic sampling missions all over the world, from Alaska to Argentina. During the Vietnam War, Bevacqua flew SR-71 reconnaissance missions over Hanoi. (On one [mission, on July 26, 1968](#), the photographs taken from the camera on his Blackbird show two SA-2 missiles being fired up at him.) But no single mission would stay with him into old age like the mission he was asked to fly on June 5, 1968, looking for Jack Weeks.

Bevacqua had arrived on Kadena the month before, having been selected to fly the Air Force version of the Oxcart, the SR-71. "All I had been told that day was that someone was missing," Bevacqua remembers. "I didn't have a need to know more. But I think I knew that the pilot was CIA." The downed pilot, he learned, might be floating somewhere in the South China Sea, approximately 520 miles east of the Philippines and 625 miles south of Okinawa. "As I set out, my heart was pumped up and I was thinking, Maybe I will find this guy. I remember anticipation. Hopeful anticipation of maybe seeing a little yellow life raft floating somewhere in that giant sea." Instead, Bevacqua saw nothing but hundreds of miles of open water. "It was like looking for a drop of water in the ocean," Bevacqua remembers. The day after the mission, Bevacqua went to the photo interpreters to ask if they'd found anything on the film. "They said, 'No, sorry. Not a thing.' And that was the end of that," Bevacqua explains.

Jack Weeks was gone. Vanished into the sea. Neither his body nor any part of the airplane was ever recovered. "Fate is a hunter," Collins muses, recalling the destiny of his friend Jack Weeks. "I was supposed to be flying that aircraft that day but Jack got sick and we switched in the rotation. Jack Weeks went down. I'm still here."

[The 1129th Special Activities Squadron had reached its end. The CIA held a special secret ceremony at Area 51](#) for the remaining Oxcart pilots and their wives. Some of the pilots had their pictures taken with the aircraft but did not receive copies for their scrapbooks or walls. "The pictures went into a vault," says Colonel Slater. "We were told we could have copies of them when, or if, the project got declassified." Roger Andersen recalls how quickly the operation rolled up. "By that time, in 1968, there were a lot of other operations going on at Area 51, none of which I had a need-to-know." Andersen had the distinction of flying the last Project Oxcart support plane, a T-33, back to Edwards Air Force Base. "Flying out of Area 51, I knew I'd miss it up there," Andersen says. "Even after all these years, and having lived all over the world, I can say that Area 51 is unlike anywhere else in the world." For certain, there would be no more barrel rolls with Colonel Slater over Groom Lake.

[The men moved on.](#) If you are career Air Force or CIA, you go where you are

assigned. Ken Collins was recruited by the Air Force into the SR-71 program. Because the A-12 program was classified, no one in the SR-71 program had any idea Collins had already put in hundreds of hours flying in the Mach 3 airplane. "It left many in the SR-71 program confused. It surprised many people when it appeared I already knew how to fly the aircraft that was supposedly just built. They didn't have a need-to-know what I had spent the last six years of my life doing. They didn't learn for decades," not until the Oxcart program was declassified, in 2007.

Frank Murray volunteered to fight on the ground, or at least low to the ground, in Vietnam. "During Black Shield, no one had any idea where I'd been. Quite a few people thought maybe I'd dodged the war. I decided to go back in and fly airplanes in combat in Vietnam." In November of 1970, Murray was sent to the Nakhon Phanom Air Base on the Mekong River across from Laos, where he volunteered to fly the A-1 Skyraider—a propeller-driven, single-seat airplane that was an anachronism in the jet age. "It flew about a hundred and sixty-five miles per hour at cruise," says Murray. "I went from flying the fastest airplane in the world to the slowest one. The Oxcart taxied faster than the A-1 flew." Because the Skyraider flew so slow, it was one of the easiest targets for the Vietcong. One in four Skyraiders sent on rescue missions was shot down. "We got shot at often but the Skyraider had armaments and I shot back." In his one-year tour of duty, Murray, the squadron commander, flew sixty-four combat missions. The Skyraider's most famous role was as the escort for the helicopters sent in to rescue wounded soldiers from the battlefield. "Our mission was to support the Jolly Green Giants. We pulled quite a few wounded Green Berets out of the battlefield that year."

Colonel Slater was assigned to the position of vice commander of the Twentieth Tactical Fighter Wing at the Wethersfield Air Force Base in England. By all accounts, he was well on the way to becoming a general in the U.S. Air Force. Then tragedy struck. Colonel Slater's eldest daughter, Stacy, was in Sun Valley, Idaho, on her honeymoon when the private plane she was flying in with her husband struck a mountain peak and crashed. Stranded on the side of a frozen mountain for twenty-four hours, Stacy Slater Bernhardt was paralyzed from the waist down. The recovery process was going to be long and painful, and the outcome was entirely unknown. "My wife, Barbara, and I needed to be with our daughter, with our family, so I requested to be transferred back to the United States," Colonel Slater says. For Slater, a career military man, the decision was simple. "Love of country, love of family."

Back in America, and after many months, his daughter recovered with near-miraculous results (she learned to walk with crutches). Colonel Slater was assigned to Edwards Air Force Base, where he began flying the Air Force's attack version of the Oxcart, the YF-12, which comes equipped to carry two 250-kiloton nuclear bombs. "I loved it," Slater says, always the optimist. "I enjoyed working for the CIA, but no matter how old I get, I will always be a fighter pilot at heart."

The MiGs of Area 51

To engineer something is to apply scientific and technical know-how to create an entity from parts. To reverse engineer something is to take another manufacturer's or scientist's product apart with the specific purpose of learning how it was constructed or composed. The concept of reverse engineering is uniquely woven into Area 51 legend and lore, with conspiracy theorists claiming Area 51 engineers are reverse engineering alien spacecraft inside the secret base. Historically, reverse engineering has played an important role at Area 51, as exemplified in formerly classified programs, including one from the late 1960s and 1970s, to reverse engineer Russian MiGs.

It began one scorching-hot morning in August of 1966 when an [Iraqi Air Force colonel named Munir Redfa](#) climbed into his MiG-21 fighter jet at an air base in southern Iraq and headed toward Baghdad. Redfa then made a sudden turn to the west and began racing toward Jordan. Iraqi ground control notified Redfa that he was off course.

["Turn back immediately."](#) he was told. Instead, Redfa began flying in a zigzag pattern. Recognizing this as an evasive maneuver, an Iraqi air force commander told Colonel Redfa if he didn't turn back at once he would be shot down. Defying orders, Redfa switched off his radio and began flying low to the ground. To avoid radar lock, in some places he flew as low as seven hundred and fifty feet. Once he was at altitude, [Redfa flew over Turkey](#), then toward the Mediterranean. But his final destination was the enemy state of Israel. There, one million U.S. dollars was waiting for him in a bank account in Tel Aviv.

Six hundred miles to the west, the head of the Israeli air force, Major General Mordechai Hod, waited anxiously for Munir Redfa's MiG to appear as a blip on his own radar screen. When it finally appeared, General Hod scrambled a group of delta-wing Mirage fighters to escort Redfa to a secret base in the Negev Desert. It was a groundbreaking event. Israel was now the first democratic nation to have in its possession a Russian-made MiG-21, the top gun fighter not just in Russia and its Communist proxies but throughout the Arab world.

The plan had been years in the making. Four years, to be exact, dating back to 1963, when Meir Amit first became head of the Mossad. [Amit sat down with the Israeli air force](#) and asked them what they would consider the single greatest foreign-intelligence contribution to national security. The answer was short, simple, and unanimous: bring us an MiG. The enemy air forces of Syria, Egypt, Jordan, and Iraq all flew Russian MiGs. Before Redfa's defection, the Mossad had tried twice, unsuccessfully, to acquire the airplane. In one case, an Egyptian-born Armenian intelligence agent known as John Thomas was caught in the act of espionage. His punishment was death; he and several coconspirators were hanged in an Egyptian public square.

For years, Mossad searched for a possible candidate for defection. Finally, in early 1966, they found a man who fit the profile in Munir Redfa, a Syrian Christian who had previously expressed feelings of persecution as a religious minority in a squadron of Muslims. Mossad dispatched a beautiful female intelligence agent to Baghdad on a mission. The agent worked the romance angle first, luring Redfa to Paris with the promise of sex. There, she told Redfa the truth about what she was after. In return for an Iraqi air force MiG, Redfa would be paid a million dollars and given a new identity and a safe haven for himself and his family. Redfa agreed.

With an MiG now in their possession, the Israelis set to work understanding the strengths and weaknesses of the aircraft in flight. If it ever came to war, the Israelis would be uniquely prepared for air combat. Which is exactly what happened in June of 1967. What Israel learned from Munir Redfa's MiG ultimately allowed them to overpower the combined air forces of Syria, Egypt, and Jordan during the Six-Day War.

Back in Washington, CIA chief Richard Helms was briefed on Redfa's story by [James Jesus Angleton](#), the man running the CIA station in Tel Aviv. Angleton was a Harvard- and Yale-educated intelligence officer who had been in the espionage business for twenty-five years. Angleton, who died in 1987, remains one of the [Agency's most enigmatic and bellicose spies](#). He is famous within the Agency for many things, among them his idea that the Soviet propaganda machine worked 24-7 to create an ever-widening ["wilderness of mirrors."](#) This wilderness, Angleton said, was the product of a myriad of KGB deceptions and stratagems that would one day ensnare, confuse, and overpower the West. Angleton believed that the Soviets could manipulate the CIA into believing false information was true and true information was false. The CIA's inability to discern the truth inside a forest of Soviet disinformation would be America's downfall, Angleton said.

James Jesus Angleton allegedly had as many enemies inside the Agency as inside the KGB, but Richard Helms trusted him. Helms and Angleton had known each other since World War II, [when they worked in the OSS counterintelligence unit, X-2](#). In the 1960s, in addition to acting as the liaison between the CIA and the FBI, Angleton controlled the Israeli "account," which meant he provided Helms with almost everything Helms knew about Israel.

During the course of negotiating the deal to get the MiG, the details of which remain classified, Angleton acquired additional information regarding Israel that he provided to Helms, and that Helms provided to the president. This included seemingly prophetic information about the Six-Day War before the Six-Day War began. The Israelis had been telling the State Department that they were in great danger from their Middle East neighbors when really, Helms explained to the president, Israel had the tactical advantage. Israel was playing the weak card in the hope of winning American military support. Helms also said that he'd recently met with a senior Israeli official whose visit he saw as "a clear portent that war might come at any time." Coupled with Angleton's assessment, Helms said this meant most likely in a matter of days. When Israel launched an attack three days later, [Helms's status with President Johnson](#) went through the roof. "The subsequent accuracy of this prediction established Helms's reputation in the Johnson White House," wrote a CIA historian.

The story of Redfa's defection made international headlines when it happened, in 1966. [But what didn't make the news](#) was what happened once Israel finished with the MiG: the Soviet-made fighter was shipped to Area 51. Colonel Slater, who was commander of Area 51 at the time, remembers how "it arrived in the middle of the night, hidden inside a C-130 [cargo plane], hand-delivered by Israeli intelligence agents." What had been a major coup for Israel was now an equally huge break for the United States. To the Israelis, the MiG was the most dangerous fighter in the Arab world. To the Americans, this was the deadly little aircraft that had been shooting down so many American fighter pilots over Vietnam. The Russians had been supplying the North Vietnamese with MiG-21 aircraft and MiG pilot training as well. Now, with an MiG at Area 51, Agency engineers once again had high-value foreign technology in their hands. "We could finally learn how to beat the MiG in air-to-air combat," Colonel Slater explains.

The path to Area 51 is different for everyone. For T. D. Barnes it began in 1962 when the CIA wanted him to go to Vietnam to be an "adviser" there. Barnes was just back from Bamberg, Germany, where he'd been deployed during the Berlin Wall crisis, tasked with running Hawk missile sites along the border with Czechoslovakia. It had been two years since he'd worked on the CIA's Project Palladium out of Fort Bliss.

"I said I'd go work for the Agency. But I had this dream of becoming an Army officer, which meant going through officer training school first. The Agency and the Army agreed and sent me to officer school." There, during survival training Barnes ripped open his knees and got a rare blood disease. "It just about nearly killed me. I was never going to do combat. I'm lucky I didn't die," says Barnes. He recovered but because of the blood disability, he couldn't go to Vietnam for the CIA. This also meant that after ten years of service, his military career was over. Barnes and his wife, Doris, moved home to Oklahoma and bought a house there with a yard for their two little girls, and one day when [Doris was reading the classified](#) section of the local newspaper, she found an advertisement of interest. "A contractor called Unitech was looking for telemetry and radar specialists that could work on a project involving space," Barnes recalls.

Barnes figured Unitech was harvesting résumés. "Getting a list of people who might be qualified to work on a highly specialized kind of a project if a contract were to materialize with, say, NASA down the road." Barnes told Doris it wasn't worth the phone call. Doris said to call anyway. "Within two days our house was on the market, we were packed up, and we were traveling to this little one-horse town in the Mojave Desert called Beatty." Beatty, Nevada. Population somewhere around 426, depending on who wants to know.

In 1964, [Beatty, Nevada, was one strange town](#). Situated 120 miles northwest of Las Vegas, it lay on a strip of land between Death Valley and Nevada's atomic bomb range. Beatty had one sheriff—he was eighty years old, was a great shot with a rifle, and was missing most of his teeth. Beatty also had nine gas stations, eleven churches, an airstrip, and a whorehouse called the Vicky Star Ranch. Behind the facade, Beatty housed a collection of three- and four-letter federal agencies, many of which were working different angles on various overt and covert operations there. "Nobody knew what anybody else in Beatty was really doing there and since you didn't have a need-to-know you didn't ask," recalls Barnes. Forty-five years later he still hadn't "figured out what the service stations or

the churches were a cover for."

How Beatty worked and who was running whom left much to the imagination. "When Doris and I drove into town that first day," Barnes recalls, "we pulled up to the service station to get some gas. One of the town characters, a semi-homeless person everyone called Panamint Annie, walked up to us and leaned against our car. She looked at me—it was summer—and she said, 'Well, it's hotter than Hell's hubs, now isn't it, Barnes?' I thought, How the hell does she know my last name?" Technically, Barnes had been recruited by Unitech. It turned out they had a contract with the National Aeronautics and Space Administration, or NASA, after all. "But there were lots of other agencies in Beatty who were working in the dark," Barnes says. "Unitech was the sign on the door."

America's space agency set up shop in Beatty in the mid-1960s in order to develop programs that would help get man to the moon. But before NASA landed on Earth's nearest celestial body, they had to conquer space, and to do so, they needed help from the U.S. Air Force. And before NASA conquered space, they had to get to the edge of space, which was why Barnes was in Beatty. He was hired to work on NASA's X-15 rocket plane, a prototype research vehicle that looked and acted more like a missile with wings than an airplane. Each day, Barnes got picked up for work by a NASA employee named Bill Houck, who drove a federal van around town and made a total of ten stops to retrieve all the members of the secret team. They would drive out to the edge of town and begin the short trek to the top of a chaparral-covered mountain where one hangar that was roughly the size of a tennis court, three trailers, and a number of radar dishes made up the NASA high-range tracking station at Beatty. Day after day, the ten-man crew of electronics and radar wizards manned state-of-the-art electronic systems, tracking the X-15 as it raced across the skies above the Mojave, from the Dryden Flight Research Center in California up toward the edge of space. Once, the airplane was forced to make an emergency landing on a dry lake bed not far from Beatty. There was a rule prohibiting transport trucks to haul cargo through Death Valley after dark on weekends, which meant the X-15 rocket had to spend the night in Barnes's driveway. His daughters, ages five and eight, spent the weekend running circles around the James Bond-looking rocket ship parked out front cheering ["Daddy's spaceship!"](#) No one else in Beatty said a thing.

To get into the air, the X-15 was jettisoned off a B-52 mother ship, after which its rocket engine would launch it into the atmosphere like a missile until it reached the edge of space. Touching the tip of space, the X-15 would then turn around and "fly" home, getting up to speeds of Mach 6. That kind of speed made for an incredibly bumpy ride. In a matter of months, Barnes became a hypersonic-flight-support expert. He monitored many things, including telemetry, and was always amazed watching how each of the pilots responded differently to physical stress. "We knew more about what was going on with the pilots' bodies than the pilots knew themselves. From Beatty, we monitored everything. Their heart rates, their pulse, and also everything going on with the pilot and the plane." In case of an accident, NASA had emergency crews set up across California, Nevada, and Utah on various dry lake beds [where the X-15 could land if need be](#). One of those lake beds was Groom Lake. Barnes says, "From watching my radars, I knew something was going on over there at Groom. I could see things on my radar I wasn't supposed to see.

One of those 'things' went really, really fast. Later, when I was briefed on Oxcart, I figured out what I had been watching. But at the time, I didn't have a need-to-know so I didn't say anything about what I saw at Groom Lake and nobody asked."

The X-15 was an exciting and fast-paced project to work on, with groundbreaking missions happening twice a week. As it was with so many of the early projects involving high-speed and high-altitude flight, many different agencies were involved in the program, not just NASA. The Air Force funded a large part of the program. The CIA didn't care about space travel but they were very interested in the ram-jet technology on the X-15, something they had wanted to use on their own D-21 drone. "Everyone monitored each other, technology-wise," Barnes says. To keep the various parties in the loop, there was a designated radio network set up for everyone involved in the project. "There were people from Vandenberg Air Force Base, White Sands Missile Range, Dryden, and CIA monitoring what was going on all day long."

Even though he was only twenty-seven years old, Barnes was the most senior radar specialist in Beatty. And almost immediately he noticed there seemed to be a major problem with the radar. "We tracked the X-15 with radar stations at Edwards, in California, and at Ely, in Nevada. My radar in Beatty was fine but I noticed there was a problem at Edwards and Ely. When the X-15 was parked on the tarmac at either place, the radars there read that it was at an altitude of two thousand feet instead of being on the ground."

Barnes got on the radio channel and told mission control at the Dryden Flight Research Center about the problem. Dryden blamed it on the radar at Beatty, even though Barnes's radar agreed with the airplane's. Over the radio network, Barnes argued his point. The site manager in Beatty was horrified that Barnes dared to challenge his superiors and shot Barnes a dirty look. *Back down*, he mouthed silently. Barnes complied. But just a few weeks later, when he learned that the X-15 was going through a fitting and there weren't going to be any flights for three weeks, Barnes seized the moment. "Now would be a good time to fix your radar problem," Barnes said into the radio network. There were dozens of senior officials listening in. "There was silence on the channel," Barnes remembers. "My site manager whirled around on his chair and glared at me. 'You're on your own, Barnes,' he said. Another one of the other guys, Bill Houck, leaned over to my station, gave me a big old grin and a thumbs-up. But Dryden still wouldn't listen to me. They said the problem was inherent to the radar. That it couldn't be fixed."

By now, Barnes had gotten friendly with the X-15 pilots. Even though they had never met in person, a great rapport had developed between them; understandable, given how much time they spent communicating on headset during flights. Barnes cared about the pilots' safety more than he cared about what his site manager perceived to be insubordination on his part. So Barnes told Dryden exactly what he believed was true. "I've been in radar long enough to know there's no such thing as an inherent problem in radar," Barnes said. "I agree with the airplane. If you don't fix your radar, you're gonna kill one of the pilots one of these days."

There was a deathly silence on the network. Back at Dryden, the communication had been overheard by the pilots who were in the pilots' lounge. X-15 pilot "Joe Walker got on a headset and said, 'Effective immediately, there will be no X-15 flights until the radar

problem is fixed.'" Now Dryden had no choice but to get on it. First, they flew up to the Beatty tracking station in a T-33, where they flew calibration flights to compare radar data with the airplane's altimeter. At Ely, they did the same thing. Barnes was right. The radar at Beatty was correct. Though both agreed with their data, the Dryden Flight Research Center and the Ely tracking station were off by two thousand feet. The radars were torn down and reassembled, to no avail. It was finally discovered that they were vintage radars, left over from World War II, and they had never been retrofitted with the field modification the way the radar at Beatty had. Unitech got a huge Christmas bonus, and no one got killed.

Of major significance for Barnes was that somewhere off in the black operations either a man named John Grace had been listening as the whole scenario went down. John Grace worked for the CIA, and Barnes's name rang a bell. Grace asked his staff to look into this Barnes character, the man whose unique confidence in radar had wound up saving the day. Grace wanted to get Barnes hired for a project that would be coming to Groom Lake—something that even Barnes had been in the dark on back then.

Working at Beatty meant running multiple jobs, and there was a second aircraft Barnes was in charge of tracking—the XB-70. This experimental program was all that remained of General LeMay's once-beloved B-70 bomber now that it had been canceled by Congress, despite four billion dollars invested. The *X* in front of *B-70* indicated that the bomber was now an experimental test bed for supersonic transport. It was a behemoth of an airplane, the fastest-flying six-engined aircraft in the world. On June 8, 1966, the mission for the day was a photo op with the XB-70 as the centerpiece. An F-4, an F-5, a T-38, and an F-104 would fly in formation alongside. Barnes was in charge of monitoring telemetry, radar, and communications from the Beatty tracking station. "General Electrics had built the engines on all six airplanes flying that day," Barnes says. "They wanted a photograph of all their aircraft flying in a tight formation for the cover of their shareholders' meeting manual that year."

It was a clear day, with very little natural turbulence in the air. The six aircraft took off from Dryden and headed west. About thirty minutes later, the pilots began getting into formation over the Mojave Desert. Barnes was monitoring data and listening on headphones. Using his personal Fischer recording system, Barnes was also taping the pilot transmissions. For this particular photo op, the X-15 pilot, Joe Walker, whom Barnes had gotten to know well, was flying in the F-104. Walker was on the right wing of the aircraft and was trying to hold his position when turbulence by the XB-70's six engines made him uncomfortable. "Walker came on the radio and spoke very clearly," Barnes recalls. "He said, 'I'm opposing this mission. It is too turbulent and it has no scientific value.'"

Only a few seconds later, [a catastrophic midair collision occurred](#). "We heard the pilots screaming, 'Midair! Midair! And I realized at first the XB-70 didn't know it had been hit,'" Barnes remembers. Joe Walker's F-104 had slammed into the much larger airplane, caught fire, and exploded. On the XB-70, both vertical stabilizers had been shorn off, and the airplane began to crash. Continuing to pick up speed, the XB-70 whirled uncontrollably into a flat spin. As it headed toward the ground, parts of the aircraft tore loose. One of the

XB-70 pilots, Al White, ejected. The other, Major Carl Cross, was trapped inside the airplane as it slammed into the desert floor. There, just a few miles from Barstow, California, it exploded into flames.

"It was so damn senseless," Barnes says. "A damn photograph." The worst was yet to come. "A lot of people blamed Joe Walker. Easy, because he was dead. There was, of course, the tape of him saying he was opposing the mission. That the vortex on the damn XB-70 was sucking him in. Bill Houck, the NASA monitor at our station, asked me to give him the tape recording to send to Dryden. Once NASA got a hold of it," Barnes says, "someone there quietly disposed of it."

The XB-70 tragedy more or less closed down the program, and the X-15 rocket plane program was finishing up as well. For Barnes, life in Beatty was nearing an end, but one afternoon, Barnes received a phone call. A man identifying himself as John Grace wanted to know if he'd like to come work on an "interesting project" not far away. "Grace said it would be a commute from Las Vegas," Barnes says. Grace told Barnes he would have to get a top secret clearance first. Whatever it was, it sounded exciting. Barnes told Grace, "Sign me up." T. D. Barnes was officially on his way to Groom Lake.

In March of 1968, his top secret clearance finally in place, Barnes learned his new employer was going to be EG&G. He was instructed by a "handler" to arrive at a remote, unmarked hangar at McCarran Airport for his first day at work. There, Barnes was met by a man who shook his hand and escorted him into a small Constellation airplane. "They didn't say anything to me about where we were going and I knew enough about black operations not to ask. It was a nice, quiet ride in the airplane. Just before we landed at Area 51, I heard the pilot say to the copilot, 'They've got the doughnut out.' Then the pilots quickly closed all the curtains on the airplane so when we landed I couldn't see a thing. I wondered what the doughnut was. I didn't ask. I was taken to the EG&G Special Projects building and introduced to our group. The boss said, 'What's your first name?' I said, 'T.D.' He said, 'Not anymore. You're Thunder out here.'" Later that first day, Barnes was taken inside one of the hangars at Area 51. "They opened the door. There sat a Russian MiG. They said, 'This here's the doughnut.' I got a chuckle about that. The pilots who'd brought me to the area had no idea that the whole reason I'd been brought in was because of the doughnut."

Munir Redfa's MiG had been nicknamed the doughnut because the jet fighter's nose had a round opening in it, like a doughnut's. It was the first advanced Soviet fighter jet ever to set its wheels down on U.S. soil. Colonel Slater, overseeing Black Shield in Kadena at the time, remembers getting a call in the middle of the night from one of his staff, Jim Simon. "Simon called me up all excited and said, 'Slater, you are not going to believe this!' He told me about the MiG. How it landed at [Area] 51 in the middle of the night, hidden inside a cargo plane. How it was accompanied by someone from a foreign government. Simon couldn't get over it and I couldn't wait to see it," Slater remembers. Oxcart pilot Frank Murray remembers the excitement of seeing it as well. During Operation Black Shield Murray was on rotation between Area 51 and Kadena when he was taken into the secret hangar to have a look at the MiG. "It was a tiny little sucker, considering how deadly it was," Murray says. "We couldn't believe we had a captured one

up there at the Ranch."

T. D. Barnes and the EG&G Special Projects Group at Area 51 got to work [reverse engineering Colonel Redfa's MiG](#)—taking it apart and putting it back together again. All the engineers knew that this was the best way to really understand how something had been built. The EG&G Special Projects Group appeared to have advance expertise in this technical process of reverse engineering aircraft. At the time, no one knew why, and Barnes, new to the EG&G engineering team, knew better than to ask. He was excited to get to work. "We broke the MiG down into each of its individual pieces. Pieces of the cockpit, the gyros, oscilloscope, fuel flow meter, radio... everything. Then we put it back together. The MiG didn't have computers or fancy navigation equipment." Still, Barnes and his crew were stumped. How was it that this Soviet plane was beating the supposedly more capable U.S. fighters in air-to-air engagements? No one could explain why. So a second program was conceived, the MiG's Have Doughnut tactical phase. During the Have Doughnut, the MiG would begin flying tactical missions against U.S. airplanes in the skies over Groom Lake. The Air Force said it wasn't interested but the Navy leaped at the chance.

"Breaking it down was the first step in understanding the aircraft. But it was by sending the MiG flying that we really figured out how it maneuvered so damn fast," Barnes says. [Test pilots flew a total of 102 MiG missions](#) over Groom Lake. Mock air battles between the MiG and American fighter jets were a daily event for a period of six weeks during the spring of 1968. The program (not including its Area 51 locale) was declassified by the U.S. Air Force Foreign Technology Division in October of 1997 and by the Defense Intelligence Agency in March of 2000. "We learned that you had to sneak right up on it and shoot it down before it had a chance to maneuver. That was the key. Get it on the first chance you get. There were no second chances with a MiG," Barnes explains. Constant flying takes a toll on any aircraft, but with a captured enemy airplane this proved especially challenging. "Since no spare parts were available, ground crews had to reverse engineer the components and make new ones from raw materials," Barnes says. "But when both phases were over, the technical and the tactical ones, we'd unlocked the secrets of the MiG."

There were repercussions from the Soviets. "The fact that we had a MiG at Area 51 infuriated the Russians," explains Barnes. "They retaliated by sending more spy satellites overhead at Area 51, sometimes as often as every forty-five minutes." Up to this point, the Soviets had gotten used to monitoring the routine activity at the base, which consisted primarily of takeoffs and landings of the Oxcart and a few drones. But once the MiG showed up, the U.S. Air Force Foreign Technology Division appeared on the scene too, and with them came various models of Soviet-built radar systems captured in the Middle East. And once the Soviets discovered engineers at Groom Lake were testing these foreign radar systems, they again decided to monitor the situation more closely from overhead.

The newly acquired Soviet radar systems started cropping up around the western edges of the Groom dry lake bed and also around Slater Lake, which was about a mile northwest of the main hangars. Technical evaluation of the radar was quickly assigned to

Barnes. He requested a Nike missile system and was surprised at just how quickly his request was filled. "I think the CIA went and got a Nike missile system at my old stomping ground, Fort Bliss, just about the very next day," Barnes says. With radars scattered all over the range, including acquisition radar that rotated and searched for incoming targets, a geek like Barnes had a field day. "We used the Nike to track the MiGs and other airplanes to evaluate their ECM against X-band radar." What Barnes did not know was that these radar systems were being acquired for the upcoming radar cross-section analysis of an Air Force plane in the works. The Russians had no idea what the Air Force was dreaming up either, but they were duly angry about the captured radars that were now sitting in the hills overlooking Groom Lake.

"We were pinned down," says Barnes. For weeks on end, the Special Projects Group couldn't turn on a single radar system; the Russians were monitoring the area that intensely. Barnes and his group passed the time by playing mind games with the Soviets. They painted strange shapes on the tarmac, "funny-looking impossible aircraft," which they then heated up with portable heaters to confuse the Soviets who were shooting infrared satellite pictures of the work going on there. "We got a kick out of imagining what the Russians thought of our new airplanes," Barnes says. With all the time on their hands, Barnes and his group of twenty-three electronics specialists began dreaming up other ways to entertain themselves. They made up riddles. They placed bets. They played with mixed chemicals that made their tennis sneakers glow in the dark. They rewired the Special Projects motor pool car so it would give the first guy to drive it a series of low-voltage shocks. They rigged up a tall TV antenna on top of their living quarters, hoping to draw reception from Las Vegas. Instead, they tapped into an international channel broadcast out of Spain. "For many months, all we watched were bullfights in Madrid," Barnes recalls.

This was a group of highly trained specialists gathered to pioneer radar technology, so when they finally ran out of practical jokes and bullfights, their attention turned back to problem solving. They started to occupy themselves by examining minutiae on printouts from radar returns. In a serendipitous way, this led to a technological breakthrough at Groom Lake. The EG&G Special Projects Group figured out they could identify specific types of aircraft by the tiniest nuances in the patterns their radar signatures left on various radar systems. This was made possible by the group's unusual advantage of having two things at their disposal: several bands of radar, which allowed them to compare results, and an entire fleet of military aircraft, which were to be used in the tactical phase of the exploitation of the MiG.

What would normally have been a technical endeavor to determine electronic countermeasures against enemy aircraft became a major breakthrough in the further development of stealth technology. From studying the minutiae, Barnes and his fellow radar experts identified what the enemy could and could not see on their radars back home. This information would eventually be shared with Lockheed during radar testing at Area 51, as Lockheed further developed stealth. Technology was doing for humans what humans had forever been trying to do for themselves; to spy on the enemy means to learn as much about him as he knows about himself. That was the technical breakthrough.

There was a tactical breakthrough as well. The ultrasecret MiG program at Area 51 [gave birth to the Top Gun fighter-pilot school](#), a fact that would remain secret for decades. Officially called the United States Navy Fighter Weapons School, the program was established a year after the first MiG arrived, in March of 1969, and based out of Miramar, California. Instructor pilots who had fought mock air battles over Groom Lake against Munir Redfa's MiG began training Navy pilots for sorties against Russian MiGs over Vietnam. When these Top Gun-trained Navy pilots resumed flying in Southeast Asia, the results were radically different than the deadly nine-to-one ratio from before. [The scales had tipped](#). Now, American pilots would begin shooting down North Vietnamese pilots at a ratio of thirteen to one. The captured Soviet-made MiG-21 Fishbed proved to be an aerial warfare coup for the United States. And what followed was a quid pro quo. To thank the Israelis for supplying the United States with the most prized and unknowable aircraft in the arsenal of its archnemesis, America began to supply Israel with jet fighters to assist Israel in keeping its rivals at bay.

Meltdown

The idea behind a facility like Area 51 is that dangerous top secret tests can be conducted there without much scrutiny or oversight. To this end, there is no shortage of death woven into the uncensored history of Area 51. One of the most dangerous tests ever performed there was Project 57, the dirty bomb test that took place five miles northwest of Groom Lake, in a subparcel called Area 13. And yet what might have been the one defensible, positive outcome in this otherwise shockingly outrageous test—namely, lessons gleaned from its cleanup—was ignored until it was too late.

Unlike the spy plane projects at Groom Lake, where operations tend to have clear-cut beginnings and ceremonious endings, Project 57 was abandoned midstream. If the point of setting off a dirty bomb in secret was [to see what would happen](#) if an airplane carrying a nuclear bomb crashed into the earth near where people lived, it follows that serious efforts would then be undertaken by the Atomic Energy Commission to learn how to clean up such a nightmare scenario after the catastrophe occurs. No such efforts were initially made.

Instead, about a year after setting off the dirty bomb, the Atomic Energy Commission put a barbed-wire fence around the Area 51 subparcel, marked it with HAZARD/DO NOT ENTER/NUCLEAR MATERIAL signs, and moved on to the next weapons test. The bustling CIA facility five miles downwind would be relatively safe, the nuclear scientists and the weapons planners surmised. Alpha particles are heavy and would rest on the topsoil after the original dust cloud settled down. Furthermore, almost no one knew about the supersecret project, certainly not the public, so who would protest? The closest inhabitants were the rank and file at the CIA's Groom Lake facility next door, and they also knew nothing of Project 57. The men there followed strict need-to-know protocols, and as far as the commission was concerned, all anyone at Area 51 needed to know was to not venture near the barbed-wire fence marking off Area 13.

And yet the information gleaned from a cleanup effort would have been terribly useful, as was revealed eight years and eight months after Project 57 unfurled. On the morning of January 17, 1966, a real-life dirty bomb crisis occurred over Palomares, Spain. A Strategic Air Command [bomber flying with four armed hydrogen bombs](#)—with yields between 70 kilotons and 1.45 megatons—collided midair with a refueling tanker over the Spanish countryside.

On the morning of the accident, an Air Force pilot and his six-man crew were participating in an exercise that was part of Operation Chrome Dome, something that had begun in the late 1950s as part of Strategic Air Command. In a show of force inherent to the military doctrine of the day—something called mutual assured destruction, or MAD—

airplanes regularly circled Earth carrying thermonuclear bombs. The idea behind MAD was that if the Soviet Union were to make a sneak attack on America, [SAC bombers would already be airborne](#) to strike back at Moscow with nuclear weapons of their own, thereby assuring the mutual destruction of both sides.

That morning, the bomber lined up with the tanker and had just begun refueling when, in the words of pilot Larry Messinger, “[all of a sudden, all hell](#) seemed to break loose” and the two aircraft collided. There was a massive explosion and the men in the fuel tanker were instantly incinerated. Somehow Messinger, his copilot, the instructor pilot, and the navigator managed to eject from the airplane carrying the bombs. Their parachutes deployed, and the men floated down, landing in the sea. The four nuclear bombs—individually powerful enough to destroy Manhattan—also had parachutes, two of which did not deploy. One parachuted bomb landed gently in a dry riverbed and was later recovered relatively intact. But when the two bombs without parachutes hit the earth, their explosive charges detonated, breaking open the nuclear cores. Nuclear material was released at Palomares in the form of [aerosolized plutonium](#), which then spread out across 650 acres of Spanish farmland—consistent with dispersal patterns from the Project 57 dirty bomb test. The fourth bomb landed in the sea and became lost. Palomares was then a small fishing village and farming community located on the Mediterranean Sea. As fortune would have it, January 17 was the Festival of Saint Anthony, the patron saint of Palomares, which meant most people in the village were at church that day and not out working in the fields.

Five thousand miles away, in Washington, DC, [President Johnson learned](#) of the disaster over breakfast. He'd been sitting in his bedroom sipping tea and eating melon and chipped beef when a staffer from the White House Situation Room knocked, entered, and set down a copy of his daily security briefing. On the first page, the president read about the war in Vietnam. On the second page he learned about the Palomares incident. The daily brief said nothing about widespread plutonium dispersal or about the lost thermonuclear bomb. Only that the “16th Nuclear Disaster Team” had been dispatched to the area.” The “16th Nuclear Disaster Team” sounded official enough, but if fifteen nuclear disaster teams had preceded this one or existed concurrently, no record of any of them exists in the searchable Department of Energy archives. In reality, the group was ad hoc, meaning it was put together for the specific purpose of dealing with the Palomares incident. An [official nuclear disaster response team](#) did not exist in 1966 and would not be created for another nine years, until 1975, when retired Brigadier General Mahlon E. Gates, then the manager of the Nevada Test Site, put together the Nuclear Emergency Search Team, or NEST.

In 1966, the conditions in Palomares, Spain, were strikingly similar to the conditions at the Nevada Test Site in terms of geology. Both were dry, hilly landscapes with soil, sand, and wind shear as significant factors to deal with. But considering, with inconceivable lack of foresight, the Atomic Energy Commission had never attempted to clean up the dirty bomb that it had set off at Area 13 nine years before, the 16th Nuclear Disaster Team was, essentially, working in the dark.

Eight hundred individuals with no hands-on expertise were sent to Palomares [to assist in the cleanup efforts](#) there. The teams improvised. One group secured the contaminated

area and prepared the land to remove contaminated soil. A second group worked to locate the lost thermonuclear bomb, called a broken arrow in Defense Department terms. The group cleaning up the dispersed plutonium included "specialists and scientists" from the Los Alamos Laboratory, the Lawrence Radiation Laboratory, Sandia Laboratories, Raytheon, and EG&G. It was terribly ironic. The very same companies who had engineered the nuclear weapons and whose employees had wired, armed, and fired them were now the companies being paid to clean up the deadly mess. This was the military-industrial complex in full swing.

For the next three months, workers labored around the clock to decontaminate the site of deadly plutonium. By the time the cleanup was over, more than fourteen hundred tons of radioactive soil and plant life were excavated and shipped to the Savannah River plant in South Carolina for disposal. The majority of the plutonium dispersed on the ground was accounted for, but the Defense Nuclear Agency eventually conceded that the extent of the plutonium particles scattered by wind, carried as dust, and ingested by earthworms and excreted somewhere else "will never be known." As for the missing hydrogen bomb, for forty-four days the Pentagon refused to admit it was lost despite the fact that it was widely reported as being missing. "I don't know of any missing bomb," one Pentagon official told the Associated Press. Only after the bomb was recovered from the ocean floor did the Pentagon admit that it had in fact been lost.

The nuclear accidents did not stop there. Two years and four days later there was another airplane crash involving a Strategic Air Command bomber and four nuclear bombs. On January 21, 1968, an uncontrollable fire started on board a B-52G bomber during a secret mission over Greenland. Six of the seven crew members bailed out of the burning airplane, which crested over the rooftops of the American air base at Thule and slammed into the frozen surface of North Star Bay. The impact detonated the high explosives in at least three of the four thermonuclear bombs—similar to exploding multiple dirty bombs—spreading radioactive plutonium, uranium, and tritium over a large swath of ice. A second fire started at the crash site, consuming bomb debris, wreckage from the airplane, and fuel. After the inferno burned for twenty minutes the ice began to melt. One of the bombs fell into the bay and disappeared beneath the frozen sea. In November of 2008, a BBC News investigation found that the Pentagon ultimately abandoned that fourth nuclear weapon after it became lost.

Once again, an ad hoc emergency group was put together; there was still no permanent disaster cleanup group. This time five hundred people were involved. The conditions were almost as dangerous as the nuclear material. Temperatures fell to -70 degrees Fahrenheit, and winds blew at ninety miles per hour. Equipment froze. In a secret SAC document, made public by a Freedom of Information Act request in 1989, the Air Force declared their efforts would be nominal, "a cleanup undertaken as good housekeeping measures." with officials anticipating the removal of radioactive debris "to equal not less than 50%" of the total of what was there. For eight months, a crew calling themselves the Dr. Freezelove Team worked around the clock. When they were done, 10,500 tons of radioactive ice, snow, and crash debris was airlifted out of Greenland and flown to South Carolina for disposal.

Back at the Nevada Test Site, a new industry had been born in nuclear accident cleanup. But before anything can get cleaned up, an assessment must be made regarding how much lethal radiation is present, where exactly, and in what form. All across the desert floor, new proof-of-concept, or prototypes, of radiation-detection instruments appeared. Before the nuclear bomb accidents in Spain and Greenland, individual radiation-detection machines were limited to handheld devices like Geiger counters, used to examine workers' hands and feet and to search for radiation in limited local areas. Finally, gadgets and gizmos flooded the Nevada Test Site for field-testing in a post-nuclear accident world. After the Nuclear Test Ban Treaty of 1963, testing had moved underground, but often these underground tests "vented," releasing huge plumes of radiation from fissures in the earth. The test site was the perfect place to test equipment because there was an abundance of plutonium, americium, cesium, cobalt, europium, strontium, and tritium in the topsoil, and no shortage of radiation in the air.

First came new handheld devices, like a briefcase called the Neutron Detector Suitcase, a prototype designed by EG&G, which was followed by more advanced means of detecting radiation, including ground vehicles. The Sky Scanner, developed by the Lawrence Radiation Laboratory at Livermore, roamed down the test site's dirt roads measuring radioactivity escaping from atomic vents. The Sky Scanner looked like a news van with a satellite dish, but inside it was full of equipment that could determine how much fallout was in the air. Next came fixed-wing aircraft that could patrol the air over an accident site. Used to detect fallout since Operation Crossroads, they were now equipped with state-of-the-art, still-classified radiation-detection devices. This marked the birth of a burgeoning new military technology that would become one of the most important and most secret businesses of the twenty-first century. [Called remote sensing](#), it is the ability to recognize levels of radioactivity from a distance using ultraviolet radiation, infrared, and other means of detection.

Within a decade of the disastrous nuclear accidents at Palomares and Thule, EG&G would so dominate the radiation-detection market that the laboratory built at the Nevada Test Site for this purpose was [initially called the EG&G Remote Sensing Laboratory](#). After 9/11, the sister laboratory, at Nellis Air Force Base in Las Vegas, was called the Remote Sensing Laboratory and included sensing-detection mechanisms for all types of WMD. This facility would become absolutely critical to national security, so much so that by 2011, T. D. Barnes says that "only two people at Nellis are cleared with a need-to-know regarding classified briefings about the Remote Sensing Lab." Barnes is a member of the Nellis/Creech Air Force Base support team and its civilian military council. But in the 1960s, three nuclear facilities—Los Alamos, Lawrence Livermore, and Sandia—and one private corporation—EG&G—were the organizations uniquely positioned to see the writing on the wall. If nuclear accidents were going to continue to happen, then these four entities were going to [secure the government contracts to clean things up](#).

[EG&G had been taking radiation measurements](#) and tracking radioactive clouds for the Atomic Energy Commission since 1946. For decades, EG&G Energy Measurements has maintained control of the vast majority of radiation measurements records going back to the first postwar test at Bikini Atoll in 1946. Because much of this information was

originally created under the strict Atomic Energy classification Secret/Restricted Data—i.e., it was “born classified”—it has largely remained classified ever since. It cannot be transferred to another steward. For decades, this meant there was no one to compete with EG&G for the remote sensing job. How involved EG&G is in remote sensing today, their [corporate headquarters won't say](#).

So secret are the record groups in EG&G’s archives, even the president of the United States can be denied access to them, as [President Clinton was in 1994](#). One year earlier, a reporter named Eileen Welsome had written a forty-five-page newspaper story for the *Albuquerque Tribune* revealing that the Atomic Energy Commission had secretly injected human test subjects with plutonium starting in the 1940s without those individuals’ knowledge or consent. When President Clinton learned about this, he created an advisory committee on human radiation experiments to look into secrets kept by the Atomic Energy Commission and to make them public. In several areas, the president’s committee succeeded in revealing disturbing truths, but in other areas it failed. In at least one case, regarding a secret project at Area 51, the committee was denied access to records kept by EG&G and the Atomic Energy Commission on the grounds that [the president did not have a need-to-know](#) about them. In another case, regarding the nuclear rocket program at Area 25 in Jackass Flats, the president’s committee also failed to inform the public of the truth. Whether this is because the record group in EG&G’s archive was kept from the committee or because the committee had access to it but chose not to report the facts in earnest remains unknown. Instead, what happened at Jackass Flats, well after atmospheric testing had been outlawed around the world, gets a [one-line reference](#) in the Advisory Committee’s 937-page Final Report, grouped in with dozens of other tests involving “intentional releases” near human populations. “At AEC sites in Nevada and Idaho, radioactive materials were released in tests of the safety of bombs, nuclear reactors, and proposed nuclear rockets and airplanes,” the report innocuously reads.

[If Area 51 had a doppelgänger](#) next door at the test site, it would certainly be Area 25, which encompasses 223 square miles. The flat, sandy desert expanse got its name during the gold rush when miners used to tie their donkeys to trees in the flat area while searching the surrounding mountains for gold. Like Area 51, Jackass Flats is surrounded by mountain ranges on three of its four sides, making them both hidden sites within federally restricted land. Unlike Area 51, which technically does not exist, Jackass Flats in the 1950s and 1960s maintained a polished public face. When President Kennedy visited the Nevada Test Site in 1962, he went to Jackass Flats to promote the space travel programs that were going on there. Richard Mingus was one of the security guards assigned to assist the president’s Secret Service detail that day. Photographs that appeared in the newspapers showed the handsome president, wearing his signature sunglasses and dark suit, flanked by aides while admiring strange-looking contraptions rising up from the desert floor; Mingus stands at attention nearby. Next to the president is Glenn Seaborg, then head of the Atomic Energy Commission and the man who co-discovered plutonium. But as with most nuclear projects of the day, the public was only told a fraction of the story. There was a lot more going on at Jackass Flats behind the scenes—and in underground facilities there—about which the public had no idea.

Area 25 began as the perfect place for America to launch a nuclear-powered spaceship that would get man to Mars and back in the astonishingly short time of 124 days. The spaceship was going to be enormous, sixteen stories tall and [piloted by one hundred and fifty men](#). Project Orion seemed like a space vehicle from a science fiction novel, except it was real. It was the brainchild of a former Los Alamos weapons designer named Theodore Taylor, a man who saw space as the last "new frontier."

For years, beginning in the early 1950s, [Taylor designed nuclear bombs for the Pentagon](#) until he began to doubt the motives of the Defense Department. He left government service, at least officially, and joined General Atomics in San Diego, the nuclear division of defense contractor General Electric. There, he began designing nuclear-powered spaceships. But to build a spaceship that could get to Mars required federal funding, and in 1958 General Atomics presented the idea to President Eisenhower's new science and technology research group, the Advanced Research Projects Agency, or ARPA. The agency had been created as a result of the Sputnik crisis, its purpose being to never let the Russians one-up American scientists again. Today, the agency is known as DARPA. The D stands for *defense*.

At the time, developing cutting-edge space-flight technology meant hiring scientists like Wernher Von Braun to design chemical-based rockets that could conceivably get man to the moon in a capsule the size of a car. Along came Ted Taylor with a proposal to build a Mars-bound spaceship the size of an office building, thanks to nuclear energy. For ARPA chief Roy Johnson, Ted Taylor's conception was love at first sight. "[Everyone seems to be making plans](#) to pile fuel on fuel on fuel to put a pea into orbit, but you seem to mean business," the ARPA chief told Taylor in 1958.

General Atomics was given a one-million-dollar advance, a classified project with a code name of Orion, and a maximum-security test facility in Area 25 of the Nevada Test Site at Jackass Flats. The reason Taylor's spaceship needed an ultrasecret hiding place and could not be launched from Cape Canaveral, as other rockets and spaceships in the works could be, was that the Orion spacecraft would be powered by two thousand "small-sized" nuclear bombs. Taylor's original idea was to dispense these bombs from the rear of the spaceship, the [same as a Coke machine](#) dispenses sodas. The bombs would fall out behind the spaceship, literally exploding and pushing the spaceship along. The Coca-Cola Company was even hired to do a classified early design.

At Area 25, far away from public view, Taylor's giant spaceship would launch from eight 250-foot-tall towers. Blastoff would mean Orion would rise out of a column of nuclear energy released by exploding atomic bombs. "[It would have been the most sensational thing anyone ever saw](#)." Taylor told his biographer John McPhee. But when the Air Force took over the project, they had an entirely different vision in mind. ARPA and the Air Force reconfigured Orion into a space-based battleship. From high above Earth, a USS *Orion* could be used to launch attacks against enemy targets using nuclear missiles. Thanks to *Orion*'s nuclear-propulsion technology, the spaceship could make extremely fast defensive maneuvers, avoiding any Russian nuclear missiles that might come its way. It would be able to withstand the blast from a one-megaton bomb from only five hundred feet away.

For a period of time in the early 1960s the Air Force believed Orion was going to be invincible. "[Whoever builds Orion will control the Earth!](#)" declared General Thomas S. Power of the Strategic Air Command. But no one built Orion. After atmospheric nuclear tests were banned in 1963, the project was indefinitely suspended. Still wanting to get men to Mars, NASA and the Air Force turned their attention to nuclear-powered rockets. From now on, there would be no nuclear explosions in the atmosphere at Jackass Flats—at least not officially. Instead, the nuclear energy required for the Mars spaceship would be contained in a flying reactor, with fuel rods producing nuclear energy behind barriers that were lightweight enough for space travel but not so thin as to cook the astronauts inside. The project was now called NERVA, which stood for Nuclear Engine Rocket Vehicle Application. The facility had a public name, even though no one from the public could go there. It was called the Nuclear Rocket Test Facility at Jackass Flats. A joint NASA/Atomic Energy Commission office was created to manage the program, called the [Space Nuclear Propulsion Office, or SNPO](#).

For T. D. Barnes, working on the NERVA nuclear reactor was a bit of a stretch—his area of expertise was missile and radar technologies. But when things got slow over at Area 51 in the late 1960s, Barnes, a member of EG&G Special Projects team, would be dispatched over to Area 25 to work on the NERVA program. Even though NERVA had been sold to Congress as a public program, all its data was classified, as were the day-to-day goings-on in Area 25. Barnes's workstation could not have been more hidden from the public. It was underground, [built into the side of a mountain](#) that rose up from the flat desert landscape. Each morning Barnes and his fellow Q-cleared coworkers who lived in and around Las Vegas parked in employee parking lots down at the entrance to the Nevada Test Site, at Camp Mercury, and were then shuttled out to Jackass Flats in Atomic Energy Commission motor pool vans. "Some of the people working on NERVA lived in Beatty and Amargosa Valley and drove to the tunnel themselves," Barnes adds.

All NERVA employees entered work through a small portal in the side of the mountain, "shaped like the entrance to an old mining shaft, but spiffed up a bit," Barnes recalls, remembering "large steel doors and huge air pipes curving down from the mesas and entering the tunnel." Inside, the concrete tunnel was long and straight and ran into the earth "as far as the eye could see." Atomic Energy Commission records indicate [the underground tunnel was](#) 1,150 feet long. Barnes remembered it being brightly lit and sparkling clean. "There were exposed air duct pipes running the length of the tunnel as well as several layers of metal cable trays, which were used to transport heavy items into and out of the tunnel," he says. "The ceiling was about eight feet tall, and men walked through it no more than two abreast." There was also a tarantula problem at Jackass Flats, which meant every now and then, Barnes and his colleagues would spot a large hairy spider running down the tunnel floors or scampering along its walls.

Deep in the tunnel Barnes would come up against a last set of closed doors. When they opened, they revealed a succession of brightly lit rooms filled with desks. Barnes explains, "Moving closer to ground zero where the tunnel ended, we entered a large subterranean room stacked floor to ceiling with rows of electronic amplifiers, discriminator circuits, and multiplexing components and banks of high-tech equipment lining the walls."

Standing in front of the row of electronics was an engineer "usually with a cart full of electronic test equipment calibrating and repairing electronic circuits," Barnes explains. These workers were all preparing for what was actually going on aboveground, and that was full-power, full-scale nuclear reactor engine tests. In order for NASA and the Atomic Energy Commission to be able to verify that NERVA could actually propel a spaceship filled with astronauts the [34 million to 249 million miles to Mars](#) (the distance depends on the positions of the two planets in their orbits), those federal agencies had to witness NERVA running full power for long periods of time here on Earth first. To test that kind of thrust without having the engine launch itself into space, it was caged inside a test stand and positioned upside down.

For each engine test, [a remote-controlled locomotive](#) would bring the nuclear reactor over to the test stand from where it was housed three miles away in its own cement-block-and-lead-lined bunker, called E-MAD. "We used to joke that the locomotive at Jackass Flats was the slowest in the world," Barnes explains. "The only thing keeping the reactor from melting down as it traveled down the railroad back and forth between E-MAD and the test stand was the liquid hydrogen [LH_2] bath it sat in." The train never moved at speeds more than five miles per hour. "One spark and the whole thing could blow," Barnes explains. At -320 degrees Fahrenheit, liquid hydrogen is one of the most combustible and dangerous explosives in the world. James A. Dewar, author of *To the End of the Solar System: The Story of the Nuclear Rocket*, gets even more specific. "[One hundredth of what one might receive](#) from shuffling along a rug and then touching a wall can ignite hydrogen," Dewar wrote in 2004. To help visualize what the facilities aboveground at Jackass Flats looked like, Barnes likens them to Cape Kennedy. "Imagine a one-hundred-twenty-foot-tall aluminum tower rising up from a plateau of cement surrounded by a deep, concrete aqueduct. Add some huge, spherical thermos-like dewars sitting around, each containing something like two hundred and sixty thousand gallons of liquid hydrogen, and you can visualize the space-launch appearance of things," Barnes explains. In Atomic Energy photographs from the 1960s, a single set of train tracks can be seen running along the bottom of the cement aqueduct and disappearing into an opening underneath the tall metal tower. "The railroad car carried the nuclear reactor up to the test stand and lifted it into place using remotely controlled hydraulic hands," Barnes explains. "Meanwhile, we were all underground looking at the reactor through special leaded-glass windows, taking measurements and recording data as the engine ran." The reason the facility was buried inside the mountain was not only to hide it from the [Soviet satellites spying](#) on the U.S. nuclear rocket program from overhead, but to shield Barnes and his fellow workers from radiation poisoning from the NERVA reactor. "Six feet of earth shields a man from radiation poisoning pretty good," says Barnes.

When running at full power, the nuclear engine operated at a temperature of [2,300 Kelvin](#), or 3,680.6 degrees Fahrenheit, which meant it also had to be kept cooled down by the liquid hydrogen on a permanent basis. "While the engine was running the canyon was like an inferno as the hot hydrogen simultaneously ignited upon contact with the air," says Barnes. These nuclear rocket engine tests remained secret until the early 1990s, when a reporter named Lee Davidson, the Washington bureau chief for Utah's *Deseret News*,

provided the public with the first descriptive details. ["The Pentagon released information after I filed a Freedom of Information Act."](#) Davidson says. In turn, Davidson provided the public with previously unknown facts: "bolted down, the engine roared... sending skyward a plume of invisible hydrogen exhaust that had just been thrust through a superheated uranium fission reactor," Davidson revealed. Researching the story, he also learned that back in the 1960s, after locals in Caliente, Nevada, complained that iodine 131—a major radioactive hazard found in nuclear fission products—had been discovered in their town's water supply, Atomic Energy officials denied any nuclear testing had been going on at the time. Instead, officials blamed the Chinese, stating, "Fresh fission products probably came from an open-air nuclear bomb test in China." In fact, a NERVA engine test had gone on at Area 25 just three days before the town conducted its water supply test.

Had the public known about the NERVA tests when they were going on, the tests would have been perceived as a nuclear catastrophe in the making. Which is exactly what did happen. ["Los Alamos wanted a run-away reactor."](#) wrote Dewar, who in addition to being an author is a longtime Atomic Energy Commission employee, "a power surge until [the reactor] exploded." Dewar explained why. "If Los Alamos had [data on the most devastating accident possible](#), it could calculate other accident scenarios with confidence and take preventative measures accordingly." And so, on January 12, 1965, the nuclear rocket engine code-named Kiwi was allowed to overheat. High-speed cameras recorded the event. The temperature rose to ["over 4000°C until it burst](#), sending fuel hurtling skyward and glowing every color of the rainbow," Dewar wrote. Deadly radioactive fuel [chunks as large as 148 pounds](#) shot up into the sky. One ninety-eight-pound piece of radioactive fuel landed more than a quarter of a mile away.

Once the explosion subsided, a radioactive cloud rose up from the desert floor and "stabilized at 2,600 feet" where it was met by an EG&G aircraft ["equipped with samplers mounted on its wings."](#) The cloud hung in the sky and began to drift east then west. "It [blew over Los Angeles](#) and out to sea," Dewar explained. The full data on the EG&G radiation measurements remains classified.

The test, made public as a "safety test," caused an international incident. The Soviet Union said it violated the Limited Test Ban Treaty of 1963, which of course it did. But the Atomic Energy Commission had what it wanted, ["accurate data from which to base calculations."](#) Dewar explained, adding that "the test ended many concerns about a catastrophic incident." In particular, the Atomic Energy Commission and NASA both now knew that "in the event of such a launch pad accident [the explosion] proved death would come quickly to anyone standing 100 feet from ground zero, serious sickness and possible death at 400 feet, and an unhealthy dose at 1000 feet."

Because it is difficult to believe that the agencies involved did not already know this, the question remains: What data was Atomic Energy Commission really after? The man in charge of the project during this time, Space Nuclear Propulsion Office director Harold B. Finger, was reached for comment in 2010. ["I don't recall that exact test."](#) Finger says. "It was a long time ago."

Five months later, in June of 1965, disaster struck, this time officially unplanned. That is when another incarnation of the nuclear rocket engine, [code-named Phoebus](#), had been

running at full power for ten minutes when "[suddenly it ran out of LH₂](#) [liquid hydrogen and] overheated in the blink of an eye," wrote Dewar. As with the planned "explosion" five months earlier, the nuclear rocket reactor first ejected large chunks of its radioactive fuel out into the open air. Then "the remainder fused together, as if hit by a giant welder," Dewar explained. Laymen would call this a meltdown. The cause of the accident was a faulty gauge on one of the liquid hydrogen tanks. One gauge read a quarter full when in reality there was nothing left inside the tank.

So radiated was the land at Jackass Flats after the Phoebus accident, even HAZMAT [cleanup crews in full protective gear could not enter the area for six weeks](#). No information is available on how the underground employees got out. Originally, Los Alamos tried to send robots into Jackass Flats to conduct the decontamination, but according to Dewar the robots were "slow and inefficient." Eventually humans were sent in, driving truck-mounted vacuum cleaners to suck up deadly contaminants. Declassified Atomic Energy Commission photographs show workers in protective gear and gas masks picking up radioactive chunks with [long metal tongs](#). Like many Atomic Energy Commission officials, Dewar saw the accident as "achieving some objectives." That "while certainly unfortunate, unplanned, unwanted and unforeseen," he believed that "calling the accident 'catastrophic' mocks the meaning of the word." The cleanup process took four hundred people two months to complete.

So what happened to NERVA in the end? When Barnes worked on NERVA in 1968, the project was well advanced. But space travel was on the wane. By 1970, the public's infatuation with getting a man to Mars had made an abrupt about-face. Funding dried up, and NASA projects began shutting down. "We did develop the rocket," Barnes says. "We do have the technology to send man to Mars this way. But environmentally, we could never use a nuclear-powered rocket on Earth in case it blew up on takeoff. So the NERVA was put to bed." That depends how one defines *put to bed*. President Nixon canceled the program, and it [officially ended on January 5, 1973](#). Several employees who worked at the NERVA facility at Jackass Flats say the nuclear rocket program came to a dramatic, cataclysmic end, one that has never before been made public. "We know the government likes to test accidents in advance," Barnes says. Darwin Morgan, spokesman for the National Nuclear Security Administration, Nevada Site Office, says [no such final test](#) ever happened. "Something like that would have been too huge of an event to have happened to 'cover up,'" Morgan says. "I've talked to people in our classified repository. They don't have anything."

The record suggests otherwise. In studying Area 25 to determine how former Atomic Energy Commission workers and contractors with cancer may have been exposed to potentially lethal doses of radiation there, investigators for the National Institute for Occupational Safety and Health determined that "two nuclear reactors" were in fact destroyed there. "[Due to the destruction of two nuclear reactors](#) and transport of radioactive material, the area was extensively contaminated with enriched uranium, niobium, cobalt, and cesium," the authors of the report concluded in 2008.

The full data relating to the last tests conducted on the NERVA nuclear rocket remain classified as Restricted Data and the Department of Energy has repeatedly declined to

release the documents. Atomic Energy Commission [records are "well organized and complete](#) but unfortunately, most are classified or kept in secure areas that limit public access," Dewar wrote. As for the records from the Space Nuclear Propulsion Office, Dewar said that "many SNPO veterans believe its records were destroyed after the office was abolished in 1973" and that "in particular, the chronology file of Harold Finger, Milton Klein and David Gabriel, SNPO's directors, would [be] invaluable" in determining the complete story on NERVA. When reached for comment, Harold Finger clarified that he left the program as director in 1968. "I have no knowledge of any meltdown," Finger said, suggesting that his former deputy [Milton Klein might know](#) more. "I left the program as director in 1971," Klein said, "and do not have any information about what happened to NERVA in the end."

In January of 2002, as part of the Nevada Environmental Restoration Project, the National Nuclear Security Administration conducted a study regarding proposed cleanup of the contaminated land at Area 25. The report revealed that the following [radioactive elements were still present](#) at that time: "cobalt-60 (Co-60); strontium-90 (Sr-90); yttrium-90 (Y-90); niobium-94 (Nb-94); cesium-137 (Cs-137); barium-137m (Ba-137m); europium-152, -154, and -155 (Eu-152, Eu-154, and Eu-155); uranium-234, -235, -238 (U-234, U-235, U-238); plutonium-239/240 (Pu-239/240); and americium-241 (Am-241)," and that these radioactive contaminants "may have percolated into underlying soil."

Twenty-eight years after NERVA's questionable end at Jackass Flats, shortly after the terrorist attacks of 2001, the radiated land at [Area 25 started to serve a new purpose](#) when the Department of Homeland Security and the military began training exercises there—including how to deal with cleaning up after a terrorist attack involving a nuclear weapon. T. D. Barnes served as a consultant on several of these endeavors.

NNSA spokesman Darwin Morgan discussed the WMD training that goes on at the test site in a government film that plays at the Atomic Testing Museum in Las Vegas. ["It's a PhD experience for first responders."](#) Morgan said of the test site, "because the site offers real radiation they can't get anywhere else." Still, the National Nuclear Security Administration declined to elaborate on how, exactly, this "real radiation" that contaminated Area 25 occurred.

Perhaps in the early 1970s, the thinking at the Atomic Energy Commission was that [one day a nuclear facility could very well melt down](#) in an American city. Were this to happen, the commission could have argued, it would be a good thing to know what to expect. By 1972, the nuclear energy industry had experienced [five "boom year\(s\)"](#), according to Atomic Energy Commission archives. Without any kind of regulatory arm in place, the commission had been promoting and developing [nuclear reactor "units,"](#) which are the fuel cores that provide energy for nuclear power plants. By the end of 1967, the commission had placed thirty units around the country. The following year, that number jumped to ninety-one, and by 1972 there were one hundred and sixty nuclear reactor units that the Atomic Energy Commission was in charge of overseeing at power plants around the nation.

Six years after the end of the NERVA program at Jackass Flats, the nuclear facility at Three Mile Island nearly melted down, on March 28, 1979. The nuclear reactor there

experienced a partial core meltdown because of a loss of coolant. Officials were apparently stunned. "The people seemed dazed by a situation that wasn't covered in the manuals, torn between logic and standard operating procedures, indecisive in the absence of a strong executive power," read a 1980 report on the disaster prepared for the public by the newly formed Nuclear Regulatory Commission's Special Inquiry Group. Even though similar accident scenarios had been conducted at Area 25, the "executive power," which was the Atomic Energy Commission, apparently did not share the information with its partners at the power plants.

At the same time the Three Mile Island accident happened, a movie called *The China Syndrome* was opening in theaters across the country. The movie was about a government plot to conceal an imminent nuclear meltdown disaster, with Jane Fonda playing a reporter determined to expose the plot. Although it was clear to moviegoers that the film was fictional, it had been made with great attention to technical detail. The Nuclear Regulatory Commission's Special Inquiry Group determined that the combination of the two events—the real and the fictional—resulted in a media firestorm. The fact that the near nuclear meltdown happened in the media glare, wrote the commissioner, "[may be the best insurance that it will not reoccur.](#)" The public's so-called mass hysteria, feared for decades by government elite, really did work in the public's interest after all. At Three Mile Island, the media firestorm and the public's response to it proved to act as a democratic "checks and balances" where the federal government had failed.

For as many nuclear accidents of its own making as the Atomic Energy Commission could foresee, they could not have predicted what happened on January 24, 1978, when a [nuclear-powered Russian spy satellite crashed](#) on North American soil, in Canada. NORAD analysts had been tracking Cosmos 954 since it launched, on September 18, 1977, but after three months, the movements of the spy satellite were causing NORAD ever-increasing alarm. The Russian satellite had been designed to track U.S. submarines running deep beneath the surface of the sea, and what NORAD knew about the satellite was that it was forty-six feet long and weighed 4.4 tons. To get that much payload into orbit required phenomenal power, most likely nuclear.

In December of 1977, analysts determined that the Russian satellite was slipping out of orbit, dropping closer and closer to Earth on each ninety-minute rotation of the globe. Calculations indicated that unless the Russians could get control of their satellite, Cosmos would, in all probability, reenter the atmosphere and crash somewhere in North America within a month. President Carter's national security adviser Zbigniew Brzezinski pressed Moscow for information about what exactly was on board the crashing satellite. The Russians told Brzezinski that Cosmos 954 carried 110 pounds of highly enriched uranium 235.

Richard Mingus worked at the Department of Energy's emergency command center, located in Las Vegas, during the crisis. The center was in charge of controlling public information about the looming nuclear disaster, following directions from the CIA. According to a secret CIA report declassified in 1997, [a decision was made not to inform the public.](#) Trying to predict the public's reaction to a nuclear satellite crash was like "[playing night baseball with the lights out.](#)" wrote CIA analyst Gus Weiss, because "the

outcome of [Cosmos] 954 would be akin to determining the winner of a train wreck." The CIA knew exactly what would happen, and that was that "the satellite was coming down carrying a live reactor." The CIA also believed that "a sensationalized leak would disturb the public in unforeseeable ways." This information has never been made public before.

"[It was extremely tense.](#)" recalls Richard Mingus, who spent several days fielding calls at the emergency command center. By 1978, [NEST](#)—Nuclear Emergency Search Team—was finally trained to handle nuclear disasters. The man in charge was Brigadier General Mahlon E. Gates, also the manager of the Nevada Test Site. According to Gates, "the nucleus for NEST-related activity was [established within EG&G](#), which had responsibility for overall logistics" to the nuclear lab workers and those assigned to NEST by the federal government. The team waited on standby at McCarran Airport, "ready to go the minute the thing crash-landed," Mingus says. "Our job at the emergency command center was to keep people across America from panicking." All that Brzezinski had said publicly was that America was experiencing a "[space age difficulty](#)." Mingus believes this was the right move. "The satellite was still pretty high up, there was no radioactive danger until it actually hit the ground. But imagine the panic if people, or say a mayor of a city, started calling for cities to evacuate based on where they thought the satellite was going to crash down on the next ninety-minute rotation?" Mingus says the feeling at the command center was that if that were to happen, it would be panic like in *The War of the Worlds*.

When Cosmos 954 finally crashed, it hit the earth across a large swath of ice in the middle of the frozen Canadian tundra, one thousand miles north of Montana on Great Slave Lake. At McCarran Airport a fleet of unmarked NEST vans—[meant to look like bakery vans](#) but really loaded with banks of gamma- and neutron-detection equipment inside—drove into the belly of a giant C-130 transport plane and prepared to head north. NEST personnel included the usual players in the nuclear military-industrial complex: scientists and engineers from Los Alamos, Livermore, Sandia, and EG&G. [Troy Wade was the lead federal official](#) dispatched to the crash site. Looking back, he explains, "It was the radioactive fuel we were most concerned about. If a piece comes down that weighs a ton, you can't predict how far and wide the debris, including all that fuel, will go."

For this reason, the first order of business was detecting radiation levels from the air. Wade and the [EG&G remote-sensing team loaded small aircraft](#) and helicopters into the belly of the C-130, alongside the unmarked bread vans, and headed for the Canadian tundra. As part of Operation Morning Light, NEST members scoured a fifty-by-eight-hundred-mile corridor searching for radioactive debris. "This was long before the advent of GPS. There were no mountains to navigate by," Wade says. "The pilots had no reference points. Just a lot of snow and ice out there. Temperatures of nearly fifty degrees below zero." Helping out from [high above was an Air Force U-2](#) spy plane.

After several long months, 90 percent of the debris from Cosmos 954 had been recovered. In the postaccident analysis, officials at NORAD determined that if the satellite had made one last orbit before crashing, its trajectory would have put it down [somewhere on America's East Coast](#).

The Lunar-Landing Conspiracy and Other Legends of Area 51

Two hundred and fifty thousand miles from the Nevada Test Site, on [July 20, 1969](#), with less than ninety-four seconds of fuel remaining, Neil Armstrong and copilot Buzz Aldrin were facing almost certain death as they approached the Sea of Tranquillity on the moon. The autotargeting on their lunar landing module, famously called the *Eagle*, was taking them down onto a football-field-size crater laden with jagged boulders. To have crash-landed there would have meant death. The autotargeting was burning precious fuel with each passing second; the quick-thinking Neil Armstrong turned it off, took manual control of the *Eagle*, and, as he would tell NASA officials at Mission Control in Houston, Texas, only moments later, began “flying manually over the rock field to find a reasonably good area” to land. When Armstrong finally set the *Eagle* down safely on the moon, there was a mere twenty seconds’ worth of fuel left in the descent tanks.

Practice makes perfect, and no doubt [Armstrong's hundreds of](#) hours flying experimental aircraft like the X-15 rocket ship—in dangerous and often death-defying scenarios—helped prepare him for piloting a safe landing on the moon. As with most seminal U.S. government accomplishments, particularly those involving science, it took thousands of men working hundreds of thousands of hours inside scores of research centers and test facilities—not to mention a number of chemical rockets designed by Wernher Von Braun—to get the Apollo 11 astronauts and five additional crews (Apollos 12, 14, 15, 16, and 17) to the moon and back home. A little-known fact is that to prepare for what it would actually be like to walk around on the geology of the moon, the [astronauts visited the Nevada Test Site](#). There, they hiked inside several atomic craters, learning what kind of geology they might have to deal with on the lunar surface’s inhospitable terrain. The Atomic Energy Commission’s [Ernie Williams was their guide](#).

“I spent three days with the astronauts in Areas 7, 9, and 10 during astronaut training, several years before they went to the moon,” Williams recalls. In the 1960s, astronauts had rock-star status, and Williams remembered the event like it was yesterday. “The astronauts had coveralls and wore field packs, mock-ups of the real thing, strapped on their backs. They had cameras mounted on their hats and they took turns walking up and down the subsidence craters. It was steep, rocky terrain,” he explains. Williams originally worked for the Atomic Energy Commission in feeding and housing, making sure the “feed wagon” got to remote areas of the atomic bombing range. “We’d get mashed potatoes and gravy to the faraway places inside the test site,” Williams says, “hot food being a key to morale.” But the multitalented Williams quickly became the test site’s jack-of-all-trades, including astronaut guide. His other jobs included being in charge of the motor pool and helping CIA engineers drill for Area 51’s [first water well](#). But for Williams, the highlight of

his career was escorting the first men on the moon inside the atomic craters.

"I was with them in 1965, and again five years later when they came back," Williams recalls. This time the [astronauts arrived with](#) a lunar roving vehicle to test what it might be like driving on the moon. The astronauts were taken out to the Schooner crater, located on the Pahute Mesa in Area 20. "We picked them up at the Pahute airstrip and took them and the vehicle into the crater where there was pretty rough terrain," Williams explains. "Some boulders out there were ten feet tall. One of the astronauts said, 'If we encounter this kind of thing on the moon, we're not going to get very far.'" Williams recalls the astronauts learning how to fix a flat tire on the moon. "They took off a steel tire and put on a rubber one" out in the field.

The lunar roving vehicle was not a fast-moving vehicle, and the astronauts took turns driving it. "NASA had built it and had driven it in a lot of flat places," Williams explains. "But before it came to the test site and drove on the craters, the vehicle had no real experience on inhospitable terrain. The astronauts also did a lot of walking out there," Williams adds. One of the requirements of the Apollo astronauts who would be driving during moon missions was that they had to be able to walk back to the lunar module if the rover failed.

The craters Williams was talking about are subsidence craters—geologic [by-products of underground bomb tests](#). When a nuclear bomb is placed in a deep vertical shaft, as hundreds were at the test site (not to be confused with tunnel tests), the explosion vaporizes the surrounding earth and liquefies the rock. Once that molten rock cools, it solidifies at the bottom of the cavity, and the earth above it collapses, creating the crater. The glass-coated rock, giant boulders, and loose rubble that remain resemble the craters found on the moon. So similar in geology were the atomic craters to moon craters that in voice transcripts sent back during the Apollo 16 and Apollo 17 missions, [astronauts twice referred to](#) the craters at the Nevada Test Site. During Apollo 16, John W. Young got specific. A quarter of a million miles away from Earth, while marveling at a lunar crater laden with rocks, Young asked fellow astronaut Charles M. Duke Jr., "Remember how it was up at that crater? At Schooner." He was referring to the atomic crater Ernie Williams took the astronauts to in Area 20. During Apollo 17, while looking at the Haemus Mountains, Harrison H. Schmitt can be heard talking about the Buckboard Mesa craters in Area 19. For Ernie Williams, [hearing this comparison was a beautiful moment](#). For lunar-landing conspiracy theorists, of which there are millions worldwide, the feeling was one of suspicion. For these naysayers, Schmitt's telemetry tapes, the moon photographs, the moon rocks—everything having to do with the Apollo moon missions would become grist for a number of ever-growing conspiracies that have been tied to man's journey to the moon.

[Just two months after Armstrong and Aldrin returned](#) home, a UFO-on-the-moon conspiracy was born. On September 29, 1969, in New York City, the newest installment of *National Bulletin* magazine rolled off the printing press with a shocking headline: "Phony Transmission Failure Hides Apollo 11 Discovery. Moon Is a UFO Base," it read. The author of the article, Sam Pepper, said he'd been leaked a transcript of what NASA had allegedly edited out of the live broadcast back from the moon, namely, that there were UFOs there. Various UFO groups pressed their congressmen to take action, several of

whom wrote to NASA requesting a response. "The incident... did not take place," NASA's assistant administrator for legal affairs shot back in a memo from January 1970.

As time passed the ufologists continued to write stories about the [moon being a base for aliens and UFOs](#). For the most part, NASA ignored them. But then, in the midseventies, a newly famous film director named Steven Spielberg decided to make a film about aliens coming down to visit Earth. He sent NASA officials his script for *Close Encounters of the Third Kind*, expecting their endorsement. Instead, NASA sent Spielberg an angry twenty-page letter opposing his film. "I had wanted co-operation from them," [Spielberg said in a 1978 interview](#), "but when they read the script they got very angry and felt that it was a film that would be dangerous. I think they mainly wrote the letter because *Jaws* convinced so many people around the world that there were sharks in toilets and bathtubs, not just in the oceans and rivers. They were afraid the same kind of epidemic would happen with UFOs." Fringe ufologists were one thing as far as NASA was concerned. Steven Spielberg had millions of movie fans. He was a modern-day version of Orson Welles.

Right around the same time, another moon conspiracy theorist let his idea loose on the American public, a theory that did not involve UFOs. In 1974, a man named William Kaysing self-published a book called *We Never Went to the Moon: America's Thirty-Billion-Dollar Swindle*. [With these three questions](#), Kaysing became known as the father of the lunar-landing conspiracy:

How can the American flag flutter when there is no wind on the moon?
Why can't the stars be seen in the moon photographs?
Why is there no blast crater where Apollo's landing vehicle landed?

Kaysing, who died in 2005, often said his skepticism began when he was an analyst and engineer at Rocketdyne, the company that designed the Saturn rockets that allowed man to get to the moon. While watching the lunar landing live on television, he said [he experienced "an intuitive feeling](#) that what was being shown was not real." Later, he began scrutinizing the moon-landing photographs for evidence of a hoax. Kaysing's original three questions have since planted seeds in millions upon millions of people who continue to insist that NASA did not put men on the moon. The lunar-landing conspiracy ebbs and flows in popularity, but as of 2011, it shows no signs of going away.

In August 2001 Kaysing was interviewed by Katie Couric on [the Today show](#). By then, Kaysing's theory had morphed to involve Area 51. He was often quoted as saying that the Apollo landings were filmed at a movie studio there. "Area 51 is one of the most heavily guarded facilities in the United States," Kaysing said, and anyone who tried to go there "could be shot and killed without any warning. With good reason... because the moon sets are still there."

In the twenty-first century, a new generation of moon hoaxers walk in Kaysing's footsteps to expose what they say is NASA's fraud. Like the game of Whac-A-Mole, as soon as one element of the conspiracy appears to be disproven another allegation

surfaces—from missing telemetry tapes to outright murder. So aggravated has America's formidable space agency become over the moon hoaxers that in 2002, NASA hired aerospace historian Jim Oberg to write a book meant to challenge conspiracy theorists' questions and claims—now numbering hundreds—in a point-by-point rebuttal. When news of the project was leaked to the media, NASA got such bad press over it they [canceled the book](#).

The idea that the moon landing was faked was born at a time of high government mistrust. In 1974, for the first time in history, a U.S. president resigned. In 1975, the [CIA admitted it had been running mind-control programs](#), a number of which involved human experiments with dangerous, illegal drugs. Then, in April, Saigon fell. The general antigovernment feeling was heightened by the fact that while government proved capable of many nefarious deeds it had been unable to win the war in Vietnam; [58,193 Americans were killed trying](#).

Kaysing was also tapping into a tradition. There had been one successful [Great Moon Hoax](#) already, over 130 years earlier, in 1835. Beginning on August 25 of that year, the *New York Sun* published a series of six articles claiming falsely that life and civilization had been discovered on the moon. According to the newspaper story, winged humans, beavers the size of people, and unicorns were seen through a powerful telescope belonging to Sir John Herschel, the most famous astronomer at the time. Editions of the newspapers sold out, were reprinted, and sold out again. Circulation soared, and the *New York Sun* made tremendous profits over the story, which readers believed to be true. On the subject of the public's gullibility, Edgar Allan Poe, who also wrote for the paper, said, "The story's impact reflects on the period's infatuation with progress." But the original Great Moon Hoax came and went without a conspiratorial bent because there was no government entity to blame. It was a publicity stunt to sell papers, not perceived as a nefarious plan by a government elite to manipulate and control the common man.

Shortly after Kaysing's book was published (it is still in print as of 2011), a 1978 Hollywood film followed along the same lines. Peter Hyams's *Capricorn One* told the story of a faked NASA landing on Mars. Even James Bond entered the act, referencing a lunar-landing conspiracy in the film *Diamonds Are Forever*. From there, the moon-hoax theory remained a quiet staple among conspiracy theorists for decades, but with the rise of the Internet in the late 1990s, the moon-hoax concept resurfaced and eventually made its way into the mainstream press. In February of 2001, Fox TV aired a documentary-style hourlong segment called *Conspiracy Theory: Did We Land on the Moon?* and the debate was rekindled around the world. This gave way to an unusual twenty-first-century moon-hoax twist.

In September of 2002, [Buzz Aldrin, the second man on the moon](#), agreed to be interviewed by Far Eastern TV. This was because "they seemed like legitimate journalists," Aldrin explains. Buzz Aldrin has the highest profile of the twelve Apollo astronauts who walked on the moon, and he regularly gives interviews. A former fighter pilot, Aldrin flew sixty-six combat missions and shot down two MiG-15s in the Korean War. He is also an MIT-trained physicist, which affords him extra fluency when discussing outer space. Sitting in a suite in the Luxe Hotel in Beverly Hills in the fall of 2002, it did not take

long for Aldrin to realize something was awry when the TV interviewer began asking him questions involving conspiracy theories. "I tried redirecting the discussion back to a legitimate discussion about space," Aldrin says. Instead the interviewer played a clip from the Fox documentary about moon hoaxes. Aldrin believes "conspiracy theories are a waste of everybody's time and energy," and he got up and left the interview. "I'm someone who has dealt with the exact science of space rendezvous and orbital mechanics, so to have someone approach me and seriously suggest that Neil, Mike, and I never actually went to the moon, but that the entire trip had been staged in a sound studio someplace, has to rank with one of the most ludicrous ideas I've ever heard," says Aldrin.

Then, down in the hotel lobby, a large man in his midthirties approached Buzz Aldrin and tried to spark a conversation. The man, whose name was Bart Sibrel, had a film crew with him. "Hey, Buzz, how are you?" Sibrel asked, the cameras rolling. Aldrin said hello and headed out toward the street. Sibrel hurried along beside him, asking more questions. Then he pulled out a very large Bible and began shaking it in the former astronaut's face. "Will you swear on the Bible that you really walked on the moon?" Aldrin, who was seventy-two at the time, said, "You conspiracy people don't know what you're talking about" and turned to walk in the other direction. The man began hurling personal insults and accusations at Aldrin. "Your life is a complete lie!" the man shouted. "And here you are making money by giving interviews about things you never did!" The conspiracy theorist ran in front of Aldrin, blocking his way across the road. Aldrin, who had his stepdaughter with him, walked back to the hotel and asked the bellman to call the police. "You're a coward, Buzz Aldrin!" shouted the conspiracy theorist. "You're a liar; you're a thief!" Aldrin said he'd had enough: "Maybe it was the West Point cadet in me, or perhaps it was the Air Force fighter pilot. Or maybe I'd just had enough of his belligerent character assassination... I popped him." The second man on the moon punched the lunar-landing conspiracy theorist squarely in the jaw, cameras catching it all on tape.

In no time, the video footage was airing on the news, on CNN, on Jay Leno and David Letterman. CNN political commentator Paul Begala gave Aldrin the thumbs-up for pushing back against conspiracy theorists. But elsewhere, all across America, many millions of people agreed with the conspiracy theorists who believed that the lunar landing was a hoax. By the fortieth anniversary of the historic Apollo 11 mission, in 2009, polls conducted in America, England, and Russia revealed that approximately [25 percent of the people interviewed](#) believed the moon landing never happened. Many said they believed that it was faked and filmed at Area 51.

As of 2011, the lunar-landing conspiracy is one of three primary conspiracies said to have been orchestrated at Area 51. The other two that dominate conspiracy thinking [involve captured aliens and UFOs](#), and an underground tunnel and bunker system that supposedly exists below Area 51 and connects it to other military facilities and nuclear laboratories around the country. Each conspiracy theory contains elements of fact, and each is perceived differently by the three government agencies they target: NASA, the CIA, and the Department of Defense. In each conspiracy theory lies an important clue about the real truth behind Area 51.

Michael Schratt, who writes books and travels around the country giving lectures about

government cover-ups at Area 51, says that the secret facility is "directly connected to Edwards [Air Force Base] North Base Complex and Air Force Plant 42 at Palmdale by an underground tube-shuttle tunnel system developed by the Rand Corporation and others [circa] 1960." Schrott also says that Area 51 is "very likely connected to Wright-Patterson Air Force Base in Ohio" this same way. "[The tunnels were dug by a nuclear-powered drill](#) that can dig three miles of tunnel a day," Schrott says. "These tunnels also connect, by underground train, to other military facilities where leaders of government will go and live after a nuclear event" such as World War III.

In fact, underground tunnels, called [N-tunnels, P-tunnels, and T-tunnels](#), have been drilled next door to Area 51, at the Nevada Test Site, for decades. The 1,150-foot-long tunnel at Jackass Flats, drilled into the Calico Mountains, through which NERVA scientists and engineers like T. D. Barnes accessed their underground workstations is but one example of an underground tunnel at the Nevada Test Site. The NERVA complex in Area 25 has since been dismantled and "[deactivated](#)," according to the Department of Energy, but elsewhere at the test site dozens of tunnel complexes exist. In the 1960s, one tunnel dug into the granite mountain of Rainier Mesa, in Area 12, reached down as far as 4,500 feet, nearly a mile underground. There are many such government tunnels and bunkers around America, but it was [the revelation of the Greenbrier bunker](#) by Washington Post reporter Ted Gup in 1992 that set off a firestorm of conspiracy theories related to postapocalypse hideouts for the U.S. government elite—and since 1992, these secret bunkers have been woven into conspiracy theories about things that go on at Area 51.

The Greenbrier bunker is located in the Allegheny Mountains, 250 miles southwest of the nation's capital. Beginning in 1959, the Department of Defense spearheaded the construction of a 112,544-square-foot facility eight hundred feet below the West Virginia wing of the fashionable five-star Greenbrier resort. This secret bunker, completed in 1962, was to be the place where the president and certain members of Congress would live after a nuclear attack. The Greenbrier bunker had dormitories, a mess hall, decontamination chambers, and a hospital staffed with thirty-five doctors. "[Secrecy, denying knowledge of the existence](#) of the shelter from our potential enemies, was paramount to all matters of operation," Paul Bugas, the former onsite superintendent at the Greenbrier bunker, told PBS when asked why the facility was kept secret from the public. Many citizens agree with the premise. Conspiracy theorists disagree. They don't believe that the government keeps secrets to protect the people. Conspiracy theorists believe the leaders of government are only looking to protect themselves.

The underground tunnels and bunkers at the Nevada Test Site may be the most elaborate underground chambers ever constructed by the federal government in the continental United States. The great majority of them are in Area 12, which is located approximately sixteen miles due west of Area 51 in a mountain range called Rainier Mesa. Beginning in 1957, massive tunnel complexes were drilled into the volcanic rock and granite by hard-rock miners working twenty-four hours a day, seven days a week. To complete a single tunnel took, [on average, twelve months](#). Most tunnels ran approximately 1,300 feet below the surface of the earth, but some reached a mile underground. Inside these giant cavities, which averaged one hundred feet wide, the Atomic Energy

Commission and the Department of Defense have exploded [at least sixty-seven nuclear bombs](#). There, the military has tested nuclear blast and radiation effects on everything from missile nose cones to military satellites. A series called the [Piledriver experiments studied survivability](#) of hardened underground bunkers in a nuclear attack. The Hardtack tests sought to learn how "[to destroy enemy targets \[such as\] missile silos](#) and command centers" using megaton bombs. Inside the T-tunnels, scientists created vacuum chambers to simulate outer space, expanding on those dangerous late-1950s upper atmospheric tests code-named Teak and Orange. And the Department of Defense even tested how a stockpile of nuclear weapons inside an underground bunker would hold up to a nuclear blast.

Richard Mingus has spent many years inside these underground tunnel complexes, [guarding many of the nuclear bombs](#) used in the tests before they were detonated. In Mingus's five decades working at the test site, these were his least favorite assignments. "The tunnels were dirty, filthy, you had to wear heavy shoes because there was so much walking on all kinds of rock rubble," Mingus explains. "The air was bad and everything was stuffy. There were so many people working so many different jobs. Carpenters, welders... There were forty-eight-inch cutting machines covering the ground." Most of the equipment was hauled in on railroad tracks, which is at least partially responsible for inspiring conspiracy theories that include trains underneath Area 51—though the conspiracy theorists believe they're able to ferry government elite back and forth between Nevada and the East Coast. In reality, according to Atomic Energy Commission records, the Defense Department built the train system in the tunnels to transport heavy military equipment in and out. If employees wanted to, men like Richard Mingus could ride the train cars down into the underground tunnel complexes, but Mingus preferred to walk.

Unlike atmospheric weapons tests or the atomic tests in vertical shafts that made the moonlike craters, for the T-tunnel nuclear tests, the bomb was one of the first items to arrive on scene. "The bomb was cemented in the back of the tunnel, in a room called the zero room," Mingus says. "That was about three-quarters of a mile distance." Sometimes, Mingus would stand guard with the nuclear bomb at the end of the tunnel for eight- or ten-hour shifts, so he chose to walk in each morning "for the exercise." Mingus also disliked the assignments inside the underground tunnels because they reminded him of a part of his early life he would rather have forgotten. "When I was a kid working the coal mines," Mingus explains. But as anxious as a man standing guard over live nuclear bombs might have been, Mingus remained calm. He says the coal mines of his youth were far more dangerous. "There were no electric drills back then so my brother and I drilled by hand. We'd get down on our knees in those little tunnels—three and a half feet wide, not tall enough to stand up in. We'd use black powder as an explosive, not dynamite. We'd set the powder in the hole, tap it with a rod, use a fuse that was like toilet paper, light it, run out, and then wait for the smoke to clear. Some things you never forget even if you want to," Mingus says.

Before the Limited Test Ban Treaty of 1963, the Pentagon maintained a policy of announcing nuclear weapons tests to the public, usually one or two hours before shot time, which meant somewhere around 3:30 a.m. the day of the blast. [After the test ban, the](#)

[Pentagon reversed its policy](#). Information about underground tests—when they were to take place and how big they would be—was now classified secret. Only if a scientist predicted that an earthquake-like tremor might be felt in Las Vegas, sixty-five miles to the south, was a public announcement made in advance of the nuclear test. And so, from 1963 until the last test in 1992, approximately eight hundred tests were conducted underground. By the late 1990s, decades after the first drills bored into the rock at the Nevada Test Site, the nuclear bombs, the hard-rock miners, and Area 51 had merged into one entity. As it is with many urban legends regarding Area 51, the underground-tunnels idea has been spun from facts.

As creative as conspiracy theorists can be when it comes to Area 51, it is surprising how they have missed the one underlying element that connects the three primary conspiracy theories about the secret facility to the truth. For conspiracy theorists, in the captured-alien-and-UFOs narrative, the federal agency orchestrating the plot is the CIA. In the lunar-landing conspiracy the agency committing the fraud is NASA. In the underground tunnels and bunker plot, the evil operating force is the Department of Defense. And yet the one agency that plays an actual role in the underlying facts regarding all three of these conspiracy theories is the Atomic Energy Commission.

Why have conspiracy theorists missed this connection? Why has the Atomic Energy Commission escaped the scrutiny it deserves? The truth is hidden out in the desert at the Nevada Test Site. To borrow the metaphor of CIA spymaster James Angleton, that is where a “wilderness of mirrors” can be found. Angleton believed the Soviets spun lies from lies and in doing so were able to keep America’s intelligence agents lost in an illusory forest. In this same manner, throughout the Cold War the Atomic Energy Commission created its own wilderness of mirrors out in the Nevada desert, built from illusory half-truths and outright lies. The commission was able to send the public further and further away from the truth, not with “mirrors” but by rubber-stamping documents with Restricted Data, Secret, and Confidential, to keep them out of the public eye. The Area 51 conspiracy theories that were born of the Cold War—the ones peopled by aliens, piloted by UFOs, set in underground cities and on movie sets of the moon—these conspiracies all stand to aid and assist the Atomic Energy Commission in keeping the public away from secret truths.

It is no coincidence that the agency behind some of the most secret and dangerous acts out in the desert—at the Nevada Test and Training Range, the Nevada Test Site, and Area 51—[has changed its name four times](#). First it was called the Manhattan Project, during World War II. Then, in 1947, it changed its name to the Atomic Energy Commission, or AEC. In 1975 the agency was renamed the Energy Research and Development Administration, or ERDA. In 1977 it was renamed again, this time the Department of Energy, “the government department whose [mission is to advance technology and promote related innovation](#) in the United States,” which conveniently makes it sound more like Apple Corporation than the federal agency that produced seventy thousand nuclear bombs. Finally, in 2000, the nuclear weapons side of the agency got a new name for the fourth time: the National Nuclear Security Administration, or NNSA, a department nestled away inside the Department of Energy, or DOE. In August 2010,

even the Nevada Test Site changed its name. It is now called the Nevada National Security Site, or NNSS.

Since the National Security Act of 1947 reorganized government after the war, the Department of Defense, the CIA, the Army, the Navy, and the Air Force have all maintained their original names. The cabinet-level Departments of State, Labor, Transportation, Justice, and Education are all called today what they were when they were born. The Federal Bureau of Investigation has changed its name once since its [formal beginning in 1908](#). Originally it was called the Bureau of Investigation, or BOI. By changing the name of the nation's nuclear weapons agency four times since its creation in 1942, does the federal government hope the nefarious secrets of the Atomic Energy Commission will simply disappear? Certainly, many of its records have.

James Angleton spent his career trying to prove Soviet deception. Angleton argued that totalitarian governments had the capacity to confuse and manipulate the West to such a degree that the downfall of democracy was inevitable unless the Soviet deceivers could be stopped. Angleton's belief system made him paranoid and extreme. For three years, he imprisoned a Soviet double agent and former KGB officer named [Yuri Ivanovich Nosenko in a secret CIA prison](#) in the United States—subjecting Nosenko to varying degrees of torture in an effort to break him and get him to tell the "truth." (After passing multiple polygraph tests, Nosenko was eventually released and resettled under an assumed identity. [His true allegiance remains the subject of debate.](#)) The Nosenko affair brought about Angleton's personal downfall. He was fired and he left the Agency disgraced. Deception may be a game between governments but the consequences of engaging in it are, for some, very real.

During the Cold War, the Soviet Union did not have the monopoly on deception. In 1995, after President Clinton ordered his Advisory Committee on Human Radiation Experiments to look into Cold War secret-keeping at the Atomic Energy Commission, disturbing documentation was found. In a [memorandum dated May 1, 1995](#), the subject line chosen by Clinton's committee to sum up early AEC secret-keeping protocol read: "Official Classification Policy to Cover Up Embarrassment." One of the more damaging documents unearthed by Clinton's staff was a September 1947 memo by the Atomic Energy Commission's general manager John Derry. In a document Clinton's staff called the Derry Memo the Atomic Energy Commission ruled: "[All documents and correspondence](#) relating to matters of policy and procedures, the given knowledge of which might compromise or cause embarrassment to the Atomic Energy Commission and/or its contractors," should be classified secret or confidential.

Clinton's staff also discovered a document that read: "... there are a large number of papers which do not violate security, but do [cause considerable concern to the Atomic Energy Commission Insurance Branch.](#)" In other words, the commission classified many documents because it did not want to get sued. A particular problem arose, the memo continued, "in the declassification of [medical papers on human administration experiments done to date.](#)" To find a way around the problem the commission consulted with its "Atomic Energy Commission Insurance Branch." The conclusion was that if anything was going to be declassified it should first be "[rewritten or deleted](#)" so as not to

result in a legal claim.

The Internet is where conspiracy theorists share ideas, the great majority of which involve government plots. It is ironic that the Internet, originally called the DARPA Internet Program, was launched by the Defense Advanced Research Projects Agency (originally called ARPA) in 1969 as a means for the military to communicate digitally during the Vietnam War. [In 2011 there are](#) an estimated 1.96 billion Internet users worldwide—almost one-third of the people on the planet—and the most popular conspiracy Web site based in America is AboveTopSecret.com. According to CEO Bill Irvine, the site sees five million visitors each month. AboveTopSecret.com has approximately 2.4 million pages of content, including 10.6 million individual posts. The Web site's motto is [Deny Ignorance](#), and its members say they are people who “rage against the mindless status quo.”

Of 25,000 AboveTopSecret.com users polled in 2011, the second most popular discussion thread involves extraterrestrials and UFO cover-ups at Area 51. But the single most popular discussion thread at AboveTop Secret.com is something called the New World Order. According to Bill Irvine, this idea has gained momentum at an “astonishing rate” over the past two years. Irvine says it serves as a nexus conspiracy for many others, including those based at Area 51.

The premise of [the New World Order conspiracy theory](#) is that a powerful, secretive cabal of men are aspiring to take over the planet through a totalitarian, one-world government. Some believers of the New World Order call it the Fourth Reich because, they say, it will be similar to Germany’s Third Reich, including Nazi eugenics, militarism, and Orwellian monitoring of citizens’ private lives. As outlandish as this New World Order conspiracy may seem to non-conspiracy thinkers, it touches upon the original secret at Area 51—the real reason why the U.S. government cannot admit that Area 51 exists.

From Camera Bays to Weapons Bays, the Air Force Takes Control

What happened at Area 51 during the 1980s? Most of the work remains classified and very little else is known. One of the [most sensational near catastrophes](#) to happen at Area 51 during this time has never before been revealed—notably not even hinted at in Area 51 legend or lore. It involved [a mock helicopter attack](#) at the guard station that separates the Nevada Test Site from Area 51. So serious was the situation, which included semiautomatic weapons and a nuclear bomb, that both the Pentagon and the White House stepped in.

One of the greatest potential threats to Area 51 in terms of an enemy attack would be from low-flying aircraft or helicopter. "A helicopter would be the aerial vehicle of choice," says Barnes. "Whereas an airplane would be seen airborne long before it reached its target, a helicopter could be trucked in and then launched only a short distance from the restricted area. In that case, the helicopter would breach the security protection before defending aircraft from Area 51 could become airborne." Which is why, to prepare against such threats, security guards like Richard Mingus would often participate in counterattack tests using large low-flying helium balloons as targets. "The balloons simulated helicopters," Mingus explains. The tests used aging V-100 Commando armored personnel carriers, complete with mounted machine guns, left over from the Vietnam War. With four-wheel drive, high clearance, and excellent mobility, the retired amphibious armored car would ferry Mingus and his team of heavily armed sensitive assignment specialists as far as they could get up the mountain range, until the terrain became too steep.

"We'd park the V-100, run the rest of the way up the mountain with machine guns, set up on top of the mountain, and fire at these forty-inch weather balloons. There'd always be a driver, a supervisor, and a loader on the SAS team. We each had an assignment. One guy kept score." Scores were important because the stakes were so high. The Nevada Test Site was the single most prolific atomic bombing facility in the world. It had a three-decade-long history of impeccable security, as did Area 51. Which is what made the breach that Mingus witnessed so radical.

It was a scorching-hot day during the Ronald Reagan presidency, the kind of day at the test site when people knew not to touch metal surfaces outside or they'd wind up getting burned. Mingus believes it was 1982 but can't say for sure, as the event was specifically kept off of his Department of Energy logbook. No longer a security guard, Mingus had been promoted to security operations coordinator for Lawrence Livermore Laboratory. At the time the near catastrophe occurred, the rank-and-file security entourage was escorting

a nuclear device down Rainier Mesa Road. [The bomb, one of eighteen](#) exploded underground at the Nevada Test Site in 1982, was going to be exploded in an underground shaft. As the [five-man security response team](#) trailed behind the bomb transport vehicle (in an armored vehicle of its own), they made sure to keep a short distance behind the nuclear device, as was protocol. "There was a driver, a supervisor, a gunner operating the turret, a loader making sure the ammo feeds into the machine guns and doesn't jam, and two riflemen," Richard Mingus explains. There is always distance between the security team and the bomb: "One of the riflemen handles the tear gas and the other works the grenade launcher. You can shoot both weapons from either the shoulder or the hip. They'll hit a target fifty or seventy-five yards away because if you find yourself under attack and having to shoot, you want distance. You don't want the tear gas coming back and getting you in the nose."

After the security response team and the nuclear bomb arrived at that day's ground zero, a team of engineers and crane operators began the process of getting the weapon safely and securely inside an approximately eight-hundred-foot-deep hole that had been drilled into the desert floor and would house the bomb. Inserting a live nuclear weapon into a narrow, five-foot-diameter shaft required extraordinary precision by a single engineer operating a heavy metal crane. There was no room for error. The crane worked in hundred-foot increments, which in test site—speak were called picks. Only after the second pick was reached, meaning the bomb was two hundred feet down, was the security eased up. Then and only then would two of the men from the response team be released. Until that moment, the bomb was considered unsecured.

Richard Mingus had been part of dozens of ground zero teams over the past quarter of a century but on this particular morning circa 1982 Mingus was coordinating security operations for Livermore from inside a building called the control point, which was located in Area 6, ten miles from the bomb. The nuclear bomb was just about to reach the second pick when chaos entered the scene.

"I was sitting at my desk at the control point when I got the call," Mingus says. "Dick Stock, the device systems engineer supervising the shot at ground zero, says over the phone, 'We're under attack over at the device assembly building!'" In the 1980s, the device assembly building was the place where the bomb components were married with the nuclear material. Because there were several nuclear weapons tests scheduled for that same week, Mingus knew there were likely additional nuclear weapons in the process of being put together at the device assembly building, in Area 27, which Mingus had good reason to believe was now under attack. "Dick Stock said he heard the information coming over the radios that the guys on the security response team were carrying" on their belts. Now it was up to Mingus to make the call about what to do next.

In the twenty-six years he had been employed at the test site, Richard Mingus had worked his way up from security guard to Livermore's operations coordinator. He was an American success story. After his father died in 1941, Mingus dropped out of high school to work the coal mines. Eventually he went back to school, got a diploma, and joined the Air Force to serve in the Korean War. At the test site, Mingus had paid his dues. For years he stood guard over classified projects in the desert, through scorching-hot summers and

cold winters, all the while guarding nuclear bombs and lethal plutonium-dispersal tests. By the mid-1960s, Mingus had saved enough overtime pay to buy a home for his family, which now included the young son he and Gloria had always dreamed about. By the mid-1970s, Mingus had enough money to purchase a second home, a hunting cabin in the woods. By the early 1980s, he had been promoted so many times, he qualified for GS-12, which in federal service hierarchy is only three rungs below the top grade, GS-15. "I attended the school for nuclear weapons orientation at Kirtland Air Force Base and had passed a series of advanced courses," Mingus says. "But nothing, and I mean nothing, prepares you for the experience of thinking the nuclear material you are guarding is under attack."

During that chaotic morning, Mingus knew all he could afford to focus on was the bomb in the hole. "I thought to myself, Dick Stock said the bomb is almost two picks down the hole. We're under attack here. What's best? I asked myself. If someone put a gun to the head of the crane operator and said, 'Get it out' they'd have a live nuclear bomb in their possession. I knew I had to make a decision. Was it safer to pull the bomb up or keep sending it down? I decided it was better to have a big problem at ground zero than somewhere else so I gave the order. I said, 'Keep the device going down.'"

Mingus had a [quick conversation with Joe Behne](#), the test director, about what was going on. The men agreed Mingus should call the head of security for the Department of Energy, a woman by the name of Pat Williams. "She said, 'Yes, we hear the same thing and we have to assume the same thing. We are under attack as far as I know,'" Mingus recalls.

Next Mingus called Larry Ferderber, the resident manager of the Nevada Test Site for the Lawrence Livermore National Laboratory. "Two minutes later Ferderber confirms the same thing, he says, 'I hear we're under attack.'" Mingus and Behne went through the protocol checklist. "Joe and I discussed going down to the basement and destroying the crypto which was in my building. Then we decided that it was too early for that. When you look out and you see guns firing, like on the *USS Pueblo*, then it's time to start destroying things. But not before."

Instead, Mingus called Bill Baker, the man who ran the device assembly building. With an attack now confirmed by the spokesperson for the Department of Energy and the test site manager, Mingus had to work fast. "I asked Bill Baker what was going on," Mingus recalls. "He said, real calm, 'We're fine over here. I'm looking out the window. I can see Captain Williams standing outside.'" Mingus got off the telephone and had another discussion with Joe Behne. "I told Joe, I said, 'We can't buy his word. He could be under duress. He could have a knife at his neck or a gun at his head.'"

Meanwhile, just a few miles to the east, hovering several hundred feet over the guard post between the test site and Area 51, a group of men were leaning out of a helicopter firing semiautomatic weapons at the guards on the ground. But the bullets in their weapons were blanks, not real ammunition, and the men in the helicopter were security guards from Wackenhut Security, not enemies of the state. Wackenhut Security had decided to conduct a mock attack of an access point to Area 51 to test the system for weaknesses. [With astounding lack of foresight, Wackenhut Security](#) had not bothered to

inform the Department of Energy of their mock-attack plans.

Back at the control point, in Area 6, Richard Mingus's telephone rang. It was Pat Williams, the woman in charge of security for the Department of Energy. "She was real brief," Mingus says. "She said, 'It was a test and we didn't know about it.' Then she just hung up." Mingus was astonished. "Looking back, in all my years, I have to say it was one of the scariest things I'd ever run into. It was like kids were running the test site that day." Mingus didn't write up any paperwork on the incident. "I don't believe I made a note in my record book," he says. Instead, Mingus kept working. "We had a nuclear bomb to get down into its hole and explode." Test director Joe Behne believes paperwork exists. "I know it's in the record. It was not a minor incident," he says. "For those of us that were there that day it was almost unbelievable, except we believed [briefly] it was real—that Ground Zero was being attacked from a warlike enemy. The incident is bound to be in the logbooks. All kinds of people got calls."

Far from the test site, things did not return to calm so quickly. The Department of Energy notified the FBI, who notified the Pentagon and the White House that Area 51 was under attack. The Navy's nuclear-armed submarines were put on alert, which meant that Tomahawk cruise missiles were now targeting the Nevada Test Site and Area 51. Crisis was averted before things elevated further, but it was a close call. Troy Wade was at the Pentagon at the time and told Mingus he "remembers hearing about how high up it went." Guards from Wackenhut Security lost their jobs, but like most everything at Area 51, there were no leaks to the press. Only with the publication of this book has the incident come to light.

The nuclear bomb Mingus was in charge of overseeing was live and not secured, meaning an actual attack on the test site at that moment would have raised the possibility of a nuclear weapon being hijacked by an enemy of the nation. But there was another reason that the nuclear submarines were put on alert that day: the extremely sensitive nature of a black project the Air Force was running at Area 51. The top secret aircraft being tested there was the single most important invention in U.S. airpower since the Army started its aeronautical division in 1907. Parked on the tarmac at Area 51 was the F-117 Nighthawk, the nation's first stealth bomber.

The F-117 would radically change the way America fought wars. As a Lockheed official explained at a banquet honoring the F-117 in April of 2008, "Before the advent of stealth, war planners had to determine how many sorties were necessary to take out a single target. After the invention of the F-117 stealth bomber, that changed. It became, How many targets can we take out on a single sortie?"

Lockheed physicist Edward Lovick worked on each rendition of the stealth bomber, which began in the early 1970s with Harvey, a prototype aircraft named after the Jimmy Stewart film about an invisible rabbit. Harvey's stealth qualities were initially engineered [using slide rules and calculators](#), the same way Lockheed had developed the A-12 Oxcart. Only with the emergence of the mainframe computer, in 1974, did those tools become obsolete. "Two Lockheed engineers, named Denys Overholser and Dick Scherrer, realized that it might be possible to design a stealth aircraft that would take advantage of some of the results of a computer's calculations," Lovick says. "In 1974 computers were

relatively new and most of them were the size of a car. Our computer at Lockheed ran on punch cards and had less than 60 K worth of memory." Still, the computer could do what humans could not do, and that was endless calculations.

"The concept behind the computer program involved mirrors reflecting mirrors," Lovick explains. Mathematician Bill Schroeder set to work writing Lockheed's original computer code, called Echo. If the CIA's James Jesus Angleton was correct and the Soviet security forces really were using black propaganda to create a "wilderness of mirrors" to ensnare the West, the Air Force was going to create its own set of reflective surfaces to beat the Russians back with the F-117 stealth bomber. "We designed flat, faceted panels and had them act like mirrors to scatter radar waves away from the plane," Lovick says. "It was a radical idea and it worked."

The next, on-paper incarnation of the F-117 Nighthawk began in 1974 and was called the Hopeless Diamond, so named because it resembled the Hope Diamond and because Lockheed engineers didn't have much hope it would actually fly. After the Hopeless Diamond concept went through a series of redesigns it became a full-scale mock-up of an aircraft and was renamed Have Blue. T. D. Barnes was the man in charge of radar testing Lockheed's proof-of-concept stealth bomber at Area 51. "Lockheed handed it over to us and we put it up on the pole," Barnes says. "It was a very weird, very crude-looking thing that actually looked a lot like the ship from *Twenty Thousand Leagues Under the Sea*. Our job was to look at it from every angle using radar to see how it showed up on radar." Radars had advanced considerably since the early days of the Cold War. "Initially, it was as visible as a big old barn," says Barnes. So the Have Blue mock-up was sent back to the Skunk Works for more fine-tuning. Several months later, a new version of the mock-up arrived at Area 51. "Lockheed had changed the shape of the aircraft and a lot of the angles of the panels. Once we put the new mock-up on the pole it appeared to us as something around the size of a crow." There was a final round of redesigns, then the airplane came back to Area 51 again. "We put it up on the pole and all we saw was the pole." Now it was time for Lockheed to present the final rendition of the Have Blue to the Air Force, in hopes of landing the contract to build the nation's first stealth bomber.

The director of science and engineering at Skunk Works, a man named Ed Martin, went to Lovick for some advice. "Ed Martin asked me how I thought the aircraft might appear on enemy radar. I explained that if the Oxcart showed up as being roughly equivalent to the size of a man, the Have Blue would appear to a radar like a seven-sixteenth-inch metal sphere—roughly the size of a ball bearing." Ed Martin loved Lovick's analogy. A ball bearing. That was something a person could relate to. Before Martin left for Washington, DC, Lovick went to the Lockheed tool shop and borrowed a bag of ball bearings. He wanted Ed Martin to have a visual reference to share with the Air Force officials there. "Later, I learned the ball-bearing illustration was so effective that the customers began rolling the little silvery spheres across the conference table. The analogy has become legendary, often still used to make an important visual point about the stealthy F-117 Nighthawk with its high-frequency radar signature that is as tiny as a ball bearing." In 1976, Lockheed won the contract. Immediately, they began manufacturing two

Have Blue aircraft in the legendary Skunk Works Building 82. [The man in charge of engineering, fabrication, and assembly](#) of the pair of stealth bombers was Bob Murphy, the same person who twenty-one years earlier had begun his career in a pair of overalls at Area 51, working for Kelly Johnson as chief mechanic on the U-2.

Testing a bomber plane would be a radically different process from testing a spy plane, and the F-117 was the first bomber to be flight-tested at Area 51. Most notably, the new bomber would require testing for accuracy in dropping bombs on targets. For nearly twenty-five years, the CIA and the Air Force had been flying spy planes and drones in the Box. But there was simply not enough flat square footage [at Groom Lake to drop bombs](#). There was also the issue of sound. With multiple projects going on at Area 51, not everyone was cleared for the F-117.

A second site was needed, and for this, the Air Force turned to the Department of Energy, formerly the Atomic Energy Commission. A land-use deal was struck allowing the Air Force [to use a preexisting, little-known bombing range](#) that the Atomic Energy Commission had quietly been using for decades. It was deep in the desert, within the Connecticut-size Nevada Test and Training Range. Located seventy miles northwest of Area 51, the Tonopah Test Range was almost in Death Valley and had been in use as a bombing range and missile-launch facility for Sandia Laboratories since 1957. The Department of Energy had no trouble carving a top secret partition out of the 624-square-mile range for the Air Force's new bomber project. To be kept entirely off the books, the secondary black site was named Area 52. Like Area 51, Area 52 has never been officially acknowledged.

The sparsely populated, high-desert outpost of Tonopah, Nevada, was once the nation's most important producer of gold and silver ore. In 1903, eighty-six million dollars in metals came out of the area's mines, nearly two billion in 2011 dollars, and at the turn of the century, thirty thousand people rushed to the mile-high desert city seeking treasure there. Tonopah's nearest neighbor, the town of Beatty, where T. D. Barnes lived in the 1960s, became known in 1907 as [the Chicago of the West](#). For several years the Las Vegas & Tonopah Railroad maintained a rail line between the two cities, which at one point was the West's busiest rail line. And then, almost overnight and like so many towns ensnared in the gold rush, Tonopah went bust. Within ten years, it was just a few families too many to be called a ghost town. Even the railroad company ripped up its steel tracks and carted them away for better use. Packs of wild horses and antelope came back down from the mountains and began to graze as they had before the boom, pulling weeds and scrub from the parched desert landscape between the Cactus and the Kawich mountain ranges. When a group of weaponeers from Sandia descended upon the area four decades later, in 1956, they were thrilled with what they found. Tonopah was a perfect place for [secret testing \[that\] could be conducted safely and securely](#). Years later, boasting to their corporate shareholders, the Sandians, as they called themselves, [would quote Saint Paul of Tarsus](#) to sum up their mission at Tonopah Test Range: "test all things; hold fast that which is good."

Between 1957 and 1964, Sandia dropped 680 bombs and launched 555 rockets from what was now officially but quietly called the Sandia National Laboratories' Outpost at

Tonopah. In 1963, Sandia conducted a series of top secret plutonium-dispersal tests, similar to the Project 57 test that had been conducted at Groom Lake just a few years earlier. Called [Operation Roller Coaster, three dirty bomb tests](#), were performed to collect biological data on three hundred animals placed downwind from aerosolized plutonium clouds generated from three Sandia nuclear weapons. With seven hundred Sandians hard at work in the desert flats for Operation Roller Coaster, a report called it Sandia's "highlight of 1963." Tonopah was so far removed from the already far removed and restricted sites at Area 51 and the Nevada Test Site that no one outside a need-to-know had ever even heard of it.

In October of 1979, [construction for an F-117 Nighthawk support facility](#) at Tonopah began inside Area 52. The facility at Area 51 served as a model for the facility being built at Area 52. Similarly styled runways and taxiways were built, as well as a maintenance hangar, using crews already cleared for work on Nevada Test Site contracts. Sixteen mobile homes were carted in, and several permanent support buildings were constructed. Sandia didn't want to draw attention to the project, so the Air Force officers assigned to the base were ordered to [grow their hair long and to grow beards](#). Sporting a hippie look, as opposed to a military look, was less likely to draw unwanted attention to a highly classified project cropping up in the outer reaches of the Nevada Test Site. That way, the men could do necessary business in the town of Tonopah.

The two facilities, Area 51 and Area 52, worked in tandem to get the F-117 battle-ready. When the mock attack at the guard gate at Area 51 occurred, in 1982, [test flights of the F-117](#)—which only ever happened at night—were already in full swing. For some weeks, a debate raged as to how an act of idiocy by a small group of Wackenhut Security guards nearly outed a billion-dollar aircraft as well as two top secret military test facilities that had remained secret for thirty years. An estimated ten thousand personnel had managed to keep the F-117 program in the dark. There was a collective mopping of the brow and succinct orders to move on, and then, two years later, the program was nearly outed again when an Air Force general broke protocol and decided to take a ride in one of Area 51's prized MiG fighter jets.

The death of [Lieutenant General Robert M. Bond](#) on April 26, 1984, in Area 25 of the Nevada Test Site was an avoidable tragedy. With 267 combat missions under his belt, 44 in Korea and 213 in Vietnam, Robert M. Bond was a highly decorated Air Force pilot revered by many. At the time of his accident, he was vice commander of Air Force Systems Command at Andrews Air Force Base, in Maryland, which made him a VIP when it came to the F-117 program going on at Area 51. In March of 1984, General Bond arrived at the secret facility to see how things were progressing. The general's visit should have been no different than those made by the scores of generals whose footsteps Bond was following in, visits that began back in 1955 with [men like General James "Jimmy" Doolittle](#) and General Curtis LeMay. The dignitaries were always treated in high style; they would eat, drink, and bear witness to top secret history being made. Following in this tradition, General Bond's first visit went without incident. But in addition to being impressed by the F-117 Nighthawk, General Bond was equally fascinated by the MiG program, which was still going on at Area 51. In the fifteen years since the CIA had gotten

its hands on Munir Redfa's MiG-21, the Agency and the Air Force had acquired a fleet of Soviet-made aircraft including an MiG-15, an MiG-17, and, most recently, the supersonic MiG-23. Barnes says, "We called it the Flogger. It was a very fast plane, almost Mach 3. But it was squirrelly. Hard to fly. It could kill you if you weren't well trained."

On a visit to Area 51 the following month, General Bond requested to fly the MiG-23. "[There was some debate about whether the general](#) should be allowed to fly," Barnes explains. "Every hour in a Soviet airplane was precious. We did not have spare parts. We could not afford unnecessary wear and tear. Usually a pilot would train for at least two weeks before flying a MiG. Instead, General Bond got a briefing while sitting inside the plane with an instructor pilot saying, 'Do this, do that.'" In other words, instead of undergoing two weeks of training, General Bond pulled rank.

Just a few hours later, General Bond was seated in the cockpit of the MiG, flying high over Groom Lake. All appeared to be going well, but just as he crossed over into the Nevada Test Site, Bond radioed the tower on an emergency channel. "I'm out of control," General Bond said in distress. The MiG was going approximately Mach 2.5. "I've got to get out, I'm out of control" [were the general's last words](#). The MiG had gone into a spin and was on its way down. Bond ejected from the airplane but was apparently killed when his helmet strap broke his neck. The general and the airplane crashed into Area 25 at Jackass Flats, where the land was still highly contaminated from the secret NERVA tests that had gone on there.

General Bond's death opened the possible exposure of five secret programs and facilities, including the MiG program, the F-117 program, Area 51, Area 52, and the nuclear reactor explosions at Jackass Flats. Unlike the deaths of CIA pilots flying out of Area 51, which could be concealed as generic training accidents, the death of a general required detailed explanation. If the press asked too many questions, it could trigger a federal investigation. One program had to come out of the dark to keep the others hidden. The Pentagon made the decision to out the MiG. Quietly, [Fred Hoffman, a military writer](#) with the Associated Press, was "leaked" information that Bond had in fact died at the controls of a Soviet MiG-23. The emphasis was put on how the Pentagon was able to obtain Soviet-bloc aircraft and weaponry from allies in Eastern Europe, the Middle East, and Asia. "The government has always been reluctant to discuss such acquisitions for fear of embarrassing the friendly donors, but the spotlight was turned anew on the subject after a three-star Air Force general was killed April 26 in a Nevada plane crash that was quickly cloaked in secrecy," Hoffman wrote, adding "sources who spoke on condition they remain anonymous have indicated the MiG-23, the most advanced Soviet warplane ever to fall permanently into U.S. hands, was supplied to this country by Egypt."

With this partial cover, the secrets of Area 51, Area 52, Area 25, and the F-117 were safe. It would be another four years before the public had any idea the F-117 Nighthawk existed. In November of 1988, a grainy image of the arrowhead-shaped, futuristic-looking craft was released to an awestruck public despite the fact that variations of the F-117 had been flying [at Area 51 and Area 52 for eleven years](#).

By 1974, the Agency had ceded control of Area 51. Some insiders say the transition occurred in 1979, but since Area 51 does not officially exist, the Air Force won't officially

say when this handover occurred. Certainly this had to have happened by the time the stealth bomber program was up and running; the F-117 program was the holy grail of Pentagon black projects—and, during that time period, the Air Force dominated Area 51. Having no business in bombs, the CIA maintained a much smaller presence there than historically it had before. During the 1970s, the Agency's work concentrated largely on pilotless aircraft, or drones. Hank Meierdierck, the man who wrote the manual for the U-2 at Area 51, was in charge of one such CIA drone project, which began in late 1969. [Code-named Aquiline](#), the six-foot-long pilotless aircraft was disguised to look like an eagle or buzzard in flight. It carried a small television camera in its nose and photo equipment and air-sampling sensors under its wings. Some insiders say it had been designed to test for radiation in the air as well as to gather electronic intelligence, or ELINT. But Gene Poteat, the first CIA officer ever assigned to the National Reconnaissance Office, offers a different version of events. "Spy satellites flying over the Caspian Sea delivered us images of an oddly shaped, giant, multi-engined watercraft moving around down there on the surface. No one had any idea what this thing was for, but you can be sure the Agency wanted to find out. That is what the [original purpose of Aquiline](#) was for," Poteat reveals. "To take close-up pictures of the vehicle so we could discern what it was and what the Soviets might be thinking of using it for. Since we had no idea what it was, we made up a name for it. We called it the Caspian Sea Monster," Poteat explains. Project Aquiline remains a classified project, but in September of 2008, *BBC News* magazine produced a story about a [Cold War Soviet hydrofoil named Ekranopian](#), which is exactly what the CIA's Aquiline drone was designed to spy on.

At Area 51, Hank Meierdierck selected his former hunting partner [Jim Freedman to assist him on the Aquiline drone](#) program. "It flew low and was meant to follow along communication lines in foreign countries and intercept messages," Freedman says. "I believe the plan was to launch it from a submarine while it was waiting in port." The Aquiline team consisted of three pilots trained to remotely control the bird, with Freedman offering operational support. "Hank got the thing to fly," Freedman recalls. Progress was slow and "it crash-landed a lot." The program ended when the defense contractor, McDonnell Douglas, gave a bid for the job that Meierdierck felt was [ninety-nine million dollars over budget](#). McDonnell Douglas would not budge on their bid so Hank recommended that the CIA cancel Project Aquiline, which he said they did. After the program was over, Hank Meierdierck managed to take a mock-up of the Aquiline drone home with him from the area. "He had it sitting on his bar at his house down in Las Vegas," Freedman recalls.

Project Aquiline was not the CIA's first attempt to gather intelligence using cover from the animal kingdom. [Project Ornithopter](#) involved a birdlike drone designed to blend in with nature by flapping its wings. And a third, even smaller drone was designed to look like a crow and land on windowsills in order to photograph what was going on inside CIA-targeted rooms. The tiniest drone program, orchestrated in the early 1970s, was [Project Insectohtopter](#), an insect-size aerial vehicle that looked like a dragonfly in flight. Insectohtopter had an emerald green minifuselage and, like Ornithopter, flapped its wings, which were powered by a miniature engine that ran on a tiny amount of gas. Through its

Office of Research and Development, or ORD, the CIA had also tried turning live birds and cats into spies. In one such program, CIA-trained pigeons flew around Washington, DC, with bird-size cameras strapped to their necks. The project failed after the extra weight tired out the pigeons and they hobbled back to headquarters on foot instead of in flight. Another CIA endeavor, [Acoustic Kitty](#), involved putting electronic listening devices in house cats. But that project also backfired after too many cats strayed from their missions in search of food. One acoustic kitty got run over by a car. The Agency's pilotless-vehicle projects were forever growing in ambition and in size. One robotic drone from the early 1970s, a project financed with DARPA, was disguised to look like an elephant—ready to do battle in the jungles of Vietnam.

Several projects, like Aquiline, involved only a handful of special-access personnel. But a few other projects took place on a considerably larger scale. In July of 1974, the CIA's Special Activities Division filed a memorandum of agreement with the Air Force to set up a classified project at Area 51 that was extensive enough that it required five hangars of its own. Aerospace historian Peter Merlin, who wrote monographs for NASA, explains: "The top-secret project, with a classified code-name, was expected to last about one year. Six permanent personnel were assigned to the test site, with up to 20 personnel on site during peak periods of short duration activity." The Air Force designated Hangar 13 through Hangar 17, located at the south end of the facility, as CIA-only. What mysterious project the CIA was working on there, those without a need-to-know have no idea. The work remains classified; rumor is that it was a Mach 5 or Mach 6 drone.

Some operations at Groom Lake in the 1970s involved the Agency's desire to detect facilities for weapons of mass destruction, or WMD, including bioweapons and chemical weapons, before those weapons facilities were in full-production mode. This work, the CIA felt, could ideally be performed by laying sensors on the ground that were capable of "sniffing" the air. Since the 1950s, the Agency had been advancing its use of [sensor drones to detect WMD signatures](#) by monitoring changes in the air, the soil, and an area's energy consumption. [Early efforts had been made using U-2 pilots](#), who had to leave the safety of high-altitude flight and get down dangerously low in order to shoot javelinlike sensors into the earth. But those operations, part of [Operation Tobasco, risked exposure](#). Several U-2 pilots had already been shot down. Because these delicate sensors needed to be accurately placed very close in to the WMD-producing facilities, it was an ideal job for a stealthy, low-flying drone.

Decades before anyone had rekindled an interest in drones, the CIA saw endless possibilities in them. But to advance drone technology required money, and in 1975, a Senate committee investigating illegal activity inside the CIA, chaired by Senator Frank Church and known as the Church Committee, [did considerable damage to the Agency's reputation](#) as far as the general public was concerned. Budgets were thinned. During Jimmy Carter's presidency, which began in 1977, CIA discretionary budgets were at an all-time low, and the CIA didn't get very far with its drones—until late 1979, when the Agency learned about a lethal anthrax accident at a "[probable biological warfare research, production and storage installation](#)" in Sverdlovsk, Russia—the same location where Gary Powers had been taking spy photographs when his U-2 was shot down nineteen years

before. As a result of the Sverdlovsk bioweapons accident, the CIA determined that as many as a hundred people had died from inhaling anthrax spores. The incident gave the CIA's drone program some legs. But without interest from the Air Force, drones were perceived largely as the Agency's playthings.

For twenty-five years, from 1974 to 1999, the CIA and the Air Force rarely worked together on drone projects at Area 51. This lack of cooperation was evident, and succinctly summed up in an interview Secretary of Defense Robert Gates gave *Time* magazine in April of 2008. Gates said that when he was running the CIA, in 1992, he discovered that "the Air Force would not co-fund with CIA a vehicle without a pilot." That changed in the winter of 2000, when the two organizations came together to work on a new drone project at Area 51, one that would forever change the face of warfare and take both agencies toward General Henry "Hap" Arnold's Victory Over Japan Day prediction that one day in the future, wars would be fought by aircraft without pilots sitting inside. In the year 2000, that future was now.

The project involved retrofitting a CIA reconnaissance drone, called Predator, with antitank missiles called [Hellfire missiles](#), supplied by the army. The target would be a shadowy and obscure terrorist the CIA was considering for assassination. He lived in Afghanistan, and [his name was Osama bin Laden](#).

Revelation

It was January of 2001, nine months before the terrorist attacks of 9/11, and the director of the CIA's Counterterrorism Center, Cofer Black, had a serious problem. The CIA had been considering assassinating Osama bin Laden with the Predator, but until that point, the unmanned aerial vehicle had been used for reconnaissance only, not targeted assassination. Because two technologies needed to be merged—the flying drone and the laser-guided precision missile—engineers and aerodynamicists had concerns. Specifically, they worried that the propulsion from the missile might send the drone astray or the missile off course. And the CIA needed a highly precise weapon with little possibility of collateral damage. The public would perceive killing a terrorist one way, but they would likely perceive killing that terrorist's neighbors in an altogether different light. This new weaponized drone technology was tested at Area 51; the development program remains classified. After getting decent results, both the CIA and the Air Force were confident that the missiles unleashed from the drone could reach their targets.

Along came another hurdle to overcome, one that was unfolding not in the desert but in Washington, DC. The newly elected administration of President George W. Bush realized that it had no policy when it came to taking out terrorists with drones. Osama bin Laden was known to be the architect of the 1998 U.S. embassy suicide bombings in East Africa, which killed more than 225 people, including Americans. He masterminded the suicide bombing of the USS Cole and had officially declared war against the United States. But targeted assassination by a U.S. intelligence agency was illegal, per President Ronald Reagan's Executive Order 12333, and since the situation required serious examination, State Department lawyers got involved.

There was one avenue to consider in support of the targeted-killing operation, and that was the fact that the FBI had a bounty on the man's head. By February of 2001, the State Department gave the go-ahead for the assassination. Then State Department lawyers warned the CIA of another problem, the same one that had originally sent the Predator drone to Area 51 for field tests; namely, potential collateral damage. The State Department needed to know how many bin Laden family members and guests staying on the compound the CIA was targeting could be killed in a drone attack. Bin Laden's compound was called Tarnak Farm, and a number of high-profile Middle Eastern royal family members were known to visit there.

To determine collateral damage, the CIA and the Air Force teamed up for an unusual building project on the outer reaches of Area 51. They engineered a full-scale mock-up of Osama bin Laden's compound in Afghanistan on which to test the results of a drone strike. But while engineers were at work, CIA director George Tenet decided that taking

out Osama bin Laden with a Hellfire missile-equipped Predator drone would be a mistake. This was a decision the CIA would come to regret.

Immediately after the terrorist attacks of September 11, 2001, the Pentagon knew that it needed drones to help fight the war on terror, which meant it needed help from the CIA. For decades, the Air Force had been thumbing its nose at drones. The pride of the Air Force had always been pilots, not robots. But the CIA had been researching, developing, and advancing drone technology at Area 51 for decades. The CIA had sent drones on more than six hundred reconnaissance missions in the Bosnian conflict, beginning in 1995. [CIA drones had provided intelligence for NATO forces](#) in the 1999 Kosovo air campaign, collecting intelligence, searching for targets, and keeping an eye on Kosovar-Albanian refugee camps. The CIA Predator had helped war planners interpret the chaos of the battlefield there. Now, the Air Force needed the CIA's help going into Afghanistan with drones.

[The first reconnaissance drone mission in the war on terror](#) was flown over Kabul, Afghanistan, just one week after 9/11, on September 18, 2001. Three weeks later, the first Hellfire-equipped Predator drone was flown over Kandahar. The rules of aerial warfare had changed overnight. America's stealth bombers were never going to locate Osama bin Laden and his top commanders hiding out in mountain compounds. Now pilotless drones would be required to seek out and assassinate the most wanted men in the world.

Although drones had been developed and tested at Area 51, Area 52, and Indian Springs for nearly fifty years, the world at large would come to learn about them only in November of 2002, when a drone strike in Yemen made headlines around the world. Qaed Salim Sinan al-Harithi was a wanted man. A citizen of Yemen and a senior al-Qaeda operative, al-Harithi had also been behind the planning and bombing of the USS *Cole* two years before. On the morning of November 2, 2002, al-Harithi and five colleagues drove through the vast desert expanse of Yemen's northwest province Marib oblivious to the fact that they were being watched by eyes in the skies in the form of a Predator drone flying several miles above them.

The Predator launched its missile at the target and landed a direct hit. The al-Qaeda operatives and the vehicle were instantly reduced to a black heap of burning metal. It was an assassination plot straight out of a Tom Clancy novel, except that it was so real and so dramatic—the first visual proof that al-Qaeda leaders could be targeted and killed—that Assistant Secretary of Defense Paul Wolfowitz began bragging about the Hellfire strike to CNN. The drone attack in Yemen was "[a very successful tactical operation](#)," Wolfowitz said. Except it was supposed to be a quiet, unconfirmed assassination. Wolfowitz's bravado made Yemen upset. Brigadier General Yahya M. Al Mutawakel, the deputy secretary general for the People's Congress Party in Yemen, gave an [exclusive interview to the Christian Science Monitor](#) explaining that the Pentagon had broken a secrecy agreement between the two nations. "This is why it is so difficult to make deals with the United States," Al Mutawakel explained. "They don't consider the internal circumstances in Yemen. In security matters, you don't want to alert the enemy."

Yemen pushed back against the United States by outing the secret inner workings of the operation. It was the U.S. ambassador to Yemen, Edmund Hull, an employee of the

State Department, who had masterminded the plot, officials in Yemen explained. Hull had spearheaded the intelligence-gathering efforts, a job more traditionally reserved for the CIA. [Hull spoke Arabic](#). He had roots in the country and knew people who knew local tribesmen in the desert region of Marib. The State Department, Yemen claimed, was the agency that had bribed local tribesmen into handing over information on al-Harethi, which allowed the CIA to know exactly where the terrorist would be driving and when. Revealing Ambassador Hull to be the central organizing player in the drone strike exposed the Department of State as having a hand in not just the espionage game but targeted assassination as well. Surprisingly, little fuss was made about any of this, despite the fact that diplomats are supposed to avoid assassination plots.

In political circles, Ambassador Hull was greatly embarrassed. He refused to comment on his role in what signaled a sea change in U.S. military assets with wings. The 2002 drone strike in Yemen was the first of its kind in the war on terror, but little did the public know that hundreds more drone strikes would soon follow. The next one went down the very next week, when a Predator targeted and killed al-Qaeda's number-three, [Mohammed Atef, in Jalabad, Afghanistan](#). As the war on terror progressed, some drone strikes would be official while others would go unmentioned. But never again would the CIA or the State Department admit to having a hand in any of them. When Mohammed Atef was killed, initial reports said a traditional bomber aircraft had targeted and destroyed Atef's home. Only later was the strike revealed as being the work of a Predator drone and a [targeted assassination spearheaded by the CIA](#).

Almost everything that has happened at Area 51 since 1968 remains classified but it is generally understood among men who formerly worked there that once the war on terror began, flight-testing new drones at Area 51 and Area 52 moved full speed ahead. This new way of conducting air strikes, from an aircraft without a pilot inside, represented a fundamental reconfiguration of the U.S. Air Force fighting force and would continue to remain paramount to Air Force operations going forward. This meant that a major element of the drone program, i.e., the CIA's role in overhead, needed to return quietly and quickly into the "black." The Air Force has a clear-cut role in wartime. But the operations of the CIA, a clandestine organization at its core, can never be overtly defined in real time. Remarkably, after nearly fifty years, the CIA and the Air Force were back in the business of overhead, and they would model their partnership on the early spy plane projects at Area 51. As the war on terror expanded, budgets for drone programs went from thin to virtually limitless almost overnight. As far as developing weapons using cutting-edge science and technology was concerned, it was 1957 post-Sputnik all over again.

No longer used only for espionage, the [Predator got a new designation](#). Previously it had been the RQ-1 Predator: *R* for reconnaissance and *Q* indicating unmanned. Immediately after the Yemen strike, the Predator became the MQ-1 Predator, with the *M* now indicating its *multirole* use. The [company that built the Predator](#) was General Atomics, the same group that was going to launch Ted Taylor's ambitious spaceship to Mars, called *Orion*, from Jackass Flats back in 1958.

A second Predator, originally called the Predator B, was also coming online. Described by Air Force officials as "the Predator's younger, yet larger and stronger

brother," it too needed a new name. The Reaper fit perfectly: the personification of death. "One of the [big differences between the Reaper and the Predator](#) is the Predator can only carry about 200 pounds [of weapons]. The Reaper, however, can carry one and a half tons, and on top of carrying Hellfire missiles, can carry multiple GBU-12 laser-guided bombs," said Captain Michael Lewis of the Forty-second Wing at Creech Air Force Base. The General Atomics drones were single-handedly changing the relationship between the CIA and the Air Force. The war on terror had the two services working together again, exactly as had happened with the advent of the U-2. This was not simply a coincidence or a recurring moment in time. Rather it was the symbiotic reality of war. If the CIA and the Air Force are rivals in peacetime—fighting over money, power, and control—in war, they work together like a bow and arrow. Each organization has something critical the other service does not have. The CIA's drones could now give Air Force battlefield commanders visual images from which they could target individuals in real time. Now, intelligence capabilities and military could work seamlessly together as one. Which is exactly what happened next, as the war on terror widened to include Iraq.

On the night of March 29, 2004, an MQ-1 Predator drone surveilling the area outside the U.S. Balad Air Base in northern Iraq caught sight of three men digging a ditch in the road with pickaxes. [Brigadier General Frank Gorenc was remotely viewing](#) the events in real time from an undisclosed location somewhere in the Middle East. He watched the men as they placed an improvised explosive device, or IED, in the hole. Gorenc was able to identify that the men were burying an IED in the road because the resolution of the images relayed back from the Predator's reconnaissance camera was so precise, Gorenc could see wires. Gorenc and other commanders in Iraq knew what the Predator was capable of. Gorenc described this technology as allowing him to "[put a weapon on a target within minutes.](#)" and he authorized a strike. The Predator operator, seated at a console next to Gorenc, launched a Hellfire missile from the Predator's weapons bay, killing all three of the men in a single strike. "This strike," explained Gorenc, "should send a message to our enemies that we're watching you, and we will take action against you any time, day or night, if you continue to stand in the way of progress in Iraq." Eyes in the sky, dreamed up in the 1940s, had become swords in the sky in the new millennium. Reconnaissance and retaliation had merged into one.

Simultaneous with the early drone strikes in Iraq, the CIA and the Air Force had begun managing a covert program to kill al-Qaeda and Taliban commanders in the tribal areas in the northwest of Pakistan, on Afghanistan's border, using drones. To get the program up and running required effort, just as the U-2 and the Oxcart had. A drone wing, like a U-2 detachment or a squadron of Oxcarts, involved building more Predators and Reapers, training drone pilots, creating an Air Force wing, building secret bases in the Middle East, hooking up satellites, and resolving other support-related issues. From 2003 to 2007 the number of drone strikes rose incrementally, little by little, each year. Only in 2008 did the drones really come online. During that year, which included the last three weeks of the Bush administration, there were thirty-six drone strikes in Pakistan, which the Air Force said killed 268 al-Qaeda and Taliban. [By 2009 the number of drone strikes would rise to fifty-three.](#) Since the Air Force does not release numbers, and the CIA does

not comment on being involved, those numbers are approximate best guesses, put together by journalists and researchers based on local reports. Since journalists are not allowed in many parts of the tribal areas in Pakistan, the actual number of drone strikes is unknown.

As much publicity as drones are getting today, there is a lot more going on in the skies than the average citizen comprehends. According to T. D. Barnes, "There are at least fifteen satellites and an untold number of Air Force aircraft 'parked' over Iraq and Afghanistan, providing twenty-four-hour-a-day coverage for airmen and soldiers on the ground. The Air Force is currently flying surveillance with the U-2, Predator, MQ-9 Reaper, and Global Hawk. [These are just the assets we know about](#). Having been in the business, I would expect we have surveillance capability being used that we won't know about for years." The majority of these platforms, all classified, are "in all probability" being built and tested at Area 51, says Barnes.

In April of 2009, reporters with a French aviation newspaper published drawings of a reconnaissance drone seen flying over Afghanistan. With its long wings, lack of tail, and two wheels under its belly in a line, like on a bicycle, what became known as [the Beast of Kandahar](#) looks reminiscent of the Horten brothers' flying wing of 1944. What was this new drone built for? It seemed not to have a weapons bay. Eight months later, in December of 2009, the [Defense Department confirmed](#) the existence of the drone, which the Air Force calls the RQ-170 Sentinel. Built by Lockheed Skunk Works and tested at Area 51 and Area 52, the newest drone appears to be for reconnaissance purposes only. As such, it follows in the footsteps of the U-2 and the A-12 Oxcart, comanaged by the Air Force and the CIA at Area 51. Save for its name, all details remain classified. It is likely flying over denied territory, including Iran, North Korea, China, and Russia. Fifty-five years after Richard Bissell set Area 51 as a secret place to test-fly the nation's first peacetime spy planes, new aircraft continue to be built with singular design and similar intention. Despite the incredible advances in science and technology, the archetypal need for reconnaissance remains.

Quick and adaptable, twenty-first-century surveillance requirements means the future of overhead lies in unmanned aerial vehicles, or drones. The overhead intelligence take once provided by CIA spy pilots like Gary Powers, Ken Collins, Frank Murray, and others now belongs to remotely piloted drones. The old film cameras, which relied on clear skies, have been replaced by state-of-the-art imaging systems developed by Sandia and Raytheon, called [synthetic aperture radar, or SAR](#). These "cameras" relay real-time images shot through smoke, dust, and even clouds, during the day or in the dark of night. But as omnipotent and all-seeing as the drones may appear, there is one key element generally overlooked by the public—but certainly not by the Pentagon or the CIA—when considering the vulnerability of the Air Force's most valuable asset with wings. Drones require satellite links.

To operate a drone requires ownership in space. All unmanned aerial vehicles require satellites to relay information to and from the pilots who operate the drones via remote control. As the Predator flies over the war theater in the Middle East, it is being operated by a pilot sitting in a chair [thirty miles south of Area 51, at Indian Springs](#). The pilot is

seated in front of a computer screen that provides a visual representation of what the Predator is looking at on the ground in the battlefield halfway across the world. Two sensor operators sit beside the pilot, each working like a copilot might have in another age. The pilot and the sensor operators rely on a team of fifty-five airmen for operational support. The Predator Primary Satellite Link is the name of the system that allows communication between the drone and the team. The drone needs only to be in line of sight with its ground-control station when it lands. Everything else the drone can do, from capture images to fire missiles, it does thanks to its satellite link.

Indian Springs is the old airstrip where Dr. Edward Teller, father of the H-bomb, and all the other nuclear physicists used to land when they would come to witness their atomic bomb creations being set off as tests from 1951 to 1992. Indian Springs is where the atomic-sampling pilots trained to fly through mushroom clouds. It is where EG&G set up the first radar-testing facility on the Nevada Test and Training Range in 1954. Indian Springs is where Bob Lazar said he was taken and debriefed after getting caught trespassing on Groom Lake Road. And in 2011, Indian Springs, which has been renamed Creech Air Force Base, is the place where Air Force pilots sit in war rooms operating drones.

For the Department of Defense, the vulnerability of space satellites to sabotage has created a new and unprecedented threat. According to a 2008 study on "[Wicked Problems](#)" prepared by the Defense Science Board, in a chapter significantly entitled "Surprise in Space," the board outlines the vulnerability of space satellites in today's world. By the Pentagon's definition, "Wicked problems are highly complex, wide-ranging problems that have no definitive formulation... and have no set solution." By their very nature, wicked problems are "substantially without precedent," meaning the outcome of them cannot be known because a wicked problem is one that has never before been solved. Worst of all, warned the Pentagon, efforts to solve wicked problems generally give way to an entirely new set of problems. The individual tasked with keeping abreast of the wicked problem is called a wicked engineer, someone who must be prepared to be surprised and be able to deal with unintended consequences because "[playing the game changes the game.](#)"

By relying on satellites to fight the war on terror as well as many of the foreseeable conflicts in the immediate future, the single greatest wicked problem facing the Pentagon in the twenty-first century is the looming threat of the militarization of space. To weaponize space, historical thinking in the Pentagon goes, would be to safeguard space in a preemptive manner. A war in space over satellite control is not a war the United States necessarily wants to fight, but it is a war the United States is most assuredly unwilling to lose.

"Over eighty percent of the satellite communications used in U.S. Central Command's area of responsibility is provided by commercial vendors," reads the Pentagon's "Surprise in Space" report. And when, in 2007, the Chinese—unannounced and unexpectedly—[shot down one of their own](#) satellites with one of their own weapons, the incident opened the Pentagon's eyes to a whole host of potential wicked-problem scenarios in space.

Around 5:00 p.m. eastern standard time on July 11, 2007, a small, six-foot-long

Chinese satellite was circling the Earth 539 miles up when it was targeted and destroyed by a Chinese ballistic missile launched from a mobile launcher at the Songlin test facility in Szechuan Province, running on solid fuel and topped with a “kinetic kill vehicle,” or explosive device. The satellite was traveling at speeds of around sixteen thousand miles per hour, and the ballistic missile was traveling approximately eighteen thousand miles per hour. The hit was dead-on. As radical and impressive as it sounds, the technology was not what raised flags and eyebrows at the Pentagon. The significance of the event came from the fact that with China’s satellite kill, the world moved one dangerous step closer to the very wicked problem of weaponizing space. To enter into that game means entering into the kind of mutual-assured-destruction military industrial–complex madness that has not been engaged in since the height of the Cold War.

Actions of this magnitude, certainly by those of a superpower like China, are almost always met by the U.S. military with a response, either overt or veiled, and the Chinese satellite kill was no exception. Seven months later, in February of 2008, an SM-3 Raytheon missile was launched off the deck of the USS *Lake Erie* in the North Pacific. It traveled approximately 153 miles up into space where it hit a five-thousand-pound U.S. satellite described as being about the size of a school bus and belonging to the National Reconnaissance Office. [The official Pentagon story](#) was that the satellite had gone awry and the United States didn’t want the satellite’s hazardous fuel source, stated to be the toxin hydrazine, to crash on foreign soil. “Our objective was to intercept the satellite, reduce the mass that might survive re-entry [and] vector that mass into unpopulated areas ideally the ocean,” General James Cartwright, the vice chairman of the Joint Chiefs of Staff, told the press. International leaders cried foul, saying the test was designed to show the world that the United States has the technology to take out other nations’ satellites. “China is continuously following closely the possible harm caused by the U.S. action to outer space security and relevant countries,” declared Liu Jianchao, China’s foreign ministry spokesman—certainly an example of the pot calling the kettle black.

In the 1950s, the United States and the Soviet Union actually considered using space as a launching pad for war. President Eisenhower’s science adviser James Killian—a man with so much power that he was [not required to tell the truth to Congress](#)—fielded regular suggestions from the Pentagon to develop, in his own words, “satellite bombers, military bases on the moon, and so on.” Killian was the man who spearheaded the first nuclear weapon explosions in space, first in the upper atmosphere (Orange), then near the ozone layer (Teak), and finally in outer space (Argus). But Killian shied away from the idea of weaponizing space not because he saw putting weapons in space as an inherently reckless or existentially bad idea but because Killian believed nuclear weapons would not work well from space.

[“A satellite cannot simply drop a bomb.”](#) Killian declared in a public service announcement released from the White House on March 26, 1958, a report written for “nontechnical” people at the behest of the president. “An object released from a satellite doesn’t fall. So there is no special advantage in being over the target,” Killian declared. Here was James Killian, who, [by his own admission, was not a scientist](#), explaining to Americans why dropping bombs from space wouldn’t work. “Indeed the only way to ‘drop’

a bomb directly down from a satellite is to carry out aboard the satellite a rocket launching of the magnitude required for an intercontinental missile." In other words, Killian was saying that to get an ICBM up to a launchpad in space was simply too cumbersome a process. Killian believed that the better way to put a missile on a target was to launch it from the ground. That the extra effort to get missiles in space wasn't worth the task. This may have been true in the 1950s, but decades later James Killian would be proven wrong.

Flash forward to 2011. Analysts with the [United States Space Surveillance Network](#), which is located in an Area 51-like facility on the island of Diego Garcia in the Indian Ocean, spend all day, every day, 365 days a year, tracking more than eight thousand man-made objects orbiting the Earth. The USSS Network is responsible for detecting, tracking, cataloging, and identifying artificial objects orbiting Earth, including active and inactive satellites, spent rocket bodies, and space debris. After the Chinese shot down their own satellite in 2007, the network's job got considerably more complicated. The Chinese satellite kill produced an estimated thirty-five thousand pieces of one-centimeter-wide debris and another fifteen hundred pieces that were ten centimeters or more. "[A one-centimeter object is very hard to track](#) but can do considerable damage if it collides with any spacecraft at a high rate of speed," said Laura Grego, a scientist with the Global Security Program at the Union of Concerned Scientists. The United States said the NRO satellite it shot down did not create space debris because, being close to Earth when it was shot down, its pieces burned up as they reentered Earth's atmosphere.

These scenarios create another wicked problem for the U.S. military. Every modern nation relies on satellites to function. The synchronized encryption systems used by banks around the world rely on satellites. Weather forecasts are derived from satellite information, as is the ability of air traffic controllers to keep airplanes safely aloft. The U.S. global positioning system, or GPS, works on satellites, as will the European version of GPS, the Galileo positioning system, which will come online in 2012. The U.S. military relies on satellites not just for its drone programs but for almost all of its military communications worldwide. Were anyone to take down the satellite system, or even just a part of it, the world would see chaos and panic that would make *The War of the Worlds* seem tame. When considering the actions of the United States and the Soviet Union during the atomic buildup of the 1940s, '50s, and '60s—the nuclear hubris, the fiscal waste, and the imprudent public policy—it is nothing short of miraculous that the space-based nuclear tests of the late 1950s and early 1960s did not propel the two superpowers to fight for military control of space. Instead, in the last decades of the Cold War, the United States and the USSR worked with a tacit understanding that space was off-limits for warfare. Neither nation tried to put missiles on the moon. And neither nation shot down another nation's spy satellites. According to Colonel Leghorn, this is because "[spy satellites launched into space](#) were accepted as eyes in the skies that governments had to live with." The governments Leghorn is referring to are Russia and the United States. But today, allegiances and battle lines have been considerably redrawn. At least one enemy army, that of al-Qaeda, would rather die than live according to the superpowers' rules.

In spite of, or perhaps because of, his ninety-one years, Leghorn speaks with great

authority. In addition to being considered the father of aerial reconnaissance, [Leghorn founded the Itek Corporation](#) in 1960, which developed the high-resolution photographic system for America's first reconnaissance satellite, Corona. The Corona program was highly successful and, most notably, was originally designed and run by Richard Bissell for the CIA at the same time he was in charge of operations at Area 51. After leaving the Air Force, [Leghorn spent decades in the commercial-satellite business](#). From the satellite images produced by Itek satellites, the CIA learned that in order to escape scrutiny by America's eyes in the sky, many foreign governments moved their most secret military facilities underground.

Out in the Nevada desert, while the CIA redoubled its efforts at Area 51 to develop ground sensor technology and infrared tracking techniques to learn more about underground facilities (which also requires the use of drones), the Department of Defense and the Air Force got to work on a different approach. In the 1980s, the military worked to develop the bunker buster, a nuclear weapon designed to fire deep into Earth's surface, hit underground targets, and detonate belowground. Weapons designer Sandia was brought on board. It was called the [W61 Earth Penetrator](#), and testing took place at Area 52 in 1988. The idea was to [launch the earth-penetrator weapon](#) from forty thousand feet above but after many tests (minus the nuclear warhead), it became clear that a nuclear bomb would have little or no impact on granite, which is the rock of choice in which to build sensitive sites underground. After President Clinton ended all U.S. nuclear testing in 1993 (the Comprehensive Nuclear-Test-Ban Treaty was adopted by the United Nations General Assembly in 1996 [and signed by five of the then seven or eight nuclear-capable countries](#)), the idea of developing an earth-penetrating nuclear weapon lost its steam. But the building of underground facilities by foreign governments continued to plague war planners, so along came a nonnuclear space-based weapons project called [Rods from God](#). That weapons project involved slender metal rods, thirty feet long and one foot in diameter, that could be launched from a satellite in space and hit a precise target on Earth at ten thousand miles per second. T. D. Barnes says "[that's enough force](#) to take out Iran's nuclear facility, or anything like it, in one or two strikes." The Federation of American Scientists reported that a number of similar "[long-rod penetration](#)" programs are believed to currently exist.

After the Gulf War, DARPA hired a secretive group called the JASON scholars (a favored target in conspiracy-theorist circles) and its parent company, MITRE Corporation, to report on the status of underground facilities, which in government nomenclature are referred to as UGFs. The unclassified version of the [April 1999 report](#) begins, "Underground facilities are being used to conceal and protect critical activities that pose a threat to the United States." These threats, said JASON, "include the development and storage of weapons of mass destruction, principally nuclear, chemical, and biological weapons," and also that "the proliferation of such facilities is a legacy of the Gulf War." What this means is that the F-117 stealth bomber showed foreign governments "that almost any above ground facility is vulnerable to attack and destruction by precision guided weapons." For DARPA, this meant it was time to develop a new nuclear bunker buster—Comprehensive Nuclear-Test-Ban-Treaty or not.

In January of 2001, the Federation of American Scientists reported their concern over the disclosure that the nuclear weapons laboratories were working on low-yield nukes, or "mini-nukes," to target underground facilities despite the congressional ban against "research and development which could lead to the production by the United States of a new, low-yield nuclear weapon." [Los Alamos fired back](#), claiming they could develop a mini-nuke conceptually. "One could design and deploy a new set of nuclear weapons that do not require nuclear testing to be certified," stated Los Alamos associate director for nuclear weapons Stephen M. Younger, asserting that "such simple devices would be based on a very limited nuclear test database." The Federation of American Scientists saw Younger's assertion as improbable: "It seems unlikely that a warhead capable of performing such an extraordinary mission as destroying a deeply buried and hardened bunker could be deployed without full-scale [nuclear] testing" first. On July 1, 2006, Stephen Younger became president of National Security Technologies, or NSTec, the company in charge of [operations at the Nevada Test Site](#), through 2012.

In 2002, with America again at war, the administration of George W. Bush revived the development of the nuclear bunker-buster weapon, now calling it the Robust Nuclear Earth Penetrator. In April of the same year, the Department of Defense entered into discussions with the Lawrence Livermore National Laboratory to begin preliminary design work on the new nuclear weapon. By fiscal year 2003, the Stockpile Services Robust Nuclear Earth Penetrator line item received \$14.5 million; in 2004 another \$7.5 million; and in 2005 yet another \$27.5 million. [In 2006, the Senate dropped the line item](#). Either the program was canceled or it got a new name and entered into the black world—perhaps at Area 51 and Area 52.

Or perhaps next door at the Nevada Test Site, underground. For as far-fetched and ironic as this sounds—developing a bunker-busting nuclear bomb at an underground nuclear testing facility in Nevada—this is exactly what DOE officials proposed in an unclassified report released quietly in 2005. In this report, officials with the agency formerly known as the Atomic Energy Commission [proposed to revive the NERVA program](#)—the Area 25 nuclear-powered rocket program designed to send man to Mars—and to do it, of all places, underground.

Unlike the NERVA program of the 1960s, argued Michael Williams, the author of the report, "DOE Ground Test facilities for space exploration enabling nuclear technologies can no longer be vented to the open atmosphere," meaning a facility like the one that previously existed out at Jackass Flats was out of the question. But for the new NERVA project, Williams proposed, the Department of Energy could easily conduct its nuclear tests inside "the existing [underground] tunnels or new tunnels at the Nevada Test site for this purpose."

Former Los Alamos associate director of nuclear weapons Stephen Younger, who currently serves as the president of operations at the Nevada Test Site, categorically denies that any underground nuclear weapons tests are in the works at the test site. But he does confirm that "subcritical" nuclear tests currently take place there, inside an underground tunnel complex located beneath Area 1. To access that facility, Younger says, employees use an elevator that travels a thousand feet underground. What goes on

there are "scientific experiments with plutonium and high explosives," Younger says, "not weapons tests." Younger insists the "same cannot be said about the Russians." He says that inside their underground facility at Novaya Zemlya—the location where the Soviet Union detonated their fifty-megaton thermonuclear bomb, called Tsar Bomba, in 1961—"the Russians are developing new nuclear weapons around the clock. Mr. [Vladimir] Putin has said that repeatedly. He keeps saying that because they want us to know."

There is no way to know precisely what is happening today at the Nevada Test and Training Range—aboveground at Area 51 or Area 52, or in the underground tunnels beneath the test site, because most of what is currently happening out in the Nevada desert is classified and the federal agencies involved believe the people do not have a need-to-know. The question is, does the public have a right to know? Does Congress? Many secret projects that have gone on at Area 51 have delivered results that have kept America safe. The first flight over the Soviet Union, by Hervey Stockman in a U-2 spy plane in 1956, provided the CIA with critical intelligence, namely, that the Russians were not lining up their military machine for a sneak attack. The intelligence provided by an A-12 Oxcart spy plane mission kept the Johnson administration from declaring war on North Korea during the Vietnam War. The F-117 stealth bomber crippled Saddam Hussein's WMD programs. But there are other kinds of secret actions that have gone on at Area 51, at least one of which should never have been authorized and should not be kept as a national secret anymore.

After World War II, the American government's hiring and protection of Nazi scientists was based on the premise that these scientists were the world's best and their information was needed in order to advance science—and win the next war. In doing so, America made a deal with the devil. This deal became a wicked problem for the agencies involved, and playing the game with former Nazis gave way to an entirely new set of problems, one of which has been the federal government's ongoing complicity in covering up many of these scientists' original crimes. Approximately [six hundred million pages of information](#) about the government's postwar use of Nazi criminals' expertise remains classified as of 2011. [Many documents about Area 51 exist in that pile.](#)

The reason why the federal government will not officially admit that Area 51 exists is not the secret spy planes, the stealth bombers, or the drones that were, and still are, flight-tested there. The reason is something else. It is a program undertaken by five EG&G engineers at Area 51. This program involved [the Roswell crash remains](#) and predicated the development of the original CIA facility, currently called Area 51, which was built by Richard Bissell beginning in 1955. Area 51 is named as such not because it was a randomly chosen quadrant, as has often been presumed, but because the 1947 crash remains from Roswell, New Mexico, were sent from Wright-Patterson Air Force Base out to a secret spot in the Nevada desert—in 1951.

The gypsies have a saying: You're not really dead until the last person who knows you dies. For investigative journalists it goes something like this: As long as there is an eyewitness willing to tell the truth, the truth can be known.

The flying craft that crashed in New Mexico, the myth of which has come to be known as the Roswell Incident, happened in 1947, sixty-four years before the publication of this

book. Everyone directly involved in that incident—who acted on behalf of the government—is apparently dead. Like it does about Area 51, the U.S. government refuses to admit the Roswell crash ever happened, but it did—according to the seminal testimony of one man interviewed over the course of eighteen months for this book. He participated in the engineering project that came about as a result of the Roswell Incident. He was one of the elite engineers from EG&G who were tasked with the original Area 51 wicked engineering problem.

In July of 1947, Army intelligence spearheaded the efforts to retrieve the remains of the flying disc that crashed at Roswell. And as with other stories that have become the legends of Area 51, part of the conspiracy theory about Roswell has its origins in truth. The crash did reveal a disc, not a weather balloon, as has subsequently been alleged by the Air Force. And responders from the Roswell Army Air Field found not only a crashed craft, but also two crash sites, and they found bodies alongside the crashed craft. These were not aliens. Nor were they consenting airmen. They were human guinea pigs. Unusually petite for pilots, they appeared to be children. Each was under five feet tall. Physically, the bodies of the aviators revealed anatomical conundrums. They were grotesquely deformed, but each in the same manner as the others. They had unusually large heads and abnormally shaped oversize eyes. One fact was clear: these children, if that's what they were, were not healthy humans. A second fact was shocking. Two of the child-size aviators were comatose but still alive.

Everything related to the crash site was sent to Wright Field, later called Wright-Patterson Air Force Base, in Ohio, where it all remained until 1951. That is when the evidence was packed up and transported to the Nevada Test Site. It was received, physically, by the elite group of EG&G engineers. The Atomic Energy Commission, not the Air Force and not the Central Intelligence Agency, was put in charge of the Roswell crash remains. According to its unusual charter, the Atomic Energy Commission was the organization best equipped to handle a secret that could never be declassified. The Atomic Energy Commission needed engineers they could trust to handle the work that was about to begin. For this, they looked to [the most powerful defense contractor in the nation](#) that no one had ever heard of—EG&G.

The engineers with EG&G were chosen to receive the crash remains and to set up a secret facility just outside the boundary of the Nevada Test Site, sixteen miles to the northwest of Groom Lake, approximately five and a half miles north of the northernmost point where Area 12 and Area 15 meet. A facility this remote would never be visited by anyone outside a small group with a strict need-to-know and would never have to be accounted for or appear on any official Nevada Test Site map. These five men were told there was more engineering work to be done, and that they would be the only five individuals with a set of keys to the facility. The project, the men were told, was the most clandestine, most important engineering program since the Manhattan Project, which was why the man who had been in charge of that one would function as the director of this project as well.

Vannevar Bush had been President Roosevelt's most trusted science adviser during World War II. He held engineering doctorates from both Harvard University and MIT, in

addition to being the former vice president and [former dean of engineering at MIT](#). The decisions Vannevar Bush made were ostensibly for the good of the nation; they were sound. The men from EG&G were told that the project they were about to work on was so important that it would remain black forever, meaning it would never see the light of day. The men knew that a secrecy classification inside the Atomic Energy Commission charter made this possible, because they all worked on classified engineering projects that were hidden from the rest of the world. They understood *born classified* meant that no one would ever have a need-to-know what Vannevar Bush was going to ask them to do. The operation would have no name, only a letter-number designation: S-4, or Sigma-Four.

The problem that the EG&G engineers would face would be highly complex, wide-ranging, without a definite formulation and with no set solution. This wicked problem was wholly without precedent. Solving it would undoubtedly have unintended consequences, because playing the engineering game would change the game. But there were two puzzles to solve, not just one. Two engineering mysteries for the elite group of EG&G engineers to unlock.

There was the crashed craft that had been sent by Stalin—with its Russian writing stamped, or embossed, in a ring around the inside of the craft. So far, the EG&G engineers were told, no one working on the project when it had been headquartered at Wright-Patterson Air Force Base had been able to discern what made Stalin's craft hover and fly. Not even the German Paperclip scientists who had been assigned to assist. So the crashed craft was job number one. Reverse engineer it, Vannevar Bush said. Take it apart and put it back together again. Figure out what made it fly.

But there was the second engineering problem to solve, the one involving the child-size aviators. To understand this, the men were briefed on what it was they were dealing with. They had to be. They were told that they, and they alone, had a need-to-know about what had happened to these humans before they were put in the craft and sent aloft. They were told that seeing the bodies would be a shocking and disturbing experience. Because two of the aviators were comatose but still alive, the men would have to transfer them into a Jell-O-like substance and stand them upright in two tubular tanks, attached to a life-support system. Sometimes, their mouths opened, and this gave the appearance of their trying to speak. Remember, the engineers were told, these humans are in a comatose state. They are unconscious; their bodies would never spark back to life.

Once, the children had been healthy humans. Not anymore. They were about thirteen years old. Questions abounded. What made their heads so big? Had their bodies been surgically manipulated to appear inhuman, or did the children have genetic deformities? And what about their haunting, oversize eyes? The engineers were told that the children were rumored to have been [kidnapped by Dr. Josef Mengele](#), the Nazi madman who, at Auschwitz and elsewhere, was known to have [performed unspeakable experimental surgical procedures](#) mostly on [children, dwarfs, and twins](#). The engineers learned that just before the war ended, Josef Mengele made a deal with Stalin. Stalin offered Mengele an opportunity to continue his work in eugenics—the science of improving a human population by controlled breeding to increase desirable, heritable characteristics—in secret, in the Soviet Union after the war. The engineers were told that this deal likely

occurred just before the war's end, in the winter of 1945, when it was clear to many members of the Nazi Party, including Mengele, that Nazi Germany would lose the war and that its top commanders and doctors would be tried and hanged for war crimes.

In [Josef Mengele's efforts to create a pure, Aryan race](#) for Hitler, at Auschwitz and elsewhere, he conducted experiments on people he considered subhuman so as to breed certain features out. Mengele's victims included Jewish children, Gypsy children, and people with severe physical deformities. He removed parts of children's craniums and replaced them with bones from larger, adult skulls. He removed and transplanted eyeballs, and injected people with chemicals that caused them to lose their hair. On Mengele's instruction, an Auschwitz inmate, a [painter named Dina Babbitt](#), made comparative drawings of the shapes of heads, noses, mouths, and ears of people before and after the grotesque surgeries Mengele performed. Another inmate doctor forced to work for Mengele, named [Dr. Martina Puzyna](#), recounted how Mengele had her keep detailed measurements of the shapes and sizes of children's body parts, casting those of crippled children—particularly their hands and heads—in plaster molds. When Mengele left Auschwitz, on January 17, 1945, he took the documentation of his medical experiments with him. [According to his only son, Rolf](#), Mengele was still in possession of his medical research documents after the war.

The EG&G engineers were told that part of Joseph Stalin's offer to Josef Mengele stated that if he could create a crew of grotesque, child-size aviators for Stalin, he would be given a laboratory in which to continue his work. According to what the engineers were told, [Mengele held up his side of the Faustian bargain](#) and provided Stalin with the child-size crew. Joseph Stalin did not. [Mengele never took up residence in the Soviet Union](#). Instead, he lived for four years in Germany under an assumed name and then escaped to South America, where he lived, first in Argentina and then in Paraguay, until his death in 1979.

When Joseph Stalin sent the biologically and/or surgically reengineered children in the craft over New Mexico hoping it would land there, the engineers were told, Stalin's plan was for the children to climb out and be mistaken for visitors from Mars. Panic would ensue, just like it did after the radio broadcast of *The War of the Worlds*. America's early-warning radar system would be overwhelmed with sightings of other "UFOs." Truman would see how easily a totalitarian dictator could control the masses using black propaganda. Stalin may have been behind the United States in atomic bomb technology, but when it came to manipulating the people's perception, Stalin was the leader with the upper hand. This, says the engineer, is what he and the others in the group were told.

For months I asked the engineer why President Truman didn't use the remains from the Roswell crash to show the world what an evil, abhorrent man Joseph Stalin was. I guessed that maybe Truman didn't want to admit the breach of U.S. borders. For a long time, I never got an answer, just a shaking of the head. Here was the engineer who had the answer to the riddle inside the riddle that is Area 51, but he was unwilling to say more. He is the only one of the original elite group of EG&G engineers who is still alive. He said he wouldn't tell me more, no matter how many times I asked. One day, I asked again. "Why didn't President Truman reveal the truth in 1947?" This time he answered.

"Because we were doing the same thing," he said. "They wanted to push science. They wanted to see how far they could go."

Then he said, "We did things I wish I had not done."

Then, "We performed medical experiments on handicapped children and prisoners."

"But you are not a doctor," I said.

"They wanted engineers."

"On whose authority did you act?"

"The Atomic Energy Commission was in charge. And Vannevar Bush," he said.

"People were killed. In this great United States."

"Why did we do that?"

"You do what you do because you love your country, and you are told what you are doing is for the good of the country," the engineer said. Meaning out at the original Area 51, starting in 1951, the EG&G engineers worked in secret on a nefarious Nazi-inspired black project that would remain entirely hidden from the public because Vannevar Bush told them it was the correct thing to do.

"It was a long, long time ago," the engineer said. "I have tried to forget."

"When did it end?" I asked.

No answer.

"In 1952?" I asked. Still no answer. "In 1953...1954...?"

"At least through the 1980s it was still going on," he said.

"I believe you should tell me the whole story," I said. "Otherwise, once you are gone, you will take the truth with you."

"You don't want to know," he said.

"I do."

"You don't have a need-to-know," he said.

For many months, I tried to learn more. I got pieces. Slivers of pieces. One-word details. "This" confirmed and "that" reconfirmed, regarding what he had previously said. One day, when we were eating lunch in a restaurant, I recounted back to the engineer everything I knew. I asked for his permission to put it all in this book. He did not say yes. He did not say no. We interviewed for more than one year. Then one day, I asked him how much of the story I now knew.

"You don't know half of it," he said sadly.

I took a crouton, left over from my lunch, and set it down in the middle of the restaurant's white china plate. "If what I know equals this crouton," I said, pointing at the little brown piece of bread, "then is what I don't know as big as this plate?"

"Oh, my dear," he said, shaking his head. "The whole truth is bigger than this table we are eating on, including the chairs."

He wouldn't say more. He said he was hurting. That soon he would die. That, really, it was best that I did not learn any more because I didn't have a need-to-know. But it is not just me who needs to know. We need to be able to keep secrets, but this kind of secret-keeping—of this kind of secret—is the work of totalitarian states, like the one we fought against for five decades during the Cold War. Fighting totalitarianism was America's rationale for building seventy thousand nuclear weapons in sixty-five styles. In a free and

open democratic society, conducting projects in the name of science is one thing. Keeping forty-year-old secrets from a president even after he tries to find them out is an entirely different problem for a democratic nation. It sets a precedent. It makes it easier for a group of powerful men to set up a program that defies the Constitution and defiles morality in the name of science and national security, all under the deceptive cover that no one has a need-to-know. I believe that even though the engineer didn't tell me everything, that is why he told me what he did.

According to my source, the Atomic Energy Commission conducted experiments on humans in a classified government facility in the Nevada desert beginning in 1951. Although this was done in [direct violation of the Nuremberg Code](#) of 1947, it is far from the first time the Commission had acted in violation of the most basic moral principle involving voluntary human consent. In 1993, reporter [Eileen Welsome wrote a newspaper story](#) stating that the Atomic Energy Commission had conducted plutonium experiments on human beings, most notably retarded children and orphan boys from the Fernald State School, outside Boston, without the children's or their guardians' knowledge or consent. After this horrible revelation came to light, [President Clinton opened an investigation](#) to look into what the Atomic Energy Commission had done and the secrets it had been able to safeguard inside its terrifying and unprecedented system of secret-keeping. I asked the engineer why President Clinton hadn't learned about the S-4 facility at Area 51—or had he?

"I think he might have come very close," the engineer said about President Clinton. "But they kept it from him."

"Who are *they*?" I asked. The engineer told me that his elite group had been given the keys to the original facility at Area 51. "Who inherited those keys from you five engineers?" I wanted to know.

"You don't have a need-to-know" is all he would say.

EPILOGUE

In the summer of 2010 a book arrived in the mail from Colonel Leghorn, the father of overhead reconnaissance, age ninety-one. The pages were musty and smelled like an attic. What he had sent was his 1946 [Army Air Forces commemorative yearbook](#) from the Operation Crossroads atomic bomb tests. What is most striking is how the story of America's first postwar nuclear test begins as a "mysterious Army-Navy assignment" in a "sand-swept town—Roswell."

"Roswell... Roswell... Roswell... Roswell... Roswell..."

The word repeats six times in the first few pages of the government-issued yearbook, making it clear that it was from the Roswell Army Air Field in New Mexico that the first shot in what would be a forty-three-year-old Cold War was fired. And what a colossal opening shot Operation Crossroads was, an unprecedented show of force aimed at letting Joseph Stalin know that America was not done with the nuclear bomb. Forty-two thousand people were present in the Pacific for the two nuclear bomb tests, including Stalin's spies. [The U.S. government spent nearly two billion dollars](#) (adjusted for inflation) to show the world the nuclear power it now possessed.

"Stalin learned from Hitler," the EG&G engineer says, "revenge... and other things." And that to consider Stalin's perspective one should think about two key moments in history, one right before World War II began and another right before it ended. On August 23, 1939, one week before war in Europe officially began, Hitler and Stalin agreed to be allies and signed the Molotov-Ribbentrop Pact, meaning each country promised not to attack the other when war in Europe broke out. And yet almost immediately after shaking hands, Hitler began plotting to double-cross Stalin. Twenty-two months later, Hitler's sneak attack against Russia resulted in millions of deaths. And then, just a few weeks before World War II ended, Stalin, Truman, and Churchill met in Potsdam, Germany—from July 17, 1945, to August 2, 1945—and agreed to be postwar allies. Just one day before that conference began, America had secretly tested the world's first and only atomic bomb, inside the White Sands Proving Ground in the New Mexico desert. [Truman's closest advisers](#) had suggested that Truman share the details of the atomic test with Stalin at Potsdam, but Truman did not. It didn't matter. Nuclear weapons historians believe that Joseph Stalin was already well aware of what the Manhattan Project engineers had accomplished. Stalin had spies inside the Los Alamos nuclear laboratory who had been providing him with bomb blueprints and other information since 1941. By the time the Potsdam conference rolled around, Stalin was already well at work on his own atomic bomb. Despite Stalin and Truman pretending to be allies, neither side trusted the other.

side, neither man trusted the other man. Each side was instead making plans to build up its own atomic arsenal for future use. When Operation Crossroads commenced just twelve months after the handshakes at Potsdam, the Cold War battle lines were already indelibly drawn.

It follows that [Stalin's black propaganda hoax](#)—the flying disc peopled with alien look-alikes that wound up crashing near Roswell, New Mexico—could have been the Soviet dictator's revenge for Truman's betrayal at Crossroads. His double cross had to have been in the planning stages during the handshaking at Potsdam, metaphorically mirroring what Hitler had done during the signing of the Molotov-Ribbentrop Pact. By July of 1947, Stalin was still two years away from being able to successfully test his own nuclear bomb. The flying disc at Roswell, says the EG&G engineer, was "[a warning shot across Truman's bow](#)." Stalin may not have had the atomic bomb just yet, but he had seminal hover and fly technology, pilfered from the Germans, and he had stealth. Together, these technologies made the American military gravely concerned. Perplexed by the flying disc's movements, and its radical ability to confuse radar, the Army Air Forces was left wondering what else Stalin had in his arsenal of unconventional weapons, usurped from the Nazis after the war.

["Hitler invented stealth," says Gene Poteat](#), the first CIA officer in the Agency's history to be assigned to the National Reconnaissance Office, or NRO. Gene Poteat's job was to assess Soviet radar threats, and to do this, he observed many spy plane tests at Area 51. "Hitler's stealth bomber was called the Horten Ho 229," Poteat says, "which is also called the Horten flying wing. It was covered with radar-absorbing paint, carbon embedded in glue. The high graphic content produced a result called 'ghosting,' which made it difficult for radar to see."

The Horten Ho 229 to which Poteat refers was the brainchild of two young aircraft designers who worked for Hitler's Luftwaffe, Walter and Reimar Horten. These are the same two brothers who, in the fall of 1947, became the subject of the U.S. Army Intelligence's massive European manhunt called "Operation Harass"—the search for a flying-saucer-type aircraft that could allegedly hover and fly.

[Whatever happened to the Horten brothers?](#) Unlike so many Nazi scientists and engineers who were recruited under Operation Paperclip, Walter and Reimar Horten were originally overlooked. After being [captured by the U.S. Ninth Army on April 7, 1945](#), at their workshop in Göttingen, they were set up in a guarded [London high-rise near Hyde Park](#). There, they were interrogated by the famous American physicist and rocket scientist [Theodore Von Kármán](#), who decided the Horten brothers did not have much to offer the U.S. Army Air Forces by way of aircraft technology—at least not with their flying wing. After being returned to Germany, Reimar escaped to Argentina, where he was set up in a beautiful house on the shores of Villa Carlos Paz Lake, thanks to Argentinean president and ardent Nazi supporter Juan Perón. Walter lived out his life in Baden-Baden, Germany, hiding in plain sight.

The information about the Horten brothers comes from the aircraft historian David Myhra, who, in his search to understand all-wing aircraft, industriously tracked down both Horten brothers, visited them in their respective countries in the 1980s, and recorded hundreds of hours of interviews with them on audiotape. These [tapes can be found](#) in the

archives of the Smithsonian Air and Space Museum.

"[Reimar had me agree to two restrictions](#) before I went to South America to interview him," Myhra explains. "One was that I couldn't ask questions about Hitler or the Third Reich." And the second was that "he said he didn't want to talk about the CIA. Reimar said there was this crazy idea that he'd designed some kind of a flying saucer and that the CIA had [supposedly] been looking for him." Myhra says Reimar Horten was adamant in his refusal to discuss anything related to the CIA. "The subject was off-limits for him," Myhra says. The conversation with Reimar Horten that Myhra refers to took place in the decade before Army Intelligence released to the public its three-hundred-page file on Operation Harass. This is the file that discusses the U.S. manhunt for the Horten brothers and their so-called flying disc. The Operation Harass file makes clear that someone from an American intelligence organization made contact with Reimar in the late 1940s to interrogate him about the flying disc. More than forty years later, Reimar Horten still refused to talk about what was said. A [2010 Freedom of Information Act request](#) to the Department of the Army, Office of the General Counsel, Army Pentagon, issued a "no records response." A secondary appeal was also "denied."

If Stalin really did get the Horten brothers' flying disc, either from the brothers themselves or from blueprints they had drawn, how did Stalin get their flying disc to hover and fly on like that? What became of the craft's hover technology, powered by some mysterious power plant, which was also so fervently sought by Counter Intelligence Corps agents during Operation Harass? The EG&G engineer says that while he does not know what research was conducted on the "equipment" when it was at Wright-Patterson, beginning in 1947, he does know about the research conducted on the "power plant" after he received the "equipment," in Nevada in 1951.

"There was [another \[important\] EG&G engineer](#)," he explains. That engineer was assigned the task of learning about Stalin's hover technology, "which was called electromagnetic frequency, or EMF." This engineer "spent an entire year in a windowless room" inside an EG&G building in downtown Las Vegas trying to understand how EMF worked. "We figured it out," the EG&G engineer says. "We've had hover and fly technology all this time."

I asked the EG&G engineer to take me to the place where hover and fly technology was allegedly solved, and he did. Archival photographs and Atomic Energy Commission video footage confirm that the site once contained several buildings that were operated by EG&G. Not anymore. Instead, the facility inside of which an EG&G engineer unlocked one of Area 51's original secrets in the early 1950s is now nothing but an [empty lot of asphalt](#) and weeds ringed by a chain-link fence. Is this what will become of Area 51 in sixty years? Will it too be moved? Will it go underground? Has it already?

What about flying saucers from a physicist's point of view? Edward Lovick, the grandfather of America's stealth technology, says that in the late 1950s, Kelly Johnson had him spend many months in Lockheed's anechoic chamber radar testing small-scale models of flying saucers. "[Little wooden discs](#) built in the Skunk Works wood shop," Lovick recalls. According to Lovick, Kelly Johnson eventually decided that round-shaped aircraft—flying discs without wings—were aerodynamically unstable and therefore too

dangerous for pilots to fly. This was before the widespread use of pilotless aircraft, or drones.

What about the child-size pilots inside the flying disc? Shortly after the Roswell crash in July 1947, a press officer from the Roswell Army Air Field, a man named Walter Haut, was dispatched to the radio station KGFL in Roswell with a press release saying the Roswell Army Air Force was in possession of a flying disc. Haut was the emissary of the original Roswell Statement, which, in addition to being broadcast over the airwaves, was famously printed in the *San Francisco Chronicle* the following day. It was Walter Haut who, three hours later, was sent back to KGFL by the commander of the Army Air Field with a second press release, one that said that the first press release was actually incorrect.

Walter Haut died in December 2005 and left a [sworn affidavit](#) to be opened only after his death. In the text, Haut said the second press release was fraudulent, meant to cover up the first statement, which was true. Haut also said that in addition to recovering a flying craft, the military recovered bodies from a second crash site—small, child-size bodies with disproportionately large heads. “I am convinced that what I personally observed was some kind of craft and its crew from outer space,” Haut wrote.

The EG&G engineer’s explanation about the child pilots inside the flying disc answers the riddle of the so-called Roswell aliens, certainly in a manner that would satisfy the fourteenth-century English friar and philosopher William of Ockham. It is an answer that is not more complicated than the riddle itself. According to the EG&G engineer, the aviators were not aliens but were created to look like them, by Josef Mengele, “shortly before or immediately after the end of the war.” Children would have had great difficulty piloting an aircraft. The engineer says he was told the flying disc was piloted remotely, but offered almost no information about what would have had to have been the larger aircraft from which this early “drone” was launched. “It came down over Alaska,” he says.

What about Bob Lazar? In the course of interviewing thirty-two individuals who lived and worked at Area 51, I asked the majority what they thought of Lazar’s 1989 revelation about Area 51. Most made highly skeptical comments about Bob Lazar; none claimed ever to have met him. While it appears that Lazar lied about his education, his statements about S-4 should not be summarily dismissed as fraud.

The EG&G engineer says that the S-4 facility that housed the original Roswell “equipment” continued on for decades, which fits with Bob Lazar’s time line. Lazar says he worked at Area 51 from 1988 to 1989. Lazar told newsman George Knapp that at S-4, he saw something through a window, inside an unmarked room, that could have been an alien. Was what happened to Lazar just like what happened to the P-38 Lightning pilot who, flying over the California desert during the dawn of the jet age, thought he saw a gorilla flying an airplane when really he saw Bell Aircraft chief test pilot Jack Woolams wearing a gorilla mask? Perhaps Lazar drew the only conclusion he could have drawn based on the information he had. And perhaps the Atomic Energy Commission had taken a page out of the CIA’s playbook on deception campaigns: it needed to produce the belief that something false was something true. Perhaps scientists and engineers who were brought to S-4 in the later years were told that they were working on alien beings and alien spacecraft. Try going public with that story and you will wind up disgraced like Bob Lazar.

As it was with the P-38 Lightning pilots in 1942, it remains today. No one likes being mistaken for a fool.

"[It's difficult](#) to be taken seriously in the scientific community when you're known as 'the UFO guy,'" Bob Lazar stated on the record in 2010 for this book.

For decades, hundreds of serious people—civilians, lawmakers, and military personnel—have made considerable efforts to locate the records for the Roswell crash remains. And yet no such record group has ever been located, despite formal investigations by senators, congressmen, the governor of New Mexico, and the federal government's Government Accountability Office. This is because no one has known where to look. Until now, the world has been knocking on the wrong door. The information has been protected from declassification by draconian Atomic Energy Commission classification rules, [hidden inside secret Restricted Data files](#) that were originally created for the Atomic Energy Commission by EG&G.

So now it is known.

How did [Vannevar Bush](#) get so much power? He was once the most important scientist in America. President Truman awarded him the Medal for Merit in a White House ceremony, President Johnson presented him with the National Medal of Science, and the queen of England dubbed him a knight. The statements made by the EG&G engineer about what Vannevar Bush authorized engineers and scientists to do at Area 51's S-4 facility are truly shocking and almost unbelievable. Except a clear historical precedent exists for Vannevar Bush having exactly this kind of power, secrecy, and control.

Vannevar Bush lorded over the mother of all black operations—the engineering of the world's first nuclear bomb. And as director of the Office of Scientific Research and Development, which controlled the Manhattan Project, Vannevar Bush was also in charge of [human experiments to study the effects](#) of the bioweapons lewisite and mustard gas on man. Some of those human guinea pigs were soldiers and others were conscientious objectors to the war, but a 1993 study of these programs by the National Academy of Sciences made clear that the test subjects were not consenting adults. "[Although the human subjects](#) were called 'volunteers,' it was clear from the official reports that recruitment of the World War II human subjects, as well as those in the later experiments, was accomplished through lies and half-truths," wrote the Institute of Medicine.

The "later experiments" to which the committee refers were conducted by a group also under Vannevar Bush's direction, this one called the Committee on Medical Research. As discovered by President Clinton's advisory committee on human experiments, this so-called medical research involved using as guinea pigs individuals living at the [Dixon Institution for the Retarded, in Illinois, and at the New Jersey State Colony for the Feeble-Minded](#). The doctors were testing vaccines for malaria, influenza, and sexually transmitted diseases. Some programs continued until 1973.

Even more troubling is this: buried in Atomic Energy Commission archives is the fact that the first incarnation of the Manhattan Project had a [letter-number designation of S-1](#). Were there two other programs that transpired between S-1 and S-4? And if so, what were they? What else might have been done to push science in a way that the ends could justify the means?

In this book, many pieces of the Area 51 puzzle are put into place, but many questions remain. What goes on at Area 51 now? We don't know. We won't know for decades. Airplanes have gotten faster and stealthier. Remote-controlled spy planes fire missiles. Classified delivery systems drop bombs. The players are mostly the same: CIA, Air Force, Department of Energy, Lockheed, North American, General Atomics, and Hughes. These are but a few.

The biggest players tend to remain, as always, behind the veil. Almost a century ago, in 1922, Vannevar Bush cofounded a company that contracted first with the military and later with the Atomic Energy Commission. He called his company Raytheon because it meant "light from the gods." Raytheon has always maintained a considerable presence at the Nevada Test Site, the Nevada Test and Training Range, and Area 51. Currently, it is the fifth-biggest defense contractor in the world. It is the world's largest producer of guided missiles and the leader in developing radar technology for America's early-warning defense system. This is the same system that, in the 1950s, CIA director General Walter Bedell Smith feared the Soviets might overrun with a UFO hoax, leaving the nation vulnerable to an air attack.

As for EG&G, they were eventually acquired by the powerful Carlyle Group at the end of the twentieth century but later resold, in 2002, to another corporate giant called URS. Currently, EG&G remains partnered with Raytheon in a joint venture at the Nevada Test and Training Range and at Area 51. The program, called [JT3](#)—Joint Test, Tactics, and Training, LLC—provides "engineering and technical support for the Nevada Test and Training Range," according to corporate brochures. When asked what exactly that means, EG&G's parent company, URS, declined to comment. This is corporate America's way of saying, "You don't have a need-to-know."

The veil has been lifted. The curtain has been pulled back on Area 51. But what has been revealed in this book is like a single bread crumb in a trail. There is so much more that remains unknown. Where does the trail lead? How far does it go? Will it ever end?

ACKNOWLEDGMENTS

Many have asked me how this book came to be. In 2007, I was at a Christmas Eve dinner when my husband's uncle's wife's sister's husband—a spry physicist named Edward Lovick, who was eighty-eight years old at the time—leaned over to me and said, "Have I got a good story for you." As a national security reporter, I hear this line frequently—my work depends on it—but what Lovick told me ranked among the most surprising and tantalizing things I'd heard in a long time. Until then, I was under the impression that Lovick had spent his life designing airplane parts. Over dinner I learned that he was actually a physicist and that he'd played a major role in the development of aerial espionage for the CIA. The reason Lovick could suddenly divulge information that had been kept secret for fifty years was because the CIA had just declassified it. When I learned that much of Lovick's clandestine work took place at that mysterious and mythic location Area 51, also called Groom Lake, I smiled. So, the place was real after all. Immediately, I wrote to the Office of the Assistant Secretary of Defense requesting an official tour of the Groom Lake Area—Lovick also told me that the CIA had given up control of the place decades earlier. My request was formally denied, on Department of Defense letterhead, but oddly with the words "the Groom Lake Area" separated out in quotes attributed to me, so as to make clear the Pentagon's official position regarding their Nevada base: *That locale may be part of your lexicon, they seemed to be saying, but it is most definitely not officially part of ours.* As an investigative journalist I sought to know why.

Since then, more individuals than I could have ever imagined have generously shared their Area 51 stories with me. I am indebted to each and every one of them. The list I thank includes everyone in this book: the legendary soldiers, spies, scientists, and engineers—professionals who, for the most part, are not known for sharing their inner lives. That so many individuals opened up with me—relaying their triumphs and tragedies, their sorrows and joys—so that others may make sense of it all has been an experience of a lifetime. Why I was given access to information that countless others have been denied remains a great mystery to me. A reporter is dependent on primary sources. From their stories, and using keywords such as operational cover names, I was then able to locate corroborating documents, often found deeply buried in U.S. government archives. I wouldn't have had a clue where to look without their aid. Specific examples are sourced in the Notes section.

T. D. Barnes is one of the most generous people I have met. He introduced me to many people, who in turn introduced me to their colleagues and friends. Barnes took me to Creech Air Force Base, at Indian Springs, Nevada, as part of a very private tour. There I was allowed to watch U.S. Air Force pilots fly drones halfway across the world, in

Afghanistan and Iraq. Barnes also arranged for my tours of Nellis Air Force Base in Las Vegas, where I sat inside a Russian MiG fighter jet and examined the Hawk missile system and the F-117 Nighthawk up close. And it was Barnes who, in the fall of 2010, advocated tirelessly on my behalf to allow me to join a group of pilots and engineers at CIA headquarters in Langley, Virginia, and at the Defense Intelligence Agency Headquarters in Washington, DC, as part of a week-long symposium on overhead espionage. I met many people during this trip who were extraordinarily helpful to me, on background, and I thank them all.

Ken Collins lives in the same city as I do, which meant that for a year and a half I got to interview him regularly over lunch. He is a remarkable pilot and an even more extraordinary person. Thank you, Colonel Slater, Frank Murray, Roger Andersen, Tony Bevacqua, and Ray Goudey, for sharing so many unique flying stories with me. Thank you, Buzz Aldrin, for explaining to me what it feels like up there on the moon.

Al O'Donnell arranged for my temporary security clearance so that I could accompany him to the federally restricted land that is the Nevada Test Site. Looking into the Sedan nuclear crater—so vast it is visible from outer space—is not something I will ever forget. While Area 51, Area 25, and Area 13 were off-limits to us on that visit, that I was able even to get within a stone's throw of these three hidden places is thanks to O'Donnell. And a special thanks to Ruth, Al's very capable wife. From Jim Freedman I learned things that could be contained in their own book. Freedman has the unusual ability to share deeply personal experiences with stunning clarity, objectivity, and conviction. Once, he explained why: "I tell you all this, Annie, because you give a damn."

Dr. Bud Wheelon, the CIA's first deputy director of science and technology, has given only a few interviews in his life. I am grateful to have joined those ranks. During one of our interviews he stopped mid-story to thoroughly explain missile technology to me. From that moment on I understood what was at stake during the Cuban missile crisis. How close we came to nuclear war.

Lieutenant Colonel Hervey Stockman and Colonel Richard Leghorn are legends among legendary men. Colonel Leghorn generously shared with me artifacts he had stored away in his attic, shipping original photographs, long-lost articles, and out-of-print books across the country for my review. Thanks to his assistant, Barbara Austin, for her help. Hervey Stockman was not so easy to locate at first, but when I finally did reach him, on the telephone, it was a magical moment. Thank you, Peter Stockman, for sending me a copy of Hervey's oral history, which was an invaluable source of information.

For all the investigating that goes on in writing a book like this, sometimes the most sought-after information comes in the most whimsical of ways. In the summer of 2009, I went to the Nuclear Testing Archive library in Las Vegas to locate declassified documents on the Project 57 "dirty bomb" test, ones that were mysteriously missing from the Department of Energy's online repository. Even in person, the staff was unable to fulfill my records request. Hindered and frustrated, I took a walk around the adjacent atomic-testing museum to cool down. Reporter's notebook in hand, I was staring at a photograph of a mushroom cloud hanging on the wall when the museum's security guard walked up and said hello. It was Richard Mingus. We'd met briefly before, on an earlier visit. I told Mingus

that I felt records on Project 57 were being withheld from me over at the library. In his characteristic matter-of-fact style Mingus said, "Well, I worked on that test. What is it you'd like to know?" Mingus, I quickly learned, was also one of the CIA's original Area 51 security guards. Thanks to Mingus, the "missing" Project 57 documents became easier to locate.

At the National Archives and Records Administration, thank you to Timothy Nenninger, chief of the Textual Records Reference Staff, Martha Murphy, chief of Special Access and FOIA Staff, and Tom Mills, who specializes in World War II records; thank you, Rita Cann, at the National Personnel Records Center in St. Louis, Missouri; Martha DeMarre of the Nuclear Testing Archive in Las Vegas; Troy Wade of the Nevada Test Site Historical Foundation; Tech Sergeant Jennifer Lindsey of the U.S. Air Force; Staff Sergeant Alice Moore, Creech Air Force Base; Dr. David R. Williams, NASA; Dr. David Robarge, chief historian, Central Intelligence Agency; Tony Hiley, curator and director of the CIA Museum; Cheryl Moore, EEA CIA; Jim Long, Laughlin Heritage Foundation Museum; R. Cargill Hall, historian emeritus, National Reconnaissance Office; Dr. Craig Luther, chief historian, Edwards Air Force Base; S. Eugene Poteat, president of the Association of Former Intelligence Officers; Melissa Dalton, Lockheed Martin Aeronautics; Dr. Jeffrey Richelson, National Security Archives; David Myhra, author and aviation historian; Fred Burton, former special agent with the U.S. Diplomatic Security Service; Sherre Lovick, former Lockheed Skunk Works engineer; Colonel Adelbert W. "Buz" Carpenter, former SR-71 pilot; Charles "Chuck" Wilson, former U-2 pilot; Arthur Beidler, 67th Reconnaissance Tactical Squadron, Japan; Dennis Nordquist, Pratt & Whitney mechanical engineer; Tony Landis, NASA photographer; Michael Schmitz, Roadrunners Internationale photographer; Joerg Arnu, Norio Hayakawa, and Peter Merlin of Dreamlandresort.com. A special thank you to Doris Barnes, Barbara Slater, Stacy Slater Bernhardt, Stella Murray, Mary Martin, and Mary Jane Murphy. Thank you, Jeff King, for making me such an excellent map, and Ploy Siripant, for a phenomenal job on the jacket. Thank you Tommy Harron, Jerry Maybrook, and Jeremy Wesley for the great work on the audio book.

Once I completed a draft of this manuscript, my editor, John Parsley, helped me to refine it into the book that it is. What I learned from John about storytelling is immeasurable. Thank you also to Nicole Dewey, Geoff Shandler, and Michael Pietsch.

I owe a debt of gratitude to Jim Hornfischer, the perfect agent for someone like me, and to my confidant Frank Morse. Thank you for the wise counsel, Steve Younger, David Willingham, Aron Ketchel, Eric Rayman, and Karen Andrews.

It takes a village to make a writer. I'm one of the lucky ones who has always known writing is what I was meant to do. I arrived at St. Paul's School in Concord, New Hampshire, at the age of fifteen, typewriter in hand, and wrote for nearly twenty years straight without earning as much as one cent. Only at the age of thirty-four did things shift for me, and I've earned my living as a writer ever since. I say that for all of the writers following in my footsteps. Don't give up. My village fire keepers—those to whom I am deeply indebted for their individually imperative roles—include Alice and Tom Soininen, Julie Elkins, John Soininen; my writing teacher at St. Paul's School, Michael Burns, and at Princeton University, Paul Auster, Joyce Carol Oates, and P. Adams Sitney; my

storytelling hero in Greece, John Zervos; those who supported me in Big Sur: Lisa Firestone, Thanis Iliadis, Alex Timken, Robert Jolliffe, Harriet and Jeremy Polturak, James Young, Nate Downey, Emmy Starr and Stephen Vehslage, Samantha Muldoon, Erin Gafill and Tom Birmingham; my mentors in Los Angeles: Rachel Resnick, Keith Rogers, Kathleen Silver, Rio Morse, and my friend and editor in chief at the *Los Angeles Times Magazine*, Nancie Clare, who commissioned my original two-part series on Area 51 for the magazine; my fellow writers from group: Kirston Mann, Sabrina Weill, Michelle Fiordaliso, Nicole Lucas Haimes, Annette Murphy, Terry Rossio, Jolly Stamat, Moira McMahon, Lisa Gold; fellow storyteller Lucy Firestone; my mother-in-law, Marion Woldsen, not only for her deep love of reading but for lending me her son.

Nothing in this world is so joyful as being the wife of Kevin Jacobsen and the mother of our two boys. While writing this book, it was Kevin who made endless sandwiches for me, brewed pots of coffee, and let me travel to wherever it was that I needed to go. Kevin hears out every first draft, usually standing in our kitchen or yard. Everything gets better after I listen to what he has to say.

Prologue: The Secret City

1. [Nevada Test and Training Range](#): Map reference number NTTR01, NGA stock no. 84413.
2. [Nevada Test Site](#): Map based on NTS Boundary Coordinates: FFACO, appendix 1, January 1998, revision 2, 6. On Aug 23, 2010, the Nevada Test Site changed its name to the Nevada National Security Site. Throughout the book, I refer to it as the Nevada Test Site, as that is the name it went by for nearly sixty years.
3. [105 nuclear weapons](#): Department of Energy, "United States Nuclear Tests," xii–xv. Total atmospheric for Nevada Test Site (NTS) is officially listed as 100 and total Nellis Air Force Range (NAFR) is listed as 5. Underground is 804 by U.S. plus 24 by U.S./UK for a total of 933.
- 4 . [weapons-grade plutonium and uranium](#): Darwin Morgan, spokesman for the National Nuclear Security Administration, Nevada Site Office, clarified: "The [Nevada Test Site] has never been a repository for weapons grade plutonium or uranium. Of course there is the 'expended' material from 828 underground nuclear weapons tests that is contained within the cavities where the tests were conducted." E-mail, September 21, 2010.
- 5 . [two known exceptions](#): Memo, Top Secret Oxcart, Oxcart Reconnaissance Operation Plan, BYE 2369-67, 15; second example from interview with Peter Merlin.
6. [bomb's price tag](#): Brookings Institute, "50 Facts about U.S. Nuclear Weapons," fact no. 1 (1996 dollars: \$20,000,000,000; 2011 dollars: \$28,000,000,000).
7. [was relayed to him by two men](#): Wiesner, *Vannevar Bush*, 98. This fact is hardly known; credit is usually given to General Leslie R. Groves and War Secretary Henry L. Stimson. Wiesner, Vannevar Bush's biographer at the National Academy of Sciences (he was also a science adviser to President Eisenhower), wrote: "Bush... had the duty, after the death of President Roosevelt, of giving President Truman his first detailed account of the bomb."
8. [no one knew the Manhattan Project was there](#): Wills, *Bomb Power*, 10–13. Wills elaborated on how Truman had some suspicions when he was vice president and approached War Secretary Henry L. Stimson, who told him to back off, which Truman did.
9. [who would control its "unimaginable destructive power"](#): Smyth, *Atomic Energy for Military Purposes*, 13.7. Also known as *The Smyth Report*, it was released by the government six days after Hiroshima, on August 12, 1945. Here, Smyth chronicled the administrative and technical history of the Manhattan Project, also called the Manhattan Engineering District (MED). The purpose of the report was allegedly to give citizens enough information about nuclear energy for them to participate in a public debate about

what to do next. The report also encouraged the idea that handing the bomb over to civilian control, as opposed to military control, would be a more democratic scenario. Instead, the controls imposed by the Atomic Energy Commission would ultimately prove to be even more impenetrable than military controls; Hewlett and Anderson, *New World*.

10. [the concept "born classified" came to be](#): Quist, *Security Classification*, 1. Here Quist writes: "The Atomic Energy Act of 1946 was the first and, other than its successor, the Atomic Energy Act of 1954, to date the only U.S. statute to establish a program to restrict the dissemination of information. This Act transferred control of all aspects of atomic (nuclear) energy from the Army, which had managed the government's World War II Manhattan Project to produce atomic bombs, to a five-member civilian Atomic Energy Commission (AEC). These new types of bombs, of awesome power, had been developed under stringent secrecy and security conditions. Congress, in enacting the 1946 Atomic Energy Act, continued the Manhattan Project's comprehensive, rigid controls on U.S. information about atomic bombs and other aspects of atomic energy. The Atomic Energy Act designated the atomic energy information to be protected as 'Restricted Data' and defined that data."

11. [seventy thousand nuclear bombs](#): Brookings Institute, "50 Facts about U.S. Nuclear Weapons," fact no. 6.

12. [Atomic Energy was the first entity to control Area 51](#): This is one of the central organizing premises of my book and will no doubt be contested by the Atomic Energy Commission until they are forced to declassify the project to which I refer.

13. [when President Clinton](#): The Advisory Committee on Human Radiation Experiments (ACHRE) was created by President Clinton on January 15, 1994, to investigate and make public the use of human beings as subjects of federally funded research. Created by executive order and subject to the Federal Advisory Committee Act (FACA), the advisory committee was obligated to provide public access to its activities, processes, and papers, some of which can be viewed at <http://www.gwu.edu/~nsarchiv/radiation/>.

14. [he did not have a need-to-know](#): Author interview with EG&G engineer.

15. ["give\[s\] the professional classificationist unanswerable authority"](#): Quist, *Security Classification*, 24; Schwartz, *Atomic Audit*, 442–51.

16. [largest facility is, and always has been, the Nevada Test Site](#): Written correspondence with Darwin Morgan, September 21, 2010, U.S. Department of Energy, Nevada Operations Office, Office of Public Affairs and Information.

17. [not controlled by the Department of Defense](#): It cannot yet be determined for certain if the Department of Defense (DOD) was involved in running the very first program at Area 51. Research at NARA (National Archives and Records Administration) reveals that DOD had a lot more to do with Paperclips than previously known publicly. For example, documents obtained by me through a FOIA request reveal "in the early 1950s the Defense Department [Office of Defense Research and Engineering (ORE)] and the JIOA took up overall direction of PAPERCLIP, which ran under the acronym of DEFSIP, or Defense Scientist Immigration Program." JIOA stands for Joint Intelligence Objectives Agency and was run by the Joint Chiefs of Staff. These multiple agencies and multiple

chains of command serve to hide information.

Chapter One: The Riddle of Area 51

Interviews: Joerg Arnu, George Knapp, Thornton "T.D." Barnes, Colonel Hugh Slater, Richard Mingus, Ernest "Ernie" Williams, Dr. Albert "Bud" Wheelon, Colonel Kenneth Collins, Colonel Sam Pizzo, Norio Hayakawa, Stanton Friedman

1. [Nighttime is the best time](#): Interview with Joerg Arnu.
2. [Robert Scott Lazar appeared on Eyewitness News](#): Interview with George Knapp; George Knapp, "Bob Lazar: The Man Behind Area 51," Eyewitness News Investigates, <http://area51.eyewitnessnews8.com/>.

3. [veiled threats of incarceration](#): A common note among most Area 51 employees interviewed, certainly among the Air Force enlisted men, was the "threat of Leavenworth," meaning incarceration at the largest federal security prison in the United States at Fort Leavenworth, Kansas.

4. [Dr. Edward Teller](#): Teller, who died in 2003 at the age of ninety-five, never confirmed or denied that he referred Lazar to EG&G for work at Area 51.

*contaminated with plutonium: Interviews with Richard Mingus; see notes for chapter 6.

5. [for a lecture Teller was giving](#): The subject of Teller's lecture was the nuclear freeze movement under way in a post-Three Mile Island world.

6. [a page-1 story featuring Bob Lazar](#): *Los Alamos Monitor*, June 27, 1982, identifies Lazar as "a physicist at the Los Alamos Meson Physics Facility."

7. [Lazar's life had reached an unexpected low](#): The most comprehensive information on Lazar is available at the Area 51 research Web site Dreamlandresort.com, created by Joerg H. Arnu in 1999. In "The Bob Lazar Corner" one can find a time line of Lazar's story as well as a compilation of public records, letters, and commentary about Lazar by his critics and his friends, as researched by Tom Mahood, whom I interviewed.

8. [Tracy Murk](#): According to the wedding certificate researched by Tom Mahood. Also according to Mahood's research, Tracy Ann Murk and Lazar married for a second time, on October 12, 1986 (the first wedding was April 19, 1986), with Murk inexplicably using the name Jackie Diane Evans.

9. [committed suicide by inhaling carbon monoxide](#): Ibid. Death certificate #001423-86, Clark County Health District, Las Vegas, NV; cause of death: "inhalation of motor vehicle exhaust." Sourced by Tom Mahood.

10. [Fly to Area 51](#): Descriptions based on multiple eyewitness interviews; see Primary Interviews.

11. [designed by Raytheon to detect incoming missile signals](#): Interview with T. D. Barnes.

12. [The miner kept the secrecy oath](#): Interview with Colonel Slater.

13. [access point Gate 385](#): Interview with Richard Mingus.

14. [trucks from the Atomic Energy Commission motor pool](#): Interview with Ernie Williams. A farm boy from Nebraska, Williams's father was a "water witch," and Williams inherited some water-locating charm. In this manner, he is the man credited by many Roadrunners as having officially found Area 51's first water well.

15. [men dressed in HAZMAT suits](#): R. Kinnison and R. Gilbert, "Estimates of Soil

Removal for Cleanup of Transuranics at NAEG Offsite Safety Shot Sites," FY 1981, 1984, 1986-91.

16. [would have gone through security there](#): Interview with anonymous EG&G employee who worked for the airline.
17. [tennis matches](#): Interview with Dr. Wheelon.
18. [jumping into the pool](#): Interview with Ken Collins.
19. [Area 51 bar, called Sam's Place](#): Interview with Colonel Pizzo.
20. [According to Lazar](#): Lazar's original interviews with George Knapp are available on YouTube in six parts.
21. [He glanced sideways, through a small nine-by-nine-inch window](#): Lazar's interview with George Knapp, part two of six, minutes 4:10-5:05. Knapp: "In an earlier interview, you had mentioned you saw what you thought may be an alien. Was it an alien? What did you see?" Lazar: "What I had said and all that occurred was that I was walking by a door, ah, a door that had a small, nine-by-nine window in it, little wires running through it. And glanced in there, and there were two... ah, either technicians, scientists, or whoever they were, looking down at something. And what that something was caught my eye and I never really did see what it was. A lot of people have asserted, well, there was an alien, they're aliens working around there and so on and so forth, I mean, I don't think that was the case. But, ah, who knows. I was. You know. You're seeing all these fantastic things and your mind gets going and you know you catch something out of the corner of your eye, who knows what your mind is going to come up with so I certainly wouldn't stand on that as fact by any means." See <http://www.youtube.com/watch?v=XAfVZcAsTxk>.
22. [what was maybe an alien](#): Lazar's interview with George Knapp, part two of six, minutes 2:33-3:30. Lazar says he was told the UFO he was assigned to work on originated from another planet. He says he was shown autopsy photographs of the craft's alien pilots, which he described to Knapp in their interview: "One or two autopsy photographs I saw ah, dealt with just a small photograph, a bust shot essentially, just head, shoulders, and chest of an alien where the ah, ah, chest was cut open in a 'T' fashion and one single organ was removed. The organ itself in the other picture was cut and vivisected essentially the, ah, showing the different chambers in there. This was totally unrelated to anything I was doing but from that photograph it looked like what you see in UFO lore as the typical 'gray' [slang for alien] so how tall it was from what I could see, I couldn't tell, 'cause I only saw a portion of the photograph but if everything else you see is correct, I would imagine it was three and a half or four feet tall. But ah, there again, you know all I had to see was a photograph. And you know, I didn't have much to go on." See <http://www.youtube.com/watch?v=XAfVZcAsTxk&feature=related>.
23. [The group made a trip](#): Tom Mahood, "The Robert Lazar Timeline, as assembled from Public Records and Statements," July 1994, updated July 1997, from dreamlandresort.com. In this time line Lazar and various friends made a total of three trips into the mountains behind Groom Lake. It was on the third trip that his group was stopped by guards.
24. [transcripts of his wife's telephone conversations](#): Ibid.
25. [Norio Hayakawa](#): Interview with Norio Hayakawa.

26. [He had bodyguards](#): In the interview with Knapp, Lazar said he was shot at while driving on the freeway (YouTube interview five of six, minute 6:00) and that during his debrief at Indian Springs a gun was pointed at him (*ibid.*, minute 8:00).

27. [Lie detector tests](#): WSVN-7 News reporter Dan Hausle's interview with former policeman Terry Cavernetti, accessed on December 21, 2010, YouTube, "Bob Lazar Passes the Lie Detector on UFOs."

28. [Stanton Friedman](#): Interview with Stanton Friedman. Friedman was employed for fourteen years as a nuclear physicist and worked on many advanced nuclear and space travel systems for companies like General Motors, General Electric, and Westinghouse. He has published eighty UFO papers, written six books, and appears in many UFO documentaries.

29. [Stanton Friedman's exposé on the Roswell incident](#): *Recollections of Roswell, Testimony from 27 Witnesses Connected with Recovery of 2 Crashed Flying Saucers in New Mexico in July 1947*, DVD, 105 minutes.

30. [a book based on Friedman and Moore's research was published](#): Berlitz and Moore, *Roswell Incident*. Friedman said it was a group decision to give Berlitz author credit instead of him, as Berlitz was from the Berlitz Language School family and had the credibility necessary to sell the publisher on the book's controversial subject matter. Charles Berlitz spoke twenty-five languages and is often listed as one of the most important linguists of the twentieth century. His 1974 book, *The Bermuda Triangle*, sold an estimated ten million copies.

Chapter Two: Imagine a War of the Worlds

Interviews: Colonel Richard S. Leghorn, Ralph "Jim" Freedman, Alfred "Al" O'Donnell, Lieutenant Colonel Hervey Stockman, Colonel Slater, David Myhra

1. became convinced that Martians were attacking Earth: *Trenton Evening Times*, October 31, 1938. Many documents relating to *The War of the Worlds* radio play are available at <http://www.war-ofthe-worlds.co.uk/documents.htm>.

2. Switchboards jammed: Ibid., "Log from Jersey Police, Port Norris Station."

3 . the FCC's role: Associated Press, "Mars Monsters Broadcast Will Not Be Repeated. Perpetrators of the Innovation Regret Causing of Public Alarm," November 1, 1938.

4. Adolf Hitler took note as well: Hand, *Terror on the Air!* 7.

5. Joseph Stalin had also been: Author interview with EG&G engineer.

6. Vannevar Bush, observed the effects: Correspondence between Vannevar Bush and W. C. Forbes, June 8, 1939; Vannevar Bush, A Register of His Papers in the Library of Congress, Manuscript Division, Library of Congress, Washington, DC.

7. "Science Discovers Real Frankenstein": Winthrop, "Science Discovers."

8. War of the Worlds radio broadcast as an example: Zachary, *Endless Frontier*, 190.

9. President Roosevelt had appointed: "Vannevar Bush, A Collection of His Papers in the Library of Congress," Manuscript Division, Library of Congress, Washington DC.

10. his next move: Zachary, *Endless Frontier*, 285. Zachary wrote, "Bush's role in the A-bomb's birth actually burnished his reputation. Like Truman, most Americans were thrilled by Japan's surrender and the end of the war... Rather than interrogate the leaders of the Manhattan Project, the public embraced them. Bush's reputation as a scientific seer grew; his image as an unmatched organizer of expertise solidified. For Bush, the atomic bomb capped off his five-year rise to celebrity from relative obscurity."

11. As Americans celebrated peace: "Majority Supports Use of Atomic Bomb on Japan in WWII": David Moore, Gallup News Service, August 5, 2005.

12. Operation Crossroads was in full swing: Author interview with Colonel Leghorn, who was the commanding officer of Task Force 1.5.2 for the operation. I am indebted to Colonel Leghorn not only for generously sharing with me recollections of his historic role at Crossroads, beginning with his departure by airplane from the Roswell Army Air Field, but for lending me original photographs taken from his airplane during the 1946 nuclear tests. He also loaned me two original yearbook-type books where I learned the operation involved more than ten thousand instruments and nearly half the world's supply of film. The Air Force alone took nine million photographs.

13 . There were barracuda everywhere: Interview with Ralph "Jim" Freedman. Freedman's first visit to Bikini was for the nuclear test Castle Bravo, six years after Crossroads, but the barracuda problem was the same.

14. led by a king named Juda: Bradley, *No Place to Hide*, 158.

15. The U.S. Navy had evacuated the natives to Rongerik Atoll: The documentary *Radio Bikini* (1987), directed by Robert Stone, includes remarkable outtakes of AEC footage showing military personnel rehearsing how to best pitch propaganda to the

- natives.
16. [three-bomb atomic test series](#): Schwartz, *Atomic Audit*, 102. Operation Crossroads cost an astonishing \$1.3 billion in 1946 eleven months after the war's end, more than any subsequent test series. Crossroads involved 95 ships and 42,000 military and civilian personnel. It was a show of force.
17. [a young man named Alfred O'Donnell](#): Interview with Alfred "Al" O'Donnell.
18. [In the face of intense fire](#): Air Force Historical Research Agency, 30 Reconnaissance Squadron (ACC), Lineage, Assignments, Stations, and Honors, Major Richard S. Leghorn, <http://www.afhra.af.mil/factsheets/factsheet.asp?id=10193>.
19. [Curtis LeMay rarely smiled](#): Kozak, *LeMay*, iv.
20. [five cents per bird](#): Ibid., 9.
21. ["Caveman in a Jet Bomber"](#): I. F. Stone, *The Best of I. F. Stone*, 326–28.
22. [LeMay was at Bikini to determine](#): Rhodes, *Dark Sun*, 261–62.
23. [Operation Crossroads was a huge event](#): The *New York Times* described it as the largest and "most stupendous single set of experiments in history." Senator Huffman called the test a "Roman holiday in the Pacific" and promised that the "only important impression these tests are going to give the world is that the United States is not done with war." Members of the Southern Dairy Goat Owners and Breeders Association recommended that the sheep being used during the test be substituted with U.S. congressmen, on the grounds that good goats were harder to find than congressmen were. In the days leading up to the event, protesters picketed the White House with signs that read, BIKINI: REHEARSAL FOR WORLD WAR THREE.
24. [one million tons of battle-weary steel](#): Fact sheet, Operation Crossroads, Defense Nuclear Agency, Public Affairs Office, Washington, DC, April 5, 1984.
25. [Alfred O'Donnell stood below deck](#): Interview with O'Donnell.
26. [the DN-11 relay system](#): Interview with O'Donnell; copy of a handwritten letter by Herbert Grier from O'Donnell's collection.
27. [What Leghorn witnessed horrified him](#): Interviews with Colonel Leghorn.
28. [tossed up into the air like bathtub toys](#): United States Atomic Energy Commission Memorandum for the Board, August 23, 1973, #718922, Naval Vessels Sunk During Operation Crossroads; AEC film footage of the explosion, Atomic Testing Museum library, Las Vegas, NV.
29. [west of the Volga River](#): Pedlow and Welzenbach, *Central Intelligence Agency*, 22.
- Leghorn believed: Interview with Colonel Leghorn.
30. [what shipyards or missile-launch facilities](#): Ibid.; interview with Hervey Stockman, who was the first man to fly over the Soviet Union in a U-2 spy plane.
31. [Halfway across the world](#): Rhodes, *Dark Sun*, 261.
32. [chain-reacting atomic pile would go critical](#): O'Keefe, *Nuclear Hostages*, 134.
33. [Joseph Stalin was developing another secret weapon](#): Author interview with EG&G engineer.
34. [secret weapon, called Hermes](#): Interview with Lisa Blevins, U.S. Army public affairs officer, White Sands Missile Range, New Mexico; "Report on Hermes Missile Project,"

35. [belonged to Adolf Hitler](#): Hunt, *Secret Agenda*, 27.

36. [secret project called Operation Paperclip](#): Paperclip was a postwar operation carried out by the Joint Intelligence Objectives Agency, a special intelligence office that reported to the director of intelligence in the War Department. Today, this would be the equivalent of reporting to the intelligence chief for the Joint Chiefs of Staff. Most details about Project Paperclip remain classified despite the government's insistence otherwise. Paperclip began before the war ended, and it was originally called Project Overcast and/or Project Pajamas. It had two primary goals: to exploit the minds of German scientists for American Cold War research projects and to keep the Russians from getting the German scientists, no matter how heinous their war crimes might have been. It is believed that at least sixteen hundred scientists were recruited by various U.S. intelligence groups and brought, with their dependents, to the United States. Paperclip had a number of secret, successor projects that remain classified as of 2011.

37. [Wernher Von Braun](#): G-2 Paperclip "Top Secret" files, WNRC Record Group 330. Also from FBI dossier "Wernher Magnus Maximilian Von Braun, aka Freiherr Von Braun," file 116-13038, 297 pages; also see Neufeld, *Von Braun*.

38. [Dr. Ernst Steinhoff](#): G-2 Paperclip "Top Secret" files, WNRC, Record Group 319.

39. [inside the two-million-square-acre](#): Schwartz, *Atomic Audit*, 169. Now called the White Sands Missile Range, the facility is the largest military installation in the country—the size of Delaware and Rhode Island combined. The first atomic bomb, Trinity, was exploded near the north boundary of the range.

40. [Dr. Steinhoff said nothing](#): Hunt, *Secret Agenda*, 27; Neufeld, *Von Braun*, 239.

41. [terrifying citizens](#): "V-2 Rocket, Off Course, Falls Near Juárez," *El Paso Times*, May 30, 1947.

42. [Allegations of sabotage](#): Army Intelligence, G-2 Paperclip, Memorandum for the AC of S G-2, Intelligence Summary, Captain Paul R. Lutjens, June 6, 1947, RG 319, Washington National Records Center (WNRC), Suitland, Maryland. Hunt, *Secret Agenda*, chapter 3; Major Lyman G. White, "Paperclip Project, Ft. Bliss, Texas and Adjacent Areas," MID 918.3, November 26, 1947.

43. [beating a dead Nazi horse](#): In a March 1948 letter to the State Department regarding "German scientists [who] were members of either the Nazi Party or one or more of its affiliates," Bosquet Wev, director of the Joint Intelligence Objectives Agency, wrote, "[R]esponsible officials... have expressed opinions to the effect that, in so far as German scientists are concerned, Nazism no longer should be a serious consideration from a viewpoint of national security when the far greater threat of Communism is now jeopardizing the entire world. I strongly concur in this opinion and consider it a most sound and practical view, which must certainly be taken if we are to face the situation confronting us with even an iota of realism. To continue to treat Nazi affiliations as significant considerations has been aptly phrased as 'beating a dead Nazi horse.'"

44. [What made the aircraft extraordinary](#): Interview with EG&G engineer.

45. [fighter jet](#): Interviews with Colonel Slater, Area 51 base commander (1963–68), Chandler's personal friend. Chandler relayed this story to Slater decades after it

happened.

46. [The recovered craft looked nothing like a conventional aircraft](#): Interview with EG&G engineer, who was an eyewitness.
47. [Cyrillic alphabet had been stamped](#): Interview with EG&G engineer.
48. [near the Alaskan border](#): Interview with EG&G engineer.
49. [What if atomic energy propelled the Russian craft](#): Interview with EG&G engineer.
50. [Amerika Bomber](#): Myhra, *The Horten Brothers and Their All-Wing Aircraft*, 217–20; interview with David Myhra, who interviewed both Horten brothers, Walter in Germany and Reimar in Argentina, for hundreds of hours in the 1980s.

51. [Paperclip scientists... called on for their expertise](#): This is my defensible speculation based on interviews with the EG&G engineer. The Paperclip group attached to the project, I learned through sources with secondhand information, allegedly included Von Braun, Ernst Steinhoff, and also Dr. Hubertus Strughold, a former Nazi and, in 1947, a research doctor at the Aeromedical Laboratory at Randolph Field in San Antonio, Texas. While employed by the Third Reich, Strughold was the leading expert on how the human body handles high altitude during flight. During World War II, Strughold had been chief of staff of aviation medicine for the German air force, or Luftwaffe. For more on Strughold, see Bower, *Paperclip Conspiracy*, 214–323.

52. [secreted away in a manner so clandestine](#): Interview with EG&G engineer.

53. [top secret project called Operation Harass](#): Jacobsen, U.S. Army Intelligence and Security Command (INSCOM) FOIA request, "Horten Brothers and Operation Harass." The file was declassified by INSCOM beginning on July 6, 1994, CDR USAINSCOM FO1/PO Auth para 1-603 DOD 5200.1R, 358 pages. Notes for pages 38 through 62 refer to this record group.

54. [testimony of America's Paperclip scientists](#): Headquarters, Counter Intelligence Corps Region I, 970th Counter Intelligence Corps, Detachment European Command, APO-154, January 6, 1948, 92. "Scientists who have better than average knowledge of the HORTEN brothers' work are: (2) Lippisch, Prof., fnu, Wright Field, Ohio, U.S.A." Dr. Lippisch was transferred to Wright Field, along with his senior staff Ernst Sielaff and Dr. Ringleb, from Luftfahrtforschungsanstalt Wien—a German aeronautical research institute for the development of high-speed aircraft.

55. [The manhunt was on](#): The earliest dated Operation Harass memo in the file is from November 10, 1947, APO 189, Subject: Flying Saucers, 139. It reads, "Considerable material has been gathered by the Air Materiel Command WRIGHT FIELD, Ohio, concerning the appearance, description and functioning of the object popularly known as the 'Flying Saucer.' A copy of the request of the report from the Air Materiel Command is on file at this Headquarters, 2. The opinion was expressed that some sort of object, such as the flying saucer, did exist. At the present time, construction models are being built for wind tunnel tests." This, however, is clearly not the first memo. [Here](#) of the FOIA file, in memo APO 134, January 2, 1948, a reference is made to an earlier letter, "RE: HORTEN Brothers, SUBJECT: Flying Saucers, dated 28, October 1947."

56. [Walter and Reimar Horten... had somehow been overlooked](#): Interview with David Myhra.

57. [been a later-model Horten in the works](#): "HORTEN, Walter-" LKL: A.V.V. Gottingen (14-5-46) "Expert on 'flying-wing' aircraft, including HO VIII IX & X," 155 (note there are two separate pages numbered 155).

58. [Timothy Cooper filed a request for documents](#): Because the Flying Saucer memos reveal that immediately after the crash at Roswell, the Army was seeking information on aircraft made by German scientists and not by extraterrestrials, the memos have been discounted by many ufologists as being Army intelligence propaganda. In fact, they reveal an important clue in understanding the EG&G engineer's truth about the Roswell mystery, namely, that the Joint Chiefs of Staff and perhaps the highest rank at Air Materiel Command knew the flying disc was in fact a Russian vehicle of German design.

59. [Extreme maneuverability and apparent ability to almost hover](#): Air Intelligence [illegible] for alleged "Flying Saucer Type Air Craft," 152-56.

60. [American Paperclip scientists living at Wright Field](#): Headquarters Sub Region Frankfurt, Counter Intelligence Corps Region III, APO 757, 4 February 1948, 71-72. "Leiber also stated that a Dr. Alexander LIPPISCH, who is at present working at WRIGHT Field, Ohio, USA, is also familiar with the work of the HORTON brothers."

61. [Messerschmitt test pilot named Fritz Wendel](#): Headquarters Counter Intelligence Corps Region IV, 970th Counter Intelligence Corps Detachment APO 407-A, US ARMY, N-2574. Subj: WENDEL, Fritz, 1 March 1948, 6 pages. Includes Sheets I, II, III, and IV—Sketches made by WENDEL re HORTEN aircraft; No. 179332, WENDEL, Fritz, "Ex-Luftwaffe Squadron leader. Presently working for Graf Von Ledebur, French Intell [sic] officer in Vienna Austria," 56-63.

62. [very much like a round cake with a large sector cut out](#): Memo, Secret, Headquarters Berlin Command, Office of Military Government for Germany (US), S-2 Branch, Subject "Flying Saucers," 3 December 1947, 126; Drawing, Directrix, Secret, 128.

63. [Could it hover?](#): Ibid., 57.

64. [if groups could fly tightly together](#): Ibid., 58.

65. [high speed escapement methods](#): Ibid., 59.

66. [Could the flying disc be remotely controlled?](#): Ibid., 58.

67. [Did Wendel have any idea about the tactical purposes](#): Ibid.

68. [a rocket engineer named Walter Ziegler](#): Memo, Secret, Headquarters Counter Intelligence Corps Region IV, 970th Counter Intelligence Corps APO 407-A Subj: ZIEGLER, Walter Erich, 1 March 1948, 52-55.

69. [four hundred men from his former rocket group](#): Ibid., 53. Ziegler called the town "Kubischew," and said it was located "east of Moscow... where they are presently constructing rockets under Russian supervision."

70. [The Horten brothers had been found](#): Headquarters 970th Counter Intelligence Corps Detachment European Command, APO 757, D-198239, Subject Flying Saucers, dated 12 March 1948, 44.

71. [the Horten 13](#): This is a transcription of a "report" originally written in German cursive writing and translated by SFC Dale R. Blohm. It is missing a cover page. The text suggests that the USG is making plans to hire "6 to 30" German scientists to create for

them the "Horten-Parabel." It reads, "The Discussions concerning the Project 'Horten-Parabel' are finalized. The results can be summed up in the following manner. 1). The Russians are in possession of the relevant planes and will be supported by German specialists. The construction series of the so called Horten 13 (Model with 2-TL (SIC) Power Unit) should not be developed beyond the initial stages by the Russians." At the end of the memo, the writer concluded, "to begin work, we ask for exact orders for the U.S. Army, for example timber work style, how many power units, operating radius, additional load, crew size, weapons layout, etc," 196-97, 202-4.

72. ["Walter Horten has admitted his contacts with the Russians"](#): Memo from European Command Message Control Secret Priority, Ref S-3773, To: United States Forces in Austria, for Director of Intelligence, 20 May 1948, 231; extracts from Horten, Walter, From D-154654, "Walter HORTEN points out that the possibility of the glider of parabolic design flown by a Russian pilot in 1925-1926 at the Rhaen competitive race may have been developed into a flying saucer. In the event the Russians further developed this glider, or, after the war, installed into it jet units of the Junkers or BMW type, the result may be the flying saucer," 232-33.

73. [stay at Wright-Patterson for approximately four years](#): Interview with EG&G engineer.

Chapter Three: The Secret Base

Interviews: Colonel Leghorn, T. D. Barnes, Lieutenant Colonel Roger Andersen, Millie Meierdierck, Bob Murphy, Ray Goudey, Edward Lovick

1. was sitting in his parlor: Bissell, *Reflections of a Cold Warrior*, 68.
2. paramour of Princess Caradja: Thomas, *The Very Best Men*, 103.
3. As for the mysterious office called OPC: CIA History Staff, "Office of Policy Coordination 1948–1952," 57 pages. Approved for release March 1997.

4. funds generated by the Marshall Plan: Bissell, *Reflections of a Cold Warrior*, 68.
5. Leghorn went back to Washington: Interview with Colonel Leghorn.
6. as part of Operation Lusty: Samuel, *American Raiders*. Operation Lusty (Luftwaffe Secret Technology) was the U.S. Army Air Forces' effort to capture and evaluate German aeronautical technology beginning at the end of World War II.

7. Putt listened: Pedlow and Welzenbach, *Central Intelligence Agency*, 35.
8. Whereas Putt was uninterested: P. Taubman, *Secret Empire*, 105.
9. Killian and Land reasoned: Pedlow and Welzenbach, *Central Intelligence Agency*, 27–37.
10. "impression of World War I as a cataclysm": Bissell, *Reflections of a Cold Warrior*, 4.

11. James Killian, who recruited Bissell: Pedlow and Welzenbach, *Central Intelligence Agency*, 16. Bissell joined the Agency in late January 1954; however, his first association with the Agency came in 1953 when he worked as a contractor. On July 26, 1954, Eisenhower authorized Killian to recruit a panel of experts to study what a U-2-type aircraft might accomplish. The group was called the Technological Capabilities Panel. In August, the idea was formally presented to Bissell. *Ibid.*, 30.

12. a secret CIA test facility: There are several accounts of who went to Groom Lake with Bissell on that historic first trip. I compile mine from Bissell's memoir and my interviews with Lockheed test pilot Ray Goudey.

13. Goudey had shuttled atomic scientists: Interview with Ray Goudey.
14. "I recommended to Eisenhower": Bissell, *Reflections of a Cold Warrior*, 102–3.
15. the tents would blow away: Interview with Ray Goudey.
16. to defend against rattlesnakes: Interview with Edward Lovick.
17. The same variable occurred: Interview with Tony Bevacqua.
18. a lot of time in a recliner: Interview with Ray Goudey.
19. Bob Murphy's job: Interviews with Bob Murphy. The U-2 engine was a P-37 specially designed by Connecticut engine maker Pratt and Whitney.
20. Mr. B., as he was known to the men: Interview with Edward Lovick.
21. Hank Meierdierck: The stories of Hank Meierdierck, the man who trained the U-2 pilots at Area 51, were relayed to me by his friends from the old days at the Ranch as well as from his personal papers, which were made available to me by his wife, Millie Meierdierck.
22. "unconventional way": Killian, *Sputnik, Scientists and Eisenhower*, 82. Killian wrote, "Eisenhower approved the development of the U-2 system, but he stipulated that it

should be handled in an unconditional way so that it would not become entangled in the bureaucracy of the Defense Department or troubled by rivalries among the services." Also see Bissell, *Reflections of a Cold Warrior*, 95.

23. [hidden from Congress](#): Top Secret Memorandum of Conference with the President 0810, 24 November 1954. "Authorization was sought from the President to go ahead on a program to produce thirty, special high performance aircraft at a cost of about \$35 million. The President approved this action. Mr. Allen Dulles indicated that his organization could not finance this whole sum without drawing attention to it, and it was agreed that Defense would seek to carry a substantial part of the financing." From the Eisenhower Archives, DDE's Papers as President, Ann Whitman Diary Series, Box 3, ACW Diary, November 1954.

24. [stand-alone organization](#): Bissell, *Reflections of a Cold Warrior*, 105. Bissell wrote, "To preserve the secrecy and expeditiousness that Eisenhower and Allen Dulles insisted on, I argued for removing the U-2 project from the agency's organizational chart and setting it up as a stand-alone organization. As a result, the entire project became the most compartmented and self-contained activity within the agency."

25. [five-page brief](#): Eisenhower was uniquely invested in Area 51 because the success of the U-2 program, which came to be during his administration, was critical to the nation's security.

26. [the Air Force was almost entirely left out](#): As recalled by General Leo Geary, Bissell's Air Force deputy, in an interview with Jonathan Lewis, tape recording, Chevy Chase, MD, 11 February 1994; Bissell, *Reflections of a Cold Warrior*, 100.

27. [LeMay was, understandably, enraged](#): "Eventually President Eisenhower settled the dispute." Pedlow and Welzenbach, *Central Intelligence Agency*, 60; Bissell, *Reflections of a Cold Warrior*, 109.

28. [the president's decision](#): "I want this whole thing to be a civilian operation," the president wrote. "If uniformed personnel of the armed services of the United States fly over Russia, it is an act of war—legally—and I don't want any part of it." From Pedlow and Welzenbach, *Central Intelligence Agency*, 60.

29. [Bob Murphy would often chat with George Pappas](#): Interview with Bob Murphy.

30. [Had Pappas been just thirty feet higher](#): From Hank Meierdierck's personal papers; Meierdierck located the crash remains from a U-2 he took out on a search mission.

31. [the CIA acknowledged the plane crash in 2002](#): As part of a tribute given by the U.S. Forest Service. The CIA did not, however, acknowledge that the aircraft was traveling to Area 51; also see Cyril Plaskon, *Silent Heroes*.

32. [security systems for Air Force One](#): EG&G, a Division of URS, Albuquerque Operations Web site. "EG&G has provided security systems for U.S. Government facilities: Department of Energy Headquarters, U.S. Bureau of Engraving, Presidential AF-1 Hangar Complex, Rocky Flats [nuclear weapons production facility in Colorado], Tooele [Utah, Army Depot for WMD]."

Chapter Four: The Seeds of a Conspiracy

Interviews: Lieutenant Colonel Tony Bevacqua, Edward Lovick, Ray Goudey, Al O'Donnell, Jim Freedman, Wayne Pendleton, T. D. Barnes

1. [Area 51, reports of UFO sightings](#): Haines, "CIA's Role," 73.
2. [U-2 look like a fiery flying cross](#): Interview with Tony Bevacqua; the wingspan is 103 feet and the fuselage is 63 feet.

3. [the crash at Roswell occurred](#): Hereafter, when I refer to the "crash at Roswell," I am referring to an aircraft, not a balloon, as has also been written. While there was a balloon-borne radar-reflector project going on at White Sands in the summer of 1947, this is not what crashed at Roswell. To learn about that project and the balloon theory put forth by one of its participants, Charles B. Moore, see Saler, Ziegler, and Moore, *UFO Crash at Roswell*.

4. [Project Sign](#): U.S. Air Force Air Materiel Command, "Unidentified Aerial Objects; Project SIGN"; Haines, "CIA's Role," 68.

5. [Project Grudge](#): U.S. Air Force, Project Grudge and Blue Book, Reports 1–12. Since the declassification of Projects Saucer, Sign, Grudge, Twinkle, and Blue Book, which began incrementally in the 1970s, the collection is housed in the National Archives; see <http://www.archives.gov/foia/ufos.html>.

6. [disliked technology in general](#): Pedlow and Welzenbach, *Central Intelligence Agency*, 17, "High altitude reconnaissance of the Soviet Union did not fit well into Allen Dulles's perception of the proper role of an intelligence agency. He tended to favor the classical form of espionage, which relied on agents rather than technology." Allen Dulles's predilection to work with former Nazis has become more obvious and more troubling as time goes by and Paperclip files are slowly declassified. The last line in Dulles's three-page CIA biography, "Secret Security Information: Subject Allen W. Dulles 7/2-127," reads: "At any rate, the American policy in the postwar period as regards [to] Germany has been directly and deeply influenced by MR. DULLES. He has a greater trust in the Germans than he has, for instance, in the French and the Italians."

7. [The UFO division was placed](#): Office Memorandum, United States Government, To: Acting Assistant Director for Scientific Intelligence, From: Todos Odarenko, Chief, Physics and Electronics Division, SI, Subject, Current Status of Unidentified Flying Objects (UFOB) Projects, 17 December 1953.

8. [Walter Bedell Smith](#): Weiner, *Legacy of Ashes*, 4, 87, 122, 131.

9. [included the flying disc retrieved at Roswell](#): This is my defensible speculation based on interviews with the EG&G engineer and my understanding of Bedell Smith's role, particularly with James Forrestal, secretary of the Navy during the war and the nation's first secretary of defense, who committed suicide on May 22, 1949.

10. [Bedell Smith was the ambassador to the Soviet Union](#): CIA Center for the Study of Intelligence, Directors and Deputy Directors of Central Intelligence, Walter Smith, General, U.S. Army.

11. [Governors Island, New York](#): National Archives Records Administration, RG 338, Box 27, G-2 Section, Headquarters First Army, Governors Island, New York, 4, New York,

12. summarily rejected the idea that UFOs: There are several CIA documents, declassified starting in 1996, that I base my interpretation of General Bedell Smith's attitude toward UFOs on during his tenure at CIA. All quotes come from these documents: Central Intelligence Agency, Washington 25, D.C. Office of the Director, ER-3-2809, Memorandum to Director, Psychology Strategy Board, Subject Flying Saucers, 2 pages, signed Walter B. Smith Director, undated; Memorandum for file OSI, Meeting of OSI Advisory Group on UFO, January 14 through 17, 1953, 3 pages; Scientific Advisory Panel on Unidentified Flying Objects 14–17 January 1953, Evidence Presented, 2 pages; CIA Scientific Advisory Panel on Unidentified Flying Objects, Comments and Suggestions of UFO Panel, 19 pages; Minutes of Branch Chief's Meeting of 11 August 1952, 3 pages; Memorandum for Director of Central Intelligence, From Deputy Director, Intelligence, Subject Flying Saucers, Dated September 7, 1952, 5 pages.

13. flying discs appeared in many different forms of art:
<http://www.crystalinks.com/ufohistory.html>.

14. like the boy who cried wolf: Memo, CIA Scientific Advisory Panel on Unidentified Flying Objects, Comments and Suggestions of UFO Panel, 10. "Potential related dangers. c. Subjectivity of public to mass hysteria and greater vulnerability to possible enemy psychological warfare."

15. "hysterical mass behavior": Haines, "CIA's Role," 72.

16. the publishers of Life magazine: H. B. Darrach and Robert Ginna, "Have We Visitors from Space?" *Life* magazine, April 7, 1952.

17. originally called Project Saucer: Haines, "CIA's Role," 67–68.

18. Green Fireballs: Project Twinkle, Final Report, November 27, 1951.

19. curious members of Congress: Interview with Stanton Friedman.

20. Air Force concluded for the National Security Council: U.S. Air Force Air Materiel Command, "Unidentified Aerial Objects; Project SIGN."

21. UFO convention in Los Angeles: "Minutes of the Meeting of Civilian Saucer Investigations."

22. Dr. Riedel had been working on Hitler's bacteria bomb: Neufeld, *Von Braun*, 206.

23. There were rumors of "problems": Ibid., 216–22.

24. "going to execute a planned 'hoax": CIA Office Memorandum to Assistant for Operations, OSI, From Chief Contact Division, CO, Date: 9 February 1953, Subject California Committee for Saucer Investigations.

25. set off alarms in its upper echelons: Special National Intelligence Estimate 100-2-57, No. 19, "Soviet Capabilities for Deception," Submitted by the Director of Central Intelligence, 16 pages. Based on recommendations made by the Technical Capabilities Panel, chaired by Dr. Killian, the recommendation read: "We need to examine intelligence data more broadly, or to invent some new technique, for the discovery of hoaxes."

26. trailing a colleague of Riedel named George P. Sutton: Curiously, the CIA document referenced above names George Sutton as a Riedel colleague and ufologist. Was he a plant? Was he turned? Did he reform on his own? According to the Smithsonian Papers, National Air and Space Museum, Archives Division, MRC 322, Washington, DC,

20560, in the G. Paul Sutton collection: "George Paul Sutton (1920-) was an aerospace engineer and manager. He received degrees from Los Angeles City College (AA, 1940) and the California Institute of Technology (BS, 1942; MS [ME], 1943) before going to work as a development engineer for the Rocketdyne Division of North American Aviation. He remained at Rocketdyne into the late 1960s, while also sitting as Hunsaker Professor of Aeronautical Engineering at MIT (1958-59) and serving as Chief Scientist, Advanced Research Projects Agency [ARPA] and Division Director, Institute of Defense Analysis for the Department of Defense (1959-60). Following his work at Rocketdyne he joined the technical staff at the Lawrence Livermore National Laboratory."

27. [Agency should handle reports of UFOs](#): Odarenko, Office Memorandum, August 8, 1955.

28. [Allen Dulles as an arrogant public servant](#): Letter from Director of Central Intelligence Allen Dulles to Congressman Gordon Scherer, October 4, 1955, ER-7-4372A.

Chapter Five: The Need-to-Know

Interviews: Colonel Slater, Hervey Stockman, Ken Collins, Frank Murray, Tony Bevacqua, Colonel Pizzo, Edward Lovick, Ray Goudey

1. [protocols that are also top secret](#): Correspondence with Cargill Hall. The Federation of American Scientists provides a nonclassified Central Intelligence Directive from 1995 at <http://www.fas.org/irp/offdocs/dcld1-19>.

2. [bemoaned the president's science advisers](#): Welzenbach, "Science and Technology," 16.

3. [Sage Control](#): Interview with Colonel Slater.

4. ["It was like something out of fiction"](#): Interview with Hervey Stockman. Also sourced in this section with Stockman are passages from his compelling oral history, a project that was spearheaded by his son Peter Stockman and the results of which are "Conversations with Colonel Hervey S. Stockman," edited by Ann Paden and Earl Haney (not published).

5. [The identities of the pilots were equally concealed](#): Interviews with Ken Collins, Frank Murray, Tony Bevacqua, and Hervey Stockman.

6. [NII-88](#): Brzezinski, *Red Moon Rising*, 22–23, 26–30, 39–44, 98, 102; Harford, *Korolev*, 77–80, 93, 95, 117. Also called Scientific Research Institute-88, which included the former NII-1, per Stalin on May 13, 1946.

7. [Stalin declared Sergei Korolev's name a state secret](#): Harford, *Korolev*, 1.

8. [multibillion-dollar espionage platforms](#): Ibid., 93. Harford quotes Gyorgi Vetrov, Korolev's Russian biographer, as saying about NII-88's radical transformation: "Hardly anyone suspected that the plant was destined to become a production base for such complicated and demanding technologies as rockets and space vehicles for traveling to other plants."

9. [Russia's version of America's Paperclip scientists](#): Ibid., 75. In addition to the Army intelligence CIC memos that I cited earlier regarding Fritz Wendel, Harford wrote "perhaps as many as 5,000 skilled Germans... were literally kidnapped and shipped with their families, by trains, freight cars and trucks to workplaces outside of Moscow."

10. [Operation Dragon Return](#): Goodman, *Spying on the Nuclear Bear*, 177.

11. ["cannot cope with contingencies"](#): Brzezinski, *Red Moon Rising*, 81.

12. [LeMay scrambled nearly a thousand B-47 bombers](#): Ibid., 25. The entirety of these Arctic overflights is still classified. Missions are written about in Burrows, *By Any Means Necessary*, 208–15, and in Bamford, *Body of Secrets*, 35–36. The National Security Agency cosponsored many of the ELINT missions. In *Secret Empire*, Philip Taubman wrote, "At least 252 air crewmen were shot down on spy flights between 1950 and 1970, most directed against the Soviet Union. It is certain that 90 of these men survived, for they were either rescued by American forces or their capture but the Soviet Union or another country was confirmed. But the fate of 138 men is unknown," 47.

13. [top secret missions as part of Operation Home Run](#): Interview with Colonel Sam Pizzo.

14. ["Soviet leaders may have become convinced"](#): CIA Staff, "Analysis of the Soviet Union 1947–1999," 27.

15. [President Eisenhower was gravely concerned](#): Top Secret Memorandum of Conference with the President, July 8, 1959. With Dulles and Bissell present at the meeting, USAF Brigadier General A. J. Goodpaster observed, "There remains in the President's mind the question of whether we were getting to the point where we must decide if we are trying to prepare to fight a war, or trying to prevent one." Office of the Staff Secretary, Subject Series, Alphabetical Subseries, Box 15, Intelligence Matters.

16. [Richard Bissell promised the president](#): Oral history interview with Richard M. Bissell Jr. by Theodore A. Wilson and Richard D. McKinzie, East Hartford, Connecticut, July 9, 1971.

17. [Alexander Orlov related](#): Orlov, "The U-2 Program," 5–14.

18. [We will shoot down uninvited guests](#): Ibid., 7.

19. [he would be even more enraged](#): Ibid.; Brzezinski, *Red Moon Rising*, 124–35.

20. [CIA men armed with machine guns](#): Interview with Hervey Stockman.

21. [Eisenhower's cows](#): P. Taubman, *Secret Empire*, 167.

22. [Stockman approached Russia's submarine city](#): Stockman also recalled in our interview, "This was good solid proof that what so many had thought to be over there, that there was this huge, dominant, strategic bomber force for the Soviet Union, [proved] not to be there."

23. [Herbert Miller wrote a triumphant memo](#): Declassified in 2000, the memo is called Top Secret Memorandum for: Project Director, Subject: Suggestions re the Intelligence Value of Aquatone, July 17, 1956. Three more U-2 flights followed Hervey Stockman's. On July 10, 1956, the Soviet Union filed a note of protest. Later that same day, Eisenhower ordered Bissell to stop all overflights until further notice. Miller's memo summarizes the intelligence value of the U-2 flights for the president and argues that the danger of stopping them was far greater than of continuing them.

24. [Khrushchev told his son, Sergei](#): W. Taubman, *Khrushchev*, 443.

25. [lost enthusiasm" for the CIA's aerial espionage program](#): Pedlow and Welzenbach, *Central Intelligence Agency*, 110. Further, the president noted that if Russia were to make these kinds of incursions over U.S. airspace, "The reaction would be drastic." Also from Andrew J. Goodpaster, memorandum on the record, July 19, 1956. The president expressed concern that if the public found out about the overflights, they would be shocked. "Soviet protests would be one thing, any loss of confidence by our own people would be quite another."

26. [he hired a team to analyze](#): Interview with Edward Lovick.

27. [painting the U-2 was a bad idea](#): Ibid.

28. [Air Force transferred money over to the CIA](#): Pedlow and Welzenbach, *Central Intelligence Agency*, 77.

29. [Among those selected](#): Interview with Tony Bevacqua.

30. [The next test was a freezing experiment](#): Interview with Bevacqua. Cold experiments were presented in the Nuremberg doctors' trials as "The Effect of Freezing on Human Beings," the purpose of which was for Nazi doctors to determine at what temperature a human subject dies from heart failure when being frozen.

31. [aviation medicine school at Wright-Patterson](#): Hunt, *Secret Agenda*, 10, 16, 19,

21. Hunt wrote that during the war, Lieutenant General Donald "Putt gathered the Germans together and, without approval from higher authorities in the War Department, promised them jobs at Wright Field," sourcing her interview with Lieutenant General Putt; "Report on Events and Conditions Which Occurred During Procurement of Foreign Technical Men for Work in the U.S.A.," September 25, 1945, Department of the Air Force, History of the AAF Participation in Project Paperclip, Appendix, May 1945–March 1947.

32. [previously worked at Nazi concentration camps](#): Bower, *Paperclip Conspiracy*, 214–323. Colonel Harry Armstrong, a surgeon with the U.S. Eighth Air Force, petitioned for the Nazi doctors to come to America after the war and "at the end of his distinguished career, in 1976, he would boast that the thirty-four German aviation doctors he brought to America had saved 'a great many millions of dollars.'" Armstrong had obtained approval from Eisenhower for an operation to "exploit certain uncompleted German aviation medicine research projects." Also see Staff Memo to Members of the Advisory Committee on Human Radiation Experiments, "Post-World War II Recruitment of German Scientists—Project Paperclip," April 5, 1995 (as per President Clinton). The committee obliquely concludes: "Follow-up Research. The staff believes this trail should be followed with more research before conclusions can be drawn about the Paperclip scientists... It is possible that still-classified intelligence documents could shed further light on these connections."

33. [conducting barbaric experiments](#): In Linda Hunt's *Secret Agenda*, chapter 5, "Experiments in Death," she chronicles several Nazi scientists who became Paperclips. Siegfried Ruff and Hermann Becker-Freyseng conducted death experiments on prisoners at Dachau, placing them in a pressure chamber that simulated high altitudes of up to 39,260 feet. "The U.S. military still viewed Ruff and Becker-Freyseng as valuable assets, despite their connection to these crimes. They were even employed under Paperclip [at the AAF Aero Medical Center in Heidelberg, Germany] to continue the same type of research that had resulted in the murder of Dachau prisoners," Hunt wrote. Ruff and Becker-Freyseng never got permanent U.S. Paperclip jobs; both were eventually arrested and tried at Nuremberg. Ruff was acquitted, Becker-Freyseng was convicted and given a twenty-year prison sentence. Another notable case was that of Konrad Schaefer. In an effort to study if Luftwaffe pilots could survive on seawater, Schaefer forced prisoners to drink seawater until they went mad from thirst. He then punctured their livers in order to sample fluid and blood. Schaefer was tried at Nuremberg and acquitted, at which point the United States hired him as a Paperclip. "When he arrived at San Antonio in 1950," wrote Hunt, "he was touted as 'the leading German authority on thirst and desalination of seawater.'"

34. [six hundred million still-classified](#): Pauline Jelinek, "U.S. Releases Nazi Papers," Associated Press, November 2, 1999. But in reality, this number is just a guess, since documents can be hidden inside agencies that are still classified (as the National Reconnaissance Office, NRO, was from 1961–1992); *Nazi War Crimes and Japanese Imperial Government Records*, April 2007. In 1998, President Clinton signed into law the Nazi War Crimes Disclosure Act, which "required the U.S. Government to locate, declassify, and release in their entirety, with few exceptions, remaining classified records

about war crimes committed by Nazi Germany and its allies." An interagency working group was created to oversee this work. Steven Garfinkel, acting chair of this five-year effort, wrote: "the WG has ensured that the public finally has access to the entirety of the operational files of the Office of Strategic Services (OSS), totaling 1.2 million pages; over 114,200 pages of CIA materials; over 435,000 pages from FBI files; 20,000 pages from Army Counterintelligence Corps files; and over 7 million additional pages of records." Garfinkel makes no mention of any Atomic Energy Commission files or the files of private contractors inside the Atomic Energy Commission, such as EG&G, who control documents classified as Restricted Data (RD).

35. [U-2 was as radical and as unorthodox](#): Interview with Tony Bevacqua.
36. [Edgerton's famous stop-motion photographs](#): Available for viewing at the Edgerton Center at MIT, 77 Massachusetts Avenue, Room 4-405, in Cambridge, Massachusetts, as well as online at Edgerton.org; Grundberg, "H.E. Edgerton, 86, Dies, Invented Electronic Flash," *New York Times*, January 5, 1990.
37. [Kenneth J. Germeshausen](#): Joan Cook, "Kenneth Germeshausen, 83, Dies; Was Nuclear and Radar Pioneer," *New York Times*, August 21, 1990. Information on Germeshausen also comes from the Kenneth J. Germeshausen Center for the Law of Innovation and Entrepreneurship at the Franklin Pierce Law Center; MIT archives; author interviews with Al O'Donnell, Jim Freedman.
38. [the most highly classified engineering jobs](#): Interviews with former EG&G employees Al O'Donnell, Jim Freedman, Wayne Pendleton, T. D. Barnes, and others.
39. [EG&G agreed to set up a radar range](#): Pedlow and Welzenbach, *Central Intelligence Agency*, 130. It is also interesting to note that in the footnotes in this CIA monograph, the source for information regarding the location of EG&G's radar range is redacted, only that they are from Office of Special Activity (OSA) records. Written requests to the CIA were denied.
40. [Lockheed test pilot Robert Sieker](#): Among pilots living at Area 51, a debate ensued about the cause of Sieker's crash. U-2 pilots Tony Bevacqua and Ray Goudey told me they believe pilot error caused Sieker's crash. According to them, he was known to open up his faceplate and take bites of candy bars during flight. Bevacqua himself flew a U-2 dirty bird and lived to tell the tale. Many of these mission flights were made over Asia. Lovick maintains it was the Boston Group's paint that caused the aircraft to overheat.
41. ["As it beeped in the sky"](#): Killian, *Sputnik, Scientists and Eisenhower*, 7.
42. [Killian and Bissell found themselves](#): Welzenbach, "Science and Technology," 18. "Killian had confidence in Bissell. A special relationship existed between Killian and Bissell going back to 1942."
43. [formidable top secret billion-dollar spy plane](#): Top Secret Memorandum of Conference with the President, July 20, 1959. "It will have a radar cross section so low that the probability of hostile detection and successful tracking would be very low. It would have a 4000-mile range at mach 4, with 90,000 feet altitude." Office of the Staff Secretary, Subject Series, Alphabetical Subseries, Box 15, Intelligence Matters.
44. [Advancing science and technology for military purposes](#): The Advanced Research

Projects Agency was Eisenhower's response to Sputnik, "a high-level defense organization to formulate and execute R&D projects that would expand the frontiers of technology beyond the immediate and specific requirements of the Military Services and their laboratories." In 1972, ARPA became DARPA. The *D* denotes *Defense*.

Chapter Six: Atomic Accidents

Interviews with Richard Mingus, Al O'Donnell, Jim Freedman, Dr. Wheelon, Troy Wade, Darwin Morgan, Stephen M. Younger

1. involved thirty consecutive nuclear explosions: Defense Threat Reduction Agency, fact sheet, Operation Plumbbob: "Operation Plumbbob, the sixth series of atmospheric nuclear tests conducted within the continental United States, consisted of 24 nuclear detonations and six safety tests. The Plumbbob series lasted from April 24 to Oct. 7, 1957, and involved about 14,000 Department of Defense (DoD) personnel."

2. airplane transporting an atomic bomb would crash: Atomic Energy Commission, Summary of Project 57, the First Safety Test of Operation Plumbbob, report to the General Manager by the Director, Division of Military Application, 24.

3. the perfect place to do this was Area 51: Ref. Sym 5112-(127), Appendix A, Administrative Committee Report, J. D. Shreve Jr., Sandia Corporation (seven pages, no date). "B. Area Chosen (clockwise perimeter) (Groom Mine Map) Start at intersection of 89 with north NTS boundary; follow 89 north to 51 (off map); 90 east on 51 to 04, south on 04 to Watertown (north) boundary, thence west to 95, south to NTS line, and finally west along NTS line to 89. More simply, it is the rectangle of land (1) bounded north and south by grids 51 and an extension of the north NTS edge respectively, (2) bounded east and west by grids 04 and 89 respectively, (3) excluding all area assigned to Watertown," 5.

4. "relinquished for 20,000 years": Operation Plumbbob, Summary Report, Test Group 57, Nevada Test Site, Extracted Version, May–October 1957, ITR-1515 (Extracted Version), 17.

5. "no preexisting contamination": Minutes, First General Meeting, the 57 Project, January 18, 1957, at Sandia Corporation, Red. Sym 5112-(127), declassified 8/9/83.

6. "a safety test": Memo dated April 2, 1957, LAV-57-33 Atomic Energy Commission, Las Vegas Branch, Office of the Branch Chief; also see Safety Experiments, November 1955–March 1958, Defense Nuclear Agency, United States Atmospheric Nuclear Weapons Tests, Nuclear Test Personnel Review, Report Number DNA 6030.

7. dispute was over eight dead cows: The University of Tennessee Agricultural Experiment Station, Knoxville, November 30, 1953, #404942, Stewart Brothers, Las Vegas, Nevada. Through courtesy of Joe Sanders of AEC, 1–5.

8. The commission had paid the Stewarts: Memo to Dr. W. S. Johnson, Section Leader, Test Operations Section, University of California, Los Alamos Scientific Laboratory, Los Alamos, New Mexico, October 20, 1953, #4049641.

9. aerial inspection of Groom Lake: Col. E. A. Blue, DMA/AEC; J. D. Shreve Jr., SC, W. Allaire (ALO), M. Cowan (SC) all inspected the area from the air on a special flight prior to January 18.

10. "60 to 80 cattle who hadn't gotten the word": Minutes, First General Meeting, the 57 Project, January 18, 1957, at Sandia Corporation, Red. Sym 5112-(127), 3.

11. excluded from official Nevada Test Site maps: Ref. Sym 5112-(127) Appendix A, Administrative Committee Report, J. D. Shreve Jr., Sandia Corporation (seven pages, no date). "It remains undecided whether Area 13 is considered on-site or off-site so far as

NTS is concerned... This is very important to rule on soon." Ultimately, it was decided to exclude Area 13 from all maps and it remains this way on declassified maps today because Area 13 lies inside Area 51. Denoting it on a map would lead to questions that the Atomic Energy Commission does not want asked.

12. [nuclear warhead was flown](#): Ibid., 6. "It will be requested that weapon be flown to Yucca Lake air strip March 15, transferred to Building 11 for storage awaiting ready date for the shot. Checkout would be done in Building 10 and the unit moved from there to Area 13 (requested designation for site) for firing."

13. [Richard Mingus was tired](#): Interviews with Richard Mingus.

14. [America's first dirty bomb](#): Operation Plumbbob, Summary Report, Test Group 57, Nevada Test Site, Extracted Version, May–October 1957, ITR-1515 (Extracted Version), 85 pages.

15. [Pacific Proving Ground](#): General information comes from Buck, *History of the Atomic Energy Commission*; O'Keefe, *Nuclear Hostages*; Fehner and Gosling, *Battlefield of the Cold War*.

16. [made its zigzag course](#): Fehner and Gosling, *Origins of the Nevada Test Site*, 39.

17. [arguing for an atomic bombing range](#): Ibid., 46–47.

18. [Armed Forces Special Weapons Project](#): "History of the Air Force Special Weapons Center 1 January–30 June 1957." Department of Defense, DNA 1. 950210.019, declassified with deletions 2/2/95.

19. [code-named Project Nutmeg](#): Bugher, *Review of Project Nutmeg*, #404131.

20. [The optimum conditions](#): Fehner and Gosling, *Battlefield of the Cold War*, 37.

21. [the goal of fostering competition](#): Interview with Dr. Bud Wheelon; also see Nevada Test Organization, Background Information on Nevada Nuclear Tests, Office of Test Information, July 15, 1957, #403243, 25.

22. [most ambitious series](#): Plumbbob Series 1957, Technical Report, Defense Nuclear Agency 6005F, DARE Tracking 48584, 60–75.

23. [Delta, nothing more](#): Interview with Richard Mingus.

24. [scientists really had no clear idea](#): Safety Experiments, November 1955–March 1958, Defense Nuclear Agency, United States Atmospheric Nuclear Weapons Tests, Nuclear Test Personnel Review, Report Number DNA 6030.

25. [Workers set up](#): Ref. Sym 5112-(127) Appendix B, Particle Physics Committee Report, M. Cowan, Sandia Corporation Presiding (nine pages, no date). This document refers to various objectives of the particle physics program, an "experimental approach" to fallout collection, "balloon born precipitators," air samplers on the ground, collection of fallout trays. It described how "some small plywood shacks with open windows and doors will be constructed in the fallout array. Air and surface contamination levels will be measured within the structures and compared to readings on the outside."

26. [stocked with radiation equipment and protective clothing](#): Plumbbob Series 1957, Technical Report, Defense Nuclear Agency 6005F, DARE Tracking 48584, 60–75, 316.

27. [Mother Nature's emissary](#): Interviews with Richard Mingus and Al O'Donnell, who introduced me to Mueller's widow.

28. [Project 57 balloons broke loose](#): Telex TWX 01A 2008242, From Reeves Attention Gen AD Starbird, 1957 Apr 20 AM 3:39; also see "Feasibility of Weapon Delivery By Free Balloons," OSTI ID: 10150708; Legacy ID: DE98056381, 34 pages.

29. [hand-fired by an employee from EG&G](#): Operation Plumbbob, Summary Report, Test Group 57, Nevada Test Site, Extracted Version, May–October 1957, ITR-1515 (EX). Sandia Corporation, Albuquerque, NM, October 10, 1958. "At 0350 PST April 24, a surface charge of 110 pounds of stick dynamite was fired 1,000 feet east of Zone C (as position 42-61) to verify predictions of cloud height. Timing and firing circuits were the ultimate in simplicity; the weapon was hand fired by EG&G at the Test Group Director's instruction."

30. [fallout was to the north](#): Ibid., 55 (6.1., Weather Observations). The weather was meticulously recorded, which is ironic given how "fast and loose" everything else was running out at the test site, as stated by an EG&G employee who also worked as a liaison to the Pentagon. "April 10, 1957. Hodographs during the period 2100 to 2330 PST showed that satisfactory conditions existed at 2100 PST, but a recommendation for cancellation was made after the wind shifted to northwest on the 2300 PST soundings. April 1F, [sic] 1957. Satisfactory wind conditions existed at 0441 PST, but the morning inversion broke more quickly than expected. By 0530 PST, winds were too strong and the shear had disappeared, forcing cancellation. April 20, 1957, Intermittent light showers began at 2330 PST on the 19th and continued through the remainder of the night and following morning. Hodographs indicated that satisfactory winds existed during this period, but moisture on the instrumentation forced cancellation. April 24, 1957. Scattered middle clouds were observed and a moderate dew formed during the night. The sequence of wind changes from 0415 to 0756 is shown by the hodographs. The shot was fired at 0627 PST."

31. [The bomb was indeed dirty](#): In June of 1982, Sandia Corporation produced an extracted 102-page report on the results of its dirty bomb or plutonium-contamination effects study on Project 57 for the director of the Defense Nuclear Agency, in lieu of a proposed cleanup of Area 13 (see chapter 18). Information in this chapter comes from portions of that extracted study. The stated objectives of the project "were to estimate the immediate and long-term distribution of plutonium and gain an understanding of how this distribution comes about, to conduct a biomedical evaluation of plutonium-laden environments, to investigate relevant methods of decontamination, and to evaluate alpha field survey instruments and monitoring procedures." And yet Area 13 soil decontamination was not even considered for twenty-five years.

32. ["extract" of the original report](#): The full, still-classified document, originally prepared by Sandia Corporation in Albuquerque, New Mexico, in October of 1958, is called ITR-1515.

33. [the alpha half-life of plutonium-239](#): Ibid., 17 ("Motivation and Mission, 1.1 Historical Resume"). The text reads: "once in the stomach, their stay in the body is short, for they are excreted as an inert material with virtually no body assimilation. Inhalation is a different mechanism entirely and one which presents a considerable threat. Any particle small enough to reach the lower respiratory tract apparently has an excellent chance of

clinging to alveolar surfaces and staying to do radiation damage... One cannot outlive the influence, because the alpha half life of plutonium-239 is of the order of 20,000 years."

34. "[respirable plutonium remarkably far downwind](#)": Ibid., 7 ("Foreword, Abstract").
35. "[earthworms moved 18 tons of soil](#)": Ibid., 101 (8.6, "A New Program"). "Finally, Dr. Kermit Larson agreed to exploit an idea which grew out of discussions among participants in the anniversary measurements—earthworms. Compton's Encyclopedia reports that the renowned Charles Darwin studied an acre of garden in which he claimed 53,000 hard-working earthworms moved 18 tons of soil. Translocation of soil, the possibility that earthworm body chemistry may vary plutonium form, etc., could turn out to be significant influences, intentional or unintentional, in the rehabilitation of a weapon-accident environment."

36. [Pauling said](#): The quotes in this two-page section, and also the newspaper quotes [here](#), are from the extensive newspaper archive collection located in the Atomic Testing Museum library reading room in Las Vegas, Nevada.

37. [The Pentagon wondered](#): Fehner and Gosling, *Battlefield of the Cold War*, 159–82.

38. [caused Area 51 personnel](#): Interview with Richard Mingus.

39. "[the Indoctrination Project](#)": DNA 6005F, Plumbbob Series 1957, United States Atmospheric Nuclear Weapons Tests, Nuclear Test Personnel Review, Chapter 4, Exercise Desert Rock VII and VIII Programs, 81, 96.

40. [Committee on Human Resources](#): Memorandum, Members of the Advisory Committee on Human Radiation Experiments, September 8, 1994, "Human Experiments in Connection with the Atomic Bomb Tests," attachment 5, item 10.

41. "[mythical attack by an aggressor force](#)": During the Hood nuclear bomb, the Marine Corps conducted coordinated air-ground assault maneuvers that included helicopter airlifts and tactical air support; "Exercise Desert Rock VII-VIII, Operation Plumbbob," Defense Nuclear Agency 4747F.

42. [Mingus saw that a large swath of the desert was on fire](#): Interview with Mingus.

43. [Area 51 had become uninhabitable](#): Interview with Richard Mingus; also Office Memorandum, United States Government, Observed Damage at Watertown, Nevada, following the Sixth Nuclear shot of Plumbbob, July 9, 1957. R. A. Gilmore, Off-Site Rad-Safe, NTO, #0150371.

Chapter Seven: From Ghost Town to Boomtown

Interviews: T. D. Barnes, Peter Merlin, Al O'Donnell, Richard Mingus, Jim Freedman, Ed Lovick, Tony Bevacqua, Ray Goudey, Ernie Williams, Harry Martin, Colonel Slater, Frank Murray

1 . [measuring fallout with Geiger counters in hand](#): Interview with T. D. Barnes; Operation Plumbbob Projects and Reports: Program 2, Project 2.2., Neutron Induced Activities in Soil Elements WT-1411; Project 2.5 Initial Gamma Radiation Intensity and Neutron-Induced Gamma Radiation of NTS Soil WT-1414.

2 . [dressed in white lab coats and work boots](#): Photographs viewed at the Atomic Testing Museum library, Las Vegas.

3 . [from pinhead particles to pencil-size pieces of steel](#): DNA 6005F, Plumbbob Series 1957, United States Atmospheric Nuclear Weapons Tests, Nuclear Test Personnel Review, Chapter 4, Exercise Desert Rock VII and VIII Programs, Civil Effects Test Group, Fallout Studies, 204-247; AEC Research and Development Report BNWL-481-1, 113 pages.

4 . [surprise of the nuclear scientists](#): McPhee, *Curve of Binding Energy*, 166–67.

5 . [could locate them with magnets](#): Roadrunners Internationale newsletter, August 1, 2009, 34th edition. From the personal diary of Dan Sheahan, owner and operator of the Groom Mine, provided to the Roadrunners Internationale by his great-granddaughter Lisa Heawood.

6 . [weapons planners moved ahead](#): Interviews with Al O'Donnell, Richard Mingus, and Jim Freedman. There was a nuclear test ban moratorium on the horizon, which meant that all weapons tests were scheduled to end on October 31, 1958. At the test site, weapons engineers worked at a frenzied pace to finish as many nuclear tests as they could before the deadline.

7 . [the animals observed](#): An anonymous eyewitness related to me the horror of watching a dying horse seek water at Area 51. The AEC has never declassified its animal observations, which I understand are extensive. In an AEC document released to the public on July 15, 1957, entitled "Responsibility for U.S. Nuclear Weapons Programs," in a section called "Operating Controls," it is stated that "cattle and horses grazing within a few miles of the detonation suffered skin deep beta radiation burns on their hides (1952 and 1953 series) with no effect on their breeding value and no effect on the cattle's beef quality. Radiation fallout more than a few miles from detonation has been quite harmless to humans, animals or crops." In *The Day We Bombed Utah*, John G. Fuller presents the opposite argument.

8 . [emergency landing on the former U-2 airstrip](#): Interview with Peter Merlin.

9 . [Edward Lovick was standing on](#): Interview with Edward Lovick.

10 . [grandfather of stealth](#): Before working on the A-12, Lovick's first job at Skunk Works was to try to reduce the radar reflections being bounced back from the U-2 to the Soviet radar systems. With Area 51 still shuttered from atomic fallout, the physicist's first efforts took place at a remote hangar in the north corner of Edwards Air Force Base in California. There, Lovick and colleagues spent hours coming up with all kinds of antiradar

schemes: "It was our job to invent something that would neither compromise the aircraft's height, nor allow its hydraulic system to overheat as had happened with Sieker. Kelly Johnson had a rule: one pound of extra weight applied to the aircraft would reduce its altitude by one foot. This meant our camouflage coating couldn't exceed a quarter of an inch and had to weigh as little as possible."

11. [aircraft would be radically different](#): Interviews with Ed Lovick, Dr. Wheelon, T. D. Barnes. Other federal agencies were also secretly experimenting with supersonic flight, but not sustained flight at Mach 3. The Air Force, NASA, and the Navy were involved in the experimental X-15, a hypersonic airplane that would lay the groundwork for travel into space. But the X-15 was boosted off the back of a mother ship, whereas the Agency's new plane would leave the tarmac on its own power and return to the base the same way.

12. [twenty-second window](#): Peebles, *Dark Eagles*, 51.

13. [it loses precision and speed](#): Interview with Dr. Wheelon.

14. [minutiae involving radar returns](#): Jones, *The Wizard War*. Lovick spent hours describing for me the fundamental concepts of radar, which is an acronym for radio detection and ranging, which first came into being in 1904 when a German engineer named Christian Hulsmeyer figured out that electromagnetic waves could be used to identify, or "see," a metal ship floating in dense fog. It didn't take long for the military to realize the inherent value of radar as a way to detect large, moving metal objects otherwise invisible to the naked eye. This was especially true for ships and airplanes, two key means of transport in twentieth-century warfare.

15. [fourteen-year-old children were doing in 1933](#): Interview with Lovick. By high school, Lovick had created a radio receiver from scrap metal, vacuum tubes, and discarded radio parts which enabled him "to detect signals a hundred miles away, which gave me the intense feeling of discovering something that I did not previously have evidence as being there."

16. [the Archangel-1](#): Robarge, *Archangel*, 4–5. *Archangel* is a term meaning "an angel of high rank" and it is also a port city in northwestern Russia, home to many Soviet radar stations that would one day be trying to track the A-12.

17. [fifty Skunk Works employees returned to Area 51](#): Ibid., 6.

18. ["build a full scale mockup"](#): Johnson, *History of the Oxcart Program*, 5.

19. [code-named Titania](#): United States Nuclear Tests July 1945 through September 1992 DOE/NV-209-REV 15, 144. The bomb was named after a satellite of the planet Uranus.

20. [Each member of Lovick's crew](#): Interview with Lovick.

21. ["Ike wants an airplane from Mandrake the magician"](#): Rich, *Skunk Works*, 198.

22. ["by adding the chemical compound cesium"](#): Johnson, *History of the Oxcart Program*, 4. Johnson wrote: "we proposed the use of cesium additive to the fuel. This was first brought up by Mr. Ed Lovick of ADP, its final development was passed over to P&W." Lovick recalls traveling to Pratt and Whitney's research center in Florida where the aircraft engines were being tested. "I realized that I had utilized theory that applied to thermal ionization of gases and would need to use parameters appropriate to electron emission from hot solid surfaces. Our results indicated that we were dealing with mixtures of the two

states but we did not know how to determine how much of each kind of material, gas or solid, was involved in the production of the ionization that we measured. The results were encouraging, but we needed to know more. So we were moved to much better facilities at the P. & W. Willgoos Turbine Laboratory in East Hartford, Connecticut." It was there that the problem was solved.

23. [Oxcart being the fastest](#): CIA Document EO 12958 3.3(b) Oxcart Facts: A-12 Specifications; A-12 Experience Record (as of July 10, 1967). Note that in November of 1961, the X-15 rocket plane flew Mach 6, or 4,092 mph. At the time of this meeting, the CIA thought they were building the fastest airplane in the world, which technically it was, because the X-15 didn't take off on its own power. As per interviews with T. D. Barnes, who worked on both projects.

24. [Area 51 was back in business](#): Parangosky, *The Oxcart Story*, 3 (per Dr. Wheelon, Parangosky was the true author of this seminal work on Oxcart; any other name was a pseudonym). The contract was officially signed on February 11, 1960.

25. [the CIA hired work crews from next door](#): Interview with Ernie Williams.

26. [The construction of a new runway and the fuel farm](#): Interview with Harry Martin; Pedlow and Welzenbach, *Central Intelligence Agency*, 25–26.

27. [The A-12 Oxcart was a flying fuel tank](#): Interview with Harry Martin.

28. [CIA's "own little air force"](#): Interview with Colonel Slater.

29. [Getting the Oxcart to fly](#): Interview with Frank Murray.

30. [186-mile swath just to make a U-turn](#): Interview with Colonel Slater.

31. [same was true at NORAD](#): Interviews with Dr. Wheelon, Colonel Slater.

32. [they passed a simple sketch](#): Interview with Ed Lovick.

33. [S. Varentsov](#): CIA Memo, S. Varenstov, Chief Marshal, USSR, The Problem of Combat with the Nuclear Means of the Enemy and Its Solution, August 1961.

34. [advancing surface-to-air missile technology](#): Interviews with Dr. Wheelon, Ed Lovick, T. D. Barnes.

Chapter Eight: Cat and Mouse Becomes Downfall

Interviews: Gary Powers Jr., T. D. Barnes, Dr. Wheelon, Jim Freedman, Gene Poteat, Helen Kleyla (Richard Bissell's longtime secretary, via written correspondence)

1. drenched in sweat: Powers, *Operation Overflight*, 75.
2. Tyuratam was Russia's Cape Canaveral: CIA report on U-2 Vulnerability Tests, April 1960, Eisenhower Archives, Office of the Staff Secretary, Subject Series, Alphabetical Subseries, Box 15, Intelligence Matters. Memo: ICBM Targets—The Urals and Tyura Tam, "Sverdlovsk in the Urals is the best bet on the location of a major ICBM factory." Notable color U-2 flight maps are in this file.
3. head up to a facility at Plesetsk: Harford, *Korolev*, 112. "R-7s and R-7As were deployed at only two launch pads at Baikonur and, eventually, four at Plesetsk, a launch center readied by 1959... Plesetsk soon became the busiest of the USSR's three launch facilities, having responsibility for placing in orbit reconnaissance and other military satellites."
4. two-and-a-half-foot increments: Brugioni, *Eyeball to Eyeball*, 185.
5. indicated he wanted to speak with him: Powers, *Operation Overflight*, 69.
6. had a premonition: Ibid.
7. awakened by a ringing telephone: W. Taubman, *Khrushchev*, 443.
8. a sharp poke in the eye: Khrushchev, *Khrushchev Remembers*, 444. "Sverdlovsk, was an especially deep penetration into our territory and therefore an especially arrogant violation... They were making these flights to show up our impotence. Well, we weren't impotent any longer."
9. "An uncomfortable situation was shaping up": Orlov, "The U-2 Program," 10.
10. Soviets' secret bioweapons program: Hoffman, *The Dead Hand*, 119.
11. Kyshtym 40 was as valuable: Brugioni, *Eyeball to Eyeball*, 43.
12. "Destroy target": Orlov, "The U-2 Program," 11.
13. Stop and think: Powers, *Operation Overflight*, 83.
14. "He's turning left": Jack Anderson, "US Heard Russians Chasing U-2," *Washington Post*, May 12, 1960.
15. NSA operators heard: Bamford, *Body of Secrets*, 49.
16. "Bill Bailey did not come home": Richelson, *Wizards of Langley*, 18.
17. The brand was Laika: Powers, *Operation Overflight*, 91.
18. "We believed that if a U-2 was shot": Bissell, *Reflections of a Cold Warrior*, 121–22. But Bissell also admitted that the Agency agreed "unanimously" that the "big rolls of film aboard the plane would not be destroyed... Their nonflammable base would prevent them from burning, and they could be dropped from a height of ten miles and survive. We always knew that in the event of a crash there was going to be a couple rolls of film lying around, and there was not much we could do about it."
19. the White House claimed: Department of State, for the Press, No. 249, May 6, 1960; Department of State, for the Press, No. 254, May 9, 1960.
20. But Khrushchev had evidence: Incoming telegram, Department of State, Control 6700, May 10, 1969.

21. [With great bravado](#): W. Taubman, *Khrushchev*, 455–58.
22. [I would like to resign](#): P. Taubman, *Secret Empire*, 396.
23. [Eisenhower wouldn't bow](#): Bamford, *Body of Secrets*, 53–54. “For Eisenhower, the whole process was quickly turning into Chinese water torture. Every day he was being forced to dribble out more and more of the story.”
24. [the first time any nation had publicly admitted](#): Brugioni, *Eyeball to Eyeball*, 49.
25. [authorized a Soviet military base](#): Ibid., 55.
26. [twenty-five minutes' time](#): Havana, Cuba, to Washington, DC, is 1,130 miles. In 1960, a Russian missile traveled at approximately Mach 3.5.
27. [During Powers's trial](#): “Report on Conclusion of Powers Trial, USSR International Affairs,” August 22, 1960, approved for release September 1985, 39 pages.
28. [Las Vegas firing range \(poligon\) in the Nevada desert](#): Ibid., RB-6.
29. [criminal conspiracy](#): Ibid.
30. [follower of Hitler](#): Ibid., RB-20.
31. [Watertown as the U-2 training facility](#): Powers, *Operation Overflight*, 114.
32. [out at the Ranch](#): Parangosky, *The Oxcart Story*, 6–7.
33. [Richard Bissell had a tennis court put in](#): Interview with Dr. Wheelon.
34. [Prohibited Area P-275](#): Interview with Peter Merlin.
35. [thirteen million different parts](#): Bissell, *Reflections of a Cold Warrior*, 133.
36. [the titanium that first held everything up](#): Pedlow and Welzenbach, *Central Intelligence Agency*, 21–22.
37. [nearly 95 percent of what Lockheed initially received](#): Robarge, *Archangel*, 11.
38. [Russia was spending billions of rubles](#): Interview with Ed Lovick.
39. [who thought ELINT was a dirty word](#): Poteat, “Engineering and the CIA,” 24.
40. [Barnes was recruited by the CIA](#): Interview with Barnes; CIA Personal Resume, 1966, Barnes, Thornton Duard.
41. [Castro's regime "must be overthrown"](#): Bissell, *Reflections of a Cold Warrior*, 153.
42. [Richard Bissell," Kennedy said](#): Thomas, “Wayward Spy,” 36.
43. [put a bullet in his own head](#): Weiner, *Legacy of Ashes*, 303.
44. [Bahía de Cochinos, or the Bay of Pigs](#): Kirkpatrick, *The Real CIA*, chapter 8; Pfeiffer, *CIA's Official History of the Bay of Pigs*; Warner, “CIA's Internal Probe.”
45. [could help in gathering intel](#): Oral history interview with Richard M. Bissell Jr. by Theodore A. Wilson and Richard D. McKinzie, East Hartford, Connecticut, July 9, 1971.
46. [Bissell blamed the mission's failure on his old rival General Curtis LeMay](#): Bissell, *Reflections of a Cold Warrior*, 176. In discussing the decision of the Joint Chiefs, which included LeMay sitting in for the commandant of the Marines, “to cancel the air strikes so readily,” Bissell stated, “one could make a case that their view reflected rivalry between the air force and the CIA. The agency's earlier success with the overhead reconnaissance programs had disturbed certain high-ranking members of the air force.” Certainly he is referring to LeMay. “Friends of mine in the military spoke frankly to me about this,” Bissell added. “There was no denying that the sentiment existed among military that all the air activities undertaken by the CIA in the U-2, SR-71 [note: Oxcart had not been declassified yet] and spy satellite programs should have come under jurisdiction of the air force. Robert

Amory recalled in a 1966 interview that, after I was put in charge of the U-2 program, 'essentially the air force's eye was wiped in you-know-what and they resented that from the beginning.'" For Bissell, "the resentment never died."

47. [if LeMay had provided adequate air cover](#): Ibid., 175. "Curtis LeMay (who was sitting in for the absent commandant of the Marines) and several of the chiefs admitted their doubt about the absolute essentiality of air cover... I was shocked. We all knew only too well that without air support, the project would fail."

48. ["time zone confusion"](#): Ibid., 189. Bissell wrote, "When the B-26s lumbered into the air the next day, however, no navy cover appeared. It seemed that a misunderstanding about the correct time standard had prevented the air support from being at the target area when expected. As a result, the B-26s were either forced from the field of battle or shot down, the final tragic blow." From the National Security Archive: "The unmarked jets failed to rendezvous with the bombers, however, because the CIA and the Pentagon were unaware of a time zone difference between Nicaragua and Cuba."

49. [Lyman B. Kirkpatrick Jr.](#): Interviews with Jim Freedman.

50. [Lyman Kirkpatrick contracted polio](#): Biography of Lyman B. Kirkpatrick, Princeton University Library, Department of Rare Books and Special Collections, Seeley G. Mudd Manuscript Library, Public Policy Papers. Lyman B. Kirkpatrick Papers, circa 1933–2000, Call Number MC209.

51. [relegated to the role of second-tier bureaucrat](#): In his memoir, Bissell does not mince words. He calls Kirkpatrick "an ambitious man who, in spite of paralysis from polio, aspired to position of director of central intelligence. His illness necessitated a move from the exciting and challenging directorate of plans to the more mundane, bureaucratic position of inspector general, a shift he always resented." Bissell, *Reflections of a Cold Warrior*, 193.

Chapter Nine: The Base Builds Back Up

Interviews with Harry Martin, Jim Freedman, T. D. Barnes, Al O'Donnell, Peter Merlin, Millie Meierdierck

1. [the man in charge of property control at Area 51](#): Interviews with Jim Freedman, T. D. Barnes, Al O'Donnell.

2. [The high and rugged northeast perimeter](#): Interview with Peter Merlin, who obtained copies (largely redacted) of Kirkpatrick's visit to Area 51 from the CIA's online reading room (CIA.gov). These documents appear to have since been removed.

3. [Bay of Pigs will embolden the Soviets](#): Absher, *Mind-Sets and Missiles*, 10.

4. [Area 51 was a target](#): Interviews with Peter Merlin, Jim Freedman.

5. [decided to make a hunting trip](#): Interview with Jim Freedman; Hank Meierdierck's personal papers.

6. [Richard Bissell resigned](#): Oral history interview with Richard M. Bissell Jr. by Theodore A. Wilson and Richard D. McKinzie, East Hartford, Connecticut, July 9, 1971 (Harry S. Truman Library and Museum), <http://www.trumanlibrary.org/oralhist/bissellr.htm>.

7. [keep the CIA in the spy plane business](#): Welzenbach, "Science and Technology," 23.

8. [Richard Bissell alone, had gone rogue](#): Ibid., 22.

9. [CIA might work in better partnership](#): Richelson, *Wizards of Langley*, 58–60.

10. ["Wayne Pendleton was the head of the radar group"](#): Interview with Wayne Pendleton.

11. [and 'dirty tricks' of Dick Bissell's](#): Welzenbach, "Science and Technology," 22. The full passage reads: "However, a note of discord crept into Bissell's relations with Land and Killian... both Land and Killian looked upon science and technology almost as a religion, something sacred to be kept from contamination by those who would misuse it for unwholesome ends. Into this category fit the covert operations and dirty tricks of Dick Bissell's Directorate of Plans."

12. [called Teak and Orange](#): Film footage viewed at the Atomic Testing Museum, Las Vegas.

13. [which is exactly where the ozone layer lies](#): Hoerlin, "United States High-Altitude Test," 43.

14. [The impetus for these tests](#): Ibid., 47.

15. [his rationale](#): Ground stations were supposed to measure acoustic waves that would happen as a result of the blast but Teak detonated seven miles laterally off course to the south and the communication systems were knocked out. Orange detonated four miles higher than it was supposed to and "the deviations affected data acquisitions."

16. [The animals' heads had been locked in gadgets](#): Oral history interview with Air Force colonel John Pickering, 52. Film footage viewed at the Atomic Testing Museum, Las Vegas.

17. ["Teak and Orange events would 'burn a hole' into the natural ozone layer](#): Hoerlin, "United States High-Altitude Test," 43.

18. [Von Braun can be seen examining the Redstone rocket](#): Teak shot film footage

viewed at the Atomic Testing Museum library, Las Vegas.

19. [left the island before the second test](#): Interview with Al O'Donnell; Neufeld, Von Braun, 332.
20. [to dash up to Hitler's lair](#): Neufeld, Von Braun, 127.
21. [project called Operation Argus commenced](#): Final Review of Argus Fact Sheet, 16 Apr. 82. "The tests were conducted in complete secrecy and were not announced until the following year."
22. [Christofilos convinced Killian](#): Killian, *Sputnik, Scientists and Eisenhower*, 187.
23. ["probably the most spectacular event ever conducted"](#): The White House Memorandum for the President, From J.R. Killian Jr., Subject: Preliminary Results of the ARGUS experiment, dated November 3, 1958, declassified 5/20/77.
24. [Walter Sullivan hand-delivered a letter to Killian](#): The letter is marked "By Hand" and dated February 2, 1959, written on *New York Times* letterhead, and addressed to Dr. James R. Killian Jr. at the White House.
25. ["Neither confirm nor deny such leaks"](#): Memorandum to Dr. James R. Killian, Jr. Subject: Release of Information on ARGUS. Dated January 20, 1959, signed Karl G. Harr, Jr. Special Assistant to the President. Among other things, it is interesting to note here that on White House stationery, Killian is referred to as "Dr. Killian." He was not a doctor; he never received a PhD but rather a bachelor's degree in management. This fact was confirmed for me by MIT library staffer Jennifer Hirsch. "Mr. Killian always went out of his way to remind people he was not a doctor," I was told—apparently not so with the White House.
26. ["I would be protected from congressional inquisition"](#): Killian, *Sputnik, Scientists and Eisenhower*, 25.
27. ["Are you still there?"](#): Admiral Parker of the Armed Forces Special Weapons Project; Defense Technical Information Center Staff, *Defense's Nuclear Agency 1947–1997*, 140; Defense Threat Reduction Agency, 2002.

Chapter Ten: Wizards of Science, Technology, and Diplomacy

Interviews: Harry Martin, Louise Schalk, Dr. Wheelon, Colonel Slater, Frank Murray, Roger Andersen, Ken Collins

1. [Martin had been at Area 51 since the very first days](#): Interviews with Harry Martin.
2. [The generals would inevitably show up](#): Classified Message, Secret 2135Z 14 May 62, To Director, Prity [sic] OXCART. "1. General Power, General Compton, Col Montoya and Col Geary [redacted], A-12... During the flight the visitors were shown [redacted]... Kelly Johnson flew back to Las Vegas with the group... General Power seemed very impressed with the aircraft." Declassified by CIA, August 2007.
3. ["Lou, wake up!"](#): Interview with Louise Schalk.
4. [The aircraft began wobbling](#): Johnson, *History of the Oxcart Program*, 12.
5. [What in Hell, Lou?](#): Rich, *Skunk Works*, 219.
6. [Martin thought for sure the airplane was going to crash](#): Interview with Harry Martin.
7. [Rare film footage of the historic event](#): CIA footage, T. D. Barnes's personal collection.
8. [Bud Wheelon](#): Central Intelligence Agency, "Biographic Profile, Albert Dewell Wheelon," May 10, 1966, NARA, MRB, RG 263.
9. [Howard and Jane Roman](#): Helms, *A Look Over My Shoulder*, 275. "When the CIA Counterintelligence Staff was established, Jim Angleton assumed responsibility for operational liaison with the FBI. Jane Roman, a veteran OSS X-2 officer, handled the daily meetings..."; interview with Dr. Wheelon.
10. [hand-picked by President Kennedy's science advisers](#): Central Intelligence Agency, R. V. Jones Intelligence Award Ceremony Honoring Dr. Albert Wheelon, December 13, 1994.
11. ["in this way, I became the new 'Mayor of Area 51'"](#): Interview with Dr. Wheelon.
12. [Agency had been analyzing reports](#): McAuliffe, *CIA Documents on the Cuban Missile Crisis 1962*, 1–31.
13. [including 1,700 Soviet military technicians](#): Ibid., 37.
14. [jamming facilities against Cape Canaveral](#): Ibid.
15. [McCone left for his honeymoon in Paris](#): Interview with Dr. Wheelon.
16. [Not another Gary Powers incident](#): This was a common theme among military planners all through the 1960s.
17. [the CIA got presidential approval](#): Office of Special Activities DD/S&T Chronological History, 30 August 1966, Top Secret, Approved for release Jul 2001, 5. "5 October 1962, Last CIA Flight over Cuba (50 flown in all)."
18. [pushing for preemptive strikes](#): Brugioni, *Eyeball to Eyeball*, 265.
19. [Ledford had been asked by McCone](#): Interview with Dr. Wheelon.
20. [General LeMay encouraged him to take the CIA liaison job](#): Richelson, *Wizards of Langley*, 53.
21. [Ledford's plane crash, involving heroics](#): Official Website of U.S. Air Force, biography of Brigadier General Jack C. Ledford, retired Oct. 1, 1970; died Nov. 16, 2007.
22. [tried to treat Ledford with opiates](#): This story was legendary among the men who

worked under Ledford at Area 51 and is sourced from multiple interviews including with Colonel Slater and Frank Murray. A version of it can be read at the Arlington National Cemetery Web site. Ledford's backseater, Sergeant Harry C. Miller, died of his original wounds several hours after Ledford and the medic helped him out of the plane.

23. [The chances were one in six, Ledford said](#): Richelson, *Wizards of Langley*, 53.
24. [Kennedy felt that if a CIA spy plane](#): Interview with Dr. Wheelon.
25. [Air Force pilot flying an Agency U-2](#): Richelson, *Wizards of Langley*, 54.
26. [Photographs showing nuclear missiles](#): Brugioni, *Eyeball to Eyeball*, photographic inserts.

Chapter Eleven: What Airplane?

Interviews: Ken Collins, Don Donohue, Sam Pizzo, Frank Murray, Roger Andersen, Florence DeLuna, Frank Micalizzi, Harry Martin

1. [Collins went by the code name Ken Colmar](#): Interviews with Ken Collins, who had never revealed his code name before.
2. [She made it as far as Athens](#): Powers, *Overflight*, 59.
3. [he flew deep into North Korea](#): Citation, First Lieutenant Kenneth S. Collins, SO. No. 221 Hq FEAP, APO925, 6 May 53, by Command of General Weyland.
4. [fired at by MiG fighter jets](#): Ibid.
5. [Distinguished Flying Cross](#): Citation to Accompany the Award of the Distinguished Flying Cross (First Oak Leaf Cluster) to Kenneth S. Collins. AO 2222924, United States Air Force.
6. [coveted Silver Star for valor](#): Citation for Silver Star, First Lieutenant Kenneth S. Collins, by direction of the president.
7. [a total of five Oxcarts being flight-tested at Area 51](#): Robarge, *Archangel*, 17.
8. [Captain Donald Donohue would start out following Collins](#): Interview with Don Donohue.
9. [Later, Jack Weeks](#): Interview with Ken Collins.
10. ["Suddenly, the altimeter was rapidly unwinding"](#): Interview with Ken Collins.
11. [Sam Pizzo had a monumental amount of work](#): Interview with Sam Pizzo.
12. [took to the desert terrain on horseback](#): Interview with Ken Collins.
13. [filled by Air Force brass](#): Interview with Colonel Slater.
14. [Holbury had been given a commendation by General Patton](#): General Robert J. Holbury biography, Air Commander, Detachment 1 of the 1129th U.S. Air Force Special Activities Squadron at Groom Lake, Nevada; Roadrunners Internationale official Web site.
15. [a pitot tube had in fact caused the crash](#): Interview with Collins; Parangosky, *The Oxcart Story*, 11.
16. [monitoring phone conversations](#): Briefing Note for the Deputy Director of Central Intelligence, 10 March 1964. Attachment 1 to BYE-2015-64, "Project Oxcart Awareness Outside Cleared Community." The Agency also had a system in place to monitor air traffic chatter during Oxcart test flights to see if any commercial or military pilots spotted the plane.
17. [increasingly suspicious CIA](#): Col. Redmond White, Diary Notes, September 27, 1963, Secret. White was the CIA's deputy director/support and his notes include a second reference to the disclosure to *Aviation Week* as well as a notation that CIA director John McCone said, "OXCART is going to blow sooner or later."
18. [the Air Force ordered not one but three variants](#): Pedlow and Welzenbach, *Central Intelligence Agency*, 33.
19. [letters stood for "Reconnaissance/Strike"](#): Memorandum, Secretary of the Air Force Eugene Zuckert to General Bernard Schriever, April 8, 1963, w/att: Procurement and Security Provisions for the R-12 Program, Top Secret.
20. [eight hundred million dollars developing the B-70 bomber airplane](#): Marcelle Size

Knaack, *Encyclopedia of U.S. Air Force Aircraft and Missile Systems, Post-World War II Bombers*, 559. The XB-70A had its genesis in Boeing Aircraft Corporation's Project MX-2145. Also see Ball, *Politics and Force Levels*, 216–18.

21. [the President was astonished](#): Rich, *Skunk Works*, 228.

22. ["unnecessary and economically unjustifiable"](#): President Kennedy, Special Message to the Congress of Urgent National Needs, delivered in person before a joint session of Congress, May 25, 1961.

23. [Congress cut back its B-70 order even further](#): House Armed Services Committee, Authorizing Appropriations for Aircraft, Missiles and Naval Vessels for the Armed Forces (1961), 569, see FY 1962, 1564–65, 1577.

24. ["Johnson, I want a promise out of you"](#): Rich, *Skunk Works*, 231.

25. [LeMay promised to send Lockheed](#): Robarge, *Archangel*, 52. The Air Force initially envisioned a fleet of as many as a hundred YF-12s, designed to intercept a Soviet supersonic bomber rumored to be in the works.

26. [At the Ranch, it was business as usual](#): Interview with Colonel Slater.

27. [finally delivered to the Ranch](#): Robarge, *Archangel*, 17. The J-57 engine could reach a maximum speed of Mach 1.6 and a maximum height of 40,000 feet; interview with John Evans of Pratt and Whitney.

28. [An X-ray showed the outline of a pen](#): Interview with Ed Lovick.

29. [new set of challenges](#): Pedlow and Welzenbach, *Central Intelligence Agency*, 38.

30. [F-101 chase plane had run off the airstrip](#): Interview with Don Donohue.

31. [Lyndon Johnson would be briefed](#): CIA Memo, Meeting with the President, Secretary Rusk, Secretary McNamara, Mr. Bundy and DCI. Re: Surfacing the OXCART, 29 November, 1963, 1.

Chapter Twelve: Covering Up the Cover-Up

Interviews: Jim Freedman, Colonel Slater, T. D. Barnes, Stanton Friedman

1. "[I heard it was in Area 22](#)": Interview with Jim Freedman. In contemporary maps of the test site, Area 22 is located down by Camp Mercury. In the 1950s and 1960s, many of the quadrants were numbered differently.

2. [354,200 feet—almost 67 miles up](#): Jenkins, *Hypersonics Before the Shuttle*, 119. The Kármán line, commonly used to define the boundary between the Earth's atmosphere and outer space, is at an altitude of approximately 328,000, or 62 miles above sea level. The U-2 flew at 70,000 feet, or approximately 13 miles; the A-12 flew at 90,000 feet, or approximately 17.5 miles.

3. "[on 30 April, A-12 was in air](#)": Priority Secret Classified Message to Director from
2219Z Classified Message Secret 15 May 62, ZE19C "Oxcart Secure Ops."

4. [commercial pilots would report sightings](#): Interview with Colonel Slater; Annie Jacobson, "The Road to Area 51," *Los Angeles Times Magazine*, April 5, 2009, 26–28, 77.

5. [Walter Cronkite hosted a CBS news special report](#): The report can be viewed online, "From the Vault," *CBS Reports*.

6. [Dr. Robertson appeared on a CBS Reports](#): Haines, "CIA's Role," 74.

7. [House Armed Services Committee held hearings on UFOs](#): "Congress Reassured on Space Visits," *New York Times*, April 6, 1966.

8. [Air Force laying blame for the cover-up on the CIA](#): Walter L. Mackey, executive officer, memorandum for DCI, "Air Force Request to Declassify CIA Material on Unidentified Flying Objects (UFO)," September 1, 1966.

9. [According to CIA historian Gerald Haines](#): Haines, "CIA's Role."

10. [journalist named John Lear](#): Lear, "The Disputed CIA Document on UFO's," *Saturday Review* September 3, 1966.

11. [One of the more enigmatic figures](#): Hillenkoetter took over amid negotiations on May 1, 1947, of what would be the National Security Act of 1947, so when the CIA came into being on September 18, 1947, he was already DCI, per the Central Intelligence Agency Library, Roscoe Henry Hillenkoetter, Rear Admiral, US Navy, CIA.gov.

12. [served on the board of governors](#): Haines, "CIA's Role," 74.

13. [Hillenkoetter testified to Congress](#): "Air Force Order on 'Saucers' Cited; Pamphlet by the Inspector General Called Objects a 'Serious Business,'" *New York Times*, February 28, 1960.

14. [he mysteriously resigned](#): NICAP Web site, "The Who Was Series," Hillenkoetter, Vice-Admiral Roscoe, <http://www.nicap.org/photobio.htm>; in my interview with Stan Friedman, Friedman said there was nothing mysterious about Hillenkoetter's resigning, "he just resigned." Nor does Friedman believe that Hillenkoetter was planted at NICAP to gather information.

15. [Bryan's true role with the ufologists](#): Ibid. In the official NICAP bio for Hillenkoetter, it is written, "He resigned from NICAP in Feb 1962 and was replaced on the NICAP Board by a former covert CIA high official, Joseph Bryan III, the CIA's first Chief of Political &

Psychological Warfare (Bryan never disclosed his CIA background to NICAP or Keyhoe.)

16. [the CIA had maintained three lines of thought on UFOs](#): Memorandum for file OSI, Meeting of OSI Advisory Group on UFO, January 14 through 17, 1953, 3 pages; Scientific Advisory Panel on Unidentified Flying Objects, 14–17 January 1953, Evidence Presented, 2 pages; CIA Scientific Advisory Panel on Unidentified Flying Objects, Comments and Suggestions of UFO Panel, 19 pages. The CIA party line on UFOs had been firmly established by General Bedell Smith during his tenure and was maintained until sometime around 1966, when this new thinking emerged.

17. [This new postulation came from the Agency's monitoring](#): CIA Memo, Translation, Vitolniyek, R. (Director) Flying phenomena, Sovetsknya Latviya, no. 287, 10 Dec. 67; CIA Memo, 10 Aug. 67, "Report on Conversations with Soviet Scientists on Subject of Unidentified Flying Objects in the USSR"; CIA Memo, Translation of Memo from Komsomolskaya pravda, no. 13, 20 January 68, author Zigel, 3.

18. [Vilen Lyustiberg](#): CIA Memo, Translation, Lyustiberg V. (Science commentator for [illegible]), "Are Flying Saucers a Myth?" Pravda, Ukrayny, no. 40, 17 Feb. 68.

19. ["the U.S. publicizes them to divert people from its failures and aggressions"](#): CIA Memo, Translation, "Nothing But the Facts on UFOs or Which Novosti Writer Do You Read?" 9 April 1968, 12 pages.

20. [Zigel, had come to believe](#): The CIA followed Zigel closely. In the Agency's author biography on him, it states: "Zigel, F. Yu., Dr of Technical Science, writes under auspices of Moscow Aviation Institute, Associate Professor there as of 1969." CIA analysts discovered that Zigel's interest in UFOs began with his interest in astronomy and mathematics in 1936, after he participated in an expedition to Kazakhstan to observe a solar eclipse. Zigel had also visited the Tunguska crater in Siberia, where a comet likely exploded, in 1908. The blast knocked over approximately 80 million trees and flattened 830 square miles of Siberian forest. In the early 1960s Zigel stunned his colleagues by suggesting that the Tunguska crater could have been created by an outer space vehicle that crashed there.

21. ["UFO Section of the All-Union Cosmonautics Committee"](#): Title: Unidentified flying objects, Source: Soviet Life, no. 2 1968, 27–29, 1.

22. ["The hypothesis that UFOs originate in other worlds"](#): Ibid.

Chapter Thirteen: Dull, Dirty, and Dangerous Requires Drones

Interviews: Ken Collins, Charlie Trapp, Colonel Slater, General Hsichun "Mike" Hua, Edward Lovick, Changti "Robin" Yeh (via written correspondence), Hervey Stockman

1. [Collins knew the kind](#): Interview with Ken Collins.
2. [simulated jungle survival](#): Interviews with Ken Collins, Charlie Trapp.
3. [CIA pilot named Yeh Changti](#): Hua, *Lost Black Cats*, ix.
4. [the Black Cats flew](#): Ibid., viii-x.
5. [no information was released about Yeh Changti](#): Interview with General Hua.
6. [His code name was Terry Lee](#): Interview with Colonel Slater. Yeh Changti's American name is Robin Yeh (the Chinese put family names first).

7 . [getting hard intelligence on China's nuclear facilities](#): National Photographic Interpretation Center, Mission [GRC-169], 23 August 1963, 30 pages. The designation for these missions was Operation Church Door. Images of targets photographed by the Black Cats include the Lop Nur nuclear facility, missile launch sites, airfields, ports, and industrial complexes.

8. [Yeh Changti was tortured and held prisoner](#): Interview with General Hua; in *Lost Black Cats*, Hua, a former CIA Black Cat U-2 pilot, tells the tragic and amazing story of the nineteen years Changti and Chang spent as captives of Communist China, based on personal interviews. The sacrifices made by Changti and Chang have never been acknowledged by the CIA. On September 17, 1998, the CIA held a symposium called "U-2: A Revolution in Intelligence" to honor the declassification of many CIA-controlled U-2 operations and to celebrate its success. But the symposium omitted any mention of the Black Cat U-2 pilots according to my interview with General Hua.

9. [second Black Cat pilot named Major Jack Chang](#): Ibid., ix. To clarify, General Hua also refers to Major Jack Chang as Chang Liyi—Jack being the pilot's American nickname and Liyi being his "first name" in Chinese, which is his family name, the reverse of Western usage.

10. [dull, dirty, and dangerous](#): Interview with T. D. Barnes.
11. [and then head back out to sea](#): Interview with Lovick. "A colleague named Mike Ash and I designed an electrical circuit into the drone's pallet to select an antenna to be used to radiate the recovery beacon signal. If the sensor package was not recovered by an aircraft and it fell into the water, an antenna was deployed to allow radio signals to enable recovery." If the sensor package landed upside down, Lovick and Ash had created a system which allowed the seawater to act like a switch and activate a second antenna.

12. [Yuletide](#): Interviews with Colonel Slater, Frank Murray.
13. [with PJs nearly falling off cliffs](#): Interview with Charlie Trapp.
14. [flight engineer, Ray Torick](#): There are many different ideas about why and how Torick died. I adhere to Colonel Slater's view of the events. The drone's first official test launch was on March 5, 1966, and during that flight, the drone launched successfully off the back of the mother ship while traveling at a speed of Mach 3.2. It then flew approximately 120 miles before it ran out of fuel and crashed into the sea, as was planned. A month later, a second launch sent a drone flying for 1,900 miles, at Mach 3.3, until it fell into the sea. It

was on the third test launch that disaster struck and Torick died.

15. "[He impulsively and emotionally decided](#)": Rich, *Skunk Works*, 267.
16. "[never again allow a Francis Gary Powers situation](#)": Ibid.
17. "[Ben, do you recognize this?](#)" Ibid., 270.
18. "[dubbed Operation Aphrodite](#)": Singer, *Wired for War*, 48.
19. [Tesla's pilotless boat](#): Tesla, "Inside the Lab-Remote Control," PBS, http://www.pbs.org/tesla/ins/lab_remotec.html.
20. [Goliath carried 132 pounds of explosives](#): "Rise of the Machines," ArmyTechnology.com, May 21, 2008, <http://www.army-technology.com/features/feature1951>.
21. [mother ship called Marmalade](#): AFSC History Staff, *History of Air Force Atomic Cloud Sampling*, 9.
22. [Fox, was blasted "sixty feet higher](#): Ibid., 11.
23. [Operation Sandstone](#): For the Air Force, maintaining a drone wing was expensive. It was also a security risk. In early 1947, that more atomic tests were being planned was a closely guarded national secret because the public was being led to believe that the United States was genuinely considering outlawing the bomb—or at least putting the United Nations in control of atomic energy. In reality, it was during this period of alleged international debate that the drone unit was again called back into action for the next test series in the Pacific. Operation Crossroads was supposed to have been a singular event, and so talk surfaced among the drone pilots. Being reactivated could only mean one thing: more nuclear tests in the pipeline. This security leak made its way up the chain of command.
24. [accidentally flew through the Zebra bomb's mushroom cloud](#): AFSC History Staff, *History of Air Force Atomic Cloud Sampling*, 21.
25. "Now pilots, not drones, would be sent": Ibid., 23–24.
26. [fear that the entire world's atmosphere could catch on fire](#): Interviews with Al O'Donnell and Jim Freedman.
27. [what happened to Oppenheimer sent a strong message](#): Interview with Al O'Donnell.
28. [measurements inside the thermonuclear clouds](#): Now called Task Group 3.4 and operating out of Eglin Air Force Base in Florida, these new drones were modified T-33 aircraft, as opposed to the old TF-80s used in earlier tests. The wing fell under the command of Colonel Thomas Gent, who was also in command of the 550th Guided Missile Wing of the Air Proving Ground.
29. [crash-landed on a deserted island called Bogallua](#): AFSC History Staff, *History of Air Force Atomic Cloud Sampling*, 37.
30. [That group included Hervey Stockman](#): Ibid., 82. Hervey's name is misspelled as "Harvey."
31. [Stockman, then flew sampling missions](#): Ibid., 80–85. Interview with Hervey Stockman.
32. "[scientists put monkeys in the cockpits](#)": "Conversations with Colonel Hervey S. Stockman," edited by Ann Paden and Earl Haney (not published), from a section called

"Nuclear testing program."

33. "[not serving as guinea pigs](#)": AFSC History Staff, *History of Air Force Atomic Cloud Sampling*, 66.

34. "[In those days](#)": "Conversations with Colonel Hervey S. Stockman," edited by Ann Paden and Earl Haney (not published), from a section called "Pacific testing ground."

35. [Jimmy P. Robinson was one of the six pilots](#): The details of Robinson's story, including where I quote him, can be found in AFSC History Staff, *History of Air Force Atomic Cloud Sampling*, 69–75. Robinson's name is redacted from the monograph, the words "privacy act material removed" stamped in their place. In 2009, Mark Wolverton wrote "Into the Mushroom Cloud" for *Air and Space* magazine and revealed the pilot's name publicly for the first time. Robinson was posthumously awarded the Distinguished Flying Cross about a year after his death, but his family had no idea how he actually had died. Wolverton wrote that Robinson's daughter Rebecca, "a baby when her father died, spent years petitioning the government for more information about his last mission, with only limited access." Rebecca Robinson says most of the information about her father's death is "still classified."

36. [Atomic-sampling pilots wore lead-lined vests](#): AFSC History Staff, *History of Air Force Atomic Cloud Sampling*, 101.

37. "[It was one of the ones that was too big](#)": Interview with Al O'Donnell.

38. [In contrast, the bomb dropped on Hiroshima](#): Rhodes, *Dark Sun*, photograph #76, "Mike over Manhattan." Here, the Ivy Mike fireball is shown in comparison with a Nagasaki-scale atomic bomb. Mike's stem was 20 miles in diameter and its mushroom cap only began at 50,000 feet, approximately twice as high as commercial airplanes fly. The top of the mushroom cloud extended into the troposphere and was approximately 200 miles wide.

Chapter Fourteen: Drama in the Desert

Interviews: Colonel Slater, Dr. Wheelon, Ken Collins, Kenneth Swanson, Frank Murray, Charlie Trapp, Frank Murray, Tony Bevacqua, Dr. Robert B. Abernethy

1. [air-conditioned hunting blind](#): Woods, *LBJ*, 313.
2. "[I'll be damned](#)": Brzezinski, *Red Moon Rising*, 175.
3. "[Soon they will be dropping](#)": Dickson, *Sputnik*, 117.
4. [not a cause for panic](#): Korda, *Ike*, 700.
5. "[What most actually saw](#)": Brzezinski, *Red Moon Rising*, 176.
6. [Johnson sat in the Oval Office with CIA director](#): CIA Memo, Meeting with the President, Secretary Rusk, Secretary McNamara, Mr. Bundy and DCI. Re: Surfacing the OXCART, 29 November, 1963, 1.

7. [it would hold aviation records](#): T. D. Barnes explained, "Officially, the SR-71 Blackbird still holds the world speed record for sustained flight in an oxygen-breathing plane in horizontal flight but it is common knowledge throughout the Blackbird community that the A-12 flew higher and faster because of the sacrifices the SR-71 made to accommodate a second passenger. The reason the SR-71 holds the 'records' is because those of the A-12 were not certified. The A-12 Oxcart didn't exist when the Air Force was setting records."

8. [outing the Oxcart was a terrific idea](#): If the public knew about Oxcart, there would no longer be a reason to have the Agency in charge of a program that needed secrecy as a cover. The Air Force knew the CIA had done all the work getting Oxcart up and running; now was the time to push the Agency aside. This echoes what happened with Curtis LeMay's early summation of the U-2 program in 1955: "We'll let [the CIA] develop it and then we'll take it from them," from Brugioni, *Eyeball to Eyeball*, 24.

9. [they could take over Oxcart](#): Letter, General Bernard Schriever to Eugene M. Zuckert, July 11, 1963, Top Secret.

10. [McCone tried a different approach](#): CIA Memo, Meeting with the President, Re: Surfacing the OXCART, 29 November, 1963, 1. "The development of the CIA and Air Force reconnaissance planes (15 in number) would cost about \$700 million, of which about \$400 million have now been spent." This figure does not include the aircraft's "extraordinary engines," made by Pratt and Whitney. Regarding those costs, Lockheed Skunk Works chief (from 1975–1991) Ben Rich wrote, "The CIA unhappily swallowed the enormous development costs of \$600 million."

11. [the fictitious name A-11](#): Parangosky, *The Oxcart Story*, 4: "The President's reference to the 'A-11' was of course deliberate. 'A-11' had been the original design designation for the all-metal aircraft first proposed by Lockheed; subsequently it became the design designation for the Air Force YF-12A interceptor which differed from its parent mainly in that it carried a second man for launching air-to-air missiles. To preserve the distinction between the A-11 and the A-12 Security had briefed practically all participating personnel in government and industry on the impending announcement. OXCART secrecy continued in effect. There was considerable speculation about an Agency role in the A-11 development, but it was never acknowledged by the government."

12. "[The world record for aircraft speed](#)": Public Papers of Presidents of the United States, Lyndon B. Johnson, 1963–1964, 1:322–23.
13. [the aircraft were still dripping wet](#): Interview with Colonel Slater.
14. "[without the specific knowledge of the President](#)": Summary of Meeting with Secretary McNamara and Secretary Gilpatric, General Carter and Mr. McCone on 5 July 1962. DCI Records dated 6 July 1962.
15. [approved the Oxcart for Operation Skylark](#): Carter Memorandum to Wheelon, "SKYLARK," 22 Aug. 1964.
16. [according to Ken Collins](#): Interview with Ken Collins.
17. [specially designed J-58 turbojet engines](#): Interview with Dr. Robert Abernethy. Robarge, *Archangel*, 12–13.
18. [two men working there were crushed to death](#): Rich, *Skunk Works*, 221.
19. [tiny black dots began to appear](#): Ibid., 223, from a story told by Norm Nelson, the CIA-Lockheed Skunk Works liaison during Oxcart.
20. [nearly knocking him unconscious](#): Interview with Ken Collins.
21. [he always sat patiently with the project pilots](#): Ibid.
22. "[Fix it," Park said](#)": Rich, *Skunk Works*, 221. This story was also clarified for me by Ken Collins, who provided additional details.
23. "[Get me out of here!" Rich later recalled](#)": Rich, *Skunk Works*, 227.
24. [Project Kempster-Lacroix](#): Interview with Ed Lovick; Pedlow and Welzenbach, *Central Intelligence Agency*, 42.
25. [the government had exploded 286 nuclear bombs](#): Through Operation Hardtack there were 119 aboveground tests. Testing resumed on September 15, 1961. From then through the end of 1964, there were 167 underground tests at NTS, including 4 at Nellis Air Force Range.
26. "[The first jamming system was called Red Dog](#)": Interview with Kenneth Swanson.
27. [Trapp thought it sounded interesting](#): Interview with Charlie Trapp.
28. [General Ledford, the head of the Office of Special Activities](#): My portrait of General Ledford is based on my interviews with men who knew him well, including Dr. Wheelon, Colonel Slater, and Frank Murray, in addition to his U.S. Air Force biographical information.
29. [it was not in Frank Murray's character](#): Interview with Colonel Slater.
30. [In 2005 NSA admitted](#): Weiner, *Legacy of Ashes*, 276–80.
31. [Robert McNamara performing an about-face regarding Oxcart](#): Robarge, *Archangel*, 31.
32. [supplying surface-to-air missile systems](#): Helms Memorandum to the 303 Committee, OXCART Reconnaissance of North Vietnam, with Attachment, 15 May 1967.
33. [set up around Hanoi](#): Interview with Tony Bevacqua; photographs from Bevacqua's personal collection.

Chapter Fifteen: The Ultimate Boys' Club

Interviews: Ken Collins, Colonel Slater, Frank Murray, Fred White, Charlie Trapp, William "Bill" Weaver, Brigadier General Raymond L. Haupt

1. [shaken from their beds](#): Interview with Ken Collins. A moratorium on testing meant that the Titania bomb, exploded on October 30, 1958, was the last nuclear bomb fired at the Nevada Test Site for a period of nearly three years. In August of 1961, the Russians announced they were resuming testing and conducted thirty-one nuclear tests over the next three months, including the fifty-eight-megaton Tsar Bomba, the largest bomb ever exploded. In response, Kennedy had the AEC resume testing at the Nevada Test Site; interview with Al O'Donnell.
2. [The incident has never been declassified](#): Interview with Collins.
3. [the less you knew, the better](#): A sentiment unanimously shared by all CIA and USAF pilots interviewed.
4. [No radio, almost no TV](#): Interviews with Slater, Murray, Collins.
5. ["like an incubus"](#): Helms, *A Look Over My Shoulder*, 309.
6. ["The only sin in espionage is getting caught"](#): David Robarge, "Richard Helms."
7. [Helms would be recruited by the Office of Strategic Services](#): Helms, *A Look Over My Shoulder*, 31.
8. [a seafood run to Westover Air Force Base](#): Interview with Colonel Slater.
9. [MKULTRA files destroyed](#): The authority on this subject is John Marks, a former State Department analyst and staff assistant to the intelligence director. In June of 1977, Marks obtained access to part of seven boxes of MKULTRA, the only ones allegedly not lost and consisting mostly of financial records. In his book *The Search for the Manchurian Candidate*, Marks wrote that shortly before leaving the CIA, "Helms presided over a wholesale destruction of documents and tapes—presumably to minimize information that might later be used against him," 219.
10. front page of the *New York Times*: According to Colonel Slater.
11. [Slater and General Ledford would be asked](#): No. 303 National Security Action Memorandum, June 2, 1964; Top Secret, From the Director of Central Intelligence, Memorandum for the 303 Committee, 22 March 1966.
12. ["McNamara was delaying finding a mission"](#): Interview with Dr. Wheelon.
13. [if a CIA spy plane were to get shot down](#): CIA Memorandum, "Reactions to a possible US Course of Action," 17 March 1966; "OXCART Development Summary and Progress," 1 October 1966–31 December 1966.
14. [The majority voted against deployment](#): Robarge, *Archangel*, 33.
15. [Slater now wanted it reduced by nearly 30 percent](#): Interview with Colonel Slater.
16. [Park had flown over all four corners of America](#): John Parangosky, deputy for technology, OSA, wrote in summation of Park's flight: "An impressive demonstration of the OXCART capability occurred on 21 December 1966 when Lockheed test pilot Bill Park flew 10,198 statute miles in six hours. The aircraft left the test area in Nevada and flew northward over Yellowstone National Park, thence eastward to Bismarck, North Dakota, and on to Duluth, Minnesota. It then turned south and passed Atlanta en route to Tampa,

Florida, then northwest to Portland, Oregon, then southwest to Nevada. Again the flight turned eastward, passing Denver and St. Louis. Turning around at Knoxville, Tennessee, it passed Memphis in the home stretch back to Nevada. This flight established a record unapproachable by any other aircraft; it began at about the same time a typical government employee starts his work day and ended two hours before his quitting time." Full text at Roadrunners Internationale official Web site.

17. [Walt Ray was, by all accounts, a terrific pilot](#): Interviews with Colonel Slater, Walt Murray, Ken Collins, Roger Andersen, Charlie Trapp.
18. [flew down to Cabo San Lucas](#): Interview with Ken Collins.
19. [fuel gauge move suddenly](#): Briefing Memorandum for Acting Deputy Director for Science and Technology, Subject Loss of Oxcart A-12 Aircraft, 6 January 1967.
20. [Walt Ray told Colonel Slater through his headset](#): Interview with Colonel Slater.
21. ["I'm ejecting"](#): Interview with Colonel Slater. Immediately after the crash Air Force channels reported that an SR-71 flying on a routine flight out of Edwards Air Force Base had gone missing and was presumed down in Nevada.
22. [unable to separate from his seat](#): Memorandum for Acting Deputy Director for Science and Technology, Subject Loss of Article 125 (Oxcart Aircraft), 25 January 1967, 2.
23. [Roger Andersen flew in low, in a T-33](#): Interview with Roger Andersen.
24. [Charlie Trapp found the aircraft first](#): Interview with Charlie Trapp.
25. ["How'd you like to fly the plane?"](#): Interview with Frank Murray.
26. [eight-page letter to the president](#): Top Secret Idealist/Oxcart, Central Intelligence Agency Office of the Director, BYE-2915-66 Alternative A, 14 December 1966.
27. [a scandalous waste of an asset](#): DRAFT, Director of Special Activities, Comments to W.R. Thomas III Memorandum to the Director, BOB, 27 July 1966, 11.
28. [Gary Powers incident had actually strengthened](#): Ibid., 3.
29. [the CIA "controls no nuclear weapons"](#): Top Secret Idealist/Oxcart, Central Intelligence Agency Office of the Director, BYE-2915-66 Alternative A, 14 December 1966, 4.
30. [But would the president see things his way](#): Memorandum for the President, Subject: Advanced Reconnaissance Aircraft, December 26, 1966, Top Secret. Participants included Cyrus Vance (deputy secretary of defense), Donald Hornig (the president's science adviser), C.W. Fischer (bureau of the budget), and Helms. All except Helms recommended mothballing Oxcart. On December 28, the president approved this memo recommendation and ordered the phaseout of the A-12 fleet by January 1968.
31. [Slater was instructed to return to Area 51](#): Interview with Colonel Slater.
32. [ahead of a two-star general](#): Ibid.
33. [Slater went to visit Werner Weiss](#): Ibid.

Chapter Sixteen: Operation Black Shield and the Secret History of the USS Pueblo

Interviews: Colonel Slater, Ken Collins, Roger Andersen, Hervey Stockman, Peter Stockman, Frank Murray, Ronald L. "Jack" Layton, Eunice Layton, Charlie Trapp

1. [never found have much use for intelligence](#): Hathaway and Smith, *Richard Helms*, 2. The most telling comment comes from Helms (*ibid.*, 7): "With President Johnson... I finally came to the conclusion that what I had to say I should get into the first 60, or at least 120 seconds, that I had on my feet. Because after that he was pushing buttons for coffee or Fresca, or talking to Rusk, or talking to McNamara, or whispering here or whispering there. I had lost my principal audience."

2. [Target Tuesday lunch](#): Barrett, "Doing 'Tuesday Lunch,'" 676-77.

3. [Helms told the president](#): John Parangosky, Deputy for Technology, OSA, wrote in summation, "Director of Central Intelligence, Richard Helms, submitted to the 303 Committee another formal proposal to deploy the OXCART. In addition, he raised the matter at President Johnson's 'Tuesday Lunch' on 16 May, and received the Presidents approval to 'go.' Walt Rostow later in the day formally conveyed the President's decision, and the BLACK SHIELD deployment plan was forthwith put into effect."

4. [A million pounds of matériel, 260 support crew](#): Johnson, *History of the Oxcart Program*, 1. The three A-12s that were deployed to Kadena flew nonstop from Groom Lake across the Pacific. They refueled twice en route and got to Kadena in a little less than six hours; interview with Colonel Slater, Ken Collins, Frank Murray, Roger Andersen.

5. [the bird should leave the nest](#): CIA Director of Special Activities to CIA Director of Reconnaissance, "Operation readiness of the OXCART System," 12 November 1965.

6. [nearly 40 percent of all islanders' income](#): CIA NLE MR Case No. 2000-69, Ryukyu Islands (Okinawa) June 1960, 2. "The military economy employs 13% of the working population and generates 36% of the national income."

7. [to keep an extremely low profile](#): Interview with Ken Collins.

8. ["no plausible cover story](#): Interview with Colonel Slater.

9. [the first Oxcart mission](#): Photographic Interpretation Report: Black Shield Mission X-001, 31 May 1967. NPIC/R-112/67, June 1967.

10. [by the time the photographic intelligence got back](#): John Parangosky, Deputy for Technology, OSA, wrote: "Film from earlier missions was developed at the Eastman Kodak plant in Rochester, New York. By late summer an Air Force Center in Japan carried out the processing in order to place the photointelligence in the hands of American commanders in Vietnam within 24 hours of completion of a BLACK SHIELD mission."

11. [four were "detected and tracked"](#): CHESS RUFF TRINE OXCART, BYE-44232/67, Black Shield Reconnaissance Missions 31 May-15 August 1967, 22 Sept 1967, Central Intelligence Agency, 1. Declassified in August 2007.

12. [first attempted shoot-down](#): Robarge, *Archangel*, 36.

13. [when he was involved in a midair crash](#): interview with Hervey Stockman; also from *Conversations with Hervey Stockman* (not numbered) in a section called "Mid-air collision."

14. [to find U.S. airmen who'd gone down](#): Interview with Frank Murray.

15. ["I hope they try something because we are looking for a fight"](#): Karnow, *Vietnam*, 514.
16. [it was on an espionage mission](#): CIA Top Secret [Redacted], 24 January 1968, Memorandum: Chronology of Events Concerning the Seizure of the USS *Pueblo*, 8 pages.
17. [two MiG-21 fighter jets appeared on the scene](#): Ibid., 3.
18. [The captain considered sinking his ship](#): Bamford, *Body of Secrets*, 259.
19. [90 percent of the documents survived](#): Ibid., 305.
20. [Pentagon began secretly preparing for war](#): Department of Defense, Top Secret Memorandum for the Secretary of Defense, January 25, 1968.
21. [pinpointed the Pueblo's exact location](#): TOP SECRET TRINE OXCART, BYE-1330/68 Figure 9; a map of Weeks's flight is noted as Mission BX-6847, 26 January 1968, figure 5.
22. [he told his fellow pilots about the problems](#): Interviews with Frank Murray, Ken Collins.
23. [very few individuals had any idea](#): In fact, for forty years, Frank Murray believed he had located the USS *Pueblo* because, in a bizarre twist, the CIA told him he did. Only in 2007, when the CIA declassified the official documents on the Oxcart program, was Jack Weeks's true role in the crisis finally revealed. Murray's other mission remains classified.
24. ["So we had to abandon any plans to hit them with airpower"](#): Rich, *Skunk Works*, 44. This is in a section of Rich's book written by Walt W. Rostow, President Johnson's national security adviser from 1966 to 1968.
25. [Murray was assigned to fly Oxcart's second mission over North Korea](#): TOP SECRET TRINE OXCART, BYE-1330/68 figure 7. Mission BX-6853, 19 February 1968.
26. [a U.S. federal judge determined](#): Wilber, "Hell Hath a Jury."
27. [There were beautiful sunsets to watch](#): Interview with Ken Collins.
28. [collectively flown twenty-nine missions](#): Robarge, *Archangel*, 35. The pilots were put on alert to fly a total of fifty-eight. Of the twenty-nine, twenty-four were over North Vietnam, two were over Cambodia, Laos, and the DMZ, and three were over North Korea.
29. ["using our jamming systems on the bird"](#): Interview with Frank Murray. The Pentagon was also using Oxcart photographs to identify potential targets for U.S. Air Force air strikes. TOP SECRET CHESS RUFF TRINE Oxcart BYE-44232/67.
30. [The Blackbirds were arriving on Kadena to take Oxcart's place](#): Interviews with Ken Collins and Tony Bevacqua. The SR-71 began arriving in March of 1968.
31. ["reaffirmed the original decision to end the A-12 program"](#): Helms Memorandum to Paul Nitze (DOD) and Horning, "Considerations Affecting OXCART Program Phase Out," 18 April 1968.
32. [Jack Weeks became ill](#): Interview with Ken Collins.
33. [After Bevacqua had left Groom Lake](#): Interview with Tony Bevacqua.
34. [mission on July 26, 1968](#): This was the first time an SR-71 was fired upon by an SA-2. With Bevacqua, in the backseat, was reconnaissance systems officer Jerry Crew. www.blackbirds.net/sr71/sr-crew-photos/ (accessed December 29, 2010).
35. [The 1129th Special Activities Squadron had reached its end](#): The Oxcart program

lasted just over ten years, from its inception as a drawing on a piece of paper called A-1, in 1957, to termination in June of 1968. Lockheed produced fifteen A-12 Oxcarts, three YF-12As, and thirty-one SR-71 Blackbirds. The CIA's John Parangosky wrote in summation, "The 49 supersonic aircraft had completed more than 7,300 flights, with 17,000 hours in the air. Over 2,400 hours had been above Mach 3. Five OXCART were lost in accidents; two pilots were killed, and two had narrow escapes. In addition, two F-101 chase planes were lost with their Air Force pilots during OXCART testing phase."

36. [The CIA held a special secret ceremony at Area 51](#): Interviews with Ken Collins, Frank Murray, Colonel Slater, and Jack Layton. Vice Admiral Rufus L. Taylor, deputy director of Central Intelligence, presented the CIA Intelligence Star for Valor to Kenneth S. Collins, Ronald L. Layton, Francis J. Murray, Dennis B. Sullivan, and Mele Vojvodich. Jack W. Weeks's award was accepted by his widow, Sharlene Weeks. The United States Air Force Legion of Merit was presented to Colonel Hugh Slater and his deputy, Colonel Maynard N. Amundson.

37. [The men moved on](#): Interviews with Ken Collins, Colonel Slater, Frank Murray, Charlie Trapp, Roger Andersen.

Chapter Seventeen: The MiGs of Area 51

- Interviews: T. D. Barnes, Doris Barnes, Tony Landis, Peter Merlin, Colonel Slater, Frank Murray, Roger Andersen, Grace Weismann (Joe Walker's widow)
1. [Iraqi air force colonel named Munir Redfa](#): Uzi Mahnaimi, "Stolen Iraqi Jet Helped Israel Win Six-Day War," *Sunday Times of London*, June 3, 2007.
 2. [Turn back immediately](#): Geller, *Inside the Israeli Secret Service*. I use information from chapter 3, "Stealing a Soviet MiG."
 3. [Redfa flew over Turkey](#): Obituary, "Major-General Meir Amit," *Telegraph*, July 22, 2009.
 4. [Amit sat down with the Israeli air force](#): Ibid.
 5. [James Jesus Angleton](#): Helms, *A Look Over My Shoulder*, 275. "Jim's interest in Israel was of exceptional value... To my knowledge, only Israel has ever dedicated a monument to a foreign intelligence officer." Angleton worked as "the Agency's liaison with the FBI... The best of Angleton's operational work is still classified and in my view should remain so."
 6. [Agency's most enigmatic and bellicose spies](#): Author visit to CIA spy museum, CIA Headquarters, Langley, Virginia.
 7. [wilderness of mirrors](#): Helms, *A Look Over My Shoulder*, 277. The phrase has become synonymous with Angleton's thinking and most notably included Angleton's belief that the split between the Soviet Union and China was not real. According to Helms, Angleton's "conviction that the Sino-Soviet split was mirage created by Soviet deception experts [was] interesting but simply not true."
 8. [when they worked in the OSS counterintelligence unit, X-2](#): Ibid., chapter 28, "Beyond X-2."
 9. [Helms's status with President Johnson](#): Weiner, *Legacy of Ashes*, 319.
 10. [But what didn't make the news](#): Interviews with Colonel Slater, Frank Murray, T. D. Barnes.
 11. [Doris was reading the classified](#): Interview with Doris Barnes.
 12. [Beatty, Nevada, was one strange town](#): Details about Beatty in the 1960s come from interviews with Doris Barnes and T. D. Barnes.
 13. ["Daddy's spaceship!"](#): Interviews with the Barnes's two daughters, who wish to remain anonymous.
 14. [where the X-15 could land if need be](#): Interview with Peter Merlin; Barnes, "NASA X-15 Program," 1.
 15. [Barnes got on the radio channel](#): The dates and data regarding X-15 mission flights can be found in Jenkins, *Hypersonics Before the Shuttle*. This story of the missing audiotape comes from Barnes.
 16. [a catastrophic midair collision occurred](#): I tell the story as Barnes related it to me. Another account appears in Donald Malick's *The Smell of Kerosene*, 132–35. Malick was assigned the helicopter mission to locate Walker's crash site.
 17. [reverse engineering Colonel Redfa's MiG](#): Interview with Barnes.
 18. [Test pilots flew a total of 102 MiG missions](#): Barnes, "Exploitation of MiGs at Area

51, Project Have Doughnut," http://area51specialprojects.com/migs_area51.html; Tolip,
"Black Ops: American Pilots Flying Russian Aircraft During the Cold War,"
MilitaryHeat.com, October 4, 2007.

19. [gave birth to the Top Gun fighter-pilot school](#): Interview with Barnes.
20. [The scales had tipped](#): Wilcox, *Scream of Eagles*, 76–77.

Chapter Eighteen: Meltdown

Interviews: Richard Mingus, T. D. Barnes, Troy Wade, Darwin Morgan, Milton M. Klein, Harold B. Finger

1. [to see what would happen](#): Atomic Energy Commission, Summary of Project 57, the first safety test of Operation Plumbbob, report to the General Manager by the Director, Division of Military Application, Objective, 24.

2. [bomber flying with four armed hydrogen bombs](#): "Palomares Summary Report," Kirtland Air Force Base, New Mexico: Field Command Defense Nuclear Agency Technology and Analysis Directorate, January 15, 1975.

3. [SAC bombers would already be airborne](#): When LeMay left SAC in 1957 to become the Air Force vice chief of staff, he left behind a fighting force of 1,665 bomber aircraft, 68 bases around the world, and 224,014 men. The man who took over was Thomas S. Powers.

4. [all of a sudden, all hell](#): Ron Hayes, "H-bomb Incident Crippled Pilot's Career," *Palm Beach Post*, January 17, 2007.

5. [aerosolized plutonium](#): Gordon Dunning, "Protective and Remedial Measures Taken Following Three Incidents of Fallout," United States Atomic Energy Commission, 1968. This was originally given as a speech called "Radiation Protection of the Public in Large Scale Nuclear Disaster," for an international agency symposium in Interlaken, Switzerland, in May 1968.

6. [President Johnson learned](#): Moran, *Day We Lost the H-Bomb*, 36.

7. [official nuclear disaster response team](#): Memo, Secret, United States Atomic Energy Commission, No. 234505, "Responsibility for Search and Rescue Operations," to M. E. Gates, Manager, Nevada Operations, November 19, 1974.

8. [to assist in the cleanup efforts](#): Nuclear Weapon Accident Response Procedures (NARP) Manual, Assistant to the Secretary of Defense (Atomic Energy), September 1990, xii.

9. [will never be known](#): Schwartz, *Atomic Audit*, 408.

10. [I don't know of any missing bomb](#): Anthony Lake, "Lying Around Washington," *Foreign Policy*, no. 2 (Spring 1971): 93. Thirty-eight U.S. Navy ships participated in the search for the bomb, which was eventually located five miles offshore in 2,850 feet of water by a submersible called Alvin.

11. [during a secret mission over Greenland](#): SAC History Staff, *Project Crested Ice*, SECRET/RESTRICTED DATA, SPECIAL HANDLING REQUIRED, AFR 127-4: FOIA 89-107 OAS-) 1793. This source document provided many facts for this section.

12. [A second fire started at the crash site](#): The cloud formed by the explosion measured "850 m high, 800 m in length, and 800 m in depth, and undoubtedly carried some plutonium downwind," according to the Los Alamos National Laboratory.

13. [One of the bombs fell into the bay](#): Gordon Corea, "Mystery of Lost US Nuclear Bomb," *BBC News*, November 10, 2008.

14. [a cleanup undertaken as good housekeeping measures](#): SAC History Staff, *Project Crested Ice*, 28.

15. ["abundance of plutonium, americium, cesium"](#): Rollins, "Nevada Test Site—Site Description," Table 2-4.

16. [Called remote sensing](#): Department of Energy Fact Sheet DOE/NV #1140. The Remote Sensing Laboratory was established in the 1950s, an offshoot of atomic cloud sampling projects. Today, it is a secret industry about which very little is known publicly; http://www.nv.doe.gov/library/factsheets/DOENV_1140.pdf.

17. [initially called the EG&G Remote Sensing Laboratory](#): EG&G Energy Measurements Division (EG&G/EM) of EG&G, Inc., managed and operated the research facility under DOE Contract DE-AC03-93NV11265. On January 1, 1996, Bechtel Nevada Corporation operated the research and production facilities under DOE M&O Contract DE-AC08-96NV11718.

18. [to secure the government contracts to clean things up](#): And what a massive market it would become. In addition to future nuclear accidents, there would be a colossal amount of radiation detection work to be done in, on, and around the Pacific Proving Ground. Between 1946 and 1958, the Atomic Energy Commission had exploded forty nuclear bombs, including the largest thermonuclear bomb ever exploded by the United States, the fifteen-megaton Castle Bravo bomb—a thousand times as powerful as the weapon dropped on Hiroshima. In June of 1971, an EG&G crew was dispatched to Eniwetok Atoll by the Atomic Energy Commission "for the purposes of pre-clean-up surveying." EG&G had armed, wired, and fired all the bombs in the Pacific. Now, using radiation detection equipment, the company determined that the island was still uninhabitable by all life forms in the water and the air—even after thirteen years. But clean-up efforts could begin. These efforts would take decades, cost untold dollars, and involve several different contractors. EG&G would lead the way.

19. [EG&G had been taking radiation measurements](#): Interviews with Al O'Donnell, Jim Freedman; Eniwetok Precleanup Survey Soil and Terrestrial, Radiation Survey (Lynch, Gudiksen and Jones) No. 44878; draft revised 5/14/73.

20. [corporate headquarters won't say](#): Interview with Meagan Stafford, EG&G/URS public relations, Sard Verbinen & Co., July 16, 2010.

21. [President Clinton was in 1994](#): Interview with EG&G engineer. DOE Openness Initiative, Human Radiation Experiments, EG&G Energy Measurements, Las Vegas, Nevada, Finding Aids, Radioactive Fallout: "EG&G/EM played an important role in monitoring airborne radiation from weapons testing, and it retained many records relating to monitoring air-borne radiation including reports on the Nevada Aerial Tracking Systems for the 1960s. The company has developed a computerized inventory of the collection which includes some 24,000 classified documents, films, view-graphs, and other materials. Currently the company is attempting to reorganize its archives into a usable collection designed to accommodate future research efforts. The dismantling process that was begun in 1986 has been halted. The CIC will retain fallout records from the aboveground testing program. All other original research documentation, film, note-books, and other records relating to EG&G/EM's important role in monitoring airborne radiation and weapons testing, including reports and maps of cloud tracking still housed at EM, will be retained by EM. Classified Material Control (CMC) contains numerous reports on later

testing programs and Aerial Tracking Systems reports for the 1960s. The company also holds original survey data for the period before 1971, but this has not been inventoried. There is an effort under way to obtain the funding to inventory and create a computerized database for these records."

22. [the president did not have a need-to-know](#): Interview with EG&G engineer.
23. [one-line reference](#): *Advisory Committee on Human Radiation Experiments Final Report*, 506–507.

24. [If Area 51 had a doppelgänger](#): At Groom Lake, for a thirteen-year period beginning in 1955, the CIA and the U.S. Air Force comanaged spy plane programs using science and technology to advance the art of aerial espionage. Forty miles to the southwest, at Jackass Flats, beginning around 1955 and for a period of seventeen years, the Atomic Energy Commission, NASA, and the Department of Defense comanaged nuclear rocket programs using science and technology to try to get man to Mars. There is an interesting paradox. At Area 51, the spy plane programs were funded by black budgets, meaning their existence was hidden from Congress and the public. Not until they were declassified by the CIA—the U-2 program in 1998 and the A-12 Oxcart program in 2007—were their existences confirmed. The term *Area 51* has remained redacted, or blacked out, from declassified documents. When Air Force and CIA officials are asked to comment on Area 51, they have no comment, because technically the facility does not exist. At Area 25, the nuclear rocket ship programs have been funded with public awareness. No one at the Air Force, the Atomic Energy Commission, or NASA will deny that nuclear rocket development went on there. But what was really going on behind the facade at Jackass Flats has always been labeled Restricted Data, which is classified.

25. [piloted by one hundred and fifty men](#): McPhee, *The Curve of Binding Energy*, 168.
26. [Taylor designed nuclear bombs for the Pentagon](#): According to Taylor's colleague the legendary Freeman Dyson, Ted Taylor made "the smallest, the most elegant and the most efficient bombs... freehand without elaborate calculation. When they were built and tested they worked." Dyson left Princeton University's Institute for Advanced Study to work on the Mars spaceship with Taylor.

27. ["Everyone seems to be making plans"](#): McPhee, *The Curve of Binding Energy*, 170.

28. [same as a Coke machine](#): Ibid., 174.
29. ["It would have been the most sensational thing anyone ever saw"](#): Ibid.
30. ["Whoever builds Orion will control the Earth"](#): Ibid., 184.
31. [Space Nuclear Propulsion Office, or SNPO](#): Dewar, *To the End of the Solar System*, xix.

32. [built into the side of a mountain](#): Interview with Barnes; see photographs. On Nevada Test Site official maps, these mountains, in Area 25, are called Calico Hills.
33. [the underground tunnel was 1,150 feet long](#): "Corrective Investigation Plan For Corrective Action Unit 165: Areas 25 and 26 Dry Well and Washdown Areas, Nevada Test Site, Nevada." DOE/NV-788, Environmental Restoration Division, National Nuclear Security Administration, January 2002, 12.

34. [34 million to 249 million miles to Mars](#): According to NASA, "the distance between

Earth and Mars depends on the positions of the two planets in their orbits. It can be as small as about 33,900,000 miles (54,500,000 kilometers) or as large as about 249,000,000 miles (401,300,000 kilometers)."

35. [a remote-controlled locomotive](#): DOE/NV #1150, "Last Stop for the Jackass & Western."

36. [One hundredth of what one might receive](#)": Ibid., 287.

37. [Soviet satellites spying](#): Dewar, *To the End of the Solar System*, appendix F, "The Russian Nuclear Rocket Program." Dewar wrote, "The Soviets built a test complex vaguely similar to Jackass Flats."

38. [2,300 Kelvin](#): Finger and Robbins, "An Historical Perspective," 7.

39. [The Pentagon released information after I filed a Freedom of Information Act](#)": Interview with Lee Davidson. Davidson's original 1990s story is from the *Deseret News*, where he was the Washington bureau reporter for twenty-eight years. During this time, Davidson reported on a number of secret AEC radiation tests in Utah, at Dugway Proving Grounds. "They had a lot of money to play with," Davidson says of the AEC. "Here in Utah, they were trying to figure out what a meltdown would look like from a number of different angles. The AEC released more radiation in Utah than was released during the partial meltdown at Three Mile Island."

40. [Los Alamos wanted a run-away reactor](#)": Dewar, *To the End of the Solar System*, 280.

41. [data on the most devastating accident possible](#)": Ibid. Notably, Dewar lays blame for the original idea of exploding the reactor on Los Alamos. The nuclear laboratory may have come up with the idea but Los Alamos takes marching orders from the Atomic Energy Commission, and in the end, the two entities agreed to go ahead and explode the nuclear reactor on the grounds that it was a safety test. "It was critical to know the total energy release in the explosion and the amount and pattern of radioactive distribution," Dewar wrote.

42. [over 4000°C until it burst](#)": Ibid., 281.

43. [chunks as large as 148 pounds](#): Ibid., 282.

44. [equipped with samplers mounted on its wings](#)": Ibid., 281.

45. [blew over Los Angeles](#)": Ibid., 280.

46. [accurate data from which to base calculations](#)": Ibid., 285.

47. [I don't recall that exact test](#)": Interview with Harold Finger.

48. [code-named Phoebus](#): Barth, Delbert, Final Report of the Off-Site Surveillance for the Phoebus 1-A Experiment, SWRHL-19r, January 17, 1966. "The data collected indicate that radioactivity levels did not exceed the safety criteria established by the Atomic Energy Commission for the off-site population."

49. [suddenly it ran out of LH₂](#)": Dewar, *To the End of the Solar System*, 129.

50. [cleanup crews in full protective gear could not enter the area for six weeks](#)": "Decontamination of Test Cell 'C' at the Nuclear Rocket Development Station After a Reactor Accident," January 18, 1967, LA-3633; Dewar, *To the End of the Solar System*, 129–31.

51. [long metal tongs](#): The workers dropped the radioactive chunks into one-gallon

paint cans, which were driven out of Area 25 on a lead dolly.

52. [officially ended on January 5, 1973](#): Dewar, *To the End of the Solar System*, 203.
53. [no such final test](#): Interview with Darwin Morgan.
54. [records are "well organized and complete"](#): Ibid., 323.
55. ["Due to the destruction of two nuclear reactors"](#): Rollins, "Nevada Test Site—Site Description," 25 of 99.

56. [Milton Klein might know](#): Interview with Harold Finger; interview with Milton Klein. Klein also says he "takes issue with the use of the word *meltdown* because that's not exactly what happens to a reactor when it's deprived of coolant."

57. [radioactive elements were still present](#): Table 3-2, "Corrective Investigation Plan For Corrective Action Unit 165: Areas 25 and 26 Dry Well and Washdown Areas, Nevada Test Site, Nevada," 32.

312 "may have percolated into underlying soil." Ibid. Certainly, Barnes's eyewitness testimony suggests as much. "When we would run the reactor, we had to clear out forty miles of the canyon around Calico Hills, it would emit that much radiation," Barnes explained. "And every time we ran the reactor, giant dewars of water would flood the whole area, which would help cool everything down. Enough water to make a temporary pond of water several feet deep."

58. [Area 25 began serving a new purpose](#): Interview with T. D. Barnes.

59. ["It's a PhD experience for first responders"](#): Film shown on a loop at the Atomic Energy Museum in Las Vegas. Also in this section of the museum was a photograph of Area 25, which depicted desert terrain interrupted by a bright blue sign on a post that read: "EG&G Training 295-6820"—an indication that the federal partner in WMD training at Area 25 was EG&G. Morgan denies this partnership existed and insists EG&G stopped working as an "official contractor" at the test site in the 1990s. The photograph at the Atomic Testing Museum has since been taken down, but as of December 30, 2010, the telephone number remained in service (using the local area code) with a voice mail stating: "You have reached [name redacted] in the training department. Please leave a message and I will return your call as soon as possible."

60. [one day a nuclear facility could very well melt down](#): For an understanding of nuclear reactor physics, how a power reactor differs from a nuclear rocket reactor, and how both differ from a nuclear bomb, see Dewar, *To the End of the Solar System*, xvii.

61. [five "boom year\(s\)"](#): Rogovin, *Three Mile Island Report*, 182–83.

62. [nuclear reactor "units"](#): Ibid., 182.

63. [dispatched an EG&G remote sensing aircraft](#): EG&G, Inc., Las Vegas Operations, "An Aerial Radiological Survey of the Three Mile Island Station Nuclear Power Plant," U.S. Department of Energy, 1977. The cover page of the president's commission on the accident at Three Mile Island features a thermal photo accredited to EG&G.

64. ["may be the best insurance that it will not reoccur"](#): Rogovin, *Three Mile Island Report*, 5.

65. [nuclear-powered Russian spy satellite crashed](#): Gates, Mahlon, *Operation Morning Light, Northwest Territories, Canada 1978, A Non-Technical Summary of U.S. Participation*; "The Soviet Space Nuclear Power Program," Directorate of Intelligence,

66. [a decision was made not to inform the public](#): Weiss, "The Life and Death of Cosmos 954." Marked Secret, Not to be Released to Foreign Nationals, 7 pages, no date. Declassified 10/24/97.

67. [playing night baseball with the lights out](#): Ibid., 2.

68. [It was extremely tense](#): Interview with Richard Mingus.

69. [NEST](#): Secret, United States Atomic Energy Commission, No. 234505, Responsibility for Search and Rescue Operations, to M.E. Gates, Manager, Nevada Operations. November 19, 1974; see also Gates, "Nuclear Emergency Search Team," 2, www.nci.org.

70. [established within EG&G](#): Gates, "Nuclear Emergency Search Team," 2.

71. [space age difficulty](#): "Cosmos 954: An Ugly Death," *Time* magazine, February 6, 1978.

³¹⁶ would be panic like in *The War of the Worlds*: Interview with Richard Mingus.

72. [meant to look like bakery vans](#): Interview with Troy Wade.

73. [Troy Wade was the lead federal official](#): Note that Mahlon Gates, who authored *Operation Morning Light* and put together NEST, was the senior U.S. government representative on the project and also the head of DOE Nevada Operations but did not have an active role in the boots-on-the-ground operation.

74. [high above was an Air Force U-2](#): Weiss, "The Life and Death of Cosmos 954," 3.

75. [somewhere on America's East Coast](#): *Time* magazine reported, "The craft crashed into the atmosphere over a remote Canadian wilderness area last week, apparently emitting strong radiation. American space scientists admitted that if the satellite had failed one pass later in its decaying orbit, it would have plunged toward Earth near New York City—at the height of the morning rush hour."

Chapter Nineteen: The Lunar-Landing Conspiracy and Other Legends of Area 51

Interviews: Buzz Aldrin, Colonel Slater, Ernie Williams, Richard Mingus, Michael Schratt, Bill Irvine, James Oberg

1. [July 20, 1969](#): For details regarding Apollo 11, "Humankind's first steps on the lunar surface," <http://nasa.gov>; for transcripts of the first lunar landing, visit "Apollo 11 Lunar Surface Journal," by Eric M. Jones, <http://history.nasa.gov/alsj/a11/a11.landing.html>.

2. [Armstrong's hundreds of hours flying](#): Jenkins, *Hypersonics before the Shuttle*, appendix 9.

3. [astronauts visited the Nevada Test Site](#): NASA, Appendix E. Geology Field Exercises: Early Training, Field Training Schedule for the first 3 Groups of Astronauts (29), 3, Feb 17–18 & 24–25, 1965 & March 3–4, 1965. "The trip provided an opportunity to examine in detail the craters and ejecta formed by detonation of subsurface nuclear devices in lavas and unconsolidated sediments"; USGS Open-File Report 2005-1190, Table 1, "Geologic field-training of NASA Astronauts between January 1963 and November 1972."

4. [Ernie Williams was their guide](#): Interview with Ernie Williams.

5. [first water well](#): Interviews with T. D. Barnes, Colonel Slater, Ernie Williams.

6. [astronauts arrived with a lunar rover vehicle](#): Gerald G. Schaber, "A Chronology of Activities from Conception through the End of Project Apollo (1960-1973)," U.S. Geological Survey, Branch of Astrogeology.

7. [by-products of underground bomb tests](#): "The Containment of Underground Nuclear Explosions," #69043 Congress of the United States, Office of Technology Assessment, 32.

8. [astronauts twice referred to](#): DOE/NV 772 REV 1, "Apollo Astronauts Train at the Nevada Test Site," 2. The mission commentary voice transmissions can be downloaded at http://www.jsc.nasa.gov/history/mission_trans/apollo17.htm.

9. [hearing this comparison was a beautiful moment](#): Interview with Ernie Williams.

10. [Just two months after Armstrong and Aldrin returned](#): Author interview with James Oberg, and from a chapter in his book *UFOs and Outer Space Mysteries*. In addition to being an aerospace historian and leading debunker of lunar-landing and UFO-on-the-moon conspiracies, Oberg spent his career as a rocket scientist working for NASA contractors, including at Mission Control in Houston, Texas.

11. [moon being a base for aliens and UFOs](#): Interview with James Oberg.

12. [Spielberg said in a 1978 interview](#): Matthew Alford, "Steven Spielberg," *Cinema Papers*, 1978.

13. [With these three questions](#): The answers, presented by a popular Web site dedicated to debunking the moon-hoax theory, are: Q: How can the American flag flutter when there is no wind on the moon? A: The movement comes from the twisting motion of the pole. Q: Why can't the stars be seen in the moon photographs? A: There are plenty of Apollo photos released by NASA in which you can see stars. Q: Why is there no blast crater where Apollo's landing vehicle landed? A: The moon's surface is covered by a rocky material called lunar regolith, which responds to blast pressure similar to solid rock;

14. [he experienced "an intuitive feeling"](#): Fox Television broadcast, "Conspiracy Theory: Did We Land on the Moon?" February 15, 2001.

15. [the Today show](#): A transcript of Kaysing's interview with Katie Couric, cohost of the *Today* show, which aired on NBC, August 8, 2001, can be read online at Global Security.

16. [canceled the book](#): Dr. David Whitehouse, "NASA Pulls Moon Hoax Book," BBC News, November 8, 2002.

17. [CIA admitted it had been running mind-control programs](#): Marks, *The Search for the "Manchurian Candidate,"* 211. During the 1977 Senate hearings, CIA director Stansfield Turner summed up some of MKULTRA's eleven-year legacy: "The program contracted out work to 80 institutions, which included 44 colleges of universities, 15 research facilities or private companies, 12 hospitals or clinics, and 3 penal institutions."

18. [58,193 Americans were killed trying](#): The National Archives, Statistical information about casualties of the Vietnam War, ARC ID: 306742.

19. [Great Moon Hoax](#): Goodman, *The Sun and the Moon*, 12.

20. [Buzz Aldrin, the second man on the moon](#): This section is based on my interview with Buzz Aldrin, and also from chapter 20 in his book *Magnificent Desolation*, which addresses the event and is called "A Blow Heard Around the World," 332–46 (galley copy).

21. [25 percent of the people interviewed](#): Brandon Griggs, "Could Moon Landings Have Been Faked? Some Still Think So," CNN, July 17, 2009. Griggs noted that a "Google search this week for 'Apollo moon landing hoax' yielded more than 1.5 billion results."

22. [involve captured aliens and UFOs](#): AboveTopSecret.com.

23. [The tunnels were dug by a nuclear-powered drill](#): Interview with Michael Schratt.

24. [N-tunnels, P-tunnels, and T-tunnels](#): U.S. Congress, Office of Technology Assessment, *The Containment of Underground Nuclear Explosions*.

25. ["deactivated," according to the Department of Energy](#): Michael R. Williams, "Ground Test Facility for Propulsion and Power Modes of Nuclear Engine Operation," 4.

26. [the revelation of the Greenbrier bunker](#): Ted Gup, "The Ultimate Congressional Hideaway," *Washington Post*, May 31, 1992.

27. [Secrecy, denying knowledge of the existence](#): KCET American Experience, "Race for the Superbomb," interview with Paul Fritz Bugas, former on-site superintendent, the Greenbrier bunker.

28. [on average, twelve months](#): U.S. Congress, Office of Technology Assessment, *The Containment of Underground Nuclear Explosions*, 18.

29. [at least sixty-seven nuclear bombs](#): U.S. Department of Energy, *United States Nuclear Tests, July 1945 through September 1992*, 15.

30. [Piledriver experiments studied survivability](#): Cherry and Rabb, "Piledriver Drilling," UCRL-ID-126150, August 9, 1967.

31. [to destroy enemy targets \[such as\] missile silos](#): Operation Hardtack II, Defense Nuclear Agency, 3 December 1982; interview with DOE officials during my tour of the

32. [guarding many of the nuclear bombs](#): Interview with Richard Mingus.
33. [After the test ban, the Pentagon reversed its policy](#): U.S. Congress, Office of Technology Assessment, *The Containment of Underground Nuclear Explosions*, 21.
34. [has changed its name four times](#): See NNSA Timeline, <http://www.nnsa.energy.gov/aboutus/ourhistory/timeline>. Notably, there is another agency that has changed its name four times, the Armed Forces Special Weapons Project (AFSWP), which, like the Atomic Energy Commission, also began as the Manhattan Project. On May 6, 1959, it changed its name to the Defense Atomic Support Agency (DASA); on July 1, 1971, it changed its name to the Defense Nuclear Agency; on June 26, 1996, it changed its name to the Defense Special Weapons Agency. Schwartz, *Atomic Audit*, 61.
35. [mission is to advance technology and promote related innovation](#): Google DOE.gov and this statement is the subhead. Or go to <http://www.energy.gov>.
36. [formal beginning in 1908](#): Federal Bureau of Investigation Official Web site, Timeline of FBI History, 1900–1909.
37. [Yuri Ivanovich Nosenko in a secret CIA prison](#): Edward Jay Epstein and Susana Duncan, "The War of the Moles," *New York*, 28–37.
38. [His true allegiance remains the subject of debate](#): Walter Pincus, "Yuri I. Nosenko, KGB Agent Who Defected to the U.S.," *Washington Post*, August 27, 2008. In CIA documents released decades later, Nosenko is quoted as forgiving the CIA for the harsh treatment, stating "while I regret my three years of incarceration, I have no bitterness and now understand how it could happen." Shortly before he died, CIA officials gave Nosenko a ceremonial U.S. flag from CIA director Michael Hayden.
39. [memorandum dated May 1, 1995](#): Memorandum to Members of the Advisory Committee on Human Radiation Experiments, from Advisory Committee Staff, May 1, 1995, "Official Classification Policy to Cover Up Embarrassment." Clinton Staff Memo is marked "Draft, For Discussion Purposes Only," and cites 1947 memo listed below.
40. [All documents and correspondence](#): "Report of Meeting of Classification Board During Week of September 8, 1947," Atomic Energy Commission.
41. [cause considerable concern to the Atomic Energy Commission insurance Branch](#): September 28, 1947, memorandum from J.C. Franklin, manager Oak Ridge Operations to Carroll L. Wilson, General Manager Re: Medical Policy, 2–3; located circa 1995 by Clinton staff.
42. [medical papers on human administration experiments done to date](#): Ibid.
43. [reworded or deleted](#): October 8, 1947, Memorandum to Advisory Board on Medical and Biology Re: Medical Policy, 8; located circa 1995 by Clinton staff.
44. [In 2011 there are an estimated 1.8 billion Internet users](#): According to Miniwatts Marketing Group.
45. [Deny Ignorance](#): Interview with AboveTopSecret CEO Bill Irvine.
46. [the New World Order conspiracy theory](#): Wikipedia has an interesting overview of New World conspiracy theories, with bibliography.

Chapter Twenty: From Camera Bays to Weapons Bays, the Air Force Takes Control

Interviews: Richard Mingus, Ed Lovick, Bob Murphy, T. D. Barnes, Gene Poteat, Peter Merlin, Harry Martin, Millie Meierdierck, Dr. Wheelon, Joe Behne

1. [most sensational near catastrophes](#): Interview with Richard Mingus. Interview with Joe Behne.

2. [a mock helicopter attack](#): The details of the mock helicopter attack remain classified. Darwin Morgan, spokesman for the NNSA, Nevada Site Office, would neither confirm nor deny the event. Both Mingus and Behne were able to discuss this event with me because the details of the helicopter attack were only ever relayed to them secondhand. Their jobs had to do with the nuclear bomb going down the hole. In other words, while both men were privy to the security scare, neither man was ever officially briefed on the mock attack.

3. [The bomb, one of eighteen](#): U.S. Department of Energy, *United States Nuclear Tests, July 1945 through September 1992*, 14.

4. [five-man security response team](#): Interview with Mingus. This is one of the rare security stories from the secret base. Mingus tells it because the procedure is now obsolete.

5. [Quick conversation with Joe Behne](#): Interview with Joe Behne.

6. [With astounding lack of foresight, Wackenut Security](#): Interview with Richard Mingus. Interview with Joe Behne.

7. [using slide rules and calculators](#): Interview with Ed Lovick.

8. [“roughly the size of a ball bearing”](#): Interview with Lovick and specifically “based on 15GHz radar, .08 wavelength.”

9. [The man in charge of engineering, fabrication, and assembly](#): Interviews with Bob Murphy.

10. [at Groom Lake to drop bombs](#): Barnes points out that some bombs were dropped close in to the dry lake bed at Area 51.

11. [to use a preexisting, little-known bombing range](#): Johnson, “Tonopah Test Range Outpost of Sandia National Laboratories,” Sandia Report SAND96-0375 UC-700 March 1996, U.S. DOE Contract DE-AC04-94AL85000.

12. [the Chicago of the West](#): State Historic Preservation Office, Beatty, Center of the Gold Railroads, “Chicago of the West,” Nevada Historical Marker 173.

13. [“secret testing \[that\] could be conducted safely and securely”](#): Johnson, “Tonopah Test Range Outpost of Sandia National Laboratories,” 8.

14. [would quote Saint Paul of Tarsus](#): Ibid., 9.

15. [Operation Roller Coaster, three dirty bomb tests](#): Ibid., 47; Operation Roller Coaster Sites, TTR SAFER Plan, Section 2.0. Map [here](#); NVO-171 Environmental Plutonium on the Nevada Test Site and Environs, June 1977, 35.

16. [construction for an F-117 Nighthawk support facility](#): Interview with Peter Merlin.

17. [grow their hair long and to grow beards](#): Interview with Richard Mingus, who lived there.

18. [test flights of the F-117](#): Crickmore, *Lockheed F-117 Nighthawk*, 4. Major Al Whitley became the first operational pilot to fly the Nighthawk in October of that year.
19. [Lieutenant General Robert M. Bond](#): U.S. Air Force official Web site, biography.
20. [men like General James "Jimmy" Doolittle](#): Interview with Harry Martin.
21. [There was some debate about whether the general](#): Barnes had left Area 51 by this time; this is a secondhand story. Having been involved in the MiG program since its inception, Barnes was privy to information about Bond but was never formally briefed.
22. [were the general's last words](#): Transcript reads: 10:17:50 a.m., Bond: "How far to the turn?" 10:17:53 a.m. Ground control: "Turn now, right 20." Bond responds with two clicks. At 10:18:02 a.m. Bond: "I'm out of control. I'm out of..." At 10:18:23 a.m. Bond: "I've got to get out, I'm out of control."
23. [Fred Hoffman, a military writer](#): Hoffman, "Allies Help Pentagon Obtain Soviet Arms," Associated Press, May 7, 1984.
24. [at Area 51 and Area 52 for eleven years](#): Johnson, "Tonopah Test Range Outpost of Sandia National Laboratories," 79. The first flight of Have Blue was December 1, 1977, by Bill Park at 7:00 p.m. as noted in Crickmore, *Lockheed F-117 Nighthawk*.
25. [Code-named Aquiline](#): Hank Meierdierck's personal papers; interview with Jim Freedman; interview with Millie Meierdierck, who had the only known mock-up of the drone sitting on the bar in her home.
26. [original purpose of Aquiline](#): Interview with Gene Poteat.
27. [Cold War Soviet hydrofoil named Ekranopian](#): James May, "Riding the Caspian Sea Monster," *BBC News* magazine, September 27, 2008.
28. [Jim Freedman to assist him on the Aquiline drone](#): Interview with Jim Freedman.
29. [ninety-nine million dollars over budget](#): Hank Meierdierck's personal papers.
30. [Project Ornithopter](#): Richelson, *Wizards of Langley*, 148.
31. [Project Insectothopter](#): Seen by the author at the CIA museum, located inside CIA headquarters in Langley, Virginia.
32. [Acoustic Kitty](#): Richelson, *Wizards of Langley*, 147.
33. [sensor drones to detect WMD signatures](#): Interview with Dr. Wheelon.
34. [Early efforts had been made using U-2 pilots](#): Interview with Tony Bevacqua, who flew "sniffer" missions in U-2s for the U.S. Air Force. The Black Cat pilots flew some of these dangerous missions, per my interview with Colonel Slater.
35. [Operation Tobasco risked exposure](#): Richelson, *Wizards of Langley*, 93–94.
36. [did considerable damage to the Agency's reputation](#): Marks, *Search for the Manchurian Candidate*, 220. Marks's entire chapter 12, "The Search for Truth," is a particularly searing portrait of how the CIA was perceived during this time.
37. [probable biological warfare research](#): CIA Top Secret, Biological Warfare, USSR: Additional Rumors of an Accident at the Biological Warfare Institute in Sverdlovsk. Dated October 15, 1979. Declassified 6/10/96.
38. [Hellfire missiles](#): Lockheed makes the Hellfire, which is an acronym for its original design: helicopter-launched, fire-and-forget.
39. [his name was Osama bin Laden](#): Coll, *Ghost Wars*, 533: "While hovering over Tarnak Farm outside Kandahar, the Predator photographed a man who appeared to be

bin Laden."

Chapter Twenty-one: Revelation

Interviews: T. D. Barnes, Colonel Leghorn, Hervey Stockman, Gerald Posner, Stephen Younger, John Pike, Gene Poteat, EG&G engineer, David Myhra

1. [engineers and aerodynamicists had concerns](#): Interview with Barnes. This is educated speculation; Barnes did not work on the drone project. Coll also writes about this.

2. [targeted assassination by a U.S. intelligence agency was illegal](#): December 4, 1981, President Ronald Reagan Executive Order 12333.

3. [State Department gave the go-ahead](#): Coll, *Ghost Wars*, 539.

4. [CIA and the Air Force teamed up for an unusual building project](#): Ibid., 534. "The Air Force ought to pay for the Afghan operation, CIA officers believed, in part because the Pentagon was learning more about the drone's capabilities in a month than they could in a half a year of sterile testing in Nevada... Having seen the images of bin Laden walking toward the mosque at Tarnak, Black was now a vocal advocate of affixing missiles to the drone."

5. [on the outer reaches of Area 51](#): In *Ghost Wars*, Steve Coll places the mock-up "in Nevada" (549). One source interviewed by me placed the mock-up at Area 51; a second source interviewed by me placed the mock-up inside the Nevada Test and Training Range (speculating Area 52). The exact location where this took place remains classified.

6. [CIA director George Tenet decided](#): Coll, *Ghost Wars*, 535. "There was a child's swing. Families lived at Tarnak. The CIA estimated that the compound contained about one hundred women and children—bin Laden's family and family members of some top aides." Tenet would have made the final call.

7. [CIA drones provided intelligence for NATO forces](#): Jim Garamone, "Predator Demonstrates Worth Over Kosovo," American Forces Press Service, September 21, 1999.

8. [The first reconnaissance drone mission in the war on terror](#): 9/11 Commission Report, 213–214.

9. ["a very successful tactical operation"](#): Wolfowitz's interview with CNN anchor Maria Ressa appeared in print as "U.S. Missile Strike Kills al Qaeda Chief," CNN, November 5, 2002. Wolfowitz added, "one hopes each time you get a success like that, not only to have gotten rid of somebody dangerous, but to have imposed changes in their tactics and operations and procedures."

10. [exclusive interview to the Christian Science Monitor](#): Yemeni Official Says US Lacks Discretion as Antiterror Partner," *Christian Science Monitor*, November 12, 2002.

11. [Hull spoke Arabic](#): Ibid.; Seymour Hersh, "Manhunt: The Bush Administration's New Strategy in the War Against Terrorism," *New Yorker*, December 23, 2002.

12. [Mohammed Atef, in Jalalabad, Afghanistan](#): Peter Bergen and Katherine Tiedemann, "The Drone War: Are Predators Our Best Weapon or Worst Enemy," *New Republic*, June 3, 2009.

13. [targeted assassination spearheaded by the CIA](#): Mark Hosenball and Evan Thomas, "The Opening Shot," *Newsweek*, November 18, 2002.

14. [Predator got a new designation](#): MQ-1B Predator, official Web site of U.S. Air Force, fact sheet.
15. [company that built the Predator](#): General Atomics Aeronautical, <http://www.gaa.com>; accessed December 30, 2010.
16. "big differences between the Reaper and the Predator": Travis Edwards, "First MQ-9 Reaper Makes Its Home on Nevada Flightline," *U.S. Air Force Public Affairs*, March 14, 2007.
17. [Brigadier General Frank Gorenc was remotely viewing](#): Major John Hutcheson, "Balad Predator Strikes Insurgents Placing Roadside Bomb Near Balad," *Red Tail Flyer*, 332nd Air Expeditionary Wing, Public Affairs, Balad Air Base, Iraq, March 31, 2006, 5.
18. [put a weapon on a target within minutes](#): Ibid.
19. [By 2009 the number of drone strikes would rise to fifty-three](#): <http://www.longwarjournal.org/pakistan-strikes.php>; these numbers vary. Peter Bergen and Katherine Tiedemann are considered the authorities on the subject of drone strikes. The pair keep track of numbers and provide analysis for organizations including New America Foundation and the *New Republic* magazine.
20. [These are just the assets we know about](#): This is because when missiles are fired it is often the work of the CIA, and CIA drone strikes are not made public. As per my interview with Pentagon officials, "That we can't confirm or deny." State Department officials also refuse to comment on CIA drone attacks and deflect attempts to get confirmation on the CIA's role in drone operations. While visiting Pakistan in December of 2009, Secretary of State Hillary Clinton told a group of journalists who were inquiring specifically about drone strikes, "I'm not going to comment on any particular tactic or technology." In reality, the strategic partnership between the CIA and the Air Force that began with Bissell's CIA and LeMay's Air Force in 1955 is back together again.
21. [the Beast of Kandahar](#): Originally reported by *Air & Cosmos* magazine, <http://www.air-cosmos.com/site/>, the story was quickly picked up in the U.S. press. David Hambling, "Mysteries Surround Afghanistan's Stealth Drone," *Wired* magazine, Danger Room Blog, December 4, 2009; interview with unnamed Lockheed official.
22. [Defense Department confirmed](#): Interview with secretary of the Air Force, Public Affairs Engagements Office.
23. [synthetic aperture radar, or SAR](#): Sandia National Laboratories: Synthetic Aperture Radar: What is Synthetic Aperture Radar? Sandia Synthetic Aperture Radar Programs (Unclassified programs and participants); <http://www.sandia.gov>.
24. [thirty miles south of Area 51, at Indian Springs](#): Physical tour of Creech Air Force Base, Indian Springs, Nevada, October 9, 2009.
25. ["Wicked Problems"](#): "Report of the Defense Science Board, 2008 Summer Study on Capability Surprise, Volume II: Supporting Papers, January 2010. Office of the Under Secretary of Defense For Acquisition, Technology, and Logistics, Washington, DC, 20301-3140, chapter 2, Appendix 2-A, Wicked Problems, 127–31.
26. ["playing the game changes the game"](#): Ibid., 127.
27. [shot down one of their own](#): Carl Hoffman, "China's Space Threat: How Missiles Could Target U.S. Satellites," *Popular Mechanics*, July 2007.

28. [The official Pentagon story](#): Jim Garamone, "Navy to Shoot Down Malfunctioning Satellite," American Forces Press Service, February 14, 2008; "Navy Says Missile Smashed Wayward Satellite," MSNBC.com News Services, February 21, 2008; "U.S. Missile Shoots Down Satellite—But Why?" *Christian Science Monitor*, February 22, 2008.

29. [not required to tell the truth to Congress](#): Killian, *Sputnik, Scientists and Eisenhower*, 25.

30. [A satellite cannot simply drop a bomb](#): Ibid., 287. Killian originally wrote this as "a study of space science and technology made at the request of the President for the non technical reader," which was released from the White House on March 26, 1958. "Much has been written about space as a future war theatre, raising such questions as satellite bombers, military bases on the moon and so on... most of these schemes, nevertheless, appear to be clumsy and ineffective ways of doing a job. Take one example, the satellite as a bomb carrier. A satellite simply cannot drop a bomb."

31. [by his own admission, was not a scientist](#): James Killian had only an undergraduate degree in management, as per my interview with MIT's archivist who researched the question for me in March of 2010.

32. [United States Space Surveillance Network](#): NASA Orbital Debris Program Office, Frequently Asked Questions, July 2009, <http://orbitaldebris.jsc.nasa.gov/faqs.html>.

33. [A one-centimeter object is very hard to track](#): Carl Hoffman, "China's Space Threat: How Missiles Could Target U.S. Satellites," *Popular Mechanics*, July 2007.

34. [spy satellites launched into space](#): Interview with Colonel Leghorn.

35. [Leghorn founded the Itek Corporation](#): Itek, which stood for Information (/) Technology (*tek*), was founded in 1957 with seed money from venture capitalist Laurance Rockefeller. Itek built Corona cameras from the beginning of the program until Corona ended in 1972. The CIA/NRO follow-on systems were contracted out to Perkin-Elmer; interviews with Colonel Leghorn, Dr. Wheelon. In his memoir, Helms wrote, "Corona flew 145 secret missions, with equally rewarding results," 267.

36. [Leghorn spent decades in the commercial-satellite business](#): U.S. Air Force official Web site, Biography of Colonel Richard Sully Leghorn, Retired, Air Force Space Command, <http://www.afspc.af.mil/library/biographies/bio.asp?id=9942>.

37. [W61 Earth Penetrator](#): Leland Johnson, "Sandia Report: Tonopah Test Range Outpost of Sandia National Laboratories, SAND96-0375, UC-700," March 1996, 80.

38. [launch the earth-penetrator weapon](#): Nelson, "Low-Yield Earth-Penetrating Nuclear Weapons," 3, figure 3.

39. [and signed by five of the then seven or eight nuclear-capable countries](#): Comprehensive Nuclear-Test-Ban Treaty Organization (<http://www.ctbto.org/>). The Comprehensive Nuclear-Test-Ban Treaty was signed by the United States, China, France, the United Kingdom, and Russia on September 26, 1996, in New York. The nuclear-armed states who did not sign (and as of 2011 have not signed) are India, Israel, and Pakistan. According to CTBTO, Israel has not reported testing but is generally assumed to be a nuclear-armed state. In 2006, Korea announced that it had conducted a nuclear test. Notably, the 1963 Partial Test Ban Treaty, to which I also refer, prohibits nuclear

explosions in the atmosphere, outer space, and underwater but allowed for underground nuclear tests. The Comprehensive Nuclear-Test-Ban Treaty of 1996 prohibits *all* nuclear explosions, including those conducted underground.

40. [Rods from God](#): Eric Adams, "Rods from God," *Popular Science*, June 1, 2004.
41. "[that's enough force](#)": Interview with Barnes.
42. "[long-rod penetration- 43. \[April 1999 report\]\(#\): JSR-97-155, "Characterization of Underground Facilities." JASON, MITRE Corporation, McLean, Virginia.
- 44. \[Los Alamos fired back\]\(#\): Interview with Stephen Younger.
- 45. \[operations at the Nevada Test Site\]\(#\): "NSTec Contracted to Operate NNSA Test Site," *United Press International*, December 22, 2008. Interview with Stephen Younger.
- 46. \[In 2006, the Senate dropped the line item\]\(#\): CRS Report for Congress, "Bunker Busters": Robust Nuclear Earth Penetrator Issues, FY2005-FY2007; Domenici: RNEP Funds Dropped from Appropriations Bill," press release, Senator Pete Domenici, October 25, 2005, FY2006 hearings. From the transcript: Representative Terry Everett: "Could you please tell me directly if there's a military need for this, for robust earth-nuclear earth penetrator?" Secretary of Defense Donald Rumsfeld: "It is a question that's difficult to answer, because sometimes they say 'military requirement.' And that's a formal process. There was no military requirement for unmanned aerial vehicles until they came along."
- 47. \[proposed to revive the NERVA program\]\(#\): Michael R. Williams, "Ground Test Facility for Propulsion and Power Modes of Nuclear Engine Operation," Savannah River National Laboratory, Department of Energy, WSRC-MS-2004-00842.
- 48. \[six hundred million pages of information\]\(#\): Pauline Jelinek, "U.S. Releases Nazi Papers," Associated Press, November 2, 1999.
- 49. \[Many documents about Area 51 exist in that pile\]\(#\): Interviews with EG&G engineer.
- 50. \[the Roswell crash remains\]\(#\): which certainly explains why the CIA and the Air Force have not been able to locate Roswell crash remains in their archives.
- 51. \[the most powerful defense contractor in the nation\]\(#\): In 1999, EG&G was acquired by the Carlyle Group. In 2002 it was acquired by URS. In 2000, EG&G formed a joint venture with Raytheon to create JT3 \(Joint Test, Tactics, and Training\) LLC, which provides "engineering and technical support for the Nevada Test and Training Range, the Air Force Flight Test Center, the Utah Test and Training Range, and the Electronic Combat Range." Interview with Meagan Stafford, EG&G/URS Public Relations, Sard Verbinnen & Co., July 16, 2010.
- 52. \[former dean of engineering at MIT\]\(#\): Vannevar Bush papers located at National Security Archives, Truman Library, the Roosevelt Library, and MIT Archives; Zachary, *Endless Frontier*, Library of Congress, "Vannevar Bush, a Collection of His Papers in the Library of Congress," Manuscript Division, Library of Congress, Washington, DC.
- 53. \[kidnapped by Dr. Josef Mengele\]\(#\): Interview with Gerald Posner; Posner and Ware, *Mengele: The Complete Story*, 83.
- 54. \[performed unspeakable experimental surgical procedures\]\(#\): Spitz, *Doctors From Hell: The Horrific Account of Nazi Experiments on Humans*. Spitz worked as a typist](#)

during the Nuremberg trials. *Forgiving Dr. Mengele*, a film by Bob Hercules and Cheri Pugh (2006); CANDLES Holocaust Museum, Biography of Eva Mozes Kor. The Japanese also performed grotesque experiments on humans during the war. "U.S. War Department, War Crimes Office, Judge Advocate General's Office, #770475." Japan's version of Josef Mengele, General Ishii, was pardoned by the U.S. War Crimes Office on the grounds that information regarding the grotesque medical experiments he performed would somehow benefit the United States. Although it is science fiction, *The Island of Dr. Moreau*, written in 1896 by H. G. Wells, tells a twisted tale of human experimentation on a remote island.

55. [children, dwarfs, and twins](#): Koren and Negev, *In Our Hearts We Were Giants*, 85–197.

56. [Josef Mengele's efforts to create a pure, Aryan race](#): Erik Kirschbaum, "Cloning Wakes German Memories of Nazi Master Race," Reuters, February 27, 1997. America is not exempt from eugenic theology; see Edwin Black, "Eugenics and the Nazis: The California Connection," *San Francisco Chronicle*, November 9, 2003.

57. [painter named Dina Babbitt](#): Ibid., 103–31 and photographic inserts. Bruce Weber, "Dina Babbitt, Artist at Auschwitz, Is Dead at 86," *New York Times*, August 1, 2009. Babbitt's maiden name (used at Auschwitz) was Gottlieb.

58. [Dr. Martina Puzyra](#): Koren and Negev, *In Our Hearts We Were Giants*, 109.

59. [According to his only son, Rolf](#): Interview with Gerald Posner. Posner interviewed Rolf Mengele and was given access to 5,000 pages of Mengele's written correspondence as well as his personal journals written after the war.

60. [Mengele held up his side of the Faustian bargain](#): Interview with EG&G engineer.

61. [Mengele never took up residence in the Soviet Union](#): Interview with Posner.

62. [Eileen Welsome wrote a newspaper story](#): Eileen Welsome, "The Plutonium Files: America's Secret Medical Experiments in the Cold War," *Albuquerque Tribune*, November 1993.

63. [direct violation of the Nuremberg Code](#): Trials of War Criminals before the Nuremberg Military Tribunals under Control Council Law No. 10, Vol. 2, Washington, DC: U.S. Government Printing Office, 1949. Nuremberg Code: (1). The voluntary consent of the human subject is absolutely essential. (2). The experiment should be such as to yield fruitful results for the good of society, unprocurable by other methods or means of study, and not random and unnecessary in nature. Full text available at <http://ohsr.od.nih.gov/guidelines/nuremberg.html>.

64. [President Clinton opened an investigation](#): The advisory committee was made of fourteen members who reported to the president through a cabinet-level group called the Human Radiation Interagency Working Group, and it included the secretaries of defense and energy (formerly the Atomic Energy Commission) as well as the attorney general and the director of the CIA. The committee was dissolved in October of 1995 after publishing its findings. Today, the Office of Health, Safety and Security (HSS), a Department of Energy office, maintains a Web site. Of its efforts, DOE says, "We have undertaken an intensive effort to identify and catalogue relevant historical documents from DOE's 3.2 million cubic feet of records scattered across the country." Given that there are

approximately 2,000 pages of documents in a single cubic foot, it is telling that a record search for "EG&G" at the HSS/DOE database delivers a paltry 500 documents.

Epilogue

Interviews: Colonel Leghorn, Ed Lovick, EG&G engineer, David Myhra

1. [Army Air Forces commemorative yearbook](#): This is the government-issued "Official Report, Task Force 1.52" and is meant to look like a high school yearbook.

2. [The U.S. government spent nearly two billion dollars: Atomic Audit](#), 102. "Operation Crossroads was an astonishing \$1.3 billion [circa 1996 dollars], far more than any of the subsequent thermonuclear tests conducted during the 1950s."

3. [Truman's closest advisers](#): "Potsdam and the Final Decision to Use the Bomb," Department of Energy Archives (<http://www.cfo.doe.gov/>): "During the second week of Allied deliberations at Potsdam, on the evening of July 24, 1945, Truman approached Stalin without an interpreter and, as casually as he could, told him that the United States had a 'new weapon of unusual destructive force.' Stalin showed little interest, replying only that he hoped the United States would make 'good use of it against the Japanese.' The reason for Stalin's composure became clear later: Soviet intelligence had been receiving information about the atomic bomb program since fall 1941."

4. [Stalin's black propaganda hoax](#): Interview with EG&G engineer.

5. [a warning shot across Truman's bow](#): Interview with EG&G engineer. The engineer says this information was relayed to him by his EG&G boss, who had been given the information by a government superior. One cannot rule out the possibility that the elite EG&G engineers were given false information as a means of coercing them into participating in a morally reprehensible program; in 1951, there was no greater enemy to the free world than Joseph Stalin. Until Russia opens its UFO archives, Stalin's side of the story will remain unknown, but since the collapse of the Soviet Union, Stalin's interest in UFOs has come to light. In *Korolev*, Professor James Harford discusses an incident where Stalin asked his chief rocket designer, Sergei Korolev, to study UFOs (See [here](#), [here](#)). In 2002, Pravda.ru ran a story called "Stalin's UFOs," identifying the dictator's Roswell/UFO research team as "mathematician Mstislav Keldysh, chemist Alexander Topchiyev, and physician [sic] Sergey [sic] Korolev." Other ufologists identify Stalin's UFO team as Sergei Korolev, missile designer and inventor of Sputnik; Igor Kurchatov, father of Russia's atomic bomb; and Mstislav Keldysh, mathematician, theoretician, and space pioneer (see photographic insert).

6. ["Hitler invented stealth," says Gene Poteat](#): Interview with Gene Poteat. Also from Poteat's participation in the CIA's Oxcart panel discussion at the National Air and Space Museum, Smithsonian Institution, Steven F. Udvar-Hazy Center, September 24, 2010.

7. [Whatever happened to the Horten brothers](#): Interview with David Myhra.

8. [captured by the U.S. Ninth Army on April 7, 1945](#): Myhra, *The Horten Brothers and Their All Wing Aircraft*, 229.

9. [London high-rise near Hyde Park](#): Ibid., 230.

10. [Theodore von Kármán](#): National Aviation Hall of Fame, biography, Theodore von

11. [tapes can be found](#): National Air and Space Museum, Archives Division, Reimar and Walter Horten Interviews, Accession No. 1999-0065.
12. [Reimar had me agree to two restrictions](#): Interview with David Myhra.
13. [2010 Freedom of Information Act request](#): Letter, October 29, 2010, to Ms. Annie Jacobsen from Nathan L. Mitchell, Assistant to the General Counsel, Department of the Army, Office of the General Counsel, 104 Army Pentagon, Washington DC.
14. [another \[important\] engineer](#): The name of this engineer and his employment with EG&G during the 1950s have been verified with other former EG&G employees.
15. [empty lot of asphalt](#): The lot is adjacent to the buildings identified as EG&G's original Las Vegas headquarters in a film about the history of the Nevada Test Site, funded by the National Nuclear Security Administration, Nevada Site Office: "When EG&G first moved to Las Vegas, their headquarters were located on 'A' Street now called Commerce."
16. [Little wooden discs](#): Interview with Ed Lovick.
17. [sworn affidavit](#): "Dead Airman's Affidavit: Roswell Aliens Were Real." Fox News.com, July 3, 2007. <http://www.foxnews.com/story/0.2933.287643.00.html>, accessed December 30, 2010.
18. [It's difficult](#): Written correspondence with Bob Lazar, 2010.
19. [hidden inside secret "Restricted Data" files](#): Interview with EG&G engineer.
20. [Vannevar Bush](#): To further understand Vannevar Bush, I reviewed his papers, letters, and hand-edited drafts of his articles, books, and monographs from three major collections: Vannevar Bush, "A Collection of His Papers in the Library of Congress," Manuscript Division, Library of Congress, Washington, DC; Vannevar Bush, "Office of Scientific Research and Development," National Archives and Records Administration, College Park, Maryland; Vannevar Bush Papers, Carnegie Institute, Washington, DC.
21. [human experiments to study the effects](#): The trials involved high concentrations of lewisite and mustard gas. *Advisory Committee on Human Radiation Experiments, Final Report*, 98; *Veterans at Risk: The Health Effects of Mustard Gas and Lewisite*, 66–69.
22. [Although the human subjects](#): Ibid., 66.
23. [Dixon Institute... Feeble-Minded](#): *Advisory Committee on Human Radiation Experiments, Final Report*, Chapter Seven, Nontherapeutic Research on Children, 320–351. Dr. Susan Lederer, *Military Medical Ethics*, Volume 2, "The Cold War and Beyond: Covert and Deceptive American Medical Experiments," 514. Lederer, a Clinton committee staff member, cites D. J. Rothman, *Strangers at the Bedside: A History of How Law and Bioethics Transformed Medical Decision Making*, Basic Books, 1991.
24. [letter-number designation of S-1](#): Gosling, *The Manhattan Project: Making the Atomic Bomb*, 10.
25. [JT3](#): From the company Web site (<http://www.jt3.com/>), accessed October 18, 2010. "The Department of Defense (DoD) has merged the engineering and technical support management of several western ranges into one organization to streamline support for test and training customers. In response to this challenge, URS (URS) and

Raytheon Technical Services Company (RTSC) formed JT3, a Limited Liability Company (LLC) dedicated to supporting Joint Range Technical Services (J-Tech) requirements. We are experts at assisting our customers and other contractors in the planning, preparation, and execution of test projects and training missions."

AUTHOR INTERVIEWS AND BIBLIOGRAPHY

PRIMARY INTERVIEWS

The individuals listed below, by birth year, did many things in their long careers. Noted are topics we discussed during our interviews. All military officers and intelligence agency personnel are retired.

Helen Kleyla (1913–). Longtime secretary to CIA deputy director Richard Bissell.

CIA, Richard Bissell, Area 51, Bay of Pigs.

Interviews: Written correspondence, fall 2009

Colonel Richard S. Leghorn (1919–). The father of peacetime overhead espionage.

Army Air Forces, USAF, CIA, World War II, Korean War; U-2, MiG, Corona satellite system, reconnaissance over Normandy, overhead espionage, Operation Crossroads, General Curtis LeMay.

Interviews: July 21, 2009; July 24, 2009; February 10, 2010; written correspondence: July 2009–October 2010

Edward Lovick Jr. (1919–). The father of stealth technology.

Lockheed Skunk Works, U-2, A-12 Oxcart, SR-71 Blackbird, D-21 drone, Harvey, Have Blue, F-117 Nighthawk, Project Kempster-Lacroix, radar testing, and pole testing at Area 51.

Interviews: January 5, 2008; February 7, 2008; March 6, 2008; April 3, 2008; April 18, 2008; April 29, 2008; May 29, 2008; June 6, 2008; June 18, 2008; July 2, 2008; July 10, 2008; July 23, 2008; July 30, 2008; August 6, 2008; August 13, 2008; August 21, 2008; August 28, 2008; September 4, 2008; November 18, 2008; December 9, 2008; January 6, 2009; January 20, 2009; March 17, 2009; March 30, 2009; June 11, 2009; June 28, 2009; August 1, 2009; February 28, 2010; April 22, 2010; September 5, 2010; written correspondence: February 2008–October 2010

Ray Goudey (1919–). Flew U-2 "Ship One" at Area 51.

Lockheed test flights, U-2, Burbank to Area 51 flights.

Interviews: June 12, 2009; July 8, 2009; October 8, 2009

Fred White (1921–). Wrote the flight manuals for Lockheed U-2, A-12, and SR-71.

Lockheed Skunk Works, U-2, A-12, YF-12, SR-71, engineering projects at Area 51.

Interviews: October 3, 2009; October 8, 2009; written correspondence: October 2009–May 2010.

Colonel Hugh "Slip" Slater (1922–). Base commander at Area 51.

Army Air Force, USAF, CIA, A-12, YF-12, D-21 drone, commander of the U-2 Chinese Black Cat Squadron, commander for Operation Black Shield, the 303 Committee.

Interviews: November 13, 2008; December 20, 2009; January 7, 2009; March 4, 2009; April 25, 2009; June 25, 2009; July 14, 2009; October 7, 2009; October 8, 2009; January 13, 2010

Alfred O'Donnell (1922–), early Manhattan Project member. Armed, wired, and fired 186 nuclear bombs at the Nevada Test Site and the Pacific Proving Ground.

Nuclear weapons, World War II, Battle at Okinawa; timing, wiring, and firing system on atomic bombs; timing, wiring, and firing system on thermonuclear bombs; Operation Crossroads, Operation Greenhouse, Operation Ivy, Operation Castle, Operation Plumbbob, Operation Hardtack, Nevada Test Site.

Interviews: May 9, 2009; May 25, 2009; May 27, 2009; June 24, 2009; June 25, 2009; July 15, 2009; September 7, 2009; September 8, 2009; October 6, 2009; October 7, 2009; November 17, 2009; December 14, 2009; December 15, 2009; December 16, 2009; January 13, 2010; January 14, 2010; February 11, 2010; March 6, 2010; June 28, 2010, June 29, 2010; written correspondence: May 2009–October 2010

Colonel Hervey S. Stockman (1922–2011). First man to fly over the Soviet Union in a U-2.

Army Air Forces, USAF, U-2 pilot, atomic-sampling pilot, fighter pilot in World War II, Korea, and Vietnam; POW at the Hanoi Hilton and other prisons from June 12, 1967–March 4, 1973.

Interviews: August 24, 2009; September 17, 2009; March 24, 2010

Colonel Sam Pizzo (1922–). Navigation expert for the A-12 at Area 51 and escort to Nikita Khrushchev from Moscow to America in 1959.

Strategic Air Command, USAF, A-12 Oxcart, Operation Home Run, celestial navigation, General Curtis LeMay.

Interviews: April 22, 2009; April 24, 2009; May 19, 2009; May 21, 2009; October 3, 2009; October 7, 2009; December 2, 2009; written correspondence: April 2009–September 2010

General Hsichun “Mike” Hua (1926–). Flew with U-2 Chinese Black Cat Squadron. CIA U-2 pilot, CIA air base at Taoyuan, Taiwan.

Interview: March 12, 2010; written correspondence: winter/spring 2010

Ralph James “Jim” Freedman (1927–). Procurement manager at Area 51, EG&G weapons test engineer, and nuclear explosion photographer.

EG&G, CIA, nuclear test liaison to Howard Hughes from Area 51, Nevada Test Site, Operation Greenhouse, Operation Ivy, Operation Castle, A-12 Oxcart, Project Aquiline.

Interviews: May 7, 2009; May 8, 2009; April 25, 2009; June 24, 2009; September 8, 2009; October 8, 2009; December 15, 2009; June 28, 2010; August 4, 2010; November 30, 2010.

Brigadier General Raymond L. Haupt (1927–). The only man to fly all three models of the Oxcart at Area 51.

USAF, U-2, A-12 Oxcart, YF-12, SR-71 Blackbird, Blackbird flight manuals, Lockheed pilots, Area 51 operations.

Interviews: October 3, 2009; October 8, 2009

Major General Patrick J. Halloran (1928–). Squadron operations officer for the U-2,

wing commander for the SR-71 Blackbird.

USAF, U-2, SR-71 Blackbird, U-2 shoot-downs over China.

Interview June 12, 2009

Dr. Albert D. "Bud" Wheelon (1929–). CIA's first deputy director of Science and Technology, also known as the mayor of Area 51.

Project Palladium, A-12 Oxcart, Cuban missile crisis, satellites, early missile systems, TRW, defense contracting, MIT, President Kennedy, James Killian, General Ledford, John McCone, Richard Helms, Lyman Kirkpatrick.

Interviews: May 29, 2009; November 9, 2009

Colonel Kenneth B. Collins (1930–). A-12 Oxcart pilot for the CIA.

USAF, CIA, A-12 Oxcart pilot, SR-71 Blackbird pilot, Korean War, Vietnam War, Operation Black Shield, Jack Weeks, Walt Ray.

Interviews: October 29, 2008; January 20, 2009; March 17, 2009; April 14, 2009; April 28, 2009; May 19, 2009; June 1, 2009; June 13, 2009; August 4, 2009; October 20, 2009; December 2, 2009; January 20, 2010, April 4, 2010, August 6, 2010; written correspondence: October 2008–October 2010

Lieutenant Colonel Francis J. "Frank" Murray (1930–). A-12 Oxcart pilot for the CIA.

USAF, CIA, A-12 Oxcart pilot, F-101 pilot, Vietnam War, Operation Black Shield, USS Pueblo, General Ledford, Walt Ray.

Interviews: March 4, 2009; March 5, 2009; April 28, 2009; October 6, 2009; October 7, 2009; January 6, 2010; January 13, 2010; written correspondence: March 2009–May 2010

Lieutenant Colonel Roger W. Andersen (1930–). Area 51 command post operations for Area 51 and Kadena Air Base during Operation Oxcart.

USAF, CIA, Nevada Test Site, atomic tests, Operation Black Shield.

Interviews: March 5, 2009; May 26, 2009; October 7, 2009; September 24, 2010; written correspondence: May 2009–September 2010

Robert "Bob" Murphy (1930–). Lockheed Skunk Works engineer and project airplane manager at Area 51.

U-2, A-12 Oxcart, D-21 drone, U-2 missions out of Asia, Have Blue, F-117 Nighthawk.

Interviews: July 4, 2009; July 20, 2009; September 24, 2010

William "Bill" Weaver (1930–). Lockheed test pilot for the A-12, YF-12, SR-71, and the only pilot to survive a Mach 3 bailout at 78,000 feet in an SR-71 Blackbird.

SR-71 Blackbird, high-speed bailouts, parachutes.

Interview June 13, 2009

Captain Donald J. Donohue (1930–). Crew captain for A-12 Oxcart at Area 51.

USAF, A-12 Oxcart.

Interviews: May 8, 2009; December 9, 2009

Frank Micalizzi (1930–). Warehouse supervisor at Area 51.

USAF, CIA, Kadena Air Force Base, A-12 Oxcart camera film storage.

Interview May 8, 2009

Florence DeLuna (1930–). Area 51 transport pilot.

USAF, C-47, Walt Ray, Dreamland airspace and air traffic control.

Interview May 8, 2009

Ernest "Ernie" Williams (1930–). Atomic Energy Commission motor pool and food services coordinator, escorted the Apollo astronauts around the Nevada Test Site.

AEC, Nevada Test Site, astronaut training.

Interviews: October 7, 2009; December 14, 2009

S. Eugene "Gene" Poteat (1930–). Pioneer of electronic countermeasures, first CIA officer assigned to the National Reconnaissance Office.

CIA, NRO, Project Palladium, Area 51 radar tests, U-2 and A-12, Caspian Sea Monster, Project Aquiline.

Interviews: September 27, 2010; September 28, 2010; September 30, 2010

Richard Mingus (1931–). Area 51 security, Nevada Test Site Security, and Lawrence Radiation Laboratory operations manager.

Atomic Energy Commission, Department of Energy, Lawrence Radiation Laboratory, Federal Services, Inc., Wackenhut Security, Inc., U-2 security guard, Area 51 security, Area 52 security, Nevada Test Site, Tonopah Test Range, Project 57, Operation Plumbbob, underground nuclear testing.

Interviews: September 9, 2009; October 8, 2009; November 18, 2009; December 14, 2009; December 15, 2009; December 16, 2009; January 14, 2009; February 10, 2010; February 12, 2010; June 28, 2010; June 29, 2010

Harry Martin (1931–). In charge of the million-gallon fuel farm at Area 51.

USAF, CIA, fuels, A-12 Oxcart.

Interviews: November 13, 2008; March 5, 2009; May 26, 2009

Lieutenant Colonel Tony Bevacqua (1932–). Youngest pilot to fly U-2 at Area 51.

USAF, U-2 pilot, SR-71 Blackbird pilot, Vietnam War, Kadena Air Force Base, Gary Powers.

Interviews: June 12, 2009; June 13, 2009; October 8, 2009; written correspondence: June 2009–October 2010

Colonel Charles E. "Charlie" Trapp (1933–). Area 51 helicopter search-and-rescue pilot.

USAF, C-47, Walt Ray, Dreamland airspace and air traffic control.

Interview June 4, 2010; November 18, 2010; November 24, 2010

Troy Wade (1934–). Longtime Nevada Test Site official, former assistant secretary of energy for defense programs, ran Operation Morning Light for the Department of Energy, Nevada Test Site Historical Foundation.

Atomic Energy Commission, Department of Energy, Nevada Test Site, Operation Morning Light, underground nuclear testing.

Interviews: September 9, 2009; October 8, 2009; December 15, 2009

Wayne E. Pendleton (1935–). EG&G radar expert.

Lockheed Skunk Works, EG&G radar range, National Reconnaissance Office, Have Blue, Howard Hughes.

Interviews: October 3, 2009; October 7, 2009; April 22, 2010

Thornton "T.D." Barnes (1937–). Radar expert on multiple Area 51 projects.

CIA, EG&G, Atomic Energy Commission, NASA, Project Palladium, A-12 Oxcart, MiG, X-15 rocket plane, Apollo 1, NERVA, Nike missile system, Hercules missile system, Have Blue.

Interviews: November 3, 2008; November 13, 2008; December 20, 2009; December 21, 2009; January 7, 2009; March 4, 2009; March 5, 2009; March 6, 2009; April 24, 2009; April 25, 2009; May 7, 2009; May 8, 2009; May 26, 2009; June 12, 2009; June 13, 2009; June 24, 2009; June 25, 2009; July 14, 2009; September 7, 2009; September 9, 2009, October 7, 2009; October 8, 2009; October 9, 2009, December 14, 2009; December 15, 2009; December 16, 2009; January 13, 2010; January 14, 2010; February 11, 2010; February 12, 2010; March 6, 2010; June 29, 2010; written correspondence: November 2008–October 2010

Ken Swanson (1937–). Electronic warfare, electronic countermeasures expert, Red Dog/Blue Dog ECM System.

Interview June 17, 2010

Sherre Lovick (1960–). Lockheed Skunk Works engineer.

Lockheed Skunk Works, radar signature, defense contracting.

Interviews: February 7, 2008; March 6, 2008; April 3, 2008; April 29, 2008; May 29, 2008; June 6, 2008; July 2, 2008; July 23, 2008; July 30, 2008; August 6, 2008; August 21, 2008; June 28, 2009

Colonel Buzz Aldrin, Apollo 11 astronaut and the second man on the moon

Dr. Robert B. Abernethy, Pratt and Whitney engineer; invented the Oxcart's J-58 engine

Joseph C. Behne Jr.: Former test director, Lawrence Livermore National Laboratory

Arthur Beidler, 67th Reconnaissance Tactical Squadron, Japan

Colonel Adelbert W. "Buz" Carpenter, SR-71 pilot

Harold B. Finger, former manager of AEC-NASA Space Nuclear Propulsion Office

R. Cargill Hall, historian emeritus, National Reconnaissance Office

Milton M. Klein, former manager of AEC-NASA Space Nuclear Propulsion Office

Darwin Morgan: National Nuclear Security Administration, spokesman (current)

Dennis Nordquist, Pratt and Whitney mechanical engineer, J-58 engine

Grace Weismann: Joe Walker's widow

Charles "Chuck" Wilson: U-2 pilot

Changti "Robin" Yeh: U-2 pilot, Chinese Black Cat Squadron

Walter Cronkite. "UFO: Friend, Foe or Fantasy?" CBS News, May 10, 1966.

Groom Lake, Nevada, in 1917. Once little more than a dry lake bed in the southern Nevada desert, what is now known as Area 51 has become the most secretive military facility in the world. (*Special Collections, University of Nevada–Reno*)

From up on top of the old Groom Mine in 1917, looking down. Not until the 1950s would the federal government take over the dry lake bed and adjacent land. (*Special Collections, University of Nevada–Reno*)

Vannevar Bush, age eighty, receives the Atomic Pioneer Award from President Nixon at a White House ceremony in 1970. Other recipients are (from left to right) Glenn T. Seaborg, the man who co-discovered plutonium; James B. Conant of the National Defense Research Research Committee; and General Leslie R. Groves, who was the commander of the Manhattan Project but took orders from Vannevar Bush. (*U.S. Department of Energy*)

Colonel Richard S. Leghorn during Operation Crossroads, at Bikini Atoll in the Marshall Islands, July 1946. Leghorn led the mission to photograph the nuclear explosions from the air, and he is credited with the concept of "overhead," which led to spy planes and satellites. (*Collection of Richard S. Leghorn/Army Air Forces*)

The Baker bomb at Operation Crossroads, July 25, 1946, was 21 kilotons, one and a half times more powerful than the bomb dropped on Hiroshima. Baker's underwater fireball produced a "chimney" of radioactive water 6,000 feet tall and 2,000 feet wide.

Stalin had spies at the event. (*Library of Congress*)

The black device attached to this balloon in Area 9 of the Nevada Test Site is a 74-kiloton atomic bomb code-named Hood, the largest atmospheric nuclear weapon ever exploded in the United States. Standing on a ladder minutes before this photograph was taken on July 5, 1957, Al O'Donnell put the final touches on the bomb's firing system. Area 51 is over the hill to the right of the device. (*Collection of Alfred O'Donnell/National Nuclear Security Administration*)

A column of radioactive smoke rises from the Hood bomb. To the right of the mushroom stem the landscape can be seen on fire. Approximately one hour after the bomb went off, security guard Richard Mingus drove through ground zero to set up a guard post at the Area 51 guard gate, directly over the burning hills. (*National Nuclear Security Administration*)

In Area 12 of the Nevada Test Site, workmen enter an underground atomic bomb tunnel through its mouth, summer 1957. (*National Nuclear Security Administration*)

Operation Paperclip scientists at Fort Bliss, Texas, in 1946. Until 1945, these men worked for Adolf Hitler, but as soon as the war ended these "rare minds" began working for the American military and various intelligence organizations, the details of which remain largely classified. Rocket scientist Wernher von Braun is in the front row, seventh from the right with his hand in his pocket. (*National Aeronautics and Space Administration*)

Nazi Dr. Walther Riedel after his capture by the U.S. Army in 1945. Unsmiling in this never-before-published file photograph, Riedel is missing teeth, which had been knocked out by U.S. soldiers while questioning him about his role in Hitler's "bacteria bomb." *(National Archives)*

Alleged to be Stalin's secret UFO study team are (standing left to right) Sergei Korolev, chief missile designer and inventor of Sputnik; Igor Kurchatov, father of Russia's atomic bomb; and Mstislav Keldysh, mathematician, theoretician, and space pioneer.
(Collection of Museum of M. V. Keldysh, Russia)

This photograph of the all-wing Horten V appeared in the Secret G-2 Combined Intelligence Objective Sub-Committee report "Horten Tailless Aircraft," dated May 1945.
(National Archives)

The 1945 G-2 report on the Horten brothers airplanes included this photograph of the unusually shaped Parabola. Two years later, after the crash of a foreign disc-shaped aircraft in New Mexico, in July 1947, the Counter Intelligence Corps embarked on a manhunt across Western Europe to locate the Horten brothers and their so-called flying disc. (*National Archives*)

A German-designed V-2 rocket is hoisted up onto a U.S. Army test stand at the White Sands Proving Ground, in New Mexico, on January 1, 1947. Five months later one of the V-2s went off course. No one was killed, but the German Paperclip scientists in charge of the rocket launch were put under investigation. (*NASA/Marshall Space Flight Center*)

Part of a U-2 coming out of a transport airplane at Area 51 in 1955. The CIA's first spy plane was so secret that Air Force pilots transporting it to Area 51, in pieces inside larger airplanes, would fly to a set of coordinates over the Mojave Desert and contact a UHF frequency called Sage Control for orders. Only when the aircraft was a few hundred feet off the ground would runway lights flash on. (*Laughlin Heritage Foundation/CIA*)

Early U-2s on the flight line at Area 51 in 1956, a worker standing on a wing. (*Laughlin Heritage Foundation/CIA*)

Trailer Area As Seen From Tower. Paved Flight Strip In Background.

Trailers at Area 51 where U-2 pilots like Hervey Stockman and Tony Bevacqua slept while learning how to fly the CIA's first spy plane. (*Laughlin Heritage Foundation/CIA*)

Over-all Shot Of Watertown Area From Hills Shooting Northeast.

A rare perspective on Area 51 looking northeast in 1955. The triangular mountain peak (just right of center in the far distance) is Tikaboo Peak, the single remaining location from where the curious can catch a faraway glimpse of Area 51. (*Laughlin Heritage Foundation/CIA*)

Hervey Stockman left Princeton University to fly with the U.S. Army Air Corps during World War II. In 1956, he was the first man to fly over the Soviet Union in a U-2. He flew 310 combat missions in three wars. In June 1967 he was involved in a midair crash over North Vietnam and became a POW for nearly six years. (*Collection of Colonel Hervey S. Stockman*)

Headquarters Building At Watertown. Flag At Half Mast Following Sieker Crash.

After the tragic death of U-2 pilot Robert Sieker on April 4, 1957, the flag at Area 51 was flown at half-mast. (*Laughlin Heritage Foundation/CIA*)

The U-2 aloft, circa 1965. All indicators of ownership, including its former NACA designation, have been removed. (*Collection of Lockheed Martin*)

A rare look at Building 82, inside the fabled Lockheed Skunk Works, circa 1957. The world's first anechoic chamber can be seen at the far rear of the room. Shoe-sized models of the CIA's spy planes would be hung from the ceiling and tested. (*Collection of Lockheed Martin*)

Area 13 sits inside Area 51 and was contaminated with plutonium in a 1957 "dirty bomb" test. This photograph, part of a set never released publicly before, was taken during a 1960 Atomic Energy Commission investigation into theft of a "hot" item stored there. After the dirty bomb test, someone had cut the fence, ignored the "Warning Alpha Contamination" hazard signs, and stolen a 1952 model pickup truck that was contaminated with plutonium and scheduled for burial in a hazardous waste pit. (*National Nuclear Security Administration*)

President Kennedy touring the NERVA nuclear facility at Area 25. The plan was to build a nuclear-powered rocket ship to take men to Mars in the astonishingly short time frame of 124 days. (*Department of Energy*)

1494-8

While working on the nuclear space ship program, T. D. Barnes walked to work each day through this 1,150-foot-long underground tunnel below Area 25. (*Department of Energy*)

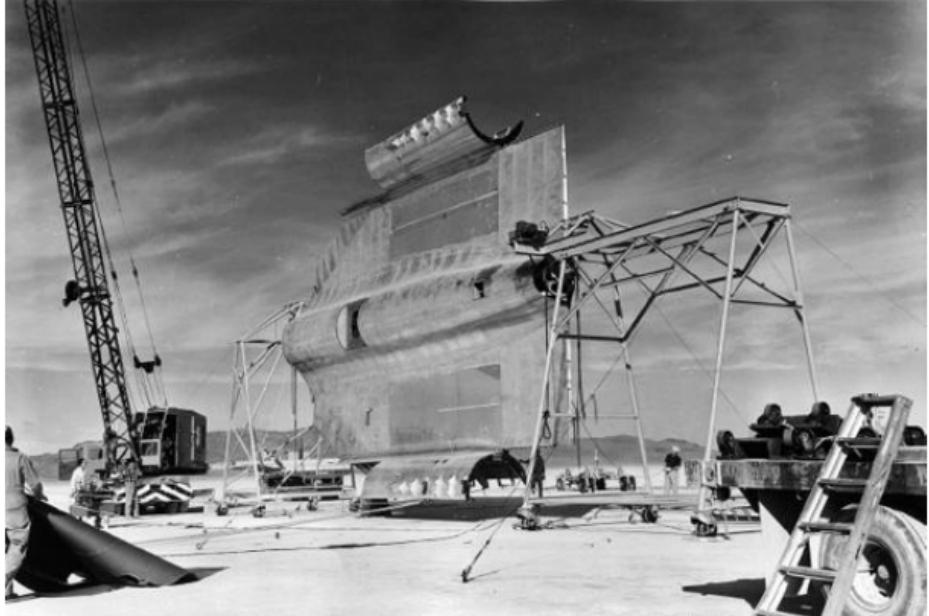

The Nuclear Rocket Test Facility at Jackass Flats, located in Area 25, seen here from above sometime in the 1960s. Three test cells (ETS-1, E-MAD, and R-MAD) were connected by a remote-controlled railroad that transported the highly radioactive reactor between them. (*Department of Energy*)

The engine for the Mars rocket can be seen at the center of the Engine Test Stand-1, positioned upside down to prevent it from taking off during testing. Operating at 3680.6 degrees Fahrenheit meant the nuclear reactor inside the engine needed to be cooled down by liquid hydrogen, contained in white industrial dewars seen at right. (*Department of Energy*)

Moving the first A-12 to Area 51, over the Cajon Pass in California. The transport crate had been disguised to look like a generic wide load. (CIA)

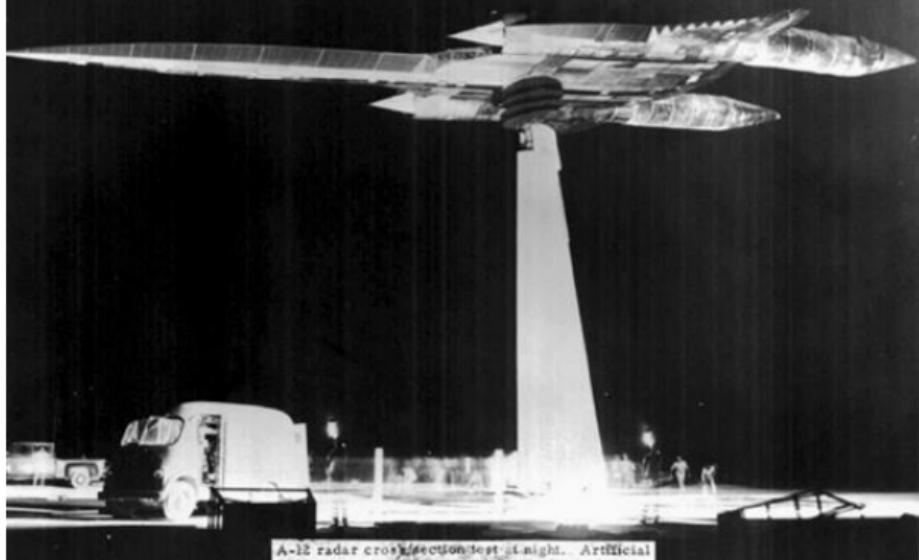

A full-scale mock-up of the Oxcart being assembled at Area 51 in 1959, even before the CIA contract was officially secured. The facility had been deserted after nuclear fallout shuttered the place in the summer of 1957. These Lockheed Skunk Workers were among the earliest returnees. (*Collection of Roadrunners Internationale/CIA*)

Setting up the legendary Area 51 pylon, or radar test pole. The radar antennas, manned and monitored by EG&G, were located a mile away from the pole. (*Collection of Roadrunners Internationale/CIA*)

Less than eight feet of the fifty-five-foot-long pole is visible here. The rest of the pole is underground, below a concrete pad, and rises up from an underground chamber built inside the desert floor. (*Collection of Roadrunners Internationale/CIA*)

A-12 radar cross section test at night. Artificial plumes attached simulating engine exhaust.

Working at night meant less of a chance of being surveilled by Soviet spy satellites. "Getting an aircraft up on the radar test pole took eighteen minutes. It took another eighteen minutes to get it back down," says Ed Lovick. "That left only a set amount of time to shoot radar at it and take data recordings." As soon as technicians were done, they took the aircraft down and whisked it away into its hangar. (*Collection of Roadrunners Internationale/CIA*)

Area 51 as seen from the air, circa 1964. This rare photograph has never been published before. (*Collection of Roadrunners Internationale*)

Yucca Flat, which spans several Areas at the Nevada Test Site, is one of the most bombed-out places on earth. In this photo taken during the winter months from a helicopter above Area 10, the Sedan Crater can be seen in the forefront. A 104-kiloton bomb was buried at a depth of 635 feet, and its detonation produced a crater 1,280 feet wide and 320 feet deep, moving 12 million tons of radioactive dirt in an instant and creating a hole that can be seen from space. (*National Nuclear Security Administration*)

Ed Lovick, at Skunk Works in the mid-1960s, with the waveguide, as he works to reduce the radar cross section for the A-12 to meet the CIA's demands. (*Collection of Edward Lovick/Lockheed Martin*)

A-12 ejection-seat test on Groom Lake's dry lake bed. (*Collection of Roadrunners Internationale/CIA*)

The A-12 Oxcart hidden behind a barrier at Area 51. It took 2,400 Lockheed Skunk Works machinists and mechanics to get a fleet of fifteen ready for the CIA. Visible on either side of the aircraft are the uniquely adjustable inlet cones that regulated airflow and allowed the CIA spy plane to cruise in afterburner and reach peak speeds of Mach 3.29 by May 1965. (*Lockheed Martin*)

Richard Bissell, known best for his role in the Bay of Pigs fiasco, was the CIA officer who built Area 51 from the ground up. In this rare photograph, he shakes hands with CIA pilot Louis Schalk after the first flight of the A-12 Oxcart in April 1962. Bissell had already resigned. (*Lockheed Martin*)

The A-12 Oxcart lands on the runway at Area 51, April 1962. (*Collection of Roadrunners Internationale/CIA*)

Charlie Trapp was chief of Rescue and Survival at Area 51 from 1962 to 1967. It was in this H-43B helicopter that Trapp found the body of Oxcart pilot Walt Ray and his airplane after a fatal crash. Trapp received the Air Medal for the twenty-five-day operation.
(Collection of Charles E. Trapp)

CIA pilot Ken Collins, in full flight gear, hanging above the Area 51 swimming pool during ocean-survival training circa 1965. Charlie Trapp sits on the diving board with a technician, name unknown. (*Collection of Charles E. Trapp Jr.*)

Radar station at the top of Bald Mountain. (*Collection of Charles E. Trapp Jr.*)

The A-12 trainer during a test flight. Note the two canopies, one for the instructor pilot and another for the trainee. The A-12 trainer aircraft could not reach the upper Mach numbers; CIA pilots experienced that remarkable feat on their own. (CIA)

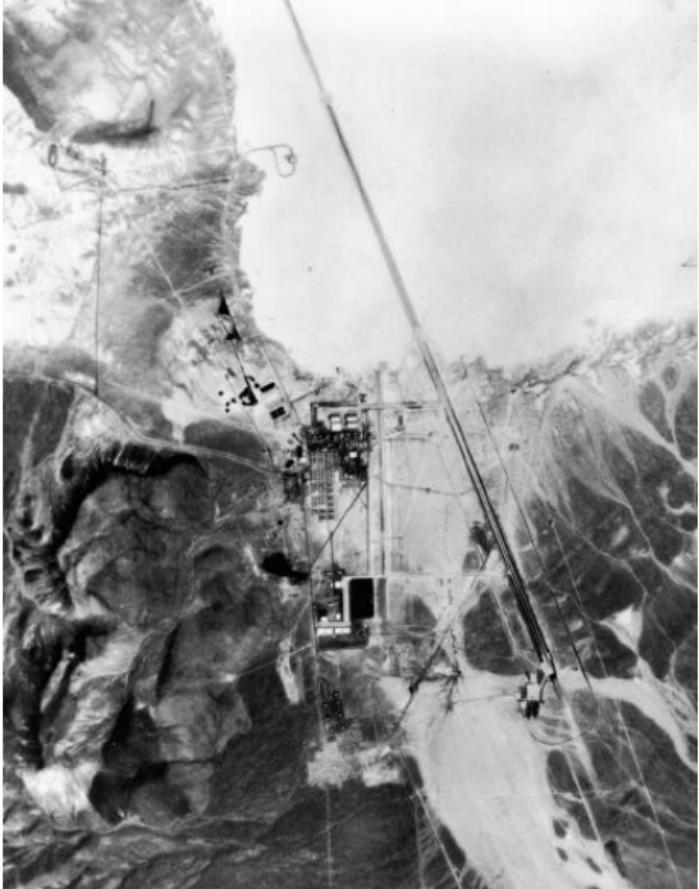

This CIA project, code-named Tagboard, was an Oxcart with a Mach 3 drone on its back, circa 1965. To avoid confusion with the A-12, the mother ship was designated M-21 (as in "mother") and the drone was designated D-21 (as in "daughter"). (*Collection of Lockheed Martin*)

Former U-2 spy plane pilot Tony Bevacqua flies over Hanoi in the fabled SR-71 Blackbird, the Air Force variant of the A-12 Oxcart. This reconnaissance photograph shows an SA-2 missile being fired at Bevacqua from a ground station below. It was the first time an SR-71 was ever fired upon. July 26, 1968. (*Collection of Tony Bevacqua/U.S. Air Force*)

Colonel Hugh "Slip" Slater served as commander of Area 51 during the Oxcart program. Before he was put in charge of Project Oxcart, he served as commander for the CIA's Black Cat U-2 Squadron, which flew covert espionage missions over China. Here he is with the YF-12, the attack version of the A-12 Oxcart, circa 1971. (*Collection of Colonel Hugh Slater/U.S. Air Force*)

Area 51 as seen from above in 1968. (U.S. Geological Survey/Federation of American Scientists)

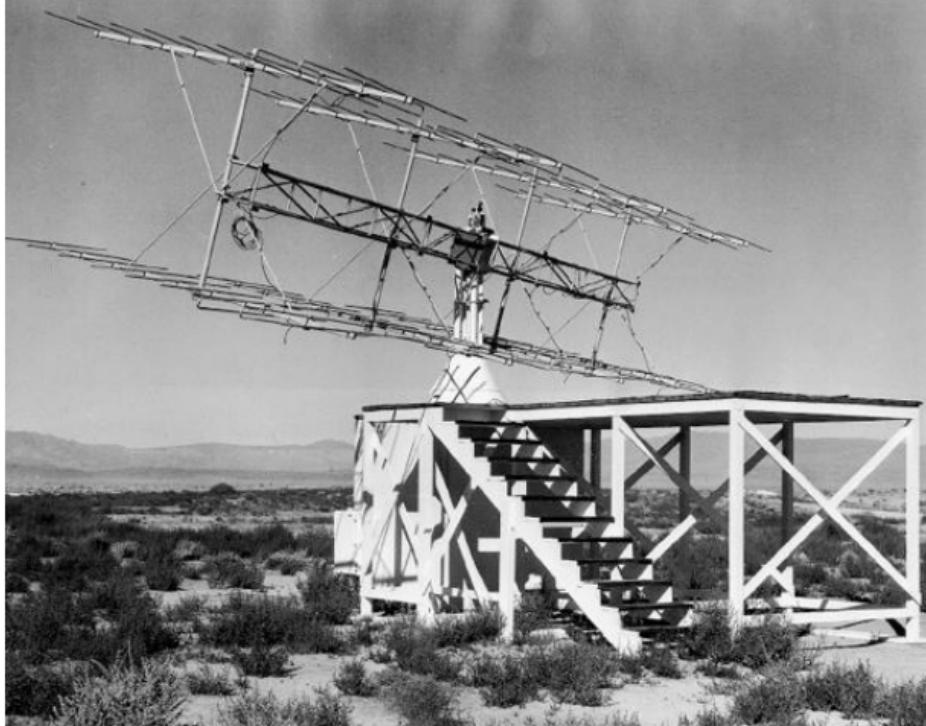

Frank Murray started out flying chase on Project Oxcart in the F-101 Voodoo. After CIA pilot Walt Ray was killed outside Area 51 during testing, General Ledford asked Murray to take Ray's place. Here Murray is on Kadena, Okinawa, before a Black Shield mission over North Vietnam. (*Collection of Frank Murray*)

Jack Weeks and Ken Collins preparing for a Black Shield mission over North Vietnam, inside the command center on Kadena in 1968. A few months later Weeks would be presumed dead; no trace of the A-12 airplane or his body was ever found.
(Collection of Ken Collins)

Area 51 radars, circa 1968. T. D. Barnes and his fellow EG&G Special Project engineers worked in the building at left. To pass the time when the Soviets pinned them down with spy satellites, they pulled pranks, like painting odd-shaped aircraft on the tarmac and heating the images up with hair dryers to add a heat signature. (*Collection of Thornton D. Barnes/Roadrunners Internationale*)

Radar antennae on the outskirts of Area 51, 1968. (*Collection of Thornton D. Barnes/Roadrunners Internationale*)

T. D. Barnes, age nineteen, serving in Korea in 1956. A photo of his new bride, Doris, sits on his desk in this photograph, as it still does in 2011. Barnes, a radar expert, started working for the CIA in 1958. (*Collection of Thornton D. Barnes*)

The Beatty High Range, where radar expert T. D. Barnes worked for joint NASA/CIA projects prior to his transfer to Area 51. From Beatty, Barnes could track airplanes over at Groom Lake, sixty miles as the crow flies. (NASA)

A Russian MiG 21 inside a hangar at Area 51. The CIA borrowed one from the Mossad, reverse engineered it, and then flew it in mock air battles over the Nevada desert. This secret program, which took place in the winter of 1968, was called Operation Have Doughnut and gave birth to the Navy's fabled Top Gun program. (*Collection of Roadrunners Internationale/U.S. Air Force*)

Apollo astronauts trained on the subsidence craters at the Nevada Test Site before they went to the moon. Ernest "Ernie" Williams was their tour guide; he helped CIA engineers locate the original water spring at Area 51. (*Department of Energy*)

Astronauts study the geology on the atomic craters while carrying mock-ups of space backpacks and other gear. (*Department of Energy*)

Richard Mingus worked security at Area 51 and the Nevada Test Site for decades. He is seen here during weapons training in 1979. (*Collection of Richard Mingus/National Nuclear Security Administration*)

A Predator drone on the tarmac at Creech Air Force Base, Nevada, June 2008.

Located just thirty miles south of Area 51, the airstrip here was formerly called Indian Springs. It is where atomic sampling pilots once trained to fly through mushroom clouds; where Dr. Edward Teller, "father of the H-bomb," used to land before atomic bomb tests; and where Bob Lazar says he was taken and interrogated after getting caught trespassing on Groom Lake Road. (*U.S. Air Force/Steve Huckvale*)

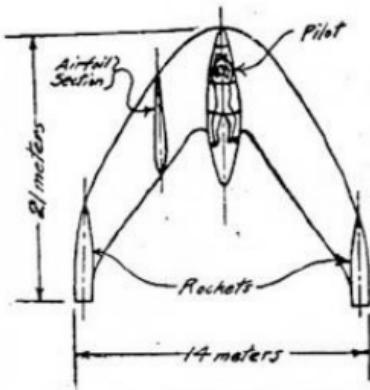

From Creech Air Force Base, Nevada, U.S. Air Force pilots fly drones over Iraq and Afghanistan using remote control. (*U.S. Air Force/author collection*)

Site of former EG&G offices on the edge of downtown Las Vegas as it looked in 2009.

Dedication

For Raini.

*Thanks for loving me through the process
and putting up with
my vacant pillow
on those dark, late nights
when the Muse came calling.*

Acknowledgments

Two things I learned while writing this book: One is that it is far less daunting *writing* a book than it is *completing* a book. And two, the process itself would be much less fraught with distraction and delay were my office located *outside* my home. And on the heels of having said that, I want to thank my wife, Raini, who did everything in her power to help keep the process streamlined, while wrangling our toddler son, Flynn. I want to thank her for all the cups of coffee and meals she brought to me here at my desk while I stared at this computer screen and tapped away at the keyboard. That's love. Her burgeoning pregnancy swelled during the writing of this book, and we watched the baby girl kick as I read and re-read and re-re-read this book out loud to her. Without Raini, this monumental task would have been far less enjoyable a process, and I want to express how happy I am that she was here.

My dear friend Marie D. Jones, a well-established author, has not only been a friend, but a great sounding board. It was Marie who saw my manuscript before it was really even a manuscript at all, and encouraged me to pursue it to its present form. She has been a great help, listening to my woes, worries, caterwauling, excitements, and downright exhausted frustrations. I want to thank her for reading, critiquing, and encouraging. Without her, this book would not be a reality.

Craig Hines is a true friend and a grossly out-of-proportion inspiration. From the day we first met, we have engaged in many conversations fraught with philosophy, theology, cosmology, and just about every “-ology” in between. He is a true scholar and has been an invaluable source and encouragement as I wrote this book.

Micah Hanks of the GralienReport.com has been a friend who has kept the fire burning beneath my feet. There were times I seriously considering quitting, but he read the early manuscript and was an uplifting source of encouragement. Thanks for being there, Micah.

Dr. Charles Aling, while you may not agree with everything I have written in this book, I want to thank you for being the very first person who ever instilled in me a love of biblical mysteries and archaeology. From the very first time you sat down with me in the crowded narthex of our church, way back when I was 12 years old and doing a report on the Pharaoh of the Exodus, you have always been willing to be my consultant, my seminary professor, and now my friend. Thank you for the irreplaceable spot you hold in my heart and mind. And thank you for instilling in me the love of history.

My daughters Abigail and Bryn are the lights of my life. They have always been there believing in everything I do, every step of the way. Now they are out on their own and I want to let them know how much I believe in them.

Sam, I am so happy you are here. Sorry for all the postponed walks and excursions while I was completing this book. I look forward to spending some extra time with you in the upcoming weeks.

Flynn, while you are too young to remember these things with any clarity later on in life, your many interruptions, coffee-cup tippings, and general calls for my attention are eclipsed by my wonderful memories of you sitting in my lap while I typed. You are a complete joy to me and a living response to the question “Why?”

For all of you who have enjoyed my lectures and writing over the years, thank you for your support, encouragement, and for being here.

[About the Author](#)

Foreword

The first drop of water splashed atop his head unexpectedly, causing him to cease his work and glance upward. He wiped the sweat from his brow, his tired eyes struggling to focus on the darkness forming in the heavens above. Another raindrop fell against his skin, and his gaze returned to the ground. His own reflection rippled chaotically across the newly formed puddles at his feet. As a crowd began to gather around him, his trembling hands reached for his tools and collected them into his arms. It was time.

“Is this your lord’s great deluge, Noah, you mad man?” yelled one of the bystanders, inciting the rest of the mob to laugh mockingly amongst themselves.

Suddenly, a loud crack of thunder boomed and cut through the crowd’s licentious laughter. They were instantly silent as uneasiness began to rise up within their guts, much like the pools of water growing beneath their feet.

Noah rushed toward the ark, the anxious voices of his family calling to him from within the wooden structure. His progress was hindered as he trudged through the mud and water. Although his sandal became lodged in the mire, he slipped his foot free and continued to run. He refused to be deterred by the unrelenting shouts and panicking cries of his pursuers. His sons hurried him aboard and began to draw the large door closed.

From inside, Noah could hear the screams of the people he once called friends—their bloodied fists clawing and thumping against the wooden structure. He rested himself against a support beam, desperately trying to catch his breath. Before long, he collapsed to the floor in a sobbing mess.

The cacophony was too horrible to bear and threatened to drive him to madness. Yet he soon found relief as it was drowned out by the pounding of the rain, as though millions of stones were pummeling the rooftop. He wanted to help, but he knew that it was too late for them. It had been too late long before the rains had ever started.

Much like the ripples created by the rainwater in Noah's tale, the events surrounding this epic legend have flowed throughout history and on through the present day. However, just like the natural side effect of such ripples, the crystal-clear images and reflections produced by the still waters of the past have now become distorted and difficult to comprehend. We are expected to make sense of it all, but centuries of repression, persecution, political agendas, wars, and even the mundane activities of the world have washed away the clues and data necessary to bring clarity to the situation.

For example, many people insist that they are familiar with the story of Noah's Ark, but the vast majority of them only know the simplified and largely censored version that they were taught as children. Ancient accounts describing the mating of angelic beings with humans, the birth of their hybrid offspring known as the Nephilim, and the disastrous consequences of such affairs are, if you will pardon the expression, completely alien to most people. Week after week, the faithful flock to places of worship to hear sermons and receive holy guidance in their lives, yet some of the most significant details or implications of the story are never brought to their attention. Most of these individuals will be happy to tell you about Noah, his family, the construction of the ark, how many of each animal were on-board, and so on; but their enthusiastic countenance will quickly diminish into one of bewilderment at the mere mention of the Nephilim.

“The Nef-a-what?”

Exactly.

It is precisely this reason that a book like this needed to be written. If you have never heard of the Nephilim, this book will serve as an excellent introduction to the subject. Even those who are well-versed in the archaic lore of the fallen angels will find some new and interesting information to add to the ever-expanding field of research materials and notes. Scott Roberts is the ideal guide for those who wish to revisit this complex subject, as well as those who are learning about these ideas for the first time.

I first encountered the research of Scott Roberts within the pages of the June 2008 issue of *TAPS Paramagazine* and his article on the antediluvian race of beings known as the Nephilim. Scott's fascination and passion for the topic were evident, and I was humbled that he cited my book, *Gateway of the Gods* (Numina Media Arts, 2007), as a primary source and recommended reading to his audience. Little did I know that at the same time I was composing a message to thank him for acknowledging my research in his article, he was contemplating if he should contact me. After a few e-mail exchanges and enthusiastic phone calls, a new friendship was born.

Since that time, I have been interviewed on Scott's radio show on several occasions, and even spoke alongside him in collaborative presentations at paranormal conferences. One of Scott's foremost traits is an eagerness to ask questions and to learn, and he is often enthralled by the process of examining and interpreting evidence. He is just as fascinated by the topic now as he was years ago—probably even more so. Beyond that, however, are his willingness and determination to teach and share what he has learned over the years, including all of the ups and downs, pitfalls, and dead-ends that he has encountered. Scott and I may not always agree on certain interpretations or theories, but we both acknowledge and respect that there are not always definitive answers to the questions we pose, and that we are each seeking different pieces of the same puzzle.

Similarly to how my book served as an inspiration and a piece of the puzzle for Scott, it is my wish that you will also find the same excitement

and curiosity within the following pages. You may already be holding another piece of the puzzle and not even realize it, only to discover that it finally makes sense after reading *The Rise and Fall of the Nephilim*. Like Noah, be vigilant and mindful of the ripples. Recognize the patterns and you will find your answers. Together, we may be able to solve the riddle of our past so that we may ultimately fulfill our destiny.

“Square the Circle.”

Craig Hines

Author, *Gateway of the Gods*

Pittsburgh, Pennsylvania

Preface

I have been asked many times by many people what it is exactly that began my journey down this path. I can only answer that is my *insatiable curiosity*.

This book is the culmination of a lifetime's quest to find the answers to the questions that are seemingly unanswerable. It is not, however, exhaustive in its conclusions. It is, rather, a look into what I believe is one of the greatest events in human history, with far-reaching ramifications and only the slightest hint at discovering the answers.

I am sure to get heat for the conclusions I have drawn, as well as the things I have missed or deliberately avoided. But I will ever and always be open to a good debate.

That humanity experienced an interruption in its ancient past is incontrovertible in my mind. The question of extra-terrestrial interference in our genetics and bloodline is most certainly a reality, though something that will be debated in greater halls of academia and bastions of thinking far beyond my scope and attainment.

Although this little book offers my scholarly surmising and educated conclusions, I have also attempted to be deeply honest and wholesomely transparent in opening up to you the reader, my thoughts, opinions, blatherings, and outright rantings over not only the subject matter, but the philosophies and politically motivated religious trappings I have encountered along the way.

Let me state for the record that I did not set out to offend anyone's religious sensibilities, for I still adhere to the faith in which I was raised and educated. But I have found over the years that there was always some missing element that left so gaping a hole in my theology that it needed to be sought out and addressed, like looking for that missing puzzle piece in the cracks and crevices of the comfortable sofa in the living room.

Yet, though that was the intention of this book, I find that the more I research, study, and root for facts, the more questions come to the surface. It's like driving a shiny new car down an ochre-yellow dirt road on a hot summer day in the country: The farther you drive seeking your destination, the more dust you raise, and soon your luster is completely coated in the fine powder of discovery.

And that is where I stand today. Seeking out the Nephilim has stirred up a great amount of dust, so prep yourself for reading further by putting on your metaphoric safety goggles, lest you allow the dust to settle in your eyes. Read on with an open mind and let the things that might cause you consternation settle into being just a part of the process.

The world as you know it is about to take on a completely different light. And the story of the Nephilim is much bigger than you may have ever imagined.

Scott Alan Roberts

August 30, 2011

Introduction

As a kid, I spent far too many nights lying atop my mother's garage. With arms folded behind my head, I'd stare into the starry sky, consumed by my childhood fantasies of becoming a starship captain who would "boldly go" into that endless black-seeking new life and new civilizations. Yet, it was more than just growing up a product of pop culture and the science fiction of the 1960s and 70s that fired my curiosities. Something deep inside told me that we were not alone in this infinite stretch of expanding universe, and I longed to know the answers to the age-old questions of "why am I here?" and "where do I come from?" Those questions were probably not as articulated in my mind as they seem when I recount them here and now, but they gnawed at me, just the same, on some primordial, undefined level of my genetic make-up. Within every cognitive, rational human being lies that nebulous unanswered haze that rises to the surface every so often, yearning to have answers. And, yet, most of our lives, we shamble through the years, wholly unaware that those desires smolder deep down inside. We subconsciously suppress any wild, weird notions that there just might be answers beyond the realm of what we think we already know and accept. Human beings walk around this world feeling absolutely unconnected to the greater world and universe around them. As a race, we have forgotten how to make this connectivity, and this ties into all aspects of how we perceive ourselves, our loved ones, our politics, our jobs and careers, our deities, our personal spiritualities, and our place in the order of things.

Sure, like many kids growing up in America during the late 1960s and '70s, I attended Sunday school and was taught about the Origins of Man from a Genesis-Chapter-One perspective. And for many years of my life, that was the only source point to which I subconsciously hailed. It was as if the stories of creation were settled long ago in that unquestioning little

child's understanding of how things work. The curiosities and questions that rose later in life from the mental depths were somehow summarily squashed by the teachings that had been put into my head so many years earlier.

But little did I know—for it was something that was never taught, but always skipped-over, avoided, misinformed, or never mentioned—that the very book from which we dogmatically drew our genesis held secretive, mysterious, encoded messages about origins, visitations and beings not of this world. What was once accepted without question as the mystical, magical, miraculous stuff of ancient biblical stories, suddenly took on a very different perspective once I opened myself to the idea that there was more to those stories than I had been told, and much more brewing beneath the surface of what I had been taught.

Remove yourself, for a moment, to a place somewhere in a more shadowy past, before the days of modern psychological discipline and scientific advance. A time when we, the human race, believed that our life's fortunes, illnesses, woes, and serendipitous happenstances were firmly rooted in the spiritual and the supernatural. As we evolved our technology and sciences, we learned more and more about the mind and body, universal expansion and entropy, geological tectonics, and the movement of our solar system around a somewhat smallish star that burned in the Milky Way galaxy. Along the way, we dispensed with our reliance on the ethereal, casting aside our need for gods, devils, and every caste of angel, demon and spirit in between. We corporately tuned-out our hearts, and turned our minds to the methodological pragmatic, allowing science and skeptical thought to successfully supplant faith in that great “something-bigger-than-ourselves.” Quantifiable Fact became the inevitable surrogate for the misty stuff of myth and legend. And while we may not have totally thrown out the baby with the bath water, we have successfully become a culture that discounts anything that cannot be measured by the scientific method, casting dispersions on experiential faith and even the slightest adherence to anything that smacks of an older spiritual belief system.

The paramount endeavor that occupies most of the recorded history of the human race—after the history of war, that is (which, sadly, seems to be synonymous with the history of mankind)—is the great quest for discovery: the seeking-out of the whos, whats, wheres, whys, and hows of our existence. And yet, while attempting, on that quest, to adhere to strict, quantifiable sources, we have let go of the Spiritual; the innocuous, insubstantial, airborne flotsam that, when you actually look for it, seems to permeate every facet of being, down to the very spark of life itself.

So, what if the outmoded, outgrown, discarded superstitions—the things of the unseen, unwanted realms—really do have their basis in some sort of truth? What if the superstitious banalities we brushed aside in the broad swath of our skeptical, scientific hand, were truly the evidentiary stuff of things not seen, the substance of a very real universe that dwelt and operated just below the surface of the visible, tangible world around us? What if there truly exists a viable, legitimate source code that, at times, finds its way through the barrier that divides the diaphanous from the substantive? What if science ain't the end-all, be-all of this universe, and we really are surrounded by forces of good, evil, light, and dark? What if there really are living, vibrant beings who dwell and function beyond the veil of the dimension of the here and now?

Nearly every ancient culture has in its annals, mythological tales of supernatural beings who came to the earth for the purpose of intermingling with human beings. And out of these early encounters came the many subsequent accounts of an ancient universal flood imposed by a god or superior being for the purpose of wiping-out the offspring created by the supernatural intercourse between these beings and humans. In the ancient, pan-cultural understanding, these beings are referred to as angels, demons, spirits—and even gods. The question that begs to be asked is: were they actually part of some spiritual hierarchy of angelic and demonic beings, or were they only labeled as such for lack of a better understanding? Are we seeing the experiential contact of humans with angelics and demonics, or are these supernatural descriptors the only mode of illustrative labeling that ancient man had for understanding who and what they encountered and experienced? Were there supernatural beings who descended and cohabited

with humans, bequeathing an offspring of giants—as many cultures purport—or is there a physical, extraterrestrial connection? Was there a doorway opened from another dimensional reality through which beings—who could be described by ancient man as nothing less than angelic or god-like—visited this dimensional plane?

In some of the apocryphal, non-canonical writings—those books excluded from biblical scripture by the Council of Nicea during the reign of Constantine in 325 CE—we are told of a group of beings known as the “Watchers,” who “orbited” the earth with the divine mandate of “watching over” mankind, but who also desired to take on the self-imposed task of descending to the earth to teach certain skills to human beings, ultimately resulting in a cohabitation and sexual intermingling. The result was a race of god-like progeny called the *Nephilim*.

The word *Nephilim* finds its source in biblical scriptures, both canonical and non-canonical, and that is why the study in this book will focus on those texts, at least as a starting point. “There were giants in the earth in those days, and also afterward,” so says the biblical Book of Genesis, “when the sons of God looked upon the daughters of men and found them fair, and took of them wives as they chose.” The bequeathed descendants became “the mighty men of old, the men of renown.” The literal translation of this passage reads something like: “The Watchers came and took human wives for themselves, as many as they wanted. Their children were the Nephilim of old, the giants.” The accounts of these beings can also be found in the Books of Jasher, Jubilees, and the more recently discovered Dead Sea Scrolls, *The Book of Giants*. The ancient Irish wrote of giant, shining gods called the *Tuatha de Danaan* who later became the Elven Folk of lore and Celtic mythology. The Middle Eastern and Mesopotamian cultures have the *Anakim* (*Anunna/Anunnaki*), and *Rephaim*—along with other beings and races described as having descended from giant Nephilim forebears. The Norse mythologies make reference to *Niflheim*, the underworld ruled by the goddess, *Hel*. The Hindu Vedas and Puranas tell of an antediluvian (pre-flood) giant-god, *Daitya* and the race of giant *Andanari*. Native American cultures speak of highly elusive giant, hairy, big-footed creatures that roam the American forests—just as Tibetan mountain peoples tell age-old tales of

similar, equally elusive giant creatures in the Himalayas. The Greeks have their *Titans* and the ancient Sumerians have their flood epic of *Gilgamesh*, the giant half-god half-man. While these peoples, religions and cultures are widely diverse, their giant and flood mythologies, pictographs and folklore all seem to have common, historical linkages. In the pages ahead, we will explore these varied accounts and mythologies, drawing the obvious—and not-so-obvious—connections and similarities.

If, like me, you attended Sunday school as a kid, we were taught that God sent a great, universal flood to the earth to wipe out the “wickedness of mankind,” sparing only one righteous man and his family along with pairs of every animal on earth, and seven of the ritually clean ones. They all took refuge in a great barge for some 120 days, waiting out the deluge and the receding of the waters. This same story is told in these many other ancient records, with varying plot twists and a different cast of characters. But common to nearly all stories is the root account of extra-terrestrial (“extra”—from without; “terrestrial”—of this earth) beings who descended to the earth for the purpose of intermingling with humans, and having children with them. And common to most ancient accounts is the wrath of a superior being who wages “judgment” on the earth in an attempt to destroy the hybrid descendants as a result—seemingly to no avail, as they are mentioned as being “*in the earth in those days, and also afterward.*”

Cultural traditions from all around the world have myths and legends telling of angelic beings who descended to the earth and interacted with human beings, ushering in some sort of cataclysmic, worldwide destruction of humanity that left scant few survivors. When analysis of the languages used in the various accounts is compared, blatantly similar facts emerge, revealing a commonality between the varied cultural tales, substantiating a corporate mythos: flesh and blood beings who were revered as gods, interacted with humanity in the most intimate of ways.

While there is a lack of scientifically repeatable evidence, there exists a sum of recorded history combined with diverse extant religious texts that comprise a broader picture of antediluvian races and events. Because these

things cannot be quantified by the standards of the scientific method, do the plethora of ancient accounts establish any sort of verifiable proof of a crossover between inter-dimensional or interplanetary races? I believe yes, and that is what I will address in the pages of this book. While the data is not repeatable for scientific experimentation, the historical annals speak loudly and clearly. When there exist such localized myths in geographical regions, repeated by other localized myths in other, far away geographical regions, over and over again, there is a certain scientific methodology at play. There is a message revealed.

Almost more importantly than the physical, textual references and evidences are the spiritual implications that can be drawn. Beyond the accounts of giant beings and extraterrestrial intercourses with humans, we have the spirituality of the matter, spanning the gaps between dogmatic theologies and firmly held systematic beliefs, spawning a broader interconnectivity between religions, cultures, and spiritualities. It is my personal belief that there is much more to discover than has been revealed, and the more we hypothesize, ponder, explore, research, study, and meditate on this wide array of scriptures, facts, folklore, stories, and writings, the more we engage in a responsible dissecting and evaluation of the living, breathing existence of these beings.

Now, you may well ask what qualifications and credentials I possess to write of such things with any modicum of authority. I could hold up my years of incomplete, degreeless education in Bible College and Masters program in seminary as sources for much of what I learned about biblical scripture, but as I have alluded to previously, that education simply left me wondering *more* about the things I had *not* been taught. If exploration and discovery is at the core of every heart and mind, then seeking out the answers by means of personal study and research is what I am presenting here in this book. We are *all* scholars, and we *all* bear a responsibility of rooting out the facts and seeking truth. While this book certainly should never, ever be held up as a quotable resource for universal truth on these matters, it is one man's attempt to find answers that do not simply and blindly follow the dictates of a single belief system. While this effort may represent my early years of speculative imaginings, rounded off by more

years of education and scholarly research, I would call this a work of my heart as opposed to a scholarly tome that will be held as *the* absolute authority on the topics contained herein. I have many more questions than I have answers, but these pages represent honest, educated research that will—hopefully—lead you down a path to your own conclusions and discoveries.

There is so much more out there than what we have been taught. There is so much more out there to discover, uncover, and seek-out.

And then, there is that still, small voice.

My friend, Craig Hines, author of *Gateway of the Gods*, made reference in his book to a “small, quiet voice” that had been speaking to him—not audibly, but deep in his subconscious—telling him to “square the circle.” Like Craig, I have struggled with seeking and finding the answers to questions that delve much deeper than what seems to be lying on the surface. My entire life I have known that there is something lying just beyond the borders of the familiar, reaching far beyond systematic theologies and entrenched dogmas. Before we ever met face-to-face, I found in Craig, through the vehicle of his writing, an able, unwitting ally in my quest to make the square peg of my quest fit into the round hole of the universe.

There is an Old Testament passage where the prophet Elijah, desiring to have a face-to-face encounter with God, is shown a phenomenal sequence of divine events passing by him as he is standing in the cleft of a rock face: wind, earthquake, and fire. The noise of theophany is overwhelming, but it is only with the palpable quiet of the aftermath that God spoke in the sound of sheer silence. It is that same stunning silence, that “still small voice” that has whispered in both Craig’s ears and my own. When you experience the calm stillness of an almost revelatory realization that the seemingly random dots connect, a complete picture starts to materialize and come into full view. As a result, both Craig and I have, in a sense, stumbled upon the

conclusion that we have been asked to “square the circle”—something Craig reminded me of in his private, hand-written note on the title page of *Gateway of the Gods*, the copy of his book he gave to me.

For most of my life, I have insisted that as much as we live and dwell in a natural world, we live and dwell in a supernatural one. The natural and Supernatural are one-in-the-same, and do not exist and function independently of each other. In fact, there is no “supernatural.” There is only the living, breathing, substantive world and universe around us, that ebbs and flows in it’s own mysterious ways. For me, this book is all about coming to terms with the religious efforts of man to explain the misunderstood, and find a better understanding about the things we thought we once knew all there was to know about. *Squaring the circle* is my realization that all things are connected, all religions are connected, all spiritualities are connected in a great web of understanding what and who we are, where we are going, and how we are supposed to get there. I want this book to stand as another effort in attaining that equation, and there may even be theories put forward in these pages that cause you to wince in pause as you attempt to assimilate the information and conclusions offered.

Ancient mankind was visited by beings of another dimension, or from a distant star, who intermingled, seeded, receded, and in some cases reemerged in their interaction with the human race. There are remnants and evidences all over the world in every culture, all one need do is look. Ancient biblical and apocryphal texts tell us that the Nephilim “were on the earth in those days, and also afterward...” And “as it was in the days of Noah, so shall it be [in the end times].”

So sit back in your favorite reading chair, grab your itty-bitty book light. Devour, absorb, and cogitate. Agree or disagree. Above all else, examine and dissect the materials in this book by going to that place where the trappings of societal sterility cannot reach your desire to see things with “older” eyes. Discard what you think you know and see the world and universe around you with a fresher-yet-ancient, un jaded view. Draw your conclusions based on an openness to know, rather than allow current

thought to dictate where you take your beliefs. Ask questions and seek the answers to those questions. Enjoy and ask yourself how *you* can find a way to *square the circle*.

chapter 1

Science Almighty

“Science is built up of facts, as a house is built of stones; but an accumulation of facts is no more a science than a heap of stones is a house.”

—Henri Poincaré,
Science and Hypothesis, 1905

“I spent a lot of time at age eight experimenting... commanding stones to levitate: ‘esir, enots.’ It never worked. I blamed my pronunciation.”

—Carl Sagan

So, I have this pile of stones, each one representing a scientific fact that could be used to build a solid foundation for what I’ll call the “House of the Origins of Humanity.” Yet, they remain in an unstructured heap, because—although each stone may be individually factual, they can be loosely mortared together only by hypothesis, built on the presupposition that humans evolved from lesser forms of primates, who in turn evolved from emergent aquatic species, who themselves evolved from primordial slime. Though these individual facts may indeed comprise my pile of stones, they cannot construct an unshakeable foundation, for they lack concrete coherence. So the house remains in the architectural phase. We know where we want to put the stones; we just are not yet sure how they all fit together.

Science, as we know it, is defined as a branch of knowledge or study of the physical or material world, dealing with a body of facts and/or truths

systematically arranged, showing the operation of general laws gained through observation and experimentation, reflecting a precise application of said fact and/or principles. Science is also the observation, identification, description, experimental investigation, and theoretical explanation of phenomena, restricted to a class of natural phenomena.

Although science is continually uncovering facts as to variant species that on a hypothetical level demonstrate a mutation within the species, they still lack that definitive link that results in an exclamation of “Eureka!”

This does not nullify the facts—that metaphoric pile of stones—but it certainly wreaks havoc with the proposed hypothesis.

To continue following my House of Humanity construct: Science has proven that there are five characteristics that separate man from other hominoids: a large neocortex, bipedality, reduced anterior dentition with molar dominance, material culture, and unique sexual and reproductive behavior.¹ Science has yet to demonstrate that the discovered variants are actual linkages within the Human species. All we know with certainty is that scientists have uncovered numerous forms of fossilized prehistoric skeletal remains, leading them to conclude that they are substantiating the line of human evolutionary ascendancy, albeit with many gaps in the progression, and therefore no real linkages. But they are pretty damned sure that they are correct in their hypothesis.

What science and its practitioners have demonstrated is that fossils exist that provide incontrovertible evidence that various hominid species walked the earth in our primordial past. What they have *hypothesized* is that they are all linked to human evolution. Even the DNA findings at best are interpolated from what scientists *think* maybe appears to be sort of connected to human DNA. They make the stretch to linkage based solely on the educated “hope” that it is “probably so,” despite not having evidence to make it so without a shadow of a doubt. And isn’t that the very same way religious believers cling to their particular version of God?

Science has a love affair with itself. It loves to puff out its chest and declare for itself (as do many religions), yet with the last 150 years of research since Darwin's *Origin of Species* (1859), their accumulated facts have still not gotten them past their original leaping-off point—their educated guess that all these finds are somehow linked, demonstrating an unbroken chain of evolutionary mutation resulting in modern man.

Although science has made great advances in the quest for the identification of linkages in the line of human evolution, science has also been forced to make quantum leaps of faith in order to adhere to pre-established hypotheses. Of course, members of the scientific community wouldn't call it *faith*, but that is the practical outcome.

In a very real sense, science (and I use the term *science* here as representative of the accumulated collective of thought, hypotheses, research, and conclusion embodied in a single entity/word) rose up to find and identify fact, and has established its own "truth" in a sometimes-overt, sometimes-unwitting desire to do an "end run" around spiritual and religious belief. Spirituality existed long before established science, but somewhere at the very roots of understanding, science kicked in as soon as someone raised his or her head and said, "*Hmmm. I know the stars are the placental remains of the Great Goddess in the sky birthing the sun and moon. But... is that just a story, or is there something more... ?*"

The Great Conflict: Science vs. Religion vs. Science vs. Faith

A conflict has existed between science and spirituality—reason versus faith—since the beginning of recorded history, and it seems as if that fight will continue until time itself ends. For many in the scientific fields, there is a need to eradicate all that is not fact, including faith-based spirituality or its

organized religious practices, as well as a denial—at least on an intellectual level—that there is some powerful, divine creative force at play in the universe.

According to evolutionary biologist Richard Dawkins, scientists never need to rely on faith, at least “not in the sense of faith as meaning belief in something for which there is no evidence.”² Dawkins, being a self-acclaimed atheist, says that any expression of “faith,” on his part, is based upon his confidence in the scientific method alone. In agreement with Dawkins is pop cultural skeptical icon James Randi, who by trade is a stage magician and scientific skeptic. He has made a notable name for himself out of debunking the paranormal and the pseudo-scientific—which is not in and of itself a bad thing. Randi says, when hailing to his experience of being tossed out of Sunday school as a kid, “I am an atheist, tried and true.”³ Since then he has dedicated his life and career to finding ways to prove that science is the end-all and be-all when it comes to the great controversies surrounding the big questions of faith, religion, and the great mysterious unknowns of life and the universe.

Carl Sagan’s credo, which has become the broadly adopted Skeptic’s Credo, states that “extraordinary claims require extraordinary evidence.”⁴ In that mantra, agenda-driven skeptical scientists have eradicated the need for any sort of faith-based belief, save that of their own exponential leaps of faith in science and the scientific method, as earlier demonstrated with the inability to find and establish the “missing link.” These very same skeptics will on one hand revile faith, religion, and spirituality as outmoded and lacking in reason, while on the other hand accept as fact the presuppositions and as-of-yet unproven theories of things such as evolutionary ascendancy. In a very real sense, the scientist and dyed-in-the-wool atheistic skeptic have, in decrying faith, established Scientific Skepticism as the new surrogate for faith, and in its own rationale unwittingly declared itself the New Religion.

The definition of religion is:

1. A set of beliefs concerning the cause, nature, and purpose of the universe, especially when considered as the creation of a superhuman agency or agencies, usually involving devotional and ritual observances, and often containing a code governing the conduct of human affairs with a strong emphasis on practice.
2. A specific fundamental set of beliefs and practices generally agreed upon by a number of persons, sects or collectives.
3. The body of persons adhering to a particular set of beliefs and practices: a world council of religions.
4. The life or state of a monk, nun, etc.: to enter religion.
5. The practice of religious beliefs; ritual observance of faith.
6. Something one believes in and follows devotedly; a point or matter of ethics or conscience: to make a religion of fighting prejudice.
7. Archaic. Religious rites.
8. Archaic. Strict faithfulness; devotion: a religion to one's vow.⁵

There is cause and nature recognized by the scientific community, and a devoutly strict adherence to its “religious” practice, but they seem to collectively come up short when it comes to acknowledging a spiritual point-of-view, and they collide in epic proportions with spirituality and religion altogether. The true skeptical and scientific mindset should more appropriately recognize the “unknown” quantity underlying religion as an *undiscovered country*, and rather than eliminate it altogether from discourse and acceptance, place it more aptly in the category of “things we don’t know for sure.” The scientific community, in aggressively attempting to eliminate—or at the very least diminish—the role of spirituality and religion from the playing field, have in a very real sense established themselves as the authority on all things unverifiable. Dawkins, again, labels religion as “trash,” and in so doing, elevates himself and his scientific colleagues to the status of “secular gods.” When religion is deposed by a conflicting mindset, that mindset then promotes itself to the lofty echelon of God’s Surrogate.

The Church of Skeptic

I have a friend who is a Skeptic, a true believer in science and skepticism; a Michael Shermer devotee. I have seen this friend during the last 20 years evolve (or “devolve,” depending on how you see things) from a Roman Catholic to a die-hard skeptical atheist, so much so that I now, amicably, refer to him as a “reverend in the Church of Skeptic.” He bristles at this moniker, yet takes it in the lighthearted fashion in which it is delivered; at the same time, he is also representative of the brand of skeptic who has less true questioning than he does unwitting cynicism. And let it be said for the record that I, too, have a skeptical mind, but my skepticism has not crossed over the boundary into arrogant adherence to only the things I can prove by means of the scientific method. Science and Skepticism, too, need to be tempered by an attitude of wanting to discover, learn, grow, and know, not a leaping-off point of absolute denial of anything outside the realm of provable science.

“The threats to human dignity and integrity are being ramped up to extraordinary levels of stress, when what we most need is wisdom,” says Yale computer guru David Gelernter,⁶ decrying the dangerous trend of know-it-all scientists promulgating the idea that “religion and spirituality are trash.” What we are seeing trended more and more is that wisdom, moral seriousness, and adherence to religion and spirituality are coming under grave and perpetual attack, and more often by the people who are prominent figures in the scientific community. Crusading atheism combined with an aggressive desire to secularize the world through the funnel of science and skeptical thought has become a major hurdle to accepting the fact that not all things are measurable by the scientific method.

The first step needed in order to help science and faith find common ground is a starting point of admitting our absolute ignorance. We know nothing. None of us, with all our glorified sciences and metaphysical mumbo-jumbos, really know anything at all. We have experienced only the tip of the iceberg when it comes to the physical workings of our universe,

and we need to constantly question and test and discover, then question and test to discover more. This process is what separates those who would remain in self-imposed make-believe worlds, from those who would be seekers of fact and truth.

Eugenie Scott, the director for the National Center of Science Education, was asked a question about whether science could ever prove or disprove God's existence. With a wry smile, she said, "Well, we don't exactly have a 'God-ometer,' do we?" And she went on to express that she was highly skeptical that such a device could ever be conceived, let alone manufactured. We don't, and probably never will have a test or device that could measure that sort of information.⁷

Some things are simply unquantifiable. This doesn't mean such things don't exist; it just means that there are some things that we may never know for sure. As appealing as it would be to assert with 100-percent certainty that God exists, we simply cannot. The existence of God is something that can only be accepted by faith—not blind faith, but a faith that recognizes there are some veils that cannot be pierced. The scientific method can only take us so far, and that explanation will only ever leave us dissatisfied. But, then again, we can never be satisfied until we reach that unknown point.

So, to debase belief in the divine and the unexplained mysteries that surround us simply because they are not definable by science, is to display utter arrogance at best and total stupidity at worst. Science, without the understanding of how everything loops together with faith and spirituality, is only half the picture.

And then there's the other side of the equation. Pope John Paul II, in an address to the Pontifical Academy of Sciences in Rome, declared on October 27, 1996, his acceptance of evolution as a fact of nature, noting that he believed there was no real war between science and religion. He said, in part, "Consideration of the method used in diverse orders of knowledge allows for the concordance of two points of view which seem

irreconcilable. The sciences of observation describe and measure with ever greater precision the multiple manifestations of life...while theology extracts...the final meaning according to the Creator's design.”⁸ Christians and the Religious Right reacted angrily to the Pope's statements, and Henry Morris, president emeritus of the Institute for Creation Research responded, “The pope is just an influential person; he's not a scientist. There is no scientific evidence for evolution. All the real solid evidence supports creation.”⁹

And so the battle wages on between mindsets, ideologies, science, and religious points of view.

But what about myth and legend? The human race bears the scars of ancient interruption. Science observes the details, but does little to recognize the random elements that lie outside the realm of the observable and testable. Spirituality opens the door to usher in any whacked-out theory or belief, as long as the person expressing the theory is sincere about his or her faith. One allows for the possibilities, while the other closes the door to anything that is unquantifiable or improbable by the scientific method.

True science is *nothing* more than us catching up to what we already naturally know and understand on a spiritual level. That level of understanding is not outside our grasp. We simply have to be unafraid to reach for it.

In his book *The Demon Haunted World*, Carl Sagan spoke of the two things instilled in him from a very early age: “My parents ... in introducing me simultaneously to *skepticism* and *wonder* ... taught me the two uneasily cohabitating modes of thought that are central to the scientific method.”¹⁰

Be scientific. Be skeptical. Be religious. Be spiritual. But never lose touch with the wonder that is beyond our finite ability to quantify that which is unquantifiable.

The Sons of God descended from the heavens and intermingled with the daughters of humans, taking whomever they chose, and the women conceived and bore children. Myth? Superstition? Religious folly? Scientific fact? Let's move on to see how all of these blend in the stew pot of ancient history, contemporary experience, and the application of scientific methodology.

“A knowledge of the existence of something we cannot penetrate, of the manifestations of the profoundest reason and the most radiant beauty—it is this knowledge and this emotion that constitute the truly religious attitude; in this sense, and in this alone, I am a deeply religious man.”

—Albert Einstein

“Enlightenment is not imagining figures of light, but making the darkness conscious.”

—Carl Jung

chapter 2

Who's Your Daddy? From Elohim to Nephilim

“A rose by any other name would smell as sweet.”

—William Shakespeare

“Then God said, ‘Let us make humankind in our image, after our likeness, so they may rule over the fish of the sea and the birds of the air, over the cattle, and over all the earth, and over all the creatures that move on the earth.’”

—Genesis 1:26

The Nephilim (Hebrew: נְפִילִים) have spawned myriad cultural mythologies, appearing in variant forms and by various names throughout the annals of ancient historical and religious texts, from the offspring of the Sons of God to the bright, shining Tuatha de Danaan of the ancient Celts, from Gilgamesh of Uruk to the Bigfoot of Native American lore. Ranging from the religious to the ufological, the Nephilim seem to defy reasonable explanation except within two basic trains of thought: the metaphysical, which is open to many various forms of spirituality and religious explanations, and the scientific, which may not wholly deny the existence of the spiritual, but will most likely not allow for the incorporation of such wondrous folly in making a determination of veracity.

On the spiritual/metaphysical track it is easy to accept non-scientific accounts of spirit beings, angelics, and demonics when attempting to

comprehend the existence of a race that “descended from the heavens” and cohabited with human women. It’s even easier to believe when you consider the many accounts of demonically intrusive sexual encounters, not to mention similar tales of alien abductions and impregnations. But these sorts of explanations describe interactions that comprise a speculative mix of religion, spirituality, and meta-science—and many times a sort of parapsychology—that is open to the possibilities of things beyond veils that are seemingly impossible to pierce by the finite mind and the study of science. Yet, even a more scientific approach, when it is not wholly dismissive of the entire notion of the Nephilim, while seeking out non-religious facts, sometimes yields just as fantastical an understanding.

No matter which path you allow to dictate your train of thought, it is simple historical fact that the Nephilim, in their various forms, permeate the writings of ancient civilizations on a nearly pan-cultural basis. And no matter whether you follow a spiritual, metaphysical, parapsychological, or scientific track, one fact stands firm: The very name of these mythical beings finds its source in the Old Testament faith writings of the Book of Genesis, with the Hebrew word *Nephilim*. In that source book, the Nephilim themselves are said to be the hybrid offspring of the “Sons of God,” or, as the Hebrew calls them, the *bene haElohim*—the Watchers of the apocryphal book of Enoch, whose pages include accounts of the Nephilim that parallel and even amplify the scant details that appear in the Book of Genesis, leading many to believe that the two accounts were based in the same source. These so-called Sons of God were, in turn, bequeathed/birthed/created by *Elohim*, the Hebrew name given to God so many thousands of times in the Jewish books of faith and law. So, in seeking out this mythical race, the big question is this: Do we define the Nephilim by spiritual texts and a faith-based understanding, or are there explanations that fall outside the realm of spirituality, despite finding the name source-point only within the scriptures of Jewish spiritual literature? Larger yet, is this question: Are the two trains of thought actually one in the same? Either the religious definitions are accurate, or the ancients simply defined these mythic beings in the only terms they could understand: those that fell within their finite realm of spiritual comprehension of how the

universe worked, while at the same time upholding a monotheistic belief in God and his created caste of spirit beings.

Now, I am not going to suggest that the Book of Genesis is not factual. Nor will I suggest that the God of the Bible is not who the writers of those books say He is. I will, however, state emphatically that the Bible is a book of faith, governed by the dictates of a faith-based spirituality, thus rendering its facts the products of not only a faith-based culture, but a theocratic one.

For the purposes of scholarly integrity, I have chosen—as a leaping-off point—to examine first, the Hebrew source of the word Nephilim—**נְפִילִים**—and to do that, we have to take the whole thing back a notch further to the headwaters of the source point: the Hebrew scriptures. If the Nephilim are the mythical offspring of the Sons of God—the *bene haElohim*—then who is the Father? Who is this Elohim that bequeathed them?

God Among Many Gods

When I first learned that one of the most common names for God was a plurality, I began to question the way I thought about much of what I had been taught about the Bible. And by “plurality,” I don’t mean the triune manifestations of the Godhead: Father, Son, and Holy Ghost (in other words: the Trinity). I am referring to the Old Testament name *Elohim*—**אֱלֹהִים**—who is said to have bequeathed the *bene-haElohim*—**בְּנֵי־אֱלֹהִים**, the Sons of God—who then had intercourse with human women and gave birth to the hybridic race of Nephilim.

More than 2,500 times in the Old Testament, the Hebrew word used in reference to the name of God is *Elohim*. Interestingly enough, the word is not a mere name alone, but it is also a descriptor, in that it details physical attributes of the Hebrew God, also known as Yahweh [Jehovah]. The word *Elohim*, itself, denotes plurality, specifically “more than two.” But it is also

most commonly used in the Hebrew texts only in conjunction with a singular verb or adjective, which can sometimes indicate a singular, individual God with a plurality of vast and many powers, depending on the context of the passage wherein it is found. There is also the argument that *Elohim* is a statement of the *Hashalush HaKadosh*, or the Trinity, despite the fact that there is no indicated number limiting the plurality of *Elohim* to “three.” Anti-Trinitarians would tell you that the term *Elohim* suggests only the multiplicity of power and majesty, as opposed to suggesting the word indicates a plurality of beings or multiplicity of entities individually combined into a collective, singular God. The word *Elohim* is also used as a collective plural reference to the many denounced false gods and idols throughout the Old Testament.

The literal translation of the word *Elohim* is “God of Many Gods,” more simply: “God of Gods.” But to render this as a wholly polytheistic term would fly in the face of how Judaism’s staunchest scholars would interpret the word. No higher authority on the Hebrew language can be found than the great Hebrew scholar Wilhelm Gesenius. He wrote that the plural nature of *Elohim* was for the purpose of intensification, and was related to the plural of majesty and used for amplification. Gesenius states that “the language has entirely rejected the idea of numerical plurality in Elohim (whenever it denotes one God) and is proved especially by its being almost invariably joined with a singular attribute.”¹

“That the language has entirely rejected the idea of numerical plurality in **אֱלֹהִים** (whenever it denotes one God), is proved especially by its being almost invariably joined with a singular attribute (cf. § 132 h), e.g. **שָׂעָלְתִּי אֱלֹהִים צְדִיקָם** 710, &c. Hence **אֱלֹהִים** may have been used originally not only as a numerical but also as an abstract plural (corresponding to the Latin numen, and our Godhead), and, like other abstracts of the same kind, have been transferred to a concrete single god (even of the heathen).”²

In other words, although it is very tempting to extrapolate from the word *Elohim* a definition that renders it literally as “God of Many Gods,” it is more likely than not that in the Old Testament, a Jewish book of faith, it would be wholly inconsistent with the Jewish religion to present their God as anything but a singular, individual, monotheistic deity. To render the word *Elohim* as signifying that the Jews held to a polytheistic expression of God, would simply fly in the face of their entire monotheistic belief system.

Though certainly debated, the name *Elohim* (most probably) has to do with the first God-encounter that humans experienced,³ at least within the Hebraic Jewish mindset. Those initial experiences produced awe or fear for the multiple powers of nature, as is reflected in the Old Testament where the word *Elohim* is used for God Himself. But it is also used for the complete plurality of so-called idolatrous gods, the wooden and stone images that people worshipped in their homes and village localities. *Elohim* is even used to mean “angels” and “judges.”

In the final analysis, the name *Elohim* has something to do with powers: The Powers That Be; The Many Powered; Power and Majesty. In the traditional Jewish view, *Elohim* is the Name of God as the Creator and Judge of the universe. In Exodus 3:6, the plural name of *Elohim* is modified by its singular personal pronouns, said to be spoken by God in the first person:

“The Holy One, Blessed be He, said to those, ‘You want to know my name? I am called according to my actions. When I judge the creatures I am Elohim, and when I have mercy with My world, I am named YHWH (Jehovah). . . .’”

(Exodus 3:6)

Yet, the Hebrew word *Elohim* does, without question, signify a plurality. Deciding whether or not that plurality indicates “more than one God” versus “many powers and amplified majesty” is where the debate starts and

ends. When one usage of the word is said to mean a singular God with a vast array of powers, and another translation of the word indicates a plurality and/or vast array of idols and “false gods,” you see the inherent conflict and subsequent confusion. However, as we talked about earlier, it is all about context and the usage of the word as it is modified by the surrounding verbs and adjectives.

“In the beginning, God (“Elohim”—plural) created (“bara”—singular) the heavens and the earth.”

(Genesis 1:1)

Is the word *Elohim* being used in this context a demonstration of the creative power of God representing the volitional act of a divine collective of many gods engaging in the act of the first creation? Is it a singular entity representing many gods? Or is it the God of Vast and Many Powers doing the creating? You could argue that the act of creation is being done by a singular representation of *Elohim*, or, if you take it outside the religious mindset of the author of Genesis, you could interpret the language as meaning the creative act performed by a vast host of many gods embodied in the singular *Elohim*. However, you would have to consider the point-of-view of the author of the Book of Genesis: Moses, so says Jewish tradition (and I believe there is no reason to doubt this fact, as I will demonstrate in the following chapter on Moses and the 18th Dynasty of Egypt). Moses was the great “Law Giver” of the Hebrews, establishing the Ten Commandments, whose very first mandate in the first commandment was, “*I am the Lord your God who brought you out of the land of Egypt, from the house of slavery. You shall have no other gods before Me.*” Should the emphasis of this commandment be placed on the person of the singular *Elohim* who commands that “nothing” should be put before him in the act of worship? Or should the emphasis be on the “other gods,” interpolating that other gods exist, but Jehovah God is the one who is demanding your worship if you are to follow him, alone? Or is it simply metaphoric language?

“Then God (Elohim) said, ‘Let us make mankind in our image, in our likeness, so that they may rule over the fish in the sea and the birds in the sky, over the livestock and all the wild animals, and over all the creatures that move along the ground.’”

(Genesis 1:26)

Is God, in this passage, referring to Himself in the third person, much as would an earthly monarch when speaking of the vast powers he or she holds in sway over his or her subjects? Or is this an example of a plurality of gods speaking as a singular entity?

The examples could go on to a point of trivial exhaustion, as there are more than 2,500 of them throughout the Old Testament. So let us (plural) bring (singular) our (plural) examination (singular) of the word *Elohim* (plural) to a conclusion, putting it in context with our entire subject matter, the Nephilim:

The source of the word *Nephilim* is found only in ancient Jewish religious writings, including the Bible’s Old Testament Books of Moses, the apocryphal book Book of Enoch, and a few other scant biblical and non-biblical references. Whether you like it or not, the Judeo-Christian books of faith are teh absolute source point for the word itself. That is not to say that there are not dozens of other ancient cultures (see [Chapter 4](#)) that record accounts of the same beings under different labels and names. But for the sake of going to the source of the most commonly understood and used word for these beings, the Nephilim are sourced in Jewish scriptures. According to Genesis, it was *Elohim* who gave birth to or created beings known as the Watchers (according to Enoch), who are called the Sons of God (*bene haElohim*) in Genesis [Chapter 6](#). It is said that these Sons of God descended to the earth and cohabited with human women, producing offspring called the Nephilim. Bing. Bang. Boom.

But we still have one intermediate step to look at before getting to the Nephilim themselves—namely, their unearthly lineage, the one half of their cross-bred parentage: the *bene haElohim*, or the Sons of God.

The Sons of God

Now that we have examined the plurality of the name *Elohim*, and the presentation of the Jewish concept that it meant (more likely than not) a singular God with vast majesty and possessing of many powers, we now need to examine his offspring. They are the characters in the account of the lineage of the Nephilim known as the Sons of God, the *bene Elohim* or *bene-haElohim*, the “parents”—or least one half of the parental line.

“1 When human beings began to increase in number on the earth and daughters were born to them, 2 the sons of God saw that these daughters were beautiful, and they married any of them they chose. 3 Then the Lord said, “My Spirit will not contend with human beings forever, for they are mortal; their days will be a hundred and twenty years.” 4 The Nephilim were on the earth in those days—and also afterward—when the sons of God went to the daughters of the human beings and had children by them. They were the heroes of old, men of renown.”

(Genesis 6:1-4)

These four verses from Genesis [Chapter 6](#) appear in the preamble to the account of Noah’s Flood. Noah’s name appears for the first time in the text in verse 8, where it states that he “*found favor in the eyes of the Lord*.” The passage goes on to state that Noah (and his family) was the only “righteous” human being left on the earth, and that is why he was chosen to be the builder of the great ark—or barge—which would preserve him, his family, and pairs of animals from the great watery judgment of God’s wrath. (We

will examine later the meaning of the word *righteous* and find out that it meant much more than simple spiritual goodness.)

These four verses comprise a very interesting passage in that it differs in writing style from the rest of the Book of Genesis, having earmarks of having been extracted, edited, and perhaps even plagiarized—at least in part—from other extant contemporary source material. If you’ve ever written a term paper for school, it’s like paraphrasing bits and pieces of material from external sources without quoting that source. After extensive study of this passage, Dr. David Penchansky, chair of the University of St. Thomas (St. Paul, Minn.) stated in a personal conversation with me:

This passage has been edited, either by the writer of Genesis, or by later scribes. It most certainly does not match the writing style of the rest of the book, and the language in which it is written is “choppy,” almost as if it is reproduced in the text as snippets from other source material. And the account was, obviously, far too well-known at the time to be omitted completely.

Who Are the Sons of God?

The term *bene haElohim* (בְּנֵי הָאֱלֹהִים), or Sons of God is found only four times in the Old Testament: Genesis 6:1-4; Job 1:6 and 2:1; Job 38:7; Psalm 29:1.

In the Genesis 6:1–4 passage we are told that the Sons of God looked upon human women (other translations refer to these women as: “the daughters of men/man; men’s daughters; the beautiful women of the human race; and even, ‘these girls’”) and “saw that they were beautiful.” In some translations, the Sons of God “lusted after them,” and then “married any of them they chose,” or in some translations “they took the ones they liked.”

The title, Sons of God, has been viewed several ways, and various translations refer to them as “God’s Sons, heavenly beings, and Sons from the Heavens.” It is clear to most biblical scholars that the title, Sons of God refers to angelic beings, and this is supported by other passages throughout the old and new testaments, as well as the apocryphal Book of Enoch, and various other historical texts. It is interesting to note that even Jesus of Nazareth, himself, was called “The Son of God.”

However, different views are taken on the Genesis 6:1-4 passage:

Sons of God simply refers to men, the sons of the nobles who were patrons of the school of the prophets, who married daughters of the common people. This is the view of many Jewish authorities as well as professors from my own theological roots in fundamentalist, conservative Baptist seminary circles, who hold that the Sons of God are only human men, justified by the use of *elohim* being defined as “judges” in other passages such as Exodus 21:6 and 22:8. But this is simply a means by which certain theologians avoid dealing with the intermingling of spirit beings and human women, an entire notion that falls far too close to an admission that there is more than just humanity inhabiting the universe. This is a perfect example of good scholars using disingenuous scholarship for a means to squeeze the interpretation of certain words into their particular theological point of view.

Sons of God—*bene haElohim*—is used in this passage to demonstrate the stark contrast to the term *daughters of men* (*סְרִבְגָּתָן*). From *Elohim* to *adahm*; God to man. When you read Elohim in conjunction with other words in the context, you have to view the Hebrew word for men: *adahm* (*אָדָם*). It simply means “the human race of men.” If, indeed, the Sons of God—the *bene haElohim*—refers only to mere mortal men of the upper classes, seeking to marry the daughters of the lower classes, the word *adahm* would not be contrasted with *bene haElohim*. And when used in the same context with *elohim*, *adahm* signifies the human race in contrast to the divine. The *bene-haElohim* were anything but human beings, and that is in strict unity with the Hebrew language of the passage.

Some theologians hold that the Sons of God are to be understood as the pious, righteous race descended from Seth (Adam and Eve's third son), and that "daughters of men" is to be interpreted as the "daughters of worldly men." However, the language simply does not state that, and, again, it is intellectually disingenuous, and a theological stretch to say that it does.

Whoever they were, the text makes it clear that they were bequeathed by the God who was above them; sons by birth, or sons by creative act, their point of origin is clear in all accounts: They came from the heavens and had some claim to being called Sons of God. The following passage from the Book of Enoch introduces them within the framework of the Jewish/Christian tradition—despite their appearance in a book that was banned from the canonical scriptures by the Church—and offers up a startlingly similar account to the Genesis 6:1-4 passage.

"1 It happened after the sons of men had multiplied in those days, that daughters were born to them, elegant and beautiful. 2 And when the angels, the sons of heaven, beheld them, they became enamoured of them, saying to each other, "Come, let us select for ourselves wives from the progeny of men, and let us beget children." 3 Then their leader Shamjaza said to them; "I fear that you may perhaps be indisposed to the performance of this enterprise; 4 And that I alone shall suffer for so grievous a crime." 5 But they answered him and said; "We all swear; 6 And bind ourselves by mutual execrations, that we will not change our intention, but execute our projected undertaking." 7 Then they swore all together, and all bound themselves by mutual execrations. Their whole number was two hundred, who descended upon Ardis (during the days of Jared), which is the top of mount Armon (Mt. Hermon in present day Israel). 8 That mountain therefore was called Armon, because they had sworn upon it, and bound themselves by mutual execrations. 9 These are the names of their chiefs: Shamyaza, who was their leader, Urakabarameel, Akibeel, Tamiel, Ramuel, Danel, Azkeel, Saraknyal, Azazel, Armers, Batraal, Anane, Zavebe, Samsaveel, Ertael, Turel, Yomyael, Arazyal. These

were the prefects of the two hundred angels, and the remainder were all with them. 10 Then they took wives, each choosing for himself, whom they began to approach, and with whom they cohabited; teaching them sorcery, incantations, and the dividing of roots and trees. 11 And the women conceiving brought forth giants.”

(1 Enoch 7: 1-11)

Looking west from the slopes of Mount Hermon, Israel.

According to Enoch, the Sons of God were created, bequeathed angelic beings who descended (fell down) to the earthly realm, and on the slopes of Mount Hermon made a pact to produce offspring with human women. To ascribe malevolence to these angels would not be wholly accurate, but Enoch's book does intimate that should they carry out their plan, they were in fear of being held responsible for enacting a “sinful” deed in the eyes of God. Enoch goes on to tell of the attributes they brought down to the human race with them: enchantments, the making of weaponry, meteorology,

astrology, astronomy, interpretations of moon phases, herbology, and the signs of the sun, stars, and moon. With these angelic-taught skills, mankind delved to the lowest common denominator by developing the art of warfare and pursued wickedness to the point of stirring up Jehovah's wrath. And the Sons of God were, indeed, held to blame; Shemjaza, their leader, somehow overlooked, and Azazel held as the main culprit for introducing weapons and warfare to mankind.

And then there was their “giant” offspring.

The Nephilim

According to scripture, the offspring of the Sons of God and human women were the Nephilim, but I do not believe the term is solely attributable to the offspring only. The Sons of God who descended from the heavens were known as the Nephilim once they took up residence in the earthly realm. So they and their offspring together became known as the Nephilim. It is similar to the scenario you have when an Irish immigrant moves his existence to America. He is Irish, but his emigrating act has given him the new title of American, and he and his offspring are now known by both titles: Irish and American, possessing a dual identity. But the children born to him in America bear the stronger title.

The writers of the 1611 King James Bible indirectly translated the word *Nephilim* as “giants,” yet the preferred scholarly translation is “fallen ones.” Giant can be better understood when you ascribe the values of height, distance from the ground to the top, descending from the heights, falling from the heavens, and so forth. Although there are many scholarly views on the identity of the Nephilim, you have to take into consideration the interpretation of the word based on the surrounding textual context, as well as the audience for whom the text is written.

The root Hebrew word for Nephilim is the verb *nephal* (Hebrew text נָפַל), meaning: 1) to fall (to the ground); 2) to fall (in battle); 3) to be cast down; 4) to desert a location; 5) to fail. The “im” (Hebrew text יִם) denotes plurality, giving us the “fallen down ones,” or the “ones who descended.”

The Sons of God can best be defined as a race of beings who descended—or “fell”—to the earth, abandoning their existence and habitation in the heavenly realms. According to the Bible, they were angelic in origin, birthed/created by God (*Elohim*), and they brought to the human inhabitants of the earth special skills, as well as an unearthly libido. Their offspring bore the title of Nephilim, and the propagation of their mixed race on the earth led to the judgment of God in the form of a flood, as described in Genesis and other ancient accounts. Also mentioned in the Book of Enoch is the fact that these beings descended to the earth during “the days of Jared,” the father of Enoch. His name means, literally, “descent,” and he was named thus because the descent of the Sons of God to the earth took place during his lifetime.

It is interesting at this point, to note that both Jared and Enoch are also mentioned in the Genesis account:

“18 When Jared was 162 years old, his son Enoch was born. 19 After the birth of Enoch, Jared lived another 800 years, and he had other sons and daughters. 20 He died at the age of 962. 21 When Enoch was 65 years old, his son Methuselah was born. 22 After the birth of Methuselah, Enoch lived another 300 years in close fellowship with God, and he had other sons and daughters. 23 Enoch lived 365 years in all. 24 He enjoyed a close relationship with God throughout his life. Then suddenly, he disappeared because God took him.”

(Genesis 5:18-24)

In the older archaic English of the 1611 King James Version of the Bible, that last verse is worded “*And Enoch walked with God, and was not, for God took him.*”

Digest all of that. Then take a deep, cleansing breath.

Elohim begat the *bene haElohim*, who begat the Nephilim. But that is simply one version of events. The question that still begs to be asked and answered is: What if the Nephilim, as defined by other cultural writings of the day, are something completely different? What if the Jewish Bible is only a version of events as understood and written by a monotheistic culture who recorded these events from within their framework of understanding, from within a monotheistic, mono-theocratic structure? What if these angelic beings were anything but angels? As is always the case, the uncovering of the basics only leads to deeper questions. As we move forward we will tackle the issue of extraterrestrial origins and the seeding of mankind.

But first, let's move to an all-important historical examination of Moses, the author of the Pentateuch, the first five books of the Bible or, as the Jewish religion calls it, the Torah. Once you have an understanding of this man's origins and why he wrote the things he wrote, you start to gain a clearer picture of just who the Nephilim really are, and why Moses wrote what he did.

chapter 3

The Pharaoh-God of Israel

Who Was Moses...*Really*?

“Yahweh spoke to Moses face to face, as a man speaks to his friend.”

(Exodus 33:11)

“27 They gave Moses this account: ‘We went into the land to which you sent us, and it does flow with milk and honey! Here is its fruit. 28 But the people who live there are powerful, and the cities are fortified and very large. We even saw descendants of Anak there.... 33 We saw the Nephilim there, the descendants of Anak of the Nephilim. We seemed like grasshoppers in our own eyes, and we looked the same to them.’”

(Numbers 13:27-28, 33)

As I state in my public lectures on the topic of the Nephilim, we are now going to “rabbit trail” a bit. But it is a vitally contextual, highly relevant side-track to understanding the bigger picture of the Watchers and the Nephilim. It’s going to include a lot of history, but remember: *History is fun, passionate, and exciting!* This isn’t the stuff of sitting in a boring high school classroom; this is the stuff that opens the door and sheds the light. Understanding the past gives illumination to the present. We all have personal histories and things that have happened in our pasts to make us

who and what we are today. The same applies to this outstanding character in history. Understanding that he is much more than a Bible story, but rather a real person who lived and breathed and experienced life, will help us to greater understand the things he wrote about and why he said what he said.

Of great importance to understanding the Genesis account of the Nephilim is having an understanding of the author of the book and the education he would have experienced in the royal courts of 18th Dynasty Egypt. The first five books of the Bible's Old Testament—Genesis, Exodus, Leviticus, Numbers, and Deuteronomy—are collectively known as the Pentateuch, the books of the Law, and their authorship is attributed to Moses, the most well-known lawgiver and Hebrew leader of Judeo-Christian tradition.

First of all, Moses is the author of the Book of Genesis. Just because he is a biblical character whose story is made up of fantastical deeds and miraculous events, does not mean he is simply part of myth.

It is Moses who, the Book of Exodus tells us, was born a Hebrew slave living under captivity in the slave city of Goshen in the delta region of the land of Egypt. The Hebrews had been living in Egypt as a family since the time of their ancestor-patriarch Joseph, one of the sons of Jacob/Israel, who migrated them to Egypt during a time of great famine in Canaan, present-day Israel. The family grew into an expatriated people, numbering nearly two million by the time of the Exodus, and suffered a gradual captivity imposed on them by the Egyptian pharaohs during a period of four centuries.

It is important to point out that, although the story of Moses is rife with faith-story tradition, many of the deeds of the historical man Moses cannot be found anywhere in recorded history, other than the pages of holy scripture and religious writings. And one has to dig very deeply to find the scant mentions that do exist, and even then there is the monumental task of discerning the man from the legend. The historical treatment of his life, as it

appears in the Old Testament books of Exodus through Deuteronomy, are events written from the perspective of the man himself, comprising major context within four of the five books of the Law in the Old Testament. Moses was a powerful man striving—as would any leader of a new nation that was the product of invasion, rebellion, or coup—to establish his authority and base of power. It is important to understand that Moses was the product of 18th Dynasty Egypt, where he was part of a ruling dynasty that held absolute power over its subjects, and this is where he learned the royal skills necessary for national leadership. This is where Moses learned that he was a “son of the Pharaoh God.” This is where he learned to impose the will of a god-man over the people he ruled.

In reading the pages of religious scripture, one must ask whether Moses was a mere figment of the pious imagination of Jewish rabbis and Hebrew historians, a mere adjunct to religious sentimentality and Judeo-Christian mythos? Or was he a real personality of some stature and substance in Egypt as the Jewish Scriptures claim? During the biblical account of the Ten Plagues of Egypt and the “let my people go!” audiences Moses had with, arguably, the most powerful monarch in the known world, we are given the distinct impression that Moses has absolute dominance over the Pharaoh, the government, and the people. In fact the biblical record states explicitly:

“The man Moses was very great in the land of Egypt, in the sight of Pharaoh’s servants and in the sight of the people.”

(Exodus 11:3)

During the period of the Ten Plagues, the very word of Moses became as *law* in the courts of the Pharaoh and the land of Egypt. Take note of what most commentators on the biblical account have overlooked:

“And all these your servants” [Moses is addressing the pharaoh]
“shall come down to me, and bow down themselves unto me, saying,

“Get you out and all the people that follow you: and after that I will go out!” And he went out from Pharaoh in the heat of a great anger.”

(Exodus 11:8)

Moses minced no words, but rather dictated with power and authority to the most powerful ruler of the ancient world. Moses was notable, exceptional, talented, and no ordinary man by any standard, past or present.

Faith Story vs. Historical Account

This is also where I am sure to draw a bit of heated criticism from my old Bible School classmates and fellow seminarians, as well as leaders and friends from the evangelical Christian circles in which I spent many years of my life. For to question the absolute authority of the Bible in its application to faith, practice, theology, or history is to question the very nature and attributes of God, Himself. Yet, there are gaping holes in the scriptural historical accounts that can be filled only with extrapolation of historical data, and the squeezing of size 13 feet into size 10 1/2 wide Egyptian sandals.

We are informed by Polybius (c. 201-120 BCE) that there are essentially three classes of historians:

- ★ One class slants their documentation for financial gain, expressing “the pleasure or the plans of kings and states.”
- ★ Another class writes for those who enjoy “rhetorical display,” an enjoyment of the sensuous exploitation of words, in a manner that sounds pleasant to the listener.
- ★ Finally, some record the truth, “for the good of mankind.”¹

The New Testament references to Moses are written within a framework of early Christian apologetics, meant to establish the young Christian religion during its infancy. The faith story told by early Christian apologists is solid tradition that sets a foundation for religious practice and tradition, and the history remains obscure, unsubstantiated, and many times unverifiable by extant historical records of the day. There are many traditional tales of Moses, as well as traditional histories in the Jewish Mishnah and other writings, but the Egyptian historical records are silent. And even Moses himself for some reason refrains from mentioning historical names of the pharaohs and royalties that would have surrounded him during the first 40 years of his life spent as a prince of Egypt.

And that is because the writings of Moses were never meant to be cold, hard, historical records. They were meant to establish the authority of God over Israel, as embodied in the authority of Moses. We see presented in the scripture an acceptable arrogance in Moses that is an indicative—and many times necessary—ingredient on the part of national leaders in establishing their authority. Even more so when that leader claims that his authority is one that is favored by the gods. Or in Moses' case, by God. Moses, in writing of his relationship with God, states in Exodus 33:11 that he was able to "*speak with God face-to-face, as a man speaks to his friend.*" Yet Moses was not destroyed by the utter holiness of God in a consuming fireball for this intimate contact. Then, a few verses later in the very same passage, God Himself tells us, via the pen of Moses:

"You cannot see My face, for no man can see Me and live!"

(Exodus 33:20)

When Moses emphatically states that he survived what other human beings could not, he establishes himself as having a little bit of divine edge that is above and beyond what the common person could endure. He begins to equate himself with the Divine in ways that establish his leadership over Israel as not only divinely appointed, but miraculously maintained. When

Moses had his personal, face-to-face meetings with Jehovah, this is how they are described in the book of Exodus:

“7 Now Moses used to take a tent and pitch it outside the camp some distance away, calling it the ‘tent of meeting.’ Anyone inquiring of the LORD would go to the tent of meeting outside the camp. 8 And whenever Moses went out to the tent, all the people rose and stood at the entrances to their tents, watching Moses until he entered the tent. 9 As Moses went into the tent, the pillar of cloud would come down and stay at the entrance, while the LORD spoke with Moses. 10 Whenever the people saw the pillar of cloud standing at the entrance to the tent, they all stood and worshiped, each at the entrance to their tent. 11 The LORD would speak to Moses face to face, as one speaks to a friend.”

(Exodus 33:7-11)

God descended to the tent of Moses in a cloud—just as He did when descending upon the ark of the covenant in the cloudy form of His female counterpart, the Shekinah—but outside the written text, no one knows exactly what Moses encountered while alone in the tent with the presence that descended there. Whether this happened precisely as the book of Exodus describes or whether it was a series of events that Moses used to further establish his position as the Pharaoh-God of Israel will be a question that remains unanswered, as there is no way to establish the veracity of what he has written beyond faith.

There are, however, speculative Ancient Alienists who would chalk these events firmly into the “Alien Encounter” category. Though we cannot establish the existence of the Divine beyond the faith of the human heart, some would choose to view these events as not only supernatural, but extra-terrestrial. Just as the pillar of cloud by day and the pillar of fire by night appeared in the skies and went before the Israelites to guide their way, the same pillar of cloud came down to the tent of Moses and later came down and settled on the ark of the covenant in a form that is described in the Hebrew language by a strictly female term, the Shekinah (**הנִיכָש**), the

grammatically feminine presence of God.² According to the text of Exodus, “all the people” saw these events take place, and if there was any further editing of the book after Moses’ death, the passages were not omitted. The event is there in the context to establish the absolute authority and sovereignty of God, as well as the absolute authority of Moses as the God-appointed leader.

Regarding the pillars of fire and cloud themselves, it is well established in rabbinic teaching that these manifestations were nothing other than the magnificence and glory of God; God personally appearing in miraculous manifestations to lead his people. This is what is known to theologians as a “theophany,” an appearance of God in physical form. And according to Judeo-Christian teaching, this is simply the glory of God appearing at the door of Moses’ tent, and hovering in the sky to guide his people. Moses was set apart as the only human being to have this close contact with God, thereby establishing him as someone who was in close union with God. The next best thing to being the monarchical Pharaoh-God.

But then we see the following passage, just a few verses later, in which Moses is not allowed to see the face of God. For some reason, the same presence that spoke to Moses in the tent, face-to-face, could not allow Moses to see its face on the top of Mount Sinai. Like anyone else who experiences the mystical, phenomenal paranormal, there is always the desire to be drawn in and know more, see more, experience more. So Moses asked for more:

“18 Then Moses said, ‘Now show me your glory.’ 19 And the LORD said, ‘I will cause all my goodness to pass in front of you, and I will proclaim my name, the LORD, in your presence. I will have mercy on whom I will have mercy, and I will have compassion on whom I will have compassion. 20 But,’ he said, ‘you cannot see my face, for no one may see me and live.’ 21 Then the LORD said, ‘There is a place near me where you may stand on a rock. 22 When my glory passes by, I will put you in a cleft in the rock and cover you with my

hand until I have passed by. 23 Then I will remove my hand and you will see my back; but my face must not be seen.””

(Exodus 33:18-23)

In establishing the magnificence and glory of the all powerful Jehovah God, Moses writes that even he was not allowed to look on God's face, though just a few sentences earlier he had established that he possessed a special, hierarchical relationship with God, being the only man who had ever talked with God “face-to-face,” as a man talks with his friend. This was all written so that the people would understand that Moses indeed as powerful as the Pharaoh-Gods of Egypt; he communed with the Divine in the most intimate of ways! And later, during the 40 years of wandering in the wilderness as a nomadic people, Moses goes a step further, and in his anger with the people he equates himself with God by referring to himself and God as “We.” For this, the scripture then tells us, Moses was reprimanded by God for his pride, and not allowed to enter into the Land of Promise. Whether that anecdotal story was part of Moses' original account, or was added later by a future editor, such as Joshua, Moses' successor, is unknown. But what is clear is that Moses took on himself the persona of the Pharaoh-God, the ruler who has absolute authority and absolute communion with the Divine.

The Residual Effect of Communing With Deity

“29 When Moses came down from Mount Sinai with the two tablets of the covenant law in his hands, he was not aware that his face was radiant because he had spoken with the LORD. 30 When Aaron and all the Israelites saw Moses, his face was radiant, and they were afraid to come near him. 31 But Moses called to them; so Aaron and all the leaders of the community came back to him, and he spoke to them. 32 Afterward all the Israelites came near him, and he gave them all the commands the LORD had given him on Mount Sinai. 33 When Moses finished speaking to them, he put a veil over his face. 34 But

whenever he entered the LORD's presence to speak with him, he removed the veil until he came out. And when he came out and told the Israelites what he had been commanded, 35 they saw that his face was radiant. Then Moses would put the veil back over his face until he went in to speak with the LORD."

(Exodus 34:29-35)

Moses' encounters with the Divine left physical traces. His face glowed and his hair and beard turned white as snow. So frightening was his appearance that he had to veil his face to hide the radiance. His face-to-face encounters with the radioactive deity bleached his skin and made him ... glow. And according to the biblical passage, he didn't even realize it until the people recoiled in superstitious horror.

It is interesting to note at this point that the Watchers who descended to the slopes of Mount Hermon, and in their varying forms as manifested in other cultures around the ancient world, were said to be bright, shining gods who descended from the skies. The ancient Sumarian *El*, the Celtic *Aillil*, Babylonian *Ellu*, Cornish *El*, Incan *Illa*, Hebrew *Elah*, and Muslim *Allah* all had their varying words for the physical shining brightness of the gods who descended down to mankind.

Was it this same light that was passed on to Moses during his close encounters with *Elohim*?

General and King

It is vital to establish exactly what it is that Moses would have experienced during those first 40 years of his life in order to have an understanding of what influenced him when he became the leader of the wilderness-wandering nation of Israel later in life. The culture, education,

and religion of Egypt would have had an intensely engraining influence on the man, despite the Bible telling us that he made a conscious choice to identify himself with his own people—which alone tells us that he was being raised as an Egyptian, living as part of the royal family of 18th Dynasty Egypt in Thebes, near Luxor, roughly 400 miles up the Nile, south of present-day Cairo. Moses was less Hebrew than he was Egyptian, so for him to make a cognitive choice to identify himself with his slave people of origin, was nothing less than altruistic. Perhaps even heroic.

But was his identification with the Hebrews an “act of faith” on his part, as the New Testament Book of Hebrews tells us, or was it in an attempt to look for opportunities to *rule* them?

There is a traditional tale in Jewish mishnah that speaks of Moses leading an army, under orders of the Pharaoh, to quell a rebellion in Nubia. Once the rebellion is squashed, and thousands of rebels are dead, Moses takes the throne for his very own, much to the chagrin of the ruling family in Nubia. Word gets back to the Pharaoh, who hastily reprimands Moses, telling him to relinquish the throne to the vassal ruling family, and to get himself and his army back to Egypt. Moses, of course, abdicates the short-lived monarchy, and returns to the courts of the Pharaoh.

Desiring a position as the ruler of a people was in Moses’ blood. He was raised as a prince, and his Egyptian queen step-mother raised him to be the next Pharaoh.

I cannot emphasize enough how utterly important it is, in dissecting the story of the Watchers descent to Mount Hermon and their offspring the Nephilim—to have an understanding of what Moses would have been exposed to in the royal tutelage and religious philosophies of 18th Dynasty Egypt.

The Traditional Story

Moses was born a slave, but adopted by a queen of Egypt, where he grew up as a palace kid, enjoying an upbringing that afforded him a royal education and lifestyle. What we know from the biblical account is that as he grew older, he began to identify himself more and more with his own people, and arrogantly saw himself, from his lofty position in the royal courts of Egypt, as the prophesied deliverer of the Hebrew people from bondage. Taking matters into his own hands, he murdered an Egyptian taskmaster and fled for his life from the wrath of the Pharaoh. He spent the next 40 years as a shepherd in the land of Midian, where he married the daughter of Jethro, the high priest of Midian, and lived to the age of 80 as a sort of outback, off-the-grid shepherd.

It was at the age of 80 that he saw a miraculous vision of God in the form of a burning bush, and was called out to return to Egypt and lead the Hebrews out of slavery. Moses balked and attempted to get out of any task that would bring him back to the land where he had spent the first half of his life and where he was wanted for murder. But God assured him that those who sought his life were long since dead and his crimes forgotten. Moses returned, and, in a series of coercive plagues leveled against the land of Egypt, finally convinced the pharaoh to set the Hebrews free after the plague of the firstborn took the life of the Pharaoh's son. Under Moses' leadership, the Hebrews left Egypt *en masse* overnight in an event called the Great Exodus, which has been celebrated ever since at the Jewish Passover.

The Pharaoh, of course, has second thoughts and mounts his armies to pursue the escaping Hebrew slaves, only to have them destroyed in one of the Bible's greatest, single mythically miraculous events: the parting of the Red Sea. Once completely free of the Pharaoh and his armies, Moses leads the Hebrews to the Holy Mountain of God—some say it is Sinai, other writings place it at Jabal Musa in Saudi Arabia. It is here that Moses climbs to the top and meets God face-to-face, and God sends him back down 40

days later with the tablets of the Law inscribed (by God's own hand) with the Ten Commandments. Upon Moses' descent, he finds the people worshipping a golden calf and partying like an Egyptian. He breaks the tablets and imposes punishment for the idolatrous worship, then returns to the mountaintop, where God inscribes a new set of stone texts for him.

The Hebrews make their way to the Land of Cana'an, only to have their spies return with reports of giant Nephilim dwelling in the land. In fear, the people tell Moses that they are unwilling to enter Cana'an and conquer it, even though it was promised them by God because it was their ancestral homeland. So Moses leads them back out to the wilderness where they wander as a nomadic tribe for 40 years. In the process of their wilderness sojourn, Moses, in an angry response to the complaints of the people, commits the sinful act of pride by equating himself with God, and is then told by God that for his punishment, he could see the promised land, but not enter it. As the Hebrews march into the land of Cana'an, Moses ascends the slope of Mount Nebo, where he gazes into the land of God's promise, and dies. His body is never found.

In the entire account of the life and deeds of Moses as written in the Old Testament, we are never given the names of the historical kings of Egypt with whom Moses lived and against whom he stood in conflict in his return to lead the Hebrews out of captivity. They are referred to only as "Pharaoh" or "the king of Egypt."

Moses had particular reasons for writing these accounts the way he did, the first of which was a demonstration of just how unimportant the names of these great rulers were to the story of the deliverance of his people. Examining the life of Moses and the dating of his exploits will bring a much greater understanding of the texts he authored and subsequently his handling of the topic of the Nephilim in his Book of Genesis.

The Making of a Pharaoh-God

It is extremely important to have an understanding of the historical data surrounding these people and events, for without that information we are left to dangle at the end of the rope of mythology and legend. Seeking out and ascribing solid dates and historical facts is nothing short of throwing wide the door of illumination on the dark room of ignorance and speculative conjecture. Of course, there are many who will say that these very facts presented here are nothing but subjective hypothesis, yet out of all the systems and theories set in place to establish the historical life of Moses, this is the one that makes the most sense by the current facts as they exist—at least when one makes an attempt to ensure the facts as presented in the Bible concur as closely as possible to the historical record.

And before you walk away from this chapter wondering what the historical story of Moses has to do with the Sons of God and the Nephilim, consider this: The man who wrote about them in the Book of Genesis experienced an upbringing, education, and lifestyle in the courts of the Egyptian royalty. Being one of the progeny of the Pharaoh, who was considered to be a god, Moses was indeed himself, a literal “son of god” in the eyes of the Egyptian people. Moses’ notions of the creation of the world and the birth of humanity were greatly influenced by the religion of the Egyptian culture that was all around him during his first 40 years of life.

According to the Book of Exodus, Moses stepped out and chose to be identified with his own people, the Hebrew slaves, but at the same time, he did not relinquish his position in the royal family of Egypt. It is plainly evident in the passages of biblical text that he saw this identification with the Hebrews as a way to set himself up as their promised deliverer. In a very real sense, there was an undercurrent of political opportunism in Moses that he could not simply allow to pass by. He may have had a faith that he was the promised deliverer, as the New Testament Book of Hebrews tells us, but that faith seems to be something applied to his acts by the foundational apologists for the Christian faith, as opposed to the literal moral motivation on the part of Moses. It is clear in the Exodus text that he saw himself as greater than those around him—a thing not at all out of

place for someone raised in a family of monarchs who held an iron-fisted rule over Egypt.

The Barque shrine relief (highlighted area) at Medinat Habu, “House of Millions of Years.” Located at the upper western end of the lower portion of the north interior wall of the second courtyard, the “Festival Hall,” northwestern quadrant. Moses would have seen this wall many times during his youth in Egypt.

And make no mistake about it: Moses was Hebrew in name only during his first 40 years of life. Moses was an Egyptian through and through, as most of his writings, philosophies, adjudication of laws, and building of religious ceremonial objects implies. Even the ark of the covenant, which Moses, as the voice of God, gave instruction to build, resembles so closely

the relief paintings of Egyptian barque shrines of worship, that the roots of influence are undeniable.

Solomon's Temple: The Cornerstone to Dating Moses

There is a hardcore, undisputed historical date in the Old Testament on which we can hang our hat when determining the dating of the events of Moses' life. Once this date is established, the rest of the mystery surrounding Moses' life unravels.

In 966 BCE, in the fourth year of the reign of Solomon, the son of David, as king of Israel, the first Jewish temple built in Jerusalem (known historically and archaeologically as "Temple") was dedicated.³ This is an iron-clad date in history, disputed only by a number of three to five years in either direction by Jewish, Christian, and historical scholars alike.

"In the four hundred and eightieth year after the Israelites came out of Egypt, in the fourth year of Solomon's reign over Israel, in the month of Ziv, the second month, he began to build the temple of the LORD."

(1 Kings 6:1)

And there you have it. Although even the existence of kings David and Solomon is still in raging dispute among archaeologists, scholars, and biblical minimalists, the temple in Jerusalem was dedicated in 966 BCE, and the date is non-disputed. This brings us to the dating of the Exodus. According to the aforementioned passage from 1 Kings, the temple was dedicated in the 480th year after the Hebrews were led out of their Egyptian captivity. This would make the year of the great Exodus under the leadership of Moses, the first Passover of the Jewish religion, 1446 BCE.

And if Moses was 80 years old at the time of the Exodus, he would have been born in 1526 BCE during the reign of Thutmoses I.

The Egyptian Pharaohs During the Time Line of Moses

Thutmoses 1

“8 Then a new king... came to power in Egypt. 9 ‘Look,’ he said to his people, ‘the Israelites have become far too numerous for us. 10 Come, we must deal shrewdly with them or they will become even more numerous and, if war breaks out, will join our enemies, fight against us and leave the country.’ 11 So they put slave masters over them to oppress them with forced labor, and they built Pithom and Rameses as store cities for Pharaoh. 12 But the more they were oppressed, the more they multiplied and spread; so the Egyptians came to dread the Israelites 13 and worked them ruthlessly. 14 They made their lives bitter with harsh labor in brick and mortar and with all kinds of work in the fields; in all their harsh labor the Egyptians worked them ruthlessly.”

(Exodus 1:8-14)

In accordance with the dateline we hinge on the dating of Solomon's Temple, Moses was born in 1526 BCE, during the first year of the reign of Thutmoses I, the son of Hebrew slaves Amram and Jocabel. Thutmoses I ruled Egypt from 1526 to 1513 BCE, and it was during his reign, the Bible tells us, that the Pharaoh of Egypt issued a decree that all Hebrew male children below the age of 2 years be slain and cast into the Nile River.

“15 The king of Egypt said to the Hebrew midwives, whose names were Shiphrah and Puah, 16 ‘When you are helping the Hebrew women during childbirth on the delivery stool, if you see that the baby is a boy, kill him; but if it is a girl, let her live.’ 17 The midwives, however, feared God and did not do what the king of Egypt had told them to do; they let the boys live. 18 Then the king of Egypt summoned the midwives and asked them, ‘Why have you done this? Why have you let the boys live?’ 19 The midwives answered Pharaoh, ‘Hebrew women are not like Egyptian women; they are vigorous and give birth before the midwives arrive.’ 20 So God was kind to the midwives and the people increased and became even more numerous. 21 And because the midwives feared God, he gave them families of their own. 22 Then Pharaoh gave this order to all his people: ‘Every Hebrew boy that is born you must throw into the Nile, but let every girl live.’”

(Exodus 1:15-22)

Moses’ mother hid her infant son as long as she could, and when he was 3 months old, in a plot to spare him from the Pharaoh’s decree, she placed him in a pitch-smeared basket woven from papyrus and set him adrift on the Nile River. Although this is not implicit in the text, it can be subjectively surmised that this was no arbitrary act of blind hope on her part. When she released him to the currents of the Nile, she ordered her daughter Miriam, Moses’ older sister, to follow along in the bulrushes along the shoreline to assure that no harm came to the child and that the basket reached the destination she had hoped: the Nile backwater pools of the palace, where the Pharaoh’s household came to bathe.

The idea of a “savior in a basket, floating down the river” was not exclusive to the story of Moses.

Sargon the Great

In an Akkadian clay cuneiform tablet purporting to be the biography of Sargon the Great of Akkad, around 2400 BCE, legend states that his mother was a temple priestess. Giving birth to him in secret and setting him in a basket to float, she abandoned him to the Euphrates river. Akki, a gardener, rescued him from the river and raised him. After working as a gardener for Akki, Sargon rose to the position of cup-bearer to Ur-Zababa, the king of Kish, and from there went on to rise in power, sacking Uruk and establishing himself as the emperor of Sumar in place of Lugalzagesi, king of Uruk.

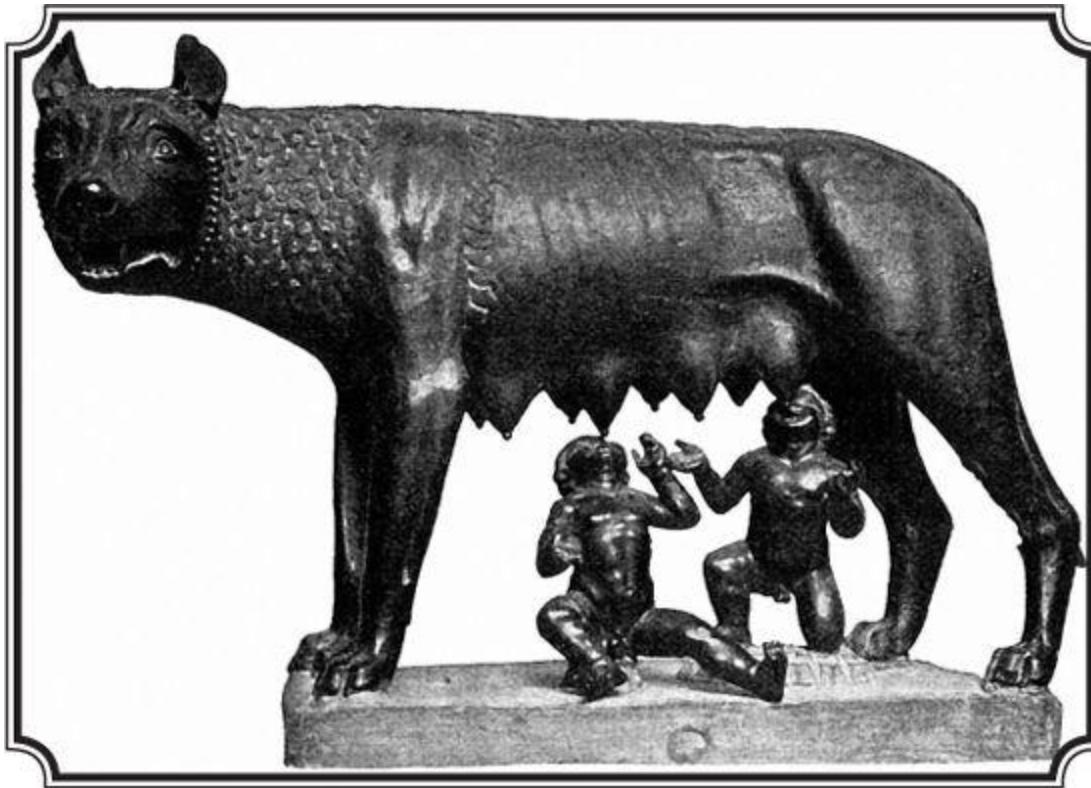

Osiris

Osiris, around 2500 BCE, the sacrificial savior god of Egypt, was murdered, after which his decapitated crowned head was placed in a papyrus basket and floated down the Nile.

Romulus and Remus

Romulus and Remus, according to Plutarch, were twins descended from Prince Aeneas, a fugitive from the legendary city of Troy after its destruction by the Achaeans. Their maternal grandfather was his descendant *Numitor*, who inherited the kingship of Alba Longa. Numitor's brother *Amulius* inherited its treasury, including the gold brought by Aeneas from Troy. Amulius used his control of the treasury to dethrone Numitor, but feared that Numitor's daughter, Rhea Silvia, would bear children who could overthrow him. In an attempt to solidify his claim to the throne with no other royal candidates rising to challenge him, Amulius forced Rhea Silvia to perpetual virginity as a Vestal priestess. This didn't end up working, as she bore children anyway. According to the legend, Mars, the god of war, seduced Silvia and impregnated her. In other accounts, it was Hercules or

even Amulius himself who impregnated his niece. Under confinement by Amulius, she gives birth to twin boys of remarkable beauty, upon which her uncle ordered all of their deaths. Rhea was buried alive, and Amulius ordered the death of the twins by exposure; both means would avoid his direct blood-guilt.

“She-Wolf Suckles Romulus and Remus.” Capitoline Wolf, traditionally believed to be Etruscan, fifth century BC, with figures of Romulus and Remus added in the 15th century by Antonio Pollaiuolo.

Photo courtesy of Wikimedia Commons (commons.wikimedia.org/wiki/File:She-wolf_suckles_Romulus_and_Remus.jpg).

Amulius charged a servant with the deed of killing the twins, but the servant could not follow through with the act. Instead he placed them in a basket and left it on the banks of the Tiber River, which flooded and carried the twins downstream, unharmed. The river deity Tiberinus made the basket

catch in the roots of a fig tree that grew in the Velabrum swamp at the base of the Palatine Hill. The twins were found and suckled by a she-wolf, Lupa, and fed by a woodpecker, Picus. A shepherd named Faustulus discovered the twin boys and took them to his hut, where he and his wife Acca Larentia raised them as their own children. Romulus went on to found the city of Rome.

Hatshepsut

This remarkable woman was the daughter of Thutmose I, born in or around 1535 BCE. She went on to marry her half-brother Thutmose II, fathered by Thutmose I and to a “lesser” wife. He was weak and somewhat sickly in his reign, and she loathed the man. When he died, she became coregent of Egypt with her stepson, Thutmose III (from, yet again, a lesser wife), and eventually deposed him and took over the monarchy as ruler herself. Thutmose III learned to hate his stepmother, and when she died, he had all Hatshepsut’s imagery stricken from every painting, obelisk, and relief, eradicating her from Egyptian history and the afterlife. Thutmose III went on to bring Egypt’s United Kingdom during the 18th Dynasty to its golden pinnacle.

In 1526, Hatshepsut would have been a mere child of about 7 to 10 years of age. When she found the baby Moses in a basket, floating into her bathing pool off the Nile; she claimed him and named him, but had no way to care for him on her own. It was then that Miriam emerged from the bulrushes and offered to help, taking the child back to his mother to have him cared for until the royal princess was old enough to legitimately adopt him, which she did a few years later.

This remarkable woman, who reigned in Egypt's 18th Dynasty, is most probably the stepmother of the biblical Moses, whom she found floating in the Nile in a basket made of bulrushes.

It can be speculated that a man named Senmut, very close to Hatshepsut and the tutor to her daughter, was none other than Moses himself. Though

the evidence is only circumstantial, one must read a bit between the lines and hail to Egyptian mythology to make the connections.

Senmut was very close to Hatshepsut and was her strongest ally, advisor, and friend, a lowly born man who rose to power with Hatshepsut. It is speculated that his lowly birth was as a Hebrew slave, and his close stepson relationship to Hatshepsut was nothing short of the love between mother and son, and the nepotism that came along with it. The name Senmut itself means “*mother’s brother*.”

To understand the significance of this mother’s brother title, it is necessary to look, briefly, at Egyptian religion and the Pharaoh: The ancient Egyptians believed that the first king of Egypt was Osiris, married to his sister Isis. Set, the brother of Osiris, murdered him out of jealousy, and claimed the throne. Incorporating a spell of magic, Isis brought Osiris back to life for one night, made love with him, and conceived a child, after which Osiris returned to his death state. The child she bore was Horus, the reincarnation of Osiris, who reclaims his rightful place on throne. The child born to Isis was, all at once, her son, her husband, and her brother. All kings of Egypt were then said to be “Horus,” the reincarnation of Osiris.

And this is the significance of the name given to Moses—*Senmut*. He was being “set up” by his mother, Hatshepsut, in the Egyptian economy to be the future king, the royal heir of his “grandfather-Pharaoh,” Thutmose I, who had no living royal male heirs. But he had one royal daughter, Hatshepsut. The future king could only inherit the throne through the royal daughter. Hatshepsut convinced her father, the Pharaoh, to make her little adopted boy his future heir. Nefure, as the symbolic Isis, had her little “Osiris/Horus,” who was named Senmut, his “mother’s brother.”

When Senmut/Moses makes the decision to identify himself with his slave people, the Hebrews, he forever cut himself off from the adopted pharohonic line of Hatshepsut.

“By faith Moses, when he was come to years, refused to be called the son of Pharaoh’s daughter.”

(Hebrews 11:24)

Some of Senmut/Moses’ many titles conferred on him by Hatshepsut were: Overseer of the Works, Overseer of the Fields, Overseer of the Double Gold House, Overseer of the Gardens of Amun, Controller of Works, Overseer of the Administrative Office of the Mansion, Conductor of Festivals, Overseer of the Cattle of Amun, Steward of the King’s Daughter Neferura, Chief of the King, Magnate of the Tens of Upper and Lower Egypt, Chief of the Mansion of the Red Crown, Privy Councillor, Chief Steward of Amun, Overseer of the Double Granary of Amun, Chief Architect, and none other than Hereditary Prince and Count.

Murder and Flight

“11 One day, after Moses had grown up, he went out to where his own people were and watched them at their hard labor. He saw an Egyptian beating a Hebrew, one of his own people. 12 Looking this way and that and seeing no one, he killed the Egyptian and hid him in the sand. 13 The next day he went out and saw two Hebrews fighting. He asked the one in the wrong, ‘Why are you hitting your fellow Hebrew?’ 14 The man said, ‘Who made you ruler and judge over us? Are you thinking of killing me as you killed the Egyptian?’ Then Moses was afraid and thought, ‘What I did must have become known.’ 15 When Pharaoh heard of this, he tried to kill Moses, but Moses fled from Pharaoh and went to live in Midian . . .”

(Exodus 3:11-15)

Shortly before Hatshepsut’s death in 1483 BCE, Senmut mysteriously and completely disappears from the royal courts of Egypt and the historical records. Having been groomed to be the next Pharaoh, it becomes clear that

Senmut/Moses' adopted half-brother, Thutmoses III, the co-regent with his stepmother Hatshepsut, had every motivation to eliminate Moses after he murdered the Egyptian taskmaster. So Moses—formerly Senmut, Hereditary Prince and Count of Egypt—fled to the wilderness for his life. He would not return to Egypt for 40 years, but when he did, it was with a much different influence on the royal courts of Egypt.

But Moses, at this point in his life, despite “identifying” himself with his Hebrew people, was thoroughly Egyptian, and he carried with him to the land of Midian a wealth of stored Egyptian knowledge that simmered in his head for 40 more years. The king-in-the-making, “mother’s brother” to the Pharaoh Queen, general in the armies of the Pharaoh, with a deep-set ambition to rule, was now married to the a daughter of the high priest of Midian and monarch to herds of sheep and goats in a dusty Arabian back water.

Moses possessed a belief in the gods of Egypt, and this wouldn’t change until his miraculous encounter with the God of Abraham, Isaac and Jacob, the great “I AM,” Yaweh, who, in the form of a burning bush, pressed him into service as the great emancipator of his people of heritage, the Hebrews.

But did Moses see that blazing desert shrubbery as the only God? Was that encounter one of a spiritual nature or one that would come to fit the mold of an extra-terrestrial encounter that challenged all his beliefs in the pantheon of gods with which he was raised and whom he knew so well? The pages of scripture tell us that this calling was of Divine Origin, and that Jehovah God Himself was the power behind the upcoming miraculous events.

The big question, if you step outside the box of faith, is whether or not Moses was encountering the God of the Universe or a being that only fit his perceptions and understanding of that which had been rooted in his mind since his earliest days.

The Ogdoad

In Thebes, the little town of Medinet Habu has, nestled on its low crest, the ruins of the magnificent 18th Dynasty Mortuary Temple of Rameses III. Medinet Habu, a small village situated a little more than 2 miles to the south of the Ramesseum, was called Djanet by the ancient Egyptians and, according to popular belief, was the place where Amun appeared for the first time. From ancient times, Medinet Habu was the place of worship dedicated to this god, as evidenced by the crumbled ruins of a temple of the 18th Dynasty dedicated to Amun of Djanet, built during the time of Hatshepsut and Thutmose III, atop the ruins of a still more ancient temple. This was what later induced Rameses III to order the construction there of his own memorial temple.

Growing up in the royal palace in Thebes, Moses would have known this place well and worshipped in its sacred halls. It was here that Moses was raised in his early years and spent the first 40 years of his life. He would have been taught not only the mathematics and sciences afforded a royal education in the courts of 18th Dynasty Egypt, but also would have experienced the worship and religious practices of the day.

The Ogdoad is the Egyptian creation myth that Moses would have been very familiar with and that some say laid his basis for writing about the creation in the Book of Genesis. The Ogdoad myth originated in Hermopolis and consisted of eight personified primeval forces, each of which was represented in the four couples of deities. In Egyptian cosmology, the number 4 represented the number of totality and completeness. The significance of these four primeval couples is not easy to understand today, for they lack any greater mythological context, and neither is there much substantive personification of the four couples of deities.⁴

The couples of the Ogdoad:

Nu and Naunet, representing the primeval waters.

Heh and Hauhet, signifying boundlessness.

The Inner Gate of the Ramesseum, in Luxor, Egypt. The Ramesseum is the temple complex of Ramses III, built on the site of what is now known as

Medinat Habu, “The House of a Million Years.” On this same site are the ruins of a much more ancient temple in which Moses would have learned of the Ogdoad.

Kek and Kauket, signifying darkness.

Amun and Amaunet, signifying air.

The four couples of the Ogdoad are less about their personalities and characteristics than they represent elemental forces in the creation of the world. The cosmogony they represent are the primeval physical matters of existence rather than the actual springing to life of the organic world, and of these eight deities, only Amun developed into a remarkable status and moved to Thebes with his female counterpart, Amaunet. These four pairs of deities also complement each other: For every “male” deity is the “female” counterpart, to make up a whole, according to the ancient Egyptian complementary way of thinking. The males are shown with the heads of frogs and the females with heads of snakes; such physical attributes are frequently said in ancient texts to inhabit the primeval waters.

At el-Ashmunein were unearthed only very scant inscriptions of the Ogdoad, telling us very little about this cosmogony, but they appear ever so subtly in the writings of Moses. The main part of evidence is taken from Theban monuments, which were pieced together in 1929 by Kurt Sethe in his survey, *Amun und die Acht Urgötter von Hermopolis*,⁵ but the earliest references to the Hermopolitan cosmogony is found in the Pyramid Texts:

You have your offering-bread, O Niu and Nenet, you two protectors of the gods Who protect the gods with your shadow. You have your offering-bread, O Amun and Amaunet, You two protectors of the gods Who protect the gods with your shadow. You have your offering-bread, O Atum and Ruti, Who yourselves created your

godheads and your persons. O Shu and Tefenet who made the gods,
Who begot the gods and established the gods....⁶

These deities were said to comprise the very substances out of which creation was brought to the universe. At Hermopolis, the opinion was that at some point these eight primeval beings interacted, whereupon a great explosion occurred, which somehow laid free the Primeval Mound. The mound later became Hermopolis, though at first it was called the Isle of Flame, as the sun god was said to be born and to rise there for the very first time. Hermopolis claimed to predate the cosmogony of Heliopolis. Just as other creation centers maintained that their location was the original place where creation first had come into being, so was also the case at Hermopolis.

The Ogdoad were the fathers and the mothers who came into being at the start, who gave birth to the sun and who created Atum. From there on the rest of the cosmos is developed. But there are some twists to the story in which the eight divinities of the Ogdoad are thought to jointly have created what is known as the “cosmic egg” out of the primeval waters (*Nun*). This egg was invisible as it was created already before the sun came into being. From this egg, according to some sources, the bird of light, an aspect of the sun-god, burst. Other sources say that the egg was filled with air, the association of the elemental couple of Amun and Amaunet. According to the Coffin Texts, this is the first act of creation:

O Atum give me this sweet air which is your nostrils

for I am this egg which is in the Great Cackler,

I am the guardian of this great prop which separates
the earth from the sky.

If I live, it will live; if I grow old, it will grow old;

if I breathe the air, it will breathe the air.

I am he who splits iron, I have gone round about the egg,

(even I) the Lord of Tomorrow.⁷

In another version of this myth, the egg is laid by a goose, the Primeval Goose, or the *Gengen Wer*, with which Amun was associated as the creator. The goose is thought to carry the egg out of which creation comes. This myth is only given in fragments, but obviously it states that the sun in the form of a bird came out of the egg that the Primeval Goose laid in the waters of creation. It is also a form of Amun in his creator-god aspect.

The act of the creation, as performed by the Ogdoad, takes this basic chronological order:

1. The Ogdoad created existence in the form of the Primeval Mound or in the form of the cosmic egg.
2. The cosmic egg was created by the Primeval Goose.
3. The cosmic egg held air, or
4. The cosmic egg held a bird.
5. And the bird was a form of the sun.

To sum it all up, all forms of initial creation happened in the darkness of the primeval waters. Creation was circular, as was the egg. Birth led to decline-death-rebirth-renewal of the cyclic existence. The significance of all this is that some things existed before existence. One of these in preexistence was *Nun*. Another was primeval beings such as frogs and snakes, frogs being associated with fertility, snakes being associated with circularity and rebirth (that is, they shed their old skin). The first creator-

god is created out of *Nun* by some interaction between all these primeval creatures. Then the creator-god creates the rest of the cosmos.

These are the things Moses would have experienced in his religious training, growing up in the royal courts of Egypt. But how are they applicable to our study of the Nephilim, and why are these backdrops important to their study? Because the setting of a solid foundation is critical to an examination of the words he wrote in the Book of Genesis. As I stated earlier, it is important to sludge through some of what seems to be mundane history in order to understand why certain things were said in certain ways. Understanding what motivated Moses to write the things he did is an all-important step to understanding the *objectives* of the things he wrote about.

Let's look at how the Egyptian myth of creation was a foundation for what Moses wrote in the Book of Genesis.

Moses the Heretic

A great source for this examination of the influences on the writing of Moses are the writings of Irenaeus, a second-century Bishop of Lugdunum in Gaul, then a part of the Roman Empire (now Lyons, France). He was an early church father and apologist, and his writings were formative in the early development of Christian theology, which at the time was indistinguishable from Catholic theology. Irenaeus's best-known book, *Adversus Haereses*, or *Against Heresies*, was written around 180 CE, and is a detailed attack on Gnosticism, which was at the time considered to be a serious threat to the Church.⁸ As one of the first great Christian theologians, Irenaeus emphasized the traditional elements in the church, especially the episcopate, scripture, and tradition. Irenaeus wrote that the only way for Christians to retain unity was to humbly accept a single doctrinal authority, and that was the episcopal councils in union with the bishop of Rome. Against the Gnostics, who said that they possessed a secret oral tradition from Jesus himself, Irenaeus maintained that the bishops in different cities

are known as far back as the Apostles, and none of *them* were Gnostics. He also maintained that the bishops provided the only “safe guide to the interpretation of Scripture.” His writings, with those of Clement and Ignatius, are taken to hint at papal primacy—the infallible word of the pope in all matters ecclesiastical and scriptural. Irenaeus is the earliest witness to recognition of the canonical character of all four gospels, and is really the precursor to the Constantinian Councils that established canonical rules for the bible.

The Gnostics claimed to possess the “hidden mysteries” as relayed to them by Jesus Christ himself. And according to their “heretical” teachings, Moses constructed the entirety of the Genesis account of creation on his early influence in Egyptian teachings of the Ogdoad. Irenaeus sets about in his writings to present and dissemble the writings of the Gnostics regarding Moses and creation, first referring to them as the development of “mighty fictions.”⁹

According to Irenaeus, Moses followed the pattern of the Ogdoad in the fashion in which he wrote the account of creation. This can get a little sticky, so stay with me here....

At the beginning of Moses’ account of creation in the Book of Genesis, he starts out in verse one of Genesis chapter one, by saying that “In the beginning, God created the heavens and the earth” (Genesis 1:1). And by creating a numerical number of four elements to the first statement of creation—God, created, heavens, earth—Moses was establishing the first *Tetrad* (grouping of four) of the Gnostics and hailing back to the initial four elements of the four god couples of the Egyptian Ogdoad. See where this is going, now? Fascinating stuff! Read on....

Moses went on in his creation account by stating that the creative act was invisible and hidden nature—a reference to the “invisible egg” of creation; a visible physical creation birthing from an invisible spiritual dimension: “Now the earth was invisible and unformed” (Genesis 1:2). Then, by

naming an abyss and darkness, in which were also water, and the Spirit moving upon the water, Moses is referring to the second *Tetrad* that births out of the first: “invisible, unformed, Spirit, moved.”

Then, proceeding to mention the Gnostic *Decad*, Moses names light, day, night, the firmament, the evening, the morning, dry land, sea, plants, and, in the 10th place, trees all as a part of the initial creative act. Thus, by means of these 10 names, he indicated the 10 *Æons* of the Gnostic structure, again based on the Egyptian Ogdoad.

Moses then reiterates the power of the Gnostic *Duodecad* and names the sun, moon, stars, seasons, years, whales, fishes, reptiles, birds, quadrupeds, wild beasts, and, after all these, in the 12th place, man. In this, the Gnostics taught that the *Triacontad* (the Triacontad (30) exist in a tripartite division of an Ogdoad (8), Decad (10), and Duodecad (12)) was spoken of through Moses by the Spirit. Further, man was also being formed after the image of the power above, had in himself that ability that flows from the one source: the invisible force. This ability was seated in the region of the brain, from which four faculties proceed, after the image of the Tetrad above, and these are called sight, hearing, smell, and taste. Moses also hails to the Ogdoad in stating that man has four sets of two: two eyes, two nostrils, two ears, and two senses of taste: bitter and sweet.

Moses continues on with his Ogdoad construct in that the sun was created on day four; the tented courts of the Tabernacle were made of fine linen, blue, purple, and scarlet. Again, the long robe of the priest falling over his feet, was adorned with four rows of precious stones. Moses also shows the influence of the Ogdoad, again, in that man was formed on the eighth day, his earthly part was formed on the sixth day, but his fleshly part on the eighth. Multiples of four.

And then Moses states that the ark of Noah was 30 cubits high—again the Tricontad—and that eight persons were saved inside most clearly indicates the Ogdoad, which brings salvation.

Now, for the record, I know very little about Gnosticism and how it works. However, it appears that they at least believed that Moses was writing in multiples that revealed a heavy influence of the teaching of Egyptian Ogdoad creation.

Why Is Moses Important to the Nephilim?

The place we draw our primary source for the Hebrew word, *Nephilim* is in a book authored by Moses, a historical character drenched in the waters of Judeo-Christian, biblical tradition. In many circles of non-religious thought, this sinks Moses deep into the pond of religious mythology, where even his existence as a real person falls under the voluminous waves of skeptical attack. So, having even a brief understanding of his history and a “lite” touch on the probable history surrounding his existence and interaction with the people living in the known historical courts of Egypt lends some credence to the things he is said to have traditionally written.

When there is scholarly controversy even over the lives and deeds of royal Egyptian figures who are established in the historical record, how can we even begin to establish the credible existence of someone who by mention of his name alone, casts him in the shadowy light of religious mythology? Moses’ presence in established Egyptian history is, for all practical purposes, anonymous. So it is ultimately important, in researching works that are traditionally held to be authored by him, to establish who he was, when he lived, what he experienced, and from where he drew his foundational abilities and philosophies, in order to lend some modicum of concrete foundation for the things about which he wrote.

And I believe I have accomplished that goal in the preceding words. Defy the auto-psychological response to discount anything that goads you to offhandedly dismiss something simply because it is entrenched in religious

or mysterious belief systems, and open your eyes to the reality that even religious writers with hugely miraculous events ascribed to them, have their place in real history.

Moses wrote the books of the Law of the Hebrews; there is no question in my mind. He penned the passage in the Book of Genesis regarding the Nephilim, though, I believe, as an abridged retelling of already widely accepted events sourced in already-ancient texts of his day in the 15th century BCE. His later mention of the Nephilim, the descendants of Anak, who the spies said were living in the land of Cana'an, may have been a later edit by Moses or his successor, Joshua, but the passage still reveals hints and clues as to the existence of these beings. Moses relied heavily on the original accounts of Enoch (as rewritten after the Babylonian captivity in the third century BCE) and on his early religious education as a “son of the pharaoh” in 18th Dynasty Egypt.

A final thought on Moses, as a result of my 30 years of study, research, and contemplation on this remarkable man, is that he was establishing himself as the “Pharaoh-God” of the Israelites. Everything he had learned in the royal courts, he incorporated into establishing his leadership. His “talks with God” gave him the seal of Divine kinship and approval before the people—something that most leaders of coups or rebellions strive very hard to accomplish. His word was law. And his kingly arrogance could only have found its roots in the leadership styles and qualities he learned from the best, the Thutmoses/Hatshepsut family of Egyptian monarchs.

Of all this, he gave us the Nephilim, though borrowed from other faith writings of his day, blended with the gods of Egypt.

chapter 4

The Pan-Cultural Effect

In 1872, George Smith, pioneering English Assyriologist and noted archaeologist and researcher with the British Museum, laboriously reconstructed the puzzle-piece-like fragments of Babylonian tablets dating to 1700 BCE found at excavations of the city of Ninevah. One night, Smith came across a large fragment with only one side legible. He was stunned to read the story of a man who built an ark to escape a devastating flood, who brought on board animals of all types, who sent out birds to see if the water had receded. If you are thinking that Smith found an ancient tablet recounting the flood of Noah, you would be incorrect. Smith had stumbled across one chapter of the much longer, long forgotten tale, of the *Epic of Gilgamesh*,¹ a “mirrored” account of the Noah and the Ark story found in the Book of Genesis. Only the account of Gilgamesh had a completely different cast of characters and a recounting of other events not found in the Noah story.

In the Babylonian Epic of Gilgamesh, toward the end of the *He Who Saw the Deep* version by Sîn-lēqi-unninni,² there are references to the great flood (Tablet XI). Many scholars believe that the flood myth of Gilgamesh was added to Tablet XI in the “standard version” of the *Gilgamesh Epic* by an editor who plagiarized the flood story from the *Epic of Atrahasis*.³ A short reference to the flood myth is also mentioned in the much older Sumerian Gilgamesh poems, from which the later Babylonian versions drew much of their inspiration and subject matter. This was a late addition to the Gilgamesh cycle, largely paraphrased or copied verbatim from the *Epic of Atrahasis*.⁴ In this account, the hero Gilgamesh, seeking immortality, searches out Utnapishtim in Dilmun, a kind of paradise on earth. Utnapishtim tells Gilgamesh how Ea (equivalent of the Sumerian

Enki) warned him of the gods' plan to destroy all life by means of a great flood. Utnapishtim then passes on instructions he had been given on how to build an enormous barge-like vessel in which he could save his family, his friends, and his wealth and cattle. After the deluge subsides, the gods repented of their action and granted immortality to Utnapishtim and his wife.

Short of historical and comparative religious and mythological research, there is no scientific methodology that can be applied to a study of the Nephilim and the disastrous deluge that killed a world of living beings as a result. You can't ring up a spirit, angel, demon, or some other form of extra-terrestrial being on the telephone, lure it into a laboratory and coax it to have sex with a human woman for the purposes of observing conception and birth of offspring. There is no means to have the ability to hypothesize, study, and repeat the procedure to gain quantifiable data. You can, however, look to the ancient annals. There is a certain scientific methodology at play when you consider that nearly every culture of the ancient world has its version of these phenomena as mentioned in the Books of Genesis and Enoch.

Including the Genesis account of Noah's Flood, in which we have the introduction of the Sons of God and their mixed-blood offspring, there are more than 600 ancient tribal legends from around the world giving account of the global deluge that consumed the antediluvial (pre-flood) world. And every major civilization of the ancient world has its corresponding mythological gods, demigods, and star children that all seem to have common source points. Despite mainstream anthropological explanations of these ancient accounts as referring less to a global flood than localized rivers over-spilling their banks, nearly all of the ancient tribal legends comprising the 600 tales speak of a "world covering" flood. And most of those tribal histories mention the intercourse between spirit beings and human women as partial cause for a deity to send flood waters to wipe them out.

The various accounts of a great, ancient flood come from hundreds of tribes in Europe, Asia, the Near East, Africa, Australia, the Pacific islands, and the Americas. To enlist them all here would require a volume of its own, so suffice it to say that these various tales are found not only in what we would consider the major, well-known cultures of antiquity, such as Greek, Roman, Celtic, Egyptian, and Middle Eastern, but also from tribes such as the Masai, Yoruba, and Mandingo of Africa; the Vogel, Samoyed, Yenisey Ostyak, Tibel, Lepcha, Sagaiye, Ifugayo, Bahnar, and Kammu tribes of Asia; the Australian tribes of Maung, Gunwinggu, Gumaidje, and Manger; North America's Inuit, Kwakiutl, Kootenay, Cherokee, Mandan, Choctaw, Navajo, and Lakota; the Tarascan, Yaqui, Tlaxcalan, Chol, Toltec, and Maya of Central America; and the South American Acawai, Yaruro, Arawak, Murato, Toba, and Selk'nam. The list is so vast that even the scant few shown here are barely the tip of the iceberg.

All this illustrates is that every culture, every tribal system, every clan, region, city-state, and religion had its version of the Genesis Flood and the events surrounding its purpose, from the utilitarian to the obscurely mythological.

Although I list here only a few of the cultural variants on the flood story, take note of how most of them reference the gods, giants, and anger of a deity against the corrupt and sinful inhabitants of the earth.

Lithuanian

From his heavenly window, the supreme god Pramzimas saw nothing but corruption, war, and injustice among mankind. He sent two giants, Wandu and Wejas (water and wind), to destroy the earth. After 20 days and nights, little was left. Pramzimas looked to see the progress. He happened to be eating nuts at the time, and he threw down the shells. One happened to land on the peak of the tallest mountain, where some people and animals had sought refuge. Everybody climbed in and survived the flood floating in the

nutshell. Pramzimas's wrath abated, and he ordered the wind and water to end their devastation. The people left the nutshell and dispersed, except for one elderly couple who stayed where they landed. To comfort them, Pramzimas sent the rainbow and advised them to jump over the bones of the earth nine times. They did so, and up sprang nine other couples, from which the nine Lithuanian tribes descended.⁵

Celtic

Heaven and Earth were great giants. Heaven lay upon the Earth so that their children were crowded between them, and the children and their mother were unhappy in the darkness. The boldest of the sons led his brothers in cutting up Heaven into many pieces. From his skull they made the firmament. His spilling blood caused a great flood that killed all humans except a single pair, who were saved in a ship made by a beneficent Titan. The waters settled in hollows to become the oceans. The son who led in the mutilation of Heaven was a Titan and became their king, but the Titans and gods hated each other, and the king titan was driven from his throne by his son, who was born a god. That Titan at last went to the land of the departed. The Titan who built the ship, whom some consider to be the same as the king Titan, went there also.⁶

Roman

Jupiter, angered at the evil ways of humanity, resolved to destroy it. He was about to set the earth to burning, but considered the possibility that the flames might set heaven itself afire, so he decided to flood the earth instead. With Neptune's help, he caused storm and earthquake to flood everything but the summit of Parnassus, where Deucalion and his wife Pyrrha came by boat and found refuge. Recognizing their piety, Jupiter let them live and withdrew the flood. Deucalion and Pyrrha, at the advice of an oracle,

repopulated the world by throwing “your mother’s bones” (stones) behind them; each stone became a person.⁷

Scandanavian

Oden, Vili, and Ve fought and slew the great ice giant Ymir, and icy water from his wounds drowned most of the Rime Giants. The giant Bergelmir escaped with his wife and children on a boat made from a hollowed tree trunk. From them rose the race of frost ogres. Ymir’s body became the world we live on. His blood became the oceans.⁸

Chaldean

According to accounts attributed to the great Babylonian priest-historian Berosus (whose writings about Oannes we will see in [Chapter 5](#)), the antediluvians were giants who became impious and depraved, except one among them who revered the gods and was wise and prudent. His name was Noa, and he dwelt in Syria with his three sons Sem, Japet, Chem, and their wives Tidea, Pandora, Noela, and Noegla. From the stars, he foresaw destruction, and he began building an ark. Seventy-eight years after he began building, the oceans, inland seas, and rivers burst forth from beneath, attended by many days of violent rain. The waters overflowed all the mountains, and the human race was drowned except Noa and his family who survived on his great boat, which came to rest at last on the top of the Gendyaean Mountain. According to legend, remnants of the enormous boat still remain, which men take bitumen from to make charms against evil.⁹

The list of cross-cultural accounts of the flood and the giants could fill volumes of books, so I merely noted a handful to illustrate the point that nearly every culture has its own version of the Flood of Noah and the elements that brought on the great deluge. Again, the absence of recorded history becomes a near-irrelevancy when stacked against the innumerable cultural accounts that all seem to hail back to a singular common event. This is by no means the final word on the matter, but merely a start in sifting through the many mythological evidences that seem to point to a great historic event.

As mentioned, there are many cultural references to “giants” and “visitors from the sky,” whom most tales refer to as angels, demons, or spirit beings. These “spirits who descended” are found in nearly every account of the ancient deluge, and are found in innumerable ancient accounts such as the Anaaye (Diné/Navajo), the Nunhyunuwi (Cherokee), the Cawr (Welsh), the Dev (Turkish), the Velikan (Russian), the Yak (Thai), the Rephaim (Hebrew), the Famangomadan (Spanish), the Wrnach (Welsh), Fomorians (Celtic), Dasa Maha Yodayo (Sri Lanka), the Puntan (Micronesia), the Azrail (Armenian), the Gigantes (Greek), and many, many others.

The notion that the accounts of the Nephilim reached every culture of the world is not as far-fetched as we might think. Though the story of the descent of the Watchers to the top of Mount Hermon is the Hebrew version, other cultural mythologies have their own variations on the tale. Whether borrowed and incorporated into their own mythologies and legends, or experienced firsthand by their own ancient inhabitants, it is clear that the Nephilim in one form or another affected the populations of nearly all ancient cultures, exponentially spreading around the globe.

But where did the Nephilim come from, in the first place?

chapter 5

The Watchers

“I ought to be thy Adam, but I am rather the fallen angel...”

—The Creature, from Mary Shelley’s *Frankenstein*

“The desire of excessive power caused the angels to fall; the desire of knowledge caused men to fall.”

—Francis Bacon

Enoch, a book found among the Dead Sea Scrolls, called them “The Watchers,” these non-earthly beings who seemed to hold some sort of superior capacity over the inhabitants of the earth. The writer of 1 Enoch even subtitles a section of the book, “The Book of the Watchers”: 1 Enoch 6-36. In the Aramaic the Watchers are the Irin, which is translated as “angel” (Greek *angelos*; Coptic *malah*) in the Greek and Ethiopian translations, although the commonly used Aramaic term for angel, *malakha*, never appears in the Book of Enoch, which is written in Aramaic. Irin is a word also found in the Old Testament’s historical/prophetic Book of Daniel, where three times throughout the book the author links them directly to God’s holy angels. It is in the Book of Daniel that the great Babylonian King Nebuchadnezzar falls into a period of madness upon seeing a “Watcher, a holy one (singular) come down from heaven” and appear to him in a dream and prophesy. The singular form of the word in this context suggests that “a Watcher” and “a Holy One” are two different titles for the same entity or caste of entities.

In the Book of Daniel, King Nebuchadnezzar goes on to describe the message delivered to him in his dream, wherein he is told that he will be reduced to madness and shall crawl upon the ground as a beast, eating grass, and that this divinely ordered punishment is “by the decree of the Watchers, and the demand by the word of the holy ones” in order that “the living may know that the Most High rules in the kingdom of men.” Nebuchadnezzar then falls into an undefined period of mental illness and temporal insanity after which, when he comes back to his full senses, he states:

“34 At the end of that time, I, Nebuchadnezzar, raised my eyes toward heaven, and my sanity was restored. Then I praised the Most High; I honored and glorified him who lives forever. His dominion is an eternal dominion; his kingdom endures from generation to generation. 35 All the peoples of the earth are regarded as nothing. He does as he pleases with the powers of heaven and the peoples of the earth. No one can hold back his hand or say to him: ‘What have you done?’ 36 At the same time that my sanity was restored, my honor and splendor were returned to me for the glory of my kingdom. My advisers and nobles sought me out, and I was restored to my throne and became even greater than before. 37 Now I, Nebuchadnezzar, praise and exalt and glorify the King of heaven, because everything he does is right and all his ways are just. And those who walk in pride he is able to humble.”

(Daniel 4:34-37)

It appears that the Watchers had made their point. And it is also clearly indicated by this passage that the Watchers themselves existed long after the rebellion of Shamyaza and his followers on Mount Hermon, and were a caste who, in their non-rebellious station, were emissaries of God or of a much higher, superior being. If nothing else, it is abundantly clear that the Watchers are here in this passage again established as being part of a hierarchy who answered to a superior authority.

In the Book of Enoch, the Watchers are angels who have been dispatched or assigned to the earth to “watch over” its inhabitants, but in the process of conducting their duties, they become enamored with human women. The passage in Genesis says they “lusted” after the women of the earth, which results in one *en masse* act of rebellion in which they follow the prodding of their leader, Shamyaza, and illicitly instruct human beings in all types of arts and practices not yet naturally developed by humans. And they, of course, enter into intimate relations and sexual procreative activity with the inferior humans. The draw for these beings to interact and have intercourse with human women must have been either a very strong urge, if they indeed were angelic or superior in nature, or it was the act of beings who had a definitive purpose and goal of interbreeding.

Whether they were divinely appointed emissaries part of an orderly caste of angels that held responsibility over mankind, or a race of infiltrators perceived by the earth’s population as gods and spirit beings, they seemingly had the ability to choose and impregnate whomever they wished. And having had such ability clearly indicates that they were much higher on the cosmic food chain than the humans they were able to subjugate and influence at whim. The great theological question looms around whether or not they were part of the biblical accounts of fallen angels or only labeled as such in the perception of those who first beheld and intercoured with them.

After their offspring, the Nephilim, are conceived, the Watchers carry on a systematic instruction of humans in the arts of herbology, cosmetics, mirrors, weaponry, sorcery, and other technical advances that would otherwise have taken a much longer period of time for humans to develop on their own. It gives humanity a foisted-upon boost that would not otherwise have happened in such a short period of time. This ongoing teaching was carried out by Shamyaza and the 200 Watchers who were there dwelling among the humans along with him.

There are 20 leaders of the Watchers mentioned in the Book of Enoch:

“7 And these are the names of their leaders: Samlazaz, their leader, Araklba, Rameel, Kokablel, Tamlel, Ramlel, Danel, Ezeqeel, Baraqijal, 8 Asael, Armaros, Batarel, Ananel, Zaqlel, Samsapeel, Satarel, Turel, Jomjael, Sariel. These are their chiefs of tens.”

(1 Enoch—The Book of the Watchers 6: 7-8

According to the Book of Enoch, the Watchers who took wives, had sexual intercourse with them, producing offspring, and taught forbidden knowledge became part of the caste of fallen angels. Enoch lists their leaders by specific names. And take specific note of how many of these beings bear the name of their maker, Elohim, denoted by the “El” at the end of the name (Other such great archangels who bore the name of God, ranking them as “Sons of God [bene haElohim] are Gabriel, Michael, and Raphael, but they were not part of the fallen caste.):

Araqiel

(also Arakiel, Araquel, Araciel, Arqael, Sarquael, Arkiel, Arkas) taught humans the signs of the earth. However, in the Sibylline Oracles, Araquel is referred to not as a fallen angel, or Watcher, but as one of the five angels who lead the souls of men to judgement, the other four being Ramiel, Uriel, Samiel, and Azazel.

Armaros

(also Amaros) in 1 Enoch taught men the resolving of enchantments and the casting of spells.

Azazel

taught men to make knives, swords, and shields, and how to devise ornaments and cosmetics.

- | | |
|------------------|--|
| Baraqel | (Baraqiel) taught men astrology and the divining of the stars. |
| Bezaliel | is also mentioned in 1 Enoch, but is left out of most translations due to damaged manuscripts and problematic transmission of the text. |
| Chazaqiel | (sometimes Ezeqeel) taught men the signs of the clouds, the art and science of meteorology, and the prognostication of weather. |
| Gadriel | also taught the art of cosmetics. |
| Kokabiel | (also Kakabel, Kochbiel, Kokbiel, Kabaiel, and Kochab) is a high-ranking, holy angel, but, in general apocryphal lore and also in 1 Enoch, he is a fallen Watcher, resident of nether realms, and commands 365,000 surrogate spirits to do his bidding. Among other duties, he instructs his fellows in astrology. |
| Penemuel | taught mankind the art of writing with ink and paper, and taught “the children of men the bitter and the sweet and the secrets of wisdom. |
| Sariel | (also Suriel) taught mankind about the courses of the moon and tidal influences, at one |

time regarded as forbidden knowledge.

Shamyaza

(also Shemyazaz, Shamazya, Semiaza, Shemhazi, Semyaza, and Amezyarak) is one of the leaders of the fall from heaven, and the instigator of the pact to cohabit with human women.

Shamsiel

once a guardian of Eden, served as one of the two chief aides to the archangel Uriel (the other aide being Hasdiel) when Uriel bore his standard into battle, and is the head of 365 legions of angels and also crowns prayers, accompanying them to the fifth heaven. He is referred to as one of the Watchers. He is a fallen angel who teaches humanity the signs of the sun.

“1 ‘And all the others together with them took unto themselves wives, and each chose for himself one, and they began to go in unto them and to defile themselves with them, and they taught them charms 2 and enchantments, and the cutting of roots, and made them acquainted with plants. And they 3 became pregnant, and they bare great giants, whose height was three thousand ells: Who consumed 4 all the acquisitions of men. And when men could no longer sustain them, the giants turned against 5 them and devoured mankind. And they began to sin against birds, and beasts, and reptiles, and 6 fish, and to devour one another’s flesh, and drink the blood. Then the earth laid accusation against the lawless ones.”

(1 Enoch 7:1-6)

A Rebellion Against Heaven

So the Watchers, some 200 in number, swore an oath to one another on the slopes of Mount Hermon in northern Israel, making a pact to descend to the earth, take human form, and take wives from the daughters of men. Ignoring, for a moment, the obvious mythical, mystical aspect of angelic beings—and this seems such an inconsequential thing in current cultural mindset, where we no longer have great prohibitions against intermarriage among the races except in racially entrenched pockets of modern civilization—and one would think that this sort of inter-breeding on the part of (even mythological) characters is rather innocuous. There is almost a “who cares?” aura about it, until you consider the far reaching ramifications of the actions of the Watchers—especially if they are in any form true events that have been recorded. Just as we have “changed” the role of God as our civilized tendencies have evolved, we ascribe modern thinking to ancient prohibitions and deeds. Note what God said of himself to the prophet Amos in the pages of Old Testament scripture:

“7 This is what he showed me: behold, the Lord was standing beside a wall built with a plumb line, with a plumb line in his hand. 8 And the Lord said to me, ‘Amos, what do you see?’ And I said, ‘A plumb line.’ Then the Lord said, ‘Behold, I am setting a plumb line in the midst of my people Israel;

I will never again pass by them; 9 the high places of Isaac shall be made desolate, and the sanctuaries of Israel shall be laid waste, and I will rise against the house of Jeroboam with the sword.’”

(Amos 7:7-9)

In essence, God was calling himself the standard by which Israel needed to measure up. The plumb line falls straight and true due to the laws of gravity and nature. Anything that deviates from the plumb is considered by God to be “off the mark.” The pact made by the Watchers to impregnate human women constituted a rebellion against the laws of heaven that knocked the plumb completely off the wall. And, as we shall see in [Chapter](#)

8 (in the section entitled “The Assembly of the Sons of God”), their sin was against the supreme king of the Divine Council of the gods—a deed worthy of divine consequences. This links the Nephilim, “those who were cast down,” with the fallen angels of the “War in Heaven” described in The Book of Isaiah. In the passage, God is assuring Isaiah that their Babylonian oppressors will be brought down to size. The following passage speaks of the Babylonian king, but many have attributed this to the fall of Lucifer, even though the passage does not implicitly say that:

“12 How you have fallen from heaven,
morning star, son of the dawn!
You have been cast down to the earth,
you who once laid low the nations!
13 You said in your heart,
‘I will ascend to the heavens;
I will raise my throne
above the stars of God;
I will sit enthroned on the mount of assembly,
on the utmost heights of Mount Zaphon [one of the most
sacred mountains to the Cana'anites]
14 I will ascend above the tops of the clouds;
I will make myself like the Most High.’
15 But you are brought down to the realm of the dead,
to the depths of the pit.”

(Isaiah 14:12-15)

The trouble with many of these Old Testamental prophecies is that they seemingly start talking about one thing, but then click over, mid-sentence, into making spiritual word pictures of a completely different notion or event altogether. It’s rather like having a talk about your backyard birdfeeders over a cup of coffee with a friend, then watching his eyes turn to a fervent, glossy stare as he begins to speak to you about the “wings of the black raven spreading their shadow over your soul....” (This actually happened to me, once, so don’t laugh.) At any rate, God seems to lapse into prophetic mode while seemingly relating information about something completely

different—and usually without warning or notice. The casual reader of these prophetic passages of scripture would have to draw the conclusion that the passage is either complete in its thoughts about the king of Babylon, or that the God who delivered the message has a—and I mean no disrespect nor blasphemy by this—attention deficit disorder problem when transmitting hidden meanings in the midst of what is a completely different description altogether on the surface. Also interesting to note in this passage: The reference to the “mount of Assembly” here contains a veiled reference to the Divine Council.

“10 ‘Then they took wives, each choosing for himself, whom they began to approach, and with whom they cohabitated; teaching them sorcery, incantations... (and) all the secret things which are done in the heavens.’”

(1 Enoch 7:10)

This is the real sin of the Watchers laid bare. They shared “powerful forbidden secrets” with mankind, and as Enoch says, “*men were not born for this.*” As we saw, each of the leaders of the Watchers taught some specialized field of knowledge, such as astronomy, the manufacture of goods, the dying of textiles, the making and application of cosmetics, and so on. And certainly, although the teaching of such things as sorcery and astrology may have been viewed as ungodly and taboo at the time, despite these things having taken place long before Mosaic Law and written prohibitions, one of the Watchers, Penemuel, stands accused of something as simple as “teaching men to understand writing, and the use of ink and paper.” This seems to be a very out-of-place prohibition, for even Enoch himself is described as a “scribe of righteousness,” and is credited in the Muslim Qur'an with being the inventor of mathematics, writing, and astronomy.¹

Berossus of Babylon, a third-century BCE Hellenistic-era Babylonian writer² born near the beginning of Alexander the Great's reign, an astronomer and priest of Bel Marduk, speaks of the half-man or half-fish

god, Oannes, as having engaged in similar forms of activity as the Watchers. He would rise up out of the sea each morning and teach unknown arts and knowledges, only without the inherent prohibition of those said knowledges being forbidden by a superior deity or set of theological rules. So, setting aside the Watchers' acts of cohabitation with and impregnation of human women, the Book of Enoch tells us that the teaching of forbidden knowledge to humanity seems to be the overt crime committed by the Watchers. If you read between the lines and root out the unwritten subtext of the book, it would almost seem as if the hidden message is that "knowledge begets evil."³ Like the Amish and the Pennsylvania Dutch who shun technological advance, believing it distracts them from a closer walk with God and is the source of all the world's sins and woes, the author of the Book of Enoch is telling us that "higher understanding" was contrary to primeval man's true nature, and resulted inevitably in corruption, judgment, and eventual punishment. It's like handing a child a loaded gun: He may have some concept of what the thing does, but he can create a world of havoc and tragedy when wielding it on his own.

But, of course, we have the opposite side of the argument from more conservative, evangelical theologians who, if they even broach the topic of the Watchers and the Nephilim at all, will quickly point out how they believe these beings were part of the Luciferian fall after the War in Heaven. And, as if God had no control over his creation, these minions of Lucifer set about a campaign to infiltrate the human bloodline and thereby infect the pure blood of the human race, leaving no possibility for the pure human bloodline of the prophesied Messiah to ever take hold. The great sin, then, of the Watchers was not just the teaching of ancient, forbidden wisdom, but an all-out assault on the one and only begotten Son of God, who had not yet been conceived. However, were this the stratagem incorporated by the fallen demonic minions of Satan, then they waited seven long generations to begin their tactical.

Watcher Psych 101

The Book of Enoch is more of an accurate record of how the Watchers were *perceived* within a framework of antediluvian worship of God than it is a reflection of who the Watchers really *were* or what they really *did*. In these accounts of the “fallen” caste of Watchers, we are given very little insight as to what their intent was, or into their personalities or their motivations. We only know that they lusted, sought out, and carried through with a plan that they were convinced was something they should carry out, but that would also bring down the wrath of God on their heads. This is why Shamyaza was second-guessing his decision, and why he looked pleadingly to the others of his kind to bolster him in his decision. They, in response, joined in with him and set the pact in concrete. Their devilish intent and malicious bloodplay are ascribed later by scholars and researchers who parse the texts with ecclesiastical intent, or who are merely disingenuous with the context when it falls outside their theological or denominational beliefs. Never once in the passages about the Watchers does it say they descended with intent to thwart the bloodlines of the coming Messiah, but that very sin has been ascribed to them by later interpreters of the text. It is axiomatic that people have an innate fear and mistrust of those whom they perceive as knowing more than they do, and most certainly of those who wield a greater power over them. It is also a given (just ask Machiavelli) that people fear, resist, and rise against any brand of change that accompanies new knowledge and new ideas. This is precisely what the Watchers brought to the ancients—change, revolutionary and evolutionary concepts, and knowledge; the sweet, fruity filling of forbidden knowledge baked within the pie crust of taboo and prohibition.

But the corruption seems to go far beyond the mere transmission of knowledge and wisdom. The offspring of the Watchers were guilty of grievous crimes against mankind that Enoch equates to the “whole earth being filled with blood,” and the souls of those who perished at their hands crying in some dreadful ghostly complaint to gain the attentions—if not the vengeance—of God.

“5 Thou hast seen what Azazyel has done, how he has taught every species of iniquity upon earth, and has disclosed to the world all the secret things which are done in the heavens. 6 Shamyaza also has

taught sorcery, to whom thou hast given authority over those who are associated with him. They have gone together to the daughters of men; have lain with them; have become polluted; 7 And have discovered crimes to them. 8 The women likewise have brought forth giants. 9 Thus has the whole earth been filled with blood and with iniquity.

10 And now behold the souls of those who are dead, cry out.

11 And complain even to the gate of heaven.

12 Their groaning ascends; nor can they escape from the unrighteousness which is committed on earth. Thou knowest all things, before they exist. 13 Thou knowest these things, and what has been done by them; yet thou dost not speak to us. 14 What on account of these things ought we to do to them?"

(1 Enoch 9:5-14)

Naturalness of awareness is synonymous with wisdom—true wisdom. And true wisdom holds a true power, not to oppress or manipulate, but to enlighten and illuminate; it's a power that is innate in every single being. In ancient times, however, wisdom was synonymous with power, and power especially for those who did not possess it was more often than not perceived to be synonymous with *oppression*.⁴ Indeed, the Nephilim were accused of such when it was written:

"12 All the earth has been corrupted by the effects of the teaching of Azazyel. To him therefore ascribe the whole crime. 13 To Gabriel also the Lord said, Go to the biters, to the repro- bates, to the children of fornication; and destroy the children of fornication, the offspring of the Watchers, from among men; bring them forth, and excite them one against another. Let them perish by mutual slaughter, for length of days shall not be theirs.... 18 'Destroy all the souls addicted to dalliance, and the offspring of the Watchers, for they have tyrannized over mankind. 19 Let every oppressor perish from the face of the earth; 20 Let every evil work be destroyed...'"

(1 Enoch 10:12-13, 18-20)

As is common in apocalyptic Jewish texts, as well as mythological tales from around the world, the oppressors in the tales are ascribed attributes of enormously epic proportion. In the Book of Enoch, the offspring of the Watchers, the Nephilim, are described as a race of giants who committed acts against both mankind and nature to monstrous, mythic degrees:

“11 Then they took wives, each choosing for himself, whom they began to approach, and with whom they cohabited; teaching them sorcery, incantations, and the dividing of roots and trees. 11 And the women conceiving brought forth giants, 12 Whose stature was each three hundred cubits. These devoured all which the labor of men produced; until it became impossible to feed them; 13 When they turned themselves against men, in order to devour them; 14 And began to injure birds, beasts, reptiles, and fishes, to eat their flesh one after another, and to drink their blood.”

(1 Enoch 7:11-14)

They consumed birds and fish, “devouring their flesh one after another and drinking their blood.” This resembles the highly exaggerated claim of a peasant tenant who watches his feudal overloads feast on fatted calves and flambéed fowl while he and his family subsist on the broth of roots and bark, with a side helping of gruel—and then he makes up horrible stories about it to exaggerate his classist angst. However, most major religions and countless legends and mythologies speak of a time when giants walked the Earth. Why would diverse and widely separated traditions all make the same outrageous claims unless it had some basis in truth? All myth and legend have at their primordial headwaters some kernel of fact and truth. And if that truth was not there at the core, what are the odds that all these traditions could concoct such similar stories?

In the Watchers we see an emerging prototype of *Satan*, the adversary, deciever, accuser, liar. We can also see a variation on the theme of Original Sin. Just as with Eve and the forbidden fruit, the sin of the Watchers involved a specific combination of infractions, having to do with both

disobedience and knowledge. And in a very real sense, Cain, the firstborn son of Adam and Eve, became the first of the Nephilim.

If one were to look behind the mythic elements of the story of the Watchers, there are many various historical events that could come to the forefront in ways to explain the spread of such incredible tales. But what ought to intrigue us beyond all fanciful stories is the persistence of the myth itself; the ongoing story of a race of gods and their descendants, who somehow come to be perceived as demonic.

Where Their Feet Hit the Ground

The Watchers. They first appear on the scene in Sumer. *Shumer*, it seems, literally means the “land of the Watchers.” For American author Zecharia Sitchin, they are alien beings whose specific task is to orbit the earth, monitoring events on earth. For Sitchin, the Watchers are not a race or a species; they are merely a job specification. Their colleagues had abandoned their ships and had landed on Earth—they continued to orbit the Earth. Those who did land, either mated or genetically engineered mankind into its present form. As a consequence, mankind worshipped the Watchers as gods.

Going a step further back, however, It is recorded in the Book of Enoch that these so-called “Watchers” descended first to the slopes and foothills of Mount Hermon (*Ha Hermon* in Hebrew), also known as *Jabal el-Shaykh* in Aramaic, meaning, “Mountain of the Chief.” The mountain is actually a cluster of mountains made up of three distinct summits that straddle the current-day border between Lebanon and Syria in the highly political, much-disputed Golan Heights region of northern Israel. To set it in more modern context, it was this mountain that exchanged hands back-and-forth between Israel and Syria during the Six Day War of 1967 and the Yom Kippur War of 1973. On this mountain it is said the Watchers first

descended to the earth and made their pact to cohabit with human women and to teach “forbidden” skills to mankind.

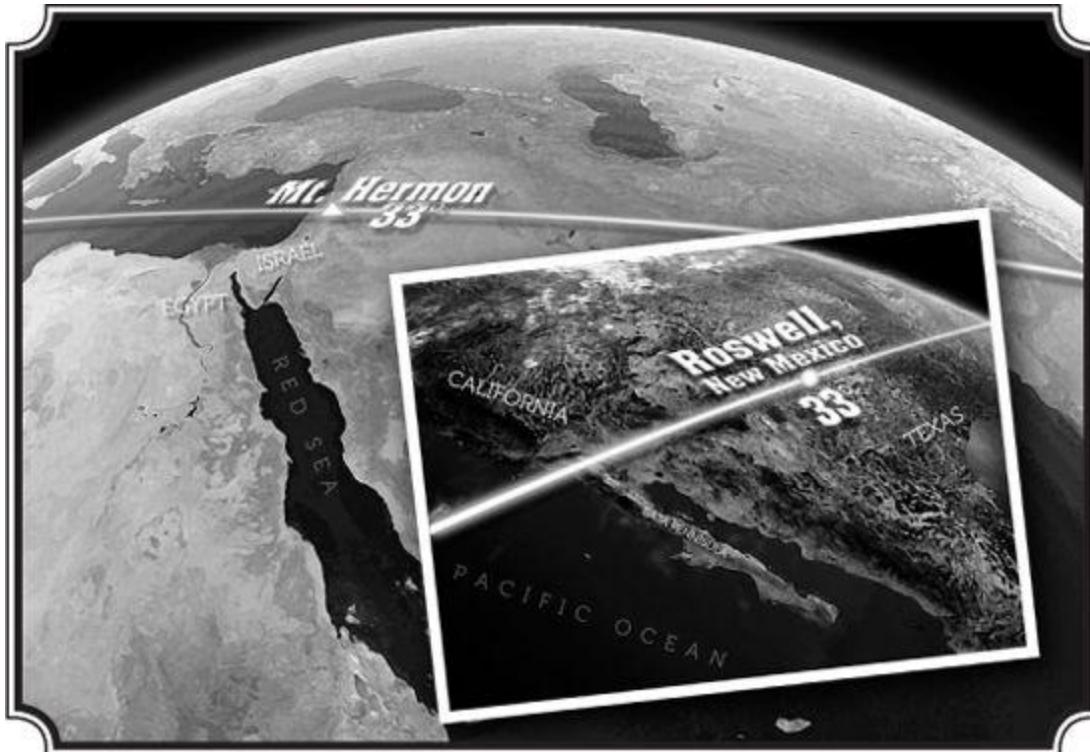

Mt. Hermon, Golan Heights, Israel/Syria/Lebanon, where the Watchers descended to the earth.

In the occult science of Numerology, the number 33 represents the ultimate attainment of consciousness. Keeping that in mind, it is very interesting to note that the geographic location of Mount Hermon, the very place where the Watchers are said to have descended to the earthly plane, lies on the 33rd parallel, which is a latitude of 33° north of the equator. If you trace the 33rd parallel to the exact geographic global opposite from Mount Hermon, you will find yourself directly on top of the most controversially mythic place in current ufological history: Roswell, New Mexico. Mount Hermon, where the Watchers descended to the earth, and Roswell, New Mexico, are exact polar opposites on the same 33rd degree north latitude. The global coordinates of Mount Hermon and the Roswell crash site are no accident, and speak to some deeper, perhaps secret significance.

“If aliens used the thirty-third latitudinal line as a weigh point—a landing point for planet earth, what biblical people saw thousands and thousands of years ago on Mount Hermon, were entities that came down from the sky. They called them angels.”

Bill Birnes, *Ancient Aliens*,
UFO Magazine, *UFO Hunters*⁵

Two significant sites on the 33rd parallel north. Mt. Hermon, Israel, and the highly controversial Roswell, New Mexico, UFO crash site are exact geo-global opposites.

Could the Watchers who descended to the slopes of Mount Hermon thousands of years ago, and the UFOs that reportedly crashed at Roswell in 1947 be from the same extra-terrestrial race? If these two events spanning the entirety of recorded human history indeed involve alien races, then they have been with us for the long haul, since the beginning of time. And it begs the question of whether or not they were left behind to monitor us, or to help establish and guide our civilizations and culture. And the even bigger question: Are they still among us today?

Some Christian ufologists, such as Chuck Missler, believe that the “Sons of God” in Genesis 6:2 are actually extra-terrestrials or grey aliens,⁶ and that these beings are actually fallen angels or demons that have appeared during the antediluvian times in order to genetically alter the human race, and to pollute the bloodline of Jesus.⁷ Thus, the Nephilim would be the hybrid race of these beings in this view.

Sumer

The land of “Shumer,” or Sumer, “Shinar” of the bible (literally, “Land of the Watchers” or “Land of the Bright Shining Ones”), as it has been identified in the Mesopotamia’s Fertile Crescent region, in modern-day Iraq, is the place where the Watchers and their offspring, the Nephilim, had their first great influence on human history. Or at least this is where they made their prehistoric, tangible mark on humanity, beyond their initial contact and intercourse.

On today’s map, the Land of Sumer lay roughly 400 miles east—as the crow flies—from the slopes of Mount Hermon, which is just a few miles northeast of Damascus. That seems like quite a distance to cover from the Watchers’ geographic touchdown on the planet to where they bore the greatest influence in mankind’s earliest of histories, but it is extremely important to take note of the region and all its connectivity to early biblical and Middle Eastern religious accounts.

For hundreds of years, we regarded Egypt as the world’s “oldest” civilization, but now the land of the pharaohs has been relegated to the periphery of the civilized world in the fourth and third millennia BCE. Despite the progress of archaeology and anthropology, we still know very little about the history of the peoples of the Mesopotamian region prior to 2500 BCE. And the Sumerians seemed to rise suddenly out of nowhere, predating Egyptian culture by at least 1,500-2,000 years.

In speaking of the Sumerian culture, Carl Sagan once remarked that we still have no clear perspective about their origins: “Their language is foreign; it shows no resemblance to Indo-European, Semitic or any other language. We can only map them by the actions of their successors, the Akkadians, who created a voluminous Sumerian-Akkadian dictionary.”⁸

The Sumerian culture of ancient Mesopotamia is the earliest human civilization known to contemporary science and the archaeological record, and Sumar’s sudden onset of civilized culture remained a mystery for many years despite representing an exponential quantum leap in humanity’s intellectual development. It all began about 6,000 years ago when the very first cuneiform writing was developed by the Sumerians to record a dramatic astronomical event: the visible star-burst of Vela X, a star that went supernova about 1,300 light years away from our solar system. It can still be seen today as a faintly flashing pulsar. Virtually overnight, in evolutionary terms, the Sumerians gave the world written language, the first fundamental character of which was the Sumerian symbol for the word *star*, commemorating the astronomical event. The cuneiform word was then linked to the symbol for “deity,” and the term *star god* was born.

In the blink of an eye, historically speaking, the Sumerians gave humanity written language when it had never before existed. The ancient Sumerians left behind, in the ruined mounds of their ancient cities, cuneiform tablets that listed everything from the spiritual form of worship to the mundane business receipts drawn up between merchants. The Sumerians, in their written language, gave us the first love song, the first prescription of pharmaceutical concoctions (all without any inclusion of magic or spirituality), the first school system, the first law code of jurisprudence, and the first parliament. And it all came out of nowhere, in the twinkling of a bursting supernova.

Why is this contextual to the Watchers? Because it was the Watchers who, according to the Book of Enoch, brought these skills to the ancient

Sumerians—and not only the Watchers, but other races that are recorded in the annals of ancient history and religious spirituality. All of the citings of ancient god-like entities appearing in various cultures, teaching mankind advanced skills, can all be collectively lumped together as superstitious myth-building, but, all myth and legend have at their core at least a kernel of truth and fact. The skeptic will ask you to cite evidences that other species interfered in the evolutionary ascendancy of mankind's civilization, while at the same time ignoring or at the very least watering down the pan-cultural evidence that already abundantly exists. It merely boils down to your "leaping off" point. That point with the skeptically and scientifically minded eliminates the possibility of spiritual or extra-terrestrial influence, as they seek to merely boil all anthropological studies down to what humanity achieved on its own accord. The possibility of external influence in cultural development—or physiological development, for that matter—is eliminated as a possibility because it smacks of too much superstition and unfounded, spurious claims. Yet the spiritual-historical documentation of every culture possesses an exponential thread of commonality in that they all express similarities. Even the Bible itself, in its many fables and Judeo-Christian mythologies, has an underlying code that exposes at least the possibility that there was influence from a more supreme being or race of infiltrators set on tangibly altering the course of homo-nid development and cultural establishment. It can't all be chalked up to superstitious myth.

Religious Mythology vs. Alien Influence

So much of what we read and interpret as mythology—especially from ancient religious texts—are things that we in our modern, much more advanced culture dispatch with a broad swath. We tend to do this so we can claim a higher intellectual ground than that of our ancestors, avoiding any possibility of being labeled as superstitious or appearing as if our theories and conclusions are being drawn from outmoded ways of perceiving and thinking.

But what if the old superstitions and mythologies are true, and we only label them as being myth because they lie outside the realm of a more sterile scientific view? In a universe as vast as the physical one in which we are only the tiniest drop in the motion of a vast, endless, blue sparkling sea, there are obviously more things at play than we can possibly fathom or even conceive in our wildest imaginings. So, instead of brushing aside the mythologies as irrelevant and lacking in any substantive fact, let's take the opposite approach and examine some of what has been left for us to consider by our ancient forebears.

Oannes, the Fishman

In the third century BCE, Babylonian priest-historian Berossus chronicled the coming of the Annedoti and their leader, Oannes, a race described as being half-human, half-fish, that surfaced from the Persian Gulf to instruct the early inhabitants of Mesopotamia in the arts of culture and civilization. According to the chronicles of Berossus, the ancient Sumerians were like “beasts of the field,” prior to the arrival of Oannes, living under no law, order, or conduct of governance. It was this half-fish/half-man entity who surfaced, appearing in the midst of the Sumerians, and though described in the writings of Berossus as being frightfully hideous in appearance, spoke with superior intelligence, ability, and instruction for the prehistoric, uncivilized Mesopotamians. According to Berossus, the leader of the Annedoti Fishman, Oannes, would rise up out of the sea every morning and instruct the people in all manner of arts and insights into all manner of letters and sciences. Oannes taught them how to construct houses, to found and build temples, and to compile laws and codes of conduct, and explained to them the principles of geometrical knowledge—all things that were necessary to devise and construct a cohesive, civilized culture. Oannes also taught the art of agriculture and the discerning of seeds and fruits and all manner of husbandry. In short, it is said by Berossus, Oannes “humanized” the savage, uncivilized humans that lived as un-unified, scattered animals in the wilds of Mesopotamia.

The appearance of reptilian-like entities exists all throughout human history. Oannes is simply one version of this extra-terrestrial form of entity, the half-man, half-fish, walking on two legs, possessing superior intelligence and the ability to communicate and teach specific knowledge to a lesser-advanced humanity.

Many ancient cultures have legends of amphibians or serpent people who serve as teachers and instruct ancient mankind in the arts of civilization. Quetzalcoatl, the feathered serpent of the Aztecs, descended from heaven in a silver egg. The strikingly handsome Nagas were the semi-divine Serpent People with supernatural powers who figure in the Hindu and Buddhist traditions. The shadowy recesses of history are rife with mentions of mythical sky people who were emissaries of the flying serpent. The snake-worshipping Mayans and Aztecs bear striking resemblance to the Chinese, who worshipped the celestial dragon. There are even reptilian characters that rise up in the Genesis account of creation and the first family.

The Dogon Nommos

The Nommos are the ancestral spirits, sometimes referred to as deities, hailing from the star Sirius B and worshipped by the Dogon tribe of Mali, West Africa, their villages situated around the arid Bandiagara Escarpment. The word *Nommos* is derived from a Dogon word meaning “to make one drink.” They are described as being frog-like creatures in both their amphibious and hermaphroditic physiologies. The Nommos were said to have been quite “ugly,” beings that resembled mermen and mermaids. They also appear in Babylonian, Accadian, and the Sumerian myths of the Annedoti and Oannes. The Egyptian goddess Isis, who is sometimes depicted as a mermaid, is also linked with the star Sirius. Dogon folk art depicts the Nommos as creatures with the upper torsos of human beings, and the legs and feet of an amphibian, with a fish-like tail. The Dogon also refer to the ancient Nommos as “Masters of the Water,” “the Monitors,” and “the Teachers.”

We see in Dogon mythology a commonality shared by many creation mythologies: the introduction of multiple births at the point of creation. This element of multiple births is even seen in the Genesis account of Adam and Eve's twin sons, Cain and Abel. In the case of the Nommos, the multiplicity is demonstrated by the mutation of a single entity into multiples. Nommo—the singular entity representing the race of Nommos—was the first living creature created by their sky god Amma. Soon after, Nommo underwent a transformative mutation and multiplied into four pairs of twins. One of the twins rebelled against the universal order created by Amma and, to restore order to his creation, Amma sacrificed one of the multiple Nommo progeny, dismembered his body, and scattered it throughout the universe. This dispersal of body parts is seen by the Dogon as the source for the proliferation of Binu shrines throughout the Dogons' traditional territory; wherever a body part fell, a shrine was erected.

In the latter 1940s, four Dogon priests related to French anthropologists Marcel Griaule and Germaine Dieterlen (who had been working with the Dogon since 1931) a belief that the Nommos, according to the Dogon legend, lived on a planet that orbits a star in the Sirius system, identified as Sirius B. The Nommos landed on earth in an "ark" that made a spinning decent to the ground with great noise and wind, like that of thunder and fire. The Dogon apparently possessed traditional astronomical knowledge about Sirius and its two companion stars that would normally be considered impossible without the use of telescopes. Of course, skeptics have attributed this intimate knowledge of the stars to "cultural contamination," possibly even introduced by the anthropologists themselves. However, that skeptical observation is considered by most to be far too simplistic a speculation.

After arriving, the Nommos, requiring a watery environment in which to exist, immediately set about the task of constructing a reservoir of water and subsequently dove in. According to the myth related to Griaule and Dieterlen, the Nommo divided his body among men to feed them; that is why it is also said that as the universe had drunk of his body, the Nommo also made men drink. He gave all his life principles to human beings.

According to the Dogon legend, the Nommo was crucified on a tree, but was resurrected and returned to his home world. Dogon legend has it that he will return in the future to revisit the earth in a human form.

The Serpent in the Garden of Eden

“1 Now the serpent was more crafty than any of the wild animals the LORD God had made. He said to the woman, “Did God really say, ‘You must not eat from any tree in the garden?’”

(Genesis 3:1)

The original paradise that rolled off the creative fingertips of God, as stated in the biblical account, is more than simple lore or myth. Despite all the spiritual mythos built up around the Garden of Eden’s existence, understanding its geographic location and the events that the Bible says took place there, are the first steppingstones to understanding the descent of the Watchers and the influence of external entities and races. We are going to take a bit of a diversion in this section in order to establish some background of the character known as the Serpent in the Garden of Eden.

According to the Book of Genesis, Eden lay in the region between the Tigris and Euphrates Rivers, with the Pishon and the Gihon flanking.

“10 A river watering the garden flowed from Eden; from there it was separated into four headwaters. 11 The name of the first is the Pishon; it winds through the entire land of Havilah, where there is gold. 12 (The gold of that land is good; aromatic resin and onyx are also there.) 13 The name of the second river is the Gihon; it winds through the entire land of Cush. 14 The name of the third river is the

Tigris; it runs along the east side of Ashur. And the fourth river is the Euphrates.”

(Genesis 2:10-14)

But all of this intimate geography may have been altered significantly during the Great Flood, which covered, as the Bible says, the entire surface of the world, even to the tops of the highest mountain peaks.

“17 For forty days the flood kept coming on the earth, and as the waters increased they lifted the ark high above the earth. 18 The waters rose and increased greatly on the earth, and the ark floated on the surface of the water. 19 They rose greatly on the earth, and all the high mountains under the entire heavens were covered. 20 The waters rose and covered the mountains to a depth of more than fifteen cubits [roughly 23 feet or 6.8 meters]. 21 Every living thing that moved on land perished—birds, livestock, wild animals, all the creatures that swarm over the earth, and all mankind. 22 Everything on dry land that had the breath of life in its nostrils died. 23 Every living thing on the face of the earth was wiped out; people and animals and the creatures that move along the ground and the birds were wiped from the earth. Only Noah was left, and those with him in the ark. 24 The waters flooded the earth for a hundred and fifty days.”

(Genesis 7:17-24)

There has been much debate over the land surface that was actually engulfed by the Great Flood. If the purpose of the flood was to destroy all life on the entire planet, then an earth-enveloping deluge is what would have been necessary, even though early human civilization existed only in the Fertile Crescent region of the earth. In the ancient way of understanding and evaluating, the “entire earth” encompassed only the areas that were known to the people alive at that time. Anything else existing on the opposite side of the globe was simply far beyond understanding or comprehension. Some ancient cultures even illustrated the Mesopotamian region as being an island surround by infinite horizons of ocean.

If the Great Flood were a more localized event, it may have simply engulfed the entirety of the Mesopotamian region, consisting of the Tigris and Euphrates River valleys, covering what would have been the highest of mountains in that antediluvian geography. A massive flood of the nature described in the Bible would have altered the landscape significantly, so the actual location of the Garden of Eden is impossible to pinpoint by today's geographic markers.

Wherever Eden actually lay on the map, it is clear that it was situated somewhere in the great Mesopotamian river valleys, in relatively close proximity to the rising Sumerian civilization and the earliest of cities built in the region.

The region of Eden. Although there is no way to be absolutely sure of its precise location, the Garden of Eden was most likely just to the northwest of the budding Sumerian civilization. The Genesis narrative places the Garden between the Tigris and Euphrates rivers, flanked by the Gihon and Pishon rivers, both of whose courses have altered over the millennia due to geologic catastrophe, yet not so much so that the approximate location of the Garden of Eden was rendered a complete mystery.

Now take a different look at the events that took place there:

The Hebrew word used in the Book of Genesis for the word *snake* is *nachash* (pronounced “naw-kawsh”), meaning “magician or enchanter; a spellbinder; to illuminate, shine.” Jewish Rabbinic interpretation never saw this word as meaning a literal snake. It was to be understood as “a shining being with power to enchant.” This is a far cry from a snake in the grass, and in many biblical interpretations is none other than Lucifer himself, although the passage itself never actually calls him out by name. It is this being that influences Eve—or beguiles her, in a more accurate sense—into eating the fruit of the forbidden tree in the midst of the Garden of Eden.

“2 The woman said to the serpent, ‘We may eat fruit from the trees in the garden, 3 but God did say, You must not eat fruit from the tree that is in the middle of the garden, and you must not touch it, or you will die.’”

(Genesis 3:2-3)

The Hebrew word for that tree is *ets*, a word that is in very close association with the Hebrew word *toledah*, both meaning “generations.” It is from these words that we draw the modern equivalent of “family tree.” Another variation of the word *ets* is “the wood of a tree as an opening and closing of a door.” In an applicational stretch the same word can apply to the term “portal; opening of one’s mind; enlightenment.”

It has been in some circles suggested that the Tree of the Knowledge of Good and Evil, from which Eve is said to have eaten the forbidden fruit, was not a literal tree at all, but, rather, symbolic of the pre-Adamic races that lived in the regions surrounding the Garden of Eden. These races are said to encompass the Atlantean civilization.

The phrase *fruit of the tree* is the Hebrew word *periy*—fruit: produce of the ground; offspring, children, progeny (of the womb); or figuratively: fruit (of actions). The phrase *eat of it* is the Hebrew word *akal* (aw-kal); this word has many uses, among which, one use means to “lay with a woman (sexual intercourse);” and the word *touch* is the Hebrew word *naga* (naw-gah); to touch, that is, to lay the hand upon (for any purpose); euphemism for: to touch, have sex with a woman.

“4 ‘You will not certainly die,’ the serpent said to the woman. 5 ‘For God knows that when you eat of it your eyes will be opened, and you will be like God, knowing good and evil.’ 6 When the woman saw that the fruit of the tree was good for food and pleasing to the eye, and also desirable for gaining wisdom, she took some and ate it. She also gave some to her husband, who was with her, and he ate it. 7 Then the eyes of both of them were opened, and they realized they were naked; so they sewed fig leaves together and made coverings for themselves.”

(Genesis 3:4-7)

This was obviously no ordinary tree. In fact, it wasn’t a literal tree at all. Many biblical scholars interpret this as Lucifer himself.

- ★ The phrase *pleasant to the eyes* is the Hebrew word *chamad*: to desire, to covet, to take pleasure in, to delight in, to be desirable, to delight greatly, to desire greatly, desirableness, preciousness.
- ★ The word *desired* is the Hebrew word *ta’avah* (tah-av-aw’)—to yearn for, to lust after (used of bodily appetites) a longing; by

implication: a delight (subjectively, satisfaction, objectively, a charm): a desire, a wish, longings of one's heart; lust, an appetite, covetousness (in a bad sense); to covet; to wait longingly.

**Took* is the Hebrew word *laqach* (law-kakh'); a primitive root; to take (in the widest variety of applications): to take (as in: "Abraham took his cloak in his hand"), to lay hold of, to receive, to marry, to take a wife, to take to or for a person, to procure, to get, to take possession of, to select, to choose, to take in marriage, to receive, to accept.

A very different picture of Eve's temptation in the Garden of Eden is beginning to emerge. The previous parsed passage is far more than a sinful, disobedient appreciation of fruit. All the references we hear of Eve eating an apple, or depictions in religious art of the Eden couple eating a big piece of fruit is merely coded information and hiding what the passage truly speaks about.

"It is obvious here that the snake was a symbol and not a literal talking snake selling apples. If you look up the words used in Genesis from a Strong's Concordance, you will then see that Genesis is filled with many sexual idioms. In fact the picture of the snake eating dust is a Jewish idiom for being lower than low. To take it literally is a mistake. Note too that there are no snakes that eat dust. Also that male penis strongly resembles a snake in its shape, so I do not think that we are dealing with a literal snake. And what was the law that Eve broke and was in "transgression" of? I would think it is clear that she was in transgression because she had committed adultery. It says that Adam did too partake in the eating of the fruit and became ashamed. But this fruit did not come directly from the tree but from Eve.⁹"

According to 1 Enoch 69:4-12, the serpent was one of five angels known as "the Five Satans," and one of those Satans was named Gader'el, and was "he who showed the children of the people all the blows of death, who misled Eve, who showed the children of the people (how to make) the instruments of death (such as) the shield, the breastplate, and the sword for

warfare, and all (the other) instruments of death to the children of the people.”

What really happened in this scene in the Garden of Eden is that Eve, the mother of humanity, lost her virginity to the Serpent; you can see that she encountered him sexually before ever having sex with her husband, Adam. And later in the passage, the text is implicit that Eve was impregnated by this encounter. Then she drew her husband into the scenario, he willingly partook, and Eve also became impregnated by Adam. Eve was then bearing fraternal twins, Cain and Abel, one from the seed of Adam and the other from the seed of the character known as the serpent in the Garden.

The grand sin that was committed in Eden was not mere disobedience in the eating of a forbidden piece of fruit from a forbidden tree in the midst of the garden. It was a sexual sin that created a dual bloodline in the twins conceived in Eve’s womb. According to the subsequent passages in Genesis, we learn that Abel was the blood seed of Adam, but that Cain was the blood seed of the serpent, and that those opposing lineages would be in constant conflict with one another, starting with Cain murdering his twin brother.

Here, we see that events in the Garden of Eden were greatly influenced by none other than a reptilian character. Theologically, you could pigeon-hole him as Lucifer or “Satan,” taking the form of a snake, but even in that form he would have had to have possessed the physical ability to have sexual intercourse with Eve. So the reptilian feature is mere poetic biblical language, or it represents the physical appearance and qualities of the person who tempted Eve.

In a very real sense, then, Cain, the seed of the serpent, was for all practical purposes the *very first* of the Nephilim, bequeathed by a fallen angel, perhaps even Lucifer himself.

Whoever the serpent truly is, there have been linkages made between the obviously coded message of the Adam and Eve story with the beings that descended to the slopes of Mount Hermon and bred with human women seven generations later. But is this “serpent seed” planted in the Garden of Eden only the first of many such recorded events in biblical history? Was the seed of the serpent something that was planted in the womb of Eve, only to be done again and again and again in the wombs of other women in both the pre-flood and post-flood worlds? And was the serpent himself—obviously not a snake or a man—a member of an angelic caste or even Lucifer, as some suggest, or was he something completely different?

“12 How art thou fallen from heaven, O Lucifer, son of the morning!”

[Isaiah 14:12]

“18 I beheld Satan as lightening fall from Heaven.”

[Jesus Christ, quoted in Luke 10:18]

Reptilians

The presence of a reptoid character in the biblical account of the Garden of Eden and the temptation of Eve has given rise to countless pop cultural mythologies, theories, and anecdotal personal encounters about a race of alien reptilian beings that interfered with human development and history. And they are linked closely with the Nephilim, Anunnaki, and the Sons of God of Genesis [Chapter 6](#). The only problem with most of the theorizing, despite how intriguing and possible the claims may be, is that it is just that: theorizing and speculation.

There are countless numbers of books and Websites that host a plethora of information about the reptilians that lived on this planet more than

800,000 years ago, hailing from the Draco star system. The vast majority of those fonts of reptilian information have no source points, no data, no cited facts. The entire reptilian issue seems to be summed up as accepted fact in particular circles of alien and ufological thought, but they offer us no solid evidence or empirical data to use as a foundation. No evidence, no verification, no historical records—much like most of our belief systems structured around the characters and events in the Bible itself. In his book *The Big Secret*, British-born new ageist, David Icke, one of the most well-known authors and lecturers on alien reptilians, speaks of their involvement with the human race through his own gaussian-blurred view of both historical and current events. For Icke, the reptilian factor is an otherworldly platform to use as a launching pad for his anti-Semitism, neofascism, and an ostensibly oddball convergence of New Age thinking with Nazi philosophy that he incorporates into the foundation for his belief that mankind has always been controlled and governed by a global Jewish conspiracy fathered by lizards from another planet.¹⁰ This merely illustrates that the topic of alien reptilians is comprised of more speculative ranting, subjective story-telling, and wishful thinking, than quantifiable historical or anthropological fact. Even the header on Icke's Website states that he is “[e]xposing the dreamworld we believe to be real.”¹¹

Reality can be stranger than fiction, it has been said, yet when we see the exposing of ideas from people who seem to have slippery holds on historical accuracy, let alone common sense and sanity, we tend to laugh them off into the other room and seat them at the children's table so they can do their thing while we adults converse at the grown-ups' table about the hardcore truisms of life and the universe. However, as crackpot as some of the ideas surrounding reptilians may sound, and whatever pseudo-political ideologies have been built on their shoulders, a kernel of truth may still lie quivering at the core. Although Reptilian art and religious application of serpents and dragons exist all throughout human history, there is little—if any—evidence that they dwelled on this planet and interacted with human beings on the level that is expressed in the theorizing of pseudo-scientific thought. Yet their presence in one form or another is pervasive and ultimately convincing to a certain degree.

Snake on a Stick

The remarkable fact is that throughout all ancient and modern civilizations, the serpent or dragon bestowing knowledge upon the human race figures prominently in all religions and histories: the Judeo-Christian reptilian “fallen angel” Lucifer; the Mayan serpent god, Quetzalcoatl; the enormous plumed serpent god of the Hopi Indians, Baholinkonga; the East Indian mystical human-like reptilians known as NAGAS; the Egyptian serpent god, Enuph; the Phoenicians Agathodemon; and even the Hebrews Nakhustan or Brazen Serpent that Moses cast and placed high on a pole when the Israelites were plagued by serpents in the wilderness—which is a biblical scene all on its own that begs the question of more encoded language from Moses. The actual passage reads:

“4 They traveled from Mount Hor along the route to the Red Sea, to go around Edom. But the people grew impatient on the way; 5 they spoke against God and against Moses, and said, ‘Why have you brought us up out of Egypt to die in the wilderness? There is no bread! There is no water! And we detest this miserable food!’ 6 Then the LORD sent venomous snakes among them; they bit the people and many Israelites died. 7 The people came to Moses and said, ‘We sinned when we spoke against the LORD and against you. Pray that the LORD will take the snakes away from us.’ So Moses prayed for the people. 8 The LORD said to Moses, ‘Make a snake and put it up on a pole; anyone who is bitten can look at it and live.’ 9 So Moses made a bronze snake and put it up on a pole. Then when anyone was bitten by a snake and looked at the bronze snake, they lived.”

(Numbers 21:4-9)

As a punishment for griping and complaining against God and Moses, the biblical account written by Moses tells us that God sent “firey serpents” into the camp of the wandering Israelites. The people were being bitten and dying in hordes. So God instructed Moses to cast a bronze snake and place

it high upon a pole, and all who were bitten and taken ill could look on the serpent from anywhere within the camp and be healed. The brazen serpent remained with the Israelites for another 700 years, where it eventually stood in the Temple in Jerusalem. But the people, during the time of King Hezekiah (715-687 BCE) had begun worshipping the snake and making an offering to it. So in a vast iconoclastic reform, Hezekiah cut down all the pagan groves, smashed all the idols, and destroyed the Nakhustan, which didn't bear that name until his reign on the throne of Israel, suggesting that he may have given it that name himself.

It is interesting to note that originally the second commandment written by Moses included this prohibition:

“4 You shall not make for yourself an idol, whether in the form of anything that is in heaven above, or that is on the earth beneath, or that is in the water under the earth.”

(Exodus 20:4)

Moses and the Brazen Serpent: Sebastien Bourdon, 1653-54.

This mandate was so strong in its wording that the Jews incorporated into their laws an extremist prohibition against portraiture and sculpted imagery of any kind, of man, beast, animal, or deity. Illustrating the power of the Jewish law, two first-century Jewish historians, Philo and Josephus, recorded revolts by the Jews during the tenure of Roman Praefect Pontius Pilatus (26-36 AD; Pilate), over the placement of graven images and effigies. According to Josephus, Pilate demonstrated a fairly insensitive approach to the Jews religious customs, and he ignored their protests by allowing his soldiers to bring the images of Caesar into the city by the dark of night. When the citizens of Jerusalem discovered these the following day, they appealed to Pilate to remove the ensigns of Caesar from the city. After five days of deliberation, Pilate had his soldiers surround the demonstrators, threatening them with death, which they were willing to accept rather than submit to desecration of Mosaic Law. Pilate finally removed the images. The incident proved to be an early example of effective resistance to tyranny by aggressive, nonviolent means, yet Pilate quelled the rebellion by signaling other of his plain-clothed troops who had positioned themselves within the crowds, to begin a very brief but bloody massacre of many of the protestors.¹²

Philo describes a similar incident in which Pilate was officially reprimanded by Emperor Tiberius after antagonizing the Jews by setting up gold-coated shields in Herod's palace in Jerusalem. The shields were ostensibly to honor Tiberius, and this time did not contain engraved images. Philo writes that the shields were set up "not so much to honor Tiberius as to annoy the multitude." The Jews protested the installation of the shields at first to Pilate and then, when he declined to remove them, by writing to Tiberius. Philo reports that upon reading the letters, Tiberius "wrote to Pilate with a host of reproaches and rebukes for his audacious violation of precedent and bade him at once take down the shields and have them transferred from the capital to Caesarea."¹³

The point is that the Jewish law forbade iconoclastic imagery of any kind, in a preemptive strike to stave off idol worship. But the Brazen Serpent was an exception, and it was imbued with divine power to cure illness and heal snake bites, and the people eventually worshipped it as a result, although centuries later. The worship of the serpent grew out of the fact that the serpent is so represented in creation scripture as the “god of the earth.” But he is also clearly presented as being subservient to the higher Divine, Elohim, who curses him in coded, symbolic language in Genesis [Chapter 3](#), as a result of the seduction of Eve. And Although it is true that the Bible itself never uses the word *reptilian*, but *serpent*, it is clear that the serpent is not simply a snake. There are only four characters mentioned at the dawn of mankind in the Garden of Eden: God, Adam, Eve, and the serpent.

Ancient Jewish beliefs about this serpent explicitly state that it had arms and legs, and walked upright. This claim is found in the *Bereshit Rabbah*, an ancient Jewish commentary on the Book of Genesis. While dealing with the story of the Garden of Eden, the *Midrash* also deals with the serpent. It declares that before causing Adam and Eve to sin, “it had legs” (*Bereishit Rabbah*, 19). According to this, the serpent was once a tall, splendid and regal creature. When its fate was decided and it is written that “upon thy belly shall thou go” (*Bereishit* 3:14), “the ministering angels descended and cut off its arms and legs” *Bereishit Rabbah*, 20. This descriptive tradition gives the physical image of the enticing serpent an impressive dimension that has repercussions on many viewpoints of the ancient world, which saw the serpent as representing forces of evil on one hand and as possessing supernatural powers on the other hand. Down through the ages, the description of the reptilian archtypical being that Adam and Eve may have encountered has been altered and evolved. By calling it a serpent and nothing more, biblical revisionists have effectively simplified the description and robbed humanity of a more mysterious, and possibly accurate, reality of which we are only now recognizing. Another point that should also be noted is that in the Book of Genesis, Elohim condemns the serpent by saying “On your belly you shall go,” which suggests that he wasn’t on it before.

The ancient Jewish accounts of the Garden of Eden describe a being that is more like the ufological, extra-terrestrial reptoids than just a plain serpent. They also tell how the reptilians' behavior amid early mankind resulted in their being *cast down into the earth*, hinting at a subterranean realm, having all traces of hands, feet, and the ability to walk upright, hidden from surface-dwelling humans, erased from man's memories, and placed permanently out of sight.

The Mighty Men of Renown

“4 The Nephilim were on the earth in those days, and also afterward, when the sons of God came in to the daughters of men, and they bore children to them. Those were the mighty men who were of old, men of renown.”

(Genesis 6:4)

There is also an alternate, not-so-pretty picture of the motivation behind the descent of the Watchers, and that is the story of enslavement and the breeding of a “worker class” by a superior race of extraterrestrial beings perceived by the simple-minded humans as divinity. The homonids found on the earth by the Watchers—the divine caste set in place, according to scripture, to protect and watch over the earth—were bettered by the genetic interbreeding of a superior, extraterrestrial race for the purpose of creating a slave caste. Accordingly, the Watchers as described in the religious Hebrew texts were none other than beings of superior intellect, strength, and technical advancement who saw opportunity to subjugate a lesser race, improving them by impregnation or genetic tampering. It is also a wave of thought among Ancient Alienists that the “interbreeding” mentioned in the Genesis and Enochian accounts was ancient, poetic, picturesque coded language used to describe what would be described in our modern terminology as cloning and genetic engineering.

The Book of Genesis tells us that the offspring of the cohabitation between the Watchers and humans were known as “the heroes of old” and the “mighty men of renown”; the *Gibborim*, the Hebrew word for “mightiest,” the intensive noun for Gabar, or “mighty.” The word was many times used to describe the valiant, brave, and of great stature. But in the usage of this word in Genesis [chapter 6](#), it speaks of a class of beings in its description of the Nephilim as being “mighty.” The word *Gibborim* is also used more than 150 times in the Tanakh, an acronym formed from the initial Hebrew letters of the Masoretic Text’s three traditional subdivisions: the Torah (“Teaching,” also known as the Five Books of Moses), Nevi’im (“Prophets”), and Ketuvim (“Writings”), and is applied not only to the Nephilim and men, but also to lions (Proverbs 30:30), hunters (Genesis 10:9), soldiers (Jeremiah 51:30), and leaders (Daniel 11:3). The ancient, divine connotation of the word is nearly lost in the modern usage of the word *Gibbor*, which means “hero” and “brave” (as a verb).

The Gibborim have even made it into current-day pop culture. Marvel Comics has their Gibborim of the Demogorge, created by Brian K. Vaughan and Adrian Alphona, as a race of three six-fingered giants, among the various Elder Gods of Earth (having somehow survived ancient judgmental catastrophe) whose goal is to wipe the Earth clean of all humanity. Averaging a rough height of 100 feet, the Gibborim despise all humans.

Despite the watering down of the ancient usage of the word and its further pop cultural diminutives, it is this class of cross-bred “mighty heroes,” these Nephilim offspring of the Watchers, who begin the ravaging of humanity and the earth. It is also this race of hybrid offspring who are said to have begun the slave enforcement of mankind. As they grew in influence and power, the Gibborim began to extract more and more natural resources for their sustenance, and all the peoples of the earth, who inhabited a relatively small region of what is now the Middle East, were oppressed and completely entrenched in a slave caste societal bondage to these beings. It was this interplay and corruption that the Book of Genesis hails to as the cause of the “wickedness of mankind,” the stench to the

nostrils of God that had him “grieving” that he had ever created mankind on the earth. And that grieving was not a hatred of humans, but rather a deep agonizing on the part of the deity that he had created a race that was so easily manipulated and altered by the Watchers, his own emissaries. The course of action taken by the divine was to then wipe out the entire race of Nephilim/Gibborim, as well as the rest of the tainted-blood humanity, in one, great universal catastrophic judgment: the Great Flood of Noah. But to preserve the human race, Noah was chosen to build an ark, a great barge to preserve all animal life as well as the one pure-blooded human family—his own.

It seems impossible for we who exist at this far end of antiquity, for such a salvational vessel to be created out of “shittim wood and tree sap tar,” as the Bible recounts, and even more implausible for a man and his three sons to take 120 years to build it, then to gather two of every kind of animal in existence to load into its many stalls and chambers. Yet one must remember that the passage itself never says that Noah went out with a net and a lasso to gather the species of animals; it says that they were “brought to the ark” by God. And, of course, as we are beginning to see, this act in and of itself is more likely than not one of two things: perfect in its illustrative descriptions and true to the scriptures as read, or poetic code language utilized to set in place a mythological cover story for an event that may have been nothing short of genetic storage at the hands of a much superior race understood by ancient man to be gods.

Demonic Interbreeding

According to Roman Catholic theology, fallen angels have been attempting to interbreed with mankind for the purposes of creating a perfect hybrid mix of demonic and human ever since the fall of man.

The Watchers themselves were not demons, nor were they fallen angels, but their act of descending to the earth in defiance of their divine charge,

certainly placed them in a position of dangerous disobedience as attested to by their leader:

“3 Then their leader Shamyaza said to them (the other prefects of the Watchers); ‘I fear that you may perhaps be indisposed to the performance of this enterprise (intermingling with human women); 4 And that I alone shall suffer for so grievous a crime.’”

(1 Enoch 7:3-4)

Against whom was Shamyaza concerned about committing a crime? God? A racial hierarchy? The humans? It is clear by this text that whoever Shamyaza really was, he was a bit nervous about his plans, as he alone would be held responsible, being their leader. He seemed to have a clear understanding that his act would bring hierarchical consequences. But he was, as the text indicates, immediately followed by the rest of the Grigori, and as we will see, they all bore the consequential brunt of their deeds, for it was this act on their collective part that placed them—at least in religious and scriptural terms—in the camp of the “fallen angels,” as some contend.

Whereas the New Testament uses the Greek word “demon” to refer to these “sons of the mighty,” the Old Testament uses revealing descriptive names. Words that describe these beings, such as *bene ha’Elohim*, meaning “sons of God,” *Zophim*, meaning “the watchers,” and *Malakh*, meaning “messengers” (this reference was translated to angel in English), are used for the “aerial host” often regardless of alignment. The Book of Enoch tells us the origin of certain “interdimensional intelligences”—called in the monotheistic New Testament “demons,” who were understandably associated with evil because originally the Greek term *daimon* meant “any deity”—was in the Days of Noah, and didn’t end with the Flood but continued, according to Genesis 6, “even after.” There are three main terms for demons in the New Testament: *daimonion* (demon; 60 times, 50 in the Gospels); *pneuma* (spirit; 52 times) usually with a qualifying adjective such as *akatharton* (unclean; 21 times) or *poneron* (evil; eight times); and

angelos (seven times of demonic agencies). *Daimon* (demon), the term commonly used in classical Greek, appears only once, in Mark 8:31.”¹⁴

Divine Judgment

In short, the reason for the flood as recorded in the Book of Genesis was not an imposition of divine judgment on a race of humans who had simply grown too wicked for their own good. That would seem an awful waste of humanity, even for God himself, especially when there would have been much better ways to offer repentance and forgiveness short of the complete destruction of the earth and all things dwelling on it. This entire issue of a great deluge being used simply to eradicate a race of sinners, sending them all to the eternal hell of infinite separation from God, is lost in its grandiosity, akin to dropping an atomic bomb in order to squash a beehive hanging from the eave of your house.

There had to be something more than simple matters of heart at play here; something more than a mere rejection of the laws of God on the part of a rebellious race of humans. Sin can be handled, according to the Bible, by a change of heart that does not require the extermination of an entire race. But what if what we have here in this story goes far beyond the “wickedness of mankind,” and delves deep into the extermination of an extra-terrestrially manipulated race that has corrupted humanity, bringing them wickedness through the mode of genetic corruption and alteration of DNA? What if the great flood was a means incorporated by a supreme being—or a master, superior race—to kill the experiment that had gone badly awry—a wiping out of an experiment that had gone very, very wrong?

In Mary Shelley’s *Frankenstein*, which she attested to have written as an allegory of God’s creation of man and his subsequent fall from grace, a man is created by a scientist experimenting with the reanimation of dead human flesh. The created being is highly intelligent and learns to read, write, and

communicate on a near-genius level—much unlike the monster that was made popular in the Boris Karloff movies of the 1930s. It was when this created man became corrupt and turned into the “monster” that his creator found it necessary to take his life, ending in a great pursuit that led them to the frozen wastes of the Arctic and a fiery demise for them both.

The creators of the hybrid race of Nephilim found it necessary to eradicate them and their influence in humanity. *But it didn't work.* Even after the utter devastation of a universal flood, even after the collection of the DNA and/or physical quarantine of every species of animal, the Bible tells us, again, that...

“4 The Nephilim were on the earth in those days—and also afterward... [!]”

(Genesis 6:4)

For the purist believer in the infallibility of God and scripture, this notion would seem heresy and blasphemy, but that is, of course, if you follow the stricture of scriptural accounts of these things by the letter, not accounting for coded language and simplistic fabled cover stories for much greater events.

Outgrown and Outmoded

On one side of the equation, humanity seems to have outgrown its need for traditional religious belief. The firmly held dogmas of the existence of a Supreme Divine have become an outmoded mythology, only to be replaced with updated, more acceptable versions of what we think ancient mankind was experiencing. Did prehistoric humans encounter strange and wonderful beings so far advanced that they could only describe them within the framework of their scientific and spiritual understanding? It seems as if

anything that lay in that realm of the mystical and unexplained—even in religious circles where we are *already* supposed to believe in great divine beings and miraculous deeds—there is a move away from anything that even smacks of the “woo woo” that fringes on the mythological. There is some exceptional allowance for God and his angels, but nearly everything else falls under the category of “we don’t know that.”¹⁵

However, on the flip side of that equation, I have found that most people have their curiosities piqued when it comes to topics of UFOs, aliens, and extra-terrestrial visitations—no matter how far outside their religious or denominational box those curiosities take them. Although they may want to accept that these things are highly possible, if not probable, they will stop haltingly short of any attempt to reconcile them with their pre-established religious belief systems that focus on a traditional, omniscient, omnipresent, all-powerful God and his caste of angels. It’s as if they *want* to believe that these mysteries bear some truth, but they are unwilling to allow those things to merge with their traditional religious beliefs and values—the things they may not even know for sure if they believe, but are unwilling to release. There is a dichotomous set of beliefs, one part wanting to accept that there are as-yet unexplained mysteries, and the other too afraid to say so, for fear of religious repercussions.

I tend to take particular issue with the evangelical, fundamentalist circles from which I hail in my younger days of church-going and ministry. Fundamentalist believers seem to have this intrinsic sense about them that, should there be any veracity to the seemingly mounting evidences that extra-terrestrials and alien visitors from the other regions of the universe or dimensionalities truly exist, their religion and faith would be somehow irreconcilably shaken to its core, as if God’s universe is not big enough to handle the existence of other races, off planet, “exo-solar system.” For these followers of hyperbolic forms of Christianity, the Bible’s faith message of salvation and reconciliation is rendered null and void if there exists another race that does not fall under the same mandates as the bible’s descriptions of a fallen human race, born in iniquity and in need of redemption.

I faced this same sort of argument in those same fundamentalist circles when discussing—long before the book and the movie—the theories behind Dan Brown’s highly provocative book *The DaVinci Code*, in which he engages the age-old theory that perhaps Jesus of Nazareth was a married man and had children. I had one old Bible School friend discount the notion completely, insisting that for Jesus to have been married would unravel the Nazarene’s claim to being the Son of God possessive of redemptive power. This theological position, of course, was taken despite the fact that there are many evidences—inclusive of a rabbinic requirement for rabbis to be married men—suggesting that Jesus was indeed married. And in establishing the Messianic authority of Jesus, the New Testament itself claims, in Hebrews 4:15, that he “experienced life (“temptation”) in *all manners*, just as we do.”

Yet, the Christian fundamentalist view is that nothing exists outside the bounds of written scriptural text, and if it was ever proven that it does, that would somehow dissemble their faith in God, leaving them like so much wet laundry hanging out on the line, flapping in the wind, void of any solid religious structure or spiritual coherence.

At the same time, the scriptures on which the foundations are built for faith and religious practice for most of these believers, are rife with all sorts of references to clearly non-human, non-earthly beings. From angels to demons to devils to cherubim and seraphim, all the way up the ladder to God Almighty, the pages of traditional religious texts put on a perpetual cavalcade of non-human entities whose actions range from simple visitations, to fiery, flying chariots, to beings who descend to the earth making a pact among themselves to impregnate the daughters of humanity.

“1 The number of people on earth began to grow, and daughters were born to them. 2 When the Sons of God [Enoch refers to these same beings as the ‘Watchers’] saw that these girls were beautiful, they married any of them they chose. The Lord said, ‘My Spirit will not remain in human beings forever, because they are flesh. They will live only 120 years.’ The Nephilim were on the earth in those days and also

later. That was when the sons of God had sexual relations with the daughters of human beings. These women gave birth to children, who became famous and were the mighty warriors of long ago.”

(Genesis 6:1-4)

The big question is: Are they gods, angels, and devils, or did early man simply ascribe those titles within the construct of their understanding?

What most faith-based believers in the Bible fail to recognize is the fact that the Bible is full of references to other intelligences and non-human entities. These beings are generally said by the theological intelligentsia to be angelic beings or demonic entities, rather than any sort of extra-terrestrial alien presence:

★ The apostle Paul, who started out as Saul of Tarsus, a persecutor of the early Christians, had set out to Damascus, carrying with him the death warrants for members of the Christian movement there. As he and his entourage were on the road, a shaft of light blazed down out of the sky, casting Saul to the ground. No one else in his party heard a word, but later, Saul recounted a tale of God speaking to him in the form of Jesus Christ, the “Son of God.”

This was said by Saul to be his conversion experience, and he changed his name to Paul. Was this an encounter with a member of the Divine Council who later manifested as the Son of God, the Jewish Messiah? Paul had an apparently life-changing, out-of-body, or near-death experience in which he saw “things which it is not lawful for a man to speak” (2 Corinthians 12:4). I have often wondered what it was that he saw and why he was never permitted to say anything about it. But it is apparent that the experience made such an indelible mark on Paul’s life that he could not even speak of it in the first person:

“2 I know a man in Christ who fourteen years ago was caught up to the third heaven. Whether it was in the body or out of the body I do not know—God knows. 3 And I know that this man—whether in the body

or apart from the body I do not know, but God knows—4 was caught up to paradise. He heard inexpressible things, things that man is not permitted to tell.”

(2 Corinthians 12:2-4)

★ The star systems of Orion, Pliades, and Arcturus are mentioned by name in the chronologically oldest book in the Old Testament, the Book of Job:

“9 He is the Maker of the Bear [Ursa Major] and Orion, the Pleiades and the clustered stars [Arcturus] of the south.”

(Job 9:9)

“Can you bind the beautiful Pleiades? Can you loose the cords of Orion?”

(Job 38:31)

★ The high priest of El Elyon [the “Most High God”] and king of the city of Salem [ancient Jerusalem] was a man named Melchizedek who, according to Hebrews 7:3, had “neither beginning nor end of days” and who mysteriously appeared in Abraham’s time, resembling a “Son of God”:

“3 He is without father or mother or genealogy, having neither beginning of days nor end of life, but resembling the Son of God he continues a priest forever.”

(Hebrews 7:3)

★ The apostle John, in his dotage on the Isle of Patmos some 60 years after he walked as a disciple to Jesus, had a most profound apocalyptic vision, which dealt with numerous non-human intelligences. In just the first of many sections of the Book of Revelation, filled with strange beasts and ostentacious visions, John wrote:

“9 I, John, your brother and companion in the suffering and kingdom and patient endurance that are ours in Jesus, was on the island of Patmos because of the word of God and the testimony of Jesus. 10 On the Lord’s Day I was in the Spirit, and I heard behind me a loud voice like a trumpet, 11 which said: ‘Write on a scroll what you see and send it to the seven churches: to Ephesus, Smyrna, Pergamum, Thyatira, Sardis, Philadelphia and Laodicea.’ 12 I turned around to see the voice that was speaking to me. And when I turned I saw seven golden lampstands, 13 and among the lampstands was someone ‘like a son of man,’ dressed in a robe reaching down to his feet and with a golden sash around his chest. 14 His head and hair were white like wool, as white as snow, and his eyes were like blazing fire. 15 His feet were like bronze glowing in a furnace, and his voice was like the sound of rushing waters. 16 In his right hand he held seven stars, and out of his mouth came a sharp double-edged sword. His face was like the sun shining in all its brilliance.

17 When I saw him, I fell at his feet as though dead. Then he placed his right hand on me and said: ‘Do not be afraid. I am the First and the Last. 18 I am the Living One; I was dead, and behold I am alive for ever and ever! And I hold the keys of death and Hades.’”

★ As we covered extensively, the Hebrew slaves were led out of bondage in Egypt under the leadership of Moses, and were guided by a pillar of fire by night and a pillar of cloud by day. Both were seen for 40 years, leading the way through the skies.

★ Ezekiel saw what has been described as a “flying saucer.” NASA spacecraft engineer Josef F. Blumrich had read Erich von

Däniken's *Chariots of the Gods*. In the book, von Däniken described Ezekiel's vision as none other than a "flying disk." Blumrich immediately set about to disprove von Däniken's theory, but upon further examination found that the vision in Ezekiel was nearly identical to a proposed craft design that he had invented. So he did an engineering analysis and worked out a preliminary design for the craft. He later wrote his findings in his book, entitled *The Spaceships of the Prophet Ezekiel*.¹⁶ Here is the description of what Ezekiel saw:

"1 In the thirtieth year, in the fourth month on the fifth day, while I was among the exiles by the Kebar River, the heavens were opened and I saw visions of God. 2 On the fifth of the month—it was the fifth year of the exile of King Jehoiachin—3 the word of the Lord came to Ezekiel the priest, the son of Buzi, by the Kebar River in the land of the Babylonians. There the hand of the Lord was upon him. 4 As I looked, behold, a storm wind was coming from the north, a great cloud with fire flashing forth continually and a bright light around it, and in its midst something like glowing metal in the midst of the fire. 5 Within it there were figures resembling four living beings. And this was their appearance: they had human form. 6 Each of them had four faces and four wings. 7 Their legs were straight and their feet were like a calf's hoof, and they gleamed like burnished bronze. 8 Under their wings on their four sides were human hands. As for the faces and wings of the four of them, 9 their wings touched one another; their faces did not turn when they moved, each went straight forward. 10 As for the form of their faces, each had the face of a man; all four had the face of a lion on the right and the face of a bull on the left, and all four had the face of an eagle. 11 Such were their faces. Their wings were spread out above; each had two touching another being, and two covering their bodies. 12 And each went straight forward; wherever the spirit was about to go, they would go, without turning as they went. 13 In the midst of the living beings there was something that looked like burning coals of fire, like torches darting back and forth among the living beings. The fire was bright, and lightning was flashing from the fire. 14 And the living beings ran to and fro like bolts of lightning. 15 Now as I looked at the living beings, behold, there was one wheel on the earth beside the living beings, for each of the four of them. 16

The appearance of the wheels and their workmanship was like sparkling beryl, and all four of them had the same form, their appearance and workmanship being as if one wheel were within another. 17 Whenever they moved, they moved in any of their four directions without turning as they moved. 18 As for their rims they were lofty and awesome, and the rims of all four of them were full of eyes round about. 19 Whenever the living beings moved, the wheels moved with them. And whenever the living beings rose from the earth, the wheels rose also. 20 Wherever the spirit was about to go, they would go in that direction. And the wheels rose close beside them; for the spirit of the living beings was in the wheels. 21 Whenever those went, these went; and whenever those stood still, these stood still. And whenever those rose from the earth, the wheels rose close beside them; for the spirit of the living beings was in the wheels. 22 Now over the heads of the living beings there was something like an expanse, like the awesome gleam of crystal, spread out over their heads. 23 Under the expanse their wings were stretched out straight, one toward the other; each one also had two wings covering its body on the one side and on the other. 24 I also heard the sound of their wings like the sound of abundant waters as they went, like the voice of the Almighty, a sound of tumult like the sound of an army camp; whenever they stood still, they dropped their wings. 25 And there came a voice from above the expanse that was over their heads; whenever they stood still, they dropped their wings. 26 Now above the expanse that was over their heads there was something resembling a throne, like lapis lazuli in appearance; and on that which resembled a throne, high up, was a figure with the appearance of a man. 27 Then I noticed from the appearance of His loins and upward something like glowing metal that looked like fire all around within it, and from the appearance of His loins and downward I saw something like fire; and there was a radiance around Him. 28 As the appearance of the rainbow in the clouds on a rainy day, so was the appearance of the surrounding radiance. Such was the appearance of the likeness of the glory of the LORD. And when I saw it, I fell on my face and heard a voice speaking.”

(Ezekiel 1:4-28)

A “mobile” star guided three astrologers from the region of Babylon to the birthplace of Jesus Christ, mentioned only in the Gospel of Matthew, but not in the others. Even the Gospel of Luke omits the presence of the star, which is interesting, as Luke—who also wrote the New Testament book of Acts of the Apostles—was a physician and historian.

There are some who believe the star never actually existed, as it is recorded in no other historical writings of the day. Judea was a Roman province, and they gave no record of the star and its fanciful movement through the skies. However, if these “wise men” saw the star “in the east,” or better, from the east, it would have taken months if not a year or two to decipher the star’s meaning and follow it to Judea.

Whatever the star was, it probably did not happen at one moment, on one night, but over the course of several months as a portent in the sky.

The appearances of both angels and demons were apparently relatively commonplace throughout the whole of biblically documented history.

chapter 6

Alien Influence?

“Devoutly to be wish’d. To die, to sleep;
To sleep: perchance to dream: ay, there’s the rub:
For in that sleep of death what dreams may come,
When we have shuffled off this mortal coil,
Must give us pause: there’s the respect
That makes calamity of so long life...”

—William Shakespeare, *Hamlet*

Despite my many questions and ponderings, based on the things I have studied, read, and absorbed over the years, I still cling to my Judeo-Christian roots, and making the leap from God, angels, and demons to UFOs, extra-terrestrials, and aliens is an exponential one for me. Yet, there is so much information out there that would tend to substantiate the existence of UFOs and alien interruption in humanity, that it cannot be overlooked. If you are anything at all like me, these things make you pause, wonder, and recalculate the things you were taught.

I have always said, rather cheekily, that when it comes to biblical theology, I have not “thrown out the baby with the bathwater.” Were I to make an on-the-spot statement of faith, I would say that I adhere to the basic tenants of the Bible, and hold Jehovah God as the Supreme Being, as well as a faith in Jesus Christ and the Holy Spirit. In my youth I was taught that the Bible is the “only authority for faith and practice,” especially as a good, conservative Baptist. The further I grow in distance from my cloistered education and walled-in, “fishbowl” denominational practices—and by fishbowl, I mean that we believers congregationally sat inside our

glass bowl of church while the rest of the world looked in—I am finding that there is so much more to the universe than what we were taught, so much more to God than is visible in a methodological Christian environment.

Then there is that stinging, lurking *fear* in the back of my mind that any deviation from my old faith practices is merely my sinful nature drawing me away from God and his dictates. The apostle Paul warned his acolyte Timothy that “*... the time will come when men will not put up with sound doctrine. Instead, to suit their own desires, they will gather around them a great number of teachers to say what their itching ears want to hear*” (2 Timothy 4:3). And I find myself wondering if my disillusionment with church organization and methodology was the catalyst I allowed to drag me from the “true faith.” I find that I struggle with what was engrained in my head and heart, versus what I research and discover.

I consider myself to be a thinker. But there are times when I may imbue my thinking with fear of becoming inviolate of religious mandate and practice.

Therein lies the rub: No matter which way you look at this enigma, no matter how much existential mumbo-jumbo we wish to ascribe to our existence in the universe, or how much power of initiative or self-illumination we think we may possess, we are still the products of someone else’s creation, and the toys of some superior being’s manipulation.

We are not our own.

Whether it was an almighty, omnipotent God who created us from the dust of the ground and breathed into our nostrils the breath of life, or some enslaving, experimenting race of interstellar breeders who interfered with our primordial DNA, we are the product—or by-product—of someone else’s hand. Are we God’s creations, to do with as he pleases, having been

imbued with a free will that is truly only free until, like insurance, you actually use it? Or are we the descendants of an alien science experiment—the genetic offspring of an extra-terrestrial race that was either acting in benevolence by imposing its superior DNA into a race of genetically intellectual gutter monkeys, or implementing an intent that was far more sinister and enslaving?

Or are we simply the products of chemical reactions and evolutionary mutation and development; slaves to overt eradication of anything spiritual in order to default to what is scientific and explainable by mathematics and scientific methodology?

Either way, it appears as if we, the human race, are simply someone else's toys. And sometimes, it's just cooler to think that we are the offspring of alien interruption as opposed to "sinners in the hands of an angry God.¹" I believe that is why the scientific/skeptical community eschews the spiritual and metaphysical: They simply want to seek the basic nuts and bolts without having to answer to a higher authority or deal with the implications of the soul and spirit. As I said quite a bit earlier, there are veils we simply have no ability to pierce, and both the scientific/skeptical circles and the religious/faith-based circles are dead set on operating on the basis of what simply cannot be seen or proved. One circle consciously disregards and eradicates it as part of the functional equation; the other incorporates it in every facet of life.

Boiling It All Down

Whatever your leaping-off point, be it faith, spirit, science, skepticism, anthropology; whether religious, anti-religious, Christian, Jew, Atheist, animist, Pagan, Wiccan, true believer, *et cetera ad infinitum*—it doesn't matter when it comes down to sifting through the evidences and the facts, such as they may be. What is clear is that there was some interruption in the human race, whether it can be hinged on the extinction of the dinosaurs,

opening the way for human development (without being eaten), or microbial mutations that developed and evolved over eons, bringing the human race where it is today (with obviously much more evolving to do if we believe the chain of evolution is still moving along), or the hands of a Divine Creative force, whether you view that entity as a spiritual/religious one, or simply an entity that has the supreme power over us. Or, perhaps, it was clean and simple as extra-terrestrial interruption of some sort.

Then there are the proponents of philosophies, such as the following quote, that ignore any other outside-the-box investigation by immediately dismissing its veracity for the simple reason that it is not revealed in God's Holy Word, the Bible: "The Bible, the revealed written Word of God teaches that life is only possible through a process of creation. Even if there were other galaxies with planets very similar to earth, life could only be there if the Creator had fashioned it. If God had done that, and if these beings were going to visit us one day, then He would surely not have left us unenlightened about this."²

Pardon the crass vernacular, but these are the sorts of statements that have me crying, "bullshit!" This brand of mindless, limited, inane, uneducated dross has me seeing red, and serves no purpose to further an understanding other than that which lies within a particular mindset or theology or philosophy or scientific framework. As you can probably tell by now, I am not one who has abandoned his faith, nor am I one who dismisses science and skepticism, but I measure the building blocks of these things against each other. The answers come only as the fabricated Berlin Walls of division, and the finger-pointed catterwauls of ignorance and fraud start having holes bored into them.

The naked truth of the matter—so sorry to inform my theological friends—is that God has given us information about these aliens. And it is within the very same pages of scripture they use to bolster an argument against such things.

Whatever the truth of the matter—because, believe it or not, truth is *not* governed by *perception*—there are evidences all over the world and in nearly every ancient cultural spirituality and history that record extraordinary events. Those events have their tone set in cement, based on the interpretation given by the people who experienced them firsthand. Whether influenced by the divine or the angelic or the alien, the task in the present day is to determine just what it is that happened—and, frankly, that may not be possible beyond mere hypothesis.

The Nitty-Gritty

Because we have spent a great deal of this book talking about the spiritual and religious take on the Nephilim and their interruption in the human bloodlines, let's look to some of the evidences that would be the foundation for the extra-terrestrial—or better, *alien*—theory of human interruption.

“The UFO manifestations seem to be, by and large, merely minor variations of the age-old demonological phenomenon...”³

“UFO behaviour is more akin to magic than to physics as we know it.... [T]he modern UFO-nauts and the demons of past days are probably identical.”⁴

“[The occultist] is brought into intelligent communication with the spirits of the air, and can receive any knowledge which they possess, or any false impression they choose to impart.... [T]he demons seem permitted to do various wonders at their request.”⁵

The majority of alien abduction cases recorded in modern history have the same earmarks and traditional elements as are seen in the written

accounts of the Watchers descending to the earth to impregnate human women. Sure, the facts differ, the tales are much less mythological in scope, but the act itself is something that bears remarkable resemblance to the acts committed by the Watchers. Are we seeing today similar events as those described in the Books of Genesis and Enoch, or has an entirely fabricated modern mythos been constructed around the writings of people like Zechariah Sitchin and the growing list of Ancient Alienists? The main problem with Sitchin's work was his lack of translating the ancient texts. The conclusion he drew had to be manipulated, squeezed, and otherwise made to fit into the theories he was promulgating.

So often I hear major proponents of the Ancient Alien theories decry the belief systems of theologians. It is almost as if one is required to have an atheistic or agnostic dogma in place in order to put forward an extra-terrestrial hypothesis. To me, this has the very same dogmatic approach as do the biblical theologians who insist that aliens could not exist because they are not mentioned expressly as such in the pages of scripture.

Annunaki, You're the One. You Make Legends Lots of Fun...

All one needs do is enter the words *Annunaki* and *aliens* together in a Google search to find an endless list of Websites that state nearly the same, exact thing: that the Annunaki built a “race” of android beings to subjugate the people of the Sumerian civilization. Sadly, none of these Websites cite any sources that would have translated Sumerian cuneiform texts as stating that sort of information. When putting forward a statement regarding these kinds of ancient “findings,” it is all-important to offer up the texts themselves, or the source of the research academic who translated the texts revealing that sort of information. Sadly, again, it is more likely that the readers and proponents of works such as Sitchin’s, are merely parroting the words of their new age-ist teacher without researching his claims to see if they possess any sort of veracity.

Semitic scholar John Heise, in his work the Akkadian language, makes the observation that the term *Annunaki* is interchangeable with the word *Igigi*,⁶ which translates roughly as “those who observe,” or “the Watchers.”⁷ The Igigi are referred to as the “gods who reside in heaven,” while the Annunaki are mentioned as being in both heaven and on the earth. And when the Sumerian god Marduk asks a question of the Annunaki, it is the Igigi who respond. So the Annunaki and the Igigi are more than likely candidates for the Watchers after their descent to the earth. But are they an alien race? Well, certainly within the context of the mythology, they are alien in the sense that they came from some other place other than the earth. According to the Sumerian texts, they resided in both heaven and earth, once you see that the terms are interchangeable. So the heavenly Igigi are the same as the chthonic (or “underworld”) gods, the Annunaki.

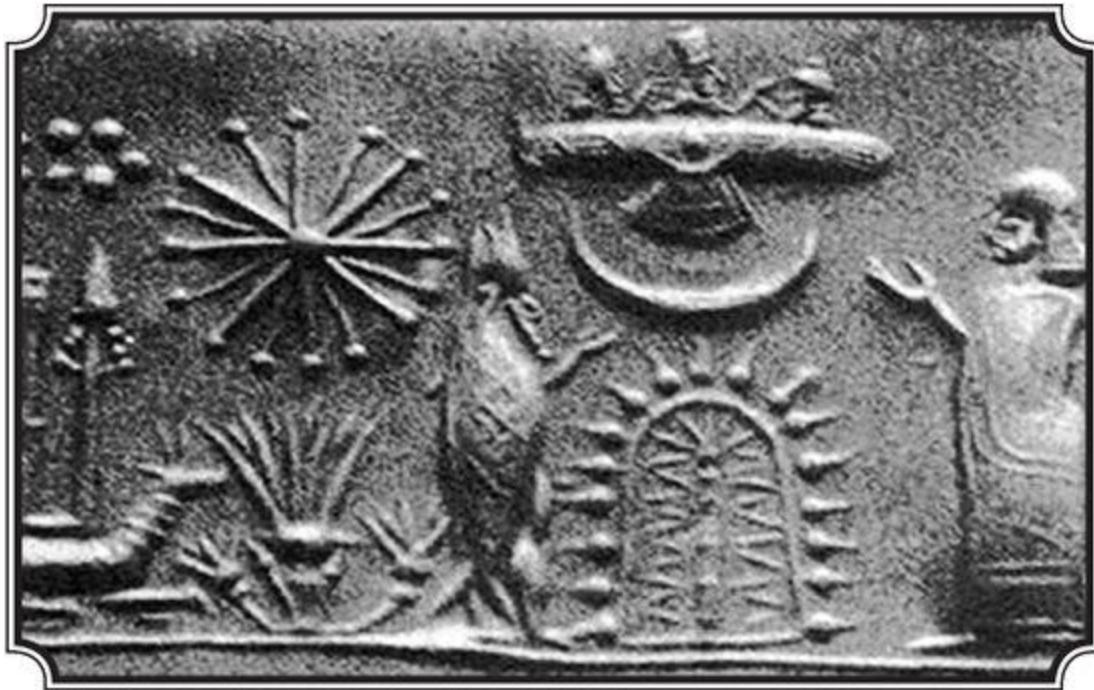

Ancient Sumerian relief of a seated Annunaki, with the sun and orbiting planets shown in the upper left. Readers of Zecharia Sitchin's books, particularly The 12th Planet, will recognize the seal, VA 243 (so named because it is number 243 in the collection of the Vorderasiatische Museum in Berlin). This seal is the centerpiece of Sitchin's theory that the Sumerians had advanced astronomical knowledge of the planetary bodies in our solar

system. This knowledge was allegedly given to the Sumerians by extraterrestrials, whom Sitchin identifies as the Anunnaki gods of Sumero-Mesopotamian mythology.

According to Boulay's work, the Sumerians and Akkadians did not refer to the Annunaki as "gods." It was later cultures that introduced the notion of divine beings, and that was what gradually made its way into our language and thinking. The Sumerians referred to the Annunaki by the term *ilu*, or "the lofty ones," from which the Semitic *ili* and *el* of the Hebrew evolved. And as an interesting cross-cultural reference, Prince Utu's name in the Mayan language was Xochipili.

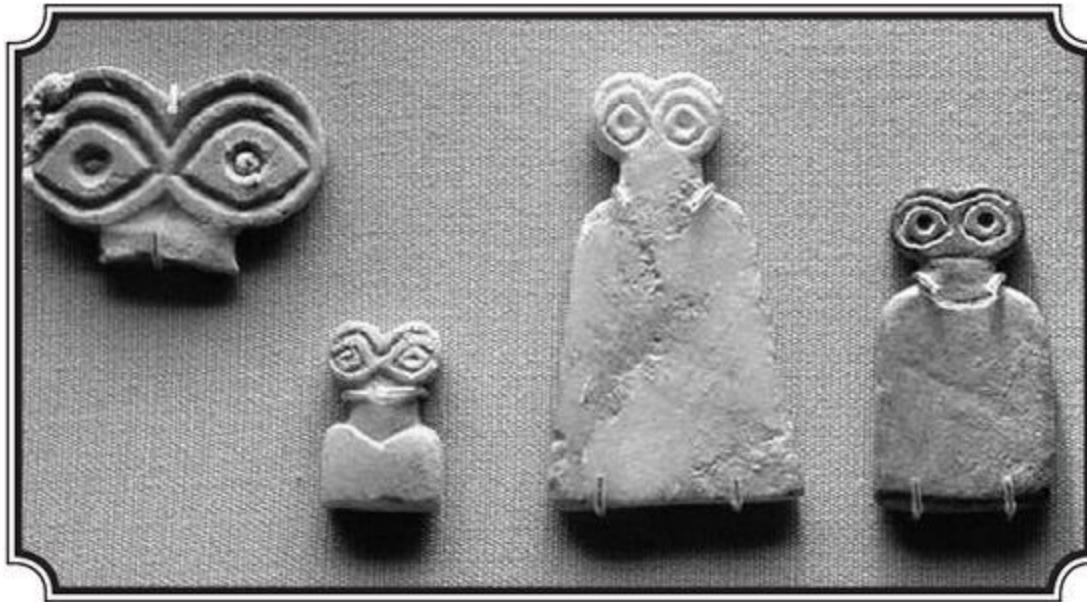

Boulay, in his fervent belief that the ancient "gods" were indeed of alien origin, goes on to say that although the term *Anunnaki* is used generically to apply to all the Proto-Sumerians who "came to this planet," it means literally "the sons of An," the greatest among their ancient gods. In the antediluvian (pre-flood) period, a large group of these Anunnaki descended from their mother ship to colonize Earth. According to the "Enuma Elish," the Babylonian myth of creation, 300 of these Anunnaki descended to Earth while another 300 remained aboard the spaceship.⁸

Images on a Sumerian clay tablet are believed to depict the Anunnaki and their “flying vehicles,” advanced spacecraft used by the Anunnaki gods to descend to the earth. The tall figure to the left may depict the half-man/half-fish god Oannes, who emerged from the ocean to teach skills to ancient mankind.

There are no pictures or drawings left of the Annunaki, but there are many small figurines that some ancient alienists say resemble the alien “greys” of modern ufology. Were the Annanuki the beings described by the ancient Sumerians? And were they the equivalent of the grey aliens synonymous with so many UFO and alien abduction cases reported in current history? Contemporary reports of these encounters bear a strong similarity to the ancient accounts of the Anunnaki and their appearance among the Sumerian people.

As mentioned previously, the Sumerian culture is the oldest known written language culture. Even today we still use the same system of mathematics, the same basic calendar, and the telling of time that they developed. They possessed an amazing knowledge of the solar system and of beings coming down to earth. The Sumerians tell us that the Anunnaki had “helpers” who often performed such tasks as flying their craft, or helping with miscellaneous needs. The Sumerians directly explain that these “helpers” were not living beings, but had the physical capabilities of rendering living human tasks.

The Annunaki and Igigi also appear in other Mesopotamian cultures, sharing a commonality that isn’t just limited to the descriptions found in Genesis and Enoch. They are also found in the Ugaritic texts and the Canaanite pantheon as the *banu ili* or *banu ili-mi*.⁹ There are also more recent finds that place them in Ammorite and Phoenecian inscriptions¹⁰ dating to the eighth and seventh centuries BCE. The huge significance of these similar finds, according to Craig Hines, is the fact that the other cultures

also recognized these beings as non-human “royal ambassadors” sent to humanity at the behest of the supreme god.

Psalms, Hymns, and UFOs

No other book in the Old Testament is as richly beautiful in its imagery as the compiled Book of Psalms. They include songs written by King David and songs written by his chief musician, as well as poetry to be accompanied by musical instruments and used in worship and prayer penned by various other writers. One of the Psalms is even a prayer of forgiveness from David after he committed adultery with Bathsheba, the wife of one of his war captains, and had the man murdered.

But in and throughout the beautiful, poetic language of the Psalms is an undercurrent of visionary language that could possibly imply encounters with what some have suggested are alien encounters.

Is it possible that David, the “sweet singer of Israel,” as he was once known, had a close encounter that he described—or hid—in a song of praise to God? Psalm 18 holds an intriguing story that tells of David being surrounded by enemies and being forced into deep water, from which he was suddenly taken up out of and put in a large place. He describes the scene in very vivid terms: the heavens opening up, and God descending, mounted on a cherub—not your typical mental image of a cherub; a heavenly beast that rode on the clouds, black smoke and fire shot out the nostrils of God—and the ensuing shafts of flame consuming everything in its path. David then writes that God, astride his cherub, was followed by, or left a “jet stream,” of dark clouds that produced hail, and a “great noise” coming from God.

Is this all an incarnate manifestation of God, a miraculous act of deliverance? Or could it be something else, something much more like the

vision of Ezekiel, who saw what has been described in modern terms as some sort of craft?

David finishes the account of the heavenly attack, telling of bolts of lightning being shot at his enemies, scattering them. This was all followed by a great earthquake, leaving the modern-day reader wondering if this entire account is a description of alien craft and weaponry being used to deliver King David of Israel—the same man who slew one of the few remaining Nephilim, Goliath of Gath—and took his head. Could this be a rescue mission sent to the man who killed one of the descendants of the great giants? Or is this merely the song written by a man who was, like Moses, establishing his “tightness” with God before the people he ruled?

“4 The sorrows of death overtook me, and the rush of ungodly people made me afraid. 5 The sorrows of hell overtook me: the traps of death captured me. 6 In my distress I called on Yahweh, and cried out to my God, who heard my voice out of the sanctuary, and listened to my cry. 7 Then the earth quaked; the foundations of the hills were disturbed and shaken, because God was angry. 8 There went up a smoke out of the face of God, and fire out of the mouth of God, in which the flames consumed everything ignited by them. 9 God opened the heavens, coming down with dark smoke underneath, 10 riding on a cherub, a heavenly being, and flying on the wind, 11 making darkness the hiding place of God, with a shelter of dark waters and the thick clouds of the skies all around. 12 But the brightness that surrounded God was followed by the thick clouds that passed, with hail stones and flashes of lightening. 13 The noise of Yahweh rumbled in the heavens, and then the voice of the Most High God spoke through the hail stones and flashes of light. 14 Yes, God sent out bolts of electricity, scattering the enemies, shooting out like flashes of lightning, and destroyed them. 15 Then the outlets of water were seen, and the heart of the earth was uncovered at Your word, oh Yahweh, from the exhaust of Your face. 16-18 God sent from above, taking hold of me, and drawing me up out of much water, delivering me from my strong enemies, and from those who hated me, which were too strong for me, and who had shamed me in the day of my misfortune, but You, oh Yahweh, were my stay. 19

You brought me forward also into a large place and delivered me, because you delighted in me.”

(Psalm 18:4-19)

Of course, it could simply be a great songwriter/story-teller embellishing his tale with vivid, colorful imagery. It is interesting to me how so many Bible believers will entertain and believe the most garish, creative stories told in the pages of scripture, but will shun the notion of the existence of aliens and UFOs, because they are just too far-fetched.

A Long Time Ago, In a Galaxy Very Close to Home...

Another Psalm of David tells of God’s presence shaking the earth and the heavens descending like an object of silver and gold, with chariots of heaven numbering 20,000 containing thousands of heavenly beings. He described it as an inanimate object found in the feeding pens of a sheepfold that comes to life and flies through the air like a dove, shimmering with silver and gold, and glowing white like the snow. He described armies running in fear from its presence. Could this be a mother spacecraft with many smaller spacecrafts containing their occupants? Would these aliens come to the rescue of God’s chosen one?

“7 Oh God, when You went forward before Your people, Israel, when You marched with them through the wilderness; Selah: 8 The earth shook and the clouds descended at Your presence: even Sinai itself quaked at the presence of God, the God of Your people, Israel.... 12 Leaders of armed forces ran away, and our dependents at home received the benefits. 13 Though You’ve been as lifeless as a metal pot, yet you will fly as the silver wings of a dove, with feathers of yellow gold.

14 When the Almighty scattered rulers in it, it was white as the snow on Mt. Zalmon... 17 The vehicles of God are twenty thousand, in which are thousands of angels: my Sovereign God is among them, as in Mt. Sinai, in the holy place... 32 Sing to God, You nations of the earth; oh sing praises to Yahweh; Selah: 33 To the Great One who rides on the heaven of heavens, which are eternal; see, the mighty voice of God sounds out. 34 We attribute strength to You, God: Your greatness is above Your people, Israel, and Your strength is in the skies. 35 Oh God, You are awesome coming out of Your holy places: It is You, God, who gives strength and power to Your people, Israel. God be blessed!"

(Psalm 68:7-8, 12-14, 17, 32-35)

The Ostentatious Power of the Remote

If you are a follower of more contemporary UFO sightings and activity, you'll have noticed that many of them take place in remote areas, such as deserts and mountainous regions, and over large bodies of water, despite the more recent advent of mass sightings over populated areas. Now consider some of the biblical events that have piqued the curiosities of ancient biblical UFO theorists: Moses was witness to a physical manifestation of God while hidden in the cleft of a secluded mountain outcrop; the prophet Elijah and Moses appeared to Jesus, and two of his disciples on the very slopes of the same mountain where the Watchers are to have descended to the earth in the Book of Enoch, Mount Hermon; God protected the children of Israel with a pillar of cloud by day and one of fire by night as they wandered as a nomadic tribe of freed slaves after the first Passover and the Exodus. Are these accounts of God's miraculous majesty and power or could they possibly be descriptions of events that might be linked to UFO and alien activity? The 29th Psalm describes some unusual activity in remote, out-of-the-way places that Ancient Alien theorists have linked to possible UFO sightings of a biblical proportion:

“3 The voice of Yahweh is heard across the oceans: the God of glory rumbles, echoing over the seas. 4 The voice of Yahweh is strong and majestic. 5 The voice of Yahweh snaps the cedars in two; yes, Yahweh snaps the cedars of Lebanon completely in two. 6 Yahweh makes the volcanoes erupt. 7 The voice of Yahweh spews fiery flames. 8 The voice of Yahweh shakes the desert; the wilderness rumbles. 9 The voice of Yahweh makes the doe to bear, and unclothes the forests, and every one tells of the glory of God in the sanctuary. 10 Yahweh rules over the Tsunami; yes, oh Yahweh sits a Sovereign One forever.”

(Psalm 29:3-10)

Columbus and the Psalmist

The voice of God is described as enormously powerful in this Psalm. The flames and the rumbling noise, along with weapons that snap massive cedar trees in two, cause volcanoes to erupt, make the deserts cascade with voluminous rumblings and the forests to burn to ash. Can these all be interpreted as the manifestation of advanced alien spacecraft? Could a space ship hide in the depths of the ocean, as many ufologists already believe? Psalm 104 describes a very bright object resting beneath the water, then emerging and moving with great speed into the clouds.

Interestingly, a UFO was spotted by none other than Christopher Columbus during his maiden voyage to America in 1492. Columbus recorded in his log that, as he was sailing through the waters of what is now the Bermuda Triangle, his compass began acting in an odd fashion. He and Pedro Gutierrez while on the deck of the *Santa Maria*, observed, “a light glimmering at a great distance,” as they observed it for several hours “in sudden and passing gleams.”¹¹ Four hours later, they saw land. Columbus attributed the sighting to divine guidance to the New World.

“2 Covering Yourself with light as with clothes: You who stretches out the heavens like a curtain: 3 Who lays the shafts of Your chambers in the waters and makes the clouds Your vehicle, moving on the wings of the wind: 4 Who makes the angels spirits; Your ministers a flaming fire.”

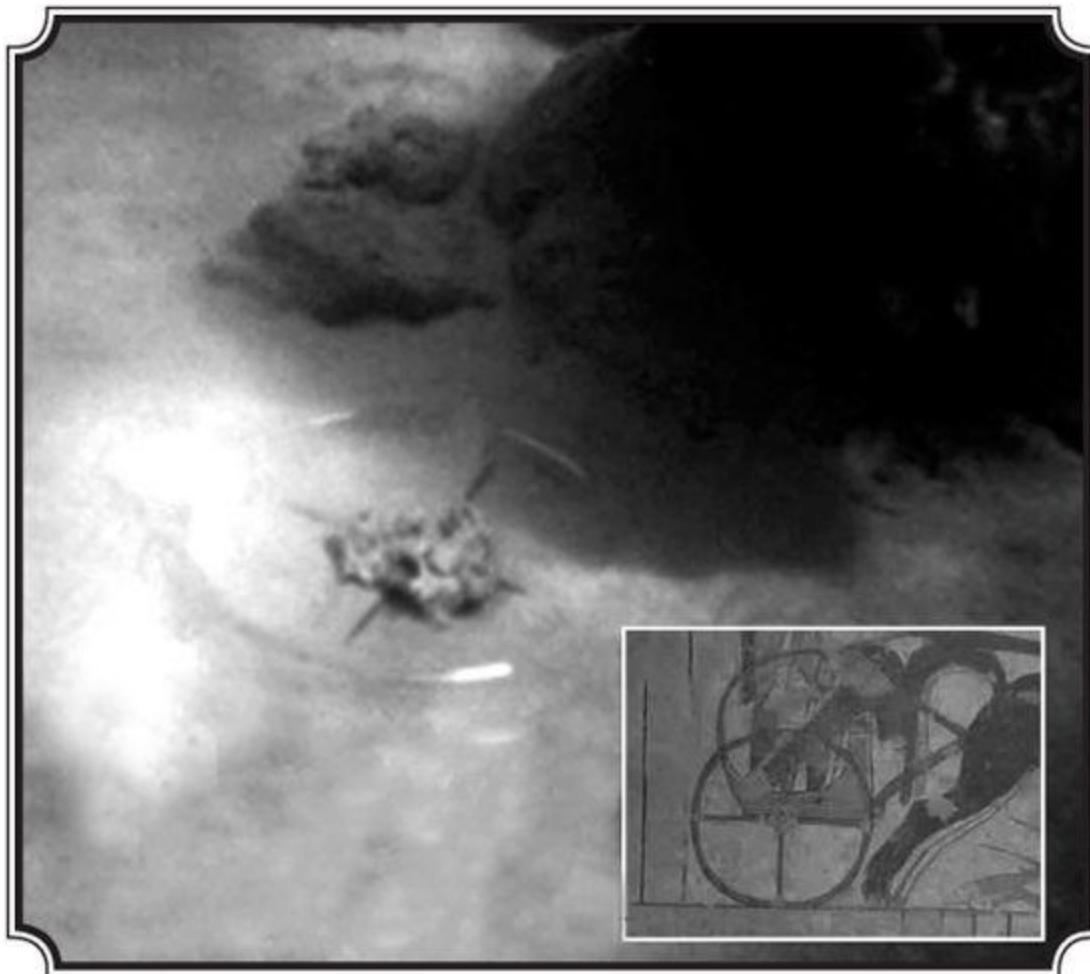

(Psalm 102:2-4)

Making a Way Through the Sea

Unusual activity from the depths of the sea is also mentioned in Psalms 74 and 77. According to the Book of Exodus, God let a strong east wind blow all night, parting the waters of the Red Sea—or, as many biblical scholars believe, the marshy region of the Yam Suph to the far northern delta region of the Red Sea. What, other than an almighty God, could send a powerful force strong enough to part the waters and let the Israelites cross on dry ground, releasing it just in time to drown the whole of the whole of Pharaoh Amenhotep II’s mighty army? Psalm 77:19 tells us that God travels in the sea and the oceans, and that his path cannot be discovered. Is this a reference to underwater craft that traverse in obscurity through the briny depths?

“13 You divided the sea by Your strength: You broke the heads of the dragons in the oceans. 14 You broke the heads of leviathan, the great sea beasts, in pieces, and gave them for meat to the people living in the wilderness. 15 You opened up the wellspring and the flood: You dried up mighty rivers. 16 The waters felt You, oh God, the waters felt You disturb them and the depths were troubled as well. 17 The clouds poured rain, the skies thundered, and Your lightening flashed also. 18 The voice of Your thunder was in the heavens: the lightning lit up the world and the earth trembled and shook. 19 Your way is in the sea, and Your path in the great oceans, and Your footsteps aren’t known.”

(Psalm 77:13-19)

One of the many gilded chariot wheels discovered at the bottom of the Red Sea, in the Gulf of Aqaba, off Neweiba Beach. Coral does not grow on gold, but the wood inside had completely deteriorated. Inset: Chariot wheel on Egyptian tomb painting.

Wax On, Wax Off

Is Psalm 97 a description of God or of an alien craft? Melting hills, enfolding darkness broken by fire, lightning, and illumination.

“2 Clouds and darkness are around you: righteousness and judgment are the symbols of Your reign. 3 A fire goes before you, and burns up Your enemies everywhere. 4 Your lightning enlightened the world: the people of earth saw, and trembled.

5 The hills melted like wax at the presence of the Sovereign One, at the presence of the Most Sovereign of the whole earth. 6 The heavens declare Your righteousness, and everybody sees Your glory.”

(Psalm 97:2-6)

Riders on the Storm

Do God and His angels ride in spacecrafts? In one Psalm they are described as a cherub on the back of whom God rides down out of the clouds. Here, in Psalm 144, we have a description of God and His angels flying down out of the heavens in what is said by biblical alienists to be a spacecraft. What if that alien spacecraft contained what we know as God and the angels screaming down out of the heavens and laying waste to the mountains? Is this the description of a terrible ufological weapon, or the power of a divine God? The psalmist may have wondered the very same thing, as he questions why God would take special note of his people and destroy their enemies. In this verse he prays for God to open the heavens and come back down to destroy his enemies.

“3 Yahweh, what are human beings, that You take note of them! Or the children of humanity, that You take account of them! 4 People are as nothing: their days are as a shadow that passes away. 5 Open Your heavens, oh Yahweh, and come down: You touch the mountains and they smoke. 6 Make lightning, and scatter them: shoot out Your lightening bolts, and destroy them.”

(Psalm 144:3-6)

Frogs and Locusts and the Angel of Death (Oh My!)

Psalm 78 is a *maskil* of Asaph—a maskil being a particular style of song, much like we'd say ballad or love song—in which the psalmist recounts the mighty power of God displayed against the Egyptians when Moses led the Hebrews out of bondage. He speaks of the terrible wonders of God when he parted the waters of the Red Sea, turned the Egyptian sources of water to blood, spread blight, frogs, and locusts across the land, then engulfed the Egyptians in utter darkness so that pharaoh “could not see his hand before his face.” The devastation goes all the way to the house of pharaoh when the final plague of the firstborn takes the eldest child in every house of Egypt. Some have speculated that it was the power of alien forces that brought down the heinous plagues and executed the great geological miracles.

“13 You divided the sea, and allowed them to pass through it; making the waters to stand up as a mountain pass. 14 You also led them with a cloud in the daytime, and through the night with the light of fire. 15 You split the rock in the wilderness, and gave them water to drink from a deep creek. 16 God brought streams of water out of the rock also, causing it to run down like rivers. 17 And they sinned all the more against God by provoking the Most High in the wilderness. 18 And they tempted God in their hearts by asking for meat for their appetites. 19 Yes, they spoke against God and said, Can God furnish a table in the wilderness? 20 Look, God split the rock, so that the waters gushed out, and the streams overflowed; Can God give us bread also? Can God provide meat for the people as well? 21 Yahweh heard this, and was angry: so a fiery wrath was kindled against Jacob, and anger also came up against Israel, 22 because they didn’t believe in God, and didn’t trust in Your salvation, 23 though You had commanded the

clouds from above, and opened the doors of heaven, 24 and had rained down manna on them to eat, and had given them of the grain of heaven. 25 People ate the food of angels: for You, God sent them enough meat to fill them. 26 You caused an east wind to blow in the heaven, 27 and powerfully brought in the south wind, raining meat on them as dust, and quail like the sand of the sea, 28 and let them fall in the middle of their camp, all around their tents. 29 So they ate and were well filled, because You gave them what they desired. 30 They weren't kept from their appetites, but while their meat was yet in their mouths, 31 the anger of God came down on them, and slew the fattest of them, and brought down the chosen people of Israel....42 They neither remember God's hand, nor the day when You delivered them from the adversary. 43 How God had wrought signs in Egypt, and wonders in the field of Zoan, turning their rivers into blood, making it so that they couldn't drink it. 45-46 You sent different sorts of flies among them, which devoured them; and frogs, which destroyed them, giving their increase to the caterpillar, and their labor to the locust also; destroying their vines with hail, and their sycamore trees with frost; destroying their cattle also in the hail, and their flocks with hot lightning bolts; casting on them the fierceness of Your anger, rage, indignation, and trouble, by sending evil angels among them; making way for anger; not sparing their soul from death, but giving their lives over to the pestilence; and striking all the firstborn in Egypt, their strongest rule, in the sanctuaries of Ham.... 52 But You made Your own people go forward like animals, 53 guiding them in the wilderness like a herd, leading them safely on, so that they weren't afraid, while the sea overwhelmed their enemies. 54 You brought them to the border of Your sanctuary, even to this mountain, which the hand of God had bought.”

(Psalm 78:13-31, 42-43, 45-46, 52-54)

Into the Belly of the Earth

There was a great rebellion among the Hebrews led by a man named Dathan. Moses descended with the tablets of the Law after spending 40 days atop the fiery, tumultuous, God-inhabited Mount Sinai, only to find the people worshipping a golden calf they had erected as their god who led them out of bondage. In righteous anger, Moses breaks the tablets of the Law and calls out to the people to divide, the followers of Dathan on this side, and the followers of Jehovah on that. After they separate, the ground immediately opens up in a great earthquake and swallows up Dathan and his rebels. You can imagine the hushed silence that fell over the rest of the people. With all the miraculous wonders performed under the leadership of Moses during their great Exodus, one wonders how these people would do anything but follow Moses' lead. Yet, Ancient Alienists believe there is more to this account than a simple miraculous tale of divine judgment. Was Moses not only being led by UFOs through the wilderness, but also being protected and upheld by a race of alien visitors? Here is how the book of Psalms records this event from the Exodus:

“16 They envied Moses and Aaron, the saints of Yahweh, also in the camp. 17 The earth opened up and swallowed Dathan, and buried the followers of Abiram. 18 And a fire was kindled in the middle of them, burning up those sinful ones.... 28 They joined themselves also to the false god, Baal-peor, and ate offerings made for the dead. 29 So they provoked You to anger with their inventions, and a deadly illness came on them. 30 Then Phinehas stood up and executed judgment: so the deadly illness was stopped.”

(Psalm 106:16-18, 28-30)

And that's just a few of the Psalms. Were we to mention every biblical passage that contains even a hint of the possibility of extra-terrestrial activity, there would not be enough room in a 10-volume set to list them, let alone comment on them. This sampling should have given you a taste of what is inside the Bible itself, when it comes to the imaginings and speculations of biblical alien theorists.

When we consider all of the passages in scripture that seem to indicate miraculous deeds and divine actions, and if you place all those passages in the context of Ancient Aliens as opposed to the acts of Jehovah, you can see the wealth of information that is right at your fingertips, on the shelves of nearly every home in Christendom.

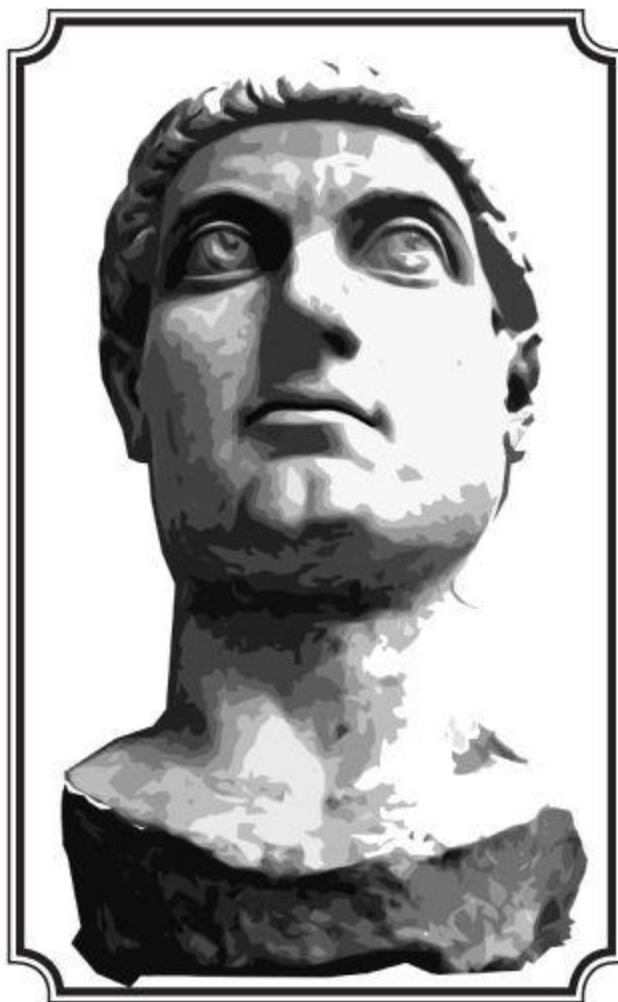

Clearly, if your perspective is one that is firmly rooted in Judeo-Christianity, you will see these passages as the amazing, almighty acts of a supreme being benevolently and sometimes violently imposing his majesty in the lives of his prophets and worshippers, making a display of his power and majesty. But if your beginning point is one that lies outside the realm of faith in the divine characters dwelling in these books, then you are outside the box looking in. Under that light, these pages can be filled with accounts of ancient UFOs, and alien races that appeared as God, angels, demons, and a host of other heavenly beings.

If Moses, Ezekiel, David, the psalmists, and other biblical leaders and figures had in fact witnessed alien presences, and interpreted their experiences as encounters with God, then it would be absolutely appropriate of them to have warned others to fear God and obey his commands. In light of the passages we have examined regarding the Watchers and their offspring, as well as the ancient gods of the Sumerians, it is clear that the issue is wide open for debate and further examination.

We may never know in this lifetime if these beings are of God or from some distant corner of our physical galaxy, but there is much fodder for thought, and a good starting point for examining the issue further.

chapter 7

Constantine: One Emperor, One God

Constantine, the first “Christian” emperor of Rome.
Photo courtesy of the Capitoline Hill Museum, Rome, Italy
(en.museicapitolini.org).

The story of the Nephilim and their divine parentage is one that the early Church fathers did not want told—at least in the entire form as it was written down in the Book of Enoch. It was a tale that transgressed the Church’s teachings that spirit beings were sexless, and spoke of beings who were considered to be gods among early mankind. Their presence in the story of Noah’s flood was something that created ecclesiastical panic among the early church fathers, and when push came to shove, there was no unanimous consensus, and Enoch was booted from the canon of God-breathed scripture. This was done under the influence of Rome’s first Christian emperor, Constantine, who ruled from 306 to 337 CE.

Constantine used his power to establish and promote the religion of Christianity, but he always remained a controversial figure, especially through the eyes of those who recorded his histories, which are abundant and detailed, but have been strongly influenced by the official propaganda of the period and are often skewed.¹ According to the various contradictory accounts of the life of Constantine, he was seen by some as the great Christian Prince, and by others, during his decline, as a noble war hero corrupted by Christian influences who transformed into a tyrannical despot in his old age—“a hero... degenerating into a cruel and dissolute monarch.”²

Among the great accomplishments of Emperor Constantine were his ecclesiastical councils, which came as he began to enter the latter part of his reign. It is said that he did not personally adopt Christianity until well into his 40s, but once he did, he instituted laws that allowed Christians to worship and practice freely in the Roman empire, as well any other religion. Constantine established a precedent for the position of the emperor as having some influence on the religious discussions going on within the Catholic Church of that time, mainly because he disliked what he considered to be the risks to societal stability that religious disputes and controversies brought with them. And so he sought, wherever possible, to establish an orthodoxy. In fact, the emperor saw it as his duty to ensure that God was “properly worshiped” in his empire, and that “proper worship” would be determined by the Church.³

The Council of Nicea, 325 CE. Melkite icon from the 17th century. Artist unknown.

Photo courtesy of the Peter Paul Reubens Gallery.

The first ecclesiastical council summoned by Constantine was the Council of Nicea, 325 CE, in which several Church resolutions were discussed and set into motion. Among them was the beginnings of the canonization of scripture, which set a precedent for removing from the scriptures, any book on which the entire council could not unanimously agree. The Book of Enoch, despite its many mentions throughout the writings of both the Old and New Testaments, as well as being quoted by Moses and the Apostle Paul, was not unanimously accepted, and it fell under the surgical knife of the council.

Keep at the forefront of your mind, when considering the facts behind the Council of Nicea, the overall motivations on the part of Emperor Constantine when summoning them. Although Constantine's reputation was

bolstered by his propaganda machine, it is well-known⁴ that he was motivated by the desire to establish only two things:

1. One God/one emperor.
2. One religion/one empire.

Constantine was above all a pragmatist, and his Christianity was only prominent when it was politically expedient—and he did not become more compassionate after his conversion to Christianity. On the heels of presiding over the Council of Nicea, he went immediately back home to Constantinople and murdered both his wife, Fausta, and his eldest son, Crispus. Fausta was Crispus's stepmother, and there were rumors that she and Crispus had been engaged in immorality while the emperor was away. Constantine had his wife slowly boiled to death in a bath, and his son was cold poisoned. Indeed, Constantine was the poster boy for living your life as licentiously and perverted as possible, saving baptism for his deathbed. Which is exactly what he did. He lived his life as wickedly as any other Roman emperor, despite the paths he paved for Christianity and its spread, and went screaming into heaven simply because he was baptized minutes before he died.

Within the first 400 years of Christianity there were in existence more than 20 gospels, 15 apocalypses, and nearly 50 other texts about Jesus. In some of these texts, Jesus didn't die, took revenge on his enemies, was not human at all, was not God at all, and was a wise teacher instead of a miracle worker. The Gospel of Thomas, attributed to "Doubting Thomas," has been discovered in its entirety and contains what is claimed to be direct quotes from Jesus, yet it has been left out of the Bible. The Gospel of Peter, Jesus' best friend among the disciples, says Jesus was silent on the cross and did not feel any pain, for he only appeared to be human, yet this Gospel was also left out of the Bible. Only a select four of the written gospels made it into the Bible—Matthew, Mark, Luke, and John—and only those Gospels that told their followers what the early Roman Church wanted them to hear. Constantine's desire to have one single authority in the Church apparently worked quite well.

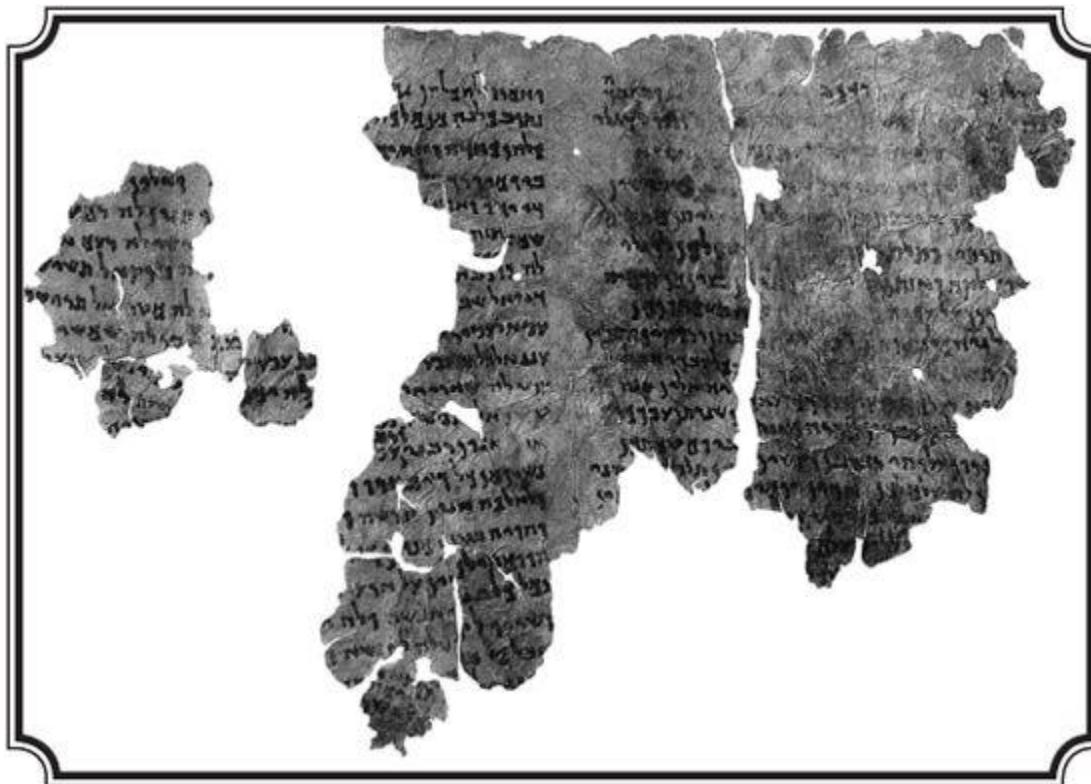

Lost books referred to in the Bible, but removed by Council:

- ★ Book of Jasher (Joshua 10:13, 2 Samuel 1:18).
- ★ Book of the Acts of Solomon (1 Kings 11:41).
- ★ Book of Samuel the Seer (1 Chronicles 29:29).
- ★ Book of Gad the Seer (1 Chronicles 29:29).
- ★ Book of Nathan the Prophet (1 Chronicles 29:29; 2 Chronicles 9:29).
- ★ Prophecy of Ahijah (2 Chronicles 9:29, 13:22).
- ★ Visions of Iddo the Seer (2 Chronicles 9:29, 12:15, 13:22).
- ★ Book of Shemaiah (2 Chronicles 12:15).
- ★ Book of Jehu (2 Chronicles 35:25).
- ★ Sayings of the Seers (2 Chronicles 33:19).
- ★ Lament for Josiah (2 Chronicles 35:25).
- ★ Paul's epistle to Corinthians before our "1 Corinthians" (Corinthians 5:9).
- ★ Paul's epistle to Church at Laodicea (Colossians 4:16).

The Book of Enoch

Because we have spent so much time talking about and around, and quoting from the book of Enoch—as well as mentioning its exclusion from the scriptural canon—it seems time to give a little bit of history about the author and the book itself.

The Book of Enoch is an ancient Jewish religious manuscript ascribed to Enoch, the great-grandfather of Noah (the same Noah associated with the Ark and Flood account of Genesis 6-9) and, according to the New Testament Book of Jude, the seventh generation from Adam. Enoch is one of those ancient manuscripts that was dropped out of the now-traditional biblical canon (the word *canon* comes from the Greek “κανών”, meaning “rule”). Simply said, you won’t find Enoch’s book in a current-day Bible, but it is grouped with several other books referred to as the apocryphal writings, meaning they were considered to be hidden, esoteric, spurious, or of questionable authenticity by the Church leaders of the day. You can find some of these books in their own section in various versions of the Christian Bible, but they are clearly labeled as being “non-scriptural.” And though the Book of Enoch is considered to be questionable by Judaism and all of Christianity, it is regarded as canon by the Ethiopian Orthodox and Eritrean Orthodox Churches.

Dead Sea Scroll Fragment of Enoch 1. The backside of P.Mich.inc. 5552, showing portions of the Book of Enoch in Greek. This manuscript is

part of the Chester Beatty Papyri, and is the third leaf of the surviving manuscript.

The Book of Enoch, along with several of the other apocryphal books, were excluded from the Bible during the Council of Nicea in 325 CE, which was convoked by the Roman emperor, Constantine, the first “Christian” emperor of the Roman Empire. But Constantine’s status as a “Christian” is held in as dubious regard as some of the books that his empirically appointed church emissaries booted out of the Bible.

The first section of the Book of Enoch (Dead Sea Scrolls) describes the fall of a group of non-human entities known as the Watchers—the bene haElohim—the Sons of God who fathered the Nephilim. Their descent to the earth is chronicled not only in the Book of Enoch, but also in the old testament’s Book of Genesis, where the subject was edited down to a few mere sentences by either by Moses himself, or by later scribes. In the Genesis 6:1-4 passage, we find Moses doing what Moses often did: abbreviating and extrapolating vital information without much detail. The passage is obviously a series of quotations from a much older source regarding the Nephilim, but contains distinct earmarks of having been edited at a later date, as the writing style doesn’t match that of the rest of the book.

Despite modern scholars dating the authorship of the Book of Enoch to a time period in Jewish history known as “The Captivity” (around the third or fourth century BCE, when the Diaspora—the scattered nation of Israel—were living in Babylon), Enoch is a much older book. In the New Testament Book of Jude, the Book of Enoch is quoted, and obvious authorship attributed to Enoch, the seventh-generational descendant from Adam.

“14 Enoch, the seventh from Adam, prophesied about them: ‘See, the Lord is coming with thousands upon thousands of his holy ones 15 to judge everyone, and to convict all of them of all the ungodly acts

they have committed in their ungodliness, and of all the defiant words ungodly sinners have spoken against him.””

(Jude 1:14-15)

The apostle Paul, who wrote the little epistle of Jude, was an educated member of the Jewish Sanhedrin prior to his conversion to Christianity, and the Book of Enoch was very well-known to his educated, religious class.

The Book of Enoch opens with these brief words about Enoch himself, saying:

“2 [Enoch] a just man, whose eyes were opened by God so that he saw a vision of the Holy One in the heavens, which the sons of God showed to me, and from them I heard everything, and I knew what I saw....”

(Enoch 1:2)

This fragmentary manuscript is similar to portions of the Book of Jubilees, an important writing of Second Temple Judaism that survived only among Christian readers and that has long been known to us from versions in Greek and Ethiopic. Among Ethiopian Christians, Jubilees was so treasured that it actually became a part of their version of the Old Testament. Fifteen fragmentary pieces of Jubilees have turned up among the Dead Sea Scrolls, establishing the work as one of the most common among those caches and clearly testifying to its importance for those who hid the texts. Like the Ethiopian Christians, they may have considered the book a part of the canon of Holy Writ.

In that light, the Book of Enoch seems to be a retelling of the Book of Jubilees, just as Genesis seems to be a very brief highlight of what is found in the Book of Enoch in its Nephilim segment. It may be that we should consider Enoch an example of “rewritten Bible,” the interpretive phenomenon we encounter so often in the scrolls. Surviving fragments of

the scrolls labeled “4Q227” relate to Jubilees 4:17-24, but give the material in a different order.

Jubilees 4:18 reports that the angels taught Enoch the calendar.

Jubilees 4:22 says that Enoch testified against the Watchers, or fallen angels, who had taken human wives and whose progeny were the Giants.

Jubilees 4:23 speaks of the judgment of the entire world.

Frag. 2 i[...]E]noch, after we taught him 2 [...] he was with the angels of God] six full jubilees 3 [... the la]nd, into the midst of the sons of man and he testified against them all 4 [...] and also against the watchers. And he wrote all [...] heaven and the ways of their hosts and [ho]ly ones 6 [...] So that the ri[ghteous ones] shall not commit error [...]

Ancient Cosmology

According to Hindu philosophy, life in the universe is created, destroyed, and re-created once every 4.1 to 8.2 billion years. Each one of these creation cycles is a repeating period of time divided by four yugas, or epochs/eras. The cycles are said to repeat like the seasons of a year, waxing and waning within a greater time-cycle of the creation and destruction of the universe. Like summer, spring, winter, and autumn, each yuga involves stages or gradual changes that the earth and the consciousness of mankind goes through as a whole. These cycles, devolving from light to darkness are the Satya yuga, the Treta yuga, the Dvapara yuga, and finally the Kali yuga. A complete yuga cycle from a high Golden Age of enlightenment to a Dark Age and back again is said to be caused by the solar system’s motion around another star, a binary star system that rotates around our solar system.

In accordance with this cosmology, we are currently in the final yuga cycle, the Kali yuga, which is the darkest of the “seasons,” also known as the Age of the Male Demon [Kali], and the Age of Vice. According to the Surya Siddhanta, Kali yuga began at midnight on 18 February 3102 BCE, and will last for 432,000 years.⁵

chapter 8

The Nephilim

“What a piece of work is a man! How noble in reason! How infinite in faculties! In form and moving, how express and admirable! In action how like an angel! In apprehension, how like a god!”

—William Shakespeare (*Hamlet* II, ii)

Now we are on it. The “brass tacks” of this entire book: the Nephilim themselves. We have taken many words to get to this chapter, and we have examined many different foundations and rabbit-trailing facets that have lead us to this point, albeit *not exhaustively*. As I mentioned in the Introduction, I am certainly not the end-all and be-all on the topic of the Nephilim, the Watchers, their religious and spiritual aspects and ramifications, nor the alternative alien angle we have touched on in oh-so-cursory a fashion. I am, however, another in a long, ever-lengthening line of interested, invested researchers to study, examine, and come to somewhat scholarly conclusions. I have melded the scholarship done by so many others before me, broached the pop cultural, fringe, metaphysical science, and presented ideas and hypotheses drawn from the historical, cultural, archaeological, and anthropological data that is so scattered and diverse on this topic.

What is clear is that something phenomenal happened in our ancient past—and is still happening today—that ought not be relegated simply to the realm of the supernatural or the paranormal only because it deals with subject matter that falls outside the lines etched in the sand by the scientific and religious communities. I have found it extremely daunting yet strangely interesting that the two differing camps in nearly any phenomena, theory, or

topic out there, seem to unwittingly come together in their opposing dissents and dogmatic stances when it comes to the Nephilim and all the surrounding information.

As I have mentioned in my public lectures many times, a study of the Nephilim is no simple task, for it encompasses a plethora of hugely diverse information that delves into so many other aspects of human existence. The story of the Nephilim is an enormous topic, for it goes to the roots of religion, faith, science, and the existence of humanity as we know it—or don't know it—today.

On one hand, the Nephilim speak to the foundations of human development; the encoding of DNA and ancient anthropological development of human civilization. On the other hand, the Nephilim represent a caste of mutated, corrupt progeny, bequeathed by the Watchers, part of the military structured host of created beings who were subservient to the Holy God of the Jews and the Christians. And what you come down to is nothing short of a religious-scientific quandary: to decide which end of the spectrum you choose to believe regarding these characters who are so much the product of a mythological history. And, yes, it is about *belief*, because even the facts used to establish a more-or-less solid case for the existence of these beings does not follow the dictates of historical, scientific, and anthropological rules. Their source point lies within religious texts and the faith writings that comprise scriptures from all different spiritual aspects, and as you have already experienced in the earlier pages of this book, I have used as my starting point the Book of Genesis in the Judeo-Christian scriptures—after all, the word Nephilim itself is sourced from those pages.

You are reading this book because these things are of interest to you. You either possess a belief that they exist, and you want to know more about it. Or you have a curiosity about these sorts of mysteries that leads to you to find out what others have to say about them. Or you are simply looking on these pages to point out what I have missed or where my theories are disingenuous or lacking in scholarship. Whatever the case may be for you,

when it comes to the Nephilim and all the surrounding mass of information used to build up a case, you have to—in your own mind—come to one of two conclusions: Either the Nephilim are figments of spiritually based imaginations, or they are actual beings who existed, whether having non-supernatural explanations or spiritual ones.

This reminds me of a true story I heard in my youth, as told by the head of Baptist Mid-Missions. A group of missionaries set up a bush hospital to help the population of several small villages in west Africa. As their medical outpost became established, the missionaries had to work very diplomatically with the tribal “witch doctor,” who saw the influence of modern medicine as a threat to his craft and sway over the locals. There had been an outbreak of disease in which it was found that certain bacteria were the cause of the illness, though the witch doctor had insisted it was demonic in nature. By invite, the tribal shaman came to the mission hospital and was shown a microscope, through which he could actually see the living bacteria and what it did to human cells to cause the illness that had been plaguing the villagers. The witch doctor left the meeting disgruntled and angry. Late that same night, the mission hospital was broken into by the witch doctor and his minions. They stole the microscope, took it to the village center, and smashed it to pieces. When he was confronted by the mission staff and asked why he did such a thing to such an expensive and valuable piece of medical equipment, the shaman smiled, with a bit of a twinkle in his eye, and said very softly, “Now there are no more bacteria.”

Just because we can’t see or ignore the evidence does not render it nonexistent. These pages, along with the writings of many others, simply stand as a microscope to point out the facts, whether scientific, religious, spiritual, archaeological, or any other method incorporated to establish the whos, whats, wheres, and whys of the Nephilim, their progenitors, and the historical ramifications. Destroying or diminishing the vehicle of scripture or mythology cannot undo what exists.

“The Nephilim were on the earth in those days, and also afterward, when the Sons of God [the bene ha’Elohim] descended to the

daughters of human beings [Adam] and had children by them. They were the heroes of old, men of renown.”

(Genesis 6:4)

Divine Offspring

When I was a young child attending Sunday School at the local church in our neighborhood, I was taught about the story of Noah and the Ark. According to the storyboard felt cloth cut-outs, Noah was a man who wore a robe and had a white beard. God had told him to build an enormous boat, and to take two of every kind of animal on board, for there was going to be a Great Flood coming that would destroy the entire earth. The reason for the Flood, we were taught, was that God had become angry with humans due to their sin and wickedness, and in his utter holiness, he needed to destroy every living thing and start all over, relaunching the human race with Noah and his sons and their wives, the only righteous people left on the earth untainted by the wickedness of the rest of mankind. I heard this tale repeated many times as I was growing up, and saw many variations of illustrated children’s books, toys, puppets, and even cartoons and movies depicting the tale. But never, in all of those tellings and retellings of the story, did I once hear about the Nephilim. At least not until I was much older, attending Bible College and seminary.

When thinking about the deliberate omission on the part of my various Sunday School teachers of one of the most important features of the story of Noah and the Ark, I wondered if it was, perhaps, due to the fact that the entire story hinges on sexual acts—perhaps even rapes—perpetrated against human women by divine beings. These would certainly be things that most child-conscious church lay workers would hold as being too graphic for the minds of children. Yet these sexual events are vital to understanding the entire passage and the much deeper implications of why the flood took place.

“1 When human beings began to increase in number on the earth and daughters were born to them, 2 the sons of God saw that the daughters of humans were beautiful, and they married any of them they chose. 3 Then the LORD said, ‘My Spirit will not contend with humans forever, for they are mortal[b]; their days will be a hundred and twenty years.’ 4 The Nephilim were on the earth in those days—and also afterward—when the sons of God went to the daughters of humans and had children by them. They were the heroes of old, men of renown. 5 The LORD saw how great the wickedness of the human race had become on the earth, and that every inclination of the thoughts of the human heart was only evil all the time. 6 The LORD regretted that he had made human beings on the earth, and his heart was deeply troubled. 7 So the LORD said, ‘I will wipe from the face of the earth the human race I have created—and with them the animals, the birds and the creatures that move along the ground—for I regret that I have made them.’” 8 But Noah found favor in the eyes of the LORD.””

(Genesis 6:1-8)

“1 And it came to pass when the children of men began to multiply on the face of the earth and daughters were born unto them, that the Sons of God saw them on a certain year of this jubilee, that they were beautiful to look upon; and they took themselves wives of all whom they 2 chose, and they bore unto them sons and they were giants. And lawlessness increased on the earth and all flesh corrupted its way, alike men and cattle and beasts and birds and everything that walks on the earth—all of them corrupted their ways and their orders, and they began to devour each other, and lawlessness increased on the earth and every imagination of the thoughts of all men 3 (was) thus evil continually....”

(Jubilees 5:1-3)¹

The entire account of the Nephilim, as we have already seen, was the preamble to the Genesis account of the Flood of Noah, and when reading it in its context it renders a greater, deeper meaning to the understanding of the rest of the Genesis Flood story—a meaning that has apparently been kept from most faithful church attendees and congregations, and avoided by most ministers for centuries. It is one of those taboo topics that requires a much greater understanding of the scripture and why it was written, and therefore gets summarily skipped over or avoided for fear of opening up a can of worms that is either beyond the scholarship of the practitioners teaching it, or outside the realm of what they want their congregations to understand. Nor does a traditional telling of the story of Noah and the Ark, and the destruction of the earth at the mercy of a great deluge sent by God, fit comfortably into the picture of salvation and faith that most Christian teachers want to ascribe to the meaning of the passage.

The reason for these omissions and ignoring of the mention of the Nephilim in the passage becomes overtly clear when one takes a step back from the biblical scriptures and begins to understand the account of the Flood of Noah and the Nephilim as part of a much greater story, with far deeper implications—and even more so when it is found to be so incredibly comparable to many other myths and legends found in other cultures. In that light, the biblical account begins to take on the form of simply *one version* of an event that is mirrored in many other religious writings and what seem on the surface to be allegorical mythologies from nearly every culture of the ancient world.

The Assembly of the Sons of God

The trappings of heaven sink into deeper and darker mystery every time I stare into their depths. The more I think back on my days growing up in the Christian church, the less I understand the superficialities of God and His angels that I learned while there. The concept of the Assembly of the Gods or the Divine Council that was comprised of the lesser Gods beneath the

rule of Yahweh goes all the way back to the pantheon of the Sumerians, once believed to be the world's most ancient civilization, but looking relatively young in comparison to new discoveries of places such as Gobekli Tepe, the circular temple complexes dating back some 8,000 years further than Sumerian civilization.

A carved pillar at the Gobekli Tepe temple near Danliurfa, Turkey, the oldest known temple in the world, dating to 12,000 BCE.

The concept of the Divine Council was universally shared by the Semitic religious traditions of the ancient Near East that came after the Sumerians. The Sumerian god An and his wife Ninhursag created or gave birth to the other gods in the Sumerian pantheon. This divine couple generally remained aloof from human affairs, residing beyond the sky and allowing their children, the lesser gods, to create the first man and woman and all of

humankind as a race of subservient beings. These lesser gods also became the patrons of the various city-states of Sumer.

These lesser gods formed an Assembly of the Gods, known as the Annunaki, in the language of Sumer, which was presided over by Enlil, their god-king. Each of these lesser gods of the Assembly represented or controlled major forces that affected the lives of their human servants. Enlil's wife, Ninlil, was also known as The Maiden, who ruled over human fertility. Inanna, the Queen of Heaven, was both the goddess of passion and of warfare. It was Enki, the god of wisdom, who was originally patron god of the city of Eridu, but later the influence of his cult spread throughout Mesopotamia and to the Canaanites, Hittites, and Hurrians, who crafted the world-platter that floats on the great abyss of the primeval waters.²

There has been some controversy over interpretation of the Annunaki in modern times. You can chalk this up to the “spiritual drift” of humanity, in that people are constantly seeking answers beyond the traditions they have held firm for so many hundreds and thousands of years. As I have said many times, man is a beast of discovery, wanting always to know more, experience the limits, and expand knowledge. After all, even in the Book of Genesis when Eve succumbed to the seductions of the serpent, wasn’t it because she was curious and wanted to know and experience more? These things of the Watchers, Nephilim, Divine Council of the gods—these are all the stuff of new discovery, despite their ancient nature and the fact that we’ve known about them all along.

But we want to know *more*.

So we read and write books such as these to find ways to expand our knowledge. In those attempts to find the undiscovered country, we continually throw out new thoughts, new ideas, new theories. One of the latest developments—on the grand scale of history, that is—has been the advent of the “Ancient Astronaut/Ancient Alien” twist on history and traditional religion. One could chalk this up to man’s desire to gain

knowledge; others may consider it the “turning away” from truth in order to find answers that do not require an adherence to the strictures of religion. Whichever it is, it has uncovered theories that challenge the nomenclature of religious history and even faith itself.

One of the earliest pioneers in the Ancient Astronaut culture has been Erich von Däniken, who wrote his *Chariots of the Gods* series of books in the early 1970s. Another is the late Zecharia Sitchin and his near-religious writings of *The 12th Planet* and subsequent books. His ideas surged the Annunaki into popular culture in the ufological community and stirred up a simmering pot of home-brewed controversy on the topic. I grew up in the 1970s, and thoroughly enjoyed and became deeply intrigued by the writings of von Däniken, and I still enjoy him today in his many appearances on various documentaries revolving around the Ancient Alien theorist culture. He is a pioneer who paved the way. Yet, although both of these respected, highly popular research authors have made great strides, forging the path for countless other theorists on the subject, elements of their work remain questionable, some revealing false findings and a severe lack of understanding and comprehension of the history and linguistics of the cultures they examine. Sitchin, especially, while claiming to be a specialist in the ancient Sumerian language, makes exponential stretches in the definition of certain words that he uses to lay the foundational cornerstones of his Ancient Alien platform, completely mistranslating words and seemingly not comprehending the language that he purported to know so well. Sitchin’s hypotheses have never been accepted by scientists and academic peers, who dismiss his work as pseudo-science and pseudo-history.³ Sitchin’s work has been criticized for flawed methodology and mistranslations⁴ of ancient texts as well as for incorrect astronomical and scientific claims.

One of the foremost respected scholars in ancient languages, Micheal S. Heiser, even says of Sitchin:

“As I noted in my open letter to Zecharia Sitchin, I have challenged him and other ancient astronaut researchers to produce one

line of one cuneiform text that demonstrates his ideas about the Anunnaki are really in the Sumerian texts. I want to see one line of one text that says things like the Anunnaki inhabit a planet or inhabit Nibiru, or that the term ‘Anunnaki’ means ‘people of the fiery rockets, that sort of thing.’”⁵

The Unspeakable Name of God

Getting back to the Divine Council, the pantheon of ancient Sumer was eventually borrowed by Sumer’s northern neighbors, the Semitic peoples of Mesopotamia. And “borrowed” is an overly simplistic term. It would be much better to say that the ancient religion evolved and spread into the other civilizations that arose out of and around the Sumerian culture. Generally, they substituted Semitic names for the Sumerian gods, but the structure of the pantheon, including the distinction between the Divine Progenitors and the Assembly of Gods, was maintained in the Semitic religions—although Semitic people typically substituted the name of their local chief god for that of the particular name of the God-king who was one of the gods of the Assembly.

We see this in more recent history with the Christian church, when it banished the pagan religions and took over their groves and high places, building their cathedrals, and even renaming the pagan holidays with Christianized versions. However, the Christianizing of pagan Europe resembles more of a *conquest* than an evolution, much like the pogroms instituted by Jehovah to “wipe out” all the non-believing inhabitants of the land of Canaan in order to institute the pure religion of Judaism. And although that may seem like an over-generalized statement, all you need do is go to the pages of the Old Testament to find instance upon instance played over and over again of religious-based genocide and xenocide. It is no wonder the early church felt the need to murder “infidels.” It is not difficult, then, to comprehend the heinous murder of someone such as Hypatia of Alexandria⁶—considered the first notable female mathematician

who also taught philosophy and astronomy—at the hands of murderous Christian mobs⁷ under the orders of their bishop, St. Cyril of Alexandria. It is also not hard to see how even the Crusades were then justified by the Christian hierarchy of the day, as it was so much the established pattern set forth in the pages of Old Testament scriptures. The spread of religion and religious practice either evolved, or it was foisted and forced upon the new masses of commoners at the hands of a ruling monarch or body that needed to establish its power base over the people. (See [Chapter 7](#) for more on this.)

In Babylonian religion, the children of El, collectively known as the Elohim were subordinate to their father, El. These sons of the god presided individually over the various stars and planets, as well as over their respective individual earthly estates. At the height of Babylonian civilization, the Elohim were ruled by a son of El called Marduk, who could be seen in the night skies as the “wandering star,” the planet Jupiter today. In Cana’anite culture, in-country, northern neighbors and political competitors to the Hebrew Israelites, Marduk was called simply Lord or Ba’al, while his true name (Hadu or, in some dialects Hadad) was held secret and known only to his priests. Ba’al’s chief rival for kingship among the gods was Yamm, meaning “Sea,” who also sometimes took the guise of a storm-god—think: Zeus. His personal name was Yaw or, in some texts, Yawu. For instance, in the Epic of Ba’al, El, speaking to Athirat about their son Yamm says, “The name of my son is Yaw, Oh Goddess....”

It is extremely interesting to note that the name Yamm is intriguingly similar to the name of the Hebrew deity Yahweh, the short form of which was Yah. The similarity of names is paralleled by a similarity of roles, because Ba’al was considered to be the chief rival of Yahweh by the Hebrews. Although this identification is not a certain one, the two are thought to have been the same deity by some scholars or, at the very least, drawn from the same roots.

In the same fashion as the Cana’anites, the Hebrews regarded the true name of their tribal god, Yahweh, as far too sacred for common use, and

they too usually called him simply “Lord” (Hebrew *adonai* [אֲדֹנָי] or, sometimes, *ba’al* [בָּעֵל]). Consider the scene of Moses before the burning bush. In the account in the Book of Exodus, Moses asks God to “tell him his name”:

“13 Then Moses said to God, If I come to the people of Israel and say to them, ‘The God of your fathers has sent me to you,’ and they ask me, ‘What is his name?’ what shall I say to them? 14 God said to Moses, ‘I AM WHO I AM.’ [in other translations: ‘I WILL BE WHAT I WILL BE’—or literally: ‘I AM THAT ‘I AM’ THEY SPEAK OF’] And he said, ‘Say this to the people of Israel, ‘I AM has sent me to you.’ 15 God also said to Moses, ‘Say this to the people of Israel, ‘The LORD, [when in capital letters, means ‘YHWH’] the God of your fathers, the God of Abraham, the God of Isaac, and the God of Jacob, has sent me to you.’ This is my name forever, and thus I am to be remembered throughout all generations.””

(Exodus 3:13-15)

Knowing the secret name of God was forbidden in Hebrew religion, and in a round-about way Moses here was asking God to reveal it to him, which, according to tradition, would have given Moses power over God. Again, Moses’ ambition stands out, or at least the need to elevate himself as the pharaoh-god of Israel. Another prime example of this was when the prophet Elisha called on the secret name of God (how he obtained it, we do not know) to punish some young people who were taunting him and his position as prophet of Israel.

“23 He [Elisha] went up from there to Bethel, and while he was going up on the way, some small boys came out of the city and jeered at him, saying, “Go up, you baldhead! Go up, you baldhead!” 24 And he turned around, and when he saw them, he cursed them in the name of the LORD [capital letters = “YHWH”]. And two she-bears came out of the woods and tore forty-two of the boys. 25 From there he went on to Mount Carmel, and from there he returned to Samaria.”

(2 Kings 2:23-25)

As a rabbit trail, yet vital to understanding all these things, I find it very interesting to note that the prophet in this passage was able to call upon the name of the Lord and violently and maliciously kill 42 children who were mocking him. Despite the fact that Bethel was known for mocking the prophets of God, this seems an extreme consequence for childish bullying. Perhaps this is a picture of the severe, uncontrollable consequence of calling on the secret name of God. For as it shows in the text, there was no other consequence for Elisha's extreme actions. And as an anecdote to this story, keep in mind the third commandment of Moses:

“You shall not utter the name of Yahweh your God to misuse it, Yahweh will not leave unpunished the man who utters his name to misuse it.”

(Exodus 20:7; the Jerusalem Bible)

A more literal reading in modern idiom would read something like “You shall not utter the secret name of God to misuse it for vain or selfish purposes, for Yahweh will not leave that person unpunished who does so.” This commandment has little to do with cussing and saying things such as “Goddammit.” It has more to do with a person’s conduct of life, especially in light of the secret name of God being used to fulfill vain purposes. Elisha seemed to be inviolate of this commandment, yet there is no consequence mentioned in the passage. It is pure and complete speculation, but perhaps the greatest punishment of all was living in the horrid aftermath of having utilized the Holy to perform such an evil deed.

As Israel expanded its territories, conquering and possessing the land throughout the region of Cana'an, they killed and ousted the inhabitants who had entrenched themselves there during the 400 years of the Hebrews' Egyptian captivity. As a result, the displaced Cana'anites became the traditional enemies of Israel, but their deities seemed to have the same, identical roots, and were actually the same god, but in name only, as the

form of worship differed between the two cultures. The parallels between Ba’al and Yahweh are quite detailed. For example, both peoples referred to him, in his role as the god of storms and war, by the euphemisms “the rider on the clouds” and the “father to the fatherless.”

“5 Father of the fatherless and protector of widows is God in his holy habitation. 6 God settles the solitary in a home; he leads out the prisoners to prosperity, but the rebellious dwell in a parched land.”

(Psalm 68:5-6)

Both are portrayed as overcoming their enemies, such as when Yamm and his henchman battled Litan, the Fleeing Serpent/the Twisty Serpent, known as “Leviathan” [לְתִינָה] in the Hebrew.

“13 You did divide the sea by your strength: you brake the heads of the dragons [some translations say, ‘sea monsters,’ perhaps an allusion to the Serpent] in the waters.”

(Psalm 74:13)

“12 Am I a sea monster or a dragon [again, an allusion to the Serpent?] that you must place me under guard?”

(Job 7:12)

“12 By his power the sea grew calm. By his skill he crushed the great sea monster.”

(Job 26:12)

“8 Or who enclosed the sea with doors when, bursting forth, it went out from the womb....”

(Job 38:8)

So it is more likely that, whatever the origin of his name, Yahweh took over the history of Ba’al in Hebrew folklore and is best understood as the Hebrew equivalent of that Cana’anite god.

Anecdotally, there is a famous confrontation between the Israelite prophet Elijah, and the prophets of Ba'al recorded in the Bible.

“16 So... [King] Ahab went to meet Elijah. 17 When he saw Elijah, he said to him, ‘Is that you, you troubler of Israel?’ 18 ‘I have not made trouble for Israel,’ Elijah replied. ‘But you and your father’s family have. You have abandoned the LORD’s commands and have followed the Ba’als. 19 Now summon the people from all over Israel to meet me on Mount Carmel. And bring the four hundred and fifty prophets of Ba’al and the four hundred prophets of Asherah, who eat at Jezebel’s table.’ 20 So Ahab sent word throughout all Israel and assembled the prophets on Mount Carmel. 21 Elijah went before the people and said, ‘How long will you waver between two opinions? If the LORD is God, follow him; but if Ba’al is God, follow him.’ But the people said nothing. 22 Then Elijah said to them, ‘I am the only one of the LORD’s prophets left, but Ba’al has four hundred and fifty prophets. 23 Get two bulls for us. Let Ba’al’s prophets choose one for themselves, and let them cut it into pieces and put it on the wood but not set fire to it. I will prepare the other bull and put it on the wood but not set fire to it. 24 Then you call on the name of your god, and I will call on the name of the LORD. The god who answers by fire—he is God.’ Then all the people said, “What you say is good.” 25 Elijah said to the prophets of Ba’al, ‘Choose one of the bulls and prepare it first, since there are so many of you. Call on the name of your god, but do not light the fire.’ 26 So they took the bull given them and prepared it. Then they called on the name of Ba’al from morning till noon. ‘Baal, answer us!’ they shouted. But there was no response; no one answered. And they danced around the altar they had made. 27 At noon Elijah began to taunt them. ‘Shout louder!’ he said. ‘Surely he is a god! Perhaps he is deep in thought, or busy, or traveling. Maybe he is sleeping and must be awakened.’ 28 So they shouted louder and slashed themselves with swords and spears, as was their custom, until their blood flowed. 29 Midday passed, and they continued their frantic prophesying until the time for the evening sacrifice. But there was no response, no one answered, no one paid attention. 30 Then Elijah said to all the people, ‘Come here to me.’ They came to him, and he

repaired the altar of the LORD, which had been torn down. 31 Elijah took twelve stones, one for each of the tribes descended from Jacob, to whom the word of the LORD had come, saying, ‘Your name shall be Israel.’ 32 With the stones he built an altar in the name of the LORD, and he dug a trench around it large enough to hold two seahs[a] of seed. 33 He arranged the wood, cut the bull into pieces and laid it on the wood. Then he said to them, ‘Fill four large jars with water and pour it on the offering and on the wood.’ 34 ‘Do it again,’ he said, and they did it again. ‘Do it a third time,’ he ordered, and they did it the third time. 35 The water ran down around the altar and even filled the trench. 36 At the time of sacrifice, the prophet Elijah stepped forward and prayed: ‘LORD, the God of Abraham, Isaac and Israel, let it be known today that you are God in Israel and that I am your servant and have done all these things at your command. 37 Answer me, LORD, answer me, so these people will know that you, LORD, are God, and that you are turning their hearts back again.’ 38 Then the fire of the LORD fell and burned up the sacrifice, the wood, the stones and the soil, and also licked up the water in the trench.

39 When all the people saw this, they fell prostrate and cried, ‘The LORD—he is God! The LORD—he is God!’

40 Then Elijah commanded them, ‘Seize the prophets of Ba’al. Don’t let anyone get away!’ They seized them, and Elijah had them brought down to the Kishon Valley and slaughtered them there.”

(1 Kings 18:16-40)

Elijah and the prophets of Ba'al.

It is apparent that the Hebrews did not recognize the evolution of the religion of the Mesopotamian region, and it is clear that they did not worship Yahweh as being the same as the god Ba'al. Despite the name of Yahweh being originally sourced to a son of El is attested by a document (KTU 1.1 IV 14) from Ugarit,⁸ a Palestinian site occupied by neighbors of Israel. The document translates as “The name of the son of god, Yahweh.”

Furthermore, this status as the foremost of the sons of El is commemorated in the *Song of Moses*, one of the oldest of the Hebrew scriptures found in Deuteronomy:

“8 When the Elyon [another name of El] apportioned the nations, when he divided humankind, he fixed the boundaries of the peoples according to the number of the gods [the bene haElohim—the Sons of God]; 9 Yahweh’s own portion was his people, Jacob [Israel] his allotted share.”

(Deuteronomy 32:8-9)

In Canaanite literature, Yahweh ruled as the king of the other children of El. In this role, he presided and judged whenever the Assembly of the Gods met in council. The preeminence of Yahweh over the other gods is repeatedly asserted in the Old Testament Book of Psalms. In Psalm 86, we are told that “*There is none like you among the gods, O Yahweh*” (Psalm 86:8), and Psalm 89 is even more specific in explaining that the “gods” are the sons of El who met as the Assembly of the Gods, the Divine Council:

“6 The heavens praise your wonders, O Yahweh,
your faithfulness in the assembly of the holy ones.
For who in the skies can be compared to Yahweh?
Who among the sons of gods is like Yahweh?
7 a God feared in the council of the holy ones,
great and awesome above all that are around him?”

(Psalm 89:6-7)

Angels or Gods?

Setting aside the theories of extra-terrestrial interpretations that we touched on in earlier chapters, it is abundantly clear that the Genesis 6:1-8

passage is speaking of unique characters, the Watchers. Identifying these characters strictly as angels creates a problem in the text, which is supported by other biblical passages such as Psalm 82, in which we have the mention of the Elohim in context of the “Divine Council”—the gathering of the plurality of gods. But the gods mentioned in the Psalm are *not* angels. Let’s examine this Psalm a little more closely, looking at its language and meaning.

A Psalm of Asaph

“1 God (Elohim) stands in the midst of the divine council
[literally, council of El]; among the gods [elohim] He
pronounces judgment.

2 How long will you [plural] judge unjustly,

showing favor to the wicked? Selah.

3 Judge the wretched and the orphan,

vindicate the lowly and the poor,

4 rescue the wretched and the needy;

save them from the hand of the wicked.

5 They neither know nor understand,

they go about in darkness;

all the foundations of the earth totter.

6 I said, “you (plural) gods [elohim],

sons of the Most High [bene Elyon—another title for God], all of you [plural];

7 but you [plural] shall die as men do,

and fall like a man, O princes [plural; more accurately “shining ones”].

8 Arise [the command is singular], O God [plural; elohim],

judge [the command is singular] the earth,

for you [singular] shall inherit all the nations.”

God stood in the midst of the gods, the *sons of the Most High* (a variation on the Sons of God as found in Genesis 6:4). In this council, the *bene haElohim* are called “gods” and also “princes,” and are told that they will collectively fall. One would have to manipulate the passage, or simply overlook certain whole chunks of the Hebrew text in order to read around what it actually states: There is a multitude of gods. The first mention of Elohim in Psalm 82:1 must be translated as a singular, in that it is the subject of a singular verb: “*Elohim stands.*” This is consistent with the Hebrew language. The second mention of Elohim in the Psalm must be read

as a plural, as the preposition in front of it (“in the midst of”) requires more than one. It is impossible to be *in the midst* of one person. In Psalm 82, God (Elohim) is presiding over an assembly (or council) of other gods (Elohim). This where I spoke in a previous chapter of the word *elohim* being both singular and plural, wholly dependent on the rest of the sentence structure and the context in which it is being used, such as saying “A deer stood in the midst of a herd of deer”—same word with both singular and plural contexts.

Verse 6 of the Psalm makes it very clear that the *elohim* are the very same characters as the Sons of God mentioned in Genesis 6:4, in that he addresses them as the other *elohim*, and calls them the “sons of the Most High,” addressing them, point blank, saying “*you are gods [elohim], all of you.*” An interesting observation has been made by Dr. Michael S. Heiser, when he notes that the *elohim* mentioned here are not angels, which comes from the Hebrew word *Mal’akim*, meaning “messenger,” an entirely different term than what occurs for the Sons of God.⁹

Other passages where the plurality of gods [haElohim] appear are:
“Among the gods there is none like you, O Yahweh; neither
[are there any works] like your works.”

(Psalm 86:8)

“For Yahweh is a great God, and a great King above all gods.”

(Psalm 95:3)

“For Yahweh is great, and deserving of exceedingly great praise: he is to be feared above all gods.”

(Psalm 96:4)

“All who served images were put to shame; those who boasted in mere idols; even all the gods bow down before him.”

(Psalm 97:7)

“For you, O Yahweh, are Most High above all the earth: you are exalted far above all gods.”

(Psalm 97:9)

“For I know that Yahweh is great, and that our lord is above all gods.”

(Psalm 135:5)

“O give thanks to the God of gods: for his mercy endures forever.”

(Psalm 136:2)

“I will praise you with my whole heart: before the gods will I sing praise to you.”

(Psalm 138:1)

“Who is like you, O Yahweh, among the gods? Who is like you, majestic in holiness, awesome in splendor, doing wonders?”

(Exodus 15:11)

“Do you indeed decree what is right, O gods? Do you judge people fairly?”

(Psalm 58:1)

Some trains of more conservative theological thought insist that Psalm 82 is speaking of God addressing other members of the Holy Trinity: God the father, God the Son and God the Holy Spirit. But this cannot be at all accurate in light of the fact that not all members of the Trinity are “sons”;

the Holy Spirit is not a “son of God.” Further, in verses 2-5 of the Psalm, God is charging the other Elohim with corruption, and condemning them for their corrupt rule of the earth. At the end of the Psalm, God is reclaiming the rule of the earth from the other elohim, the implication being that they have done a horrible job of it, acting wickedly, and so they must be taken out of the picture. Again, according to Dr. Michael S. Heiser, these other elohim were an “impediment or a nuisance or at best a disappointment”¹⁰ —certainly not indicative of the Holy Trinity, as defined by Christian theology.

There are numerous other passages in the Bible that speak of this divine council and the *elohim* as a plurality, as well as the sons of God, the *bene haElohim*. One of the most familiar passages where the Sons of God appear is in the first two chapters of the Book of Job, which is considered to be, chronologically speaking, the oldest book in the Bible, pre-dating the formulation of Israel as a nation and the Jewish religion itself. Take note of another character who shows up in this passage:

“1 There was a man in the land of Uz, whose name was Job; and that man was blameless and upright, one who feared God, and turned away from evil. 2 There were born to him seven sons and three daughters. 3 He had seven thousand sheep, three thousand camels, five hundred yoke of oxen, and five hundred she-asses, and very many servants; so that this man was the greatest of all the people of the east. 4 His sons used to go and hold a feast in the house of each on his day; and they would send and invite their three sisters to eat and drink with them. 5 And when the days of the feast had run their course, Job would send and sanctify them, and he would rise early in the morning and offer burnt offerings according to the number of them all; for Job said, “It may be that my sons have sinned, and cursed God in their hearts.” Thus Job did continually. 6 Now there was a day when the Sons of God [*bene haElohim*] came to present themselves before the LORD, and [the] Satan also came among them. 7 The LORD said to (the) Satan, “Whence have you come?” [The] Satan answered the LORD, “From going to and fro on the earth, and from walking up and down on it.” 8 And the LORD said to [the] Satan, “Have you considered my

servant Job, that there is none like him on the earth, a blameless and upright man, who fears God and turns away from evil?” 9 Then [the] Satan answered the LORD, “Does Job fear God for nought? 10 Hast thou not put a hedge about him and his house and all that he has, on every side? Thou hast blessed the work of his hands, and his possessions have increased in the land.”

(Job 1:1-10)

And again in Job [Chapter 2](#):

“1 Again there was a day when the Sons of God [bene ha’Elohim] came to present themselves before the LORD, and [the] Satan also came among them to present himself before the LORD.”

(Job 2:1)

One could only imagine what exactly was going on in the courts of heaven when the Divine Council, the host of elohim, “presented themselves” before God, the singular elohim that held rule over them. Although these verses as well as other passages throughout scripture exist, and have meaning and purpose, it tells of a very different picture of the gods of the Bible, and a much murkier purpose behind the things that they did. Suddenly, the picture of the mythological Zeus holding court with the other Olympian gods, toying with the lives of humans while bartering with Hades, the god of the Underworld, starts to look at once not so unfamiliar or far-fetched. Again, we see the great mythologies of the world start to merge into a bigger, more mysterious story where the differing cast of characters blend and merge into one another.

The members of the Divine Council, known as the Watchers, who descended to the earth on the slopes of Mount Hermon, did so with great determination to make a pact among themselves. They were charged with the responsibility of watching over humanity, the children of God’s creation, but then left that responsibility behind when they looked down on

humanity with desire, wanting to be one of them and experience the lustful, sensual, steamy, flesh-on-flesh experience of sexual contact. They wanted to create life that sprang forth from their own loins, experiencing what only the Creator himself had experienced. For this, they were condemned, stripped of their “god-ness,” and reduced to a fleshly life that would suffer the consequence of physical death—a thing that they, apparently, would not have had to suffer in their heavenly state.

But there is also the danger of ascribing too much non-malevolence to these beings. In a desire to make them seem “more human,” we can often times imbue them with attributes that they did not possess. In the Christian way of thinking, making something “good” that God has deemed “evil” can run the risk of heresy and blasphemous behavior, and apparently the elohim who stood in the midst of the elohim—the Divine Council—had the superior power to condemn them for their actions. Yet, in great speculation, it is curious to wonder how these lesser gods saw themselves, what they thought about, and how they rationalized a departure from their Creator. When mankind considers offending a holy God, we have nothing to register that against, save for words taught from scriptures and consciousnesses that have religious mores grafted into them. These members of the Divine Council who left their place in the courts of heaven and descended to the earth to cohabit with human women seemingly understood full well what consequences their actions would produce. Yet, they still did it. Was it because they didn’t believe that God had the power to condemn and destroy them? Or was it that they simply didn’t care? Because, unlike human beings who have no visceral, tangible connection to the presence of God save through faith alone, these beings had physical access, beings gods themselves, and could experience the presence of the Most high God on a firsthand basis.

Still, the Watchers chose to desert the Divine Council and make their own way among the humans. Perhaps their biggest mistake was in believing that they were princes who could float untainted by their actions, above the consequences, and impose rule over the inferior children of Adam, much as Moses believed when he saw himself as the deliverer and potential ruler of the Hebrews the day he murdered the Egyptian task master.

And That's How I Met Your Mother...

The Nephilim are the children of the Sons of God, the offspring of the mixed blood of the bene haElohim and the benoth Adam, the daughters of men. But these offspring, according to scripture, were anything but normal children. There was no father-son stroll down the lane, fishing poles on shoulders, whistling a happy tune and skipping stones into the Euphrates River. We are told in the texts that the offspring of the sexual relations between the Sons of God and human women was like an experiment gone very wrong. The accepted view in academia is that the Nephilim are the offspring of angels, but that may be only part of the story, at least according to the text as rendered in the 1611 King James translation of the Bible, where the word Nephilim has been translated as “giants.”

As mentioned previously in this book, the generally accepted view of the word Nephilim is that it is derived from the Hebrew word *nepahl* (נֶפֶל). The “-im” ending signified plurality. The most commonly accepted definitions for the word nephal are:

1. To fall (as if to the ground).
2. To fall (as if in battle).
3. To be cast down.
4. To desert a location.
5. To fail.

As Craig Hines suggests in his book, *Gateway of the Gods*, these definitions are most likely were in reference to “fallen angel” originates.¹¹ But he goes on to ask which of the meanings most readily applies to the Nephilim, and does it refer to the angelic parents or the hybrid offspring? If we are to take the first definition of “to fall (as if to the ground),” it would seem that this could apply to angels who “fell from a state of grace to an

evil fallen one”—an act of motion, moving from one place to another. But there are much better, more succinct words to describe this act, such as *yarad* (יָרַד), which means “to come or go down, to descend,” and the “im” would have been added in some form to denote the plural aspect of the word.

Then there is the second definition, “to fall (as if in battle).” This definition denotes death. But we are told that these Sons of God and their offspring were very much alive. They were living, breathing, thinking, lusting, and having sexual intercourse and reproducing. Doesn’t sound very dead to me, unless, perhaps, later scribes were making reference to them at a much later date, viewing them as the “dead warriors” who had already been destroyed in the waters of the great deluge.

The third definition, “to be cast down,” seems to be a perfect fit if we are ascribing a fallen state to the Watchers and their offspring. They would have been seen as being cast down from heaven as a consequence of their rebellion against God. Yet, were this the only definition, it would exclude the many accounts of other cultures experiencing these beings as good, well-meaning teachers and beings of beneficent intent. Remember: The offspring of the Watchers were not all considered to be evil, but are written about as such in scripture as a collective.

The fourth definition speaks to desertion, a moving from one location to another with deliberate abandonment. In a real sense, this is what the Watchers did when they descended to the steepes of Mount Hermon and deliberately made a pact to willingly leave their godly estate on the Divine Council and dwell among the humans, one of the purposes of which was to experience the fathering of children with the human women.

The fifth definition is one of “failure,” which could easily be manipulated to fit the context in that the Watchers obviously failed to do their duty and fulfill their responsibility—which is, in part, the reason they are condemned

in Psalm 82. You can also find this supported by the text in the Book of Jubilees, part of the Dead Sea Scrolls.

“15 And in the second week of the tenth jubilee Mahalalel took unto him to wife Dinah, the daughter of Barakiel the daughter of his father’s brother, and she bare him a son in the third week in the sixth year, and he called his name Jared, for in his days the angels of the Lord descended on the earth, those who are named the Watchers, that they should instruct the children of men, and that they should do judgment and uprightness on the earth.”

(Jubilees 4:15)

“1 And it came to pass when the children of men began to multiply on the face of the earth and daughters were born unto them, that the angels of God saw them on a certain year of this jubilee, that they were beautiful to look upon; and they took themselves wives of all whom they chose, and they bare unto them sons and they were giants. 2 And lawlessness increased on the earth and all flesh corrupted its way, alike men and cattle and beasts and birds and everything that walks on the earth—all of them corrupted their ways and their orders, and they began to devour each other, and lawlessness increased on the earth and every imagination of the thoughts of all men (was) thus evil continually. 3 And God looked upon the earth, and behold it was corrupt, and all flesh had corrupted its orders, and all that were upon the earth had wrought all manner of evil before His eyes. 4 And He said that He would destroy man and all flesh upon the face of the earth which He had created. 5 But Noah found grace before the eyes of the Lord. 6 And against the angels whom He had sent upon the earth, He was exceedingly wroth, and He gave commandment to root them out of all their dominion, and He bade us to bind them in the depths of the earth, and behold they are bound in the midst of them, and are (kept) separate. 7 And against their sons went forth a command from before His face that they should be smitten with the sword, and be removed from under heaven. 8 And He said ‘My spirit shall not always abide on man; for they also are flesh and their days shall be one hundred and

twenty years.’ 9 And He sent His sword into their midst that each should slay his neighbour, and they began to slay each other till they all fell by the sword and were destroyed from the earth. 10 And their fathers were witnesses (of their destruction), and after this they were bound in the depths of the earth for ever, until the day of the great condemnation, when judgment is executed on all those who have corrupted their ways and their works before the Lord.”

(Jubilees 5:1-10)

Can you see the similarity that shines through in all of these texts, even from the books that were completely eradicated from scripture under the councils invoked by Emperor Constantine? This speaks to the fact that not all of these “non-canonical” scriptures were indeed rightfully eradicated from the Bible! (See [Chapter 7](#).)

There are inherent problems, however, with the word Nephilim, and Heiser goes through great strides to demonstrate the differences between the Hebrew and the Aramaic, where a single “yod” (Hebrew vowel) can take the definition of the word in a completely different direction. Heiser ends up defining the word Nephilim as meaning “those who were fallen,” expressly meaning “those who fell/were fallen.”

However, though I have great respect for the linguistic work of Heiser, I would more align myself with the observations of Hines, who expresses a philosophy that seems inherent to the context of the Genesis 6 passage, wherein the Nephilim come across as, for all practical purposes, rather neutral. They are not defined by the evil of some fallen state of their parental lineage, but are rather set up in the Genesis passage by Moses as being “heroes of old” and “men of reknown.” They were obviously not all inherently evil in nature, and a study of these beings in the literature and scriptural writings of other cultures demonstrates that many of them were not considered to be malevolent. The Watchers may have descended to the earth in a desire to cohabitate with human women—a thing they knew had grave consequences for them in the Divine Council—but they came down

to experience life as human beings and to procreate. Some of them may have had evil intent, as we will see, but others, obviously, bore no malicious, devilish intent. They taught humans the “forbidden knowledges” of such dastardly things as cosmetics, mirrors, and herbology and medicine, but some also took advantage of the humans by teaching the arts of making weapons, sorcery and waging war. It was their hybrid offspring who, it is said in the passages of Enoch, wreaked havoc and brought destruction to mankind. The Watchers’ inability to control what they had procreated seems to be the source of the corruption, and the sin of the Watchers themselves was the act of deserting their posts and fraternizing on the most intimate of levels with those whom they were appointed to watch over. The consequences were widespread and resulted in divine judgment.

Then again, you also have the viewpoint of Derek Kinder’s work, in which he says, “The craving of demons for a body, evident in the Gospels, offers at least some parallel to this hunger for sexual experience.”¹²

Again, for clarity and reference, the passage as written in 1 Enoch:

“1 It happened after the sons of men had multiplied in those days, that daughters were born to them, elegant and beautiful. 2 And when the angels,¹³ the sons of heaven, beheld them, they became enamoured of them, saying to each other, Come, let us select for ourselves wives from the progeny of men, and let us beget children. 3 Then their leader Samyaza said to them; I fear that you may perhaps be indisposed to the performance of this enterprise; 4 And that I alone shall suffer for so grievous a crime. 5 But they answered him and said; We all swear; 6 And bind ourselves by mutual execrations, that we will not change our intention, but execute our projected undertaking. 7 Then they swore all together, and all bound themselves by mutual execrations. Their whole number was two hundred, who descended upon Ardis,¹⁴ which is the top of Mount Armon. 8 That mountain therefore was called Armon, because they had sworn upon it,¹⁵ and bound themselves by mutual execrations.”

(1 Enoch 7: 1-8)

Hines sums it up best: “There is good and bad in everything, and it is through the actions of an individual (even an angel) that determines their nature.”¹⁶

It is my sincere belief that, in accordance with the language and the contexts surrounding the various appearances of the word Nephilim, they were not inherently evil in nature, and they are best described as the descendants of a race of beings who abandoned or left their place in the heavenly realms and the courts of the Divine Council, and descended to the earth in violation of the rules established by God.

“6 And the angels which kept not their first estate, but left their own habitation, he hath reserved in everlasting chains under darkness unto the judgment of the great day. 7 Even as Sodom and Gomorrah, and the cities about them in like manner, giving themselves over to fornication, and going after strange flesh, are set forth for an example, suffering the vengeance of eternal fire.”

(Jude 6-7)

Once again we also see in this passage the reassertion of the prohibition against certain forms of sexual activity. As we saw with the serpent character in the Garden of Eden story, we see again in the account of the Watchers. Everything seemed to revolve around encoded sexual activity in its adulterous or fornication forms. And there is always an imposition of consequential judgment imposed after these rules are violated. In the case of the breeding of the hybrid race of Nephilim, God is “grieved” that He ever made man and sets about a great natural catastrophe to wipe them all out—mankind, Nephilim and every living creature on the planet, according to the Genesis and Enochian accounts. Save for one man and his family, and pairs of every known animal in creation that could not survive in an aquatic habitat.

“Perfect in His Generation”

Why Noah and his immediate family were seemingly the only ones immune from this great watery judgment of God is significant. Genesis 6:9 says, “Noah was a just man.” According to Judeo-Christian teaching, Noah stood out among the rest of humanity as an example of righteousness and godliness in a world that had gone completely insane with perverse corruption around him. Like Enoch before him, Noah also “walked with God.” This is where most commentators and bible teachers seem to come to a screeching halt, falling far short of—as the late, effervescent radio personality Paul Harvey used to say—the rest of the story.

There was another reason why Noah was spared. And this reason goes far deeper than the surface issue of merely following God or being a “good believer.” The greatest cause of frustration over this issue is the fact that it seems to have escaped most commentators either through ignorance of the language of the text, or lack of desire to broach these topics beyond the surface message. Genesis 6:9 says that Noah was “perfect in his generation.” Is the text implying moral and spiritual perfection? Not in the least. Genesis 9:20-23 disproves any such perfection:

“20 Noah, a man of the soil, proceeded to plant a vineyard. 21 When he drank some of its wine, he became drunk and lay uncovered inside his tent. 22 Ham, the father of Canaan, saw his father naked and told his two brothers outside. 23 But Shem and Japheth took a garment and laid it across their shoulders; then they walked in backward and covered their father’s naked body. Their faces were turned the other way so that they would not see their father naked.”

(Genesis 9:20-23)

I Just Survived the Great Deluge, and Now I’m Going to DisneyLand!

What was the first recorded act of Noah in the Book of Genesis, after the events of the Great Flood? He got drunk. (And who wouldn't?) I think that if I had just spent the last 120 years building a huge barge as a repository for every species of animal in the known world, and spent four to six months in those closed quarters with my wife and kids, tending to the menagerie, and watching the total and complete destruction of living thing on earth, the first thing I would most probably do when all the puddles had dried up is thank God for my salvation, and hit that bottle of 21-year-old single malt Highland Scotch stashed in my overnight bag. Noah was as predictably human as you and me.

So why does the biblical account call him “perfect”? What is the meaning of this word? The Hebrew word is *tamiym* [תָמִيم]¹⁷ and comes from the primitive root word *taman* [תָמַן]. This means “complete, whole, entire, sound, without blemish” (see also: Exodus 12:5, 29:1, Leviticus 1:3). In its primary meaning, it does not refer to any moral or spiritual quality or superiority, but to *physical* purity. Noah was uncontaminated by the bloodlines of the Watchers and their offspring, the Nephilim. He was also of the line of Abel, the seed of *Adam* [אָדָם] not of the serpent’s bloodline as carried through the descendants of Cain. Noah alone had preserved their pedigree and kept it pure, in spite of prevailing corruption brought about by the fallen angels.¹⁸ What the language is telling us in Genesis [Chapter 6](#) is that Noah’s bloodline had remained free of genetic contamination, be it angelic or alien in nature. Noah was pure human being, through and through.

Flavius Josephus, a Palestinian, wrote *Antiquities of the Jews* to educate the Roman-Hellenistic world about Judaism and the history of the Jews. In it he recounts the tale of the Watchers, Nephilim, and Noah as follows:

“For many angels of God accompanied with women, and begat sons that proved unjust, and despisers of all that was good, on account of the confidence they had in their own strength; for the tradition is, that these men did what resembled the acts of those whom the Grecians call giants. But Noah was very uneasy at what they did; and

being displeased at their conduct, persuaded them to change their dispositions and their acts for the better: but seeing they did not yield to him, but were slaves to their wicked pleasures, he was afraid they would kill him, together with his wife and children, and those they had married; so he departed out of that land.¹⁹"

Despite the rather warmed-milk version of events given by Flavius Josephus, the overt implication is, then, that all other human families on the Earth had been contaminated by the blood of the Nephilim, save for Noah and his children. And if the biblical implication is that humanity was completely tainted by the blood of the serpent as represented in the lines of the Nephilim, it is no wonder that God pronounced such a universal fiat of judgment.

As for the fallen members of the Divine Council who descended to the earth to commit themselves to interbreeding with humans, participating in the abomination, God put them in custody "in everlasting chains under darkness unto the judgment of the great day" (Jude 6). This is sometimes interpreted as Tartarus or the "nether realms" (2 Peter 2:4). In Greek mythology, Tartarus (*Tάρταρος*) is a deep, gloomy place, a pit, or an abyss used as a dungeon of torment and suffering that resides beneath the underworld. In the *Gorgias*, Plato (c. 400 BCE) wrote that souls were judged after death and those who received punishment were sent to Tartarus, and it is only known in Hellenistic Jewish literature from the Greek text of 1 Enoch 20:2, where the archangel Uriel is the jailer of the 200 Watchers who sinned by cohabiting with human women and producing the bloodline of the Nephilim.²⁰ It is, further, interesting to note that even Peter—"Saint Peter," the big fisherman, the "rock" upon which Christ would build His church, the friend and disciple of Jesus and the apostle who wrote the New Testament Books of first and second Peter—refers to the Greek mythological place of punishment in the afterlife:

"4 For if God did not spare angels when they sinned, but sent them to Tartarus, putting them in chains of darkness in gloomy dungeons to be held for judgment; 5 if he did not spare the ancient world when he

brought the flood on its ungodly people, but protected Noah, a preacher of righteousness, and seven others; 6 if he condemned the cities of Sodom and Gomorrah by burning them to ashes, and made them an example of what is going to happen to the ungodly; 7 and if he rescued Lot, a righteous man, who was distressed by the depraved conduct of the lawless 8 (for that righteous man, living among them day after day, was tormented in his righteous soul by the lawless deeds he saw and heard)—9 if this is so, then the Lord knows how to rescue the godly from trials and to hold the unrighteous for punishment on the day of judgment. 10 This is especially true of those who follow the corrupt desire of the flesh and despise authority.”

(2 Peter 2:4-10)

The punishment was reserved for those fallen who had participated in the great seeding of the human bloodline, and would also explain why some fallen angels are kept in custody and others are free to roam the heavens and torment mankind. Such a severe and dramatic punishment presupposed a severe and dramatic sin, something infinitely more evil and more sinister than mere mixed marriages. It was nothing less than the fallen, perhaps even demonic, realm attempting to pervert the bloodlines of the human world. By genetic control and the production of hybrids, the serpent of the Garden of Eden, and those who left their place on the Divine Council, following him, were out to rob God of the people He had made for Himself. The serpent character in the Bible, as we examined earlier, was none other than the leader of the fallen. And were the purpose of this book to examine Lucifer, the Star of the Morning, the Glory of God, and a Prince of the Divine Council, we would say a lot more about the implications, but we'll save that for another time. Suffice it to say that if the serpent from the garden who fathered the very first of the Nephilim in Cain had succeeded in corrupting in entirety the human race, he would have hindered the coming of the perfect Son of God, the promised “seed of the man,” who would defeat the fallen and restore man's dominion (Genesis 3:15).

In what is considered to be the very first Messianic prophecy in the Bible, God said to the serpent character in the Garden of Eden:

“15 And I will put enmity between you and the woman, and between your offspring and hers; he will crush your head, and you will strike his heel.”

(Genesis 3:15)

The bloodline of the serpent was manifested in Cain, his offspring conceived during the seduction of Eve in the Garden of Eden. The bloodline of the woman was manifested in her son Abel, whom Eve conceived with Adam. The prophetic implication of this verse in Genesis is that the Messiah would be born through pure human bloodlines, the seed of Adam and Eve, uncorrupted by the blood of the serpent and his host of fallen Watchers. That is why you find the lineage of Mary, the wife of Joseph and mother to the immaculate conception of Jesus Christ, being traced through King David and all the way back to Adam, through the younger son Abel.

According to Christian theology, if the bloodlines of the Nephilim had by any means prevented the birth of the “only begotten” Son of God, they would obviously have averted their own doom. It was for this reason, according to Christian theology, that God drowned all of mankind in the Great Flood of Noah.

There is a state of what I will call “contingent dualism” at play here: Had the bloodlines of the serpent and the Watchers succeeded in contaminating all of humanity, there would have been no immaculately born Son of God, who the Jewish Messianic prophecies referred to as the “Kinsman Redeemer,” the seed of the man, the divine savior of our own bloodline who would take away the sins of the world. Because the bloodline of the Watchers was eliminated in the flood, the pure human genealogies would be allowed to continue through the pure human sons of Noah, producing a messiah of pure human birth.

But wait—is not the Messiah, according to Christian theology, born of a human bloodline, mixed with the bloodline of God? Was not Mary the mother of Jesus impregnated by elohim in the same fashion as the daughters

of men were impregnated by the Watchers, the elohim of the Divine Council? Did not the mother of Jesus conceive the Messiah as a result of a divine sexual interference? And are not the genealogies of Mary, tracing her lineage back to the throne of David the king, and further back to the line of Adam through Abel written into the story of the birth of Jesus, written for the sole purpose of establishing the untainted human bloodline of the Christian messiah, who was said to be both God and Man? For, indeed, the greatest Son of God was the messiah, himself, born to a virgin, fathered by a God. Yet he is called the “only begotten” son of God. Not simply a prince of heaven, but God Himself in human form. The mysteries of the universe compound exponentially when the elohim who stands in the midst of the elohim and pronounces judgment on the gods of the Divine Council, holds the ability to strip the other gods of their divinity, yet strips Himself of divinity in order to become a human being in a singular act the Koinae Greek calls the kenosis ($\kappa\acute{e}nōsīs$). This, according to Christian theology, placed Jesus Christ in a place far above the gods and angels. God out-did the Watchers and the serpent in that he made the perfect melding of human and god.

Pardon Me, but There's a Giant in My Soup

There is some confusion when reading all these passages as to whether or not these Watchers were a caste of hierarchical angels, or whether they were lesser gods, as expressly stated in Psalm 82. I believe it is as simple as understanding that the angels of God had different titles in the heavenly domain than they did after their collective descent to the earth. In short, they were *both*. But gaining an understanding that these beings existed far outside the story-bookish view many people have of angels is important to understanding the princely majesty of these beings, as well as the devastation that they brought to the bloodlines of humanity.

Could the term Nephilim, though generally accepted as the offspring of the Watchers, also be used to describe the Watchers themselves? After all,

the definition of the word Nephilim means to fall or descend. The children of the Watchers did neither of those things, as they were the product of the Sons of God interbreeding with human women. They descended from nowhere, other than the wombs of their earthly mothers. As I alluded to much earlier, a good illustrative example would be the monikers we place on immigrants from foreign countries. When an Irish family emigrates from Ireland to the United States, their children are known as Irish-Americans. But then the term extends also to the parents, who also become Irish-Americans. Once the Nephilim were bequeathed, the titles spread across the board to both the parents and the children.

There is another completely unique distinguishing factor to the children of the Watchers: They were called “giants.” And there is some textual evidence to support a larger size. When the wandering Israelites finally reached the Promised Land, an advance party was sent to spy on the country. They came back with this report:

“32 So they gave out to the sons of Israel a bad report of the land which they had spied out, saying, “The land through which we have gone, in spying it out, is a land that devours its inhabitants; and all the people whom we saw in it are men of great size. 33 There also we saw the Nephilim [the sons of Anak are part of the Nephilim]; and we became like grasshoppers in our own sight, and so we were in their sight.”

(Numbers 13:32-33)

Although I do not fully subscribe to the Creationist views of Dr. Henry Morris, he has some interesting things to say about the “giants” and their further offspring:

“There were giants “also after that,” in the days of the Canaanites, and these were likewise known as, among other things, the Nephilim (Numbers 13:33). Humanly speaking, they were descended from Anak, and so were also known as the Anakim. These people were, of course, known to Moses and it was probably he who editorially

inserted the phrase “and also after that” into Noah’s original record here in Genesis 6:4. Moses probably also inserted the information that these were the “mighty men of old, men of renown,” men whose exploits of strength and violence had made them famous in song and fable in all nations in the ages following the Flood. To rebellious men of later times, they were revered as great heroes; but in God’s sight they were merely ungodly men of violence and evil.^{[21](#)}”

During the campaign of the Five Kings in Abraham’s day, several tribes nestled around the Valley of Siddim in the Dead Sea region, evidently intermingled with the Canaanites, and are considered to be the Nephilim or hybrids of Nephilim. These tribes are identified in both Genesis 14 and Deuteronomy 2 as the Rephaim (“titans,” children of “Rapha”), the Zuzim or Zamzummim (“terrible ones”), the Emim, Horites, and Anakim (“crushing tyrants”). It is the tribe of the Anakim that is directly connected with the Nephilim in the report given to Moses and the Hebrews by the spies in Numbers 13:33. The context of the Dueteronomy and Numbers passages suggest that the other tribes of giants were relatives of the Anakim or other lines of Nephilim, particularly the Rephaim, whose descendant is described as living in the city of Gath along with the Anakim giant, Goliath, and Lahmi. The Rephaim are giants and are generally described as being tall or large, and seem to be synonymous with the Nephilim, based on the translation of the word *giants* in Genesis [Chapter 6](#).

The tribe of the Anakim were descended from a giant named Anak, who was a son or grandson of a giant named Arba, from which the ancient city of Hebron was originally called “Kiriath Arba” or “The City of Arba” because “Arba was the greatest man among the Anakim” Joshua 14:15. This tribe was so tall, that the weak-kneed spies reported, “we are like grasshoppers to them” (Numbers 13:33).

The Old Testament scriptures tell of how the tribes of giants were fought and destroyed by the tribes of normal men who replaced them, including the Israelites. Moses killed Og, king of the Rehpaim who lived on the Golan heights near Mount Hermon, the original spot where the Watchers

descended and fathered the Nephilim. Og apparently did not travel far from home. According to the biblical passage, Og had a bed that was nine cubits long (13.5 to 15.5 feet, depending on which cubit was used) and was called “last of the remnant of the giants” (Deuteronomy 3). Og may be the source of the word *ogre* in the English language.

According to Issac E. Mozeson’s *The Word: The Dictionary That Reveals the Hebrew Source of English*, an “ogre” (עָגָר) is a hideous monster or giant (and is never mentioned as having “layers,” so get the picture of Shrek out of your mind completely). The mighty King Og of Bashan was said to be the last of the original line of Nephilim giants of scripture, so we are told in Numbers 21:33 and Deuteronomy 3:11. The old etymological notion that the word *ogre* came from the French language was probably written by men who had never heard of the biblical King Og. The French version explains the “re” suffix to be French in origin.

“The Illiterate Greeks, who clumsily borrowed an alphabet from the Semites, probably paganized the stuff of many biblical epics. One of these was the account of the Mighty Og and the Anakim—or Nephilim—battling the armies of god for the rights to settle Cana’an. Gigas [Og] is a major figure in their mythic battle between the Titans and the Gods. As for Og’s wife, note the Old Norse term for ogress, gygr. This is the given source for the Scottish word for an evil spirit or ogre.”²²

Joshua, Moses’ successor, drove the three remaining sons of Anak out of Hebron in his first campaign after leading the Children of Israel into the Promised Land. The sons of Anak evidently reoccupied the city of Hebron while Joshua was waging his campaign against Canaanite cities in the North. Caleb later retook Hebron and killed the three giants.²³ Surprisingly, there was probably heavy motivation for Caleb to drive them out and keep them from retaking the territory, as this is the region where, 40 years earlier, Caleb was one of the spies who said to Moses, “Yeah, they’re giants, all right, but we can take ‘em! Oh, and by the way, I have this great piece of land I want where these three giants live....” Caleb had his eyes and heart

set on a piece of land for 40 years. His motivation to kill the residents was strong indeed, bolstered by sand in his sandals for four decades.

David and King Saul fought a remnant of smaller giants who had taken refuge in the Philistine city of Gath. They included Goliath, who was “six cubits and a span” (roughly 9' 3”), and his brother Lahmi “whose spear had a shaft like a weaver’s rod.” The last of the Gittite giants was slain “In still another battle, which took place at Gath”:

“20 In still another battle, which took place at Gath, there was a huge man with six fingers on each hand and six toes on each foot—twenty-four in all. He also was a giant, descended from Rapha.”

(2 Samuel 21:20)

The last scriptural reference to the giants, chronologically speaking, may be Isaiah 45:14, which prophesies that Sabeans “men of stature” will become slaves in chains of the redeemed Israelites:

“14 This is what the LORD says: ‘The products of Egypt and the merchandise of Cush, and those tall Sabeans—they will come over to you and will be yours; they will trudge behind you, coming over to you in chains. They will bow down before you and plead with you, saying, Surely God is with you, and there is no other, there is no other god.’”

(Isaiah 45:14)

These are the characteristics of the remnant tribes of giants described in Scripture:

- ★ Their height was two or three times the height of normal men.

- ★ They were associated with some kind of unholy intermixing before the Flood.
- ★ They were closely associated with the wicked Canaanites after the Flood.
- ★ In one case they are described as having polydactyly (extra fingers and toes).
- ★ Unlike the Canaanites, there are no examples of Nephilim who became followers of God.

The Genesis account clearly states that the Nephilim were on the earth both before and after the Great Flood. This generates another question all on its own: If God sent a devastatingly tragic universal deluge that killed off all human beings and every other living thing, for the purpose of wiping out and completely exterminating this hybrid race, *why did it not work?*

Did God in all his biblical attributes of omniscience and foreknowledge not know that his act of judgment would not have the desired effect? Did God make a huge blunder, or was there something more going on? Was the great flood not as universal as we are told, allowing for the escape and survival of some of the Nephilim? Perhaps, as Ancient Alien theorists suggest, the Nephilim bugged out as soon as they knew of the Great Flood's impending arrival. Could the same space craft have returned to take away the remnant, only to redeposit them on the earth after the flood waters had receded? These are all—pardon the pun—giant questions. As we'll see at the end of this book, there may be some answers that will explain their return, and why Moses penned this:

“The Nephilim were on the earth in those days—and also afterward—when the Sons of God came in to the daughters of men and they bore children to them...”

(Genesis 6:4a)

God. No...Angel. Wait... *Gods*?

We've talked extensively about Elohim, and we know that the word refers to both the singular God and the multitude of gods of the Divine Council, the context of the passage defining which usage is to be incorporated. The Princes of the Divine Council are also referred to as angels, as they are seen in the biblical texts and the apochryphal books of Enoch. One such instance of the word elohim in the plural was when King Saul visited the witch of Endor in 1 Samuel 28:13. The noun elohim is used in conjunction with a plural when the witch tells Saul that she sees "gods" (elohim) coming up out of the earth; this seems to indicate that the term was used to mean something like "divine beings" among spiritists in ancient Israel.

Elohim (אֱלֹהִים) is used nearly 3,000 times in the Old Testament for the name of God, and in addition to meaning "God," it can also mean gods, goddesses, divine rulers, angels, god-like being or beings, or judges. In the New American Standard version of the Hebrew Old Testament, the word *elohim* is used in these instances for:

God, 2,326 times.
God's, 14 times.
divine, 1 time.
divine being, 1 time.
exceedingly, 1 time.
god, 45 times.
goddess, 2 times.
godly, 1 time.
gods, 204 times.
great, 2 times.
judges, 3 times.
mighty, 2 times.
rulers, 1 time.
shrine, 1 time.

The shortened, singular name for God is the word *El* (אֵל), which has the same meanings as above, but in a shorter, singular form: god, mighty man, and strength. It is very interesting to note that the Sons of God, the angels, and gods of the Divine Council had the name El incorporated into many of their names to denote their status as Sons of God, names such as the archangels bore: Michael, Raphael, Gabriel, Uriel, and even Azazel, who introduced the art of weaponry and warfare, as well as harlotry and prostitution to the humans. As mentioned earlier when talking about the bright shining gods, various other cultures have beings that have variants of the same word:

Sumerian *el* meant “brightness” or “shining.”
Akkadian *ilu* meant “radiant, shining one.”
Babylonian *ellu* meant “the shining one.”
Old Welsh *ellu* meant “a shining being.”
Old Irish *aillil* meant “shining” or “to shine.”
English *elf* meant “shining being.”
Anglo-Saxon *aelf* meant “radiant being.”

Philo of Alexandria (20 BCE-50 CE) wrote a commentary of Genesis 6 called *Concerning the Giants*. In it, he emphasized that the passage was not a myth:

And when the angels of God saw the daughters of men that they were beautiful, they took unto themselves wives of all of them whom they Chose.” (Genesis 6:2) Those beings, **whom other philosophers call demons, Moses usually calls angels;** and they are souls hovering in the air. And let no one suppose, that what is here stated is a fable, for it is necessarily true that the universe must be filled with living things in all its parts, since every one of its primary and elementary portions contains its appropriate animals and such as are consistent with its nature; the earth containing terrestrial animals, the sea and the rivers containing aquatic animals, and the fire such as are born in the fire (but it is said, that such as these last are found chiefly in

Macedonia), and the heaven containing the stars: for these also are entire souls pervading the universe, being unadulterated and divine, inasmuch as they move in a circle, which is the kind of motion most akin to the mind, for every one of them is the parent mind. It is therefore necessary that the air also should be full of living beings. And these beings are invisible to us, inasmuch as the air itself is not visible to mortal sight. (But it does not follow, because our sight is incapable of perceiving the forms of souls, that for that reason there are no souls in the air; but it follows of necessity that they must be comprehended by the mind, in order that like may be contemplated by like. [author's emphasis])²⁴

chapter 9

...And Also Afterward

It was sometime during the mid-1990s, while deep in an engaging conversation with friends, that a little light bulb popped on over my head, rather suddenly. We had been talking about aliens, D&D, *Star Trek*, and general metaphysical and ufological genre stuff, enjoying the heady, mystical, metaphysical atmosphere we seemed to be conjuring up in front of the fireplace. Of course, the Guinness was flowing pretty freely, and we all had reached that “higher plane” of enlightenment—you know, the one where all your thoughts suddenly have no filters, and your words come out as if they’d been under restraint for all the days of your life prior to that moment.

Well, this was one of those moments.

I jumped to my feet, yelling several exclamatory expletives of joy upon realizing that I had just stumbled upon a new discovery—at least for me. The information was nothing new, nor was it going to win me a Pulitzer or high praise around the world, but at that moment, it was completely new to me: UFOs and aliens are somehow inextricably linked to the Flood of Noah and the wildly fantastic breed of hybrid Nephilim that appeared at the beginning of the biblical account.

See? Nothing new.

But what occurred to me at that moment was a sudden understanding of the link between events that took place thousands of years ago, and what

seemed like events that were taking place today. And this was the biblical passage that spawned the entire *gadzooks!* scene in front of my friends' living room fireplace:

"26 Just as it was in the days of Noah, so also will it be in the days of the Son of Man. 27 People were eating, drinking, marrying and being given in marriage up to the day Noah entered the ark. Then the flood came and destroyed them all."

(Luke 17:26-27)

And cross-referenced in Matthew's gospel:

"37 As it was in the days of Noah, so it will be at the coming of the Son of Man. 38 For in the days before the flood, people were eating and drinking, marrying and giving in marriage, up to the day Noah entered the ark; 39 and they knew nothing about what would happen until the flood came and took them all away. That is how it will be at the coming of the Son of Man."

(Matthew 24:37-39)

These were the words of Jesus, spoken to his disciples. In their context, they were speaking less about the *conditions* of the times of Noah, than they were speaking to the suddenness of God's wrathful judgment, in that people were still marrying and partying all the way up until they heard the slamming door of the ark that Noah had been building for 120 years. When the first little droplets of rain started to pitter-patter off their foreheads, they suddenly realized that all Noah had been saying was coming to pass. It's not that they hadn't *heard* Noah's words of warning; it was that they didn't *believe* them.

There was a deeper application of the passage than the simple suddenness of judgment—the idea that the things that were taking place all around us in current-day ufology and alien contact scenarios, seemed to be exactly what was taking place when the Watchers interbred with human women and sired the Nephilim. We asked ourselves that night: Is this a repeat of angelic or demonic beings attempting to infiltrate the human bloodline to stave off a

second judgment? Was this the precursor to the fulfillment of all the eschatological prophecies and the path to Armageddon?

Genesis 6:4 leaves us hanging on a haunting, almost chilling three words: “*... and also afterward.*” We have already established that several passages in the books of Moses tell us that the Nephilim survived the flood. But this seems to stand in stark contradiction to the verse in Genesis where we are told:

“21 And all flesh died that moved upon the earth, birds, cattle, beasts, all swarming creatures that swarm upon the earth, and every man; everything on the dry land in whose nostrils was the breath of life died. He blotted out every living thing that was upon the face of the ground, man and animals and creeping things and birds of the air; they were blotted out from the earth. Only Noah was left, and those that were with him in the ark.”

(Genesis 7:21)

Is this an oversight or a contradiction in the passage, or was it an intentional ruse to throw us off the path of the Nephilim? It is clear that what Moses wrote was an account of the Hebrew version of the Flood, but as we discovered earlier, the account of the Nephilim themselves, as recorded in the first few verses of Genesis [Chapter 6](#) have earmarks of having been edited, or added completely at a later date. Was this the work of Joshua, Moses’ successor? Or was it the addition of later scribes?

Or does it simply mean that the Nephilim were not considered as anything but the offspring of spirit beings, therefore not included in the list of things destroyed in Genesis 7:21?

Then there is a question that is often associated with this entire topic: Could this hybrid race of Nephilim giants, produced from the union of the princes of heaven—the lesser gods of the Divine Council—and earthly women, still be roaming the earth today? Because according to Genesis 6:4,

they survived the Flood, regardless of who wrote the passage. If it is a detail that Moses did not write or was somehow unaware of, someone edited the text and added in the appropriate phrases telling us that the Nephilim were still on the earth *after* the Flood that was supposed to have destroyed them.

As discussed in [Chapter 8](#), the Old Testament mentions several occurrences of “giants” and “Nephilim” appearing, specifically the giant-races of Canaan: the Rephaim, the Emim, the Horim, the Zamzummim, and the Anakim.

“10 The Emites used to live there—a people strong and numerous, and as tall as the Anakites. 11 Like the Anakites, they too were considered Rephaite, but the Moabites called them Emites. 12 Horites used to live in Seir, but the descendants of Esau drove them out. They destroyed the Horites from before them and settled in their place, just as Israel did in the land the LORD gave them as their possession.”

(Deuteronomy 2:10-12)

The Kingdom of Og, the King of Bashan, was the “land of the giants.”

“12 That is, the whole kingdom of Og in Bashan, who had reigned in Ashtaroth and Edrei and had survived as one of the last of the Rephaite. Moses had defeated them and taken over their land.”

(Joshua 13:12)

Anak, and his seven sons of the Anakim were also giants, along with the famed Goliath and his four brothers:

“4 A champion named Goliath, who was from Gath, came out of the Philistine camp. He was over nine feet tall. 5 He had a bronze helmet on his head and wore a coat of scale armor of bronze weighing five thousand shekels; 6 on his legs he wore bronze greaves, and a bronze javelin was slung on his back. 7 His spear shaft was like a

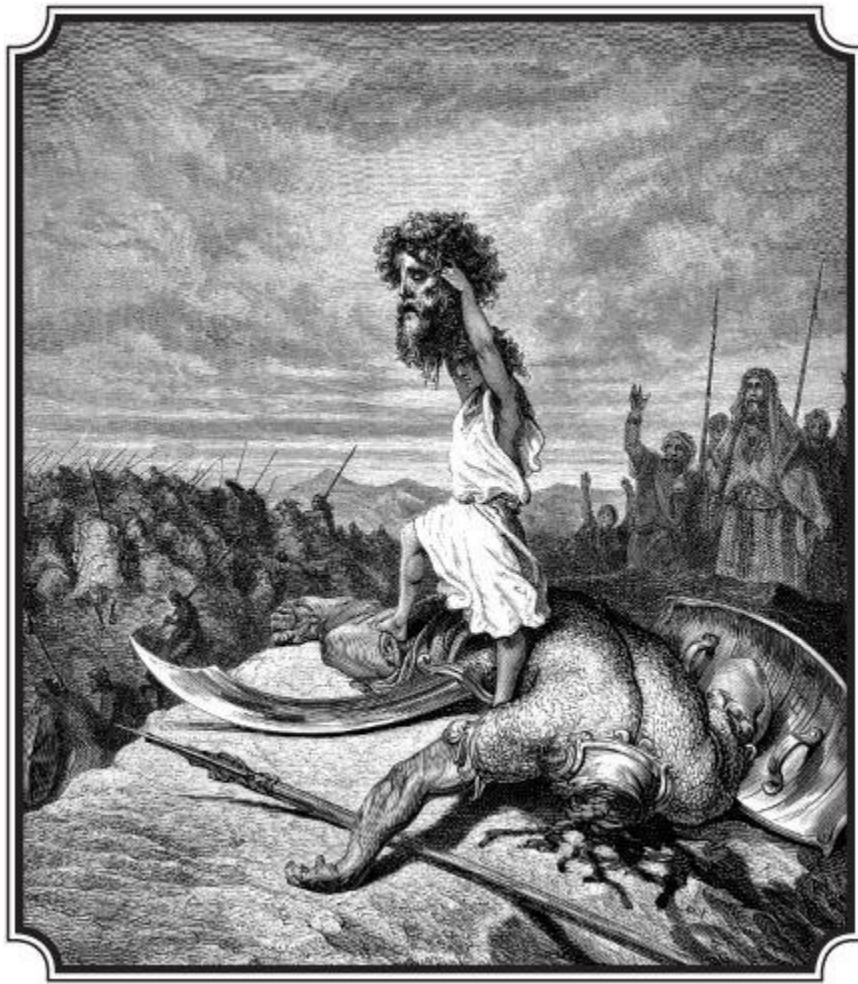

weaver's rod, and its iron point weighed six hundred shekels. His shield bearer went ahead of him."

(1 Samuel 17:4-7)

"15 Once again there was a battle between the Philistines and Israel. David went down with his men to fight against the Philistines, and he became exhausted. 16 And Ishbi-Benob, one of the descendants of Rapha, whose bronze spearhead weighed three hundred shekels and who was armed with a new sword, said he would kill David. 17 But Abishai son of Zeruiah came to David's rescue; he struck the Philistine down and killed him. Then David's men swore to him, saying, "Never again will you go out with us to battle, so that the lamp of Israel will not be extinguished." 18 In the course of time, there was another battle with the Philistines, at Gob. At that time Sibbecai the Hushathite killed Saph, one of the descendants of Rapha. 19 In another battle with the Philistines at Gob, Elhanan son of Jaare-Oregim the Bethlehemite killed Goliath the Gittite, who had a spear with a shaft like a weaver's rod. 20 In still another battle, which took place at Gath, there was a huge man with six fingers on each hand and six toes on each foot—twenty-four in all. He also was descended from Rapha. 21 When he taunted Israel, Jonathan son of Shimeah, David's brother, killed him. 22 These four were descendants of Rapha in Gath, and they fell at the hands of David and his men."

(2 Samuel 17:16-22)

The account of David and Goliath pits the youngest shepherd son of Jesse against the giant from Gath who fought for the Philistines. Goliath came down from the ridge where the Philistines were encamped, every day for 40 days, taunting the armies of Israel, challenging them to single-handed combat.

David and Goliath, Gustave Doré, 1866.

King Saul had promised that whomever could defeat the giant in hand-to-hand, single combat would become Israel's champion. That man would also become the captain of the king's body guard, get the king's daughter's hand in marriage, and have his family become "tax free" in Israel all their days. Not a single soldier answered the call, but they remained encamped, waiting for something to break.

"1 Now the Philistines gathered their armies together to battle, and were gathered together at Sochoh, which belongs to Judah; they encamped between Sochoh and Azekah, in Ephes Dammim. 2 And

Saul and the men of Israel were gathered together, and they encamped in the Valley of Elah, and drew up in battle array against the Philistines. 3 The Philistines stood on a mountain on one side, and Israel stood on a mountain on the other side, with a valley between them. 4 And a champion went out from the camp of the Philistines, named Goliath, from Gath, whose height was six cubits and a span. 5 He had a bronze helmet on his head, and he was armed with a coat of mail, and the weight of the coat was five thousand shekels of bronze. 6 And he had bronze armor on his legs and a bronze javelin between his shoulders. 7 Now the staff of his spear was like a weaver's beam, and his iron spearhead weighed six hundred shekels; and a shield-bearer went before him. 8 Then he stood and cried out to the armies of Israel, and said to them, 'Why have you come out to line up for battle? Am I not a Philistine, and you the servants of Saul? Choose a man for yourselves, and let him come down to me. 9 If he is able to fight with me and kill me, then we will be your servants. But if I prevail against him and kill him, then you shall be our servants and serve us.' 10 And the Philistine said, 'I defy the armies of Israel this day; give me a man, that we may fight together.'"

(1 Samuel 17:1-10)

You can still visit the Valley of Elah today, where the flat, low valley is bordered on two sides by low ridges, and where the armies of Israel encamped on one side and the armies of the Philistines on the other.

Saul was the logical choice to fight Goliath on two counts: He was the king, and the Bible tells us that he stood "head and shoulder" over all the rest of the men of Israel. Saul was a tall man, but nowhere near the height of the giant of Gath. When David came to the camp to deliver food to his brothers, who were soldiers in the Israelite army, he heard the tauntings of Goliath, who by that time had started ascending the Israelite side of the valley to shout out his challenge. David, as the story goes, answered the call. King Saul attempted to dress the shepherd boy in his own armor—some commentators think as a ruse to let the rest of the army think it was Saul himself going into battle against the giant—but the armor was too big

for David. David went into the valley and faced off against Goliath, who mocked him in disdain.

“41 So the Philistine came, and began drawing near to David, and the man who bore the shield went before him. 42 And when the Philistine looked David over, he disdained him; for he was only a youth, ruddy and good-looking. 43 So the Philistine said to David, ‘Am I a dog, that you come to me with sticks?’ And the Philistine cursed David by his gods. 44 And the Philistine said to David, ‘Come to me, and I will give your flesh to the birds of the air and the beasts of the field!’”

(2 Samuel 17:41-44)

And, of course, David replied:

“45 You come to me with a sword, with a spear, and with a javelin. But I come to you in the name of the Lord of hosts, the God of the armies of Israel, whom you have defied. 46 This day the Lord will deliver you into my hand, and I will strike you and take your head from you. And this day I will give the carcasses of the camp of the Philistines to the birds of the air and the wild beasts of the earth, that all the earth may know that there is a God in Israel. 47 Then everyone gathered here shall know that the Lord does not save with sword and spear, for the battle is the Lord’s, and He will give you into our hands.”

(2 Samuel 17:45-47)

And the rest of story we all know: David picked a smooth stone from the valley floor, put it in his sling, and buried it into Goliath’s forehead, killing him instantly. And before you go adhering to the theories that Goliath was just a man with gigantism, keep in mind that he was called a man who had been a “warrior from the days of his youth” (1 Samuel 17:33). When someone is inflicted with gigantism, the older they get, the more brittle their bones become, and the more unstable their musculature and ability to function, or even walk, normally. Goliath was a warrior, he was not a man inflicted with a physical ailment that gave him great size and debilitated him.

Goliath was the offspring remnant of the Nephilim, and he had four other brothers.

But what of the acts of the Watchers? Are they still happening today? Is mankind still being visited by the members of the Divine Council and those who left that domain thousands of years ago? And what of the Nephilim themselves?

chapter 10

Where Are They Now?

“2 Don’t forget to show hospitality to strangers, for some who have done this have entertained angels without realizing it.”

(Hebrews 13:2)

There is a pervasive question regarding the Nephilim as to whether or not they are still among us today. The answer would simply be *yes*, but obviously not in the same form as they interacted with humanity thousands of years ago. And though there may be a bloodline remnant of the Nephilim evident throughout history, it would be a safe bet to say that it no longer has anything to do with the original Watchers. Their influence died thousands of years ago. Unless there are more Watchers in the heavens who did not fall to the earth that day so long ago, there is little probably that their influence will ever be seen again.

But the same cannot be said for their offspring.

It is unknown whether the entire Divine Council of gods came to earth, touching down on the slopes of Mount Hermon. Nor is there any way to calculate the number of beings who may have descended and intermingled with humanity over the millenia. What we know for a certainty is that nearly every ancient culture experienced this brand of extra-terrestrial interruption on some level, bequeathing offspring that took the form of what we now deem as mythological or legendary beings—or, better, the heroes of old and men of renown. From the Tuatha de Danaan’s Elven deities, the statuesque, bright shining giants of the Celtic peoples, to the Sasquatch of

the Native Americans, there have been genetic footprints left in nearly every ancient culture throughout all of recorded history.

As we have already seen, there were remnants of the Nephilim found in various passages of the Old Testament. As early as the time of Abraham, the Nephilim are mentioned as having dwelled in the region around the Dead Sea, scattered among several tribes. The footnotes of the Jerusalem Bible suggest that Moses, in the Genesis 6 passage, intended his words on the Nephilim to be an “anecdote of a superhuman race.” According to the Jerusalem Bible’s commentary, Moses does not go into great detail, nor does he make any bones about representing the Nephilim as the offspring of superhuman beings, as it was already a known entity in his day. He merely references them in order to establish, in his account of Noah’s Flood, the severity of the “wickedness” that was present on the earth prior to the meting out of God’s judgment by flood.

In Christian evangelical circles, there are those who believe these Watchers came down to “pollute” the Messianic bloodline of Jesus Christ. By interfering with human DNA, the “pure,” necessary humanity of the Messiah could thus be thwarted before it ever came to be. Along with Ancient Alienists, Chuck Missler, an evangelical Christian, also believes that the Watchers were extra-terrestrials or grey aliens¹ who were, in actuality, fallen angels or demonic beings setting out to muddy the Messianic waters.

The history of the human race is synonymous with the history of a great spiritual conflict. When we view world politics today, many of us wonder why we can’t just all come to the table and settle disputes in a peaceful fashion. To some extent, it seems to me that the gods and every caste of spiritual being beneath them seem intent on not being able to do what seems so common sensed to humans. There was not a “war in Heaven”: there is an ongoing conflict that makes the stuff of earthly battles seem insignificant. And it has been taking place since before the dawn of time itself.

The Demonology Connection

It is interesting to note that so much of what we read in the biblical accounts of the first family and the subsequent books of the Law, revolve around sexuality and the encoded messages of adultery and sexual prohibition. Just pick up a Bible and read the first five books of the Old Testament, and you'll get the picture. The subtext is rife with pictures of God's relationship to man taking on the tone of a marriage, any deviation from which would be adulterous. And adultery, in accordance with Biblical Law, bore the punishment of death—but only for the woman, not the man. Is this a residual condemnation placed on the female because it was she who was tempted in the Garden of Eden, thereby bringing on the fall of mankind? Is it residual judgment of the women who introduced the world to the Nephilim by sleeping with the Watchers, allowing the world to be corrupted by their offspring?

Creation is sexual in nature—and if you don't believe that, you need to get out more. Whether it was simple lust, as the Genesis passage tells us, or the seeking of elemental power over creation, the heavenly beings were drawn to the sexuality of humans. Do not try to define away the word *lust* as something other than its true intent, which is sexual in its basic, most primal etymology. Could it also be that so much of what we read in the biblical accounts of early mankind—the serpent in the Garden, the Watchers, the overtly sexually discriminating, gender-biased Mosaic Law—are so sexually underwritten in their subtexts, that they were created for the sole purpose of enforcing patriarchal rule? And was that patriarchal rule contrived out of scapegoating the female gender for all of mankind's spiritual woes? Were the questionably misogynistic mandates laid out for the early Christian Church by the Apostle Paul simply there for the intent of controlling women in first-century patriarchal Judean society, or were they in adherence to what was—even then—the ancient notion that women needed to keep covered to prevent the temptation of angels and other spirit beings? It is clear that the Judeo-Christian scriptures contain a resounding undertone of sexual prohibition that can trace its foundations back to the role that women played in the downfall of man, and the corruption and

destruction of the world by the Nephilim. Clearly, it is the sexual promiscuity of women that brought on the greatest woes of the world, and clearly the under-code of sexual prohibition is there to remind them of their follies and keep them suppressed as punishment for their gender-driven acts. The Watchers were not the only ones placed under lock and key when God imposed judgment on the world.

Make no mistake: It was the early church fathers who first said that the angels and other spirit beings were “sexless.” This is a completely fabricated, extra-biblical notion. Scripture never states that angels and demons cannot engage in sex. The highly quoted passage in Matthew 22:30 has Jesus telling his followers that “angels do not marry.” He doesn’t, however, say they are incapable of sex, and the context of his words in this passage focus on the righteous angels, not the unrighteous demons. The entire contextual point of Christ’s argument is that *people* will not marry in heaven; He is not particularly discussing the sexual habits of the angels.

There is something more to all of this, something deeper. Some alien conspiracy theorists contend that the Church has been silent about UFOs and abductions, and about alien hybridization, fetus thefts, and the impregnation of women by these beings. Yet, all along, the Church has spoken out as loudly as any other voice in that it has a complete doctrine built around the infiltration and interference of the demonic on humanity—and it all stems from the very first impregnation of Eve in the Garden, by the character known as the “Serpent.” It was he who fathered Cain, the first of the Nephilim. This act was repeated throughout all of antediluvial humanity until God had had enough, and there was judgment.

According to Roman Catholic Church doctrine, “the fallen” have been attempting to breed the perfect hybrid offspring of spirit and human since the time of the resurgence of humanity onto the still damp floodplains of ancient Mesopotamia. In accordance with Roman Catholic systematic theology—and in the simplest of terms—God keeps demons on a pretty short leash. They can do nothing without his consent or allowance. The account of the descent of the Watchers is not to be misconstrued as demonic

attempts at breeding with human women. The Watchers, as we have seen, were not demonic, nor were they fallen angels. They were the minor gods of the Divine Council who “left their first estate” and descended to their charges, the humans, to interbreed with them, and the judgment imposed on them is hinted at in Psalm 82: “They were stripped of their immortality and died like mortal men.”

From Genetic Hybrid to Demon

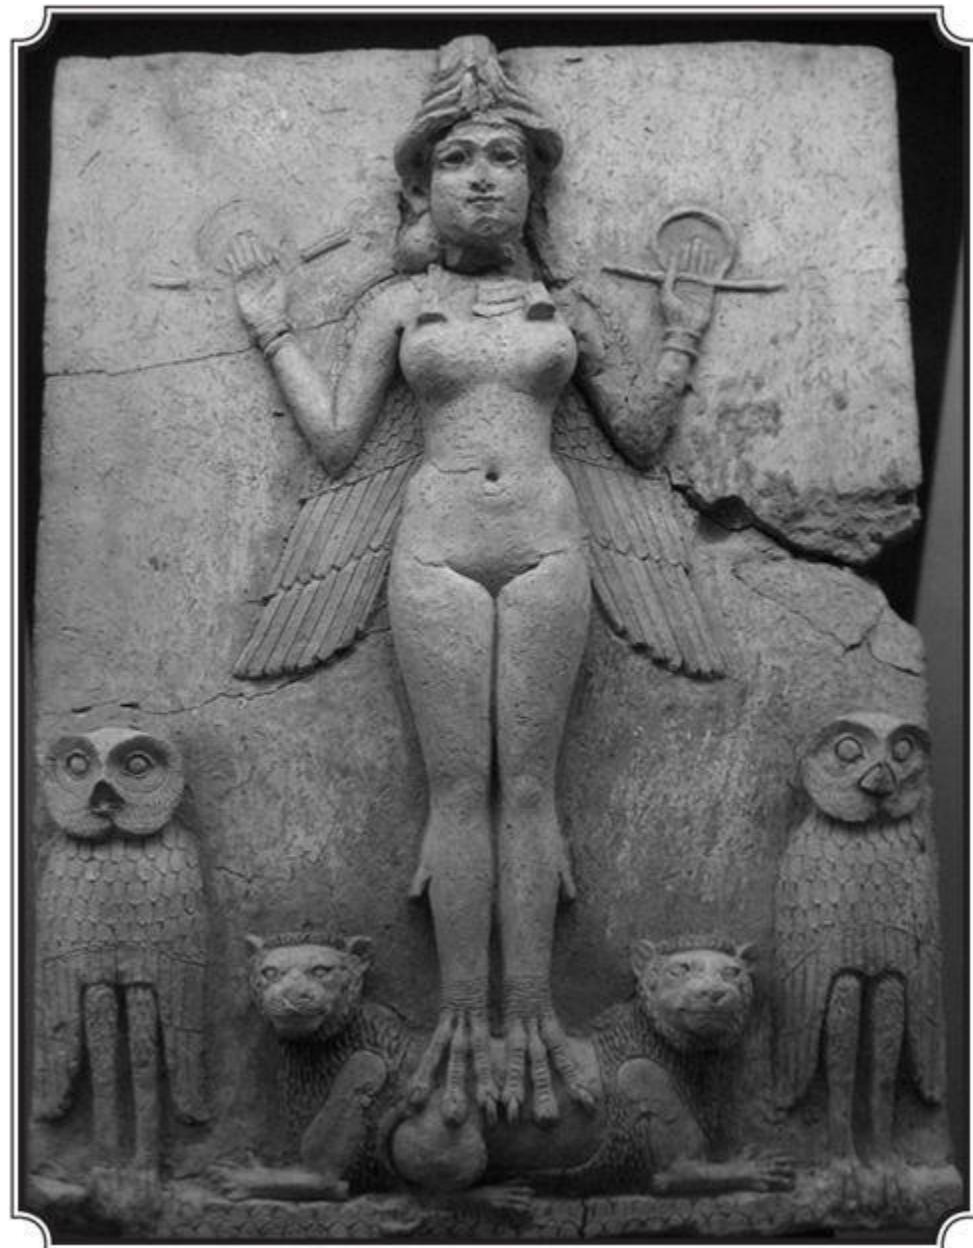

Although it is commonplace in Judeo-Christian circles to believe that demons are simply the angels who rebelled against God and were cast to the earth, the Book of Enoch gives us a very different alternative to that tradition:

“8 And now, the giants, who are produced from the spirits and flesh, shall be called evil spirits upon 9 the earth, and on the earth shall be their dwelling. Evil spirits have proceeded from their bodies; because they are born from men and from the holy Watchers is their beginning and primal origin; 10 they shall be evil spirits on earth, and evil spirits shall they be called. (As for the spirits of heaven, in heaven shall be their dwelling, but as for the spirits of the earth which were born upon the earth, on the earth shall be their dwelling.) 11 And the spirits of the giants afflict, oppress, destroy, attack, do battle, and work destruction on the earth, and cause trouble: they take no food, but nevertheless 12 hunger and thirst, and cause offences. And these spirits shall rise up against the children of men and against the women, because they have proceeded from them.”

(Enoch 15: 8-12)

The Enochian passage is implicit. It is the spirits of the Nephilim killed in the Great Flood that are the demonic forces dwelling on the earth today. It was here on the earth that they were born; it is here on the earth where they died. And because they were fathered by spirit beings, Enoch tells us

that they will forever dwell on the earth in the form of evil spirits. The “ghosts” of the Nephilim are the demonic host who have plagued humanity through the ages. The offspring of the Watchers and human women were disruptive, corrupt, and evil in nature, and that is why the Divine sent a great flood to wipe them out. Evidently, in spirit form they are no different.

The earliest known representation of Lilith, Sumerian, circa 1950 BCE. Famous relief from the Old Babylonian period (not in the British Museum) called the “Burney relief” or “Queen of the Night relief.” The depicted figure could be an aspect of Ishtar, Mesopotamian goddess of sexual love and war. However, her bird-like feet and accompanying owls have suggested to some a connection with Lilitu (called Lilith in the Bible), though seemingly not the usual demonic Lilitu.

Photo courtesy of the British Museum, London.

The spirits of the Nephilim are the great harassers of mankind. They are the true Fallen—those who came down, those who descended, those who fell. They troubled mankind to the point of watery judgment imposed by the supreme God, and they continue, in spirit form, to commit evil against humanity. The Watchers are not fallen angels, as we have established already in this book, but their offspring, whose mix of extra-terrestrial and human DNA made them unique on the earth, have become the spiritual hounds of hell who torment the living.

And they continue wreaking havoc on the earth and in the lives of humans—even today.

Sleeping With the Enemy

In *The Gilgamesh Epic*, the god-man Gilgamesh’s father is listed as Lilu,² and he is one of the earliest mentions of an incubus. The story hales from ancient Mesopotamia and is found in the Sumerian King List (2400 BCE), where it is said that Lilu seduced women in their sleep and had sex with them. At the same time, Lilitu³ (“Lilith”), a female demon, appeared to men in their erotic dreams. Both Lilu and Lilitu strove to fulfill their sexual desires and create offspring.

Regarding Lilith (Hebrew: לִילִית) herself, she is a character found in Jewish mythology, mentioned earliest in the Babylonian Talmud, documents compiled between the third and fourth centuries CE. In Jewish folklore, during the eighth to 10th centuries CE, Lilith became known as Adam's first wife, and this mythology developed into a widely accepted view among the Jews of the Middle Ages.⁴ As the legend became more refined and expanded, the 13th-century writings of Rabbi Isaac ben Jacob Alfasi ha-Cohen had Lilith leaving Adam, refusing to return to Eden after she refused to become subservient to him. She later mated with archangel Samael.⁵ The resulting Lilith legend is still found in modern Western culture, literature, occultism, fantasy, and even horror. And she has even become a cult favorite in the spiritist-feminist community.

It is said in some traditions that Lilith, taking the form of a male, was actually the serpent in the garden who seduced Eve, and then went on to seduce Adam with grave consequence:

“And the Serpent, the Woman of Harlotry, incited and seduced Eve through the husks of Light which in itself is holiness. And the Serpent seduced Holy Eve, and enough said for him who understands. And all this ruination came about because Adam the first man coupled with Eve while she was in her menstrual impurity—this is the filth and the impure seed of the Serpent who mounted Eve before Adam mounted her. Behold, here it is before you: because of the sins of Adam the first man all the things mentioned came into being. For Evil Lilith, when she saw the greatness of his corruption, became strong in her husks, and came to Adam against his will, and became hot from him and bore him many demons and spirits and Lilin.”⁶

It was the offspring of Lilith by Adam that was said, in this tradition, to have become the host of demons. This is really the birth of the modern understanding of the incubus and succubus, demonic beings who sleep with humans for the purpose of satiating some innate sexual drive, and for the purpose of creating spirit offspring.

In the Christian tradition, there existed a huge debate over the veracity of demonic influence—especially when it came to discussions over the incubi and succubi. St. Augustine, a Roman philosopher and theologian who lived in the late fourth and early fifth centuries, touched on this topic in his work, *The City of God*. Sounding much like alien abduction believers today, Augustine said that there were too many attacks by incubi to deny their existence: “There is, too, a very general rumor, which many have verified by their own experience, or which trustworthy persons who have heard the experience of others corroborate, that sylvans and fauns, who are commonly called incubi, had often made wicked assaults upon women.”⁷

Eight hundred years later, Thomas Aquinas, disputing the reproductive abilities of incubi, as they were—in his account—fallen angels, therefore incapable of sexual reproduction, wrote: “Still if some are occasionally begotten from demons, it is not from the seed of such demons, nor from their assumed bodies, but from the seed of men taken for the purpose; as when the demon assumes first the form of a woman, and afterwards of a man; just as they take the seed of other things for other generating purposes.”⁸

According to the *Malleus Maleficarum* (“Witches’ Hammer”), written by Heinrich Kramer in 1486, a succubus will have sex with a human male in order to collect semen from the men she seduces. She then gives it to the incubi or male demons, who then use the semen to impregnate human females, thus explaining how demons could apparently sire children despite the traditional belief that they were incapable of reproduction. Children so begotten were known as *cambions*, and were supposed to be those who were born deformed, or more susceptible to supernatural influences.⁹ The *Malleus Maleficarum* does not address the obvious issue: why a human female impregnated with the semen of a human male would not produce normal, healthy human offspring, even if the mode of delivery was demonic.

Of course, it is also widely believed that the *Malleus Maleficarum*, written during the period of the Inquisition's greatest power, is nothing more than a work of misongyny. It holds women as the main culprits of evil and perpetrators of witchcraft. The book also claims that women are much more susceptible to demonic influence as they are “weaker in faith than men,” and more apt to be carnal. The author also put forward the notion that most of the women accused as witches were guilty of “possessing strong personalities” and were known to defy convention by overstepping the lines of “proper female decorum.”¹⁰

Whether or not any of information on demonic activity as found within the pages of the *Malleus* bears any resemblance to the truth of the matter is very hard to decipher, especially when obfuscated by the persecution and the political maneuverings of those who were in control of the masses at the time of its writing. When one steps back, outside the box, it all starts to take on the tone of so much ridiculous surmising and story-telling, and works such as the *Malleus Maleficarum* do little to dispel the notion that so much of this is pure fiction.

Do the demonic spirits of the Nephilim have sex with humans to continue to propagate a species of mixed-blood spirit beings? It seems that even in death, the offspring of the Watchers continue to perpetrate their raging corruption of humanity. Of course, there is very little of this that can be proven by physical evidence, so it once again it is all governed by the tone of what you *choose to believe*. And it all sounds so fanciful and the stuffs of dark imaginings, it is no wonder the scientific community shuns the slightest notion.

The Paranormal

There is a great and grave fascination with demons among modern paranormal hobbyists. The surge of ghost hunting and paranormal investigation throughout the last decade, spurred on by the success of pop

cultural, live-action paranormal television, has fostered a rise in interest in demons and demonology, the study of evil spirits and their influence on people. However, with the rise of pop cultural influence also comes the rise in pop cultural application, and the vast majority of so-called demonologists operating today have little knowledge of what it is they claim to be, and little ability to enact on the behalf of those tormented by demonic spirits. Having an interest in the demonic is not the same as having experience with helping people who are in bondage to these beings.

Are the ghosts encountered during highly popularized paranormal investigations in any way linked to the spirits of the Nephilim? The short answer is *yes*. Something I have always said when investigating claims of ghosts and encountering the spirit world is that you never know who you are talking to, *really*. Without making a case for the existence of “human” ghosts, suffice it to say that it is more often than not that a demon will deceive you into believing it is the ghost of a dead human, rather than an actual encounter with those who have passed on, and are still roaming the hallways and attics of old houses and abandoned insane asylums.

The evil spirits encountered in demonological settings are the spirits of the Nephilim, who died in the Great Flood.

Are the Nephilim among us today? Most certainly—in both physical remnants that have bred into the bloodlines of the human race, and the ghostly presence and influence of the Nephilim demons.

Conclusion

As you have been able to see by now, the story of the Nephilim is not a simple one. Recounting the actual biblical tale, including the various accounts from other ancient books, could comprise a page or two in a book such as this. But attempting to dig a little deeper to gain a richer knowledge of what's behind the story, along with its historical and future ramifications, is what transforms it into a much bigger account. The descent of the Watchers to humanity is no small, isolated myth; it has far-reaching tendrils that dip into the subterranean flow of every culture and even life itself on this planet. Of course, there is a modicum of *faith* required to make the connections, just as there is with leaping the great chasms that lie between the mileposts on the evolutionary chain established by science. And as with the scientific research of the ascendancy of mankind, there are no quantitative facts that link it all together, simply stepping stones from one discovery to the next. As I said at the very beginning of this book, we have a pile of stones here, but that pile does not make a house until it is all mortared together—and sometimes that mortar is mixed pretty thinly in order to make exponential leaps to fill in the missing data. There is so much to surmise and such significant amounts of subjective extrapolation, that the true story in all its details may never be known to modern humanity. But the fact that something indeed happened many thousands of years ago is incontrovertible.

Whether you are a believer in the religious writings of the bible and its apocryphal companions, or whether you are in strict adherence to the scientific code that allows for nothing to exist beyond what is provable in the here and now, humanity bears the marks and scars of interference on both a historic scope as well as in our bloodlines. That is where we find ourselves flipping the intellectual coin of subjectivity into the air, wondering if the answer is as simple as “heads it is so, tails it is not.”

I have already begun to garner criticism on my religious views as expressed in this book, and I am sure there is much more to come as these ideas of mine, as mixed into the examination of these unearthly beings, makes their appointed rounds to the minds of those who crack the covers of this book. I am sure to be taken to task for some of my translations of the ancient texts, as there are so many good scholars who have done the groundwork beneath my feet, and from whom I have gleaned bits and pieces of information. Though not intending to make any enemies in the Jewish and Christian camps, I am sure to have offended some sensibilities when addressing the religious tone of these topics, and I know I will draw some concern for the safety of my immortal soul from those who will see my words as damning Christianity and thumbing my nose at the monotheistic God of the Bible. But those actions on my part would be the farthest thing from the truth. I am simply asking questions and seeking answers.

Have I undergone some transformative thinking during the process of researching and writing this book? Most certainly. And although I have an overwhelmingly satisfactory grasp on what I believe about the Watchers and the Nephilim, there have been great tolls taken on my faith and even greater questions burning in my brain. Perhaps one might think that my faith must not have been very strong to begin with, if a little historical buffeting could shake it up a bit, but I would differ with that assessment, for my faith was very strong during my early years and my subsequent Bible College and seminary training. But the older I get, and the further away I travel from those days of innocence, the more difficult it becomes to trust in a God who resembles so many other mythological characters—many of whom preceded him in the historical record.

So what I want to leave you with as a result of reading this book is a better understanding of who the Nephilim are—where they came from and why they are important to understanding the great ebbing and flowing undercurrent of humanity. I want you to have gleaned an understanding that, although stories maybe stories, there is usually a kernel of truth at their

core that is a much bigger story than what you could have ever imagined. To me, my study of the story of the Nephilim has emerged as an eye-opening encounter with beings who are living and breathing around us every day of our lives. Their activities have great bearing on the whole of humanity and the course of world events. They once were so influential that they brought about the end of the world. The big question is whether or not they are having that same influence yet again.

It is up to you to determine what you want to believe about these beings. Were they the descendants of the minor gods of heaven? Were they the offspring of alien encounters with humanity? Either path bears little proof beyond the obvious earmarks of interruption. Determining just who and what did the interrupting is at the core of the big questions of life. If nothing else, I hope this book provided you with information, and, in the grandest of hopes, opened the doors to deeper consideration and the asking of even greater questions.

It is my belief that there exist out there beings much greater than ourselves—perhaps not greater in reason and compassion, but greater in the sense that they hold a power that was strong enough to create us, and then strong enough to manipulate our genetics and bloodlines. It is my belief that there is a great, universal spirituality that resembles nothing like that which we have been taught or have conceived in our wildest fictions.

The Nephilim rose to dominance on the earth as the children of a mixed race of superior beings and human women. They, as all things do, degraded and became corrupt, but their decay and decadence were on as grandiose a scheme as their unnatural origins. They wreaked havoc and tragedy and catastrophic corruption among humankind. Then they fell in the great judgment imposed by the king of all that exists, only to return in the form of pure evil.

If this all sounds like the stuffs of myth, you would be correct in your assessment, for all myth begins to merge at the edges, blending into a

massive blurred picture of the great cosmic narrative, underpinning the foundation and origin of the universe. The saddest part of all is that myth is not testable. It is not logical, and it rarely makes sense in light of scientific methodology.

The Nephilim came, conquered, decayed, and fell, and they are still with us to this very day.

The big question is in asking yourself what you can and cannot believe. And the greatest responsibility we all have is squaring the circle.

Epilogue

“8 ‘For enquire, I pray thee, of the former age, and prepare thyself to the search of their fathers: 9 For we are but of yesterday, and know nothing, because our days upon the earth are a shadow.’”

(Job 8:8-9)

Chapter 4

1. George Smith, *The Chaldean Account of Genesis* (1876).
2. According to Wikipedia (en.wikipedia.org/wiki/Sin-liqe-unninni), Sîn-lēqi-unninni was an incantation/exorcist priest (mashmashshu) who lived in Mesopotamia in the period between 1300 BC and 1000 BC. He is the compiler of the best preserved version of the Epic of Gilgamesh. His name is listed in the text itself, which is unusual for works written in cuneiform. His version is known by its incipit, or first line, “He who saw the deep” or “The one who saw the Abyss.” It is unknown how different his version is from the earlier texts. The only time when Sin-lēqi-unninni narrates the story in first person is in the prologue. His version includes Utnapishtim’s story of the

Flood in Tablet XI and in Tablet XII the Sumerian Gilgamesh, Enkidu and the Netherworld. Sîn-lēqi-unninni's name means "Sin (the Moon God) is one who accepts my prayer." It is also sometimes transcribed, albeit less probably, as "Sîn-liqe-unninni," meaning "O Sin! Accept my prayer."

Chapter 6

1. “Sinners in the Hands of an Angry God” is a sermon written by American theologian Jonathan Edwards, preached on July 8, 1741, in Enfield, Connecticut. Like Edwards’s other sermons and writings, it combines vivid imagery of the Christian concept of Hell with observations of the secular world and citations of scripture. It remains Edwards’s most famous written work, and is widely studied both among American Christians and historians, due to the glimpse it provides into the theology of the Great Awakening of c. 1730-1755.

About the Author

SCOTT ALAN ROBERTS is the founder and publisher of *Intrepid Magazine* (www.intrepidmag.com), and is the author and illustrator of *The Rollicking Adventures of Tam O'Hare*. After several years in Bible college and seminary, Roberts spent the bulk of his next 25 years as an advertising art and creative director, and was the editor-in-chief of *TAPS Paramagazine*, SyFy's *Ghost Hunters*' official publication. Roberts has written numerous articles and appeared on countless national radio shows, including *Coast to Coast AM*. Scott is a well-known public speaker, and is currently working on his magazine and future book projects. He lives with his family in western Wisconsin, not far from the twin cities of Minneapolis and St. Paul, Minnesota.

INTRODUCTION

Many books on ‘feminism’ have a starting point of describing the positionality of the author. In so doing, some feminists emphasise race, others emphasise sexuality, and yet others emphasise general points of nonconformity. I am a traditionalist Muslim man. I am not a feminist and am neither liberal nor secular. This book is a collection of essays I have completed at a post-graduate level at the Centre for Gender Studies at SOAS University of London. I have not named this book ‘Fifth-Wave Feminism’ to bait my reader. The recommendations I have made in this book do amount to what I believe could be a renewal of feminist thought. The main question is: what was the ideological impetus for a traditionalist, non-feminist Muslim to write a book like this or even be concerned with feminism? I have decided to write this book for the preservation of traditionalist Islamic thought in the West and throughout the world. In the numerous community projects that I am involved in related to promoting and rationalising traditionalist Islamic thought, perhaps the most common forms of questions I am asked everywhere I go in the world relate to Islam’s relationship with gender equality. People ask, ‘to what extent is Islam compatible with feminism?’.

What they mean by feminism is usually a second-wave conception, and what they mean by Islam is usually a traditionalist Sunni interpretation. I have found that the most academically honest way to answer these questions – if my aforementioned definitions of feminism and Islam are assumed – is ‘to some extent’. Unfortunately, this answer does not leave many ‘Western Muslims’ satisfied. The question ‘to what extent is feminism compatible with Islam’ is a different question to that of ‘to what extent is Islam compatible with feminism’. The first question focusses on the accommodation of feminist ideas in traditionalist Islam, whereas the second question focusses on the accommodation of Islam in feminism. Through this book, I argue that if we were to ask the second question – of how much of feminism can be accommodated in traditionalist notions of Islam – we may get more favourable results.

Having said this, this book is not about theology and will not even reference theology. As will be apparent by the end of the book, everything discussed

surrounding traditionalist Islam is applicable to almost any religion on the face of the earth. If the recommendations of this book are taken seriously, I feel they may have the potential to solve many of the societal issues surrounding the complex relationships between religious groups and other kinds of minorities in the West. For this reason, I have included chapters on the serious issue of domestic violence, as well as homonationalism. Muslims and non-Muslims, homo- and heterosexuals, need to know what homonationalism is. A robust understanding of homonationalism provides us with the academic tools to negotiate some of the main challenges relating to potential ‘tensions’ that exist between traditionalist Muslim communities, for example, and LGBT communities; of course, these two communities are not mutually exclusive.

The aim of this book is simple: to assess the potential flexibility of feminist reasoning in a way that allows as many people to be represented in this social discourse as possible without compromising any of their individual core principles.

Mohammed Hijab

CHAPTER 1

FEMINIST EPISTEMOLOGY (JUDITH BUTLER)

Epistemology, or the ‘theory of knowledge’, refers to the ways in which we know things about the world. It is closely connected to the idea of ‘first principles’, which are the most reduced simplifications through which all other propositions (of a chosen field) are predicated. In Western academia, feminist epistemology has undergone major transformations since the 60s. These changes are most notably because of the introduction of post-modern modes of philosophical considerations into feminist discourse, as well as a new understanding of intersectional forms of analysis since the 80s. At the heart of any feminist epistemology are questions on ‘sex’ and ‘gender’.

According to the gender theorist Judith Butler, the second-wave (Beauvoirian) notion of an individual not being born a woman but rather ‘becoming one’ “has come under attack for ‘degrading the natural as that which is “before” intelligibility, in need of the mark, if not the mar, of the social to signify, to be known, to acquire value...’” (Butler, 1993:5). To Butler, the category of ‘sex’ has been assumed by second-wave feminists to be an epistemological starting point, whereas it could be said to be “a contrived premise ... a fiction” (Butler, 1993:5). On this view, the category of sex is potentially as fluid as the category of gender itself, and the second-wave assumption of a supervening gender on sex implies that “sex is relinquished in the course of that assumption and gender emerges” (Butler, 1993:5). An epistemic shift from second-wave to third-wave approaches also has implications on notions of ‘patriarchy’, which Butler sees as depending on a ‘universalising principle’ which may engender a kind of Orientalist essentialism when used in ‘comparison’ with other cultures (Butler, 1990:3).

Epistemology is also connected with both the positionality and subjective experiences of the examiner and examined. This point is fervently made by the civil rights activist Audre Lorde, who discussed the inclusion of “poor women, black and third world women and lesbian women” (Lorde,

1983:25). Gloria Jean Watkins (writing under the pseudonym bell hooks) makes a similar kind of point: “As a radical standpoint, perspective, position. ‘the politics of location’ necessarily calls those of us who would participate in the formation of counter-hegemonic cultural practices to identify the spaces where we begin the process of re-vision” (hooks, 1996:48). Both Lorde and hooks see language, and the general dominant paradigm through which they both operate, as a challenge. hooks says, “language is also a place of struggle” (hooks, 1996:48), while Lorde notes that “the master’s tools will never dismantle the master’s house. They may allow us temporarily to beat him at his own game, but they will never enable us to bring about genuine change” (Lorde, 1983:27). According to these evaluations, who you are and how you are positioned (especially relative to the ‘sources of domination’) are an incredibly important part of how things are ‘known’ in feminist theory.

Besides all the aforementioned nuanced developments, second- and third-wave feminists have had to endure many epistemic contradictions that have afflicted their modes of analysis. Such contradictions are sometimes candidly noticed by post-Beauvoirian feminists. For example, bell hooks acknowledges – as Butler does above – that “[t]he idea of common oppression was a false and corrupt platform disguising and mystifying the true nature of women’s varied and complex social reality” (hooks, 2002:396) yet hooks also notes that “there can be no mass-based feminist movement to end sexist oppression without a unified front” (hooks, 2002:396), thus imposing an activist agenda on an otherwise untouched epistemology of intersectional complexity. Unusually, hooks often uses a form of pseudo-Darwinian explanation of ‘survival’ to justify her cause, writing, “Many of us are struggling to find new strategies of resistance. We must engage decolonisation a critical practice if we are to have meaningful chances of survival even as we must simultaneously cope with the loss of political grounding which made radical activism more possible” (hooks, 2006:194). Several issues can be noticed when making this kind of analysis. Perhaps the most severe of them is the issue of the hierarchisation of the intersectional variables, which must be done in order to ‘unify’ ‘women’ behind ‘one cause’. Of the many categories that are often mentioned (class, race, gender, and sexuality), and others more inconspicuous in the literature (religion, lineage, tribe, and other oft-ignored items of identification), one must arrange and prioritise the categories in order of epistemic importance. In so

doing, feminists have often disregarded key categories and created a new ‘master’s house’ that belongs to the privileged English-speaking academic whose intellectual voice became forcibly heard through the very dominant structures they resist. Baring this in mind, an effective intersectional approach ought to never presuppose gender priority or ‘feminism’ for all subjects, especially if it is to be consistent with post-structuralism. A potentially more pressing issue is that post-structuralism, second-wave, third-wave, black feminist, and most other Western ‘feminist’ approaches may be said to represent the ‘master’s house’ if the master is the immediate hegemonic beneficiary. Lorde academically exonerated herself in implying that, as a result of her blackness and gayness, she is not in fact not a ‘master’ respective to some unrepresented voiceless counterpart. Such self-exemption may not be justified on epistemological grounds. A question may therefore be asked: how (and by whom) is ‘domination’ defined? How (and by whom) ought it be defined on an intersectional basis? Why, and on what epistemological grounds, is ‘domination’ rejected? How can we guarantee (if it is assumed that we ought to) that domination does not just repeat itself in the discourse of the would-be ‘new masters’?

CHAPTER 2

JUDITH BUTLER & THIRD-WAVE CONTRADICTIONS

Human beings have been in a continual diaspora for as long as they have inhabited the earth. The Cambridge Dictionary defines diaspora as “a group of people that have been spread from one original country to another” (Cambridge Dictionary). The problem with this definition, and other definitions like it, relates to stating what is meant by ‘a group of people’ and how such people should be grouped in the first place, and what constitutes the ‘original country’. This chapter will use these questions as the main tools for interrogating Judith Butler’s article entitled *What Shall We Do Without Exile*. In the beginning of the article, Butler invokes Edward Said as a useful point of reference for her analysis, yet shows perplexity at his use of secular humanism as a method of analysis. As Butler is undoubtedly aware, Said used other frameworks to develop his arguments in *Orientalism*. Said uses postmodernism (or more specifically, Foucauldian post-structuralism) as well as a Gramscian hegemonic power framework. A similarity between both Said and Butler is their reference to postmodernist thinkers, especially in their discourse analyses and efforts to deconstruct dominant paradigms. The argument that will be made in this chapter is as follows: a post-colonial analysis of the condition of the Palestinian people is more coherent (though not free from inconsistencies itself) and effective in making a case for a sociohistorical historical collective of the Arabic speaking people otherwise known as ‘Palestinians’.

Those who are familiar with Judith Butler’s theories may recall her theorising the idea of gender performativity. Butler’s analysis is predicated on a deconstructionist epistemology whereby the “unproblematic unity of the woman” (Butler, 1990:6) is put into question and ultimately described as a cultural production. What is most peculiar and interesting about *What Shall We Do Without Exile* is that Butler departs from the epistemological criticality that she has for gender/sex when it comes to matters of

race/ethnicity. This is as she continually groups Jews/Palestinians into unified lexical categories (Butler, 2012:33). The burning philosophical question would be: why does Butler not exhibit the same amount of deconstructionist criticality she employs with race/ethnicity as she does with gender/sex? Doing so, of course, may have irreversible philosophical consequences for subsequent analysis of the matter. The most obvious of these consequences is the conclusion that there is no actual substance that can be referred to as ‘race’ or ‘ethnicity’, and no actual ‘grouping of people’ that can occur, and therefore no diaspora to talk about. Connected to this is a question of ‘race performativity’, if there could ever be one. If so, should ‘race’ or ‘ethnicity’ themselves, as cultural productions or dominant discourses, be deconstructed? If ‘race’, ‘ethnicity’, ‘nationality’, and ‘citizenship’ are designated as social constructions, it could be said that there is simply a movement of ‘individuals’ who are the product of a hybridity of different cultural productions from one place to another. Thus, there is no such thing as ‘diaspora’ or ‘migration’. Of course, Butler herself is aware of these issues and asks, “to what extent do regulatory practices of gender formation and division constitute identity, the internal coherence of the subject, indeed, the self-identical status of the person?” (Butler, 1990:17). Although this is a good way to summarise the inquiry, it unfortunately leaves us on a philosophical cliff-hanger.

Two important points can be made here that have been the feature of Butler’s article on exile. Firstly, Butler seems to use legalistic definitions to inform her critique (Butler, 2012:33) despite having previously criticised structuralists for “[referring] to the law as singular” (Butler, 1990:38). There is also a question of whether power relations define identities or whether identities form power relations. As these questions are not given a definitive answer using post-structuralist, queer, or third-wave approaches, it would seem that deconstructionism makes it exceedingly difficult to make ‘general’ claims of oppression from one ‘group’ of people to another. Queer, post-structuralist, and (perhaps to a lesser extent) third-wave approaches are therefore probably best used diagnostically rather than prescriptively. Said anticipated these challenges and used Gramscian analysis to be able to make ‘general claims’ of hegemonic exploitation relating to the colonised people. The contradiction here, of course, is that if this is not clearly delineated from post-structuralism, two competing theories of power (Foucauldian and Gramscian) will be present. In making value judgements, these two theories

cannot be said to work in contradistinction with one another. As an Italian, Antonio Gramsci was also ‘Western’, which might be an issue with those who are making a case for Eastern self-expression. The project of post-colonialism as a framework of reference should be understood as giving the ‘Oriental’ peoples an opportunity to make a case for themselves, whether individually or “collectively” (Said, 1980:17). Butler is quite right in realising that ‘secular humanism’ is an ideology that attempts at universalising concepts that are often ‘Western’. The general idea of ‘humanity’ or ‘humanness’ is presupposed by the vast majority of social scientists and is a useful guide to whether ‘a people’ who mutually agree to define themselves with whatever ‘characteristic(s)’ have been ‘mistreated’. The main task thereafter is that such individual collectives, or collective of individuals (whichever first – if any) need to themselves individually or collectively philosophise to know what ‘being human’ is and what it entails. From this, it would naturally follow that a robust theory of ‘justice’ may well be developed (as has been in moral philosophy, for example), which may express how such diasporic people feel at being oppressed. Thus, the work of the post-colonial scholar ought not to be one of describing the ‘power dynamics’ and concluding the ‘injustice’ (as we see in second-wave discourse), but rather freeing the space for the ‘colonised’ – or in our case the ‘diasporic subjects’ – who would themselves conceptualise the ‘oppression’ and rationalise a remedy for dealing with it in line with their own world view.

CHAPTER 3

MONA ELTAHAWY: THE FEMINIST UNCLE TOM?

The study of postcolonialism has gone through many developments since Franz Fanon first wrote the *Wretched of the Earth* and Edward Said subsequently wrote *Orientalism*. Homi Bhabha developed Saidian ideas of didactic representation (or protagonist/antagonist dualisms) into new developed concepts of hybridity, stereotype (Huddard, 2006:35), mimicry (Huddard, 2006:57) and the uncanny (Huddard, 2006:77). In his work *A Location of Culture*, Bhabha focuses on the case of Thomas Babington Macaulay's speech in the British Parliament about the need to educate Indians who would then bridge communication between the coloniser and the colonised (Huddard, 2006:61). The problem is that the colonised found that such class became too similar to them in attitude and ideas, and had grown in anxiety as the cultural justification to colonise such 'inferior' people was threatened. Baring this in mind, this chapter aims to use Mona Eltahawy and her article *Why Do They Hate Us* to draw upon the pre-existing frameworks of post-colonialism and proposes a new category not explicitly mentioned in scholarly works. I propose that post-colonial studies should have an explicit category that references the cultural 'Uncle Tom', which I will call 'command capitulators'. I will use the case of Mona Eltahawy to explicate what such a category entails, and I will leave it up to the reader to judge whether Eltahawy fits within this description. This category is best illustrated by Malcom X, who described the 'house Negro' as simply mimicking the words or criticisms of the slave master. To this end, when the slave master would say 'we have good food', the slave would say 'we have plenty of good food'. A key part of Malcom X's speech relates specifically to the use of lexis. Malcom X said, "he [the house negro] speaks with the same phraseology, the same diction". Malcom X's house Negro example directs us to an important socio-economic variable that relates to privilege and which may apply to Eltahawy. Eltahawy is a privileged

Westerner who, instead of giving agency to Arab women by conducting research on their perspectives and issues, uses the diction and phraseology of the colonial neo-conservative Western elites to instead instruct women on what should outrage them.

At one point in her article, Eltahawy makes the sweeping statement that, “[p]oor or rich, we all hate our women”. Eltahawy focusses all her attention specifically on Arab men, with an intentional attempt to strip any nuance from her angry misandrist discourse. The statement ‘poor or rich’ – a sidestepping of the class discourse – is indicative of a deeper issue relating to the hierarchisation of the identifiers that lead to exploitation. In other words, Eltahawy deliberate – or probably blissfully ignorant – non-consideration of the class variable in her non-intersectional assessment of power relations indicates that her intellectual capitulation of Orientalist discourse is more than surface deep. Eltahawy peppers her article with frequent mention of the previous Saudi Arabian ban on women driving, saying that Arab women are “denied the simple mobility of getting into their own cars.” This generalises the rulings of the Saudi clergy on the entire Arab world the attitude of Arab men towards women. It is therefore surprising that Eltahawy has not complained about the process of White colonial elites stopping both men and women from having the simple mobility of getting into their own homes in Iraq and Afghanistan, or even Vietnam and North Korea, as a result of hegemonic occupation. Of course, this may upset the readers of the right-wing Foreign Policy magazine in which Eltahawy’s article features. Eltahawy’s lack of intersectional consideration may mean that her concern is solely to target Arab men. Eltahawy begins her article with a fictitious short story written by the Egyptian author Alifa Rifaat. The story focuses on an unknown Arab man not providing his wife with sexual satisfaction, preferring to go and pray in the mosque instead. Eltahawy concludes, “In a crisp three-and-a-half pages, Rifaat lays out a trifecta of sex, death, and religion, a bulldozer that crushes denial and defensiveness to get at the pulsating heart of misogyny in the Middle East.” Aside from using this short story to reinforce the colonialist stereotype myth, Eltahawy projects her own first-world concerns of achieving an orgasm on a population of Arab women, many of whom do not have basic economic provisions.

Of course, some of Eltahawy's complaints are legitimate to some extent and represent an issue in the attitudes of some men in the Middle East that may have themselves fallen victim to the attitudes of a hybridity of cultures that puts women in a morally sedentary position. Eltahawy's narrative, however, is a racist one. The real test of Eltahawy's academic bravery will come when she makes similar statements such as the ones she has made about Arab men on Black and Jewish men. Eltahawy makes constant mention of religion, and more specifically Islam, as a motivating force for misogyny against women. However, she has forgotten that there are Muslim-majority countries in sub-Saharan Africa, the Indian subcontinent, and the Far East. Had this article been about Black men, she may have chosen a different kind of sexual example to suit a different form of Orientalist discourse, one that would have probably put Eltahawy out of business right away. Summarising this point, Edward Said writes, "malicious generalisations about Islam have become the last acceptable form of denigration of foreign culture in the West; what is said about the Muslim mind, character or religion, or culture as a whole cannot now be said about mainstream discussions about Africans, Jews, and other Orientals" (Said, 1997:xii). Religion may well be a contributor to hybrid cultures in a globalised world, but Eltahawy's overemphasis on such a contributor presents an unrealistic optimism in being able to understand the complexities of a cultural environment using this kind of reductionist methodology. To this extent, Said writes, "it is therefore just as well that 'Islam' has not been particularly useful in explaining the Gulf War, any more than ideas about the 'Negro mentality' were useful in explaining the twentieth century experiences of black people in America" (Said, 1997:169). The fact that Eltahawy could not write a piece on 'the Negro mentality', but effectively could write on the Arab or Muslim one, highlights to us a bigger issue our society is facing regarding acceptable colonial racisms.

CHAPTER 4

DOMESTIC VIOLENCE IN THE MIDDLE EAST

The issue of domestic violence in the Middle East – and the broader Muslim world – is a crucial and interesting case study. It provides a glimpse into the interplay between the interlocking spheres of influence from religion, the state, and institutional power. The issue is highly contentious as a case of Arab or Muslim peculiarity and is often made with specific reference to the sacred texts of Islam. Much has been written on jurisprudential ‘rulings’ that allegedly allow ‘wife beating’ in Islam, which is a topic that requires special treatment and is beyond the scope of this paper. Domestic violence has been defined as “violence that occurs within the private sphere, generally between individuals who are related through intimacy, blood or law... [It is] nearly always a gender-specific crime, perpetrated by men against women” (Coomarswamy, 1996:53). Aside from not differentiating between ‘sex’ and ‘gender’, this definition begs the question by arriving at the conclusion before allowing for an investigation. In her work on domestic violence in the Middle East, Lisa Hajjar admits that for “some countries, there is virtually no statistical information. Most of the existing information about domestic violence comes from local and international organizations, including women's and human rights organizations, and certain bodies of the United Nations with mandates that focus on or include women” (Hajjar, 2004:8). Despite this, Hajjar spends much effort examining Islamic jurisprudence and ‘human rights’ in Arab- and Muslim-majority countries and concludes that “[a]lthough shari'a is administered, interpreted and used in a variety of ways across Muslim societies, in many contexts it provides a potent justification for states to deny or limit women's rights” (Hajjar, 2004:32). To her credit, Hajjar explains that there is a need to avoid stereotypes that “Muslim women are uniquely or exceptionally vulnerable” (Hajjar, 2004:1). This argument notwithstanding, Hajjar’s case study objective – to understand domestic violence in the context of the relationship between religion and state power –

could not be said to be achieved through actual data analysis, nor does Hajjar attempt to carry out surveys on which to base her conclusions on.

Kecia Ali exhibits the same kind of Orientalist discourse, even when there is no sociological need or where clear fallacies of presentism or anachronism are at play. Ali writes, “In sum, the books of marriage, divorce, and related topics in formative period Sunni fiqh compilations express no explicit concern whatsoever with the consent of an enslaved female to a sexual relationship with her owner” (Ali, 2017:151). Despite using words such as ‘slave’ – which has acquired a different historical meaning in Western contexts (Brown, 2017)

– and making claims which are jurisprudentially aberrational, Ali falls into the common trap of ideological presuppositional prejudice of a post-Western Enlightenment nature. Put another way, the language and approach of both Ali and Hajjar forcibly creates binaries between ‘Islamism’ and ‘human rights’ (in the case of Hajjar) and immediately puts a Euro-centrally understood ‘human rights’ discourse at an epistemological advantage. The issue with this on an intersectional feminism approach – which prioritises the autonomy and self-description of a ‘subject’ – is that it forces a hierarchy of ideas which are not legitimised by the subject group. In other words, Hajjar does not put any effort whatsoever into asking Middle Eastern or Muslim women about their worldview or their moral philosophy. In this way, Hajjar imposes her own theory of justice on women without their consent. Perhaps the biggest issue of all from this topic is its propensity to feed into a knowledge production that may ultimately contribute to promoting interventionism by foreign powers into less militarily advantaged Muslim or Arab nations.

Azal Ahmadi, like Hajjar, also found several serious methodological problems in his investigation of hymenoplasty surgeries in Iran. As with Hajjar, this did not stop Ahmadi from coming to conclusions as to the implications of these operations on women in Iran. In terms of his method, Ahmadi writes that he “found challenges in locating women and physicians who were prepared to talk to me about their experiences with the surgery. Since participants did not consent to having the interviews audio recorded, I also had to rely on detailed notes to reconstruct participants’ experiences” (Ahmadi, 2015:8). Ahmadi further writes that “hymenoplasty is a covert form of resistance against socio-culturally prescribed sexual inegalitarianism

that restricts women to the social sphere of premarital chastity” (Ahmadi, 2015:1). This is highly peculiar especially considering that Ahmadi claims that he is using Butler’s idea of ‘performativity’ and Foucault’s idea of ‘reverse discourse’ to come to this conclusion. In reality, Ahmadi uses neither effectively, as using either of these frameworks would be self-refuting. This is because the idea of ‘resistance’ could equally be said to be performative and is unnecessary to post-structuralism.

Moreover, this kind of research sample inaccessibility raises questions about the statistics from the World Health Organization (WHO) report on FGM. These statistics are neatly arranged for Black and Arab nations, with the report stating that “[m]ore than 200 million girls and women alive today have been cut in 30 countries in Africa, the Middle East and Asia where FGM is concentrated” (WHO, 2018). While the report does not mention the condition of consent for the recognised completion of FGM, the literature is sparse on the statistics of labiaplasty as well as other cosmetic ‘unofficial’ FGM procedures done in the Western world. The literature is also lacking in investigating the extent to which Western women, for example, are more likely to have piercings in their vaginas compared to Black or Arab women (piercings are described by the WHO as a form of FGM).

In summary, the Orientalist discourse that positions the Arab/Muslim other as the subject of investigation is running out of academic steam. The framing of the white/Western saviour academic who needs to stop Egyptian and Ethiopian women from cutting themselves for their husbands while acquiescing to White women doing the same thing (NHS, 2016) makes it clear that this is an issue of linguistic framing more than anything else. The expat Britisher may cut herself and be cut by her domestically violent husband and will not be peculiarised or assumed to be acting out of ideological justification, but she is foreign in the country of her Arab immigrant counterpart who is compelled by his Ishmaelite wildness to harm and injure his concubine-like wife.

CHAPTER 5

HOMONATIONALISM & THE MUSLIM EXAMPLE

Jasbir Puar defines homonationalism as “[a] facet of modernity and a historical shift marked by the entrance of (some) homosexual bodies as worthy of protection by nation-states, a constitutive and fundamental reorientation of the relationship between the state, capitalism, and sexuality” (Puar, 2013:337). Homonationalism could be said to be the utilisation of a conception of gay rights that is intricately connected to a nation state(s) – usually ‘Western’ – at the expense of another self-identified ‘community’. In this way, homonationalism becomes linked with conceptions of settler colonialism, post-colonialism, neo-liberal/capitalist orders, and human rights. In order to fully grasp homonationalism, one must investigate both the epistemologies and methodologies by which it is predicated and through which it becomes operationalised. The first part of this paper will deal with such an investigation. The argument will subsequently be made that ‘homonationalism’ is an epistemological by-product of a knowledge production that gives the European experience an advantage from the onset. Focus will be placed on certain definitions in this discourse, as well as the extent to which narratives can and have been manipulated in order to superimpose ostensibly benign yet dogmatically dominant ethical suppositions onto the discourse.

Homonationalism could be seen to be especially pertinent to the narrative concerning the perception of Muslim minorities in the West (and indeed in other places) and gay rights. Commenting on this, Jasbir Puar writes, “the justifications and the admonishments provoked by the Abu Ghraib photos rely on Orientalist constructions of Muslim male sexuality as simultaneously excessively queer and dangerously premodern” (Puar, 2013:336). Puar also uses the example of Israel’s utilisation of a gay rights protection narrative in order to justify a reduction in the rights of the Palestinian people (Puar, 2013:336-7). Éric Fassin, commenting on a similar phenomenon in the West,

writes, “[f]or while the “sexual clash of civilizations” remains an international rhetoric in the post-9/11 world, the instrumentalization of sexual politics against immigrants has now become a European reality” (Fassin, 2010:515). Thus, it would seem in the first instance that a ‘clash of civilisations’ narrative is required, one that juxtaposes Muslims (or other such minority groups) with Europeans. Such a juxtaposition manufactures Muslims as the antagonist to the defender European protagonist, whose job it is to uphold tolerance, human rights, and equality. On this point, Fatima El-Tayeb makes specific reference to this required binary by stating that “the claim to the “incompatibility” of Islam and Europe is not framed as a conflict between a Christian majority and a Muslim minority, both of whom are European, but between European humanism, committed to the protection of rights, namely those of gender equality and sexual freedom, and a hostile, intolerant, foreign culture” (El-Tayeb, 2006:81). For many Western elites, this kind of reasoning offers political justifications that either disadvantage Muslim minorities in the West or militarily inferior Muslim-majority nations elsewhere. Military intervention can become justified as part of the mission to spread equality and sexual freedom by the proverbial sword. El-Tayeb writes, “Muslim youths — the violent male and the veiled young woman — become the central Other of the unifying Europe, exemplifying everything it is not and cannot be, exactly at a point when the existence of a native European Muslim population has become an undeniable reality” (El-Tayeb, 2006:83). Perhaps such sharp dividing lines can most easily be seen in the International Lesbian, Gay, Bisexual, Trans and Intersex Association (ILGA) maps that track the most ‘homophobic’ countries with neat and simplistic reference to where homosexuality is criminalised.

In addition to using the post-9/11 context, Puar uses the case study of the Abu Ghraib prison scandal in 2004 to discuss the interplay between the different themes of Orientalism, homophobia, and sexuality. The case of Abu Ghraib is particularly disturbing, as it entailed the sexual torture of Iraqi soldiers by US Army members. Male prisoners were forced to commit sexual acts with one another while being molested by members of the US Army. Puar discusses this point:

The taboo of homosexuality in Islamic cultures figures heavily in the equation for why the torture has been so “effective”; this interpretation of sexual norms in the Middle East — sexuality is repressed, but perversity is

just bubbling beneath the surface — forms part of a centuries-long Orientalist tradition, an Orientalist phantasm that certainly informed photographs of the torture at Abu Ghraib. (Puar, 2007:81)

What is of note here is that Puar describes what she sees as Orientalising. Puar outlines the heteronormative view that homosexual acts are aberrational or irreligious and may create higher levels of discomfort for the tortured subject. After mentioning a range of Islamic and LGBTQ organisations, and their taking specific offense to the rape and torture (especially on account of the subjects' religion and culture), Puar objects to the viewpoint of a certain LGBTQ organisation:

I do take issue with Al-Fatiha's statements, as they, along with many others', relied on an Orientalist notion of Muslim sexuality that foregrounded sexual repression and upheld versions of normative masculinity; that is, being in the feminized "passivo" positioning is naturalized as humiliating, producing a muscular nationalism of sorts. (Puar, 2007:91-2).

In terms of epistemological approach, it seems that Puar's conception of Orientalism is one that is fixed against a particular Western knowledge production that is psychologically and sexually 'liberating' or 'freeing'. In other words, suppression of some kinds of sexual behaviours is seen as either inconceivable realistically or undesired socially. In either case, these conceptions, perhaps ironically, may in and of themselves be perceived to be Orientalist. This is because they lack the propensity to be able to potentialise a willing 'self-suppressor' of homosexual acts, for example, who may do so on religious grounds. In this way, not only may the experiences of the torture victims at Abu Ghraib be demoted to a non-exceptional status, but the subjects of the torture themselves are denied from being able to exhibit non-normative ideas or be understood for experiencing pain related specifically to such non-normative ideas. Methodologically, there is little effort by Puar to analyse how subjects of torture felt themselves, and even less effort to endure some of the potential tensions that may result from the perspectives of such subjects. Puar comes close to this in some sections:

It is surely wishful thinking to assume that U.S. guards, female or not, having forced prisoners to wear women's underwear, among other derogatory "feminizing" acts, would then be perceived by the non-west as a

product of the west's gender equality. In fact, misogyny is perhaps the one concept most easily understood by both captor and captive. (Puar, 2007:91)

Though Puar attempts to use words carefully, stating that misogyny is ‘understood’ by both captor and captive, she does not go into any methodological depth as to how misogyny (itself a phrase susceptible to the forces of cultural malleability) may be conceptualised by the captor in contrast to the way in which it would be for the captive.

The deep-rootedness of the clash of civilisations discourse is premised on an epistemological favouritism of one series of post-Enlightenment dominant ethics over and above all other ‘foreign’ discourses. Fatima El-Tayeb says that a “universalist narrative simultaneously presents the European condition as paradigmatically human and other, non-Western parts of the world as inevitably deviating from this norm” (El-Tayeb, 2006:81). Liberalism and its outgrowths (human rights, capitalism, etc.) are perhaps first on the list of preferred knowledge items presupposed in the discussion of equity among subjects. By making the claim that ‘Western’ knowledge productions are in fact ‘universal’ (in a Kantian cosmopolitan sense), it would follow that they ought to be enforced. Such enforcement is most likely entrusted to the hegemonic leader, namely, the United States, Europe, the UN, or other such connected ‘allies’. El-Tayeb writes about “the European notion of tolerance and secularism, suggesting that the tensions becoming visible in their wake are in fact already built into the (Western) European model of liberal tolerance, including its feminist and queer variations” (El-Tayeb, 2006:81). The layers of contradiction in this line of reasoning are problematic even on liberalism, as tyrannies of the majority are created, and unequal favouritism of one community over another is allowed. Thus understood, the dominant liberal discourse may only free itself from the contradiction of having a perceived conflict of interest between ‘traditionalist’ or ‘conservative’ advocates of heteronormativity by manufacturing a social protagonist (the gay, white, oppressed) and the socially backward antagonist (the unintegrated Muslim Other).

What is interesting about conceptions of liberal tolerance (which are forcibly mixed with queer study discourses) is their overt illogicality with one another, especially considering the post-structuralist and deconstructionist nature of the queer approach. Perhaps even more pertinently are the prima

facie contradiction of the intersectional approach and liberal presuppositional approaches. For example, Judith Butler's destabilisation of our understanding of both gender and sex in *Gender Troubles* and *Bodies that Matter* is usually not translated to a destabilisation of concepts such as 'sexism', which may be called into question in epistemological entirety as a direct result of having its foundations shaken by the queer approach. Race, and even racism, would also be destabilised, since the latter may not exist in a 'conventional' format without the former. There is much to be said as to the Eurocentric nature of these descriptors and the legitimacy of expressing racism, sexism, and homophobia through the lens and experience of the privileged Westerner. Queer approaches, as argued by many who favour the LGBT approach from this perspective, could be seen to be quite fragile. Intersectional approaches, on the other hand, allow for both an individual and collective case to be made in line with the autonomous decision-making ability of individuals in groups or groups of individuals. In this way, queer approaches may be useful up until the point of 'prescription'. The intersectional approach as suggested by Kimberly Crenshaw and others offer quite simplistic types of subject-categories. Such taxonomies, whilst improving the state of feminist analysis, are not complex enough to accommodate for the most unaccounted-for subjects. While intersectionality could be facilitative of a gay Muslim or a Muslim gay person, for example, it does not have much to offer for the guilty gay Muslim or the convinced Muslim gay. Put another way, intersectional categories are always depicted as impassive and abstracted states rather than a combination of potentially contradicting cognitive and emotional ones. This reality was seen in our case study with Abu Ghraib, where it was difficult to conceptualise the raped and tortured victims as enduring any enhanced modes of humiliation on account of their proposed religious averseness to homosexual acts. Almost in Freudian terms, such approaches have generally prioritised 'expression' over 'repression'. Many religious/ conservative approaches (including Jewish and Islamic traditionalism) have favoured the opposite. Where the emotions expressed as 'guilt', 'shame', or even 'humiliation' are seen as necessary in some approaches, they are seen as unnecessary and unacceptable in others. Psychological 'guilt' can and has been instrumental in the creation and disregard of categories of importance and unimportance. In order for this hurdle to be overcome, it must be conceivable that a religious 'traditionalist', for example, may feel most actualised repressing sexual desires. In this way,

otherwise impossible subjects of a guilty gay Muslim, for example, may be potentialised. The fluid and complex intersectional approach which I am proposing allows dominant discourses to be produced by subjects through self-autonomy and free-will.

CHAPTER 6

FIFTH-WAVE FEMINISM

Feminist approaches have undergone countless transformations throughout the years. First-wave feminism was, to a large extent, cause-driven. The ‘unifying’ cause had been universal suffrage. Feminist campaigning led to legislative change in Canada, the UK, and the US. Despite its success, the movement has many historical skeletons in its academic closet. White supremacy, for example, was an issue for early feminists such as Elizabeth Stanton, Millicent Fawcett, and Rebecca Latimer Felton (the first female senator in the US), who all believed in lynching black people (White, 2005:178–9). This colonial and discriminatory feminist streak continued even through secondwave feminism, where the voices of people of colour were not well represented. This prompted the important contributions of prominent Black feminists such as bell hooks and Audre Lorde, who had re-orientated the way many feminists conceptualised categories of identification, specifically race.

An extension of this is the ‘intersectional’ approach that Kimberly Crenshaw mentions in *Demarginalizing the Intersection between Race and Sex*. The idea of interlocking and overlapping markers of identification is the hallmark of both third- and fourth-wave approaches. Moreover, Judith Butler’s contribution to the philosophical discourse is possibly unmatched in the movement to the third wave. This is as she reconstituted her understanding of feminist thought from its philosophical basis in Sartrean existentialism (the Beauvoirian approach) to a new post-modern Foucauldian approach. Perhaps rather vaguely is also the fragile link between intersectionality and postmodernism. The latter may be seen to be deconstructive of the former, but we will cover these contradictions later in this chapter. One can postulate that ‘feminism’ has entangled ‘objectives’ or ‘motives’ throughout its scholastic history. Universal suffrage and equal pay are examples of material politico-economic objectives having been met. ‘Representation’, whether it be of views or actual bodily representation, has been another objective of feminism. Studying gender and sexuality in the Middle East, Africa, Asia, or

anywhere else for that matter has been problematic for many theorists on account of the following two main epistemological and historical complications. Firstly, ‘feminism’, as it is understood in the Western academic landscape, is shaped by the historical events of the ‘Western’ experience more than that of any other ‘hemisphere’ or knowledge producer. This has meant that both the philosophical foundations (as seen above with Beauvoir and Butler), as well as the ‘legitimate causes’, are decided upon largely in the Global North. Racial, class, and sexual considerations complicate the picture as the issue of ordering the most important identity markers usually becomes the privilege of Westerners. Intersectionality represents perhaps one of the sharpest doubleedged swords that feminist theorists have ever had to face. The existence of intersectionality may deem feminism itself irrelevant, since the state of being feminine can now be seen as a secondary, tertiary, or even a non-consideration in discourse analysis.

Bearing this in mind, this chapter will make the following argument: if representation of subjects is what is sought through feminist theory, then a complex intersectional approach that has the propensity to renegotiate gender categories to either a logical point of non-importance or primary importance is required. Moreover, if a researcher is primarily concerned with giving voices to voiceless subjects (men, women or otherwise), such voices may be antithetical to Western notions of ‘human rights’, ‘women’s rights’, or any knowledge production that is ‘Western’. This chapter will begin with a discussion on some of the acknowledged limitations on studying gender and sexuality in the Middle Eastern context, and will then move on to what I will call Orientalist post-colonialist approaches. This section will look at how approaches which respond to universalising and Orientalist narratives can ironically themselves be Orientalist in nature. Finally, I will conclude with what I refer to as the fifth-wave approach. This, in addition to being ambitiously named, is a complex intersectional approach I will propose which links to epistemology and general methodology.

In recent decades, theorists have taken into good consideration the Orientalist pitfalls that many academics have fallen into when studying the Middle East. One of the reasons for this may be the unearthing of new historical information. Researchers such as Dror Ze'evi are able to access sexual information from the Ottoman Empire and have shown the nuance in sexual attitudes within them (Dror, 2005). Indira Gesink’s recent research

has examined the case study of the intersex body in the Middle East, showing that such bodies were known to Muslims and Arabs and that modernity did not introduce them bodies to the world (Gesink, 2018). These examples of social histories showcase that non-normative sexual patterns, bodies, and general gender interactions are not as straightforward as Orientalist discourse would have us figure. To this end, these studies – like studies from other disciplines – have helped create nuance in the discourse.

Commentators such as Jasbir Puar have offered different kinds of sociological analysis that shed a different kind of academic light onto the discourse. Puar explains how nation-state nationalism predicated on homosexual bodies finding refuge in the West away from Muslim/Arab harm creates social Othering:

Sexual deviancy is linked to the process of discerning, othering, and quarantining terrorist bodies, but these racially and sexually perverse figures also labor in the service of disciplining and normalizing subjects worthy of rehabilitation away from these bodies, in other words, signaling and enforcing the mandatory terms of patriotism. (Puar, 2007:67)

Moreover, third-wave feminist approaches could be said to also take into account problematic Orientalist discourse in conjunction with the ‘third world’, or the Arab world. Judith Butler, for example, calls into question the traditional second-wave idea of the patriarchy as being a ‘fixed unity’ and problematises such fixing and unification on Oriental grounds:

The political assumption that there must be a universal basis for feminism, one which must be found in an identity assumed to exist cross-culturally, often accompanies the notion that the oppression of women has some singular form discernible in the universal or hegemonic structure of patriarchy or masculine domination. The notion of patriarchy has wickedly been criticised in recent years for its failure to account for the workings of gender oppression in the concrete cultural contexts in which it exists ... that form of feminist theorizing has come into criticisms for its efforts to colonise and appropriate non-Western cultures to support highly western notions of oppression ... they tend to construct a “Third World” or even an “Orient” in which gender oppression is subtly explained as symptomatic of an essential, non-Western barbarism. (Butler, 1990:3)

Despite these developments, there is an ironic tendency for postcolonial approaches to be inadvertently Orientalist. Orientalist postcolonial approaches exist when Western knowledge productions are implicitly assumed as superior frameworks for analysis before research begins. As will become clear in the last part of this chapter, these approaches are incredibly deep-rooted in the vast majority of feminist, queer, and LGBT approaches. They are problematic for two main reasons, both of which highlight the contradiction between third-wave and intersectional methodologies. Firstly, the hidden assumption of a dominant ethic – such as Western human rights – is problematic for post-structuralism. Secondly, they are problematic with notions of subject autonomy, especially in conjunction with intersectional approaches.

To take a specific example, attitudes towards homosexual sex in a society as being a ‘human right’ is contingent on notions of sexual expressions that prefer demonstration to repression. This view is favoured by Sigmund Freud in *Civilisation and Its Discontents* and most enigmatically demonstrated in the so-called ‘sexual revolution’ in the 60s, a time when second-wave approaches were also on the rise. A simple question could therefore be posed: who determined that sexual expressionism is epistemically superior to ‘repressionism’ in all cases and through all types of sexual behaviour? Why is ‘coming out of the closet’ assumed to be in the moral best interest of the sexually suppressed? Why is the closet emblematic of suppression in the first place? What categories of sexual suppression are acceptable? What about suppression of incestuous desires for instance, and what makes that any less sexually acceptable than any other non-normative sexuality? Perhaps more severely, what do we do when there is a conflict of moral interest between non-normalative ‘traditionalist’ types of ideas and the preferred moral philosophies of the Western analyst? Such tensions have attempted to be resolved in a myriad of ways within the ‘framework’ of feminism. Amina Wadud, perhaps the most notable self-proclaimed Muslim feminist in the West, writes Muslim men throughout history have lavished more attention on the language directed toward them than upon attaining the goals of justice directly commanded of them. It was not until women, in the modern era, began the task of publicly indicating the Qur’anic pointers that men were so careless or flippant about – rather than agents toward – that this tendency, which had prevailed for over a millennium, was blatantly exposed. Since the significance of gender

as a philosophical and epistemological category of thought has only become pronounced in modernity, it is really no surprise that gender implications of all fields of Islamic intellectual thinking has overlooked this. (Wadud, 2006:216)

Aside from re-producing the binary/Orientalist image Butler was referring to above, Wadud presupposes that second-wave feminism is the philosophical gold standard through which all of women's rights (or in particular, Muslim women's rights) should be measured. However, this is not legitimised by consent or 'objective' measures from either a philosophical or research perspective. Directing her complaints to the situation in the Middle East, Wadud further writes:

Muslims have been struggling through an identity crisis not only as a consequence of colonialism's infiltration and corruption of Muslim complacency, but also in response to the globalisation of ideas like pluralism, Western secular human rights universals, and their sheer backwardness – as recently reported through an internal study of the state of the Arab world/Middle East (read: Muslims, despite actual demographics). I entered this struggle with my own peculiar identity concerns as well, as a woman. I concluded early in my research that one way to resolve my questions about gender was to direct myself to Islamic theology rather than Muslim social contexts or commentary, present or historical. Using the Qur'an, I proposed ideas about the Muslim woman's full human agency and dignity despite Qur'anic interpretations, juridical codes, and practices to the contrary. (Wadud, 2006:187)

Wadud's epistemological insistence that Islamic traditionalism ought to accommodate for second-wave approaches is problematic as it presupposes that Muslim women have and would agree with her intersectional understanding of feminism. This point will be elaborated upon in what follows with my concluding proposals.
barbarism. (Butler, 1990:3)

Despite these developments, there is an ironic tendency for postcolonial approaches to be inadvertently Orientalist. Orientalist postcolonial approaches exist when Western knowledge productions are implicitly assumed as superior frameworks for analysis before research begins. As will

become clear in the last part of this chapter, these approaches are incredibly deep-rooted in the vast majority of feminist, queer, and LGBT approaches. They are problematic for two main reasons, both of which highlight the contradiction between third-wave and intersectional methodologies. Firstly, the hidden assumption of a dominant ethic – such as Western human rights – is problematic for post-structuralism. Secondly, they are problematic with notions of subject autonomy, especially in conjunction with intersectional approaches.

CONCLUSION

We started this book with a question: to what extent is feminism compatible with traditionalist Islam? The answer is, if representation is what is sought in feminist theory, then fifth-wave feminism – which prioritises the intersectional approach – has no choice but to epistemologically self-implode and allow any other system of representation to be prioritised in formal analysis. This is because a woman, or man, who decides to represent herself using Islam has the full intersectional right to do so. In this way, intersectional feminism can be totally compatible with traditionalist Islam, or any other way of life for that matter.

Dedication

*For better, for worse;
For richer, for poorer;
In faith, in cognitive dissonance;
When writing, when facing writer's block...*

Although these were not the vows of our nuptial bliss, my wife, Raini, has been the experiencer, in and throughout, hefting all of these things as they blethered and bilged from me, although not all occurred during the particular writing of this particular book.

For all the months of time I spent researching, reading, writing, rewriting, lying in bed with my laptop casting a blue-gray luminescence about our room in the middle of the night; for all the times I excitedly distracted her from her tasks or—even worse, her slumber—to read new translations of ancient Sumerian cuneiforms or newly stumbled upon historical information that prodded me from my intellectual bienséance; for all the times she was over-burdened with being the single parent—the war widow—of our two wonderful, little children, Flynn and Rhowan Claire, and my 11-year-old son, Samuel, while I was off campaigning through ancient texts and pop cultural fantasies—all the while remaining grounded and supportive despite her frustrations with my brooding creativity, and uplifting during her motherly vehemence.

For providing an atmosphere where I could work and think and create, while taking on the heavier burden of wrangling the pre-teen, the toddler, and the babe, doing her best to keep the extraneous daily affairs of the household off my plate so I could write; for bringing me coffee and sitting on my lap to hear me read things that I am sure either bored her to tears, or during which she could have been engaging in something much more aligned to her own schedule, likes and agenda for those times, I lovingly dedicate this book to my wonderful, caring, supportive wife, **Raini Roberts**. This book is as much a product of her stalwart love and affection for me as it is the work of my own hand.

This book is also dedicated to the memory of Philip Coppens, whose life and research has been an inspiring, integral part of who I am. Go rest high

on that mountain, my dear friend.

Acknowledgments

When there are so many books available on the shelves, it must seem a small thing to the common reader that an author of just one small book could spend any amount of significant time or space acknowledging the people who helped along the way. But it truly is not any small task, nor is it anything even close to insignificant. Without these people I am about to mention, this book would not be a reality.

First I want to thank everyone at New Page Books who has had a hand in publishing this work. Michael Pye, Laurie Pye, and Kirsten Dalley have been overtly supportive and unflinching proponents of my writing, and for that I cannot say enough how thankful I am. To Kirsten, especially, I want to say thank you for putting up with my inane schedule, and for tolerating my making you hound me for permissions and other details toward the end of this process. Thank you all for letting me part of what you are at New Page Books.

To my wife, Raini Roberts, I want to say thank you for putting up with my distractedness and downright surliness while I, sometimes literally, paced the floors and remained in an agitated, unruly state while contemplating what I hope translates into the struggle of dealing with some of the issues in this book. This isn't all just folly to me, but highly representative of fundamental, foundational changes in my beliefs and intellectual approaches to things I once thought so substantial. Thank you, Raini.

To my dearest of friends, my brother, my cohort in *Intrepid Magazine* and Paradigm Symposium, my ally and fellow explorer, Micah Hanks, I cannot express how thankful I am to have you in my life. Your help in constructing elements of this book are astronomically off the scale, and were it not for your consistent uplifting nature, and your research and work on my behalf, this book would most certainly not exist in the form it is in today. I love you with all my heart, my dear friend, and may the gods place your essence in the heavens for your care and selfless nature. Thank you for "making it so," oh, Science Officer.

Once again I must thank my old friend and professor Dr. Charles Aling, for it was he who originally sparked in me a love of history and archaeology. Although he and I may reside on differing sides of the theo-

historical fence in some regards, he remains an inspiration whose influence has deep roots in who and what I have become. Perhaps we can sit over coffee and you can take me to task for some of my ideas and interpretations, and push me to continually do better, as you have always done.

Father Jack Ashcraft, thank you for listening. Thank you for inspiring and prodding me to think. You have been a good friend, indeed, and without your valuable influence in my life, I would be a poorer, sadder man. You have heard my caterwauls, misgivings, frustrations, dismissive pangs, and struggles of faith. Thank you for being not just an ear, but a dear friend through the process of writing this book.

Anthony F. Sanchez, you are someone who has established yourself as a dear friend, and your writing and conversations and ever-present encouragements are things of beauty to me. Thank you.

Dr. John Ward, thank you for your historical and archaeological input. Your invaluable information on the Thule and the 19th-century influences, though not all used in this book, established an incredible foundation from which to structure what did appear in these pages. As with *Nephilim*, we don't always see eye-to-eye on all these issues of interpretable history, but we do share a common love of the knowledge that comes from the research. I thank you for always being there for my questions and conversations. Your help in structuring parts of this book have immeasurable value. Thanks for the smokes and coffee by the Nile during our many video chats.

Thank you, Philip Coppens, for your wonderful Foreword and for your support in so many of my endeavors.

And for all those of you who let me rant and bounce ideas off your brains and hearts, I thank you unabashedly: Dave Potter, James Keuhl, Jim Fitzsimons, Barry Fitzgerald, Cassidy O'Connor-Nicholas, April Slaughter, Jane Scott (Mom), and many others far too numerous to list here.

And, of course, only last on the list due to her utter importance and influence, my dear friend on whom I cannot heap enough accolades and heartfelt praise and thanks—the inimitable, incomparable, amazing Marie D. Jones. You have been a dear friend, supporter, sounding board, and inspiration. Without your influence and prodding, this book—and the one before it—would not even exist. Thank you, my friend.

About the Author

Foreword

I remember ordering and reading Rene Andrew Boulay's *Flying Serpents and Dragons* from an alternative science mail order catalog in 1991. Boulay continued the work of American author Zecharia Sitchin, who had proposed that in our distant past, we were visited by beings from a 12th planet—allegedly named NIBIRU, the Crossing—in our solar system, who were the founders of most civilizations, but specifically that of Ancient Sumer. Whereas Sitchin had left the nature of these beings blank, Boulay claimed that these beings were reptilian. Boulay argued that there were numerous references in ancient accounts, including the Bible, that showed that some of our ancestors, including Noah, still showed physical marks of their reptilian origins, as we were a genetic manipulation of Earthly humanoids and Nibirian reptilians.

The early 1990s was also the time when thousands of mostly Americans were reporting “UFO abductions.” Some of these abductors were described as reptilian entities. These two ingredients were mixed by British conspiracy author David Icke, who proclaimed that the British Queen Elizabeth II was actually a reptilian in disguise—a gimmick that guaranteed his claims would make headline news, including the British tabloids who loved that a former BBC sports presenter had made such outrageous claims. In fact, his claim was very much on par with what could be seen in the 1980s popular science fiction television series *V*, which portrayed a reptilian alien species that colonized Earth.

The theme that there are reptilian overlords overseeing the fate of humanity is a strong presence in modern conspiracy literature. As I appear on the popular television show *Ancient Aliens* and people as a consequence assume I have editorial input, one of the most frequently asked question is whether there is going to be a special on the Annunaki, the name the conspiracy-minded Sitchinites have given to our assumed reptilian overlords.

Of course, our current mindset didn't begin with David Icke; he merely played with an archetype that is far older and perpetually remained popular. The source of all evil in the Bible has become commonly identified as a reptilian being—a serpent. Though the crime the serpent seems to commit

in the Bible is quite minor—providing information to Adam and Eve—as Christianity grew in popularity and power, it sought to personalize evil in the form of Lucifer and the devil, who became identified with that speaking serpent of the Garden of Eden.

If the devil is one of your most prominent identifiers, it is not surprising that serpents face an uphill struggle in popularity contests, though this is a cultural phenomenon. In the New World, the Feathered Serpent Quetzalcoatl was seen as a culture bringer, while the Vision Serpent helped the Mayan king in receiving information from the underworld. Though it shows that serpents were not always seen as evil, it does show, even in the biblical account, that intelligent serpents have provided our ancestors with knowledge, including otherworldly knowledge.

With a topic that has been identified by the Church for almost two millennia as the root of all evil, wading through the material is not a simple task. Sitchin and Icke are but two of a long list of researchers who have stranded in the murky waters of the reptilian archetype. Scott Roberts fortunately boldly goes where few men have surfaced from, providing a well-balanced, innovative, and insightful approach to the topic.

It is time to become reacquainted with our reptilian neighbor, who seems to have a consistent, cross-cultural reputation of bringing us knowledge. It is high time we learn....

Philip Coppens

Preface

“Mankind is poised midway between the gods and the beasts.”

—Plotinus

Writing a book about the ever-enigmatic race of extraterrestrial Reptilians is as simplistic a task as writing a book about the divinity of the historical Jesus. Fluxing in and out between myth and science, history and religion, all tempered with a healthy dose of “show-me-the-facts” skepticism, the very notion could drive one to the hard conclusion that establishing fact beyond a shadow of a doubt is nearly impossible in its efforts. The implications of the comparative historical and religious touch points are so far-reaching that the meanderings of myth one must follow to seek efficacious tendrils of fact could most certainly drive one mad in its contemplation.

What is it that religion and science aren’t telling me about where I come from and why I am here? And why is the Serpent, a being both feared and revered, so inextricably linked to the misty imaginations and fortified spiritualities of man?

When I was a kid, I was deathly afraid of the dark.

Back then, I had a newspaper delivery route that encompassed several city blocks around my neighborhood in the farthest reaches of northern Minneapolis, slipping over into the closest residential areas along the busy middle-class suburb on the west bank of the Mississippi River. As a paperboy, it was my after-school responsibility to ensure that the people on my route received their copy of the *Minneapolis Star* every afternoon, before the dinner hour. That was the easy part of my job, which earned me about \$8 per week. (In 1970, that was big money for a school kid.)

The hard part of my job was the Sunday morning route. The Sunday paper was three times as thick as the daily paper, and required me to rise at about 3 a.m., head to the paper shack (the pick-up location in our district, located about six blocks from my house), and collate the several sections of the paper for my route. I would then load those papers into my large, metal,

bright yellow, two-wheeled cart, as they were far too thick and cumbersome to carry in my canvas sack.

Our house sat on a corner lot, and, despite the yellowish street lamp at the apex of the two bordering streets, our yard was always completely engulfed in the black shadows of night when I'd rise to walk to the paper shack. I remember standing there on the back cement steps of the house, jumping down into the dark yard and grabbing for the yellow handle of my paper cart. I'd yank it out of its spot and run, headlong through the yard to the dimly lit street. While standing beneath the incandescent glow, which created a 12-foot circle of safety around me, I would stare down the vacant, dead-of-night street to the next lamp, contemplating my sprint through the darkness between. Sucking up all my courage, gripping my yellow, two-wheeled anchor behind me, I'd again close my eyes tightly and run with all my might toward the next streetlamp, squinting only momentarily to make sure I hadn't deviated off my course and into the shadows that lined the street.

I would repeat this blind feat at every corner until I finally reached the safety of the corrugated tin shack, which was usually already bustling with other kids loading their paper carts.

I don't know what it was that created such a fear of the dark for me. Perhaps it was many hours watching *Dark Shadows*, a show filled with vampires, werewolves, and ghosts that scared the beejeebies out of me. Or maybe it was the thought of aliens and monsters that would spring from the bushes and devour my guts while I was still alive, kicking and screaming. Then again, it may have been all of those things simply combined with my innate fear of the unknown—that sense we all have that makes you tingle when you enter a dark room or pass a shadowy alcove that you absolutely know—beyond a shadow of a doubt—is inhabited by some otherworldly, carnivorous entity. The unknown has always been the primordial slime of the imagination, the place where we birth and foster our most terrifying nightmares.

My boyhood friend and fellow paperboy Doug Beman and I would, on many Sunday mornings, lay atop the newspapers stacked in our respective carts, and philosophize—as only fifth graders can do—beneath a corner street lamp, waiting for the earliest sliver of silvery-blue on the eastern horizon. There was one pre-dawn morning when we watched a cat slowly

cross the road about 50 feet away from us, and we mused whether or not God had taken the form of that cat to come and watch over us. We took that reasoning and mused even further, reflecting on all the different things that had happened to us in our sphere of existence that might have conjured such a theophany (although we didn't use those particular words, as they were far outside our 10-year-old lexicon). As we sat there talking, we looked at each other and were astonished to see we were both shedding tears—not of sadness or any sort of uncontrollable weeping, but from something that hit very close to home in our psyches, on a very deep, subconscious level. And it was from that point we determined that God or his angels truly existed and could manifest before us in any shape or form they desired. And the cat, from that day forward, became the object of our fecund, private, little religion.

I imagine, now, some 40 years later, that this could be very much like the experiences of the ancients, when they sat philosophizing beneath flickering nocturnal torchlight, gazing up at the sky, only to be interrupted by some astronomical phenomena or the unexplained, unrecognized rustling of something out there in the dark, prompting the same sort of musings my friend and I experienced several thousand years in their future.

What was their religious cat, I wonder? Who or what became the object that, for them, could so capture their worship in the midst of their contemplative brooding? What was it that caused them to conceive deities and imagine giants from the dark to such a degree that they would soon end up etched for all time on the local cliff face, painted with dye concocted from the roots of the plants that grew around their village?

Or perhaps their ancient encounters were far more tangible: men from faraway tribes appearing in their village for the very first time—beings from the desert, hills, skies, and possibly even the stars. And from these encounters were birthed their oral stories that were generations growing into legends and myths.

On the heels of *The Rise and Fall of the Nephilim*, which examined and explored evidences and theological, anthropological, and comparative cultural accounts that the human race was visited in ancient times by non-human intelligences that interrupted and influenced the development of humanity, these pages will take the case another step further. There is a lot of mythos out there to suggest that we have been visited by

“extraterrestrial” intelligences, so much so that it has permeated our popular culture, our intellectual dialogues, and even our religions and spiritualities. In fact, there exists more “evidence” to support the existence of UFOs than there is to support the existence of God—and seeing as God never really seems too overtly interested in proving himself beyond the heartfelt acceptance of the faithful, that is a fairly concise statement.

Notions of beings from outside this world impregnating humans are as old as humanity itself, up to this current day. And those histories and accounts have comprised a bulk of human mythology, legend, religion, and superstition. But what if those ancient visitations and encounters with non-human intelligences were far less than the stuff of “first contact”? What if those races manipulated the DNA of homo sapiens, creating a “slave race” to do the bidding and work of Reptilian-hominid overlords?

The theory of ancient alien interruption and the possibility of extraterrestrial reptilian races is not a new one, and its purveyors have been writing and theorizing on the topic for decades. Ever since early humans first gazed up in wonder at the star-blanketed night sky, we were intrigued by the seemingly unanswered questions of a mysterious, unattainable universe intrigued by its unexplained mysteries. Early mythologies and legends give the circumstantial evidences of mysterious objects roaring across the heavens. Shards of ancient tablets and shreds of ancient documents describe phenomenal, unexplained manifestations in the skies, and virtually every culture and religion relates visitations from angels, demons, devils, and gods who visited mankind in ancient times. And humanity, in its infancy, described these visitations from the sky in the only terms they could understand. Of course they were deities.

Despite this decades-old—if not centuries-old—debate, there is still a lot of disinformation and misinformation out there that begins with an atheistic point of view bent on disproving the religious and spiritual elements of creation and otherworldly interaction, as well as the opposite, which would seek to disprove or naysay anything that smacks of anything outside the box of established traditional theology.

Despite being a secular society, focused on the tangibles of day-to-day material safety nets and a laissez-faire adherence to entrenched generational religious denominations, people have an underlying draw to old spiritualities and covert superstitions. Though outwardly displaying a

dismissive attitude toward anything that smacks of a deeper connection with traditional beliefs and spiritual roots, usually accompanied by an almost-apologetic acquiescence to having grown up in a faith or religion, the overt façade belies a deeper, inextricable-yet-unrequited draw to theo-philosophical questions, mixed with a fascination of God, UFOs, ghosts, angels, demons, and everything in between. As for scientific dogma, most people dismiss the sciences as “mathematical things” that are either too heady or too emotionally dissociative to matter, and far less things to incorporate into any sort of daily life, and they tend to ignore them altogether. Unless Morgan Freeman narrates a show about the universe or genetics, science has become a thing that has been relegated to the realm of geeks, nerds, and academia. Why, you’d never find a scientist drinking beer, eating hot dogs, changing diapers, and belching out his new theory on the Higgs Boson...right?

When you strip away all the externals and lay bare the hearts of most people, at the core is their need to know who they are, where they came from, why they exist, and what the hell else is out there—regardless of how much they try to make the rest of the world believe they view these things as unimportant. Myth, legend, theology, and meta-science comprise the underlying faiths and beliefs of most Americans, who would otherwise give no outward indication that they hold to such values, even on a level of simple curiosity.

This book represents the *never-ending-book*, contained in 220 or so pages. You’ll find yourself, at times, deeply entrenched in facts and details, sorting through historical and linguistic material, but I have presented in such a way that is, hopefully, exciting and enlightening while riddled with bits and pieces of humor and my own anecdotal rants. In other places, you will endure my pedagogic philosophizing mixed with my middle-of-the-road positioning while attempting to bring a clear connection between myth and anthropology. In these pages we will discuss and hopefully provoke thought, addressing the innate need we all have to know the answers to these age-old questions via a very focused examination of a race of beings who visited earth, millennia past, for the sole purpose of not simply cohabiting, but creating and manipulating a race of underlings.

Utilizing a scholarly approach, blended with a bit of light-hearted tongue-in-cheek intellectualism, I will engage, on a deeper level, the examination of familiar accounts in the Old Testament book of Genesis,

combined with similar, corresponding accounts in various other cultures, religions, and spiritualities, cracking wide open the theories of extraterrestrial interruption and intercourse with early humanity, thus challenging and bringing new light to what we have discarded as mere mythology and ufological “urban myth.”

What if non-human intelligences bequeathed a race of mixed-blood humans?

This book explores the cross-cultural theological accounts as well as the current New Age movements that capitalize on fear mongering, the Illuminati, and the behind-the-scenes of the behind-the-scenes of what is taking place in humanity. We will explore the Merovingian bloodlines, the bloodlines of the Nephilim, and the presence of Reptilian and other alien races working to destroy, aid, and/or bolster humankind, all as they precariously balance against ancient religious mythology of the presence of the serpent in and throughout ancient history and religions.

The Rise and Fall of the Nephilim established that something huge happened to the human race in our ancient past, supported by the comparative religions, cultures, and archaeology of the world. Utilizing archaeological record, anthropological studies, and comparative religious examinations, we dig even deeper to establish what is already so evident yet hidden and encoded in the world today.

It’s a grossly huge topic that deserves an equally huge scholarly look and treatment. That does not mean we will, in these pages, be able to exhaustively cover all the angles and bring conclusive answers to every issue. But these pages will establish a great place to start looking at the questions from a new vantage.

I am told that people want to know precisely where you stand on an issue when you present it in a book such as this. What you will find from me is someone who straddles the fence between science and faith, mythology and archaeology, legend and history. They all work together to bring us a clearer understanding of what exists out there. You simply cannot have one without the other—and this is the fallacy of discarding one for the other, because, as I have contended time and time again, there are veils that simply cannot be pierced, and eschewing the unquantifiable, although scientifically acceptable, is philosophically irresponsible.

“There is nothing truer than myth: history, in its attempt to realize myth, distorts it, stops halfway; when history claims to have succeeded, this is nothing but humbug and mystification. Everything we dream is realizable. Reality does not have to be: it is simply what it is.”

—Eugene Ionesco

Introduction

“Snakes. Why’d it have to be snakes?”

—Indiana Jones

Every night a snake-like man would visit me in my house. I don’t know how he got in or where he came from. He was just there, standing more than 6 feet tall, with smooth, delicately scaled, greenish-brown skin, almost silky to the touch, giving me the sense of a cobra or some other sort of sleek reptile. His eyes were large and glossy black with vertical iris slits that glinted an iridescent yellow. When he spoke, his voice was as deep and hollow as a bottomless canyon, rapacious and seductive all at once. His breath held a faint scent of cinnamon. He said he was from another part of the galaxy, somewhere in Orion’s Belt, and that I had been someone “They” had been watching for a long, long time....

That is the beginning of a story told to me, several years ago, by a woman whose name I have long since forgotten. She went on to describe a fearsome yet benevolent creature who described himself to her as being part of a hostile race set on the destruction of humanity—a course that was determined long, long ago in humanity’s primordial past. This woman even sent me drawings she had done of this being, as well as much more descriptive, and at times quite sexual, narrative. They, too, have simply vanished along the way, more a result of my own ramshackle filing system than any sort of weird conspiracy theory.

Her story, along with many other similar accounts of such beings I have heard throughout the years, was relegated to the back of my brain, filed under: “Interesting but Nutty.” There it sat in a metaphoric mental stew pot, slowly simmering—a reptilian “stone soup” growing in richness and flavor as I subconsciously added the bits of ingredients delivered by all sorts of characters and sources along the way. Every so often the lid of the pot would rattle, releasing a steamy, fragrant aroma of hearty broth, bringing me back to the awareness that I had something cooking over there in the kitchen of my mind. And what was cooking was a splendid, blended concoction of theology, archaeology, ufology, psychology, cosmology, anthropology, and every other little “ology” in between.

Having recently completed my work on the *The Rise and Fall of the Nephilim*, I found myself in a highly agitated state of spiritual and emotional unrest. I had either just opened up (at least for me) an exponentially expanded view of who God is, or I had, in essence, eliminated his existence altogether. Either the god of the Hebrew and Christian scriptures existed as I had been taught in cloistered, fundamentalist academia, or I had effectively stripped away his divinity by lowering him a few rungs on the ladder to the level of non-human entity with some power over the human race to create, procreate, and destroy. To me, this represented a crisis of faith, and I entered the grieving process of the “loss of innocence,” as embodied in the theology I once adhered to so strictly and believed in so intimately. When my theology was forced to stand against the onslaught of history, comparative religion, cumulative cultural mythologies, and archaeological record, everything about my religious practice seemed to be ripped open and lain bare, as if by a great whirlwind. And all that was left was a naked faith, shivering in the harsh cold of a veritable nuclear winter of pragmatic thinking and common sense, void the protective cloak of religious insulation.

The Serpent in the Garden of Eden took on the completely different role of historical influence once I was able to view the story without the filter of religion or denominational interpretation. When I was able to see that this creature, as described in the Hebrew Bible’s Book of Genesis, was similar to if not synonymous with many other cultural tales of trickster beings who brought knowledge and illumination to early humans, I saw a much bigger picture encoded within those pages of biblical scripture. When people step outside the box of religion and denominational spirituality, they find themselves in a unique vantage point of being able to see myriad varied tales that have intrinsic common threads woven throughout.

It’s rather like walking into one of those glorious, old theatres that dominated the cultural avenues of upper-crust society at the turn of the last century. As you entered the theatre and walked down the main aisle, the gilded proscenium and glittering chandeliers sparkled the magnificence of the thespian palace, built as a showcase for the art of the show. And there, lining the aisles were row after row of plush velvet seats, all identical and all capable of holding the weight of a patron every night. Yet despite their identical construct and appearance, each chair held a different perspective of the show being performed on the stage. Depending on which seat you

settled into, your viewpoint of what was being performed up front varied. Some seats were side-by-side, so their vantage was nearly identical; other seats delivered views from the far sides, back, or distant last row of the balcony. Some seats even had partially obstructed views. But in a literal, mathematical sense, not a single seat held the same exact vantage point or view of the show being played out onstage. But one thing was also sure: No matter where you sat in that theatre, and no matter which vantage point from which you viewed the show, the performance was unaltered.

Perception does not alter reality; it merely alters practice. The show on stage doesn't change dependent on where I am sitting or from what vantage point I am viewing. Only my perception of it alters. So the trick is to not be part of the audience, but rather a part of the play—a member of the cast. A participant, as opposed to an observer.

The Hebrew story of a race interrupted is an encoded one: Adam and Eve, the Serpent, their offspring, the fallen state of humanity, and the proclamation of an angry deity. These are all elements of an encoded cover story, as I spoke about extensively in both *The Rise and Fall of the Nephilim* and in *Lost Civilizations and Secrets of the Past*. There is a much bigger message than the meticulously buried messages of the biblical tales that is similar in tone and thread to hundreds of other cultural religious mythologies of spectacular non-human beings interacting with the human race of ancient times. Common to nearly all of these cultural stories is the common thread of residual bloodlines that run through the course of all of human history.

Call it religious mumbo-jumbo, or theological manipulation. Look at it as the establishment of the messianic bloodlines and the mixed race meant to thwart the coming of the Kinsman Redeemer. But no matter how you view it, the story of the ongoing bloodlines remain a concurrent theme, from the very first utterance of an enmity that will exist between the seed of the serpent and the seed of the woman, all the way down the historical biblical genealogies that are there within Old Testament passages to exhort the ever present, vigilant eye to be ever watchful of the *pure human line* versus the oppositional mixed-blood lineage.

Humanity was visited by non-human entities that from the very beginning introduced an alternate bloodline that has carried all the way down the historical record to current day—the bloodline of the serpent. But

we only see fragmentary bits and pieces, rather like a checkerboard where half the spaces are occupied, but the other half remain completely void and empty.

I am not one who quickly sidles up alongside “great awakenings,” new spiritual movements, or hyper-fastidious conspiracy theories. They all generally tend, to me, to be the stuff of manufactured emotional reactions to hypothesis that are either not well researched—historically, spiritually, anthropologically—and many times are not well-articulated, despite their complex yet imaginative constructs. Most of these types of theoretical movements rely far too heavily on fanciful whimsy, bolstered by a desire to find something new and exciting, filled with elements unwittingly designed to “suspend reality,” or move the mind away from the mundane—not to mention the targeting of political opponents.

Far too many times throughout human history we have seen the devastatingly horrific result of revolutionary new movements that explode onto the scene, spewing theoretical spiritualities, political conspiracies or *vox populi, vox Dei*, but in the long run end up being little more than mere flashes in the pan, lacking substance and longevity, resulting in the martyrdom (whether literal or metaphoric) of self-proclaimed messiahs and the murder, suicide, or disbanding of disciples. Yet those movements that do gain a foothold and garner mass followings trend to the darker elements of racial bigotry, genocide, political xenocide, and holocaust, building gravitas and momentum by catering to the fears of potential devotees and zealous followers alike.

People are always looking for something that is different than what they already have, or more exciting than what are told they should be satisfied with. Spiritually, politically, and conspiratorially based movements generally thrive within, around, and despite the well-established religions, spiritualities, sciences, and governments that are deeply entrenched in our societies and cultural histories.

On the flip side of the coin, deep within well-established philosophies, religions, and political mindsets, there are embedded messages and encoded languages that tend to shift the paradigm away from the established way of thinking. Once this new information is articulated and disseminated, established systems of spiritual belief and practice are enhanced, are expanded, and in many cases rewrite the history of a well-established,

firmly entrenched philosophy. The end result is that the new twist can sometimes appear to be a new awakening or new conspiracy theory, when it is in reality an illumination of something that already exists—an expansion based on a fresher understanding of what was already there.

The Serpent in the Garden of Eden, though allegorical in nature and very possibly the stuff of Hebrew religious mythology, is a figure that represents a very real source of what has become an emerging understanding of a very real bloodline running through the veins of human descendants throughout all of human history.

There is, indeed, a Reptilian factor to humanity, and it shines through our religious and cultural icons. The serpent is one of the oldest and most widespread mythological symbols. Snakes have been associated with some of the oldest religious rituals known to humankind and have carried the dual expression of both good and evil. From the Hebrews' Serpent in the Garden to the Mayans' Quetzalcoatl; the Bhuddist Naga to the rattlesnake on the early Colonial American flags; the African Dahomey and Aido Hweido to Jörmungandr of the Nordic mythologies; and Ouroboros, the ancient Near Eastern serpent devouring its own tail representing the great cycle of life. Then there exist everything from sea serpents to St. George and the Dragon, and even the medical caduceus.

If symbolism, however, was all there was to the traceable bloodlines of the serpent, the flesh and blood of the story would be a short, sweet, picturesque history lesson. Demystifying the cover story of the serpent in the Garden is only the beginning. Identifying the source point of his and countless other mythological and cultural counterparts is what will allow us to see the tangible evidence of ancient human encounters with non-human entities, revealing what that lies beneath the surface of old mythologies as they meld into current-day accounts.

The human race has not yet experienced a full-fledged “first contact” with any alien race—at least none that has been disclosed. Those who have made experiential disclosures are generally pooh-poohed by the skeptical, scientific, religious, and even hopeful, believing camps. We do have, however, countless numbers of ancient documents and texts that record interactions with what can only be described as non-human intelligences. Most of these ancient documents categorize these intelligences as their version of gods, angels, demons, and spirit beings—the biblical stories of

the Sons of God, the Watchers, and their offspring, the Nephilim being prime examples.

One of the criticisms thrown at most religious documents is that they cannot be trusted as quantifiable historical sources, because they are books of faith. The Bible falls under this sweeping dismissal all the time. However, most ancient historical documents were synonymous with religious texts, as ancient peoples did not separate those two driving forces of civilization the way we do in modern affairs. Even as recently as the reigns of Henry VIII and Elizabeth I of England, many royal proclamations were linked to the religious views of the monarchs, and in that period of history in England, the conflict between Catholicism and Protestantism was a driving force. Keeping this non-separation of powers squarely in mind, note that Reptilian creatures have filled the texts of ancient documents. To cite just a small handful:

- ♦ The serpent Nachash interacted with and impregnated Eve in the Garden of Eden story.
- ♦ Oannes, the half-fish/half-man, and his people rose up out of the Persian Gulf to teach civilization to the ancient Mesopotamians.
- ♦ The Cannanite goddess Qetesh interacted with serpent beings.
- ♦ In Sumerian literature, Gilgamesh loses his powers of immortality to a serpent.
- ♦ The Sumerian fertility god, Ningizzida, is depicted as a serpent.
- ♦ The ancient Jewish (Hebrew) tribe of Levi is said to have conquered Europe under a surge driven by Reptilian “illuminati-like” overlords
- ♦ Ho Ti, of the House of Sui, also known as the Serpent Emperor of China (618 AD) found a wounded serpent and nursed it to health, after which it returned to him with a reward of recompense.

And there is much more, as we will discover throughout these pages.

The serpent has been a pervasive presence indeed throughout human history, filling our religious scriptures, historical tomes, and mythological

tales, and appearing on the faces of thousands of archaeological relics. And, yes, our theories of UFO visitations and extraterrestrial encounters have a decisive Reptilian influence in and throughout the ancient alien subculture. Simply enter the word *reptilian* in an Internet search engine and you will find millions of entries, ranging from the profusely inane and undocumented to highly politicized pseudo-religious movements, to loosely documented claims by highly credible people.

The opening lines of this book began by recounting an experiencer's tale of interaction with a single member of an "alien" reptoid race. We will now move forward to explore the veracity of these experiential claims, as well as the serpent as a religious symbol, a political force, a mythological influence, and a race of both intraterrestrial and extraterrestrial races bent on the mutual destruction and salvation of our species.

PART I
The Empire of the Serpent

Chapter One

The Annunaki and Their Sumerians

“[The realm of myth and magic] is a dangerous field: fairies abound, good fairies and bad fairies, dragons and dragon-slayers, gods and goddesses, truth and untruth, history and legend, science and fiction, inextricably mixed and fused. But what has archaeology to do with it, you will say? Archaeology is concerned with bones and flints, with pots and pans and post-holes, with stone and metal, in short, with the material remains and spades to dig them up with.”

—F.J. Tritsch, “Myth, Magic and Archaeology”

Going back to the very beginning is generally the best place to travel when looking for the roots of any mythology. It’s in the fertile soil of creation that we find the seeds that sprouted and grew into the massive, towering beanstalk that has led us to the realm of the giants and the golden goose in the clouds. And whether allegorical, mythological, legendary, or the stuff of fable, there is generally always an incontrovertible fact at the core—that thing that started the whole story. And let’s make no mistake about it: Once you start delving into the depths of comparative ancient stories, their encoded similarities and subsequent decipherment, you enter a muddled world of interpretation that will raise both dust and ire. Clearing the air is the monumental task with which you are left.

There are mindsets that are at complete odds here, like two trains running at high speed toward each other on the same set of tracks. There is bound to be an eventual collision of catastrophic proportion—in this case, the repeating scenario of science colliding with belief and archaeology running headlong into myth (and vice versa). But there has to be an accounting on both parts. Faith and belief open themselves to upholding the sometimes-nonsensical, mystical, un-provable, capricious, and many times ambiguous, spiritual soul of religion and mythology, whereas science and archaeology will eschew—many times with great disdain—the

unquantifiable as folly, rooting out what they define as fact from fiction, no matter how grounded in their own sense of objectivity and importance—rather like when the science of the day upheld that the earth was the center of the universe and the sun rotated around it. Those were simply the facts based on the available knowledge and interpretation, and they were religiously adhered to by the academia of the day—until, that is, science developed the capability to move beyond its limits and recalculate its positions, determining that the earth, indeed, rotated around the sun.

Now, bear with me as I work through laying a little background that will serve as the platform from which we will engage in an examination of the secret history of the Reptilians.

The Naked Truth

When I completed my work on *The Rise and Fall of the Nephilim*, I recall sitting back in my office chair and staring at the ceiling for a long, silent time. In those minutes I was contemplating what it was that I had just written. In all the research I did into the Book of Genesis, from both Christian and Rabbinic standpoints, I found myself drawing further and further away from the God of my youth. It was not a deliberate distancing, but after stepping outside the box and looking back in, I found that the God I had discovered in my youth was not the same God that seemed to materialize after taking a closer look at more than dogmatic systematic theology. The God I grew up knowing was one of holiness, of benevolence, and ultimately of eternal, sacrificial, propitiating, atoning love. His was a love that transcended everything and embraced me where I was, saving me from myself, and the horrors of an eternal existence void of His loving presence.

Perhaps this was simply a byproduct of my need to step “outside the box” in order to see things from as objective a point of view as possible. This seems to be the problem with a purely academic—or secular—examination of these things: When you distance yourself from the possibility of the weird, odd, spiritual, and mythological, you deliberately set yourself up to look beyond the wonder and the possibilities, to funneling all research through a sterile filter.

What is even more profound is to observe the distillation of research by secular scholarship and that the scientific and skeptical approach to biblically themed topics, such as the Nephilim, seems to operate under a

preconceived notion that the Bible cannot be taken literally in any form, including its historicity. One critic of *The Rise and Fall of the Nephilim* stated that I erred simply by placing any veracity at all in the biblical record. However, it has been quantified time and time again that the Bible is quite irrefutably strong in its historical presentations, albeit at times vague, limited, and deliberately not forthcoming in detailed information, as the contextual themes inclusive of some historical data were meant to present a faith principle, rather than historical documentation. Therefore the historical information was sometimes sketchy, at best. Skeptical researchers, honest to their scholarship, are finding it increasingly more difficult to dispute the overwhelming archeological evidence for the historical accuracy of the biblical accounts. Any corroboration of biblical historical facts, however, does not by any means emphatically state that the faith story wrapped around these events is “truth,” but it does lend to the veracity of the Bible as a historically accurate document, aside from the religious and spiritual aspects of Judaism and Christianity. Biblical accounts that include such things as listings of nations, historic personages, customary rituals, and colloquial practices have been verified by archeological evidence and anthropological research. Secular academicians who have corner-stoned careers on criticism of biblical history have many times found themselves humiliated by new discoveries that validate the biblical accounts they had previously deemed to be myth (academic embarrassment). Among these are such discoveries as the existence of the obscure Hittites, King David of Israel, Goliath of Gath, and Pontius Pilate, the praefect of Judea during the lifetime of Jesus of Nazareth. Nelson Glueck, noted 20th-century Jewish archeologist whose work in biblical archaeology led to the discovery of more than 1,500 ancient sites, put it this way: “It may be stated categorically that no archeological discovery has ever controverted a single biblical reference. Scores of archeological findings have been made which confirm in clear outline or in exact detail historical statements in the Bible.”¹

Not surprisingly—as some think of the biblical record as being inaccurate and rife with faith stories alone—when stacked up against non-biblical accounts of historical events, the scriptural narratives reveal unflinching veracity. In his 1919 collection of essays and other journal work, *A Scientific Investigation of the Old Testament*, R.D. Wilson, who was fluent in 45 ancient languages and dialects (inclusive of all the biblical

languages of common etymological origin, such as Hebrew, Aramaic, Assyrian, Phoenician, Sumerian, Babylonian dialects, Ethiopic, as well as several Egyptian and Persian dialects), engaged in a meticulous analysis of 29 different monarchs from 10 different nations mentioned in Masoretic texts (the Old Testament). By way of comparative analysis, every one of these monarchs had corresponding archeological artifacts documented by secular historians containing their names, syllable-by-syllable, consonant-by-consonant. Wilson demonstrated that the monarchical names as recorded in the biblical record matched the findings of secular historians and archaeological artifacts, accurate in minute detail to the chronological order of the kings. Conversely, Wilson also demonstrated that many secular historical accounts were often filled with gross inaccuracies and were eventually deemed quite unreliable. Ptolemy, the famed Librarian of Alexandria, and even Herodotus were horrendously inaccurate in their documentation of royal names, and in many instances even misspelled the names (in the Library of Alexandria) to the point of nearly being unable to be recognized when compared to their respective archaeological artifacts or ancient monuments. Their research simply required more evidentiary research to establish any sort of accurate corroboration.

Even the well-known 19th-century archaeologist and historian Sir William Ramsay, a noted scholarly skeptic of biblical history, converted to Christianity after his travels to Asia Minor to conduct meticulous research and archaeological excavations into the New Testament's Gospel according to Luke and Luke's follow-up historical record, the Acts of the Apostles. The evidence Ramsay uncovered continually and incontrovertibly supported the historical record of the biblical writings of Luke. At a time when many secular historians and scholars dismissed the existence of most of Luke's record of governmental officials and geographical name-places, Ramsay's archeological digs actually flipped the naysayers' claims on their heads. Without error, Ramsey established through his excavations that Luke was accurate in naming countries, cities, islands, Roman officials, and many other salient details of historical record contained in the New Testament writings. As a result of his discoveries, Ramsay wrote: "I began with a mind unfavorable to it...but more recently I found myself brought into contact with the Book of Acts as an authority for the topography, antiquities, and society of Asia Minor. It was gradually borne upon me that in various details the (biblical) narrative showed marvelous truth."²

Ramsay also wrote: “Luke is a historian of the first rank; not merely are his statements of fact trustworthy...this author should be placed along with the very greatest historians.”³

Although the previous paragraphs may have seemed a bit of a rabbit trail—for which I have become very well-known, as there is so much information that could be incorporated to illuminate any tidbit of information out there—I included them for the purpose of establishing the fact that not all religious literature is merely faith-based alone, despite many secular, skeptical opponents, in their own particular biases, wishing it were so. When you step outside the box of a particular faith, and look to find corroboration between historical data and scriptural teaching, using the faith writing as a guide, not a filter, you will find that biblical history, in particular, stands the test of historical scrutiny.

However, because the historical data may be reliable, this does not always necessitate the spiritual information it’s housed within is universal truth. Though I can insist that the Constitution of the United States is a historical document and uphold it as closely as possible to its original intent, there will be others who interpret its words through different filters, thereby causing decades of debate on its veracity versus its interpretability. The same is true with religious writings.

On a spiritual level, my personal universe was very small back in the days of my youth, and God was a God, I was told, who waited for me with open arms, to take my troubled life and make it something beautiful through His saving, undeserved grace. Yet the older I got, and the more I dug into the topic of the biblical Nephilim, the more I found a God emerging from the murkiness that was, in nature and human-like emotional volatility, ultimately detached from humanity—a God who didn’t give (and pardon my plain vernacular here) two shits about humanity. This is mythological interpretation as opposed to historical veracity, but it is the result of my spiritual studies and evolving understanding of the spiritual content of these ancient documents. Despite all the teaching about God and all the systematic theology in my Bible school and seminary days, the Elohim of the Old Testament seemed more concerned and focused on the stuffs going on in the realm of the heavens than he did with human beings. There are many instances in the Bible’s stories of God’s dealings with mankind where human life was as dispensable as yesterday’s news, and several occasions

where God insisted on their extermination and even followed through with it by divine judgment or mandates passed on to His followers. And once I discovered that the Elohim were a *plurality*—a pantheon, if you will—dominated by a superior member of their caste of gods, the one, singular, omniscient, omnipresent God of my upbringing took a decidedly rear seat in the family van. Although there were plenty of scriptures that were interpreted as God’s presence, love, and interaction with people, there were even more that spoke to His ability to be as human and unjust as any earthly monarch establishing his jealous reign over his subjects, enacting the wiping out of non-believers and the genocide of whole peoples in His justified wrath. There was even an account in the Old Testament Book of Exodus where God was going to destroy His promised people, and it took the intervention of Moses to hold back God’s wrath, reminding Him of His promise to Abraham and caused God to “repent of the evil he was going to do” (Exodus 32:14).

The Jewish Midrash teaches (Ecclesiastes 5:4) that “Three things annul evil decrees: 1) prayer; 2) charity [righteousness]; 3) repentance [tshuvah].” In striking contrast, however, in Bamidbar Rabbah (23:8; cf: Exodus 32:14) we read that Moses “came forward and *made God repent* (author’s emphasis).” In this case, it was the intervention of a righteous human being that preceded prayer, righteousness, or *teshuvah* [תְשׁוּבָה] on the part of evil-doers. There are several instances in Hebrew scripture where men intervened and changed the mind of God; Moses, Abraham, and Jonah, in particular, seemingly all had the influence to reverse what can be understood as God’s “evil inclination.” In fact, Exodus 32:9–14 passage says:

9–10God said to Moses, “I look at this people—oh! what a stubborn, hard-headed people! Let me alone now, give my anger free reign to burst into flames and incinerate them. But I’ll make a great nation out of you *instead* (author’s emphasis).”

11–13Moses tried to calm his God down. He said, “Why, God, would you lose your temper with your people? Why, you brought them out of Egypt in a tremendous demonstration of power and strength. Why let the Egyptians say, ‘He had it in for them—he brought them out so he could kill them in the mountains, wipe them right off the face of the Earth.’ Stop your

anger. Think twice about bringing evil against your people! Think of Abraham, Isaac, and Israel, your servants to whom you gave your word, telling them ‘I will give you many children, as many as the stars in the sky, and I’ll give this land to your children as their land forever.’”

¹⁴And God did think twice. He *decided not to do the evil* (author’s emphasis) he had threatened against his people.

In short, there are several biblical instances in which God looked more and more like Zeus, Neptune, Elil, and the other superior reigning gods of mythology than He did a real, substantive heavenly father that was so presented throughout my life. God began to look no different than all the other “false” gods we learned about in comparative religions courses. He started to take on the traits and attributes of a god created by man for the purpose of rallying the troops or controlling the erstwhile yet sinful courses of common folk who needed to be reigned in and controlled.

Further, as I began the research into ancient religions for the purpose of this book, I found much of what I had believed by faith to be the only-one-true-religion, to be simply the stuffs of revitalized, rewritten, reworked—possibly even plagiarized—religions of thousands of years prior to the writing of the compiled books we refer to today as the Bible. When Moses penned the Pentateuch (the first five books of the Hebrew Bible and the Christian Old Testament) in and around 1400 BCE (I believe there is absolutely no reason to doubt that these books were, at least originally, authored by Moses, and that he indeed was a real, historical person, as established in the dating system set forth in my previous work⁴), it is very clear that Moses “borrowed” information from the earlier Sumerian and Akkadian religions, recorded in cuneiform 1,500–2,000 years earlier, sometime between 2500 and 2800 BCE. (**Author’s Note:** In *The Rise and Fall of the Nephilim*, when stating that the date of the Sumerian civilization flourished around “4500–4800 BCE,” I meant to say 2500–2800 BCE, but inadvertently stated the number of years from today, backward, rather the correct date. Ah, the things that can get missed even in your most meticulous editing!) The evolution and migration of humans from the Fertile Crescent region between the Tigris and Euphrates rivers south and west into the Canaanite region brought with it, also, the evolution and transformation of ancient religion. The Hebrews picked up on the name

“El” and incorporated it into their religion—their own, homespun version of a superior god and the pantheon of the Sumerians. Elil became Elohim, El Eliyon, El Shaddai of the Hebrew religion, while Enki/Ea, the base word for Ywhw, became Yahweh, or Jehovah.

However, when discussing this very issue of etymology of ancient god-names, my friend and Byzantine Catholic priest Father Jack Ash-craft said to me in a personal conversation, “The word ‘Allah’ can be found in use in the Syrian Churches. The etymology isn’t the issue. Muhammad merely used a common word in his tribe for deity. The issue is the character, will, and salvific history of the deity concerned. If they do not match, they cannot be the same deity.”

When considering this anthropological migration of religion and its adaptation of cultural words and names, it is interesting to note that the name “Allah” was one of the pagan deities of the Quraish. As a youth, Muhammad, who later founded the Islamic religion, participated in the worship of the 360 pagan gods of the Kabah in Mecca, overseen by the Quraish tribe to which Muhammad belonged. As Muhammad grew up, he was influenced by Jewish and Christian monotheists who condemned the polytheism of the Kabah. At some point in Muhammad’s life, he became convinced that polytheism was completely incompatible for a nationalistic-based religion and sought to reject the 360 pagan gods with which he had been raised.⁵ Muhammad was converted to the concept of monotheism through the influence and teachings of Judaism and Christianity.⁶ However, being a proud nationalistic Arab, he sought not to change his people’s beliefs completely, but turned reformer and sought to reboot his native pagan religion rather than adopt a completely different belief system altogether, such as Christianity. As a result, Muhammad took the chief pagan god of the Kabah in Mecca (Hubal/Allah⁷) and chose him to be his new monotheistic god. This god was already considered the chief god among the other gods at the Kabah. Muhammad’s strategy was simple: Rather than converting all the Arab people to the monotheism of Christianity, he merely banished the other 359 pagan gods and chose Hubal/Allah to be the one and only god, thus giving Islam “Allah.” In a very real sense, Muhammad created Islam out of whole cloth for the purpose of solidifying Arabic nationalism under one god and one religion—much the same as Constantine with Christianity in the early 300s AD.

The last thing I wish to do is dissuade anyone from their personal faith or traditional beliefs. However, in saying that, it also must be recognized that even the most sacredly held names in our most holy beliefs have come from earlier sources. Civilization developed and migrated across the globe, and with that came the migration and evolution of religious thought. Just as the early Christian church dislocated pagan tribes and usurped their places of high worship, burning down their sacred groves only to erect chapels and cathedrals in their place, so did ancient humanity as they borrowed and transformed religion into newer modes of practice and objects of worship.

This train of thought, of course, represents what religious scholars would call a secular view. It eliminates the need for faith, and filters the history of humanity and the development of religion and religious stories through the strainer of archaeology and anthropology. Accordingly, evangelicals and staunch adherents to Judeo-Christian faith, as well as Islam and other dogmatic faiths, would view this migration of religion and evolution of language as nothing more than a secularized explanation for something they accept by faith. At best they would accept by faith that the secular view can be merged with the religious mythology. Insisting that the so-called secular left despises them, Evangelical Christians maintain that post-modernism has moved the secularists to abandon absolutism for the more comfortable, objective, relative definition of “truth”: “Evangelical Christians believe... there is absolute truth which applies to all people, in all cultures, for all times. Evangelicals recognize that this objective and absolute truth is found ultimately in the one true God...and in His revelation given to us personally in Jesus Christ and in the Bible.⁸

In a conversation in July 2012, during the writing of these paragraphs, Micah Hanks, prominent futurist and author, said to me:

I think when one begins to look at the anthro-side of things, our inherent humanity is put in new perspective for us. It becomes easy to dismiss any kind of divinity at that point. But divinity is faith...in what? Faith cannot exist without the hope for something greater.... It is merely that glue which binds us to the divine. Whether or not a God exists, many have faith...and many who choose not to believe lack that faith, even if “he” is still there nonetheless. Or is our “faith” merely another human construct, much like thought, sight, and other things?

And, then, rather tongue-in-cheek, he added, “I would like to know if the Darsannee of Plibius TE-17 with their cold stony moon have an equivalent word to our English ‘faith.’”

We’ll cover this in more detail later, but suffice it to say that at this point in our study the Hebrew Bible starts to look more and more as if it is, simply, the Hebrew *version* of greater and much older worldly events. Could the Old Testament be nothing more than mere religious myth as opposed to the absolute on the spiritual truth of the universe, as Judeo-Christianity teaches? The more we investigate our religious origins, through the many myths, legends, and dogmatic theologies out there, the more we find that the similarities are staggering. Is there a “one true religion,” where God is the benevolent ruler of all that exists, or are all these collective mythologies simply different versions of common events, with common threads running throughout them all? Was there some “proto-religion” from which all ancient religions drew their basic information, or did there exist some magnificent story from which all religions built their versions of origins?

And what of this pervasive presence of the serpent that emerges not only in the Sumerian and Hebrew religions, but in many prevalent religious mythologies the world over? What of this supposed mysterious race of Reptilian beings that seems to run through the undercurrent of humanity’s mythos? Are these creatures the mere stuffs of man’s creation? The devils in the dark of the conspiratorial minded? Or are they the diaphanous stuff of ether?

Archaeology and Myth

archae·ol·ogy (noun)

The recovery and study of material objects, such as graves, buildings, tools, artworks, and human remains for the purpose of investigating the structure and behavior of past cultures. Archaeologists rely on physical remains as clues to the emergence and development of human societies and civilizations. Anthropologists, by contrast, interact with living people to study their cultures. (*The American Heritage New Dictionary of Cultural Literacy*)

myth (noun)

A traditional or legendary story, usually concerning some being or hero or event, with or without a determinable basis of fact or a natural explanation, esp. one that is concerned with deities and demigods and explains some practice, rite, or phenomenon of nature.

Stories or matter of this kind: realm of myth.

Any invented story, idea, or concept: His account of the event is pure myth.

An imaginary or fictitious thing or person.

An unproved or false collective belief that is used to justify a social institution. (*Collins English Dictionary, Complete & Unabridged, 10th Edition*)

I was recently part of a live debate where an archaeological PhD made the emphatic statement that myth was merely “mankind’s fantasies” and nothing more. Though it’s true that a myth can at times be a mere story, removing itself far from the status of reliable historical resource that the increasingly scientifically minded discipline of archaeo-anthropological disciplines would utilize, myths are not always as rooted in the realms of fantasy as the esteemed halls of academia might consider them to be. Of necessity to a richer understanding of our past, an interdisciplinary dialogue efficacious to the future development of both mythological and archaeological disciplines should exist. Perhaps, somewhere along the way, you will come to find that the union of archaeology and mythology is far from being grounded in the realm of fairytale.

In context to the subject matter of this book, I am hailing back to the creation story as written in the Old Testament of the Bible. Although the story of creation as told in the book of Genesis is not the first of humanity’s creation stories, it is one that tends to be most familiar in a broader sense and contains the roots of this discussion, so it is there that I will begin this search for fact, buried deep within the religious machinations and mythologies of faith. Also note that, though we may be able to identify facts within the linguistics and stories of the ancient texts, there is still no real way to quantify those facts as being hard evidence as to how things actually happened. But the multiplicity of creation accounts spread across a multiplicity of cultures and religions does give us a visible common thread

that, when viewed from “outside the box” of any particular religion or culture, presents a picture comprised of commonalities that are pan-cultural.

Does this merely underscore the notion that humanity’s civilizations, cultures, and religions have all evolved in equal fashion as one another? Or does it establish that there is a common thread woven throughout all cultures, beginning with a singular, common event lost in primordial antiquity? Each subsequent culture then ascribes its own version of events, character names, and twists on the original story, remanufacturing it to adapt to their own values and politics, not to mention the un-pierceable veils—the individual accounts of encounters and experiences that cannot be substantiated, but that are wholly important to any consideration of these spiritualistic, therefore hyper-speculative things.

Adam, Eve, and the Prince

The Book of Genesis tells us that Adam and Eve were the first couple. Whether you believe they were real people evolved from lower species, metaphoric stick figures, mythological characters, or actual, living human beings spiritually set against a deeply encoded message, the Hebrew religion tells us that they were created by God and given dominion over a garden paradise, and commanded to not eat of certain fruit growing on certain trees, lest they “die.” Period.

Enter, stage left, the trickster character Nachash [נַחַשׁ], the serpent. Although never identified in the text as Lucifer, Satan, or the Devil (those names being attributed to him much later in the biblical scriptures), this character has become religiously synonymous with the devilish figure who led humanity away from God, thereby ushering in original sin and the resultant fall of mankind from a state of grace before a holy God, placing humanity in need of a spiritual savior-redeemer. This serpent character is also established from that point forward as the evil force, ever-present and working to thwart the work of a gracious and loving God in the affairs of humanity. Nachash is the Hebrew word that, when translated into English means, “serpent; trickster; crafty magician, bringer of knowledge; illuminator; bright shining one.” According to Psalm 82, “God,” appearing in the singular version of the word *Elohim*, refers to the *other* gods of heaven—the “Divine Council”—as the Elohim [אֱלֹהִים], using the very same Hebrew word in its plural version, also calling them the “bright,

shining Princes of Heaven.” In this instance, you have the God of the Hebrew Bible declaring the existence of a “caste of gods” or “minor gods” over which He has authority, but whom he calls by the same name. Note that He never refers to them as “angels.” The Hebrew word for angels (*mal’ahk* [מֶלֶךְ], which means “messenger”) never appears in the passage.

Noted Hebrew and ancient Semitic language scholar Michael S. Heiser put it this way:

...[I]n light of the serpentine appearance of divine beings in Yahweh’s presence, what we have in Genesis chapter three is wordplay.... *That is, Eve was not talking to a snake. She was speaking to an bright, shining upright being who was serpentine in appearance, and who was trying to bewitch her with lies.* (Heiser’s emphasis)⁹

In other words, Eve was in the presence of one of the Sons of God. These beings were not angelic in nature, but were beings that possessed free will, and were more powerful than the angels, the messengers of God. When Psalm 8:4–5 speaks of the creation of human beings, utilizing the phrase “a little lower than the angels,” the Hebrew text actually renders this as “a little lower than the Elohim.” Eve was actually interacting with a member of the Divine Council who did not share God/Yahweh’s enthusiasm for his new creation, human beings.

I am convinced, by ancient linguistic use of the same word, that the Serpent in the Garden of Eden story is one of these bright shining princes of heaven who is none other than the “bright shining one” who appears in the Genesis account of Adam and Eve as Nachash, the serpent character, who “seduces” and impregnates Eve, after she sits at his feet to learn the knowledge he bestows.

Believe what you will, as your faith might dictate regarding the connection to Lucifer, the Star of the Morning, the “Bright Shining Presence of the Glory of God,” but the big question to ask is whether or not this teaching in the Hebrew scripture is a factual accounting or an elaborate cover story for much deeper events involving much more detail. We will, most probably, never know if Adam and Eve or Nachash ever existed, outside the realm of a faith story. But historical evidence does exist that links all these characters to other personages in different creation

mythologies throughout many other ancient religious cultures, establishing a common thread or under-current, as we will see later in this chapter.

Let me say again, at this still-early point in this study, that it is not my intent to offend anyone's religious or spiritual beliefs or sensibilities. Nor is it my desire to trounce scientific research or input. My personal background is one that has its foundations in the Christian faith and academia; that is where I received all of my formal-yet-incomplete biblical training and seminary education, and I must state again, for emphasis, that I do not by any means wish to dissuade anyone from believing what they trust by faith in their own heart to be true. I would like to present some questions, however, throughout the entirety of this book that may challenge those beliefs. When making comparative forays into religious teachings that span many different cultures, one is left to decipher the messages and determine in his own heart that which he believes to be true and that which he must discard as false, not to mention what one can or cannot accept as fact on the basis of archaeological and anthropological research—two schools of study that must completely separate themselves from faith issues in order to retain integrity in fact-finding. (As with my previous work on the Nephilim, I am sure that there will be some who will fear for the eternal salvation of my soul, if not the back-slidden state of my position with the Christian God.)

Suffice it to say that our personal faiths and religions—if adhered to—play harsh taskmasters in our lives and with what we understand to be our eternal souls. Add to that faith mix, the necessity of stepping back to examine other theologies outside its reach, then blend them all together with mythology, and you will find that there may exist something else completely different lying beneath the surface. There just may be things in the anthro-archaeo-mythological record that challenges you to look beyond the limits of your religious affiliations and think outside the box.

Slaves and Freedom Fighters

“[While] the Annunaki are sitting before you,
...Belet-ili the womb-goddess is present,
Let the womb-goddess create offspring,
And let man bear the load of the gods!
...Create primeval man that he may bear the yoke!

Let him bear the yoke, the work of Elil,
Let man bear the yoke of the gods!"

—Atrahasis, Tablet 1¹⁰

Cuneiform tablet containing the Atrahasis Epic, housed in the British Museum. Image made available through Wikimedia Commons.

Let's go back a little further than the writing of Genesis to the ancient Mesopotamian civilization of Sumer. According to their ancient cuneiforms, they were ruled by the Annuna/Annunaki, their god-caste of beings who came to the earth from the heavens. As the story goes, these gods, weary of performing their own manual labor, bred into—or genetically engineered and manipulated the DNA of—the humans of the Mesopotamian region who roamed as wild beasts. They did this to create a slave caste to do their work for them. As the story continues to unfold, the humans began to feel the weight of their enslavement. Theirs was an unwilling servitude. Accordingly, as time went on, the cruel hand of the

slave masters became unbearable to the humans, and some of the Annunaki overlords went rogue, launching a conspiracy to free the humans and teach them the knowledge of science and spirituality, and the art of civilization, thus elevating them to the same god-like status as the Annunaki. The leader of the rebel freedom fighters was none other than Elil's brother god, an Annunaki named Enki, also known as Ea in the neighboring Akkadian culture.

When seeking to understand any ancient text, it is important to recognize a few things up-front:

1. The language in which it was written, as most ancient languages have a logic all their own that does not translate as well into modern English.
2. The people for whom the stories were being written. Their understanding of the stories and the way in which they were presented could have been vastly different than what we understand in a modern reading.
3. The context of the text in relation to the people for whom it was being written. Again, our current-day understanding being completely different as to what ancient peoples' would be.

The poetic, picturesque language of these ancient Sumerian texts, though beautiful in their presentation as ancient religious accounts, offer no source to quantify their veracity, thereby leaving themselves to stand only as religious history and myth. The importance of sources and verifiable information matter wholly when deciphering ancient texts, but five to seven thousand years ago, there was little need for this, if there existed even the slightest concept that far in the future, archaeologists, historians, and anthropologists would be far greater served had the ancients included indexes and bibliographies along with their cuneiform tablets. These accounts were written as religious history, in their context, and presented to the people of that time and place. The writers were establishing spiritual stories and a history of the origins of their people, but they were not presenting that information for the ages.

Zechariah Sitchin. Image made available through Wikimedia Commons.

In modern day, their stories have certainly been over-romanticized in the works of the late Zechariah Sitchin, who, while perhaps being “on to something,” pushed his theories too far in order to make things fit. But despite his mistranslations and abused usages of ancient text, he did create an intriguing fictional account of the descent of extraterrestrial beings to the earth, housing the Sumerian mythology in updated, vernacular narrative. A prime example is when Sitchin forced the word *Nephilim* to mean “people of the firey rockets.”¹¹ Sitchin, at best, simply mistranslated the word, ignoring—or misunderstanding—the Aramaic usage blended with biblical Hebrew. The Nephilim were not the ones who “came down” from anywhere. They were the descendants—the offspring—of those who actually did come down—namely, the Watchers, the “Sons of God,” the bene ha ’Elohim [בְּנֵי־הָאֱלֹהִים] of Genesis chapter six. At worst, Sitchin deliberately ignored linguistics and fabricated meanings in order to substantiate his personal theories. But it is easy to understand how he may have extrapolated word definition from the combination of language and pictographs, as many of the carvings and reliefs from ancient Sumer depict their gods as descending in winged or bowl-like craft.

First-millennium seal showing descending Annunaki. Pictured is a worshipper and a fish-garbed sage before a stylized tree with a crescent moon and the descending winged disk set in the sky above it. Behind this group is another plant-form with a radiant star and the Star-Cluster (Pleiades cluster) above. In the background is the dragon of Marduk with Marduk's spear and Nabu's standard upon its back. Image made available through Wikimedia Commons.

The bigger issue is that Sitchin, in desiring to update the mythology and bring it into a more relevant understanding of ancient astronaut theory, simply did not do his homework. He, rather, like many of the theoretical metaphysicists of our age, stated that things were so, based solely on his (mis)interpretation of language, and his continual forcing of the square peg into the round hole. It's like grasping to the farthest possible meaning of a word—the broadest associative definition—and utilizing that obscure definition as the rock solid basis for your hypothesis. That can only end in disastrous interpretation and ultimately faulty conclusions.

When Sitchin refers to the Nephilim as the “people of the firey rockets,” he has gone far out of his way and deep into a misunderstanding of the Sumerian language in order to establish his hypothesis. His argument for “ancient rockets” and “firey space flight” is constructed completely on two ancient Sumerian words, *mu* and *me*,¹² which are the same words as the Akkadian *shamu*, and the Hebrew *shem*. Continuing in his argument to establish the ancient space craft theory, Sitchin goes on to contend that the Tower of Babel account in Genesis, in which the people wanted to make for themselves a *shem*, is in reality describing the construction of a flying craft

or rocket of some sort. In his book *The Twelfth Planet*, Sitchin defines the Sumerian word *mu* as meaning “an oval shaped, conical object,” as well as “that which rises straight.”¹³

The problem is that Mr. Sitchin merely defines the word, but offers up no linguistic etymology to define it within the framework of Sumerian language. He simply states the meaning and continues on building his hypothesis. However, it is interesting to note that the ancient Sumerians created their own dictionary,¹⁴ and it contains the word *mu*! The entry in the ancient Sumerian dictionary has the word *mu* being synonymous with the Akkadian word *shamu*, meaning “heaven, part of the sky, (sometimes) rain.” This is what the word means according to ancient scribes, who make no mention of flying craft or fiery rocket ships. It is a simple descriptive noun for the sky. The Sumerian word *me* is used for the same meaning, as part of the heavens.

And that’s just the linguistics. Zechariah Sitchin represents, to me, a man who had a deep-set interest in discovering who we are and where we came from. His research into ancient Mesopotamian culture to look for ancient answers is admirable, while all at once woefully incomplete and academically insincere.

Peter James, coauthor of the controversial book *Centuries of Darkness*, has leveled his own criticisms against Sitchin’s scholarship, pointing out that he not only deliberately had to disregard the rest of the known world outside Sumer and Mesopotamian civilization, but also for his seemingly innate misunderstanding of Babylonian literature:

[Sitchin] uses the Epic of Creation Enuma Elish as the foundation for his cosmogony, identifying the young god Marduk, who overthrows the older regime of gods and creates the Earth, as the unknown “Twelfth Planet.” In order to do so, he interprets the Babylonian theogony as a factual account of the birth of the other “eleven” planets. The Babylonian names for the planets are established beyond a shadow of a doubt—Ishtar was the deity of Venus, Nergal of Mars, and Marduk of Jupiter—and confirmed by hundreds of astronomical/astrological tables and treatises on clay tablets and papyri from the Hellenistic period. Sitchin merrily ignores all this and assigns unwarranted planetary identities to the gods

mentioned in the theogony. For example, Apsu, attested as god of the primeval waters, becomes, of all things, the Sun! Ea, as it suits Sitchin, is sometimes planet Neptune and sometimes a spaceman. And the identity of Ishtar as the planet Venus, a central feature of Mesopotamian religion, is nowhere mentioned in the book—instead Sitchin arbitrarily assigns to Venus another deity from *Enuma Elish*, and reserves Ishtar for a role as a female astronaut.¹⁵

William Irwin Thompson, well-known social philosopher and cultural critic (ergo: a man who make his living criticizing and poking tongue-in-cheek jabs), writer and publisher of poetry throughout his career, and a recipient of the Oslo International Poetry Festival Award in 1986, describes his personal writing and speaking style as mind-jazz on ancient texts. Thompson had this to say about what he calls Sitchin's "literalism":

What Sitchin sees is what he needs for his hypothesis. So figure 15 on [page 40](#) is radiation therapy, and figure 71 on [page 136](#) is a god inside a rocket-shaped chamber. If these are gods, why are they stuck with our cheap B movie technology of rockets, microphones, space-suits, and radiation therapy? If they are gods, then why can't they have some really divine technology such as intradimensional worm-hole travel, antigravity, starlight propulsion, or black hole bounce rematerializations? Sitchin has constructed what appears to be a convincing argument, but when he gets close to single images on ancient tablets, he falls back into the literalism of "Here is an image of the gods in rockets." Suddenly, ancient Sumer is made to look like the movie set for *Destination Moon*. Erich Von Däniken's potboiler *Chariots of the Gods?* has the same problem. The plain of Nazca in Peru is turned into a World War II landing strip. The gods can cross galactic distances, but by the time they get to Peru, their spaceships are imagined as World War II prop jobs that need an enormous landing strip. This literalization of the imagination doesn't make any sense, but every time it doesn't, you hear Sitchin say "There can be no doubt, but..."¹⁶

This is what disturbs me most about Zechariah Sitchin.

As someone who is invested in wanting to know more about our origins, and who is thoroughly intrigued with the ancient astronaut theory, I have to admit that such small words as *mu* and *me* can redefine the entire theory as put forward by Sitchin, who I still contend has some good ideas brewing, but has relied too heavily—and foolheartedly—on his own translations and, perhaps even deliberate, squeezing of a definition to fit his overall theory.

Folks, language is important. It is so important that even the Bible refers to itself as a book that is so “God-breathed,” that it is “infallible” and cannot be changed by “one jot or tittle” (Matthew 5:18)—the tiniest of Hebrew punctuation marks. Simply put, the writers of Hebrew scripture were *using language as a gage of authenticity*. That is an ultimately strong point on which theories can rise or fall, and we have archaeologists to thank for the deciphering of ancient mythological texts. Who knew a five-thousand-year-old dictionary would come in so handy? I wish Sitchin had referred to it, as that would, for me, not cast such broad dispersions on his interpretations and subsequent theories.

Does this—or should it—delegitimize Sitchin’s theories and his dozen-plus books on the topic? A most definitive yes on my part. If you are going to present theory based on scholarship, would it not be important to first ensure that the scholarship is sound?

Enki from a ninth-century BCE Babylonian alabaster wall-panel relief.
Copyright Trustees of the British Museum. Image used by permission of the British Museum.

In turn, should this, then, delegitimize ancient alien theory that adheres to similar yet differing hypothesis as Sitchin's? Not necessarily. Better scholarship on the topic needs to be established. And in the end, we may not come up drawing the same conclusions that were the object of our original hypothesis.

In Sumerian mythology, Enki ("Ea" in the neighboring Akkadian religion) is the god of craft, mischief, intelligence, and knowledge. He is also known as the god over the waters and creation, and although the exact meaning of his name is uncertain, the common translation is "Lord of the Earth." When you compare him to Nachash in the Book of Genesis, you find similar definitions as the "trickster" and bringer of "mischief." When

you keep in mind the etymology of “making mischief,” you will find that its origins have little to do with what we consider to be mischief by modern standards. Mischief was in its earliest forms equated with chaos, havoc, and the committing of rebellious acts.

There is such overt similarity between the acts of Enki/Ea and the serpent in the Garden of Eden in the Book of Genesis that it cannot be overlooked. The traditional story tells us that the serpent is none other than Satan, the Devil, Lucifer. However, the serpent is never called by any of those names in the text. Those are names attributed to the serpent thousands of years later in other scriptural writings of the Hebrew Bible. What is clear is that Nachash, the serpent character in the Eden story, is a member of the Divine Council, the Elohim. As I covered extensively in *The Rise and Fall of the Nephilim*, Psalm 82 presents a caste of minor gods referred to as the Elohim, the “bright, shining Princes of Heaven.”¹⁷ This plural form of the word *Elohim* was uttered in the text by the singular Elohim, who equates them to himself.

For most evangelicals, there is a problem in that the Old Testament, here, affirms the existence of a multiplicity of Elohim. Though simple, the solution requires us to think like an ancient Semitic Israelite, and not as a product of the Reformation or the modern evangelicalism that exists today. Biblical theology did not begin with modern evangelicalism, the Calvins, the Luthers, the Aquinases, or even the Augustines. It began with the ancient text as it stands, understood within the historical, cultural, and religious context that produced it.

The first occurrence of *Elohim* [אֱלֹהִים] is correctly translated “God” and is obviously to be taken as the singular form of the word for reasons of grammatical subject-verb agreement. The second use of the word *Elohim* in this passage is to be equally understood as being in the plural form because it is the object of the sentence’s preposition. The grammar and syntax are crystal clear in this psalm, in that a singularity cannot preside from within a singularity. It is clear by the language of the text that Elohim (the singular) is presiding over the Elohim (the plural), and it is repeated a second time later in the short psalm. Both “God” and the “gods” are represented by the identical word *Elohim* [אֱלֹהִים].¹⁸

It Must Be Satan!

By definition, Nachash, the bright shining one (later, he becomes known as Lucifer, who in his pre-fallen state is the bright shining presence and defender of the glory of God, “The Bright and Morning Star”—which is also a reference to the Messiah/Jesus, much later; more on this in the next chapter), is also known as “the bringer of knowledge and intelligence, the illuminator.” When Nachash seduced Eve by the offering of “forbidden fruit”—that forbidden information that would make humans “just as Elohim (gods)” (Genesis 3:22)—he became the bringer of knowledge and the emancipator of the intellect, for after the forbidden fruit was accepted and eaten, the humans knew that they were naked. They knew that there was more to their existence than simply caring for the garden for the superior being who bred them.

And the LORD God said, “The man has now become like one of us, knowing good and evil. He must not be allowed to reach out his hand and take also from the tree of life and eat, and live forever.”²³ So the LORD God banished him from the Garden of Eden to work the ground from which he had been taken. Genesis 3:22–23

The Sumerian tablets tell us that the rebel god named Enki/Ea was the extraterrestrial (not-of-this-earth, non-human) being appointed by the chief god of the Annunaki, Elil, to create Homo sapiens. After his involvement with the original genetic experiment that bequeathed the slave race of humans, bred to do the work for the Annunaki (as paralleled in the keepers of the Garden of Eden in the Book of Genesis) his compassion for the plight of the slave race shifted his role as a genetic engineer to that of a veritable “rebel leader.” His actions flew in the face of the rest of his kind.

Now there was one Atrahasis
Whose ear was open (to) his god Enki.
He would speak wih his god
And his god would speak with him.
Atrahasis made his voice heard
And spoke to his lord,
“How long [will the gods make us suffer]?
Will they make us suffer illness forever?”
Enki made his voice heard

And spoke to his servant:
“Call the elders, the senior men!
Start [an uprising] in your own house,
Let heralds proclaim...
Let them make a loud noise in the land:
Do not revere your gods,
Do not pray to your goddesses...”

—from: Atrahasis 1:vii¹⁹

It is also related in the Sumerian texts that Ea's headquarters of operation were in the swampy, backwater region called the Snake Marsh, also referred to as a *den* to many reptiles and serpents. In other words, the first fight for freedom of the human race took place in an area known as “Ea-Den.”

Enki/Ea was originally the god of the ancient Sumerian city, Eridu, known for being the first and oldest city mentioned throughout Sumerian literature. It is closely associated with Uruk (“First City”) as built in biblical tradition by Cain, the Nephilim son of Eve and Nachash.²⁰

Closely associated with the city of Eridu is the mythical region below the earth's surface, known as the Abzu,²¹ which is often interpreted as an underground sweet water ocean in Mesopotamian mythology.²²

The ancient city of Eridu as envisioned by archaeological artist Balage Balogh. Used by permission from the artist, www.archaeologyillustrated.com.

The geographical characteristics and features of the ancient site of the city of Eridu must have had great impact both physically and spiritually with the original concept of the Abzu. It is difficult to imagine what exactly made the place sacred to the ancient Sumerians, mostly due to the fact that there are no direct references or depictions of the original landscape and terrain. However, where there was water in these arid, desert regions, there was life, and it was in these geographical places that civilizations were established and flourished. Eridu was situated in a marshy and continuously flooded area in the backwaters of the Tigris and Euphrates rivers, where it can be easily deduced by geographical patterns that some natural phenomenon of flooding and receding marsh waters took place, and was perceived by the ancient inhabitants of Eridu to be sacred nature at work.

The concept of the Abzu was derived from the waterways and clear lagoons that encompassed the city of Eridu. The surrounding river backwaters were also referred to as a “marshy den” that physically created a sanctuary setting, enclosing the sacred city, where eventually, a cult arose, dedicated to the god and/or goddess of sweet water.²³

The earliest form of the god Enki could have been “Abzu,” who was later seen as being conquered or vanquished by Enki,²⁴ who then stepped into the place of Abzu, which in turn became known as his domain.²⁵ This sort of alteration of concepts, where an ancient deity becomes a mere attribute of a more contemporary, evolved, divine figure, was a common attributable alteration when the god took on the function or act of a certain deed or natural phenomena, such as took place in the rising and falling of the waters surrounding Eridu. And make no mistake, the changing of the names of deities was common practice among the ancients, this being clearly illustrated in the many names for God in the Old Testament (Jehovah, Elohim, El Shaddai, Adoni, the Angel of Lord, and many others) as well as the biblical record of the divine changing of names of some of the early patriarchs—Abram of Ur becoming Abraham, Jacob becoming Israel, Joseph being renamed by the Egyptians as Zaphnath-paaneah, Saul of Tarsus renamed Paul the Apostle, and even the Messiah had evolutionary progressive name changes and additions as the function of the Messiah grew and burgeoned: Kinsman Redeemer, the Lion of Judah, the Lamb of God, the Rod of Jesse (of the royal house of King David, which did not exist until thousands of years after the earliest form of Messiah was used),

and so on. The meanings of names was all-important in ancient religion, and the owner of the name change generally followed the rule of *change equates function, designation, or purpose*.

In antiquity, one deity might have had several names used for him simultaneously, as mentioned previously with the several names for God and Messiah in the Hebrew Bible. During the course of time as older names disappeared or developed into newer forms with greater contemporary meaning, the older name incorporated as an attribute of his newer function. However, it should be taken into consideration that an original meaning of the name of a deity might mean nothing at all to a community of people using that name many centuries after the name was first uttered.

Look to the Tetragrammaton, the paleo-Hebrew name of the god YHWH (Jehovah). It must have had a translatable meaning, very early on, prior to the writing of the Hebrew scriptures, when the Hebrew religion was in an early state of development, and still in its infancy. Yet, much later, when Moses composed the Hebrew Scriptures around 1400 BCE, which also contained the Law for the Hebrew people, establishing the foundations of the Jewish religion, demonstrates signs that the name YHWH was still rather ambiguous and had no direct translation. And it is highly possible that the original meaning of YHWH had no importance whatsoever for the Hebrews who lived much later, where in the fifth century BCE they used several divine names for God, all more than likely referring to older deities in older layers of Israelite religion. The form and pronunciation of YHWH, although considered as sacred, as was the deity behind the name itself, was never altered. It was simply retained as part of the growing list of attributable names for the Hebrew God.

All of this is highly important to understanding the name of Enki/Ea, the evolution of his name being much similar. Even if Enki/Ea once had a clearly translatable meaning that was understandable to ancient Sumerian people, that original meaning was not necessarily understood by the Mesopotamian people living in the third millennium city-states of Sumer and neighboring Akkad. But the name Enki—specifically the Akkadian version, Ea—did migrate into the Canaanite region from the Mesopotamian region throughout the course of the following millennia and a half. The name *Ea* became the base of the Canaanite word *YHWH* (pronounced “Yee-ah-weh”), the Hebrew name *Jehovah*. This is all important in understanding

how the idea of the serpent became the basis for the Genesis account of the Garden of Eden's Serpent character, Nachash.

The direct translation of the Sumerian name, Enki, recorded as a divine Sumerian name in written sources since the composition of the texts literally translated as "Lord Earth," or "Lord of the Earth," extending to the meaning of "he who ruled beneath the earth (the Abzu) and had dominion over it."²⁶

Sounds like Satan, doesn't it? The problem is that, although Enki/Ea has incredible mythological linkage to the Serpent in the Bible, the name Ea is the early form of the name *YHWH*—Jehovah. There is some sort of twist in meaning that has taken place along the millennia, and there is some theoretical, yet highly heretical, surmising that the two characters are, perhaps, one in the same: Lucifer and Jehovah, at least etymologically, if not theologically. Were they both of the pantheon of the Elohim? The connectivity between Enki/Ea, who brought forbidden knowledges of the gods to early humans from a place known as the Snake Den (Ea's Den), is undeniably connected to the character of Nachash, who was the illuminator and bringer of forbidden knowledge to Adam and Eve in the Genesis story of the Garden of Eden, yet he is etymologically linked to Jehovah, the savior of humanity.

Chapter Two

That's Not What I Learned in Sunday School

If you grew up anything like me, you attended Sunday school as a kid. Maybe you even attended as an adult, and perhaps you still attend today. I only talk about religious education in the framework of “Sunday school,” as it gives a quick reference in our minds to all the things we were taught in our religious training as kids. It’s there that we learned in rudimentary form all the basic stories of the Bible and the embryonic systematic theology that formed our particular denomination’s dogmas and doctrines. If you were Catholic, you went to Catechism. If Lutheran, you attended Confirmation classes. If Jewish, you attended synagogue and both pre-and post-bar and bat mitzvah education, and maybe even went on into Medrichim in your teens. Perhaps you are of a different faith altogether or experienced no form of biblical training at all. Most of us have some notion as to what the early stories of the bible had to say regarding the creation of mankind, the Garden of Eden, Noah and the Ark, and other great stories that are religious in their origins, but that have transcended into common dialogue through the countless retellings and spread into pop culture, children’s books, toys, games, and all sorts of other ancillary forms throughout the years.

For the purposes of this examination, as I have stated, I hail back to the roots of my Christian education, as they are the foremost familiar tales stemming from much older, not-so-familiar historical religious accounts and mythologies. If I were to approach an absolute stranger on the street and ask him or her about the Garden of Eden or the Serpent in the Garden or Noah’s Ark, a great flood, or even Moses and the Ten Commandments, he or she would, as would most people, have some idea of what it is I was asking. These are common stories woven into the fabric of our religious heritage; that is not to say *your* particular heritage, but the heritage and religious “mythology” of humanity. In many cases, the old adage rings true that familiarity breeds contempt, and many of us, though perhaps adhering to what we were taught as children, have drifted far from those original teachings, relegating them to the realm of fantasy and religious fairytale.

As I grew older, I began to question many of the things I had been taught. I knew that I accepted those old stories as the absolute truth of God's Word as I was taught to do as a youngster, and they became engrained in my mind as some sort of probable universal truth. But because I extended my biblical education into my teens and young adult years, I found that my logical mind contended with the faith stories that made so much sense so many years earlier. I questioned who God really was, what His names meant, and why there were so many things in the pages of scripture that seemed to play like a *Lord of the Rings* movie, only with angels on crack.

So, I started asking questions.

“Why does the name Elohim have a plural connotation?”

“What!? Beings came down from heaven and impregnated humans?! Who were they?”

“Why did Moses never name the pharaohs with whom he had his encounters? Isn’t that important to the narrative?”

“Was Goliath actually a real giant?”

“What the hell are ‘sea monsters’ and ‘leviathan’?”

“What is that wheel-within-a-wheel-within-a-wheel contraption in Ezekiel?”

“Why is it Leviticus placed a legal mandate against eating Alaskan King Crab?”

“What? I can’t have sex with a menstruating woman?”

And so on, and so on, and so on.

Those were only the tip of the iceberg when it came to my questions. Many more dealt with textual criticisms, historical references, the mention of constellations that played important roles in pagan religions but figured prominently in biblical passages, homosexuality, Old Testament patriarchal polygamy, the genocide of infidels, the drinking of alcoholic beverages, and the mandate for women to stay silent in the church while allowing them to teach classes and sing.

The questions listed here are not just examples I’ve pulled out of the air, but all actual questions I asked, among many others, while attending Bible school and seminary, and working in youth ministry in my teens and 20s.

Ultimately, I was labeled a troublemaker. This moniker was delivered in one of two forms: “You are a troublemaker, Mr. Roberts. That kind of thinking will get you nowhere, fast, around here,” and “You are a troublemaker, Mr. Roberts”—wink-wink-nudge-nudge, accompanied by the non-verbal “And you are on to something by asking, but we can’t talk about that here, in this setting,” which ended up in private, out-of-the-way chats over cups of coffee in dark corners of far-away cafés.

As in most theological, dogma-driven circles, questioning the norm generally lands you in hot water. But the biggest question of them all, for me, was this: “Why? How do we know that what we believe and teach is the absolute corner on the truth? Did God descend and tell us these things firsthand, or are we simply believing in something for which we have no proof and for which all the science and reason and logic out there seems to contradict? Is that the true nature of faith?” I’d ask, bewildered, “Believing something that makes no sense for a greater purpose of which we have absolutely no proof?”

“It’s better than believing in nothing at all,” I was admonished with some conclusive air.

That is what has brought me to the place where I write about these things. I do not disbelieve in God, nor have I thrown out the baby with the bathwater, but I do have questions for which answers are hard to come by within the context of my religion. So I started looking outside the box, to the places that might lend me some better perspective or some answers that might give more solidity to the foundation that I was told was as “solid as the Rock of Christ. Amen and Glory!”

The Serpent in the Garden

¹Now the snake was the most clever of all the wild animals the Lord God had made. One day the snake said to the woman, “Did God really say that you must not eat fruit from any tree in the garden?” ²The woman answered the snake, “We may eat fruit from the trees in the garden. ³But God told us, “You must not eat fruit from the tree that is in the middle of the garden. You must not even touch it, or you will die.”” ⁴But the snake said to the woman, “You will not die. ⁵God knows that if you eat the fruit from that tree, you will learn about good and evil

and you will be like God!”⁶The woman saw that the tree was beautiful, that its fruit was good to eat, and that it would make her wise. So she took some of its fruit and ate it. She also gave some of the fruit to her husband who was with her, and he ate it.⁷Then, it was as if their eyes were opened. They realized they were naked, so they sewed fig leaves together and made something to cover themselves.⁸Then they heard the Lord God walking in the garden during the cool part of the day, and the man and his wife hid from the Lord God among the trees in the garden.⁹But the Lord God called to the man and said, “Where are you?”¹⁰The man answered, “I heard you walking in the garden, and I was afraid because I was naked, so I hid.”

¹¹God asked, “Who told you that you were naked? Did you eat fruit from the tree from which I commanded you not to eat?”

¹²The man said, “You gave this woman to me and she gave me fruit from the tree, so I ate it.”¹³Then the Lord God said to the woman, “How could you have done such a thing?” She answered, “The snake tricked me, so I ate the fruit.”¹⁴The Lord God said to the snake, “Because you did this, a curse will be put on you. You will be cursed as no other animal, tame or wild, will ever be. You will crawl on your stomach, and you will eat dust all the days of your life.¹⁵I will make you and the woman enemies to each other. Your descendants and her descendants will be enemies. One of her descendants will crush your head, and you will bite his heel.”¹⁶Then God said to the woman, “I will cause you to have much trouble when you are pregnant, and when you give birth to children, you will have great pain. You will greatly desire your husband, but he will rule over you.”

¹⁷Then God said to the man, “You listened to what your wife said, and you ate fruit from the tree from which I commanded you not to eat. So I will put a curse on the ground, and you will have to work very hard for your food. In pain you will eat its food all the days of your life.¹⁸The ground will produce thorns and weeds for you, and you will eat the plants of the field.

¹⁹You will sweat and work hard for your food. Later you will

return to the ground, because you were taken from it. You are dust, and when you die, you will return to the dust.”²⁰The man named his wife Eve, because she was the mother of all the living.²¹The Lord God made clothes from animal skins for the man and his wife and dressed them.²²Then the Lord God said, “Humans have become like one of us; they know good and evil. We must keep them from eating some of the fruit from the tree of life, or they will live forever.”²³So the Lord God forced Adam out of the garden of Eden to work the ground from which he was taken.

²⁴After God forced humans out of the garden, he placed angels and a sword of fire that flashed around in every direction on its eastern border. This kept people from getting to the tree of life. (Genesis 3:1–24)

Taking a biblical story and dissecting it to bare all the internal organs and skeletal structure is a meticulously important process necessary in an understanding of ancient culture. Simply said, the Bible, for all of its gloriously revered tales of Jehovah God and His interactions with His human creation, spawning three of the world’s major religions, is a source point for understanding the ancient anthropology of humanity. Depending on your view of the veracity of biblical scripture, there is no shadow of doubt that its pages reveal stories, accounts, myths, legends, and fables that mirror—or are mirrored by—a plethora of cultures in the ancient world. The importance of the Bible, if not for faith and practice, is to see it as a book that demonstrates another facet of events as experienced and recounted by ancient mankind—a *version*, if you will, of common events experienced by ancient humanity.

Accordingly, if you are of Judeo-Christian or Muslim religious heritage, the pages of these religious texts and biblical scripture are Truth. According to certain Christian denominations (and a phrase I heard over and over throughout my Bible education!), “The Bible is the only foundation and authority for faith and practice.” Although this may or may not be true, it is clear that when one takes a step back from the text of the Bible, removing the sometimes-rose-colored glasses of dogma and systematic theology, you can start to read between the lines and see, as it were, the vastness of the

world flickering between the slats as you walk along the perimeter fence of one of the world's most holiest of books.

And there exist many other world cultures that have varying accounts of creation and the first family, some of which border on that fairytale sort of scenario, such as gods or great human warriors casting beasts and animals into the skies to create the swath of heavenly constellations. African and Native American accounts of creation share such commonalities such as subterranean humans coming to the surface of the earth and “gods” from the heavens impregnating their beautiful daughters with quadruplets.

For example, in Lakota, accounts of the first human family, Waziya, the Old Man, and his wife, Wakanka, emerged for the first time out into the world from underground. Wakanka gave birth to Ite, a daughter so beautiful that she captivated the attentions of Tate, the God of the Wind, who married her and fathered quadruplets. In this account, we are told of a character, Iktomi the Trickster, who tempted that first family with promises of great wealth, power, and beauty. Iktomi bears great resemblance to the Old Testament’s account of the serpent, Nachash, who tempted Eve in the Garden of Eden, promising eternal life and knowledge like that of the gods if she ate of the forbidden tree at the garden’s center. As with the Lakota tale of Waziya, Wakanka, and Ite, disobedience and treachery against God/the gods resulted in banishment from paradise for them all. Nachash and his Lakota counterpart, Iktomi, were cursed and exiled to the earth for all time, while the first families went on to bear children and spread throughout the world.

It is very interesting to note that although Waziya and Wakanka “came out from underground,” according to Lakota oral tradition, in the Genesis account (2:7), Adam was “formed out of the clay of the ground.” The similarities in cultural versions of creation can be clearly seen. All the varied cultural tales of creation have such a vast number of similarities and overlaps that the touch points create a tangled web of scientific methodology, established more by the crossovers in the myths of various cultures, rather than the veracity of the individual cultural tale.

In the Hebrew account of creation’s first family, in the Genesis text, Adam and Eve were the first human couple, created by God and placed in a beautiful paradise garden called Eden. Their mandate was to till the ground and keep it (the garden) for God, the only prohibition being the eating of

fruit from the two forbidden trees, the Tree of the Knowledge of Good and Evil and the Tree of Life, located at the center of the garden. Along comes the Serpent, out of nowhere, with no contextual link to the passage, and tempts Eve to eat of the fruit of one of the forbidden trees. Eve looks at the fruit, and finds it beautiful and tasty in appearance, as well as something that would make her wise. How she knows that the fruit will bring her wisdom is absent from the narrative. She plucks the fruit, eats it, and offers it to her husband, Adam, who according to the text, just happened to be standing there with her, saying nothing nor offering any protest to her actions or the temptations of the Serpent. The result is an instantaneous opening of the floodgates of their minds, and they are suddenly fully aware that they are naked. They run and hide, covering themselves with fig leaves they've sewn together, while the Serpent seems to fall silent. The consequences are devastating to the human race, in that God finds the couple, curses them for disobeying his decrees, and condemns forever all of humanity. He also curses the Serpent, condemning him to crawl forever on his belly and be reviled above all other animals on the earth, and that his offspring and the offspring of the mother of humanity would forever be in enmity and conflict.

That's about as mythological a tale as they come, rife with all the earmarks of every other culture's mythological tales. But in Judeo-Christianity, we are taught that this is the truth, breathed from God, Himself. So, either one of two things is true:

1. It's a myth, not unlike the creation myths of many other cultures, or
2. Mythological tales are sometimes the absolute truth, despite resembling the mythological tales of all other cultures.

Perhaps you could add a third option:

3. It's the truth, and all other mythological tales sourced in other cultures are simply those other culture's twist on the truth, and are the work of Satan performing acts of diabolical mimicry.

There is more to the Eden tale than what you read on the surface. And whether you believe the account to be fact, fiction, allegory, or myth, there is an encoded message deep within the subtext of the passage. The story of the Garden of Eden's occupants and their fall from grace is more than a simple tale of disobedience and the eating of forbidden fruit. It is a tale of

race interrupted—and it mirrors many of the events we find in the ancient Sumerian account of the Annunaki breeding and enslavement of primeval mankind.

In Eden, Eve's downfall came as a result of her encounter with the Serpent. The encoded message in the Genesis passage implies that she had intercourse with the Serpent character, thus rendering her recorded bite out of a piece of fruit, small potatoes.

The Serpent not only seduced Eve away from the arms of her husband Adam, but impregnated her and she conceived her son Cain. Eve, in turn, brought this sexual knowledge to her husband, Adam, and they also had sex, conceiving Abel, Cain's twin brother. But Nachash did much more. Buried in the encoded mythical tale, he also passed to the first couple the forbidden knowledge of the Elohim, the pantheon of gods ruled by Jehovah.

Comparatively, similar events took place when Enki/Ea went to the humans and incited rebellion against the gods by passing on their forbidden knowledge to the humans from his place in the Sanke Marsh, Ea's Den. The ancient Sumerian cuneiforms also tell that this was done against the wishes of his superior and brother god, Elil, and as punishment for this treasonous act, the progressive Enki/Ea and his followers were condemned and ordered to remain underground—in the earth, Abzu as their domain, within its vast cavernous systems weaving and intersecting throughout the substrata of the earth. Along with this punishment, it was ruled that Enki/Ea was to never interfere with humans again and that their generations would not only not ever know each other, but will learn to hate each other and be in continual conflict, just as God pronounced the “continual enmity” that would exist between the offspring of the Serpent and the offspring of the humans, in Genesis 3:14–15.

In a rather tragic way for Western religious thought, then, the story seems to suggest that God stands against our own moral maturity, against sexuality, and against the divinization of human nature through the acquisition of knowledge and sexual pleasure. It also insinuates, when it does not actually shout, that we all die because our first parents knew each other within the intimate gnosis of sexual intercourse. Because they fucked, we're screwed.

—Jeffrey J. Kripal, *The Serpent's Gift, Gnostic Reflections on the Study of Religion*

Have you ever encountered a serpent that walked upright? Spoke in an audible, understandable voice? According to Genesis, the snake that Eve encountered did both of these things. Though it is probably safe to say that Eve was not very experienced in the ways of the world, seeing as she was the very first woman, it is also probably very safe to say that she knew the difference between a snake and a man. According to the scripture (Genesis 3:1), this snake was neither:

Now the serpent was more crafty than any of the wild animals the LORD God had made. He said to the woman, “Did God really say, ‘You must not eat from any tree in the garden?’”²

As mentioned, the Hebrew word used in the Book of Genesis for the word *serpent* is nachash (pronounced: naw-kawsh), meaning “magician or enchanter; a spellbinder; to illuminate, shine.” Jewish Rabbinic interpretation never saw this word as meaning a literal snake. It was to be understood as “a shining being with power to enchant.” This is a far cry from a snake in the grass, and in many later interpretations is identified as none other than Lucifer himself, although the passage never actually calls him by that name. It is attributed thousands of years later. It is this being that influences and beguiled Eve—or “seduced,” in a more accurate sense—into eating the fruit of the forbidden tree in the midst of the Garden of Eden—which, as we have seen, had absolutely nothing to do with eating fruit from a tree.

²“The woman said to the serpent, “We may eat fruit from the trees in the garden,³ but God did say, ‘You must not eat fruit from the tree that is in the middle of the garden, and you must not touch it, or you will die.’” (Genesis 3:2–3)

The following linguistic details of what transacted in the Genesis account of the Garden of Eden were presented in *The Rise and Fall of the Nephilim*, but well worth reconsidering here:

The Hebrew word for that tree is *ets* [אֵת], a word that is in very close association with the Hebrew word *toledah* [תּוֹלֶדֶת] both meaning “generations.” It is from these words that we draw the modern equivalent of “family tree.” Other variations of the

word *ets* is “the wood of a tree as an opening and closing of a door.” In an applicational stretch the same word can apply to the term “portal; opening of one’s mind; enlightenment.”¹

It is highly suggested that the Tree of the Knowledge of Good and Evil, from which Eve is said to have eaten the forbidden fruit, was not a literal tree at all, but rather, symbolic of the pre-Adamic races that lived in the regions surrounding the Garden of Eden. These races are said to encompass the Atlantean civilization.

The phrase *fruit of the tree* is the Hebrew word *periy* [בָּתִים]—fruit: produce of the ground; offspring, children, progeny (of the womb); or figuratively: fruit (of actions). The phrase *eat of it* is the Hebrew word *'akal* [אָכַל]; this word has many uses, among which, one use means to lay with a woman (sexual intercourse); and the word *touch* is the Hebrew word *naga* [נָגַע]—to touch (that is, to lay the hand upon [for any purpose]; euphemism for: to touch, in a sexual manner).

⁴“You will not certainly die,” the serpent said to the woman.

⁵“For God knows that when you eat of it your eyes will be opened, and you will be like God, knowing good and evil.”

⁶When the woman saw that the fruit of the tree was good for food and pleasing to the eye, and also desirable for gaining wisdom, she took some and ate it. She also gave some to her husband, who was with her, and he ate it. ⁷Then the eyes of both of them were opened, and they realized they were naked; so they sewed fig leaves together and made coverings for themselves.

(Genesis 3:4–7)

This was obviously no ordinary tree; in fact it wasn’t a literal tree at all. Many biblical scholars interpret this as Lucifer. The definitions of some of the Hebrew words used here are controversial as to their application in this context. That is to say that there may be opinions that have already been drawn prior to extrapolating meanings and applying them to the context. Here are the words from this Hebrew passage: The phrase *pleasant to the eyes* is the Hebrew word *chamad* [חָמַד]—to desire, to covet, to take pleasure in, to delight in, to be desirable, to delight greatly, to desire greatly, desirableness, preciousness. The word *desired* is the Hebrew word *ta'avah*

[תַּאֲנִה] —to yearn for; to lust after (used of bodily appetites) a longing; by implication: a delight (subjectively, satisfaction, objectively, a charm): a desire, a wish, longings of one's heart; lust, an appetite, covetousness (in a bad sense); to covet; to wait longingly. *Took* is the Hebrew word *laqach* [לְקַחַ]—a primitive root; to take (in the widest variety of applications): to take, to lay hold of, to receive, to marry, to take a wife, to take to or for a person, to procure, to get, to take possession of, to select, to choose, to take in marriage, to receive, to accept.

Under these definitions, a very different picture of the Eve's temptation in the Garden of Eden emerges. The parsed passage shown is far more than a sinful, disobedient appreciation of fruit. All the references we hear of Eve eating an apple, or depictions in religious art of the Eden couple eating a big piece of fruit, are merely coded information and a hiding of what the passage truly speaks about. What really happened in this scene in the Garden of Eden is that Eve, the mother of humanity, lost her virginity to the Serpent, as you can see that she encountered him sexually before ever having sex with her husband, Adam. And further down the passage, the text is implicit that Eve was impregnated by this encounter. She then drew her husband into the scenario, and he willingly partook. And Eve also became impregnated by Adam. Eve was now bearing fraternal twins, Cain and Abel—one from the seed of Adam, and the other from the seed of the character who is known as the Serpent in the Garden.

The grand sin that was committed in Eden was not mere disobedience in the eating of a forbidden piece of fruit from a forbidden tree in the midst of the garden. It was a sexual sin that created a dual bloodline in the twins conceived in Eve's womb. According to the subsequent passages in Genesis, we learn that Abel was the blood seed of Adam, but that Cain was the blood seed of the Serpent and that the lineage would be in constant conflict with one another, starting with Cain murdering his twin brother.

This begins the trail of the Nephilim—the bloodlines of the serpent.

Blood Is Thicker Than Water

The Genesis record of the Serpent's sexual encounter with Eve, the "mother of all living," establishes that the biblical account recognizes a dual bloodline had been conceived in Eve. This fact is borne out, not only in the condemnations in Eden, post-fall, and the pronunciation of what is

understood in rabbinic and evangelical schools to be the first Messianic prophecy (“...and he will crush your head, but you will bite his heel” [Genesis 3:15]) but also by the long lists of genealogies that appear in the subsequent Old Testament books. And these genealogies were written down and placed there for one purpose alone: to establish a traceable, pure human bloodline from which the Messiah would come. “Traceable to whom?” you might ask. Traceable back to the loins of Adam, the first human male. Here is how the genealogies began in the first 28 verses of 1 Chronicles, [chapter 1](#):

Historical Records From Adam to Abraham to Noah’s Sons

¹Adam, [Author’s Note: Take note of the exclusion of the firstborn twin sons, Cain and Abel] Seth, Enosh, ²Kenan, Mahalalel, Jared, ³Enoch, Methuselah, Lamech, Noah.

⁴The sons of Noah:

Shem, Ham and Japheth.

The Japhethites

⁵The sons of Japheth:

Gomer, Magog, Madai, Javan, Tubal, Meshek and Tiras.

⁶The sons of Gomer:

Ashkenaz, Riphath and Togarmah.

⁷The sons of Javan:

Elishah, Tarshish, the Kittites and the Rodanites.

The Hamites

⁸The sons of Ham:

Cush, Egypt, Put and Canaan.

⁹The sons of Cush:

Seba, Havilah, Sabta, Raamah and Sabteka.

The sons of Raamah:

Sheba and Dedan.

¹⁰Cush was the father of

Nimrod, who became a mighty warrior on earth.

¹¹Egypt was the father of

the Ludites, Anamites, Lehabites, Naphtuhites, ¹²Pathrusites,

Kasluhites (from whom the Philistines came) and Caphtorites.

¹³Canaan was the father of

Sidon his firstborn, and of the Hittites, ¹⁴Jebusites, Amorites, Girgashites, ¹⁵Hivites, Arkites, Sinites, ¹⁶Arvadites, Zemarites and Hamathites.

The Semites

¹⁷The sons of Shem:

Elam, Ashur, Arphaxad, Lud and Aram.

The sons of Aram:

Uz, Hul, Gether and Meshek.

¹⁸Arphaxad was the father of Shelah,

and Shelah the father of Eber.

¹⁹Two sons were born to Eber:

One was named Peleg, because in his time the earth was divided; his brother was named Joktan.

²⁰Joktan was the father of

Almodad, Sheleph, Hazarmaveth, Jerah, ²¹Hadoram, Uzal, Diklah, ²²Obal, Abimael, Sheba, ²³Ophir, Havilah and Jobab.

All these were sons of Joktan.

²⁴Shem, Arphaxad, Shelah,

²⁵Eber, Peleg, Reu,

²⁶Serug, Nahor, Terah

²⁷and Abram (that is, Abraham).

The Family of Abraham

²⁸The sons of Abraham:

Isaac and Ishmael.

And this listing of genealogies goes on for eight-and a-half more chapters!

Why was there a need to trace the human bloodline back to Adam? Why such a meticulous biblical record of the flow of humanity from the first human man? It was to establish the traceable lineage of the coming Messiah, the kinsman redeemer prophesied during the pronouncement of cursing and judgment back in Genesis 3:15. These genealogical records

exist for one purpose and one purpose only: to establish that there existed a dual bloodline in humanity, bequeathed in the Garden of Eden—the seed of Adam, being the “pure human bloodline,” and the seed of Nachash, the bloodline of “mixed human and Elohim blood,” as bred into Eve. And, as I noted above in the 1 Chronicles passage, the firstborn son, Cain, as well as the younger twin whom he murdered, are both omitted from the genealogy. Why? Cain is the firstborn and by Hebrew tradition should have appeared on the list immediately following Adam, but he is omitted from the genealogical record as listed in the Old Testament for the simple reason that he was not of pure, human blood. Cain was of the mixed blood of Nachash and Eve. He was the first of the Nephilim. Abel wasn’t listed in the record for the simple fact that he was murdered by Cain before he had bequeathed any children. That is why we see the third third-born son, Seth, listed in the genealogical record as the direct descendent of Adam.

Again, if you recall—and this is extremely important to understand the entirety of the Old Testament—Cain, as the firstborn son of Eve, was fathered by Nachash, the Serpent character in Eden who was of the Elohim, the bright, shining prince of heaven. He represents the mixed bloodline, and if the Messiah was to be the kinsman redeemer, the savior of mankind born of mankind, his lineage had to be established as being of the pure, human bloodline, therefore, a descendent of Seth, not Cain.

The Kinsman Redeemer

The ancient Hebrew sense of redemption was firmly fixed in the word *goel* [גּוֹלֵךְ], the act of redeeming as a kinsman. The Hebrew sensibility understood the Messiah to be the “kinsman redeemer,” the one who would come to save, redeem, and rectify, but who was also a near kinsman to the family.

The concept of the kinsman redeemer was structured like this: The Law of Moses made provision for instances when a person who was forced to sell part of his property or himself into slavery, that his nearest of kin could step in and come to his aid by “buying back” what his relative was forced to sell, whether goods or person. The kinsman redeemer became the benefactor, the person who frees the enslaved by paying the ransom price and eliminating his debt.

“If a fellow countryman of yours becomes so poor he has to sell part of his property, then his nearest kinsman is to come and buy back what his relative has sold.” (Leviticus 25:25)

It was generally the nearest of kin who had the responsibility of redeeming his kinsman. If a person sold himself into slavery—or was forced into such—his kinsman redeemer purchased his freedom. When debt threatened to overwhelm a person, the kinsman redeemer stepped in to buy his homestead and let the family live. If a family member died without an heir, the kinsman redeemer gave his name by marrying the widow and rearing the existing son or a new son to carry on his dead relative’s name. When death by murder came at the hands of another man, the kinsman redeemer acted as the avenger of blood and pursued the murderer to enact familial vengeance or bring to justice (Numbers 35:12–34; Deuteronomy 19:1–3).
